A. Well, we have no fixed standard, sir; I could give you the component parts of our gas.

Q. I do not mean that?

A. Our thirty-two candle gas is pretty nice gas. There is no such gas in the world that I know of. The test of Mr. Love will tell you of what it is composed.

Q. All of the contracts of the city provide for a standard of purity?

A. No, sir. The contract for lighting the city was given out the other day. The Consolidated bid sixteen candle, $1.50. We bid for twenty-five candle gas at $1.40, but we have to bid for twenty-five candle under our contract.

9352 (By the CHAIRMAN:)

Q. How is the intrinsic value of gas affected by increased candle power?

A. Increase of light, in its intrinsic light, increased by the squares of candle power. Its value is measured by the diminution of light.

Q. Don't you think the illuminating power of gas ought to be taken into account in determining its price?

A. In every account; in London the London Gas-light Company deliver gas of less than sixteen candle power at three and three pence; they might better pay New York companies the prices charged; it would be cheaper than the gas they have in London at three and three pence.

Q. Is there any other company that furnishes gas of equal candle to yours?

A. They don't do it; they can.

Q. There is no motive for it?

A. Not at all.

Q. Is there any reason, in your opinion, why the standard of gas to be delivered should not be fixed by a public officer, or in some other way, established method, by law?

A. It has been fixed in other States, but the laws have always proved a nullity; fixed in New Jersey and Massachusetts, and they do not pay any attention to it.

Q. Is it not true that where the candle power has been fixed by officers charged with that discretion, that the gas supplied has equaled the standard in illuminating power?

A. Yes, sir.

Q. In respect to purity, we observe that in the contract made between the city and the New York Company in the spring of 1884, there was a provision of the following effect: "As regards purity, the gas shall be free within limits not injurious to the public health from ammonia and sulphuretted hydrogen, and of other sulphur and nox-

ious compounds;" is it not, in your opinion, reasonable to
9353 establish, either by law or by some public officers charged with
appropriate discretion, some standard of purity, either of that
sort or of some other character?

A. Perfectly so; no trouble about it.

Q. As a matter of fact, a well regulated company would prescribe for its limits something of that character?

A. Yes, sir; they do in the cities.

Q. If the price of gas is to be regulated in any respect by law, should not, in your opinion, the illuminating power and purity be likewise thus regulated?

A. Most decidedly.

Q. In that respect, so far as your experience is concerned, and your own company also, there would be no objection to adequate provision by law to that effect, would there?

A. No objection; none at all.

Q. In your opinion, is there any reason why, either by law itself, or by the exercise of appropriate discretion vested in proper officers, the price of gas, or at least its maximum price should not, from time to time, be limited by law?

A. I do not think there should be any law about the price of gas; the companies will fix that themselves; it is like bread or any thing else; we pay for our right of way; there are immense dangers affecting gas corporations; immediately works may all be burned up, and the men who put their money in there are taking great risks.

Q. As a matter of experience, have there been any explosions?

A. Yes, sir; the Metropolitan lost nearly a quarter of a million dollars by one explosion, a loss of something like a couple of hundred thousand dollars.

Q. Do you know that to be a fact?

A. Yes, sir; Mr. Zollikoffer swore to it; this is mere hearsay.

(By the CHAIRMAN:)

Q. How many years have you been connected with gas works in New York city?

A. Ten.

9354 Q. What explosion do you know of during that time?

A. We had an explosion the other day at Flood Rock; it knocked the bottom out of one of our gasometers, at an expense of $10,000 or $15,000.

Q. Have you known of any other explosion, in your experience?

A. We arrange our business, so far as we can, not to have them.

Q. In your experience, do you know of any other explosion except that?

A. That is all.

Q. That is all you know of in your experience?

A. Yes, sir.

Q. While upon the subject of illuminating power and quality and purity, I refer you to section 11 of the proposed act reported by the last Senate Committee and ask you whether you know of any practical objection to the application of the standards there designated?

A. Well, that suits both water gas and coal gas; there is no objection to that; that would come within the limits and capacity of every company in the city.

Q. That section would be sufficiently elastic to meet all the practical exigencies within your knowledge in New York business?

A. Yes, sir.

Q. Is there any other objection, in your view, to a maximum limitation to be established from time to time of the price of gas than what you stated?

A. It would be unjust; there you say that a coal gas company shall deliver eighteen and twenty-five candle gas and we are giving thirty that is unfair.

Q. There ought not to be a uniform price of varying value?

A. Yes, varying candle power.

Q. Suppose that the standard was fixed at a maximum price per candle power and that that maximum price of gas was established from time to time as the price of material and labor might
9355 necessitate, is there any objection or any reason, in your
opinion, why that should not be done, provided, of course, that an appropriate profit on the investment is, at the same time, secured?

A. I do not say the price should be touched, sir; we have made a contract with the city of New York at a price which was far below what others charged; we have raised money and induced parties to go into this enterprise and whether it is a success it is their business, and the price was low; that contract which was entered into by the city has been confirmed and if the power exists in the Legislature to make it $1.25, the same power might make it twenty-five cents and we have to go out of business; that is my reason.

Q. If the rate of dividend on the capital actually invested was fixed so that the investor should always be secured first, in their investment and second, in their income upon that investment, is there any reason, in your opinion, why *they* should not be some limitation somewhere upon the price to be charged to the public for a uniform article?

A. I must say I do not want to agree to that; I cannot, because I am a native born American citizen, not a Russian, and I do not feel like having the business interfered with; if we find we can next year reduce the price of gas, we will do it; but I do not like to be crowded into it by legislation; I do not say it is wise to do it.

Q. What rate of income, in your opinion, provided it be reasonably assured to the investors, is fair and equitable upon gas stock?

A. From ten per cent. to fifteen per cent., sir.

Q. What have you to say as to the relative merits of the gas that was furnished by New York and Manhattan Companies, and that is now furnished by those old works under the name of the
9356 Consolidated Companies in the same section of the City?

A. The New York Company is now making water gas; the Manhattan have improved their candle power materially of late.

Q. Do you know of any reason why the candle power of the New York Company should be as low as twenty-two now?

A. About twenty-four.

Q. Twenty-two or twenty-four candle power while that of the Municipal and Equitable and Mutual is in the neighborhood of thirty or thirty-two?

A. I do not know what they are doing; I never was in their works in my life.

Q. Is there any reason practically why there should be that difference in the gas furnished in the different parts of the city?

A. Oh, no, sir; no engineering difficulties.

Q. Has there been any reduction of your capital stock?

A. No, the Equitable owns the patents for the United States.

Q. Does it cost the same to produce coal gas of a given candle power illumination as it does to produce water gas of a higher candle power illumination?

A. I know nothing about the manufacture of coal gas; I never made any of it.

Q. On what element does the cost of producing water gas largely or generally depend?

A. Upon the cost of naphtha.

Q. That ingredient is the chief element of the price?

A. Yes, sir.

Q. The other elements are standard?

A. They are water, labor and coal.

Q. In the manufacture of coal gas the element is coal?

A. Yes, sir; the coke or residuum in Paris and London they sell for all that coal costs; there is not so much coke used here.

9357 Q. The dividends are fixed at ten per cent. on the capital stock actually employed and the price of gas be regulated by the cost of coal or naphtha, or both, and the minimum of expense, is there, in your opinion, any reason why such an arrangement should not be satisfactory to stockholders and to consumers alike?

A. I believe they will make that arrangement, yes, sir; it will be very difficult for them to make over ten per cent.

Q. Couldn't they be made to do it?

A. I think not.

Q. Supposing the stockholders have that protection and guarantee, would there be any objection to it?

A. If the State would guarantee that protection and say: Gentlemen, "you shall have ten per cent.," the Consolidated stock would be worth two hundred right off.

Q. Supposing the State should say it should not be more than seven per cent., what would be the result?

A. The law would be inoperative.

Q. Would the companies go out of business?

A. I do not think they would all go out; some of them; it depends upon how they got in.

Q. In your opinion, does it tend to lessen the price of gas to double the nominal capital on which dividends are to be paid?

A. No, sir.

Q. The opposite tendency, as a matter of course?

A. Yes, sir, the oposite tendency, of course.

(By the CHAIRMAN:)

Q. When you say that a certain per cent. is a reasonable per cent. of profit, you mean a per cent. upon that sum?

A. Upon the capital stock of the company.

Q. Do you mean upon capital stock watered by various devices, or the actual stock?

A. Well, so far as we are concerned, we have no watering.

Q. You mean upon the capital put into the concern?

A. I am not proposing any fixed percentage but that would be my mind upon the stock; it is upon the par value of the stock.

9358 Q. Upon stock fairly issued and paid in, not fictitious stock, of course?

A. If there is going to be any law passed which is going to be operative I should like to organize another gas company and buy out the Equitable before any fixed sum—buy out the Equitable's $10,000,000 stock and then we would be ready; but we don't like any such law passed unless we are fixed.

Q. Suppose you had a capital of $10,000,000 and under full headway, you could supply a pretty good share of the city?

A. Yes, sir.

Q. Supposing you had really a hard-pan capital of $10,000,000 paid into the concern, what portion of this city could you supply with gas?

A. I think we could deliver 10,000,000 feet on the longest night of the year any year.

Q. If you had a capital of $20,000,000 could you supply the whole city and more too; and make considerable allowance for future growth?

A. Well, we would try to do it—struggle.

Q. And rather hopeful you would be?

A. Yes, sir.

The CHAIRMAN: The dividend lists were taken by Mr. Smith and he agrees to bring them back to the committee at nine o'clock Monday morning next, and he agrees to be here at one o'clock.

J. YALDEN, being duly recalled, testified as follows:

Examined by Mr. TREMAIN:

Q. Mr. Yalden you are prepared to give evidence with regard to the Equitable Gas-light Company?

A. Yes, sir. This company was incorporated in 1882 with an authorized capital of $2,000,000, which was subsequently increased to $3,000,000; it commenced business in 1882 by the purchase 9359 of the patent rights belonging to Mr. Jermananski for $1,000,000 in fully paid shares of the capital stock of the company; Mr. Jermananski then donated $500,000 of this stock to the company for the purpose of providing working capital to build works, etc.

This stock was all sold at par, and paid for in cash.

In addition to the above items $190,000 in shares were issued at par in part payment on contract for the erection of works.

The remainder of the capital, $2,310,000, has all been subscribed for, payable in installments, on account of which $1,742,247.68 has been paid in cash up to November 30, 1885, $432.32 interest allowed on anticipated payments, leaving a balance still to be paid in of $567,320.

The company has issued besides $1,000,000 in coupon bonds, and owes on mortgage on its real estate and works the sum of $400,000, making the total capital upon which it is at present operating $3,832,680. On the first of November 1885, to which time the accounts were taken out, this item stood at $3,737,865.

The investments for works, etc., against this capital including the $500,000 for patents, amount to $3,381,850.10, and the difference is made up of cash in bank, value of materials on hand, and bills against consumers, due and unpaid, amounting to $350,614.90. Of this sum, however, considerable amounts are being expended for real estate (over $500,000) to provide additional works to increase production.

The company did not commence to produce and distribute gas until the month of December, 1884, and has sent out during the eleven months about 253,118,800 cubic feet and is now producing a maximum of about 2,500,000 cubic feet per diem.

9360 The Equitable is apparently bound to be a very profitable concern for the following reasons: The expenditure and income account, after charging against it all the interest paid, the commissions on the sale of stock and office expenses, and the legal expenses pertaining to the formation of the company, salaries, labor, allowances and taxes up to date nearly balances. There is practically a deficiency up to November 1st of about $34,000, but against that they have sent out gas from the 15th to the 30th of November which will eventually be credited. So, I think it can be fairly stated of the gas sent out to their customers, there is about $335,000 worth. The profit on it, together with the gas that can be estimated from the 15th to the 30th of November, can be fairly stated to have paid not only the work and expense of cost of the gas, but of the expense for the formation of the company; so practically the Equitable Company to-day is beginning, as it were, with a clean sheet and must, at the present prices, commence to make a great deal of money. The statement I make to show that gas at $1.75 and $1.50, the prices of the Equitable, can be made by that company and show a very considerable profit on the capital invested. I think their profit will average at least with this two and a half million maximum at least forty cents per thousand feet net profit for the company, on an average price of $1.60.

Q. One dollar and twenty-nine cents for the actual cost for making and distributing the gas; the forty you mean is for the first years doing business?

A. The expense of making their gas to-day is about forty-six cents, their distribution sixty-four cents; the repairs ten cents per 1,000; taxes ten cents per 1,000.

Q. It is based upon last year's experience?

9361 A. Yes, sir; that would leave them about forty cents profit.

Q. What about leakage?

A. Next year the presumption is that the leakage will be less and the profit more and the next year's business will be increased and the expense correspondingly less. I qualify my remarks. Here is $335,000 worth of gas charged up to consumers in this period. Here is about the same amount of expense charged against the consumers, but it is inclusive of all the expense for the formation of the company which Graham has testified was $200,000.

Q. So far as the estimate for the year past is concerned, they are all included?

A. Yes, sir; but I am qualifying my remarks for the actual facts of this past year.

Q. So that while they have sold gas for one year they have paid the expense practically for two years?

A. Yes, but their expense account against that gas included all the expense for the formation of the company.

Q. I suppose the accounts show what that preliminary expense includes?

A. Not separately shown; it shows there is nearly $47,000 for leakage expenses.

Q. Have you got anything to indicate what are the items comprising that total of $250,000?

A. No.

Q. An estimated sum to cover preliminary expenses?

A. No, sir; I could tell you nearly what they are.

Q. The subject matter?

A. Interest chargeable from the first day, commissions on sales of stock, office expenses and the legal expenses, and the inspectors for the city and advertising, and taxes; they will amount to $260,000 or $270,000, a good portion of which was spent before they commenced to make and distribute gas.

9362 Q. Many of those items it would seem should be charged to the appropriate accounts to which they relate, should they not?

A. Well, no; I should not say that, not unless they could be held to be a part and parcel of the investment; it should be treated as I before stated.

Q. Was capital stock issued for it?

A. No; not in every instance; the real estate has been paid for wholly in cash.

Q. How, in your opinion, should such an item be treated, as a part of the capital or an expense over one year or more?

A. I am of the opinion that all the expense attending the formation of the company for which there is really no representative value, should form an item of expense to be distributed over a series of years and chargeable yearly against the profits until obliterated; and for the sake of argument, say the one-tenth every year for ten years and not deducted out of the earnings of the first year.

Q. Is it not true that because of the primitive condition of the Equitable business an increase of business that you cannot calculate from their books at what price they could, during the ensuing year, sell gas, and, at the same time, retain for themselves a profit of, say ten per cent. on their investments?

A. It is difficult.

Q. And for the reason stated?

A. It is difficult; the business of the Equitable is increasing very fast and you cannot form an estimate of their income; the records of the Equitable show that the chances were of selling, for the month of December, 60,000,000 feet of gas; but by reason of the Flood Rock explosion injuring their gasometer they had to stop and put in meters and so decreased their index quantity.

9363 FIFTH AVENUE HOTEL,
NEW YORK, *December 21st,* 1885.

Committee met pursuant to adjournment.

Present: Hon. John I. Gilbert, Chairman, Hon. Thomas Robinson, Hon. Michael C. Murphy.

Henry E. Tremain, Esq., appears as counsel to the committee.

W. W. SHARPE, a witness called by the counsel to the committee, being duly sworn, testifies as follows:

Examined by Mr. TREMAIN:

Q. What is your residence and place of business, Mr. Sharpe?

A. My place of business is at No. 21 Park Row; my residence is 67 East 130th street.

Q. Who are your partners in the firm?

A. I have one partner, George H. Norman.

Q. What business has been conducted by your firm in the past year?

A. What business?

Q. Yes, sir.

A. The nature of it?

Q. Yes, sir.

—. Advertising brokerage.

Q. I call your attention to a circular to the following effect, and ask you if you remember having sent it out, or having caused it to be sent out by your firm in the spring of 1884. The quotation I read is from the Fulton County *Republican* of November 23d, 1884.

"We have before us a proposition from the advertising agency of W. W. Sharpe & Co., of No. 21 Park Row, New York, offering us four dollars for a publication of the following notice in our own columns as an 'Editorial or Pure Reading Notice:'

"'The New York *Tribune* recently published a letter from that eminent Republican statesman, Clarence A. Seward, opposing the gas consumer's bill now pending in the Assembly, 9364 on the ground that its provisions are self-contradictory. Moreover, as the bill gives the mayor of the city of New York power after four years to appoint three commissioners whose expenses and allowances for clerical hire aggregate $60,000, and as New York usually has a Democratic mayor, Republicans who vote for the bill will be playing into the hands of the Democratic party. Besides, the bill is against public policy, because it is a step towards governmental control of private business enterprises.'

"In this way the Consolidated Gas Companies of New York City are trying to buy the influence of the country press to prevent the passage of bills in the Legislature to restrain this giant monopoly from robbing the people of the metropolis. These companies enjoy unusual privileges, granted by the people, and when they in turn swindle those who use gas, proper measures should be enacted by the Legislature to restrain their greed."

The question is whether you ever sent out any extract from the New York *Tribune,* in a circular or any other form, from your advertising agency last April?

A. I don't remember such a circular.

Q. Is there any way of refreshing your recollection, to say whether it was or was not sent out by your firm?

A. I don't know that there is.

Q. Your firm is in the habit, is it not, of sending out matter to country newspapers?

A. Advertisement; yes, sir.

Q. Well, was any thing on that subject sent out by your firm last April?

A. I can't say.

Q. What book or books would record it in your business ?

A. I don't know that any book would.

Q. What books or book would record any circular sent out last spring?

A. I have no books that would record such a circular.

Q. What books or book would record any circular of any kind?

A. No books.

9365 Q. Well, do you wish to testify before this committee that no such circular was ever sent out by your house?

A. No, sir; I don't remember such a circular; I do an advertising business and send out circulars, but I don't remember such a circular.

Q. Didn't you send out such an extract from any New York paper on that subject last spring?

A. I don't remember that I did.

Q. Will you testify that you did not?

A. No, sir; I don't send out every thing that comes in there.

Q. Who does?

A. My clerk.

Q. Give the name of the clerk who would give me information on that subject?

A. Am I obliged to make that statement about my business?

Q. Have you any objection to state what clerk would know whether that circular or any circular on any subject was sent out by your firm in April last?

A. Well, I have in this, it was something belonging purely to my business.

Q. Well, have you any objection to answering this question now as to what clerk in your establishment, in the usual and ordinary course of business, would have knowledge of circulars or matter, printed matter, sent out by your firm in April last?

A. Well, I don't know that I have.

Q. Well, then will you please give his name to the committee?

A. Well, I have two or three clerks with me that sent out advertisements at that time.

Q. Well, what are their names?

A. One is John Thomas.

Q. Is he now in your employ?

A. Yes, sir; now in my employ.

Q. And another?

A. James McGraw.

Q. Is he now in your employ?

A. No, sir; he is not with me now.

9365 Q. Where does he live?

A. I don't know, sir.

Q. Is there any other?

A. No, I think that's all.

Q. Would not Mr. Norman have any more information on this subject than you have?

A. No, sir, I think not, sir; he is out most of the time, sir; he does not have much to do with the office.

Q. Did anybody ask you to send out any printed matter whatever, on that subject last spring?

A. No, sir.

Q. You testify positively that no such matter was sent out by your firm last spring?

A. No, sir, I don't testify to that.

Q. Did you ever hear of this circular before, that we are now inquiring about?

A. No, sir.

Q. Do you keep a file of papers in which those advertisements appear, that you have sent to them?

A. Sometimes we do; that depends upon whether the contract calls for copies of the papers.

Q. Have you any recollection of the use of your name for such a circular as I have described?

A. No, sir, I have not.

Q. Do you ever send advertisements to the *Fulton County Republican?*

A. Well, I don't know; we take advertisements for any paper that any one wants to advertise in.

Q. Did you ever send out printed matter to be inserted as an editorial or as reading matter?

A. No, I think not; we might; generally a thing of that sort is an advertisement and is sent out as such.

Q. Well, as we understand your testimony then, there is no record or any thing kept by your firm, in the ordinary course of business, that will show upon examination whether any such circular as I have described and just read to you, has been sent out by your firm, or that will show that it has not been sent out; is that so?

9367 A. Well, we keep a record of the advertisement that goes out; that is, a list of the papers, and names we send them for generally, but as to keeping a copy of that particular advertisement I don't believe we did it.

Q. You keep a copy of the names of the persons for whom you do it?

A. Yes, sir.

Q. Can you refresh your recollection between now and to-morrow morning as to whether you sent out any notice whatever, for anybody, on this subject last spring, and if so, at whose request you sent it?

A. I don't know; I can try.

Q. You have no objection to doing it, I suppose, have you?

A. I don't know that I have if it is proper for me to do so in justice to my business.

Q. You observe that the question I am asking you is not in a compulsory way, but to ascertain if you can?

A. I want to find out whether I have to or not.

Q. If you have any objections please state them, but if you have not the committee would be glad to have you state to-morrow morning whether there is any thing upon the records of your books kept in the usual and ordinary course of business that will show of such a circular or of any circular that has been sent out or that has not been?

(By Senator MURPHY:)

Q. As I understand the witness he states that his office is devoted to sending out circulars and advertisements but that he has no recollection or knowledge or having sent out any circular but as an advertisement; do I so understand you, sir?

A. Yes, sir; that is my recollection now; I say there is business that goes into my office and is sent out that I don't know any thing about; people come in and pay and yet I may know nothing about it.

9368 Q. Did Mr. Thomas ever send out editorial matter or printed matter to be published as an advertisement, to your knowledge?

A. Well, that is difficult for me to answer; I have been in the business for a long time; I might have advertisements running where they put in what they call "reading notices."

Q. Any reading notices of a political character?

A. I would not say positively, but, as I remember now, I am not in the habit of sending out reading notices; that kind of advertising is generally regular advertisements; but there are long time notices sent out as reading matter—that are called reading matter.

Q. We have them published in our Sunday papers here, and they are paid for as advertisements; all the Sunday papers publish them?

A. Yes, sir; I have never sent out any thing that has been paid for—if that is the object of the question—except it was paid for as an advertisement.

(By the CHAIRMAN:)

Q. That is one step; now, do you sometimes send out reading matter, but when it leaves you it goes as an advertisement?

A. Yes, sir.

Q. Whatever the form in which it appears?

A. Yes, sir.

Q. It may appear in the newspaper as reading matter?

A. Yes, sir.

A. And it might appear as an editorial?

A. Yes, sir.

Q. But still you are paid for it as an advertisement?

A. Yes, sir.

Q. It goes out in that way but, in the form, it may be an editorial?

A. Yes, sir; I can't tell how it will appear; it may come out as a full editorial.

Q. That is, so far as you are concerned, it may come out as an editorial?

A. Yes, sir; that is my understanding when I take it.

9369 Q. If I understand you, Mr. Sharpe, you could not say whether or not such matter was sent out, through you, to the country newspapers in the form it may be in an editorial, but really as an advertisement for which you have received due compensation; you could not say whether that occurred or not from your present recollection?

A. No, sir; but I think I never sent out anything but has been paid for.

Q. That is the extent of your recollection?

A. Yes, sir.

Q. Whatever was sent out in advertising form and whatever subject you were paid for as an advertisement?

A. Yes, sir; and the papers published it as such.

Q. The papers to which you sent it?

A. Yes, sir; as an advertisement.

Q. Now, could you, by looking at your books, tell whether through you, in the carrying on of our form of business, communications were sent to the country newspapers in respect to the gas bill of last winter?

A. Well, I don't know; I can look; that is the best I can promise without making an examination.

Q. You could not say certainly whether the books will show it or not?

A. No, sir; I could not.

Q. But it is possible that they would?

A. Yes, sir; they might show an advertisement of that kind if such a thing was sent.

Q. And might not; that's about the amount of it?

A. Yes, sir; they would not show any circular, probably, but give some name or some word perhaps.

(By Senator Murphy:)

Q. Just a memorandum?

A. Yes, sir.

(By the Chairman:)

Q. What is the name of that book?

A. The Record.

9370 Q. Any objection to bring that here to-morrow morning for April last?

A. Yes, sir; unless compelled to; belongs to my business and we have to use it all the time.

Q. The Record for April would not be in use for an hour tomorrow morning, would it?

A. It might be and it might not.

(By the CHAIRMAN:)

Q. Is that book now in use, Mr. Sharpe?

A. It might be.

Q. We should not think of putting any thing on the record unless it was something pertinent to the thing we are inquiring about?

A. All right, sir.

C. H. BOTSFORD, a witness, called by the counsel to the committee, being duly sworn, testifies as follows:

Examined by Mr. TREMAIN:

Q. You reside in New York city?

A. Yes, sir.

Q. State what time, if any, you have devoted toward the examination and study of topics connected with gas companies?

A. I think about two years of rather close application.

Q. Up to what time?

A. Well, I might say to the spring of 1884.

Q. Have you also written upon that subject?

A. Yes, sir.

Q. Are you the gentleman whose name appears as the writer of an article in the *North American Review* for August, 1885?

A. Yes, sir; of the August item; and also to the New York *Tribune* previous to the spring of 1884, a series of articles on the gas question in this and other cities.

Q. You are called as a witness in consequence of some compilations that appeared in articles in the New York *Tribune* many months ago. In these compilations we observe some statements
touching the market values of the stock of the constituent
3371 companies entering into the consolidation. Did you person-
ally make an examination of the recorded values in 1879, or thereabouts, of the shares or of the capital stock of the New York, Manhattan, Municipal, Metropolitan, Harlem, Mutual and other companies?

A. I had compiled a table on the subject, which in substance appeared in the New York *Tribune,* I have heard, under date of March 14, 1885.

Q. From what sources did you make such compilations or gain any information touching such values?

A. I made an examination of the tax books, tax returns of the different companies, in the tax commissioner's office, and from the sworn statements of the managers of the constituent companies, or of the several companies; compiled figures which I afterward compared with the quoted prices of the stocks at a cotemporary period in the American Gas-light Journal, and the Financial Chronicle and the Daily Indicator.

Q. Was it the fact that the prices of those stocks were currently published in one or more of those publications, and if so how often?

A. The quotations were made weekly in the American Gas-light Journal, and quotations were made weekly in the Financial Chronicle; I think my compilations took the weekly estimates of the reporters of those journals, of those papers.

Q. Was there a wide range in those quotations as respects each of the companies, or individually, at various times, or were they comparatively constant and uniform?

A. Do you refer to a single year or a series of years?

Q. I refer to a short period in any one year at about 1879, or prior thereto?

A. I think that the quotations of the various city gas-light stocks were lowest about, from about the spring of 1880, or say
9372 December, 1879, prior to the formation of the so-called pool; these lowest quotations I take as the basis of my calculations.

Q. And they relate to what period of time?

A. Relating to 1879 and 1880—during the year 1879, I think, I may say; it must be explained that the companies were in the habit of making returns to the tax commissioners at as low a valuation upon their stock as the market gave them, for the purpose of getting the minimum of taxation.

Q. Those returns state the market value of the stock or capital over the signatures of the proper officials?

A. Yes, sir.

Q. And your tables of compilations were made, were they, from that source?

A. Perhaps not entirely.

Q. Partially from that source?

A. Yes, sir.

Q. And also from the stock quotations for the year 1879, is that so; is that the fact?

A. Yes, sir.

Q. Taking an average of those stock quotations?

A. I think I took them at one period, sir.

Q. When you had ascertained the quotations of a particular stock how did you draw that in arriving at the total market value of the other capital?

A. Multiplied it by the alleged number of shares as appear by the statements of the financial officers, of the officials, and the statements of the finanacial papers.

Q. That is the method of your compilation?

A. Yes, sir; that is it.

Q. Now, by that method and from those sources what did you compile the market value of the capital of the New York Company to be?

A. On a par of $4,000,000; market value $3,000,000.

Q. And of the Manhattan?

A. On a par of $4.000.000—$5,300,000.

9373 Q. And of the Harlem?

A. Seven hundred and thirty-eight thousand dollars.

Q. Of the Municipal?

A. The Metropolitan is the next—$2,825,000; I have the figures of the Mutual; do you wish that?

Q. Leave that; the Knickerbocker?

A. The Knickerbocker, as appears by the tax estimate, had no market value; therefore, I did not rate that.

Q. The Municipal?

A. The Municipal, $2,070,000.

Q. Par.

A. The par I am not sure, but I think $2,000,00 at that time.

Q. The Mutual?

A. The Mutual $2,500,000; that is the quoted value.

(By the CHAIRMAN:)

Q. Now, the par value; deducting the Mutual, what is the total of the constituent companies in the Consolidated.

A. According to the dates which I have here $13,933,000; I have not footed them up (footing up figures); that is correct; that total is correct according to my footing.

Q. If you have the same calculations, compiled from the same sources, for the year 1884, the Committee would be glad to have the results?

A. I made the calculation on the first of July, 1884.

Q. From what data?

A. From data of the same sort that I had in my possession, and found them as follows for the same companies: New York $6,080,-000, Manhattan $11,360, Harlem $2,160,000, Metropolitan $5,850, Municipal $6,000,000, making a total of $31,500,000; that excludes the Mutual.

(By Senator MURPHY:)

Q. You got that, Mr. Botsford, from the tax office?

A. These, I believe, were compiled from the quotations of the date which I named, and from the American Gas-light Journal and the Financial Chronicle.

9374 Q. You didn't get them from the tax books?

A. No, sir; these appear to be the right quotations of that day.

Q. Are the quotations made in your book made from the tax books?

A. Principally.

Q. What is the rate or the system of assessment of the Board of Tax Commissioners; do they tax up to the full value, or proportionately?

A. They take the market value of the stock, sir, and then deduct their real estate to fix the basis upon.

Q. On what basis do they assess real estate?

A. I speak not from absolute knowledge but from what I understand to be the case—at about seventy-five or eighty per cent. of its supposed value; that question was brought up in the courts in the taxation of the gas companies; they desired to get as much for their real estate as possible, so when the reduction was made the taxable capital was so much less; so some companies chose that method; they had to pay for the privilege; therefore, in some cases the real estate is figured very close to its absolute value; in order to explain that I might have to go on and say they would take the values, the cost values, of their real estate and plant and carry it in their books, and take those totals on from year to year, adding the accumulations of value every——

Q. That is not what I want to get at; I want to know simply whether the record that you got has been taken from the tax books, and you reply by saying the companies put the estimate upon the real estate at a higher figure in order to balance it in consolidation; is that it?

A. No, sir; that is not what I wish to be understood as saying; you asked me how the date I have was arrived at, and what the method of taxation was, and I said in the case of the gas com-
9375 panies there was an anomalous state of things; that some companies put their real estate in at the cost value on their books, and the other companies didn't quote the——

Q. You say "put in"; where did they put it?

A. In their returns; so, when you asked me if their real estate was put it at its value——

Q. I asked what the Board of Tax Commissioners assessed it at?

A. I would reply that two methods were used, for the reasons I have stated.

Q. I asked you the real estate; there is only one method; that is for the Board of Tax Commissioners to assess it at sixty-five, seventy or eighty per cent.; is that your answer?

A. Yes, sir; from sixty to eighty per cent.; and, although the assessments are made upon actual values, it has been my observation that the alleged values are carried upon the company's books, and enter largely into the calculation.

Q. I am not speaking of the alleged values; of the actual values as carried by the Tax Commissioners——

(By Mr. Tremain:)

Q. We have those returns here, and it will be observed also that the market value is given; the real estate that is put on those returns by the same officers of the company is deducted from that market value, and that real estate of course includes the structures and plant of various kinds, and mains, in many instances, which are held by the gas companies to be real estate and taxable as such; now, how do the commissioners get at the actual value of the real estate; does that appear by this testimony?

A. That does not appear by this testimony; I have made the compilation——

Q. Now, in order that there may be no possible misapprehending, the testimony you have given upon this subject, do we under-
9376 stand that your figures as to values of the other capital are quite independent and exclusive of any consideration whatever touching the values of the real estate, as given either by the officers of the company or by the taxing authorities?

A. Certainly; it is entirely independent; if you will allow me I could explain my testimony about the——

(By the CHAIRMAN:)

Q. You think that will help us, Mr. Botsford, in our work; if you think it will, state it?

A. The Mutual Company in making their tax returns always taxed upon the stock which they issued, not at par, but at fifty cents on the dollar, and that explains what I had to say as to the differences in taxation; they didn't take the market value, but the figures of the stock issued for original.

(By the CHAIRMAN:)

Q. Mr. Botsford, at what time was the market value of the stock of the several constituent companies $13,933,000?

A. Well, sir, as those returns were made to the tax commissioners upon an alleged market value of the stock during the year for which the whole of that tax was to be collected, it would be impossible to say at what date they were at that value. From my own knowledge I should say about the last of December they would have footed up to these totals—the last of December, 1879.

Q. Well, that approximates it?

A. Yes, sir.

Q. Now, I understand you that in July, 1884, the market value or capital stock of the same companies to be $31,500,000?

A. Yes, sir, a difference of $17,567,000.

Q. How do you account for that difference?

A. I account for it by the fact of the increase in the price of gas from $1 per thousand and less to $2.25.

Q. How do you account for that difference in increase?

A. By the combination.

9377 Q. The so-called pooling arrangement?

A. Yes, sir.

Q. And you think that was the object and the effect of the pooling arrangement?

A. Undoubtedly—increase in rates.

EDWARD J. MACNIVEN, a witness called by the Counsel to the Committee, being duly sworn, testifies as follows:

Examined by Mr. TREMAIN:

Q. You are in the employ of W. W. Sharpe & Co., advertising agents, 21 Park Row?

A. Yes, sir.

Q. You have brought here to-day, at the request of the Committee, two books which have been used by them in the usual course of their business?

A. Yes, sir.

Q. How do you designate those two books?

A. One of them is known under what we call the specimen book; samples of our advertisements are kept in that.

Q. Does that contain samples of advertisements that have been sent out during the period it covers?

A. Yes, sir.

Q. Then that book relates to the period of April, 1885?

A. Yes, sir, 1884 and 1885.

Q. You call it a sample ledger, do you not?

A. No, sir, just specimen book.

Q. And the other book, what do you call that?

A. That is the bill-book.

Q. Bill-book?

A. Yes, sir.

Q. Who keeps that book?

A. The bookkeeper.

Q. What period does the bill-book cover?

A. I can't say, gentlemen, having nothing to do with it.

Q. Just look in that book and see whether it relates to the ordinary business done by that house during 1885?

A. Yes, sir, it does.

9378 Q. Look in it and see if there are any entries for May, 1885, relating to the Consolidated Company—Consolidated Gas-light Company, and if so, please state the pages?

A. Pages 386 and 387.

Q. What is the date of this bill on pages 386 and 387?

A. I believe it is May 11; I can only see half of it.

Q. On what page in the specimen book is found the specimen to which this bill on page 386 relates; pages 386 and 387?

A. On page 351.

Q. I would like to have the extract to which you allude on page 351 of the specimen book, and the bill to which you allude on pages 386 and 387 in the bill-book read in evidence, and I request you to give proper instructions to have a copy made so as to have the same put in the record; does not page 322 of the bill-book also relate to the charge to the Consolidated Gas-light Company on April 17?

A. I don't know any thing about that.

Q. Does not that entry in your opinion relate to the specimen in the specimen book at page 335?

A. Yes, sir.

Q. This bill at page 322 of the bill-book relates to an advertisement in the *Commercial Advertiser* of April 17, 1885, does it not?

A. Yes, sir.

Counsel requests that the extract of advertisement alluded to on page 322 of the bill-book, and extract therefrom covering the same, be at the proper time placed in evidence.

FIFTH AVENUE HOTEL,
NEW YORK, *December* 23, 1885.

Met pursuant to adjournment.

Present: Hon. John I. Gilbert, Chairman, Hon. Thomas Robinson, Hon. Michael C. Murphy.

9379 Henry E. Tremain, Esq., appears as counsel to the committee.

LOUIS M. BERGTHEIL, a witness called by the counsel to the committee, being duly sworn, testifies as follows:

Examined by Mr. **TREMAIN**:

Q. Did you make a copy of the several parts of the two books produced by W. W. Sharpe & Co.; book called specimen book and book called bill-book?

A. I did.

Q. Did you compare these copies with the originals that were produced in evidence?

A. Yes.

Q. On Saturday?

A. No, on Monday, the day before yesterday.

Q. Are these copies of the extract that were then identified?

A. Yes.

Q. And read?

A. Yes.

Counsel here produces in evidence the sworn copies of the entries in the books and states that they were shown to the witness Thomas yesterday.

WITNESS adds: I ought to say that two of the copies were made by me and the other by another clerk, but I compared all of them with the originals.

Copy of excerpt from paper pasted on page 351 of specimen book, 1884-1885, of Messrs. W. W. Sharpe & Co., advertising agents, of 21 Park Row, New York City.

Excerpt subscribed. Order of April, 1885.

Republican Assemblymen who vote for the Gas Consumers' bill now pending will be strengthening the Democratic party in New York city, because the bill gives after four years the appointment of the three commissioners created, whose salaries and allowances
9380 for clerk hire aggregate $60,000 to the mayor who, as New
York is strongly Democratic, is usually a Democrat. That eminent Republican, Clarence A. Seward writes to the New York *Tribune* that the provisions of the bill are self-contradictory.

Besides, the bill brings what should be a private business enterprise into politics, and by fixing the price of gas destroys competition.

Copy of excerpt from newspaper pasted on page 335 of specimen book, 1884-1885, of Messrs. W. W. Sharpe & Co., of 21 Park Row, New York city.

Excerpt subscribed, Commercial, April 17, 1885.

RIGHTS OF GAS COMPANIES.

To the Editor of the Commercial Advertiser:

A member of the Gas Consumers' Association argues under the above heading in your issue of yesterday that, because gas is a modern necessity, gas companies should be under legislative control, as provided by the pending Gas Consumers' bill. But why stop at the gas companies, if your correspondent argues correctly. Mr. Sherwood, the president of the association, is in law an inn-keeper, Mr. Thurber, who gives the bill his support, is interested in supplying the public with canned goods. Inns and canned goods are modern necessities. How would Mr. Sherwood like to have a commission run his inn, or Mr. Thurber enjoy having a commission take charge of the sale of his canned goods at prices fixed by the Legislature?

JUSTICE.

Bill-books—pages 386, '7 of bill-book of Messrs. W. W. Sharpe & Co., of 21 Park Row, N. Y. city.

MAY 11, 1885.

9382 Paid Bangs of Mail Com.

Bill-book, page 322, of Messrs. W. W. Sharpe & Co., of 21 Park Row.

April 17, 1885.

The Consolidated Gas Co., to advertising article in April 17, Commercial Advertiser, nineteen lines, one time........ $19 00

Wm. M. Bangs, a witness called by the counsel, being duly sworn, testified as follows:

Q. What is your business, Mr. Bangs?

A. I am clerk in the *Mail and Express* office.

Q. By the books of W. W. Sharpe & Co., you appear to have received a small commission on an advertisement left by you with them in last April or May, the total of the bill being $270.00; do you remember the occurrence?

A. I never left an advertisement with them at that time; I suppose I introduced some advertiser to them; people sometimes come into our office looking for advertising agents.

Q. Who did you introduce on that occasion?

A. What is that occasion?

By General Tremain:

I will tell you what that advertisement is; I have a copy of it here; it is a copy of advertisement pasted on page 351 in the specimen book of W. W. Sharpe & Co., order of April, 1885. The following is the advertisement:

"Republican Assemblymen who vote for the Gas Consumers' bill now pending will be strengthening the Democratic party in New York city because the bill gives after four years the appointment of
the three commissioners created, whose salaries and allow-
9383 ances for clerk hire aggregate $60,000 to the mayor, who, as
New York is strongly Democratic, is usually a Democrat.
That eminent Republican, Clarence A. Seward, writes to the New York *Tribune* that the provisions of the bill are self-contradictory,

Besides the bill brings what should be a private business enterprize into politics and by fixing the price of gas destroys competition."

Q. I won't swear that I know the man; I do not remember this advertisement; I had introduced a gentleman last spring who told me he had some reading notices, but I did not read them and I have no idea of what they are.

Q. Do you remember that one item?

A. No; I do not.

Q. And as a consequence of that introduction you received an allowance or commission—that is the usual thing?

A. Yes, sir.

Q. What is that gentleman's name?

A. Mr. Gustav Kobbe.

Q. And his place of business?

A. I do not know; he does some thing for us; I do not know where his office is; he is a general newspaper man.

Q. What part of the work does he attend to—editorial?

A. Yes and reportorial, he does either or both.

Q. He is not a counting-room attache?

A. No.

Q. How long have you known him?

A. I do not know how long; he has been connected with us now about three years.

Q. Is he an attache of the *Mail and Express* now?

A. Yes; and paid for what he does on a salary.

Q. Where is his residence?

A. I do not know.

Q. Did he ask you to introduce him?

A. I do not remember the conversation; he stated he had
9384 some advertisements and asked where he should go.

Q. Did he ask you to introduce him to anybody?

A. No; the question is just as I say, where he should go.

Q. Did he himself ask you to do this or some one else?

A. I do not remember.

Q. Did some one else ask you or speak to you about it?

A. No.

Q. Do you mean to testify that no one else but yourself had any knowledge of the occurrence?

A. No; certainly I do not want to say that.

Q. But to your knowledge no body else knew the circumstances but you?

A. No.

Q. In other words, your connection in the matter began and ended with the introduction of Mr. Sharpe to Mr. Kobbe?

A. I do not know if it was Mr. Sharpe or some one else in his office.

Q. Do you know Mr. Sharpe personally?

A. Yes, sir; very well.

Q. It was probably Mr. Thomas?

A. No; probably one of the concern, but I do not know; I do not remember.

Q. Do you know Mr. Thomas, the cashier?
A. Yes.
Q. Was this circumstance ever mentioned by you or in your presence?
A. No, I think not; I do not remember.

(By Senator GILBERT:)

Q. Are you able to say it was not?
A. No; I am not able to say that; I will not say so.

(By General TREMAIN:)

Q. When was it, to the best of your recollection, if ever it was mentioned?
A. I have no recollection of it having been mentioned until this morning.
Q. *Do* you not go twice to Sharpe's office about it?
A. No, only once; I might have introduced Mr. Kobbe by letter, but I am not sure.
9385 Q. Did Mr. Kobbe tell you what the matter was he wished to have inserted?
A. If he did so before or afterwards, I do not know; I will not take my oath as to the time; he told me it was an advertisement relating to the gas question.
Q. What else did he tell you about it?
A. He told me nothing more that I know of.
Q. Who was present when he told you this?
A. I do not think any one overheard it.
Q. Why should he want to insert an advertisement in relation to the gas questien, employed as he was on the staff of the *Mail?*
A. No more than that Mr. Kobbe is a contributor and is paid for what he does.
Q. You did not receive a commission when you first introduced him?
A. No.
Q. That commission could not have been paid until late in May?
A. I do not know when it was paid, sometime afterward.
Q. Who paid it?
A. Mr. Thomas, the cashier.
Q. Directly to you?
A. Yes, sir.
Q. By check or currency?
A. Currency.
Q. What was stated on that occasion?
A. He expressed the wish that I would see him often.
Q. Did he say any thing else?
A. Not that I remember.
Q. What did Mr. Kobbe say at any time about it?
A. I do not know; I do not remember; I- was not of sufficient importance to make a note of it in my mind.
Q. Are you not aware that there was more paragraphs about that time?
A. I am not.

Q. I mean in April?

A. I do not remember.

Q. You have nothing to do with the editorial columns?

A. No.

Q. What is your particular business in the office?

A. Cashier.

9386 Q. You do not write for the paper at all, do you?

A. No, sir.

Q. And did not at that time?

A. No, sir.

Q. Are you positive that these circumstances were never mentioned in your presence to anybody else?

A. I am not positive.

Q. You are not positive?

A. I do not remember.

Q. Is it your testimony that you do not remember any other instance?

A. That is my testimony.

Q. When did you see Mr. Kobbe last?

A. I saw him this morning.

Q. At what time?

A. I do not know.

Q. You do not know; you have an idea, have you not; give the time to the best of your recollection?

A. It was somewhere about 10 o'clock, I guess.

Q. After you were subpœnaed?

A. Yes.

Q. What conversation occurred?

A. I told him I had been subpœnaed and asked him if he had been.

Q. What else occurred?

A. He thought it was a pretty good joke.

Q. What else occurred?

A. Nothing else.

Q. What did he say?

A. As far as I remember he said nothing.

Q. Did he say any thing at all?

A. He said nothing that I can repeat; he did not say any thing that I am willing to repeat.

Q. Now, Mr. Bangs, please tell the committee what he said, to the best of your recollection?

A. He asked me if I had read Sharpe's evidence, and I said yes, and that I had been subpœnaed.

Q. Where did you see him?

A. He passed through the office on his way upstairs.

Q. Your office?

A. Yes, sir.

Q. Is Mr. Kobbe in your employ now?

A. Yes; in the same way; he writes for the paper.

9387 Q. Is he there every day?

A. I think he is.

Q. Is not that the usual way they are employed?

A. They are employed both ways.

Q. And those that are paid according to what work they do are also regularly employed, are they not?

A. His time does not belong to us; he works whenever he pleases and wherever he pleases.

By Senator GILBERT:

Q. But as a matter of fact he works for your paper most of the time?

A. I do not believe he does; he has a great deal of out of town correspondence, I know, in a general way.

By General TREMAIN:

Q. By out of town you mean New York State business, do you not—or what?

A. I do not know, as my knowledge is not exact.

By Senator GILBERT:

Q. His usual place of business is at the *Mail and Express* buildings, is it not?

A. I do not know.

By General TREMAIN:

Q. Is it your opinion as a newspaper man that it is the custom or ordinary course for reading matter to be inserted through advertising agencies?

A. Yes, it is as often that way as any other.

Q. In such cases they are paid for as advertisements, are they not?

A. I do not know, we do not print any of that sort.

Q. I am not asking whether you do or not?

A. Well, I do not know.

Q. How long have you been in the newspaper business?

A. Sixteen years, between sixteen and eighteen years.

Q. Do you know that this was expected to be paid for, or otherwise Mr. Kobbe would not have any interest in it?

A. I do not know to my own knowledge, it is only a case of inference.

9388 Q. In introducing him to Mr. Sharpe you know he would not do so unless he was paid for it?

A. I do not know in what shape the advertisement was, but I knew it was to be advertised; I do not know any thing that I can speak positively about.

Q. Mr. Bangs, did Mr. Kobbe say what this matter was?

A. No, sir.

Q. You did not read it?

A. No, sir, I did not read it.

Q. Was it not an extract from the *Tribune?*

A. I am not aware of that.

Q. Are you or are you not aware whether it was an extract from a newspaper?

A. No, I do not know.

Q. Are you not aware that it was something that Mr. Kobbe had in part prepared?

A. I do not know what my knowledge was at that time, I thought he had prepared it all.

Q. Mr. Kobbe does not prepare advertisements as a general rule, does he? He prepares reading matter, does he not?

A. I do not know all the details of Mr. Kobbe's business.

Q. Say as far as you know to the best of your knowledge?

A. He does not prepare any advertisements for us.

By Senator GILBERT:

Q. So far as you know, or anybody else?

A. So far as I know.

Q. You do not prepare this reading matter yourself?

A. No, sir; I have no connection with this part of the business.

Q. There is a general belief that that sort of advertisements are patent with all newspapers, is there not?

A. I do not know; it is my belief that this rule is not patent with all newspapers; it might be with some, but not all.

9389 NEW YORK CITY, FIFTH AVENUE HOTEL,
December 24, 1885.

The committee met pursuant to adjournment.

Present: Hon. John I. Gilbert, Chairman, Hon. Thomas Robinson, Hon. Michael C. Murphy.

Henry E. Tremain appeared as counsel to the committee.

CHARLES ROOME, a witness called by the counsel to the committee, being duly sworn, testifies as follows:

Examined by Mr. TREMAIN:

Q. You are the president of the Consolidated Gas-light Company?

A. I am.

Q. And you were also president of the Municipal?

A. I was, yes, sir.

Q. General Roome, before commencing the examination, I wish to ask you if there is any line of inquiry which the committee has thus far omitted which you think would be essentially absolute in order to learn the whole truth about the matter under inquiry?

A. I do not know, sir, much about what you have done; I am sure I don't know what you require.

Q. Our object was to see whether there was any side of the question that had occurred to you which had not occurred to us?

A. I can't think of anything, sir.

Q. Do you remember when the first lists or schedules of property of the Municipal Company with a view to consolidation were prepared?

A. I do not.

Q. Well, about how long prior to the summer of 1884?

A. I know nothing about it, General Tremain.

9390 Q. When did you first have any knowledge on that subject?

A. When the committee, the adjustment committee, made their report; I had nothing whatever to do with the adjustment committee.

Q. You mean by the "adjustment," the adjustment of values for the purpose of consolidation?

A. Yes, sir; a committee of one from each company.

Q. You were not a member of the pooling committee, were you?

A. I was not.

Q. Were you not aware that the pooling committee, so-called, had under consideration from time to time, during the years 1880 to 1884, propositions for a consolidation?

A. I believe the pooling committee was formed with the object, if possible——

Q. Well, that I didn't ask—were you not aware of the fact that during 1880, 1883, the pooling committee did consider plans for a consolidation?

A. I did not.

Q. Did you never hear that it did?

A. Never heard that it did.

Q. The pooling committee at a meeting held in December, 1883, appeared to have acted upon or accepted a plan for a consolidation, and to have appointed a sub-committee, with power to call in legal counsel to carry it into effect; did you hear of that at the time?

A. I didn't hear any thing about it; I paid very little attention to the pooling committee.

Q. Well, when it came to a vote in the board of directors, did you vote for the consolidation scheme?

A. I did.

Q. Before voting for it, had you informed yourself of the basis of assessment of valuation of the several constituent companies?

A. I knew nothing except the report of the committee appointed for the purpose of settling all these matters. 9391

Q. You do not know what principle of valuation upon which they acted, do you?

A. I do not exactly know how to answer that question; I do know that the property of the different companies was valued by the process of the adjustment committee, and I know that they reported to the different companies the calculations at which they had arrived; beyond that I am not able to answer the question.

Q. Do you know how the Manhattan Company had its real estate, so-called, appraised or valued, if at all?

A. I have answered that question before; I know nothing about the operations of the adjustment committee, except as they reported to the board of the company of which I was the president.

Q. When, in their report to the board did they not indicate for the consideration of the Manhattan board, whether the value of the real estate, so-called, which is stated in the appraisement schedules for the Manhattan to be $3,563,000, was simply the value of the lots, or the lots with structures upon them?

A. I can't answer that question.

Q. You mean that you never had any information on that subject?

A. I mean to say I have no recollection further than I have told you, being assured that this committee had taken every means in their power to arrive at a just value of all the property submitted to the different companies for consideration.

Q. But you acted, you relied upon that assurance, did you?

A. With perfect confidence.

Q. General, can you give us the name of the engineer of the Manhattan Company?

A. Charles Roome.

9392 Q. Yourself?

A. I am; yes, sir.

Q. And who is the assistant engineer?

A. We have superintendents of work, sir; we have no such officer known now as assistant engineer; we did have, but he died, and since his death we have had none.

Q. Do you know the name of the gentleman who has filled the office since his death?

A. I presume I do, sir.

Q. Is there any practical engineer at the North river station?

A. There is.

Q. What is his name?

A. Mr. Smith.

Q. Mr. A. M. Smith?

A. A. M. Smith.

Q. And at the East river station?

A. Mr. William Combe; both of whom I brought up to business.

Q. How long have you been engaged in the gas business?

A. Since 1837.

Q. With what company, principally?

A. The Manhattan.

Q. You know of the building of the plants?

A. I planned the works and built them.

Q. Are you acquainted, do you know the producing capacity of the Consolidated Companies?

A. I do.

Q. How many cubic feet of gas per day can these Consolidated Companies now put out?

A. Twenty-eight million feet in twenty-four hours.

Q. Have they plants sufficient to do that now?

A. Can do it now this minute.

Q. You know how many cubic feet you have put out since consolidation in any one day?

A. About twenty-two million, sir, I think as near as I can recollect.

Q. Have you any knowledge of the amount of gas required to light the city of New York, in these present evenings, nights, about?

A. I know—I don't know of other companies——

9393 Q. My question is what amount of gas it requires to light this city?

A. At this time?

Q. Yes; this time of night?

A. I suppose about twenty-six or twenty-seven million feet; somewhere along there; that I can't speak positively.

Q. Have you any plants belonging to your company that are not in use?

A. Yes, we have.

Q. And you know about how much?

A. We have the real estate, that is land enough to make fifty million feet a day.

Q. Now, you speak of having land enough; is that land not at present occupied by any tanks or mains or any thing?

A. We can increase our manufacturing with the land we have from twenty-eight million to fifty million, about I think; I have no doubt of it.

Q. Now, you say you built or planned the plants of the Manhattan; are you competent to judge of what it cost to put in a plant at present?

A. I suppose it would——

Q. My question is whether or not you are a competent engineer to testify what plants cost?

A. I suppose a million dollars for a million feet.

Q. That embraces buying the land, and mains and all?

A. Every thing, I believe.

Q. Now, can you estimate or have you estimated what it would cost your company, having the real estate on hand to produce the additional plant necessary, to produce that fifty million feet?

A. That would require a good deal of calculation, but I know and am confident this we can do.

Q. My question is, have you compared the cost at any time since you were president of this company what it would cost you, owning real estate that you have now, to make the addition necessary to make a plant capable of producing in this twenty-four hours fifty million feet?

A. I have not calculated up to fifty million feet.

9394 Q. How far have you calculated?

A. With the expenditure now of $1,000,000, we can make an additional quantity of five million cubic feet a day. We can now furnish five million feet more in addition to the twenty-eight million, with an expenditure of $1,000,000.

Q. Now, you testified before that it would require about a million dollar plant to produce one million cubic feet of gas; now you say you can produce five million with an additional expenditure of $1,000,000; the reason of that is because you have the real estate and other things on hand?

A. Because we have the land, the buildings and the apparatus, and with the expenditure of $1,000,000 we can furnish an additional quantity of five million feet in twenty-four hours.

Q. You say you have made that calculation—that estimate?

A. Yes, sir.

Q. Have you not been president of this company since its formation, this Consolidated Company in question?

A. I have.

Q. Do you have any knowledge of what it is assessed for for taxes; have you any knowledge of that?

A. We are taxed by the State for State purposes.

Q. The answer to my question is—have you any knowledge of what your company is assessed for for taxes; have you a knowledge of it, that's all?

A. No, sir; I do not; I know this, what our personal tax is.

Q. That is assessed in the city?

A. That is assessed in the city.

Q. What is your personal tax?

A. We are assessed in the city on personal $12,700,000, I think; this includes our franchises.

Q. What is your personal property?

9395 A. Our franchises, coal, meters and such matters; the board of assessors did assess us $15,000,000 personal property, and after a good deal of discussion, a long discussion, they reduced it to $10,000,000; now, we——

Q. Reduced what, the personal?

A. The personal from $15,000,000 to $10,000,000.

Q. I thought you said personal $12,700,000?

A. Twelve million five hundred thousand dollars, I think, is the exact amount; they assessed us $15,000,000 on our personal tax, but they reduced that to $10,000,000, and we pay on that; and then I believe we have patent rights worth $2,000,000 or $2,500,000, and that would make it amount to $12,700,000.

Q. So you think your personal tax is $12,700,000?

A. Yes, sir.

Q. And of that personal how much is coal, horses, wagons and things of that kind; what does that amount to, you know?

A. No, sir.

Q. That embraces then this coal and things of that kind, together with your franchises?

A. Yes, sir.

Q. Embraces all the liquid assets according to market value?

A. Yes, sir; I suppose so.

(By Senator Robinson:)

Q. General, I don't suppose that includes the real estate and mains?

A. No, sir.

Q. I think I understood you to say that you planned the plant for the Manhattan Company?

A. Yes, sir, I did.

Q. And superintended the construction of it yourself?

A. I did; they were built under my personal direction.

Q. So you are a practical gas engineer?

A. I am.

(By the Chairman:)

9396 Q. General, when you say it requires $1,000,000 of capital to produce a million cubic feet of gas per day, does it make any difference as to the quantity, that is to say, whether you have a plant that shall produce one million, or five million, or fifteen million, or twenty million, the same would hold good all the way?

A. I suppose it might originally; that would depend perhaps somewhat on circumstances; but that is so. Now, when I say—that I may be understood exactly—the reason why I say that with an expenditure of $1,000,000 we could increase five millions, is because we have in some of our works certain apparatus equivalent to twice their present requirements, and naturally we can now add five million feet of gas a day to our production for $1,000,000; yet to add another five million it would cost, say $1,500,000.

Q. For the second?

A. Yes, sir; then I think we could go on and produce seven million feet for $3,500,000.

Q. The first five million feet $1,000,000?

A. Yes; the second for $1,500,000, and the next seven million feet for $3,500,000.

Q. And then you might go on——?

A. I have not calculated beyond that, sir; you see we have—I have gone over the whole of it; I have reasoned it out all over in my own mind what we can do. We are now sending out twenty-two million feet a day; it depends somewhat on the weather; we will probably send out twenty-four million feet a day during the holidays; but you can't tell; it depends on the weather; if it is foggy and cloudy weather there will be a great deal of gas used in the day time; we can't tell one day what will be required to furnish the next; it is so large a business, it would vary.

9397 Q. Taking the ratio between the capital required and the per diem production, it will vary somewhat according to the quantity of gas produced by a given plant?

A. Yes, the more gas you make the cheaper you can probably make it a thousand feet.

Q. That is what I want to get at, whether or not that is so?

A. Yes, sir; you can do a large business cheaper than a small one.

(By Mr. Tremain:)

Q. Did I understand you, General, that the $12,000,000 of assets, the value of personality that you alluded to was the entire personality of the company upon which you paid taxes exclusive of real estate, or was that the amount from which the read estate was deducted?

A. It had nothing to do with the real estate.

Q. Nothing to do with the real estate?

A. No; I want to be understood, as I stated before, the city consented to place our personal taxes, that is our franchises and meters at $10,000,000, and the State taxes *us* $600,000 a year for State purposes; so I suppose that may be considered as the fair value of our franchise—that is the way I got at it.

Q. And the entire personality?

A. Yes, sir, the franchise, I suppose.

Q. You speak of patent rights. What patents are in use at the Manhattan works?

A. We have patents for charging and drawing retorts and storing away coal, etc.

Q. How many patents have you for charging?

A. Oh, I don't know; we have Ross's patent for charging, drawing, etc.

Q. What else?

A. That's all. Yes, we have—I don't know that you would call it a patent right—there are ways for storing coal.

Q. What others for charging?

A. We have Ross's patent.

9398 Q. No others?

A. The same as used in Cincinnati.

Q. What patents, if any, used in connection with filling the holders or tanks?

A. None that I know of for filling the tanks. I don't know what you mean.

Q. Is there not a patent used in conveying the gas from the tanks?

A. I don't know of any.

Q. For charging the retorts, putting the coal in and taking it out again?

A. Yes, sir.

Q. Is there any patent used from that time until the time the gas reaches the mains?

A. No.

Q. None?

A. No, sir.

Q. Has there never been?

A. You mean after the gas leaves the retorts?

Q. Yes, sir.

A. I know of no patent; the patent is in storing coal and manufacturing the gas; after the gas is made it requires no patent; it takes care of itself.

Q. Is there no patent used in adjusting the pressure?

A. I don't know of any patent for that.

Q. No patent used in recording the pressure?

A. I don't know if there are any patents; there are instruments for that purpose—an apparatus for that purpose; there may be patents; there are some patents, but as we buy of the manufacturers we have nothing to do with those particular patents that I know of.

Q. Is there a stage in the process after the gas is produced before it is consumed when any pumps are used?

A. After the gas is produced? Oh, we use what we term exhausters or air pumps—gas pumps.

Q. Are they patented?

A. Yes, sir; all those things are patented but the company does not own those patents.

9399 Q. You acquire the right to use them when you buy the machines?

A. Yes, sir.

Q. How many are used by the Manhattan?

A. Oh, I don't know; we have patent exhausters that we bought in London forty years ago; and there is the McKenzie patent here, and oh, two or three others; I don't know.

Q. Can you mention the names?

A. No, I don't know; Root, I think, is the name of one, McKenzie was one, and Jones, and I think there was another one, Beals; we use two kinds of exhausters in the Manhattan works; they use in all the works different patents; I can't recollect the names of the owners and patentees.

Q. What did you say the names of the patent exhausters are?

A. I think Root is the last patentee.

Q. Did you ever hear of McIlhinney?

A. I didn't know he had invented any.

Q. The purpose is to relieve the pressure from the retorts and to force it against the weight of the gas holders?

A. Yes, sir.

Q. And by what general process is that done?

A. The exhauster draws the gas from the retorts and forces it through all the intervening apparatus into the gas holders; to explain it further I would have to go into the chemistry of the thing.

Q. A strong pressure of air is created in order to aid in the propulsion of the gas?

A. Strong pressure of air—air has nothing to do with it; the air has nothing whatever to do with it.

Q. You use an air pump?

A. I say it is like an air pump—it is a gas pump; it pumps the gas from the retorts through the intervening apparatus to the gas holder so as to cause the holder to rise; the weight of the holder gives all the necessary pressure on the streets.

9400 Q. If the weight of the holder then can rise that increases the pressure in the mains?

A. What mains?

Q. To which the gas is delivered?

A. Yes, sir; when we speak of mains we speak of large pipes in the streets.

Q. The pressure on the street mains is regulated by the pressure on the tanks?

A. Yes, sir; when you say tanks you mean the holders that hold the gas—the gas holders; if the pressure of the gas holders is greater than that required on the street mains, that is regulated by valves or governors; on regulating that pressure the gas holder would vary in pressure according to the height.

Q. If the weight was stationary, so it could not move up and down?

A. There would be no pressure at all; in that case, if you filled it you could not empty it again.

Q. It would have to be pumped out?

A. Pumped out? That is an absurdity.

Q. You mean that it is not practicable?

A. Impracticable; if you should attempt to pump the gas out of the gas holder you would crush your gas meters in, and in very short order.

(By the CHAIRMAN:)

Q. General, when these companies were brought together, was it found that there were many of the streets in which there were an unnecessary quantity of mains?

A. Yes, sir; that will always be the case where you have opposition companies; the more companies you have the more capital you waste in carrying on the business.

Q. Can you tell us how large a quantity of those unnecessary mains there was at the time of consolidation?

A. I am not sufficiently familiar with the subject to answer the question; I knew there were more large mains than business would warrant.

9401 Q. Could you give us some kind of an estimate that would be approximate?

A. I cannot, sir.

Q. Some complaint has been made that while the price of gas has been reduced the bills for gas have increased; now, without inquiring whether that is particularly so or not, we want to ask you this: What are the conditions which either increase or diminish the quantity of gas registered at a given burner for a given number of hours, if you please?

A. In nine cases out of ten the carelessness of the consumer.

Q. The carelessness of the consumer in what respect?

A. Not paying attention to his light; putting it out when he does not want it; there is an enormous quantity of gas that is wasted unnecessarily through the carelessness of the party burning it; that has always been so, and I think will always be so from now until the day of judgment.

Q. Now, assuming that that carelessness is a fixed quantity, now, what other conditions would either increase or diminish the quantity of gas registered at a given burner?

A. I don't know of any condition that would do it in a properly conducted company as ours is; the pressure by the gas companies is no more or less than just to furnish the quantity of gas required.

Q. I am asking you now what conditions might do it—not in your case, nor in any other particular case—but what conditions might increase or diminish the quantity of gas registered at a given burner, other things remaining equal?

A. I know of none whatever.

Q. Could you not increase the pressure in such a way as to cause the escape of more gas—I don't refer now to any thing you have done?

A. I understand that; no gas company will work under a greater pressure than it is compelled to.

9402 Q. How is your propulsion usually determined?

A. By the requirements; for instance, if we should get a report made of deficiency of light the deficiency of light would arise from the fact of insufficiency of gas; that insufficiency of gas would arise from the fact that it was not sent into the meters with sufficient force to supply the quantity required; we would then increase our pressure; our pressure is increased or diminished every few months.

Q. Would it be a physical possibility to increase the pressure so as to cause the escape of an unnatural amount of gas at the burner?

A. Not at the burner; it would in the street mains; it might in the street lamps; but in the house, if parties pay any attention whatever to their light they may regulate it to suit themselves; but the gas is improperly burned, it is improvidently burned, wastefully burned.

Q. That I understand; I have no doubt it is so. Now, supposing the light is turned on with full force, is it a physical possibility for the company to cause such a pressure to be brought upon the gas as to cause the escape of more gas than is really consumed?

A. Not more than is consumed, but more than is properly consu*em*d. There are some burners so constructed, called fish-tail burners, that will blow when you turn them up, they will go up to a point instead of spreading out the gas; it will whistle, and then the only thing you can do is to turn your gas down, but if you shall let it blow the gas company can't help that.

Q. Would more escape than could be turned into a flame?

A. I don't see how it could escape without being consumed.

(By Senator Robinson:)

Q. General, you have had an experience with meters; is
9403 it just as apt to register so as not to register all that passes
through?

A. Yes, sir; a majority of meters that do not register correctly register against the company; they pass more gas than they register.

(By Mr. Tremain:)

Q. Do you make that statement from the records of the company or is it a matter of knowledge?

A. What?

Q. That statement you have just made?

A. I speak from positive knowledge; it is a matter of positive knowledge.

Q. Is that particular statement you make a statement that is made from the records of the company?

A. Yes, sir.

Q. Those records are records of meters that the company has tested and examined and no others?

A. Yes, sir.

Q. What books will show such records?

A. You can find them by going down to Irving place; there is not a meter that comes into that building and goes out again without being proved, whether it is a new meter from the factory or from a customer that has been sent back to be reconstructed; the record is kept and you are at liberty to look at it; I think we prove certainly ten thousand a year.

(By the Chairman:)

Q. General, how does the illuminating power of gas affect the quantity consumed at a given burner, other things being equal?

A. The illuminating power and the quantity have no reference to each other, if I understand you right.

Q. One witness thought that when the illuminating power of the gas was increased at a given burner that the quantity consumed, other things being equal, was diminished?

A. The quantity consumed might depend on the specific gravity of the gas.

9404 Q. Does not the illuminating power coincide with a certain relative specific gravity of the gas?

A. Not in all gas.

Q. The greater the illuminating power the less the specific gravity ordinarily?

A. It would not follow.

Q. Would the reverse be true?

A. I would have to get at the composition of the gas and go into the details of the manufacture of gas to answer that.

(By Mr. TREMAIN:)

Q. General Roome, inasmuch as Senator Robinson has asked you one question about meters I would like to ask you if it is not the fact that the longer a meter is in use the more apt it is to get out of order and register against the company?

A. The longer it is in use?

Q. The older it gets?

A. To register against the company; yes, sir.

Q. That is generally true, is it not?

A. Oh, yes, that has been my experience, gentlemen.

Q. A great many things might happen; I don't care to go into the subject of meters?

A. I don't care to volunteer any thing; I don't wish to be understood as doing so; but I believe there is no article of consumption sold in this community than the gas sold to the public that will——

Q. I did not ask any information on that subject; this committee has not inquired into that; it is the policy of the company to change the meters about how often, within five years?

A. Oh, yes, all changed.

Q. As a general thing within three years?

A. Yes, sir.

WILLIAM COMBE, a witness called by the counsel to the committee, being duly sworn, testifies as follows:

9405 Examined by Mr. TREMAIN:

Q. What is your occupation?

A. Superintendent of the Fourteenth street station of the Consolidated Gas Company.

Q. That was formerly the East river Manhattan station?

A. Yes, sir.

Q. And you were also there at that time?

A. Yes, sir.

Q. Your profession is that of an engineer?

A. Of a superintendent; I don't claim to be an engineer.

Q. How long have you been in these works?

A. About thirty-one years.

Q. You are familiar with all the details of the work there, are you not?

A. Yes, sir.

Q. Well, what is the process by which the gas is put into the holder?

A. It is made in a retort and goes into the holder by its own pressure and the pumps.

Q. What pumps?

A. Root's and Jones' exhausters.

Q. How long have they been in use?

A. The Jones pump has been in use nearly thirty years.

Q. Thirty years?

A. Yes, sir; and the Root pump about two years.

Q. Are those the only ones that have ever been used?

A. Yes, sir, at that station, at their works.

Q. What special purpose do they preserve?

A. Take the pressure off the gas in the retort.

Q. What else do they do?

A. Put it into the gas holder.

Q. Suppose the pressure of the gas holder is uniform and is not changed, what is the effect, if any, that the pumps have on the gas?

A. No effect at all, but to put it into the gas holder.

Q. Well, if there is an outlet it would put the gas into the street mains, would it not?

9406 A. It has nothing to do with the street mains; that is regulated by another valve that is in our valve house.

Q. Any pump used there?

A. None at all.

Q. What regulates the valve?

A. The gas is regulated going out by the pressure of the gas holder.

Q. My question was, suppose the pressure was not regulated at all, but remained uniform, would not those pumps make the pressure more or less?

A. The pumps have no connection with that pipe at all; they have another in connection with the street.

Q. For forcing the gas into the holder?

A. Yes, sir.

Q. If the valve was open and the pressure uniform, that would force the gas into the mains?

A. The pressure of the gas holders does force the gas into the street mains; we have to change that every five months.

Q. My question was, assuming that, without opening and regulating, it remains uniform at the valve, and that the pressure on the holder was uniform, would it not be possible to force the gas through the holder into the main by that pump?

A. No, sir.

Q. Why not?

A. It pumps directly into the holder; it forces the gas into the holder.

Q. If the valve was open and the force continued it would have to force it out, would it not?

A. No, sir; I can very well explain what I mean; it pumps into the gas holder.

Q. If the top or bottom of the valve was open it would pump it through and out?

A. It would pump it so full it would blow out at the bottom from a separate valve there.

Q. Suppose they are open?

A. When they are open; they are only opened when they are required to be.

9407 Q. Is it not possible for you to answer my question, then? Suppose that the valves are open so that the gas may escape from the holder into the street arteries, and suppose that the pressure at the holder remains constant and uniform, and is not changed at all, and the gas pumped into such a holder thus opened, would not the gas escape by the arteries into the street, under those conditions?

A. Yes, sir.

Q. It would?

A. Yes, sir.

Q. Now, I ask you this question: Is it not possible so to force the gas by the pumps that you use, in order to pump it into the holder that with a uniform pressure at the holder, and the valve open, the gas can be pumped into the artery; that is possible, of course, is it not?

A. It is possible, yes; but at night, when we are using the full quantity of gas, all we make is pumped into the street and the surplus required comes from the gas holder.

Q. Comes from the gas holder?

A. Yes, sir.

(By Senator Murphy:)

Q. Then your theory of it is that you supply the meters, and if the supply of gas in the mains becomes exhausted, then you take it from the holder again to supply what is needed, is that it? Is the valve continually open to supply this?

A. Yes, sir.

Q. The gas is continually open from the holder to supply the mains?

A. Our holder is the surplus for the night, at night time; when there is full consumption going on, all that we make goes out into the street, and if the surplus required is more than we make it comes from the gas holders, which are stored in the day time.

(By Mr. Tremain:)

Q. Assuming the pressure of the holder to be constant and uniform, and the valve open, and constantly open, at what point, 9408 if any, is there a danger of explosion under those conditions?

A. None at all, that I am aware of.

Q. At this station you make coal gas?
A. Yes, sir.

JOHN H. SHERWOOD, recalled, testifies as follows:

Examined by Mr. TREMAIN:

Q. Mr. Sherwood, did you examine the schedule of lands, of lots, that were set forth in the schedules in evidence of the constituent companies entered into the Consolidated?
A. I have.
Q. What is your experience and sources of knowledge and information touching the values of lots in the city of New York?
A. I have been a dealer in real estate and an appraiser for large institutions, also for estates and individuals for the last thirty years.
Q. Name some of the institutions that you have acted in that capacity for at times?
A. Mutual Life, Van Buren estate, Columbia College, Board of Underwriters, and others where I had to let for friends; constantly giving opinions to parties upon real estate.
Q. Is it or not an ordinary thing in forming an opinion touching the value of real estate in the city of New York to estimate separately the value of land or lots as distinct from the structures upon them; is it or not a familiar thing to estimate the value of the land or lots?
A. In valuing for loans I also get at the value of the land and the buildings.

(By the CHAIRMAN:)

Q. Separately?
A. Separately.

(By Mr. TREMAIN:)

Q. And if you have familiarized yourself with the lots upon which the works and structures of the plant of the various constituent companies are located sufficiently to form an opinion, the committee would like to know whether the values, the total values, opposite the terms "real estate," "bulk heads," "piers," etc., set forth in the presumed schedules that are in evidence are or are not in excess of the fair market value of those lots; please state to the committee whether you can express an opinion on that subject? 9409
A. In this case I am called upon to give an opinion upon the value of lots that are stripped of every thing above the paving and the sidewalks.
Q. Take all and value it as improvements?
The CHAIRMAN: You give the value of it as land located where it is?
A. Yes, and occupied for manufacturing gas.
Q. Have you an opinion on that subject?
A. I have, yes, sir.
Q. Please state to the committee whether in your opinion the values upon the schedules are or are not fairly stated there?
A. I think they are excessive and fictitious.

Q. Well, please state more of your information and to what extent they are so excessive?

A. They are estimated beyond what land property could be sold for at this time. It is notorious that wherever gas works are located that it cheapens and is a blight upon the property; the gas property itself necessarily remains cheap property and it cheapens the surrounding property, and in no section where gas plants, to my knowledge, are located do we find high priced property.

Q. I don't think that opinion responds to more than half my question. To what extent in your opinion are these values excessive?

A. I shall say that they were from twenty to thirty-three and a half per cent., and in some few cases more than that beyond their present value.

9410 Q. By present value do you refer to the value in 1885; if you do I understand this question to relate to the period of 1884?

A. By present value I wish to be understood that it was what I could say their present value would be, stripped of every personality that they have, estimated as personal property, just the bare lots, as I am requested to give an estimate.

Q. Would it have been less or more in the fall of 1884 than now?

A. Not that property; property generally I could say in the City of New York has appreciated in the last ten or twelve months; property is considered on the up-grade now in the city.

Q. You base your opinion on the present value?

A. I base my opinion from the values that were given at the time of the consolidation, the figures that I had here.

(By the CHAIRMAN:)

Q. Are your estimates based upon the value of to-day or the fall of 1884?

A. The values that I take in the schedules submitted to me.

Q. At what time of valuation, now or then?

A. When these statistics were made, the data there.

(By Mr. TREMAIN:)

Q. The sections of the city in which these various works appear by the schedules to be located are very well known, are they not?

A. Yes, sir.

Q. Persons at all familiar with real estate are likely to be well informed as to their fair values, are they not, do you think?

A. Yes, sir; I think that is a matter that could easily be got at.

Q. Have you been engaged in buying and selling vacant lots in the city?

A. Yes, sir, and owned a great many of them, almost daily, I think, from its very progress.

Q. If it were known that vacant lots were to be used for gas would not that put up the price for those lots, would they not have
9411 to pay more for that purpose than any other?

A. No, sir; if fifty companies, gas companies, were to start business in the city of New York to-morrow—perhaps that would be an excessive estimate—I say ten companies, they would have no difficulty in finding cheaper property to locate their plant upon; the supply of that is greater than that of any other kind of property.

Q. I understand you to say it cheapens all property around it?

A. Yes, it does; I believe no one will dispute that.

Q. Would it not put up the price of lots for that purpose?

A. I can answer by saying, if the gas companies would pull up stakes and go somewhere else their own property would sell for more and the surrounding property would be more valuable.

(By Senator MURPHY:)

Q. Then you mean to say if the gas companies removed their buildings from the present location that real estate would be of more value than it is now?

A. It would sell for a higher price than it would sell for now.

(By Mr. TREMAIN:)

Q. Would those particular lots sell for more?

A. Well, I don't know how to answer that; perhaps they would sell for more if the gas works were off from it. I will say this much, that if there was a restriction that there should be no gas manufactured on that property it would sell for more than with that restriction taken off.

(By Senator MURPHY:)

Q. What is the value of these properties, how do they compare with the values in the tax office?

A. I have not made that comparison, Senator.

(By Mr. TREMAIN:)

Q. Mr. Sherwood, do you know any thing about what is a proper capital, a fair capital to produce a gas plant of a given 9412 capacity, have you ever had any practical experience or any kind upon that subject in the usual course of business; if you have, the committee would like to have it?

A. I have no practical experience except from paying bills, gas bills, but from information I have obtained this last year, and what I consider very reliable information, in regard to the manufacturing and selling of gas.

Q. Well, if you can give the committee any light on that subject, I have no doubt they would be glad of it?

A. I am assured by reliable gas manufacturers who make it their business to set up works, that if they can have the right to come into the city and set up works and sell gas here, that they can supply it, to begin with, for $1.25, and will do so; and I have not the least doubt that any required capital for that purpose can be obtained.

(By Senator MURPHY:)

Q. Can you give us the names of those gentlemen?

A. I could not without giving you the names of parties who are willing to come here and start gas works; they are personal friends of mine, some of them, and perhaps some of them——

Q. My reason for asking the question is simply this—and all your evidence goes on the record—you stated what you know of several parties who are willing to come into New York, if they have the right of way, to manufacture gas for a certain price?

A. I will give you better reasons, Senator; some of them are interested in the present gas companies.

Q. Now, Mr. Sherwood, there is another clause in your answer that perhaps ought to be explained; what do you mean when you say if they had the right of franchise?

A. I mean to say that no man to-day that does not hold a charter, unless gas companies, can lay an inch of pipe in the city of
9413 New York without getting the consent of two-thirds of the population; could not do it if he furnished gas for ten cents a thousand feet.

Q. You think that that would retard the gentlemen to whom you referred in your evidence would establish gas companies?

A. I have no more doubt of it than I have that you will eat your dinner to-day.

Q. Do you refer to the law of 1883, known as the Thirty-fifth Act?

A. Yes, sir; I think that is the act that shuts out any other companies except the present ones from making or selling gas, and I characterize that as the most infamous piece of legislation that was ever enacted in the State of New York.

Q. Suppose there should be four or five more companies or twenty?

A. If I ever ask you to pass a charter for a gas company I will be willing to have a restricting clause put in prohibiting the company from charging more than $1.25 a thousand feet for gas, and also prohibiting among the shareholders a distribution of more than eight per cent. a year in dividends, which is enough for any reasonable man.

(By the Chairman:)

Q. Eight per cent. on what?

A. On the money actually put in.

(By Senator Robinson:)

Q. Are not the streets nearly full of pipes now?

A. No, sir; there is always room for more in the city of New York; there is room enough to put down a great deal more plant than we have got here; they may not be laid with precise regularity; pipes are put down in the streets very much like a string of country sausages, you know.

(By Senator Murphy:)

Q. Have you ever had any conversation with any of the gas manufacturers in relation to the price of gas?

9414 A. Yes, sir; I met a large manufacturer, one of the best informed manufacturers in this city, on last Saturday evening at the club, and spent most of the evening with him.

Q. That is what I am getting at. Have you and any other members of the Gas Consumers' Association, met with any like number of gas manufacturers in any hotel or room in this county, in this city, for the purpose of talking over the price of gas?

A. Yes, sir.

Q. I don't want to ask the names of the gentlemen who were present—will you give the committee the conversation, the substance of it?

A. Now, must I talk right out in meeting; the meeting was in a measure a private one; it is a question whether it would be proper for me to do so; so far as my part of the conversation is concerned, I would be glad for the committee to know it.

Q. If the subject was a private conversation, the committee has no power to exact it, but if it is any thing that ought to be on the record of this investigation, I would like to hear it.

Mr. Tremain: I don't think it ought to go on the record until the committee has heard it.

The Chairman: I concur in that. The committee has no interest except as the temporary representatives of the public in this matter; we have no friends, no enemies.

Senator Murphy: I will not push the question for the present.

The Witness: I will say however, that the manufacturers and consumers were not able to agree on the subject of dividends to be paid by the gas companies. The consumers thought that the shareholders were unreasonable in wanting so large dividends, and the shareholders who had been educated up to receiving large
9415 dividends, thought that the consumers were unreasonable in wanting the dividends reduced so low as seven or eight per cent.

The Chairman: It is always unreasonable to expect anything less than what you can get.

A. Certainly, sir; I will say right here, if I can succeed in having gas sold in the city of New York by the present gas companies at what it ought to be sold for, for what they are selling it in some other cities for, I will step right out of the way and let the present gas companies occupy the ground as long as I live. I don't want to make gas except in self defense.

(By the Chairman:)

Q. Now, Mr. Sherwood, that the subject has been broached, if you have no objection, I would like to ask this question, whether, as a large property owner and a man familiar with the values of investments, is there in your judgment any doubt that abundant capital to supply New York city with gas can be immediately secured, or would be proffered if a dividend upon it should be limited to eight per cent. on the actual investment, and the price of gas regulated by law or the public authorities?

A. And a charter back of that that was durable, will you say?

Q. I assumed that in my question?

A. No, sir; not at all; there are millions here that are put into investments that pay from four to eight per cent.; millions of dollars.

Q. I was going to ask you about that; would large companies making gas be secure in a dividend in gas of legal interest, or even four per cent.?

A. It is one of the grossest wrongs, Senator, that has even been put upon the people of the city of New York, the enormous 9416 amounts of money that have been wrung out of the people by the present gas monopoly.

Q. Have you any reason to doubt that if a gas company were formed with a nominal capital exactly equal to its actual capital doing a fair business with the people, have you any doubt whatever but what a dividend of five per cent. would be a reasonably remunerative profit upon the investment?

A. If investors knew it was permanent, it would not.

Q. You refer, in a large measure, to the fictitious capital and the manner in which the business is conducted?

A. Mr. Senator, the public in the city of New York know but very little about the works of these companies—these gas companies; it has been manipulated and held by a few favored old substantial people of this city; if the public knew of the profits that have been made out of them, I don't think these persons would ever have been suffered to accumulate profits that way; there is a measure of bad the public know very little about.

(By Senator MURPHY:)

Q. What system would you recommend?

A. I would recommend you to open the streets of the city of New York to any party or to any person who would, under proper legal restrictions, supply gas to the city of New York at any time for the purpose of making better gas or selling it cheaper than the persons who keep up the gas now; I would recommend that.

Q. Would that be done by the common council?

A. By the common council or by the legislature; let us have eight per cent. dividend, and let the people have the gas at cost after that.

(By Mr. TREMAIN:)

Q. Would publicity of accounts have any thing to do with it?

A. I would have the whole management as open as the noonday.

9417 (By Senator ROBINSON:)

Q. Mr. Sherwood, are there any other large corporations based on that principle, the dividend being limited to eight per cent.?

A. Well, yes; I think our savings banks.

Q. The Mutual Insurance Company limit in that way?

A. That is mutual; we don't take a penny for ourselves; let the gas companies adopt the system of the Mutual Insurance Company, nobody will ever make another complaint.

(By the CHAIRMAN:)

Q. Do you not think that corporations that derive their privileges from the public should be under the restrictions and under the eye of the public?

A. I believe any institution or any body of men who are receiving privileges that are likely to be avaricious and overstepping the bounds of reason ought at all times to be restricted by legal enactments; now, when you come to take an article of gas and contrast it with a bank or any thing of that kind it is an entirely different thing; you can buy your gas nowhere else; you can buy your Croton water nowhere else; but you can deposit in any American bank and go to any store.

Q. You have had some seven or eight different companies that were opposed to each other, were they not?

A. It was not a monopoly at all until they made a combination; then it became a monopoly, I never opened my mouth, Mr. Senator, until that law was passed.

Q. During the time you had seven or eight different companies was not gas as high as it is now?

A. Yes, sir; sometimes as high and sometimes higher.

Q. So that competition didn't cheapen the price of gas?

A. It did at one time, and then they bought up the competitors, and now there is no competition; within a few years inventors and discoverers have enabled them to make gas with double the illuminating power at about less than half the cost; gas is made to-day for sixty and seventy cents, but they don't sell it for that; it is made in Jersey City and sold for $1.25; the largest gas companies in Chicago brought the price down to $1 and they never want to see gas higher than that in that city. 9418

(By the CHAIRMAN:)

Q. Is it not true that competition alone is not enough to remove the evil complained of; you have got to have some regulation as to capital and some other matters?

A. Yes, sir; these same companies were competitors some few years ago at seventy-five cents, and by a pooling arrangement they brought it up to $2.25; they were no longer competitors then; you take cities in Germany, you take the place where Krupp makes his guns, those people are making gas there to-day at a cost of sixteen cents; of course the conditions in Germany may be very different from what they are here; labor is cheaper, and we pay better wages.

W. W. SHARPE is recalled, and testifies as follows:

Examined by Mr. TREMAIN:

Q. Referring to your bill-book at pages 386 and 387, a copy of which is before you, and to which the witness who has made that copy is to be sworn, did you or your firm pay or incur the several amounts to the several papers therein named and for which you rendered a bill to the Consolidated Gas-light Company; did you ever pay or incur those amounts, less the commissions?

A. I don't know; I don't know that I rendered a bill to the Consolidated Company; sometimes we do advertising for other agents and we divide the commissions with them and have nothing to do with making the contract with the advertiser. 9419

Q. Assuming that may be so, is it not, however, the fact that the entries in your books that are made in the usual and ordinary course of business are true entries and represent actual transactions?

A. I think so.

Q. Your books do not indicate that a payment was not made or an obligation not incurred when they state the contrary, do they?

A. No, I think not.

Q. You think your books do give a true record of your business so far as they give any?

A. Yes, sir.

Q. Who is the man in your establishment who has personal knowledge of the transactions or of any part of it to which this bill of May 11, 1885, relates?

A. I can't say.

Q. What is your cashier's name? He is bookkeeper too?

A. Yes, sir.

Adjourned to 3.30 o'clock P. M.

HENRY C. THOMAS, a witness called by the counsel to the committee, being duly sworn, testifies as follows:

Examined by Mr. TREMAIN:

Q. You are cashier for W. W. Sharpe & Co., are you not?

A. I am, sir.

Q. You remember a transaction in April by which an advertisement was to be sent through your firm to various newspapers in the city of New York, which newspapers are named in a bill in your bill-book, pages 386 and 387, under date of May 11, 1885?

A. Yes, sir, I conducted the transaction.

Q. You conducted the transaction?

A. Yes, sir.

9420 Q. Were the amounts that are set opposite the names of those different newspapers paid in the usual course of business to those newspapers, less the commissions?

A. Yes, sir, in some cases in making estimates we have to be a little higher in price; I could not say those are the exact prices; there may have been a little variance, higher or lower.

Q. Would you know at the end of the month when bills come in?

A. Yes, sir.

Q. And so far as you know the bills in the usual and regular course of business have come in at the end of the month and been paid or allowed in this particular advertisement?

A. Yes, sir, I am quite sure, but I would not say positively.

Q. Give us the amount of any that came in?

A. Yes, sir, we have a statement made up once a month.

Q. When they come in you are under obligations to pay them?

A. Yes, sir.

Q. Was any advertisement charged for by those papers designated?

A. Yes, sir.

Q. You keep a record of them?

A. Yes, sir.

Q. Have you to check off the advertisements that appear?

A. Yes, sir.

Q. You receive the papers and check them off?

A. Yes, sir.

Q. And this bill was paid as rendered, was it not?

A. Yes, sir, paid as rendered.

Q. What was the name of the man who conducted the transaction with you?

A. Well, that is a thing I can't swear to exactly; the name was Bange or Banze or something of the kind.

Q. A commission was allowed him?

A. Yes, sir, a very small commission.

Q. A commission out of your commission?

A. Yes, sir, probably $10, or may be a little over that.

9421 Q. There seems to be a charge also for an advertisement in the *Commercial Advertiser,* May 17, 1885; you remember about that?

A. Yes, sir; that was brought in by the same party but at a different time. I never saw him before but have seen him again since on the street; that is the only way I have of finding him.

Q. Do you know his business?

A. He told me he was a reporter on some newspaper.

December 28, 1885.

Meeting of the senate committee.

Present: Senators Gilbert and Murphy.

Witness, Dr. W. M. Jackson:

By Mr. Tremain:

Q. Doctor, you are connected with the——

A. I am president of the Gas Consumers' Benefit Company of the United States.

Q. Have you had experience in matters pertaining to light, heat and power, in a scientific way?

A. Yes, sir, I believe I am considered an expert in that respect.

Q. Kindly tell the committee what your experience in matters of that nature has been?

A. Well, sir, there has been a great deal of complaint from consumers regarding artificial light and in my judgment the complaints are largely due to the ignorance of the consumers themselves about gas; a total misunderstanding of the gas system and of the nature of gas.

Q. Have you made a scientific study for some years of the nature of the product of gas for manufacturing purposes, its method of production, distribution and consumption?

A. Yes, sir.

Q. Please tell the committee in what way your experience on these subjects has been gained?

9422 A. Well, it has been gained principally by experimental work on my own part; my investigation in the production and maintenance, and operation of gas works in every state in the United States; building works myself for the manufacture and delivering of gas and going into the works and making gas myself and making scientific tests of — photometrically and otherwise.

Q. So that you have studied the matter in a scientific and tested in an entirely practical sense?

A. Yes.

Q. What cities does this cover?

A. Providence, Boston and New London Gas Works; I built the latter for water gas nearly twelve years ago.

Q. Is your profession that of gas engineer?

A. No, not particularly; I profess to be scientific in this special department.

Q. Did I understand you to say that you were president of the Gas Consumers' Benefit Company of the United States?

A. Yes, sir, I am.

Q. In case that statement might mislead, as there is a Gas Consumers' Association, what is the object of your company?

A. To acquire and offer to the public all things which may cheapen the cost of artificial and effective illumination.

Q. You stated a moment ago there were many complaints by consumers regarding artificial light, do you allude to your general experience in other States or only to New York city?

A. In all cities where I have been brought in contact with the gas question I found the complaint to be universal, not only in New York city but in other cities.

Q. Well doctor from what cause or causes in your experience did such complaints proceed?

A. The main feature as I understand it is excessive pressure at the point of ignition; improper burners; the distribution of gas of unscientific composition; of varied and too high candle power; 9423 ignorance of the public concerning gas meters and general apparatus involved; illogical press comments; things accepted by custom as facts which have no truthful origin. A total misunderstanding of the gas question. A fostering desire to find fault, with no fundamental information from which to draw reasonable and just conclusions. Effects of long accepted, fictitious notions, creating morbid public denunciation of everything connected with gas. Improper regard for the rights of the people by gas companies, their selfishness placed predominant in fact of the franchise, the gift of the people.

These causes, the heads of subjects may be divided and subdivided into particular considerations until they become excessively numerous. Brevity and clearness therefore, in the statement of causes, must be incompatible with the rough conception of all points involved. To understand the gas system embracing its relation to kindred branches of industry, from the moment the pick breaks ground for the erection of works through all its ramifications to a truthful understanding of all modern improvements in chemistry, philosophy, dynamics, mechanics and mercantile diplomacy one must have made the subject a thorough study, and cannot convey his information in connected order unless he resorts to systematic preparation. I know of no subject which combines more humbug in the same receptacle than illuminating gas. There are a thousand

and one processes for its manufacture, each the best. The apparatus for its consumption, burners, stoves and engines may be counted by thousands; to eliminate the true from the false requires a thorough knowledge of the subject; each misrepresented ap- 9424 pliance pushed into popular favor, soon clouds the confidence of consumers and renders so much more difficult the introduction of any thing meritorious—we have thus to deal with an apparently inextricable mass of incongruous matter.

Q. General Roome, who was called here, volunteered an opinion—I do not remember that he was expressly asked upon the subject in reference to the veritability of meters. Now if your experience is of a character that enables you as a scientific and practical man in expressing an opinion upon that subject, the committee would like to have your opinion as to whether gas meters measure and record gas correctly, and if not whether there — any that do?

A. I have had large experience with gas meters; I have had occasion to use all kinds that have been manufactured, both American and foreign; I have tested them in all conditions of temperatures and tested at random those in general use and I draw this conclusion: I know of no instrument in such universal use, which can favorably compare with a gas meter for faithful work—at the factory before it is permitted to leave, it is adjusted with the utmost care and operates as accurately at the temperature of adjustment as a chronometer. Of course it must vary in general use as temperature contracts or expands a cubic foot, but since it is usually located in a cool place, the cellar generally, we may infer that its action will be as fair for the consumer as the manufacturer of gas—take it the year around its record is correct; a gas meter can no more move its machinery without a flame of gas through its substitute cylinders and valves, than can a steam engine with no steam; the dial hands of a meter are connected to the actuating mechanism by positive 9425 gearing, and they cannot move unless the engine be put in motion; the motion cannot take place unless the gas passes in or out of the meter; the metrical devise may be injured in such manner that gas may pass through without actuating the engine, in which case the index is silent and the consumer receives his gas gratuitously; but cannot be so broken that no gas will pass, and the index continue to record; to be plain, the indices of meters mark consumption only when gas passes, and if a record be made upon the dial you may be sure gas has gone somewhere, either consumed by burning or lost by leakage in your pipes; I will not say that all meters in use record correctly, but will assert that I believe if all the meters in this city were tested, the result would show against the Gas Company an average loss, which of course gives the consumer the advantage; meters may be incorrect from improper adjustment after being repaired, or may be read wrong by the indexer, but I firmly believe the meter to be more than fair toward the public, taken as a whole.

By Senator GILBERT:

Q. Is there no allowance——
(Witness interrupting:) No, sir.

Q. You have named improper adjustment as a possible case of meters recording incorrectly, is it not true that the index of the meter may be made to run faster or slower as the gas passes out of the consumer's pipes, according as the radius that is attached to the diaphragm may be lengthened or shortened as the pendulum of a clock?

A. Yes, sir.

Q. So that by lengthening that radius, as the pendulum of a clock is lengthened, the meter may be made to run too slow?

A. Yes, sir.

9426 Q. And by shortening it as the pendulum of a clock is shortened, the meter may be made to run too fast?

A. Yes; that is so.

Q. And that effect may be produced, may it not, while the gas that is passing through the meter is consumed?

A. Yes, sir.

Q. And your evidence as just delivered, is based is it not, upon the theory that the radius is perfectly adjusted?

A. Yes.

Q. Is that practicable?

A. Yes; the meter is adjusted by means of a power which indicates the exact number of cubic inches, and the adjustment continues until the index of the meter and the delivered gas measured by the power correspond; this is exact at uniform temperatures.

Q. Is it not practicable without disturbing the seal to change that adjustment?

A. It would be a very difficult thing to do; you are obliged to take the whole top of the meter off to make the adjustment properly.

Q. Can that be done without disturbing the State seal upon the top of the cover?

A. It might be done; it would show upon inspection to have been done; you can cut a hole through the top of the meter, a small hole, and cut up a square, then reach down with a pair of forceps and change the adjustment, turn it over, solder and paint it, and no one would notice it upon superficial examination.

Q. When the meter is repaired, is it not necessary to get at the nut to make that adjustment?

A It ought to be always.

Q. And in so doing it can be made to run either fast or slow?

A. Yes.

Q. There is no doubt about that, is there?

A. No; that is what Dr. Chandler said in his testimony which is before you.

9427 Q. Will not that meter register so long as any kind of gas passes through it and works the dial hand?

A. Yes, sir.

Q. What do you mean when you state that gas is always measured which went in or went out?

A. The meter is constructed virtually upon the same principle as a low-pressure engine, and gas must pass through the mechanism to actuate it; if there is a hole through the mechanism the gas can pass through without acting.

Q. Any kind of gas will operate through the mechanism, will it not?

A. Yes, sir.

Q. Whether it is illuminating or not?

A. Yes.

Q. Or water?

A. Yes.

Q. Or air?

A. Yes.

Q. Is it not then true that this mechanism will register as though gas was consumed when it passes through, if it does pass through?

A. Yes; it will register a cubic inch as correctly as a cubic foot of gas.

Q. Is there any way of telling by the meter what has passed through the meter, whether air, gas or water?

A. No, sir.

Q. You have stated that one cause of complaint by the consumers is excessive pressure at the point of ignition; will you please explain this?

A. Illuminating gas, whether distilled from coal or other gas-yielding hydro-carbon, or made by decomposing water by means of incandescent carbon and subsequently carburetting the compound, obeys a common law when brought in open contact with the atmosphere and ignited. This common law provides that combustion is the prime factor in the production of light, and to effect combustion the gas must be inflammable and explosive when mixed with its proper co-equivalent of oxygen (an ingredient of air); therefore, all flames are but a series of minute explosions, so rapidly following each other as to present the spectacle of continuity. 9428 These explosions are created by the chemical affinity of oxygen and hydrogen, the former in the air, the latter in the gas; they await only the touch of fire to seize upon each other; the friction created by this rapid union maintains and continues the process, destroying the nature of component parts and sending them into the atmosphere as products of combustion. Meanwhile, the floating or hypothetical carbon is rendered incandescent by the intense heat and light necessarily resulting. Nothing material is lost in chemistry, simply changed to another form or state. Thus if we weigh a cubic foot of gas and burn the same, collecting the products of combustion, we shall find we have a new group of material to deal with, but the same old elements; corresponding in weight exactly with the original quantity of gas plus the weight of air it took to consume the cubic foot; if our combustion has been perfect, we should have light and heat in true proportions; but if imperfect we meet with a loss which, though not material, properly speaking, affects us as such, and so almost contradicts the theory of nothing lost; this union of oxygen with hydrogen involves the chemical change of other ingredients concerned, for instance, hypothetical carbon bisulphide of carbon; sulphuretted hydrogen; carbonic oxide, carbonic acid, component

parts of most all illuminating gases and nitrogen an ingredient of air; the hypothetical carbon is converted into carbonic acid; all compounds of oxygen with carbon in the gas such as carbonic oxide and carbonic acid are changed into carbonic acid and aqueous vapor while sulphur is united with oxygen to create a sulphurous
9429 acid; now if the combustion be partial only, the process is illegal, and its issue a reflection upon our intelligence.

By Senator MURPHY (interrupting):

Q. Please state what that means; you have just stated that it is a reflection upon our intelligence?

A. We have had gas long enough in use to have been enabled by this time to supply mechanical means for its proper combustion—it is our fault if we do not so consume it.

Q. Are there no patents in existence now for consuming gas as you have just mentioned?

A. Yes; hundreds of them.

Q. But they are not in use by any of the companies, are they?

A. No, sir; most of them are utterly impracticable.

(By Senator GILBERT:)

Q. That is to say, there has nothing been found to serve the purpose?

A. No; nothing but an imperfect kind. When a flame smokes, the carbon is not decomposed and lamp black is the result, this being a common fault with gases containing a large percentage of hypothetical carbon and indicating a high candle power. Such gases are generally improperly consumed by any common burner which a consumer may chance to purchase. They may, however, be perfectly handled, provided an expert selects the device for such manipulation; as experts are not always at hand, the results give rise to complaint. Gases smoke as a rule, because the burner exposes too much gas under too low a pressure for the grasping power of the atmosphere, the atmosphere laboring under more or less advantage, according to whether it is still or in motion. It seems to me that a gas of not more than twenty candle power is the only one which can be used with general satisfaction to producer and consumer.
9430 Pressure exerts a particularly active influence upon all gases, relative to combustion. It may be concluded that perfect combustion requires a certain quantity of gas, relative to a certain quantity of air, and the relative quantities depend upon the composition of the gas—therefore, a gas publicly distributed should be as nearly uniform in character as possible. Next we wish to consume this gas in such a manner that the products of combustion will be natural, thus obtaining the full photometrical value and preventing unnecessary pollution of the atmosphere of our apartments. It has been determined by repeated experiments that illuminating gas may be forced through a given size aperture with such velocity that its carbon fails to become incandescent or even luminous, thus we have the example presented, a twenty candle gas distributed and the possibility present of so consuming such a gas as to deprive it of its entire light.

By General TREMAIN:

Q. Is that practicable?

A. Yes; I can demonstrate it.

Q. In other words you can force it through burners which would give a full light, so that it would hardly give any light at all?

A. Yes, sir; it takes a high pressure to deprive it of its entire light.

Q. Can that effect be produced through any length of pipes, or what length?

A. It makes no difference whether the distance is ten feet or ten thousand.

By Senator GILBERT:

Q. Is that statement relatively true?

A. Yes; now just in as much as there may be a point of high pressure to burn gas at the place of ignition, which annihilates its 9431 luminosity, so there is a low pressure at which we may secure the full candle power.

Q. Now the problem is to have the pressure such that the gas, as it passes through, shall all be consumed and give an even continual light; is that it?

A. That is the point I am making; the light being lost proportionally as the pressure varies between the two standards. I think I am correct in the statement; all things considered that fully one-half of all the light indicated by photometrical test, all over the world, is lost by consuming the gas at improper pressure at the point of ignition and in leakages after the gas passes the service meter. We have by this means a much larger quantity of material being converted into gas than required for the amount of light we receive.

(By General TREMAIN:)

Q. When you refer to the service meter, you mean the meter in the house?

A. Yes.

Q. On what do you base that statement?

A. I base it upon the opinion of most all practical gas engineers that I have talked with on the subject; they put the loss of light as high as fifty per cent. with imperfect combustion; I add leakage of service pipes to it.

(By Senator GILBERT:)

Q. In other words, one-half of the gas is practically lost?

A. It is worse than lost; the atmosphere is polluted by the large amount of gas as well as there being a financial loss.

Q. Then there is a financial loss and harm to physical health generally?

A. Yes, it is a fact, and how far it may be concerned in producing epidemic diseases which are prevalent in gas consuming cities, no one can tell, but it is fair to presume that in a room where there are four or five burners there is an atmospheric impoverishment of fifty per cent. by imperfect combustion.

9432 Q. Then it is not only a financial loss but a sanitary one?
A. Yes.

(By General TREMAIN:)

Q. You have stated right here something about financial loss; is it not true that there is really no financial loss to the gas company the loss you have just stated, the consumer loses by the index at the meter?

A. There is no financial loss to the consumer except so far as the doctor's bill is concerned. The gas companies are paid for all the gas that passes through the meter while the consumer receives but one half of the light which is allowed him, besides a loss to his physical health.

Q. It is not true then that there is a larger quantity of material converted into gas than is requisite for the quantity of light we receive?

A. Yes, about double; they use about two tons of coal at the works when they should use one.

Q. That is if it is coal gas?

A. Yes, certainly.

Q. There is a loss by imperfect combustion?

A. Yes.

Q. Explain that loss, please?

A. We have by this means a much larger quantity of materials being converted into gas than required for the amount of light we receive. Now if so large an amount of light is lost by imperfect combustion we must consume as much more gas to secure the illumination to which we are entitled, burning so much more obliges us to rob the atmosphere of an equivalent proportion of oxygen; excessive quantity of products of imperfect combustion, coupled with deterioration of the air by taking from it its oxygen, renders the air which we breathe dangerously obnoxious; imperfect combustion is damaging alike to eyes, health and pocketbook; a violation of natural law, and wanton waste of gas-producing material, a losing game at both ends of the dilemma; careful experiment
9433 has proved that for a twenty candle gas the open burner should expose a flat flame as nearly circular in shape as possible, and the gas emerge at the top at about two-tenths of an inch water pressure (the power the gas exerts to hold a column of water two-tenths of an inch high). For a gas of thirty-candle power three-tenths of an inch may be required, and so the higher the candle power the greater must be the pressure to prevent smoke, and drive the gas through narrow orifices (which are required for high-candle power); fine orifices are undesirable, because liable to stricture; I can offer no argument against an eighteen or twenty-candle gas; experience teaches as it is best and most satisfactory all around, although the great bulk of distributed gas in New York is higher than my standard, and thus might be termed a much superior gas compared with that furnished other cities, still its distribution is attended by complaints of smoke from consumers, and rendered somewhat fractious on cold nights by condensation and other inconveniences.

Efforts have been made to burn super-heated gas, and extravagant claims have been laid to superiority. A series of experiments conducted by me several years ago demonstrated, to my mind, the fallacy of this system, since you cannot superheat without decomposing the gas and precipitating its illuminants, thus losing instead of gaining light, besides filling your conducting pipes with coke and choking the passage of the gas. I have spoken somewhat carefully of pressure, limiting my statement particularly to regulation at the point of ignition. Reasons present themselves to my mind for this exclusiveness.

9434 Q. What is the reason that you have limited your observation to the pressure at the point of ignition and what relation has that pressure to the pressure actually exerted at the holder or immediately preceding the distribution of gas?

A. Because I believe it to be semi-effective only to govern the pressure at remote points from the flame; the place to control pressure is at the point of ignition.

By Senator Gilbert:

Q. And the place where the pressure is created, is where?

A. At the holder, but the place to control pressure is at the point of ignition, and the device should be automatic, changing to suit the varying pressure caused by unequal calls upon the mains for more or less supply, as burners are lighted or extinguished.

By Mr. Tremain:

Q. Perhaps if there was an automatic device at the point of ignition, the consumer would not receive the benefit of that, because the gas at the point of ignition would have already passed through the meter?

A. That would not make any difference if the gas passed through the meter and the device was located at the point of ignition, providing the gas was under a certain pressure, say two-tenths of an inch and therefore instead of burning double the quantity of gas which was the case before, he would burn only the quantity which would pass under that pressure of two-tenths of an inch through the meter, and not register the gas which had not passed.

Q. Then your theory is that a machine of that sort is for preventing that gas from causing to the point of ignition at such a rapid rate as at present?

A. No fixed openings as is the case with check burners, can 9435 never suffice to bring about proper combustion, they serve as additional stop cocks and are superfluous in view of the fact that one gas cock already exists by which you can check the flow of gas as effectively as with the additional one in the burner; the varying pressure of gas in the pipe is a necessity from the nature of the supply and demand, also a necessity from the fact that gas is specifically lighter than the atmosphere and increases its pressure by rising, diminishing by falling but independent of the initial pressure from the gas holder at the works.

Q. Something has been stated about regulating that pressure immediately after the gas passes out of the meter by some appliance?

A. Yes, gas governors; they are used for the purpose of producing automatic regulation of pressure.

Q. And do they not have that effect?

A. Not specially; there are many devices of this character, all operating upon the same principle, varying just enough in mechanical construction to entitle them to limited separate patents; some employ flexible diaphragms, others check valves, and many separate miniature gas holders floating in dead oil, mercury, glycerine and other fluid seals; they serve a fair purpose in the absence of a better thing; the prime objectionable features exist in common defects; the principle on which they operate is founded upon the power of the gas to flex the diaphragm or lift the holder against the atmospheric pressure, and thus draw into position a valve which partially shuts off the supply of gas; when the burners are not in use the gas forces the valve to its seat where it is liable to adhere, owing to a sticky deposit lodged on the face of the valve by the foul nature of the gas; this tendency varying in severity with the character of the gas employed; again these devices are all dangerous,
since they are obliged to have an opening in their upper
9436 chambers above the diaphragm or holder, for the free ingress and egress of air, thus there is nothing between us,
and a fatal leak of gas into our cellars save the diaphragm or the fluid seal; this might be obviated by connecting the upper chamber by a pipe leading out of doors; I have never seen it done, but offer the suggestion gratuitously; now, presuming we have our governor duly connected with an out-of-doors pipe, and located upon such a clean gas that the valve will not stick, and weighted to produce a pressure of say six-tenths of an inch; we cannot set it at a lower standard than this, because our pipes would rarely furnish us sufficient quantity of gas at a less pressure; now the unequal demand upon pipe branches will vary the pressure after the gas passes as will also its tendency to increased pressure upon rising, or diminished upon falling; therefore it does not regulate properly or effectively; again, with the growing demand for gas for heating, cooking and mechanical purposes, we require adequate supply and high pressure; if we cut down the pressure, by a governor, all over our pipes, we are deprived of the convenience of our gas stoves; there seems to be but one way out of the difficulty; automatically regulate the pressure at the point of ignition by some inexpensive device which has no movable parts in contact and will stand the test of time without fouling and becoming inoperative, then the pressure on street mains and pipes will make no difference to our attaining the full value of the gas for illuminating purposes and *we* shall be cocked and primed for the acceptance of proper devices for heating, cooking and other purposes. If the ideal device above pro-
pounded should be forthcoming, we shall not only insure
9437 perfect light, better air and comfortable satisfaction, but in
as much as the pressure at the point of ignition is not to
vary, controlled by the automaton. A one foot burner will burn

one foot, and a five, five feet, so we shall have some means of knowing what we are consuming, whereas now a one foot may burn six feet and a five twenty, according to variation of pressure.

Q. Practically, the pressure is not regulated, is it?

A. It is not regulated. The gas companies furnish a pressure sufficient to supply *its* consumers with the amount of gas they require, beyond that there is no regulation from the holder.

Q. How is that pressure regulated by the gas companies?

A. By the weight of the holder.

Q. Is that not capable of being regulated if required?

A. No, sir.

Q. That weight?

A. It would be impossible to regulate the pressure at the holder in proportion to the demand from the people, because the demand is very variable; it is sometimes more, sometimes less.

Q. Is the pressure constant and uniform?

A. Yes, sir; in most large cities where they use gas for mechanical and heating purposes they maintain a full pressure all the time, although in some cases the pressure is reduced just in proportion as the people are consuming it, and increased when necessary. I will give a case of illustration in regard to pressure. A gas holder distributing gas with a six inch pressure and carrying it through a main six miles long from that city to a neighboring town, would furnish in that neighboring town but one-inch with its six-inch pressure at the holder.

Q. How do you calculate that?

9438 A. It depends upon the density of the gas. It is fair for us to presume that a six-inch pipe one mile long would be reduced in delivering capacity ninety-five per cent. in that distance.

Q. Is that true as a general supposition?

A. Yes, sir, it is.

Q. Is it not true that a large amount of gas is consumed at a distance greater than six miles from the works?

A. Yes, sir.

Q. Measuring by the course of the mains of course?

A. Yes.

Q. In such a case is it practicable to apply an appropriate pressure at a holder?

A. It is a very difficult thing to do; they have to have an excessively high pressure in order to overcome any difficulties that may arise in the working of the pipes; all gas companies are obliged, in fact it is an absolute necessity for them to supply its consumers with a very high pressure.

Q. Of what practicable purpose are the registers of pressure you will find in the engineers' reports of gas works, a report of the New York Company, for instance, the report regarding the register of pressure at the holder gauge; of what practicable value is that record?

A. It is of no practicable value because the pressure indicated by that gauge might be very different than the result indicated in your department. This pressure may be regulated according to the size of the mains, or according to the distance or length of the mains.

Q. As a matter of fact, how do gas companies determine what the pressure shall be at the holder when it is registered in the pressure gauge?

A. Generally at all remote points, they determine what it is there; if the consumers at remote points complain that their pressure is too low, the company increases the pressure for their benefit; but it is generally at remote points where it is determined.

9439 By Senator **Gilbert**:

Q. Is there no practical way of regulating that at the holder?

A. I cannot say; they can carry two *pounds* to the square inch if they wish.

Q. What they want then is some device that would give a correct record, when the person is remote from the holder?

A. Yes, sir, such a device would be of the greatest benefit to the gas companies, and would enable them to give a proper pressure and to correct to some extent excessive pressures.

By Mr. **Tremain**:

Q. What is the pressure that operates the amount of economical consumption and illuminating power?

A. Two-tenths of an inch; you will readily see that in order to maintain two-tenths of an inch the street pressure and main pressure must be very great.

Q. You have spoken of photometrical tests, and yourself and other witnesses have spoken of candle power—will you please explain what is meant by candle power or what it is that is tested by photometrical test so called?

A. We imply a scientific problem which varies the moment we leave the instrument which gives us our result; we compare a standard candle consuming one hundred and twenty grains of sperm an hour with an English standard Argand burner, consuming five cubic feet of gas per hour, the gas measured at a temperature of sixty degrees Fahrenheit scale—by arranging the two lights in a line at either end of a scale beam, the scale beam having a sliding index upon which is placed a double screen provided with translucent spots; we cause the rays of light to pass into the screen; we then move the screen until the diffusive powers of both
9440 lights are equalized, thus establishing upon the scale beam a fulcrum of difference in the penetrating power; this fulcrum of difference shows by leverage the exact number of candles and fractional portions thereof the gas-light is equal to of the candle opposite, according to the ability of our eyes to locate the screen properly on the scale beam, judging the translucent spots to be equal; this instrument is called a bar photometer and is the only one I know of which gives anything like correct results; there are other photometers, which judge the candle power by the height of the flame the gas passing under a given pressure through a fixed or-fice, but they are incorrect and fail utterly to give the penetrating or diffusive power of the light.

Q. Do you know the instrument that is used in this city; do you know if it is the bar photometer; is it used by the companies here also, in their measurements?

A. In their measurements, yes; they use the bar photometer for correct results and another instrument for approximate results; they use both instruments but they use the bar photometer to give result that could be sworn to.

Q. Is it not true that the presence of air in the gas determines its illuminating power?

A. Yes, sir.

Q. Is it not true then that if air can be present in the gas to an amount not sufficient to interfere substantially with the candle power, illuminating power, the consumers suffer a loss?

A. One per cent. of air would show in the candle power, and one per cent. would reduce the specific gravity of the gas, which makes it more dense; it would pass so much slower through the burner and register, so much slower at the meter, and it is suicidal in 9441 the extreme for any company to use air in the gas; it would redound against the gas companies; I do not think gas companies ever mix air with gas except by accident; it is sometimes done by accident, but not intentionally.

Q. In view of your statement, that there is a loss in passing through the pipe at a distance of six miles, I would like to ask you is it practicable, in your opinion, to convey gas a distance of one hundred miles?

A. Yes, it is.

Q. Or two hundred miles?

A. Yes, by using relays.

Q. Would the nature of the gas be of sufficient power to operate here?

A. Yes, by using pumps or relays.

Q. At how frequent intervals?

A. Well, if I was going to do that, I should put my relays twenty-five miles apart—governed by ground conditions.

Q. I understand you that the proper pressure at the burner is two-tenths of an inch?

A. Yes, sir.

Q. If you increased the candle power, that would have what effect upon the pressure at that point?

A. It would make no difference in the pressure but in the combustion; it would have no appreciable effect; for instance a gas under a two-tenths pressure will burn without making smoke; the products of combustion are natural; if that gas be increased to thirty candle power, then the same quantity of gas does not virtually come in contact with sufficient atmosphere to consume it.

Q. A fair illustration in this city would be Equitable gas, would it not?

A. That gas will not burn at two-tenths of an inch at the tip without smoke.

9442 Q. What is their candle power?

A. Thirty candle power.

Q. Then for a gas of thirty-two candle power the proper pressure at the burner should be three-tenths?

A. Yes.

Q. And two tenths would be for what candle power?

A. From eighteen to twenty-two candle.

Q. You have expressed preference for gas of a low candle power, from eighteen to twenty-two candle power; now if you have a gas of thirty-two candle power with a pressure of three-tenths of an inch at the burner, would it not give an equally satisfactory result?

A. Well, you have a better light than twenty-candle power; you have one-third more light.

Q. Is there any reason why it is not more desirable?

A. It is to the consumer, provided he is not inconvenienced by smoke.

Q. Did I understand you to say that they could not regulate the pressure?

A. There is no device by which they can do so. If they had a device to regulate that pressure, then that gas would be more advantageous to the consumer, and the manufacturer would have to make less.

Q. The gas of a thirty-two candle power is worth more than the same quantity of gas of a lower candle power?

A. Yes, one-third more.

Q. Have we any device now by which gas [illegible] eighteen to twenty-two candle power can be properly consumed as it is burned at night?

A. There is no device that I am aware of in the market that will operate effectively or properly; there are a number of so-called automatic check burners, but none that I am aware of that ever operated very effectively.

Q. Does not a proper pressure result in perfect combustion ?

A. Yes, sir; but the devices which already exist for that
9443 purpose have been tried but have failed.

Q. Have you ever tried any experiments to ascertain that the gas is not fully consumed at the burner?

A. Yes.

Q. What is that experiment, and give the results?

A. Destructive analysis of the products of combustion; the results of the analysis would indicate excessive carbonic acid, sulphurous acid, sulphur*a*tted hydrogen, bisulphite of carbon, carbonic oxide, free carbon, carbonic anhydrate, etc.

Q. Is there any other way you can determine the pressure of those impurities?

A. Yes, sir.

Q. Can you, in any way, show that out of the flame there proceeds a gas which can be re-ignited?

A. Yes; by placing a funnel-shaped tube and holding it in the flame of gas from an ordinary burner, with the narrow end upward, the gas can be ignited at the top.

Q. A funnel of about what length?

A. Well, of about four or five inches. Put the large end in the flame and you can see what gas escapes. In trying that experiment you want to get that tube below the top of the flame; if you do not do that you will get products of combustion which are principally carbonic acid.

Q. Doctor, you say that you yourself have constructed some gas plant. Now if you consider yourself competent to say any thing about the amount of capital requisite to produce a gas plant of a given capacity, we would like to have your opinion on that subject, a capacity of at least one million.

A. I could give it approximately including generators, washers, hydraulic mains, purifiers, holders, etc. Beyond that it would be very difficult for me to do so, especially when applied to the city of New York, because here I do not know what it might cost 9444 to lay mains. I do not know what the price of labor is and do not know what they have to pay for the franchise, but as to the virtual plant itself, costs of pipes of putting them together, works of producing one million feet, I could estimate close on to it; it would depend somewhat as to what kind of gas they were going to make; producing one kind of gas costs less than another; coal gas works cost more than water gas works.

Q. Is it true, that if a capacity of ten million is reached, or even five million, that capacity may be doubled, or at all events readily increased at a comparatively small increase of cost?

A. Yes, sir.

Q. In what relation?

A. There has been a marked development in the consumption of gas in all cities during the day; if the night consumption was equivalent to ten million feet, and the amount of gas required for heating, cooking and mechanical purposes should increase the amount to twenty million, the same mains and same holder would be used to distribute that gas, and the same meter would mark the combustion; it would be double the labor of the actual cost of distributing and of material, but I think a gas company can very well afford to sell gas for twenty five per cent. of the present cost for heating purposes alone; gas for day consumption costing less than for night consumption in labor and requiring no extra plant, they could well afford to put separate meters in houses; it would cost so much less to distribute gas for heating purposes, because it would be day consumption principally.

By Senator GILBERT:

Q. For which plant is already at hand?

A. Yes.

9445 Q. Is there a tendency toward the use of gas for heating purposes?

A. Very strong; consumption is increasing very rapidly in that way alone.

Q. That should decrease in itself the price of gas to the consumer?

A. Yes.

Q. They use it to heat rooms and to cook?

A. Yes, sir; very extensively; the treasurer of the gas company in the city of Providence told me within two weeks, that one-tenth of all the gas distributed by the Providence Gas Company was distributed for heating and cooking purposes, and that increase had been developed within three years.

Q. And at about what additional cost?

A. I do not know.

By Mr. TREMAIN:

Q. Then you think it is true that if the producing capacity of five million cubic feet has been secured, that a fair estimate for that capacity of plant is then $1,000,000 for a million cubic feet of gas?

A. No, sir.

Q. Is it true, including real estate?

—. No, sir.

By Senator GILBERT:

Q. It does not cost four times as much to produce twenty million cubic feet, as it does to produce five million?

A. No, sir, it does not.

By Mr. TREMAIN:

Q. Do you know — far that is out of the way?

A. I should say it was considerably out; I do not know as I am able to say exactly, as far as New York city is concerned, because I am not so familiar with gas distribution in New York city, but I know in other cities that twenty-five per cent. per thousand is a fair estimate, that would make it $250,000 instead of $1,000,000.

Q. You mean $250,000 per 1,000,000 cubic feet up to what producing capacity; it is not uniform?

9446 A. No, sir; of course I am going into those large figures without any precedent as to value of real estate.

(By Senator GILBERT:)

Q. You mean to say for instance that to obtain a producing capacity of 5,000,000 cubic feet, the capital would be say $1,400,000 exclusive of real estate?

A. Yes, sir.

Q. And the cost of franchise?

A. Yes; you would then have to fix a standard basis upon 1,000 feet; I would depend upon the standard; I do not know that there is any standard; I do not think that gas companies have any standard as they do not require it; they always find plenty of capital to transact their business.

Q. If it cost a given number of dollars to provide works by which to manufacture 10,000,000 cubic feet per day, representing that number of dollars by "A," how much in your opinion would it cost to provide works which would manufacture 20,000,000 cubic feet?

A. I should not place it higher than "A+¼," if all these things were in proportion exactly it might be figured but there are a great many things that are out of proportion; the day consumption is an important factor in that question; if 20,000,000 feet were delivered in twenty-four hours with a constant run at the holder and the same number of cubic feet were required to be delivered in twelve hours it would make a great difference.

Q. I was assuming that every thing was alike, same proportion by day and by night; do you so understand my question?

A. Yes; that would be the natural increase.

DECEMBER 28, 1885.

GUSTAVE KOBBE, a witness called by the counsel to the Committee, being duly sworn, testified as follows:

9447 Q. Where do you reside, Mr. Kobbe?

A. New York.

Q. Where is your place of residence?

A. One hundred and seven East 45th street.

Q. And your place of business?

A. Twenty-three Park Row.

Q. That is your office?

A. Yes, the office of the *Mail and Express,* I have a desk there, I am not regularly engaged on the paper.

Q. Your general business is what?

A. General writer for newspapers.

Q. Do you remember a paragraph to the following effect:

"Republican assemblymen who vote for the Gas Consumers' bill now pending will be strengthening the Democratic party in New York city, because the bill gives, after four years, the appointment of the three commissioners created, whose salaries and allowences for clerk hire aggregate $60,000, to the mayor, who, as New York is strongly Democratic, is usually a Democrat. That eminent Republican, Clarence A. Seward, writes to the New York *Tribune* that the provisions of the bill are self contradictory. Besides the bill brings what should be a private business enterprise into politics, and by fixing the price of gas destroys competition."

In last April or May, what did you do with it; do you remember the paragraph?

A. I think I wrote that paragraph; in fact I am perfectly sure I did.

Q. What did you do with that paragraph?

A. I believe I took it to the advertising agent; I asked him to insert in certain papers, the names of which I gave him.

Q. What was that gentleman's name; was it Mr. Sharpe?

A. Yes, he has testified here.

9448 Q. Who did you see in Mr. Sharpe's office?

A. I cannot remember.

Q. Would you know the man if you saw him?

A. I simply know it was an advertising office, and I know this man performed some functions in this office; I do not know if it was Mr. Sharpe or his assistant; I had no previous acquaintance with him.

Q. Was it Mr. Thomas, the cashier?

A. I do not know.

Q. Have you seen him since?

A. Yes; on the street.

Q. When?

A. Off and on.

Q. Did you talk to him about this particular occasion and this paragraph?

A. No.

Q. Did you make the arrangements with him to have it inserted in the papers?

A. I believe I did.

Q. A commission has been *said*, and allowed to Mr. Bangs?

A. He sent me to Mr. Sharpe; that is the way I came to go to him.

Q. Did Mr. Bangs go with you?

A. No, sir; he gave me a letter, I believe; the letter was simply introducing me; I think that was the way; I presented the letter indicated.

Q. At whose request did you prepare the paragraph?

A. I prepared the paragraph at the request of the Consolidated Gas Company.

Q. At whose request? Name the person?

A. Mr. Gawtry, the secretary, I believe.

Q. Did you personally see him?

A. I did.

Q. How long before?

A. I cannot say.

Q. Where did you see him?

A. I saw him at various times and various places; I cannot say exactly, whether I have seen him at his office or on the street.

Q. Tell the committee the whole story?

9449 A. I will narrate the whole circumstance, that is the easiest way; it is simply a business transaction and I have nothing to hide. Mr. Gawtry happened to know in some way, whether through conversation with me or not, I do not know, what I thought of the gas bill. He happened to know that I thought it was an impolitic piece of legislation, and he asked me if I could write some editorials from my point of view and I did so, and the question came up as to how and where to put these editorials; on looking over everything that had been written on the subject (Mr. Gawtry had taken clippings of what had been published on the matter *pro* and *con*, from different papers), I saw notes from letters contributed by lawyers and other people of prominence, mostly all in favor of the bill, I believe, and being a journalist my journalistic instincts told me that these were paid for, I had no moral certainty of this but I presumed they were, and that suggested the idea of meeting the case on the same line and the idea was to select a certain number of papers published through the country districts, and to have them publish these editorials; I believe there was one or more, either editorials or as reading matter, and I took these to Mr. Sharpe and handed them to him just as any advertising agent would take an advertisement for patent medicines.

Q. You left the paragraph I have read to you?

A. Yes.

Q. Nothing else?

A. Yes, I believe there were three other editorials; I wrote two Democratic editorials, and two Republican editorials.

Q. Any thing else?

A. Nothing else that I have any recollection of.

Q. In what papers did they appear?

9450 A. I do not remember; I gave Sharpe the list; I took a list of the papers that appeared the most influential, but I cannot tell from memory.

Q. Do you know any Democratic paper that published it?

A. I think I went to Mr. Sharpe's office some time afterward—a few days afterward—and he said papers were beginning to come in containing it; I believe there were some Democratic papers.

Q. Was the New York *World* one of them?

A. No, I never knew it was in New York papers.

Q. Was it in the Albany *Argus?*

A. I doubt if the *Argus* was one; I do not know if it was on my list.

Q. Have you got your list?

A. I gave it to Mr. Sharpe.

Q. Have you a copy of it?

A. No, sir.

(The witness is here shown a copy of the list he gave to Mr. Sharpe, but states that it does not refresh his memory.)

There were thirty-seven papers on the list; I believe that Mr. Sharpe noted on the books; I think I saw in one of the newspapers a report of his testimony; the article was headed "a flood of editorials."

Q. Did that list exhause your list, do you think?

A. I should think it might; I really do not remember; the transaction has almost escaped my memory; I gave Mr. Sharpe the list of newspapers, and asked him to attend to the matter; I selected these papers from a newspaper directory, taking into consideration of course their apparent influence in their locality, and according to their politics.

Q. Were the three other articles after the editorials?

A. They were simultaneous.

Q. But in different language?

A. Yes, four different editorials.

9451 Q. This one that I read was for Republican papers, was it not?

A. Yes, sir.

Q. And the others were for Democratic papers, and in different language?

A. Yes, sir.

Q. You had acquaintances among the stockholders, had you not, of the Gas Company?

A. No, sir, I had not; I had formed opinions upon the subject from what I had in the newspapers.

Q. Was that before you talked with Mr. Gawtry on the subject?

A. Yes, sir.

Q. Did you talk with anyone else, except Mr. Gawtry?

A. No, no person except the people who represented him, I believe; I mean simply messengers.

Q. Who were the messengers?

A. I do not know if you can call them messengers; they went driving around doing collecting.

Q. Do you not know their names?

A. No.

Q. Do you not know at what place you met Mr. Gawtry at one time?

A. No, sir, I do not; I do not think I ever met him down town.

Q. Where did you meet him?

A. I think I went to the company's office; that is my recollection; I am quite sure I did not meet him down town.

Q. Did you never meet him any where else but at the company's office?

A. I think not.

Q. Did you not have a conversation with any one except with Mr. Gawtry or the messenger boy?

A. I don't want it to be understood that I spoke to the messenger boy; it was some one, as I said before, who went around in a buggy collecting bills; he brought me a letter from Mr. Gawtry, asking me to call on him.

Q. Do you know his name?

A. No, sir; I do not know his name.

Q. How many times did you see that person?

A. Not more than once, probably.

9452 Q. Then this compensation, was it exclusive of Mr. Sharpe's commissions?

A. No, sir; I received so much for writing editorials.

Q. That was from the Consolidated Company, by its check?

A. I cannot tell whether it was by check or money; they paid me for their editorials just as a newspaper would pay me.

Q. Was it Mr. Gawtry who made the payment?

A. I cannot tell you; but now when I come to think of it, I think it was Mr. Gawtry.

Q. At the office?

A. Yes, sir.

Q. That is about the whole story?

A. I think it is.

Q. Do you remember when it was that Mr. Gawtry sent this messenger for you?

A. No, sir; I do not.

Q. Well, about how long before that visit to Mr. Sharpe?

A. I presume it was some days before; but I do not remember exactly; I think the whole transaction occupied very little time; no more than two or three days.

Q. The whole affair?

A. Yes, the whole affair.

Q. So that it must have been shortly before you called on Mr. Sharpe?

A. I fancy it was shortly before my call on Mr. Sharpe.

Q. Did Mr. Gawtry by that note ask you to come to his office to see him?

A. I do not know.

Q. But as a consequence of that note you went to the office?

A. Yes—Mr. Tremain, let me tell you here that the first intimation I had was one afternoon while walking up town I met Mr. Gawtry on the street. I think he stopped me and asked me what I thought of the gas bill and asked me to embody my views in an editorial, and a day or two afterward I received this note, perhaps a shorter time than that; it is very hard to remember every detail when so many things have happened since then.

9453 By Senator GILBERT:

Q. In response to that note you met him where?

A. I think at his office.

Q. Was it then and there you made arrangements with him for the insertion of the editorials in those newspapers?

A. It was either there or the subsequent meeting.

Q. Had the article in the *Tribune* then appeared—the article to which I refer?

A. Yes; it must have appeared about that time; that is the letter from Mr. Clarence Seward?

Answer by General TREMAIN: Yes.

(By Mr. TREMAIN:)

Q. Did the other editorial then appear in the *Tribune?*

A. What editorial is that?

(By Mr. TREMAIN:)

Q. There was a short editorial in the *Tribune* which called attention to this letter?

A. That I do not know anything about.

Q. Were you then aware that this letter from Mr. Clarence Seward which has, by some, been styled an opinion, was prepared at the instance of parties interested in the Consolidated Gas Company, and paid for by that company?

A. No, I was not aware of it.

Q. Were you ever informed to that effect?

A. No, sir; I was not.

Q. Mr. Gawtry did not mention that that letter was procured by the officers of the company?

A. As I said before, he simply gave me what had been written on the subject *pro* and *con;* I was interested in the matter from the fact that I followed the newspapers very closely, and even if Mr. Gawtry had not called my attention to the matter, I would have seen it; I was interested in the business as "the *Sun*" took a decided stand in the matter, and as I contributed to the *Sun,* I took an interest in it.

9454 Q. Were you not aware that Mr. Hitchcock, of the *Sun,* was a large shareholder and was interested against the gas bill?

A. I was not aware.

Q. Did you hear of it?

A. I think it was intimated, but I have no regular connection with the *Sun* at all, I simply contributed to it as I did to any other paper.

Q. What else did Mr. Gawtry say about this gas bill?

A. I do not know, as I had no conversation with him beyond what related to my own services in the matter.

Q. Did he not say anything about the company fighting the bill?

A. No, sir.

Q. Or about the investigation that had been held?

A. No, sir.

Q. Did he introduce you to Mr. Smith?

A. No, sir.

Q. Did you never talk to Mr. Francklyn about it?

A. No.

Q. Do you know him?

A. No, sir, except by sight.

Q. Who first mentioned the matter to Mr. Bangs, yourself or somebody else?

A. I did; Mr. Bangs being in the business department of the *Mail and Express,* I thought he might probably know of somebody.

Q. Were these articles that were in the Democratic papers of greater length than the article or paragraph which appeared in the Republican papers.

A. No, sir; all about the same length, four editorials about the same length—two Democratic and two Republican.

NEW YORK CITY,
FIFTH AVENUE HOTEL, *December* 30, 1885.

The committee met pursuant to adjournment.

9455 Present: Hon. John I. Gilbert, Chairman, Hon. Michael C. Murphy.

Henry T. Tremain, Esq., appears as counsel to the committee.

FRANCIS W. SANBORN, a witness called by the counsel to the committee, being duly sworn, testified as follows:

Examined by the CHAIRMAN:

Q. Where do you reside?

A. In Brooklyn, at present.

Q. What is your business?

A. Gas saving.

Q. What, if any experience, have you had with the gas business?

A. I have been in the business for the last ten years of saving gas by attaching regulators and burners, and am manager of a gas saving company.

Q. What do you mean by gas saving?

A. The reduction of the gas bills in large establishments, where gas is consumed in large quantities; of a maximum light with the minimum of gas.

Q. Why do you say large establishments?

A. Because in small private establishments, very rarely the owners can be got to examine the matter; in large establishments it is a matter of great interest to the owners and proprietors.

Q. What do you call the apparatus used for that purpose?

A. A governor, or regulator.

Q. At what point is that governor applied?

A. Near the meter.

Q. What is the immediate effect produced by it?

A. It reduces the pressure in the mains. The pressure of the gas in the mains varies continually. The regulator makes it uniform on each floor in the building.

Q. The effect is to regulate the pressure at the point of ignition?

A. Exactly so.

9456 Q. Does your experience lead you to believe that it is practicable?

A. No well regulated institution should be without a regulator.

Q. Do you agree with a former witness, in the statement that a large per cent. of gas consumed is wasted, that is, produces no light?

A. Yes, from forty to fifty per cent. is wasted.

Q. The effect of that waste upon the quality of the air we breathe is what?

A. Very deleterious. It destroys the oxygen in the air, and fills it with carbonic acid, sulphuretted hydrogen and ammoniacal gases.

Q. What is pure gas?

A. The product of coal distilled and purified hydrogen gas and carbon mixed with oxygen.

Q. Do you know what pure gas is, as a matter of fact?

A. Yes, sir; I do.

Q. What are the component parts of pure gas?

A. Hydrogen and carbon.

Q. For illuminating purposes?

A. Yes, sir.

Q. What elements are liable to enter into that pure gas, rendering it impure?

A. The sulphur and ammonia which are in the coal at the time of distillation, if not properly purified, mingle with the gas.

Q. Those are foreign substances?

A. Yes, sir.

Q. Do you know whether gas varies in respect to purity?

A. Yes, sir, very greatly.

Q. Do you know whether or not the presence of these impurities can be easily detected?

A. Yes, sir; very easily indeed.

Q. Do you know whether as a matter of fact, there are in any places officers, whose duty it is to test the quality of gas and report?

A. I only know that in Washington there is an inspector of gas,
whose duty it is to inspect the gas, and who does it every
9457 morning, and if it is not up to the standard of purity, he
notifies the gas company that it must be brought up to that
standard. That is done daily, consequently the gas company keep their gas up to the standard.

Q. Do you know the market price of gas in the city of Washington?

A. Two dollars and one half a thousand feet it used to be, I would not say what it is now.

Q. Do you know what it is now?

A. I don't.

Q. Do you know what it is in any other large city?

A. In Chicago $1 a thousand.

Q. Do you know what it is in Chicago?

A. Yes, sir, it is $1 a thousand.

Q. Do you know what it is at Pittsburg?

A. I think they use natural gas there, I don't know.

Q. What do you say as to the feasibility of using gas for fuel and power, as well as for light?

A. It should be supplied for from fifty to seventy-five cents a thousand for fuel—for heating purposes, and it is very feasible, and there are a great many stoves for that purpose all over the United States and in Europe; the food cooking on such stoves is about twenty per cent. more nutritious, and it avoids all bad smells and debris.

Q. What effect, if any, does the increased application of gas for various purposes have upon the price?

A. It reduces the price; a small increase of expense in enlarging gas works would render them capable of furnishing a large amount and consequently the price should be reduced.

Q. Do you know about how much gas per hour is consumed by an ordinary burner with the gas turned on, without any regulator?

A. A four foot burner will sometimes consume ten feet of gas an hour and a six foot burner from twelve to thirteen feet an hour.

9458 Q. What do you mean by a four foot burner?

A. A burner which is constructed to consume four cubic feet of gas an hour; we have a regular gauge which is called a regular pressure gauge.

Q. Is it possible for a meter which is well regulated to be so placed as not to actually measure the number of cubic feet escaping from the burner?

A. Yes, sir, very easily.

Q. Without reference to any leakage?

A. Yes, sir.

Q. Tell us how and why?

A. A meter is placed in a heated position, and the gas coming from the cold means in the street is largely extended, and consequently registers considerably more gas; in passing through the meter it is heated and extended.

Q. And after it has passed through?

A. Well, then it is cooled again and consequently condensed in the pipes of the house, and thus it registers largely in excess of the amount of gas which is consumed.

Q. In other words, if the meter is placed in a warm position the gas is extended and the number of cubic feet of gas registered at the meter is correspondingly increased?

A. Exactly.

Q. Would you regard it desirable to have the regulator as near as possible to the point of ignition?

A. Yes, sir; the best effects are produced as near the point of ignition as possible.

Q. What result have you known to be reached by the use of the regulators?

A. I have known as high as sixty per cent. of gas to be saved.

Q. With what effect upon the light given?

A. Increasing the brilliancy of the light.

Q. And saving sixty per cent. of gas without loss of light?

A. Yes, sir, and rather increasing the brilliancy of the light.

9459 Q. That is not common?

A. No, sir; the common percentage that would make is thirty-three per cent.; that is the average of the saving, which is generally effected by a gas burner or governor.

Q. You regard it that there is so much wasted?

A. Yes, sir.

Q. Assuming that your statement is correct, it is conclusive in your mind that that amount of gas is wasted?

A. Yes, sir, and much more; I think fifty per cent is wasted; in putting on regulators we have to combat the idea that a regulator is something unnecessary, and out of the common course of things used by the gas companies, and for that reason we cannot alter the burners as we would like to; we would like to put on the burners with a governor, so that the hold should be uniform.

Q. Are you aware that at the present session of Congress a petition has been introduced from the citizens of the District of Columbia, asking that the price of gas be reduced to fifty cents per thousand cubic feet?

A. I have been so informed, but I do not know personally.

Q. Are you aware that in some cities gas is now being furnished at fifty cents?

A. I am not, no, sir.

Q. What elements are essential to the production of light?

A. Carbon, hydrogen and oxygen.

Q. How many of those elements does water contain?

A. It contains them all.

Q. Water?

A. Yes, sir.

Q. Does it contain oxygen?

A. It does not; oh, yes, it does, too.

Q. Does it contain carbon?

A. Not carbon; it contains hyd*or*gen and oxygen.

Q. That is the difference; the old formula I believe which is (H. O. 2); water contains, then, hydrogen and oxygen?

A. Yes, sir.

9460 Q. And the gas which we consume has to be furnished with the other element?

A. Yes, sir.

Q. Namely, the carbon?

A. Yes, sir.

Q. That is derived from what source?

A. Either from passing it over naphtha, gasoline or passing it through some element which contains carbon; I do not understand the process by which water gas is manufactured.

Q. Coal furnishes the carbon for coal gas?

A. Yes, sir.

Q. And for water gas?

A. Coal furnishes the carbon for that, I believe; I think they convert it into steam; then we have gas machines in which we use simply air, the air over naphtha or gasoline which is in the machine, and which gives a very rich illuminating gas.

Q. The candle power of gas is in proportion to the relative quantity of what element in it?

A. The carbon which it contains.

Q. Carbon?

A. Yes, sir.

Q. You said something about air as furnishing carbon or something of that sort?

A. I think not; the oxygen in the air we use acts in the same way; we enrich gas sometimes to sixty, seventy-five, and sometimes as high as ninety per cent. by passing it over naphtha or gasoline and making that reduction in the gas bills by so doing; but the insurance companies refuse to insure while naphtha or gasoline is used for carburretting purposes in the city.

Q. For what reason?

A. For the the reason of the danger of explosion from naphtha.

Q. How are those gas machines designated which you say are all alike dangerous?

A. All alike dangerous; I do not wish to say that; if the tank
containing the gasoline is placed at a sufficient distance from
9461 the house. there is no more danger from gasoline gas than
there is from coal gas, but where it is placed in houses there
is very much danger on account of the volatile character of the gas of the naphtha.

Q. Distance lends safety as well as enchantment?

A. Yes, sir; there are thousands of them in use; in large mills and manufactories throughout the country.

Q. I will ask you one thing farther; a ton of coal will produce, or is necessary for the production of about how many cubic feet of gas?

A. About 9,000 cubic feet of gas?

Q. Is that coal wholly consumed in the production of the gas?

A. No, sir; there is a caldron of coke or residuum.

Q. Worth how much?

A. About three dollars a ton; and then there is about eleven gallons of coal tar.

Q. Worth how much a gallon?

A. About two dollars a barrel—about seven to ten gallons of ammoniacal liquor.

Q. Worth about how much?

A. Say fifty cents.

Q. What kind of coal is used in the production of gas?

A. Cannel coal or bituminous coal otherwise.

Q. Such coal in the city of New York costs about how much a ton?

A. From twelve to fifteen dollars per ton; I would like to withdraw the statement as to the value of coal; I would say I do not know.

Q. Have you any information as to the public regulation touching the pressure of gas in England?

A. Yes, sir.

Q. What are the sources of that information?

A. The different books published on gas consumption, technical and scientific works.

9462 Q. Name them?

A. Cathell's "Gas Consumer's Guide," "Letchers on Coal Gas," Wilkin's "Management of Coal Gas," Sugg's "Domestic Uses of Coal Gas," Moore's "Gas Consumer's Guide." That is all, I believe.

Q. What is your information?

A. The parliament compels the gas companies to apply regulators to all the meters which furnish gas in the city of London.

Q. At whose expense?

A. At the expense of the gas companies.

Q. Do you understand that those regulators are for the purpose of preventing this waste of which you have spoken?

A. They are.

OSCAR F. ZOLLIKOFFER, a witness called by the counsel to the Committee, being duly sworn, testified as follows:

Examined by Mr. TREMAIN:

Q. You are connected with the Consolidated Gas Company at the present time?

A. Yes, sir.

Q. In what capacity?

A. I don't know that there has been any particular distinction made since the consolidation.

Q. You are performing the same work you performed prior to the consolidation?

A. Not exactly, no.

Q. Where are you kept?

A. At Broadway and Forty-fifth street, the Metropolitan Branch of the Consolidated Company.

Q. Is that branch office the office of the old Metropolitan Company?

A. Yes, sir.

Q. Is the same business conducted there as was conducted formerly?

A. Well, the general work, yes.

Q. The difference in the actual work?

A. The direction of the company is at the main office.

9463 Q. In other respects is there any difference?

A. No.

Q. The same customers?

A. Exactly.

Q. And the same routine of work for collecting for gas sold to consumers continues at that office?

A. Yes, sir.

Q. Prior to the consolidation what was your work in the office?

A. I was secretary of the Metropolitan Gas-Light Company.

Q. What was your duties as secretary prior to the consolidation?

A. Had general charge of the office and attended the board meetings and taking the minutes, etc.

Q. Since the consolidation what do you do?

A. Have charge of the office?

Q. You remember the circumstances, do you not, that schedules of properties of various constitutent companies had been prepared and were under consideration during the summer of 1883 or during the years 1883 and 1884?

A. Yes, sir.

Q. Can you recall how early the first of any such schedules was prepared?

A. Eighteen hundred and eighty-four, probably; 1883 or 1884.

Q. You are cognizant of the fact that negotiations were going on with a view to consolidation?

A. Yes, sir.

Q. If you have any information as to how the item of $1,863,000 par value of stock of the Consolidated Company was awarded to the Metropolitan Company, or as to how the total amount of $7,781,000 of stock of the Consolidated Company was awarded to all of the constituent companies for so-called rights, franchises, etc., over and above the appraised schedules, please state to the Committee what information you have?

A. It was based on the business for the year October, 1882, to October, 1883.

9464 Q. Do you mean to say that having fixed the total capitalization, the difference between that sum and the total appraised values, according to the schedule, was so apportioned as capital among the constituent companies?

A. That is considered a fair value.

Q. Isn't that what you mean, that having arrived at the total proposed capital, the difference between that total and the total appraised values under the schedules, was apportioned among the several companies for their rights, franchises, etc., in proportion to the business of those several companies?

A. That was the method that those figures were obtained.

Q. How was that business estimated?

A. That was the actual business of the companies, the actual sales.

Q. You mean the sales of the gas?

A. Yes, sir.

Q. And the sales of gas for the entire year?

A. The entire year.

Q. Where will be found any record of that computation?

A. I could not tell you that.

Q. Who made it?

A. I do not think I know; in fact, I do not know.

Q. Do you know what percentage that computation exhibits?

A. I could only ascertain it from the quantities there, that is the only way I could determine it, figure it down for each company.

Q. If I take those percentages as they appear from the schedules, they should represent if you are correct, should they not, the percentages of business?

A. The relative business of all the companies for the year from October, 1882, to October, 1883.

Q. Was that capital of $45,000,000 fixed with regard to the market value of the stocks?

A. Not to my knowledge.

9465 Q. Was this apportionment for the balance of capital of the so-called rights and franchises made regardless of the market price of the stocks?

A. Entirely so.

Q. Where did you get your information about that?

A. What is that?

Q. About the apportionment of this balance of capital for franchises, etc.?

A. I was present at all the metings.

Q. Well, with whom?

A. With all the gentlemen who represented the seven companies.

Q. Just designate them?

A. Mr. Lees represented the New York Company, Mr. Smith represented the Manhattan, Mr. Gawtry represented the Municipal and Knickerbocker, I think, or one company, at all events; Mr. Zollikoffer represented our company, and Mr. Moss the Harlem Company.

Q. What was the first step taken to arrive at this capitalization which was under consideration by those gentlemen?

A. This plan was agreed upon and it was carried out.

Q. When was the first time that $45,000,000 was mentioned?

A. That would be very difficult to say, because there were a great many conferences, and it would be difficult to say when it was first mentioned.

Q. What other sum was ever mentioned as the total proposed capital except $45,000,000?

A. There might have been other sums during the negotiation, but I do not remember any of them.

Q. Do you know how that sum was arrived at, or was it done arbitrarily?

A. It was supposed to be the fair value of the property.

Q. Well, for the purpose of distributing the proceeds of the business during the pooling arrangement, there seems to have 9466 been established, according to the books of the pool, a ratio of distribution between the several companies?

A. That is right.

Q. And that ratio appears to have been established by those tables, according to the business done during the quarter ending February, 1880. Do we understand your testimony to mean that no regard was had to those tables in the distribution of this capital?

A. No, sir; none whatever.

Q. What do you know about the persons named or selected by the constituent companies, beginning with the New York Company, for the purpose of appraising the value of the plant with a view to consolidation? Did you ever hear any thing said on that subject?

A. Mr. Rowland was the appraiser of the New York plant.

Q. Who selected him?

A. Every company selected their own appraiser as far as possible; I think the New York Company must have selected him.

Q. Do you know any thing about the plant of the New York Company?

A. I know it in a general way; I am not familiar with it as I am with our own, of course.

Q. Was any other appraiser ever named for the New York Company?

A. There was one spoken of besides Rowland.

Q. Who spoke of him?

A. I am of the impression it was O. Zollikoffer.

Q. To whom did he mention him.

A. He mentioned him to the committee generally.

Q. What was his name?

A. William Farmer.

Q. Was he accepted?

A. He made figures for the Manhattan.

Q. Was he accepted for the New York?

A. That I could not tell you, sir.

9467 Q. What became of the figures he made for the Manhattan?

A. I do not know; I think they are the basis for the appraisal.

Q. Did you ever see them?

A. I saw them.

Q. Did you see Mr. Farmer's certificate?

A. I did not see his certificate, but he made figures for the Manhattan.

Q. The committee have never seen any such paper, and if there is any such thing in existence, we would like to be advised of it, so as to see it; what do you know about Mr. Farmer?

A. He is a gas expert and engineer.

Q. About his acting for the Manhattan?

A. I will correct my testimony; the schedules of value of the plant of the Manhattan were made by Thomas F. Rowland, and not by William Farmer; Mr. Farmer commenced on the schedules; did not finish.

Q. Didn't Mr. Farmer go through the New York works?

A. No, sir.

Q. According to the appraised schedules, the value of the plant, so called, of the New York Company, exclusive of the street mains, valves, meters, services, lots, bulkheads, piers, office buildings, furniture, etc., appears to have been fixed at $2,874,000 in round figures;

is that, in your opinion, a fair and liberal or excessive valuation of that plant in its then condition for the purposes of sale?

A. I should have to be governed by Mr. Rowland's certificate, for he is a credible man and an expert; I do not know sufficiently of the New York Company's plant to give an offhand estimate of it.

Q. The capacity of the New York Works?

A. I could not tell you.

(By the CHAIRMAN:)

Q. Have you an independent opinion as to whether or not the sum of $2,874,922 is an excessive valuation of the property specified by counsel in the last previous question? 9468

A. No, sir; I have not.

Q. Assuming the capacity of the New York works to be about 6,000,000 feet per day, and that the real estate, the lots, street mains, valves, meters, services, bulkheads and the office buildings are separately estimated, have you an independent opinion as to what is a fair price for the plant that will produce that capacity?

A. No, I have not.

Q. Have you an opinion as to the value in November, 1884, of the plant of either of the following companies, viz., the Knickerbocker, Metropolitan, New York or Harlem?

A. I have not; I could speak of our own on that point only, that is the Metropolitan.

Q. Do you know any thing about the method adopted, if any method was adopted, by which the real estate or lots of the constituent companies was valued?

A. I can speak of the Metropolitan.

Q. What was adopted there?

A. We took a real estate expert to value the land.

Q. What was he instructed to value?

A. Simply the land as it was without the buildings on it, and land under water.

Q. Is his report in writing?

A. Yes, sir.

Q. To whom was it made?

A. Mr. Zollikoffer.

Q. Where is that paper?

A. It must be in our office.

Q. Do you know of any real estate expert having been selected by any of the other constituent companies to appraise your real estate or their own?

A. I do not know of any such.

Q. Was any thing said by any of the representatives of the constituent companies as to how the lots should be valued?

A. Well, the general understanding was the market value.

9469 Q. How was that to be arrived at?

A. I suppose they informed themselves of the value of the property in that neighborhood.

Q. As a matter of fact, didn't each company value its own lots?

A. It did.

Q. Your company took no steps to verify the value of the lots of the other companies, did it?

A. Yes, sir.

Q. What did it do?

A. It took information on the values of the others.

Q. From what source?

A. From the same source we took our own.

Q. Sent an expert?

A. Yes, sir.

Q. Did you send an expert to the real estate of all the companies?

A. We did.

Q. Did any other company do the same thing?

A. We do not know; at least I do not know.

Q. If you will kindly get, or send and get those papers for the chairman, relating to the whole valuation of the appraisal of lots to all the companies we will be much obliged. As secretary of the old Manhattan Company, as representing its stockholders, I would like to repeat to you a question which has been asked of some of the officers of the old companies. By the rate of distribution of the Consolidated stock it appears that 260 shares of that stock were awarded for 100 shares of the stock of the Metropolitan Company, that at the time of that distribution the market price of the Consolidated stock was quoted at about eighty-five by that exchange and according to the price of the Metropolitan stock, as testified here to have been about 240 or 250, there would seem to be a loss on the transaction by the exchange of each 100 shares of the Metropolitan stock of about $1,900. Assuming the price of the Metropolitan at 240, will you tell the committee, what, in your opinion, 9470 was the advantage to the Metropolitan stockholders in that transaction?

A. You are asking me now about the market value which was not considered at all. I could not tell you about that.

Q. My question assumes the market value at the prices I have stated, because it already appears in the testimony here and based upon that assumption, was there any advantage to the stockholders of the Metropolitan?

A. The matter of market value was never considered and the market value fluctuated very much during the negotiation. The Metropolitan was 255 at one time and before we went into the consolidation it was down to 225.

Q. It did not fluctuate as much as that in any year?

A. Yes, sir.

Q. During how long a period?

A. Nine months.

Q. Was there any advantage, in your opinion, either to the public or to the shareholders in this consolidation of the constituent companies entering into it at the capitalization adopted by it?

A. We thought there was an advantage in it.

Q. Well, now explain why?

A. The reason is this: That we were liable to compete with one another and have what we would call a gas war, which was probable or possible and rather than have the property of all the companies injured, which it would have been, a consolidation was determined upon.

Q. Well, that was the controlling reason, wasn't it?

A. I cannot say that other companies looked at it in the same light, but our company thought it was best for our stockholders to do it.

Q. For that reason?

A. Yes, sir; but there were other reasons.

Q. Was it the chief reason?

A. We have twelve directors, and every dierctor will look at it from his own standpoint.

9471 Q. Was that your view of it?

A. As far as I could look at it from being a director; that was my view of it.

Recess until 3 P. M.

DECEMBER 30, 1885—3 p. m.

Hearing resumed.

EDWARD G. LOVE, a witness called by the counsel to the committee, being duly sworn, testified as follows:

Examined by the CHAIRMAN:

Q. Where do you reside?

A. Sixty-nine East 54th street, New York city.

Q. Do you hold any official position?

A. I am gas examiner in the department of public works.

Q. Was you appointed under any statute?

A. No, sir; I was appointed by the commissioner of public works under a resolution passed by the board of aldermen.

Q. What are your duties?

A. To make daily tests of the illuminating power of the gases supplied by the seven companies on Manhattan Island; I also keep a record of the pressures at the various photometric stations and make an analysis of the various gases from time to time, to ascertain impurities.

Q. Are you required to do all these things by the resolution under which you was appointed?

A. I think the resolution says merely to test the gases under illuminating power primarily.

Q. You are required to make examinations as to the illuminating power of gas?

A. I am.

Q. And that you do how often?

A. Every day.

Q. Your report is published how often?

A. I make weekly reports to the commissioners and they are published in the *"City Record."*

Q. Are you required under the resolution to test the quality
9472 of gas?

A. As regards purity, I think that may be a part of the resolution; I was asked to do it; I believe I am.

Q. Of course, it is by resolution of the board of aldermen?
A. That is my impression.

(By Senator MURPHY:)

Q. The principal part of the work is done by ordinances; the common council directs how the work should be performed; is there any standard of purity of gas, so far as you know, fixed by law, or by an ordinance of the city, or by contract with the city?
A. There is.
Q. Is there any fixed, specified definite standard?
A. Nothing that is definite; it has a certain standard but it is very indefinite.
Q. No limit set to it?
A. No limit whatever.

(By Senator MURPHY:)

Q. I think that possibly the witness may not rightly understand the question; if I recollect correctly, the testimony was given that in contracting with the city to illuminate the streets there was a set standard, about eighteen or twenty candle power.

Mr. TREMAIN: That is, illuminating power.

The CHAIRMAN: I am speaking now as to purity; do you know whether under any provision of law, a standard is fixed?
A. Not in this State.
Q. Is there anywhere?
A. There is a law in Massachusetts and also in the State of New Jersey; the law in Massachusetts is enforced and I think in New Jersey it is.
Q. You know how it is in London?
A. Yes, sir; there is a very rigid standard there; at present the law allows twenty grains of sulphur to 120 feet of gas, and four grains of ammonia to the same quantity; if at any time it is in excess of these quantities the companies furnishing such gas are liable to a fine.

9473 Q. What, if any, provision is made for testing it?
A. There is a regularly appointed board consisting of three members and the gas is tested by gas examiners in various parts of London.
Q. Is your knowledge to the effect that the law is enforced there?
A. It is very rigidly enforced there.
Q. That serves, then, does it not, as a protection to the consumers to that extent?
A. It does.
Q. What is absolutely pure illuminating gas?
A. The gas which contains no carbonic acid, no sulphuretted hydrogen, or other sulphuretted compounds, and no ammonia.
Q. The pure things?
A. Hydrogen, marsh gas, carbonic oxide and illuminants.
Q. Mention the elements that compose pure illuminating gas?
A. They all contain carbon and hydrogen, with the exception of hydrogen gas, which, of course, is an element in itself, and oxygen,

which is a part of carbonic acid, and sulphur and nitrogen; that is all.

Q. The impurities which you have spoken of are, of course, injurious, are they not? I do not know whether you have analyzed those?

A. I have; the impurities as they exist in the gas are changed in the combustion of the gas.

Q. And produce things which are hurtful to those who breathe it?

A. In the same way that the air is hurtful, on leaving the lungs, from carbonic acid—differing in degrees and also kind, to a certain extent.

Mr. **Tremain**: I think I ought to state to the Committee that the efforts to procure Mr. Day's attendance have utterly failed. The Committee may remember that when Mr. Day was temporarily excused from the witness stand, it was with the understanding
9474 between himself and the Committee that he would attend
when wanted. A day or two afterward he wrote a letter to Senator Jacobs, who produced the letter before the Committee, and whose testimony disputed in part that of Mr. Day. Some of the statements in that letter are not in harmony with Mr. Day's testimony. Day was then notified by the Committee to attend; through his firm a reply was received that he was out of town. Notice was afterward sent to him to attend. Whether he has actually been in the city or not, I do not know, but he has been reported in the public prints as having been in the city since that time. The sergeant-at-arms reports as the result of his efforts to serve a subpœna upon him, that, both at his place and his residence, he has received replies that they did not know where he was. We despair of getting his testimony.

The **Chairman**: I have been informed by the sergeant-at-arms that he has made diligent inquiries and efforts to procure his attendance. We regret very much our -ability to procure his attendance, but it seems impossible to do anything farther about it.

Daniel E. Sickles, a witness called by the counsel to the committee, being duly sworn, testified as follows:

Examined by Mr. **Tremain**:

Q. General Sickles, will it be agreeable for you to tell us what was decided by Judge Van Vorst in your suit which you had with the gas company?

A. I will try.

Q. Will you kindly state to the committee what was the point of law that was decided, and what were the facts submitted upon which
that decision was based in the suit which was brought before
9475 Judge Van Vorst in equity in the Supreme Court, where you
was the plaintiff and one of the gas companies was defendant?

A. The issue before Judge Van Vorst was only an issue of fact; the issue at law had been already argued and decided at a Special Term by Judge Lawrence, and afterwards it was decided at the General Term.

Q. I was not aware that it had gone to the General Term; what was determined by that litigation and the facts upon which it was based?

A. Perhaps a short statement of the case will indicate more clearly than any other way what it was about, and what was decided. In 1881 and 1882 I occupied an apartment on the premises 14 Fifth Avenue, an apartment house; gas was supplied to all the occupants by the Manhattan Company; all the consumers there grumbled at what they regarded as excessive and wrongful demands on the part of the company, and we all employed such reasonable remonstrances as occurred to us in vain, as usual, and the other occupants, as usual, submitted to it and paid. I refused, whereupon steps were taken by the company to cut off the supply of gas from my premises. I forbade them, and instructed my servant not to allow any representative of the gas company to have access to my meter or pipes except upon his assurance that his only motive was to ascertain what the meter suggested as to the consumption; threats were made by the company to arrest my servant, and they persisted in their efforts to get access to my premises to cut of the supply, whereupon I applied to the Supreme Court upon a statement of facts that the charges were believed by me to be excessive and extortionate, and they threatened, unless I submitted, to cut off the supply. I represented these facts; an injunction was issued forbidding the company to interfere 9476 with my supply of gas until it should be ascertained what amount was justly due, for what I had consumed. That was a temporary injunction, and the matter came before Judge Lawrence on an order to show cause why it should not be continued until the final hearing; and after argument Judge Lawrence continued the injunction, holding that the company had no right to cut off the supply of gas from a consumer who stood ready and willing to pay for what gas he had actually consumed, leaving the company to establish that fact by such evidence as they could furnish. The intention of the company evidently was that it was my duty to pay their bills as they presented them and to accept their meter as law and without court or jury. And if I found that I had been overcharged, my business was after paying them all that they demanded to commence a suit against them and recover back any extortionate charge I established; that was overruled by Judge Lawrence and he held it was a proper case for an injunction. The Manhattan Company appealed to the general term of the Supreme Court from Judge Lawrence's adjudication. The matter was argued there by John Graham in my behalf and with equal ability by Mr. Anderson for the company; and the general term unanimously confirmed Judge Lawrence's decision, and the gas company did not go to the court of appeals, and thereupon issues of fact were formulated and tried before Justice Van Vorst at a special term. The issue of fact was mainly how much gas I had consumed. The company as usual relied upon the meter. The president of the company was there to explain the meter, and the vice-president and engineers and the manufacturer from the American Meter Company and Mr. 9477 Chandler. All swore that the meter could not lie, but Judge Van Vorst found it did lie and decided against the company, holding that their bills were excessive and that they did not establish their case by their meter, leaving them to proceed by further suit at their discretion to establish their demand, for which I have vainly waited ever since, and have not heard any thing farther.

Q. The issue of fact in the case concerned the quantity of gas consumed and not the rate at which charge should be made?

A. No, sir, no question about rate. Unfortunately, the company have since reduced their rates and my bills are larger than ever.

Q. If your experience in that line leads you to believe that you can throw any light upon the subject matter that this committee has under investigation, they would be pleased to hear it?

A. Well, I do not know that I could guide the committee. I fought my fight and won it, and I suppose any other consumer can do likewise if he chooses. I suppose as a citizen and consumer that it is the right and duty of the legislature to fix the quality of gas that these companies should furnish and the price, and I suppose that if the consumers choose either individually or by combinations to resist these extortionate demands, of which we hear so much complaint, that the law as established in my case, and I believe confirmed in other subsequent cases, would afford adequate remedies. When gas companies combine consumers should unite. And if consumers unite and employ General Tremain to resist unjust demands and go to the courts, they will get justice; that would be my advice; fight it out; they have no power; they threaten most people effectu- 9478 ally—successfully by saying they will cut off the gas if you do not pay the bills, and housekeepers and consumers do not want to have that threat put in force, and they submit. New York is an easy-going town and submits to almost any thing, no matter whether it is a railroad, gas company, telegraph company or any thing else; but whenever a citizen chooses to say to any of these companies "halt, you must not do this," those who go to the courts are protected; that is my experience; for individuals to do that sometimes it costs more money and time than they are willing to give; but consumers, of whom there must be many thousands in New York, could easily unite and organize, and a thousand of them would be a batallion strong enough to fight the Consolidated Gas Company. The legislature, I suppose, can and should fix the price of gas, having in view a reasonable dividend on the stock, and, I think certainly should fix the quality of the illuminating power of the gas furnished.

Q. And the purity of it?

A. Yes, sir; both for sanitary and economical reasons. Now, gentlemen, that is all that occurs to me. I would be happy to answer any question that General Tremain, or any other gentleman, may ask.

General TREMAIN: The only point of immediate inquiry has already been responded to.

(By the CHAIRMAN:)

Q. In speaking of a reasonable profit upon the stock of the gas companies, do you mean the actual paid up stock of the company or the nominal stock of the company fixed according to the pleasure of the company or companies, as the case may be?

A. Oh, sir, the basis for the legislature is the actual value of the plant—cost of the plant, cash or stock paid in, because if you leave the company to fix arbitrarily their own values upon the 9479 plant and their privileges, franchises, the most valuable parts of it are derived from the public—municipal and State. Why, your ground would be taken from under your feet; ten per cent. on a cash capital paid in is as large a dividend as any corporation in this country is expected to earn.

Q. That is the same as five per cent. on capital stock nominally doubled without any actual increase?

A. Yes, sir; this process of watering Elevated stock or gas stock is an abuse calculated to blind the public as to the cost of these properties, and the proper share of the earnings to indemnify the companies for their risk, etc.; but for the legislature, I should say always the real actual money paid in is the proper basis which should determine the value of the property and the amount of dividends fairly to be earned.

Q. Is it, in your judgment, a great evil and a growing one, this watering of corporate stock?

A. Oh, yes, sir; I regard that as one of the most demoralizing perhaps tolerated in this country on the part of corporations.

Q. Demoralizing to the public and the instrument of undue exaction to the public?

A. Yes, sir; it affects our commerce and is very oppressive upon the poor; rich people with large incomes can stand any reasonable amount of that sort of thing; but after all the great burden is borne by the poor who should not be forced to bear it; these great franchises are given for the public good and not for the private benefit of grantees.

Q. You think it is contrary to public policy to permit corporations to water their stock?

A. I do, sir, consider it contrary to public policy and productive of great public evils and producing private injury to citizens.

Q. Both to those who perpetuate it and those who are affected at the other end?

A. Yes, sir.

9480 Q. Investors also are injuriously affected?

A. Yes, sir! it is one of the direct reasons for those fluctuations in values of securities, and causes that uncertainty in price which is a great injury to investors and which also injures the public credit so far as the public credit is affected by the reputation of corporations and the securities they issue.

Q. Like any other wrong it does not fit in the proper state of things at any point?

A. No, sir, and like any other wide-spread public wrong it brings in its retribution upon that community that hovers it.

Q. Cannot come in on the right order of things with impunity anywhere?

A. No, sir; take the farmers, for instance; they have been enjoying a lucrative foreign market for their products—their wheat, corn, cotton, etc., and they are now confronted with competition from India, Egypt, and Australia, which puts them at a disadvantage in the European markets; and if you analyze the cause of that successful competition you will find it grows out of excessive freight charges and excessive terminal charges—the greater cost of transportation and shipments in this country, as compared with the other countries I have mentioned, who are becoming now our competitors in the production of these commodities—and this excess of charge is mainly produced by the necessity or apparent necessity that existed of the earning of dividends upon suppositi-ous values and it has a prejudicial effect upon the producing classes where all our real wealth rests.

Q. This dividend upon fictitious stock enters as an element, of course, in the consumption of the products affected by it, made by it or transported by it, as the case may be?

A. Certainly; the consumer is expected to pay and does 9481 pay, in the long run, a dividend upon whatever value corporations see fit to place upon certificates, if they double and quadruple the supposed capital, they are expected to keep up a high rate of dividends on their capital whatever it may be and to do that, they must earn enough out of their patrons to justify their claims as to the supposed value of their property, and all that comes out of the pockets of the consumer; that is the way I understand it.

Oscar Zollikoffer, being duly recalled, testified as follows:

Examined by Mr. **Tremain**:

Q. Since your testimony was suspended have you found any memorandum or papers by which your recollection has been refreshed touching the various propositions that were under consideration, leading up to consolidation and the proposed capital?

A. I have found some, General; but I must say I don't know which of them has been more or less adopted; it is only discussion that we had.

Q. Well, please show the Committee any memorandums that were in use, whether adopted or not, relative to the total capital proposed at any time?

A. I have found one which was discussed at the different meetings but was not adopted; it was my duty to report to my board what was done there, discussed from time to time as I reported in that way; so I found one on the 9th of September, 1884, in which I insisted that the capital should be not more than $43,000,000, if all the companies joined.

Q. Including the Mutual?

A. Yes, sir, including the Mutual, and it was adopted; it was a memorandum for myself; the book is different.

9482 Q. Prior to that time had not the sum of $45,000,000 been suggested?

A. I think—yes, it was prior to that, but I was always in favor of a great deal less.

Q. How much was you in favor of?

A. At the most, $35,000,000.

Q. Including the Mutual?

A. Yes, sir; but still that don't mean that I set a different valuation; I think it is the same in all this property; it comes to the same whether you make forty-five or thirty-five; they are not injured by it.

Q. That is between the different companies?

A. The different companies.

Q. You mean that the aggregate should not exceed $45,000,000 instead of $35,000,000?

A. Yes, sir; such memorandums I have a number of; but I do not *think* which one afterwards finally came to a negotiation and the other sums were agreed to.

Q. Who proposed to increase it?

A. Well, most every other company.

Q. I understand you to say that as a result of the conferences in the committee you reported in your board what those considerations were?

A. Yes, sir, from time to time; that is one of them and I have perhaps two dozen of them or more.

Q. Up to the 10th of September it would appear by this memorandum, that the companies had not in fact agreed upon the proposed capital?

A. No, sir; they had not agreed up to that time, but did shortly after; but you see I was very decided on my part; I do not like to submit those papers because they are not in shape; I would write them over if you want it; they are merely for my own guide; I reported from time to time to my board.

Q. You say, in your opinion, you did not think the total should have been more than $35,000,000?

9483 A. It was my first opinion that it would be better for the whole company that we make only that rate; I did not want to swell the amount.

Q. On what did you base your opinion?

A. We paid a very small—only two and a half millions in proportion to our business and therefore we paid after a while more dividends in proportion then if we had a swelled capital like the others.

Q. What others?

A. Those that had elegant houses and everything that way; our works are very plain and the machinery is good as I said before.

Q. Which company has got their figures up?

A. Well, I think every one, beginning with the New York, that is the oldest; they remodelled their works entirely; they were formerly simple and plain like ours, and afterwards spent heavy sums in changing their works, and there were some other newer companies who had larger buildings and every thing more elegant than we have.

Q. What were the reasons suggested by any of the companies why the total should be $45,000,000 instead of $35,000,000?

A. That was about the value or the market price of the stocks at that time.

Q. Those market prices depended, of course, upon the dividends that were being paid?

A. By the stability as they expected the business should be.

Q. Is it a fact that the consumption of gas is uniformly increasing?

A. Yes, sir; but we are provided with the electric light, and with the fuel gas which comes out of the ground.

Q. That depends upon the future?

A. Yes, sir.

9484 Q. Considering the age of the companies and their business and the extent of their works and producing capacity were not the valuations for the Municipal and Knickerbocker Companies, in your opinion, excessive?

A. Well, that was my impression.

Q. What is your impression now about that; they were valued in the schedules, $18,100,000; isn't that valuation in its relation to the values placed upon the properties of the other companies, in your opinion, excessive?

A. I think it is; still, I do not want to say that I am an expert in the valuation; I think I understand it; I opposed it as long as I could.

Q. In comparison with your own company, which is a long established and well known property, for which the valuation is fixed at $7,175,000?

A. I claim more to that in proportion; therefore, I must say I was convinced we were not in the same ratio to it as others.

(By Senator MURPHY:)

Q. You believed that your property was worth more than the Consolidated representatives allowed you?

A. Yes, sir.

(By the CHAIRMAN:)

Q. In proportion to their values?

A. Yes, sir, in proportion to their values; this is all an idea in the form of a comparative thing; six months before when we first submitted our values—there would more come to the point, but I must say I have mislaid those papers or torn *must say I have mislaid those papers or torn* them up; I know they were entirely different.

Q. Give your best recollection of what it was as proposed by you?

A. It was considerably less in that paper that you will get to-morrow about the valuation; it will indicate to you more than any thing else what the standard then was, because it was an impartial outside man who knows the business who made the appraisement; I looked for the paper and I think there is no doubt I can find it by to-morrow morning and deliver it to you.

9485 Q. Well, these figures that you speak of as having been proposed six months before September, 1884, bear a different relation, do they not, in the values of the companies' properties to each other?

A. I told you I was for $35,000,000, and I based my first valuation always in proportion to each company, and on the $35,000,000.

Q. In verification of a former answer, and with a view to its farther explanation, if there be any, I call your attention to the memorandum under date of September 9, 1884, that you have just submitted; in that memorandum there appears to be a proposition that the total capital shall be $43,000,000, with a million reserve for working fund and the distribution of that capital shall be as follows:

New York Company	$7,500,000
Manhattan Company	12,000,000
Mutual Company	5,600,000
Municipal and Knickerbocker Companies combined	7,600,000
Metropolitan	7,600,000
Harlem	2,700,000
Total	$43,000,000

The schedules as already in evidence show that upon a larger capital of $45,000,000 estimated there was apportioned $8,000,000, for the Municipal and Knickerbocker combined, and $7,175,000, to the Metropolitan; there is thus a larger allowance to the Municipal and Knickerbocker, and a smaller allowance to the Metropolitan of about half a million, which was on a total smaller capital; explain how that came about?

A. I claimed that ours was too small in proportion, but the majority finally fixed upon the others, and I could not resist it.

9486 Q. You was overruled?

A. I was overruled.

Q. In the value of your own property you made an offer to have your property fixed in the same proportion?

A. Yes, sir.

Q. And that was not granted, and the representatives valued your property, as indicated in the exhibit, against your wishes?

A. Yes, sir.

Q. I want to know who voted upon that?

A. The representatives of the different companies.

Q. Did the Knickerbocker count one vote in getting at that majority and the Municipal count one vote, making two votes?

A. Yes, sir, making two votes; the Mutual could not get in because its charter made it a misdemeanor.

Q. Did the Mutual vote upon that?

A. The Mutual voted upon that, I suppose.

Q. Was your attention called to the excessive valuations of the Municipal real estate?

A. I insisted at many meetings that they should have one appraiser, and I wanted to go by that appraisement that would be submitted.

Q. The same appraiser for all the property?

A. Yes, sir.

Q. Who objected to it?

A. The majority.

Q. Did Mr. Smith?

A. Not exactly so much Smith as the others.

Q. Mr. Gawtry objected to it?

A. Certainly.

Q. Mr. Franklyn?

A. Certainly.

Q. Mr. Lees objected to it?

A. Certainly.

Q. Do you know what become of the appraisement that was made by Mr. Farmer of the Manhattan plant?

A. I never saw it, only at the meetings; I never saw it afterward.

Q. Didn't Mr. Farmer appraise the entire New York plant?

A. No, sir; I suppose he was interrupted when he did; he did a part.

Q. Why was he stopped?

9487 A. They wanted to shove the thing through, and the same time there were certain things he did not appraise high enough.

Q. You do not know how the committee can find any of those memorandums?

A. No, sir.

Q. Who did you hear say that?

A. At the pool meeting.

Q. They were talking about the plant?

A. Yes, sir, about all the plants.

Q. Didn't they get the New York plant high enough?

A. In my opinion, but I was only one out of seven.

Q. Do you think they got it too high?

A. I do not know.

Q. Did they get it too low in your opinion?

A. No.

Q. You think they got the Manhattan plant too low?

A. I must say it was not too high.

Q. You think the New York was too high?

A. I think it was; I was so impressed at the time, and I told them so.

Q. You think they got the Knickerbocker too high?

A. Yes, sir.

Q. There is no doubt about that?

A. No doubt.

Q. Did you tell them so?

A. Well, I must have told them so for I insisted upon another amount.

Q. Did you tell them the Municipal was too high?

A. I insisted also upon that, that it was too high: I never said any thing against the Mutual; it was a fair valuation.

Mr. Tremain: The figures show that there were some of them who did not contend against, and others who did.

Senator Murphy: He says he was outvoted; that is the substance of his evidence.

The CHAIRMAN: Unquestionably undervalued and outvoted.

9488 Q. Did you say any thing about the Harlem?

A. I think that was one I differed with a great deal; there is no doubt I was correct in my views.

Q. You have not had any reason to change your opinion since?

A. No, sir.

(By the CHAIRMAN:)

Q. Did your company pay any thing for any franchise at any time?

Q. When we started in 1858 we had to; not we but the predecessors had to pay for the franchise.

Q. Who?

A. The owners who had the charter.

Q. The franchise came originally from the people?

A. Yes, sir; it was offered here in the market.

Q. Did the people get any thing for those franchises; did the people sell those franchises to anybody?

A. The whole of those franchises?

Q. Did the people sell any of the franchises of any of these companies that entered into this consolidation?

A. Not that I know of.

Q. The franchises were from the people and given by the people?

A. I do not know that the people ever got any thing.

Q. They were given by the people?

A. Yes, sir, and those that made use of it transferred it to us at a certain percentage.

Q. The franchises came from the people; that is true of all the companies so far as you know of?

A. As far as I know of.

Q. In 1858 what did you buy?

A. The whole franchise for the city of New York for the Metropolitan Gas Company.

Q. What did it include?

A. Rights that we could lay pipes anywhere in the city, for the whole Manhattan Island?

Q. Anything else?

A. Nothing.

Q. It was given by the people to somebody and was sold to their successors for a given sum?

9489 A. Yes, sir; that given sum was $144,000, in one place and in another place more; I do not know how that came.

Q. Take the $144,000—of whom did you buy that?

A. There were at that time three parties who were the main holders of it, and stock was issued, but the stock had hardly any value; nobody would buy it at any price.

Q. Then, stock had been issued upon a bare franchise?

A. Yes, sir, before I was connected with it.

Q. No real property was purchased before you went into it?

A. No.

Q. At the time you purchased something for $144,000, there was no real estate?

A. There was a lot at the corner of Forty-second street that was all, but not fully paid for.

Q. Was it a part of the $144,000, purchase?

A. No, sir; that is another thing.

Q. Then that which you purchased consisted simply of a right which had been grat*itu*ously given by the people, upon the consideration for which stock had been issued?

A. Yes, sir.

Q. There was no real estate, no personal property, and no expenditure so far as you know, as the basis of that capital stock; I mean previous to your purchase?

A. Negotiations were begun but not completed.

Q. Did they own any personal property?

A. They had the refusal of it; that is all; they had not bought it.

Q. They had not bought any personal property?

A. No.

Q. They had not bought any thing?

A. No, but they had expenses.

9490 Q. You will pardon me for interfering: at the time that you made this $144,000 purchase, those of whom you got it had not purchased any thing?

A. No.

Q Property of any kind?

A. No, sir; they had not bought any thing, only transferred what they had begun.

Q. They had incurred some expenses?

A. Yes, sir.

Q. For what?

A. Organization, and I don't know what all; they claimed to have a good deal of stock and issued stock already.

Q. But upon the right that the people had gratuitously given them?

A. Yes, sir.

Q. In the schedules of appraisal heretofore submitted, I see there is a sub-division designated "Rights, Franchises, etc." What is meant by rights as distinguished from franchises?

A. I should say it was another expression for franchise: rights means every thing which is comprised in a franchise.

Q. Will you be kind enough to tell us what franchises your company had at the time of the consolidation, bearing in mind that I use the word franchise as you yourself have defined it? Now, what had you at that time?

A. We had a right under the ordinances of the city to lay mains, service pipes, and to furnish gas and collect those bills afterwards under the laws of the State of New York, and to conduct the business in a manner according to the rules; but every thing was guaranteed to us that we should not be interrupted.

Q. By whom?

A. By the city, provided we got the franchise from the State.

Q. Was any thing said as to its duration?

A. It was thirty years from 1859, I think.

Q. So that would expire in 1889?

A. Eighteen hundred and eighty-nine, yes, sir.

9491 Q. That was really all the right you had, or all the franchise you had, your company?

A. Yes, sir; ours was for the whole Manhattan island.

Q. Did you have a water franchise?

A. Yes, sir; a special grant, a special private dock.

Q. Isn't there a contest over that with the city?

A. For a part of it, but not for the whole. Our charter says that the whole front at Forty-third street belongs to us.

Q. There is a law suit about it?

A. Yes, sir.

Q. The city claims the same front?

A. Not the same front; ours is not in dispute.

Q. So far as you are in possession, there is no dispute?

A. No, sir; according to the lines of our property we go farther.

Q. The West Shore railroad couldn't have a right there unless it was granted by the city?

A. No, sir.

Q. Was there any grant given by the city for water rights for your company?

A. Yes, a private pier.

Q. Isn't it a fact that a part of the water right is disputed by the city?

A. The dock at 42d street; it is.

(By Senator Murphy:)

Q. The city of New York gives the West Shore railroad a lease?

A. Yes, sir.

Q. You claim that that property comes under the old grant given you by the common council?

A. Yes, sir.

Q. My information is that your company claim under this right for a pier still more of the water right than is actually used by them for a pier, and that you are in possession, but the city authorities dispute it?

A. Yes, sir.

Q. And the dock department claim water rights in your immediate front?

9492 A. Not where we are now; we want to extend and they made some objection, and at the same time we had the whole in possession.

Q. You wanted it to extend further into the water?

A. Yes, sir.

(By Senator Murphy:)

Q. You became possessed of this water front property before the establishment of the dock department?

A. Yes, sir, I think so.

Q. How long ago was it ceded to you?
A. In 1859 or 1860.

Senator MURPHY: The dock department has been created only since 1870.

Q. Did you pay the city any thing for that ordinance?
A. I do not know; I do not think so, but I am not certain.

(By Senator MURPHY:)

Q. Did you pay the city any rent for the use of that property after the ordinance was granted?
A. Never.
Q. You got it gratis?
A. We had property belonging to us and we built a dock.
Q. You got the property from the common council?
A. No, sir; only the water rights, the right to have a private dock.
Q. And it didn't cost you any thing?
A. I do not recollect.
Q. And you never paid any rent since?
A. No, sir.
Q. The right to collect bills is a right in common?
A. Like any body else, the same as any body who holds property.
Q. That right was not peculiarly to your company or any other company?
A. No, sir.
Q. In fixing the values of the rights and franchises so-called, as apportioned to your company, was the circumstance of your charter expiring in 1889 mentioned in the committee?
9493 A. I think they all knew it; I do no- know that there was particular mention made.
Q. No particular stress made of it?
A. No, sir, but they all knew it.

HENRY A. PERRY, a witness called by the counsel to the committee, being duly sworn, testified as follows:

Examined by Mr. TREMAIN:

Q. What is your present residence?
A. Worth House, New York city.
Q. What has been your familiarity with the real estate in New York city and its valuation in past years?
A. I have been a deputy tax commissioner; putting values upon real estate.
Q. For how long?
A. From 1873 to 1882.
Q. During that period have you had occasion to acquaint yourself with the values of real estate in the city of New York so as to enable you, in your opinion, to form a judgment respecting the market value of lots in New York city?
A. Yes, sir.

Q. Have you examined plots of lots indicated in the schedule in evidence of the New York Gas-light Company?

A. Yes, sir.

Q. By those schedules it appears that exclusive of the mains and what of real estate by way of structures may be included under the term of plant, and of other structures exclusive of the bulk heads, piers and water rights, the so-called real estate of the New York Company has been valued at $1,607,000, for the purposes of my inquiry I assume that valuation to relate exclusively to the lots—the lands without any structures; and upon that hypothesis I would like
to ask you what value you think was a fair market value in
9494 the fall of 1884, for the property designated on that schedule
as "Block No. 1.?"

A. I assessed that at $290,000.

Q. How did you get at that?

A. Placing the valuation by taking in a number of lots, that is, between avenue A and avenue B, Twenty-first and Twenty-second streets, placing the value on the number of lots and the surroundings, allowing for the water front and its advantages, and by its market value in November, 1884, a very little allowance; I allowed more for corner lots averag*er*ing them $5,000 each, and $20,000 allowance for the water front; in bulk $290,000.

Q. I ask you the same question respecting "Block No. 2?"

A. I valued that at $325,000.

Q. For the purpose of informing the committee as to the basis of valuation, give the valuation you have placed upon some of the lots; by way of example?

A. Between avenue A and B, Twenty-first and Twenty-second streets, I allowed $5,000 each, with an allowance of $15,000 extra for water fronts; the inside lots I would value about $4,500, and the avenue lots about $6,000 each, and the corner $7,500; but I valued them all in bulk about $5,000 each, putting the regular *pro rata* upon them; just south of them in a better street, and a better locality and better lots, they were sold for $5,000 each.

Q. You know of the sales?

A. Yes, sir; in July, 1884.

Q. Block No. 3, what do you say about that?

A. Between Avenue A and First avenue, fifty lots—I valued those at $6,000 a lot—$[illegible]00,000.

Q. What was block 2d, the valuation?

A. Three hundred and twenty-five thousand dollars.

Q. The third?

A. Three hundred thousand dollars, there were fifty lots; these
valuations which are placed upon this property I allowed
9495 a little extra on account of their being such large plots.

Q. You gave different values to lots differently situated in the same block?

A. Yes, sir; whether single or in bulk.

Q. Block No. 4, what do you say to that?

A. Twenty-first to Twenty-second street, Avenue A to Avenue B, forty lots $240,000, the same reason.

Q. Block No. 5, what do you say to that, eight lots, Twentieth street?

A. I believe there is 175 feet; I make it seven lots, $42,000; what is called a lot is 25x100.

Q. The value of "Block No. 5," is $42,000?

A. Yes, sir; they assess them only at the rate of $6000; this is on the opposite side, they put a value of $7,000; they allow three feet of each lot.

Q. In view of the sales, you know that in that neighborhood you think the company's valuation on those schedules are excessive?

A. Yes, sir.

Q. What do you say about the bulkhead, pier or water rights; what is the usual method of estimating them—by the foot, excluding the pier?

A. Yes, sir; the work that is done to form the bulkheads, the sinking of cribs and piles, and filling in, from $120 to $125 per foot is very fair for a bulkhead.

Q. On that basis, what would you put as the value?

A. Sixty-five thousand dollars to $70,000; I believe the piers belong to the city; they are very valuable; they extend out to the foot of twentieth and to the foot of twenty-second, forty and fifty feet wide and run out some 400 feet.

Q. We do not ask the question concerning the value of the piers because it has already appeared in evidence that the construction of the piers was paid for by labor and material entering into other
9496 accounts; the question concerning this water front of the New York is limited to your appr-isal or estimate on 500 odd feet of water front in front of this particular real estate?

A. Yes, sir; say $125 a foot.

Q. Making about $65,000?

A. I should judge so.

Q. I do not ask you for the same reason to give any estimate of the value placed as appears upon this schedule marked "A. 3, J. I. G." opposite the item $33,505; I have not asked you about that?

A. No, sir, that comes under real estate; you have included the lot in my other values, all the land that they owned you have received a valuation for.

Q. There is a piece of real estate at the corner of Hester street and Elizabeth that is valued in this schedule at $100,000—what do you say as to that valuation?

A. I placed that at $85,000.

Q. We will take up the Manhattan next; refer-ing to the Manhattan, the first item on the schedule of the Manhattan property, the schedule being marked Exhibit "B. J. I. G," four lots of the block bounded by Tompkins and 14th street, Avenue D and 15th street, and numbered on the set of schedules and the plot to which they refer, as lots Nos. 1835, 1836, 1837 and 1838, and I will also ask you about four other lots on the same block, Nos. 1831, 1832, 1833, 1834, being eight lots facing on Tompkins street, what have you to say as to their value?

A. The corner lot of Tompkins, north side—north corner, $9,000;

three lots adjoining, $6,500 each; the three adjoining, $6,000, and on the corner $8,000. I place a little difference between 14th and 15th street lots.

Q. Making a total for those eight lots of how much?

9497 A. Fifty-four thousand five hundred dollars.

Q. We ask the same question now for the eight lots Nos. 1823, 1824, 1825, 1826, 1827, 1828, 1829 and 1830, being eight lots fronting on Tompkins street, between Fifteenth and Sixteenth streets?

A. Fifty-eight thousand dollars.

Q. How did you get at them?

A. In putting a value on the lots on Fifteenth and Sixteenth streets, I valued them at $8,000 for the corners, and $6,000 for the inside.

Q. The next plot I ask you about is a plot of nine lots, numbering 1806 to 1814, inclusive, on Avenue D, from Fifteenth to Sixteenth streets, in the same blocks?

A. Fifty-eight thousand dollars.

Q. The next question is the same and relates to lots Nos. 1797 to 1805, inclusive; No. "1" on block bounded by Fourteenth and Fifteenth streets on Avenue D, east side?

A. Sixty thousand five hundred dollars.

Q. The next plot is the same question, and relates to lots Nos. 1839 to 1844, inclusive, being six lots on Fourteenth street, in the same block?

A. Thirty-six thousand dollars, at $6,000 each.

Q. The next question relates to the four lots, Nos. 3102 to 3105, inclusive, in the same block, on Fifteenth street?

A. Eighteen thousand dollars, $4,500 each.

Q. The next question relates to eighteen lots on Avenue D, Nos. 1779 to 1796, inclusive, and between Sixteenth and Fifteenth and Fourteenth streets, on the west side, a plot of eighteen lots on the avenue?

A. Fourteenth street corner, $9,500; three adjoining lots, $7,000 each; the next four, $16,500 each; corner $8,500.

9498 Q. Total?

A. Sixty-four thousand five hundred dollars; I make a difference between the north corner and south corner on Fifteenth street.

Q. Why?

A. The south corner of Fifteenth street being nearer to Fourteenth street, and it being a little more valuable; on the north corner of Fifteenth street $8,000, and the seven adjoining lots, $6,000 each.

Q. What is the total of these eighteen lots?

A. One hundred and twenty-three thousand dollars.

Q. The next plot you are asked about is a plot of twenty lots Nos. 1845 to 1864, inclusive, north side between Avenue C and D?

A. One hundred and thirty thousand dollars; $6,500 each.

Q. Ten thousand dollars is an excessive value for those lots, is it not?

A. Yes, sir, very.

Q. The next plot to which your attention is called, is a plot of twenty lots, Nos. 3082 to 3101, inclusive, on the south side of Fifteenth street?

A. Five thousand dollars each; $100,000, total.

Q. The next plot is a plot of twenty lots on Fifteenth street, north side, Nos. 3108 to 3127, inclusive, what do you say about those values?

A. One hundred thousand dollars, $5,000 each.

Q. What do you say as to the next twenty lots, Nos. 3408 to 3427, inclusive, on Sixteenth street, south side?

A. The same—$100,000, $5,000 each.

Q. The next one is a plot of eighteen lots on the east side of Avenue C, Nos. 1681 to 1698, inclusive; that is to say lots 1681 to 1689, inclusive, on Avenue C, east side, between Fourteenth and Fifteenth streets, and also lots Nos. 1690 to 1698, inclusive on the same side of the same avenue between Fifteenth and Sixteenth streets, making eighteen lots on Avenue C, east side?

A. On the northeast corner of Fourteenth street and Avenue
9499 C, the corner $10,500; three adjoining lots $8,000 each; the next four adjoining, $7,500 each; and corner $7,500; north corner of Fifteenth street, $9,500; the seven adjoining $7,000, each, and corner $9,500—total $142,500; between Fourteenth and Fifteenth streets, front $6,500 more in value than Fifteenth to Sixteenth streets on account of Fourteenth street.

Q. The next plot is a plot of nine lots on the west side of Avenue C and Nos. 1672 to 1680, inclusive, being lots between Fourteenth and Fifteenth streets on the west side of Avenue C?

A. Fourteenth street, $10,500, north-east corner; three adjoining lots, $8,000 each; four adjoining lots, $7,500 each; corner $9,500; this is appraised the same as the opposite side of the avenue.

Q. The total for those nine lots?

A. Seventy-four thousand and five hundred dollars.

Q. The next plot is a plot of thirteen lots, on Fourteenth street, north side, Nos. 1865 to 1877, inclusive?

A. I make it thirteen and four-fifths lots; I assessed it in bulk $7,000 each, $96,700; that includes that small piece.

Q. Exclude that; does that estimate in your last answer include a value for one lot adjoining 1877, and marked on the schedule "lot 1878"?

A. Yes, sir.

Q. What do you value lot in the rear of lot 1878, and No. 3068 on Fifteenth street, south side?

A. Four thousand and four hundred dollars.

Q. The next question relates to a plot of thirteen lots on Fifteenth street, south side, Nos. 3069 to 3081, inclusive?

A. Five thousand and five hundred dollars each, making $71,500.

Q. The next question relates to three lots on Fifteenth street, south side, Nos. 3048½ to 3053?

A. There is a gore.

Q. One nearly full lot and the gore?

A. I agree with them on the $12,000.

9500 Q. The next question is a plot of fourteen lots on Seventeenth street, north side, Nos. 3774 to 3787, inclusive?

A. Fourteen lots, $5,000 each; $70,000.

Q. Next is a plot of fourteen lots on Eighteenth street, south side, Nos. 4079 to 4992, inclusive?

A. Five thousand dollars each; $70,000.

Q. For those 227 or 228 city lots of which inquiry has just been made your total valuations as just given amount in all to what sum?

A. One million three hundred and seventy-nine thousand six hundred dollars; that is my estimate.

Q. The estimate on the schedule before and in evidence for those same lots appear to be $1,740,500. The next plot to which I call your attention is a plot of nine lots on the south side of Eighteenth street, Nos. 2058 to 2066?

A. Nine lots, $7,000 each, $63,000.

Q. Seven thousand five hundred dollars each is too high?

A. Yes, sir.

Q. The next is three lots on the south side of Eighteenth street, Nos. 2262 to 2264, inclusive?

A. Seven thousand dollars each, making in all $21,000.

Q. The next is twenty-four lots, north side of Sixteenth street, Nos. 1769 to 1746, inclusive?

A. Six thousand dollars each, $144,000.

Q. The next is twenty-four lots on the south side of Seventeenth street, Nos. 1770 to 1793, inclusive?

A. Twenty-four lots, $6,000 each, $144,000.

Q. The next is twenty-four lots on the north side of Seventeenth street, Nos. 2007 to 2030?

A. Twenty-four lots, $6,000 each, making $144,000.

Q. The next is a plot on the south side of Eighteenth street, twenty-four lots?

A. Six thousand dollars each, $144,000.

9501 Q. The next is a plot of seventeen lots, north side of Eighteenth street, Nos. 2274 to 2290, inclusive?

A. Seventeen lots, $6,000 each, $102,000.

Q. The next is a plot of twelve lots on the south side of Nineteenth street?

A. Six thousand dollars each, $72,000.

Q. The next is a plot of eleven lots on the north side of Nineteenth street?

A. Six thousand dollars each, $66,000.

Q. The next is eleven lots on the south side of Twentieth street?

A. Six thousand dollars, $66,000.

Q. The next is a plot of eight lots on the west side of Tenth avenue, Nos. 313 to 320, inclusive, being between Sixteenth and Seventeenth streets?

A. North-west corner of Sixteenth street and Tenth avenue, $10,000; six adjoining lots, $7,500 each, and the south corner $10,000; total $65,000.

Q. The next is a plot of nine lots on the west side of Tenth avenue, Nos. 304 to 312, inclusive, being between Seventeenth and Eighteenth streets?

A. North-west corner of Seventeenth street and Tenth avenue, 8,500; four adjoining lots, $6,000, and three adjoining lots, $7,500 each, and the corner, $10,000; those lots assessed at $7,500 each, were twenty-three feet, making in all $75,000.

Q. The next is a plot of eight lots, Nos. 296 to 303, inclusive, on the west of Tenth avenue, being between Eighteenth and Nineteenth streets?

A. North-west corner of Eighteenth street, $10,000; six adjoining lots, $7,500 each; corner, $10,000; total, $65,000.

Q. The next is a plot of eight lots on the east side of Eleventh avenue, Nos. 161 to 168, inclusive?

A. The corners, $8,500 each; six inside lots, $6,500 each; total, $56,000.

9502 Q. The next is a plot of eight lots on the east side of Eleventh avenue, Nos. 169 to 176, inclusive, being between Seventeenth and Eighteenth streets?

A. Corners, $8,500 each; $6,500 inside lots; total, $56,000.

Q. The next is a plot of eight lots on the east side of Eleventh avenue, Nos. 185 to 192, inclusive, being between Nineteenth and Twentieth streets?

A. Corners, $8,500 each; six inside lots, $6,500 each; 56,000.

Q. The next is a plot of eight lots on the west side of Eleventh avenue, marked "1," between Thirteenth avenue and Eleventh avenue and Sixteenth and Seventeenth streets?

A. Forty thousand dollars; they put it at $50,000.

Q. The next is a plot of eight lots on the west side of Eleventh avenue, marked "9;" what have you to say to that?

A. One hundred thousand dollars; it is a very valuable piece, and it has four fronts.

Q. Of the 224 lots concerning which you have been questioned last immediately preceding this question the total valuation on this schedule before me and already in evidence and marked Exhibit "B. J. I. G." is footed up to $1,823,000, please state what is the total of your footings of the valuations of those 224 lots as last before given?

A. One million four hundred and sixty-five thousand dollars.

Q. What is the value in your estimation, of the office and dwelling at Irving Place and Fifteenth street, stated in this schedule to be valued at $175,000?

A. I will give you the amount of value only for the land; I have not valued the building.

Q. State the value of those lots separately?

A. The plot fifty-nine by ninety-two and fifty by eighty-four, $80,000.

9503 Q. The next is the Metropolitan; five lots situated on the north-east corner of Avenue A and Sixtieth street?

A. Twenty-two thousand dollars; I agree with them fully on that.

Q. Also for eight lots fronting Avenue A and the west side, between East Sixtieth and Sixty-first streets?

A. Corners, $7,000 each, and six inside lots, $5,500 each; total, $47,000.

Q. Also eight and one-half lots fronting on the north side of Sixtieth street, between First avenue and Avenue A, commencing 100 feet west of Avenue A?

A. Four thousand dollars each, total $34,000.

Q. Also eight and one-half lots fronting on the south side of Sixty-first street, between First street and Avenue A, commencing 100 feet west of Avenue A?

A. Four thousand dollars each, total $34,000.

Q. Also eight lots fronting on Avenue A, on the west side between East Sixty-second and Sixty-third streets?

A. Corners, $7,500 each, and six inside lots, $6,000 each, total, $51,000.

Q. Also thirteen and one-fourth lots fronting on the south side of Sixty-third street, and commencing 100 feet west of Avenue A?

A. Four thousand five hundred dollars each, total, $59,625.

Q. Also fifteen and one-fourth lots fronting on the north side of Sixty-second street, and commencing 100 feet west of Avenue A?

A. Four thousand dollars each, $61,000.

Q. Also eight lots fronting on Forty-first street on the north side, between Tenth and Eleventh avenues, commencing 100 feet east of Eleventh avenue?

A. Five thousand dollars each, $40,000.

Q. Also eight lots fronting Tenth avenue on the west side from the north-west corner of Sixty-fifth street to the south-west
9504 corner of Sixty-sixth street?

A. Corners, $8,000 each; six inside lots $6,000 each, $52,000.

Q. Also eight lots fronting Eleventh avenue on the east side, commencing at the northeast corner of Sixty-fifth street and extending to the southeast corner of Sixty-sixth street?

A. Corners, $6,500 each; inside $6,000 each—total, $43,000.

(Reference is here made to the ninth, tenth and eleventh questions following, and also to their answers.)

Q. Also twenty-four lots fronting on the north side of Sixty-fifth street, commencing 100 feet from Tenth avenue.

A. Four thousand dollars each, total $96,000.

Q. Also twenty-four lots fronting on the south side of Sixty-sixth street, commencing one hundred feet west of Tenth avenue?

A. Four thousand dollars each, total, $96,000.

Q. Also six inside lots fronting on the west side of Eleventh avenue between Forty-first and Forty-second streets?

A. Forty thousand five hundred dollars.

Q. Also one lot the north-west corner of Eleventh avenue and Forty-first street?

A. Eight thousand dollars.

Q. Also one lot the south-west corner of Eleventh avenue and Forty-second street?

A. Eleven thousand dollars.

Q. Also twenty-eight lots fronting on the north side of Forty-first street between Eleventh and Twelfth avenues, commencing about one hundred feet west of Eleventh avenue?

A. Four thousand dollars, total, $112,000.

Q. Also the twenty-eight lots fronting on the south side of Forty-second street between Eleventh and Twelfth avenues, commencing about one hundred feet west of Eleventh avenue?

A. Seven thousand dollars, total, $196,000.

9505 Q. Also six lots fronting on the north side of Forty-second street between Eleventh and Twelfth avenues, commencing one hundred feet west of Eleventh avenue?

A. Seven thousand five hundred dollars each, $45,000.

Q. You think there is an error in the schedule here?

A. Yes, sir.

Q. What is here Forty-second street, should be Eleventh avenue?

A. Yes, sir.

Q. Also eight lots fronting on the west side of Eleventh avenue between Sixty-fifth and Sixty-sixth streets?

A. Corners, $6,500 each; inside lots $5,000 each, total $43,000.

Q. Also seventeen and seventy-five one hundredths lots having a frontage of 199 feet and nine inches on the north side of Sixty-fifth street, and 243 feet nine inches on the south side of Sixty-fifth street, between Eleventh avenue and the Hudson River railroad cut, commencing 100 feet west of Eleventh avenue?

A. That railroad cut down there is very bad. Seventeen lots, $60,000.

Q. The total values to which you have just testified of the lots as stated in the questions and answers, of the Metropolitan Company amount to what sum?

A. One million one hundred and forty-seven thousand one hundred and twenty-five dollars.

Q. The total by the schedule in evidence as it appears now before me, and from which the preceding questions were asked, appears to be $1,424,250 unless there be an error in the addition; this amount I find in pencil on the schedules; your amount seems to be less?

A. Yes, sir.

Q. You are satisfied that your values are according to the fair market price?

A. Yes, sir.

Q. Is there room for such difference of opinion as would be indicated upon the schedule before me and your figures?

A. I think not.

9506 Q. The property is of a character whose values are readily arrived at?

A. Yes, sir.

Q. With a degree of certainty?

A. Yes, sir.

(By the CHAIRMAN:)

Q. Also fifty-seven lots bounded by the west side of Twelfth avenue and the center line of Forty-first street and the west side of the former Thirteenth avenue at Third avenue and the centre line of

Forty-second street, with water rights and grants as to wharfage, cranage, etc.?

A. I have put no valuation upon those fifty-seven lots, because the boundary reads as follows:—Bounded by the west side of Twelfth avenue and the centre line of Forty-second street, and west side of the former Thirteenth avenue, and centre line of Forty-second street, with water rights and grants as to wharfage, cranage, etc.

Q. You mean you have not made an estimate?

A. Yes, sir.

Q. How far are those lots filled in?

—. About seventy feet east of Twelfth avenue.

Q. The balance of the lots extend under water, do they not?

A. Yes, sir.

Q. Out to the pier?

A. Yes, sir; they claim that they own even beyond the pier according to this map, but I am told that they wanted to build up and they would not be allowed to. There is a bulkhead line of fifty-seven lots established by the Dock Department of 1871, and the pier line extending into the water. I call your attention to the schedule of the Harlem real estate which has been submitted in evidence heretofore, and on which the value of lots owned by the Constituent Harlem Company is stated at $604,000, and ask you, without going into detail respecting the valuations of the different lots there specified, whether you looked at the property?

A. Yes, sir, each and every appraisal with the exception of
9507 the King's Bridge road plot that I am very familiar with.

Q. What have you to say as to the total value of all the plots that are valued at $604,000 on that schedule—what is your valuation?

A. Five hundred and two thousand five hundred dollars.

Q. How did you arrive at that $503,500?

A. By going over the ground and looking at the same.

Q. State the items of your valuation?

A. Well, first is eight lots on Avenue A, and eight on First Avenue, and nine lots on the north side of One Hundred and Tenth street, and seventeen lots on the south side of One Hundred and Eleventh street—total valuation $203,000. The First avenue lots you might say, $6,000, all told. The avenue fronts each $48,000; $4,500 each on First avenue, first with Pleasant avenue; seventeen lots on One Hundred and Tenth street, $3,000 each—total, $51,000; seventeen lots on south side of One Hundred and Eleventh street, $4,000 each—total, $68,000.

Q. What are the lots on One Hundred and Tenth street assessed at in the tax office?

A. Seven hundred dollars each which is about fifteen per cent. of the valuation put upon the same lots by the gas company.

Q. And on One Hundred and Eleventh street?

A. One thousand two hundred dollars each which is about twenty-five per cent. of the valuation placed by the gas company's expert.

Q. As a general rule, about what proportion to the market value, salable value, is the tax assessed value?

A. That should be sixty per cent.; I don't say they are, understand.

Q. When you say the assessed value for tax purposes of those lots is $700 to $1,200, do you allude to the year 1884 or thereabouts?

A. Yes, sir; I do.

9508 Q. Refer to the next plot that is stated on the schedules and give your valuations?

A. Six lots on First avenue and eight lots on the north side of One Hundred and Eleventh, and two on the south side of One Hundred and Twelfth, between Avenue A and First avenue, avenue lots $6,000 each, total $36,000; One Hundred and Eleventh street, lots $4,000 each, total $32,000; One Hundred and Twelfth street, two lots $4,000 each, total $8,000; all told, $76,000.

Q. Please refer to the next plots indicated on the schedule opposite the words "block 226 valued at $200,000," and give your valuations?

A. Eight lots west side of First avenue, $6,000 each, total $48,000; twelve lots north side of One Hundred and Tenth street, $4,000 each, total $54,000; fifteen lots south side of One Hundred and Eleventh street, $4,500 each, total $67,500; gore, $3,500, total $163,000.

Q. The next plot is a plot marked on the schedule "block 227" and valued at $53,000; what are your valuations?

A. Forty-five thousand five hundred dollars.

Q. The next plot, that is valued at $28,000; what is your valuation?

A. Fifteen thousand dollars.

Q. Why is there such a great discrepancy?

A. I cannot give theirs, my own is full value; I think it is assessed for less than $10,000, including a tank belonging to the company, a large tank up there; they put a value on the tank.

Q. It is real estate, because it is a structure, is it not?

A. Exactly; they assessed it less than $10,000.

Q. We will now inquire concerning the lots of the Municipal that
appear to have been scheduled at a valuation of $889,000,
9509 and using the Exhibit marked "D J I G.," I would first call
your attention to the plot described as block 225 in the
twenty-second ward, bounded by Forty-fourth and Forty-sixth streets, Eleventh avenue and Hudson river, and which also included block "225 A. and block 226 A.;" you recognize the property?

A. Yes, sir.

Q. Have you seen it?

A. Yes, sir.

Q. Been on the ground?

A. Yes, sir; been on the ground.

Q. In the schedule I have just indicated, and opposite the items just read appear the figures with values of $1,083,000; what is your estimate of the values of the four plots just designated?

A. Five hundred and twenty-eight thousand two hundred dollars.

Q. In arriving at that valuation, did you include any structures of any kind whatever?

A. None.

Q. In arriving at that valuation what did you include?

A. All the land above and under water as described on the maps.

Q. You mean the maps in the schedule from which I have just read?

A. Yes, sir.

Q. Did you value the lots separately?

A. Each block by itself.

Q. Did you count the number of lots?

A. Yes, sir.

Q. Did you observe any discrepancy between the number of lots stated in the schedule from which I have just read, and the actual number of lots as shown by the map or by the property?

A. The total of the lots is the same, but they have fifty-four and three fourth lots on their schedule above water when it should read forty lots.

Q. Explain that?

A. If you will look on the map at block 226, and then compare it with a statement of block 226, the statement reading fifty-
9510 four and three-fourth lots, you will see there are but forty; if you will look at "226 A" map, and schedule "226 A" it reads forty lots instead of fifty-four and three-fourths; all with the exception of eight that face Twelfth avenue are under water.

Q. Being less valuable?

A. Very much; 75 per cent. less.

Q. The schedule reads 32 lots under water on block 226 A; there are in fact more under water, are there not?

A. Yes, sir.

Q. How many more?

A. Fourteen and three-fourths lots more.

Q. Under water?

A. Under water.

Q. Block No. 226 in the schedule reads 54¾ lots; how many are there according to the map?

A. Forty.

Q. How did you estimate the lots?

A. Twenty-five by one hundred.

Q. Block 225 reads 53 lots: that is 52, 25x100, and one lot 16x 100?

A. That is 52 2-3; that is correct.

Q. Block 225 A reads, 54¾ lots, eight above water and thirty-two under water?

A. That only accounts for forty.

Q. How many lots were there?

A. Fifty-four and three-fourths lots I allowed.

Q. Were there?

A. I suppose there were; when I came to look out in the water I take that as a guide; I went down to the tax office and they couldn't give me any information about that; I have examined the maps and could not get the exact number of the lots.

Q. Did you give your values assuming the number of the lots existed as stated in the schedule on that block?

A. Yes, sir; I did.

Q. Your values as just given include the values of lots under water?

A. Yes, sir.

9511 Q. What have you to say as to the method of estimating for marketable purposes, the value of such lots?

A. About twenty-five per cent. of the value of upland lots is very liberal.

Q. Does the fact that there is an adjoining lot under water add to the value of the lot that is exposed on land?

A. Certainly.

Q. When therefore you give the true value of the lot that is exposed on land does not such true value include some value for the adjoining lot under water?

A. Yes, sir.

Q. It must, must it not?

A. Certainly.

Q. Did you make the estimate to which you have just testified for the lands or lots out of water upon this basis?

A. Yes, sir; I made quite an allowance.

Q. What is a fair method of estimating the water rights adjoining this property of the Municipal, which you have just valued, if, in fact, there be any value in addition to the value of the lots as you have just given them?

A. I would place it about $100 to the foot.

Q. How many feet front was there in this property?

A. About 520 feet.

Q. That would be about $52,000?

A. Say $65,000.

Q. Now I observe in this schedule an item of 517 feet of bulkhead, valued at $52,500; isn't the value of that bulkhead, in your opinion, fairly included within the value of the lots exposed and out of water which you have already given?

A. No, sir; that is not in my estimate of $1,000 for lots under water.

Q. The estimate which you have just given includes an estimate for lots under water at what figure?

A. One thousand dollars each.

Q. And lots above water exposed at what figure?

A. Four thousand dollars each.

9512 Q. Are such lots as those designated capable of being accurately valued for marketable purposes?

A. Yes, sir.

Q. Do you know of sales in accordance with the values you have given?

A. I found some offers at my figures; they are valued at the price I have placed values on now; I call your attention now to the schedule marked "E. J. I. G." being the schedule of properties of the Knickerbocker Company, which by the books of the Consolidated Company appear to have been valued at $480,000, for their real estate and by this schedule the lots of which inquiry is about to be made of you appear to be valued at $550,000?

A. Yes, sir; that is their estimate.

Q. Have you examined the lots against which that estimate appears in these schedules, which are located in the Twelfth ward, between Ninety-eighth and Ninety-ninth streets, Second avenue and Harlem river?

A. Yes, sir; I have.

Q. What have you to say in respect to the fair values of those lots?

A. Three hundred and sixty thousand dollars, I make them.

Q. Does that include lots under water?

A. No, sir.

Q. Why not?

A. There are no lots under water.

Q. How do you arrive at your item?

A. I valued the lots between First and Second avenues, 201x650 feet in all, fifty-two lots, at $4,500 a lot, total $234,000; the other block from the Harlem river to First avenue, thirty-six lots, at $35,000 a lot, total $126,000; all told $360,000.

Q. Are those lots capable of being valued with any great degree of accuracy?

A. Yes, sir; from sales that have been made surrounding and what they are now valued at.

9513 Q. If there be any water rights in addition to the values just stated by you for that block fronting on the Harlem river between Ninety-eighth and Ninety-ninth streets, what are they?

A. Twenty-five thousand dollars to $30,000; $125 a foot.

Q. Twenty-five thousand dollars to $30,000 is sufficient to cover what?

A. The bulkhead.

Q. Do I understand you have made a personal examination at the request of the chairman of the committee of property surrounding that which you have just testified?

A. Yes, sir.

Q. In doing so it occupied a very considerable time, did it not?

A. Yes, sir.

Q. These values you have testified to are not such values as in the discharge of your duties if you was an official to assess for taxable properties that you would assess these lands at?

A. Certainly not; these are market values.

Q. The assessed values, I understand you would be about sixty per cent. of the market value?

A. Yes, sir; sixty per cent. of my values.

(By the CHAIRMAN:)

Q. Are these lots so situated including their surroundings that they are capable of being valued with a great degree of accuracy?

A. Yes, sir, very readily.

Q. For the most part, they have a recognized market value?

A. Yes, sir.

Q. Which you have stated?

A. Yes, sir.

MICHAEL COLEMAN, a witness called by the counsel to the committee, being duly sworn, testified as follows:

Examined by Mr. TREMAIN:

Q. You are holding what position?

A. Commissioner of taxes.

Q. Do you know Mr. Perry, the last witness?

A. Yes, sir.

9514 Q. What do you know about Mr. Perry's familiarity with real estate values and ability to judge of their market value?

A. Well, he was a clerk in our department for several years and was promoted as deputy; he has had experience in the tenement districts as to the value of lots in those districts and also he has had some experience in the valuing of water fronts on account of the position he had as deputy in the Twelfth ward, and of property adjoining the water front.

Q. Should you consider him a fair expert and competent to estimate the values of lots located in the following described portions of the city of New York, viz: in Fourteenth, Sixteenth and Twenty-second in the twelfth and nineteen- wards?

A. I should consider him rather a competent man to value property generally speaking, without there is some exceptional considerations that ought to be taken out of the line of ordinary property.

Q. Mr. Perry has been asked concerning the values of lots on which various gas properties in the city are located along the east side of the city near Fourteenth, Twenty-third and Ninety-ninth streets and also on the west side of the city in Forty-second, Sixty-fifth and Fourteenth streets taking several plots at each location I have named?

A. I should say that he was competent without as I said there was some extraordinary points that perhaps might be considered by an expert in values taking in some considerations that a competent ordinary man would not really know, unless he was experienced in regard to water fronts, or from whatever the cause might be.

Q. Excluding the costs of water fronts and the costs of their improvements, is there any other qualification you would fix to your answer?

A. No, sir.

9515 Q. My question, of course, relates exclusively to vacant lots?

A. Yes, sir.

Q. I speak of the valuation of lots apart from any structures upon them?

A. That is the way I understand it.

Q. Are you familiar with the properties I have indicated in these questions?

A. Not any more so than I am, generally speaking, throughout the city.

Q. Are you familiar with the values of real estate throughout the city?

A. Yes, sir.

Q. State your degree of familiarity and from what source it is derived?

A. From the experience I have had in the past twenty years in buying and selling, examining and estimating the market values of property on complaint of citizens, generally speaking, who have filed their objections in the tax department since 1868.

Q. As a matter of administration or fact, is there not usually a difference between the assessed value of city lots for taxable purposes and their actual selling value in the market?

A. We generally try to get below the market value.

Q. About how much is the market value above?

A. Throughout the city we are on a basis now of about seventy-eight per cent. but of course there are exceptions in all locations.

Q. There has been considerable testimony delivered this afternoon as to the value of a large number of pieces of property, and without asking you to go over all those values, I will by way of illustration, so as to see whether the testimony is in all respects or in some respects in accord with your judgment; I will inquire of you in one or two instances, calling your attention to the block between Forty-first and Forty-second streets and Eleventh and
Twelfth avenues, twenty-eight lots on one side on Forty-
9516 second street and twenty-eight lots on Forty-first street, I
would like to ask you whether you think $7,000 a lot for the twenty-eight lots on Forty-second street is not a fair and full value?

A. It is a fair value for all ordinary purposes, taking one lot at a time.

Q. Suppose you take twenty-eight lots?

A. You would have to add on a percentage there for connection, it is a very hard matter in New York for parties seeking large plots in that neighborhood and up to Ninetieth street to get twenty-five to thirty lots without paying a percentage over ordinary selling value; $7,000 is as fair a value as any expert could put on one or two lots; but if you could value that, you would have to add on a percentage.

Q. What would you value the entire block at?

A. It is a third rate tenement street or else a factory neighborhood and do you want me to take in these Eleventh avenue fronts?

Q. Yes, sir.

A. Well, as a plot that property would perhaps sell at $390,000; that is add on a percentage for the collections, but separately it would not sell for that price.

Q. From Twentieth to Twenty-second street and from the river to Second avenue; give us an idea of the valuation of the lots?

A. All my answers are for ordinary use; they would run along there for ordinary use in the neighborhood of $5,000.

Q. What do you say about the value of lots between Eleventh and Twelfth avenues and Forty-fourth and Forty-fifth streets?

A. Single lots there perhaps about $4,500.

Q. Worth any more on the avenue than on the side streets?

A. Yes; all avenue lots are worth more; that is the future for business; corners are worth a great deal more in proportion
9517 in tenement neighborhoods than in private neighborhoods.

Q. How do you assess the lots under water, how would you value them at their market value?

A. That is altogether owing to the foundation of river bed, the depth of water, the cost of cribbing out, the cost of filling in, the difficulty of getting the filling, and the current; there are many elements to be taken into consideration.

Q. What do you think would be a fair value?

A. That would be owing to the surroundings.

Q. Between Forty-fourth and Forty-fifth streets for water lots what relation to the upland values would those lots have?

A. It is a very difficult question to answer.

Q. For purposes of assessment what proportion of value is given to such lots under water in proportion to upland lots?

A. We place but small assessments, for the reason they are no expense to the city, and it is a difficult matter to find what will be the necessary cost of filling out and improving them to make them in such a condition as to make them marketable.

Q. If you put a valuation, say of about $4,000, on an exposed lot, about what would you put the valuation of a lot under water adjoining it?

A. It would be a difficult matter for any one to understand, the difficulty of putting values in proportion to upland lots without knowing the location exactly.

Q. At the foot of Forty-fourth and Forty-fifth streets?

A. It would be a difficult matter; I don't know the soundings.

Q. What are they worth, ordinarily speaking, in the market?

A. It is all a matter of what they would be used for.

Q. Would you not say that twenty-five per cent., in comparison with the upland value at that point, would be fair?

A. Very liberal.

9518 Q. Without making any very close examination, can you state about what the value of lots is between First and Second avenues, Ninety-eighth and Ninety-ninth streets?

A. That is all filled in around there, and I should judge they would run for street lots about $3,500; avenue lots, inside, $4,500; and the corners thirty per cent. added on to inside avenue lots. No single lot in that block would hardly be built on without an extra addition of cost on account of its value.

Q. Consequently the values you would put would be too high for a single lot?

A. Yes, sir; no one could afford to buy single lots; in that location it would be necessary for a purchaser to take several lots at once.

Q. Would you not think that taking that block, then, and averaging all the lots at $4,000, or $4,500, would be a very liberal value?

A. Very; of course I am answering in regard to ordinary use.

Q. Would there be any serious difference in the values of the block east of the block just mentioned, viz., between Ninety-eighth and Ninety-ninth streets and east of First avenue?

A. No, there would not be any.

Q. In the last questions that I have asked you concerning these two blocks, I have come within the values as testified to by Mr. Perry—I think considerably within—assuming I have come within, do you see any method by which those values could be made more accurate for that particular plot?

A. No, I do not.

Q. Or for any plots I have mentioned to you?

A. No, I do not; in the ordinary way of speaking about values of upland properties, those locations; but you must remember that in placing values upon large plots, upon river fronts, that what parties pay for them and what parties ask for them some-
9519 times are not the ordinary values but extraordinary values;
the manner in which they are purchased and the use made of them after they are purchased, all those are elements that ought to go in when you are speaking of large plots.

Q. Well, if property is in use for gas making purposes, and it is to be valued on account of a disuse of those purposes or for a continuance of the use of the same purposes, would either of those circumstances argue to increase the value, the salable value, the marketable value of those lots, above what an ordinary expert seeing them in their present use would place upon them?

A. Oh, very much indeed.

Q. Well, how?

A. Gas corporations in New York have selected locations to suit their particular kind of business; their plant is there, their mains are all connected; and privileges of their water-fronts which are special privileges in New York because we have only so much water-front here, and if they were altered to suit their purpose, would have far greater values. If for ordinary purposes or a disuse of property, then Mr. Perry's estimate of value I should consider as good as you could get, with the exception of what I say in regard to the mechanical improvements that ought to be made on bulkheads or the extension of bulkheads.

Q. Mr. Perry has not been asked about that; is there any other way, in your opinion, of arriving at the fair value of any of the plots of ground to which I have called your attention, except to send a competent expert acquainted with the values of the lots, and procure his estimate of appraisal of those lots?

A. Not as single lots.

Q. Is there, in your opinion, any other fair method of obtaining a fair aggregate value of any plot of lots of less than a
9520 block, or if a block except by sending a competent expert to
appraise the lots?

A. Now, you are talking of it as a whole?

Q. As a plot of lots or part of a block say?

A. Not by taking one single lot, or part of blocks, one with another; there is no other way.

Q. Supposing you want to get at the fair value of a piece of property, including real estates and structures upon it, and the fixtures, and a distinction is made between the value of the ground and what is upon it. The fair way is to ascertain the value of the ground, as ground is one element in the total of valuation?

A. Yes, sir; that is the foundation of values, of course.

Q. And the values which Mr. Perry has put upon these grounds seems fair to that extent?

A. Yes, sir.

Q. And then you go on and get the value of the plant, if there is one, and add that to it?

A. Yes, sir; but there is a connecting element that ought to be taken into consideration. The plant that has been put upon those grounds, if it is a prosperous plant, that element enters into its value together with the location, and should certainly be taken into account, and in getting at the value, you should have both together.

Q. You have got to get at the value of the land as one element?

A. Yes, sir.

Q. Mr. Perry has done that fairly, as far as you can see?

A. Yes, sir.

Q. If there is any thing in your testimony that you have not clearly explained, please do so?

A. My testimony is in regard to land in its natural state, and vacant with the improvements of streets surrounding it, the naked land.

Q. When you are getting at the value of land as land, we have it as far as you can see, and Mr. Perry has done it intelligently and fairly?

A. I should judge so, as far as I can see.

APPENDIX K.

Comparison of

Chapter 960, Laws of 1867.	Chapter 367, Laws of 1884.
An act to authorize the consolidation of *corporations organized under the law of February* 17, 1848.	An act to authorize the consolidation of *manufacturing corporations.*
§ 1. Any two or more corporations heretofore organized *under the law of* 1848, *may consolidate as follows:*	Any two or more corporations heretofore *or hereafter* organized *under any general or special law may consolidate as follows:*
The *trustees* shall meet and agree upon details as to name, location, trustees, capital stock (*which shall not be larger in amount than the aggregate amount of capital of the consolidating companies*), number of shares and other details, *not inconsistent with the laws of February* 17, 1848.	The *boards of directors* shall meet and agree upon details as to name, location, trustees, capital stock (*which capital shall not be larger in amount than the fair aggregate value of the property, franchises and rights of the consolidating companies*), number of shares, *term of existence* (*not over fifty years*), and other details. (Last clause, law of 1867, omitted in law of 1884, but see § 4).
§ 2. The agreement of the directors shall become that of the corporations only on the assent of two-thirds of the shares of stock of each company at a meeting duly called and advertised.	Same.
Any stockholder who dissents at this meeting or within twenty days may, or the company may, apply to the Supreme Court for the appointment of appraisers to hear and determine the value of such stockholder's shares.	Same, but the application to the Supreme Court must be *within sixty days after such dissent.*
Upon valuation of such shares, and payment of the amount appraised to the stockholder, the new corporation becomes owner of such shares.	Same.
§ 3. When duplicates of the agreements and verified copies of the proceedings of the stockholders' meetings shall be filed with the county clerk and the secre-	Same.

tary of State, the corporations shall be merged in the new corporation, and the details of such agreement shall be carried into effect. *But such new corporation shall have no larger powers than are granted by the law of February* 17, 1848.	(This sentence, law of 1867, omitted in law of 1884, but see § 4.)
§ 4. New corporation shall possess general powers and restrictions under 1 R. S., title 3, chap. 18, and under law of February 17, 1848.	Same.
§ 5. All rights, franchises and property of old corporations shall belong to the new.	Same.
§ 6. Rights of creditors protected.	Same.
§ 7. New corporation limited to the transaction of *one kind of business authorized by the law of* 1848.	New corporation allowed to carry on *any business authorized to the consolidating corporations or either of them.*
§ 8. This act shall take effect immediately.	Same.

APPENDIX L.

FORM OF REPORT FOR GAS COMPANIES IN USE IN LONDON.

The following is the form of the report provided by law, made for the first half year of the year 1885, for the Gas-light and Coke Company of London, exhibiting the method of stating for public information and for official use the details of capital, dividends, receipts, payments, supplies, materials, cost of manufacture, cost of gas, quantities manufactured, amount of sales, appreciation, depreciation, expenses, and general revenues, and all the general business of the company for one half year.

The capital of this company represents the equivalent of about $54,000,000. It sells gas at a maximum price of seventy-two cents per thousand cubic feet; it pays dividends varying upon different classes of shares, from five per cent. to ten per cent. per annum, and manufactures 8,479,915,000 cubic feet of gas in six months. (See committee's report pages .)

REPORT.

TO BE SUBMITTED TO THE PROPRIETORS AT THE ONE HUNDRED AND FORTY-SEVENTH HALF-YEARLY ORDINARY GENERAL MEETING TO BE HELD ON THE 7TH AUGUST, 1885.

The Directors submit herewith the accounts for the half-year which ended on the 30th of June last. They show receipts amounting to £1,542,586 1s. 2d., and outgoings (including provision for all fixed and preferential charges) amounting to £1,217,016 9s. 9d. The balance of £325,569 11s. 5d., added to the surplus profit, brought forward from the last account, amounts to £517,764
9523 16s. 4d., out of which the Directors recommended a dividend on the ordinary stock at the rate of 12 per cent. per annum.

The sale of gas continues to increase satisfactorily; and the wear and tear account, while every regard has been paid to the maintenance of efficiency, is again reduced. The cost of coal compares favorably with its cost in the corresponding period of last year, but the prices of tar and ammoniacal liquor and their products continue much depressed. There are, however, the Directors are happy to say, indications of improvement in some classes of this branch of their trade.

Parish rates and taxes, which show a still further increase, prove every year more onerous. In view of the growth of parochial expenses, and of the quinquennial reassessment now being made, the Directors have little hope of any diminution of these most serious charges upon the company.

The capital account, it will be observed, has been slightly reduced by the amount received for superfluous land which has been sold.

The application of the Vestry of the Parish of Kensington for a reversal of the judgment of the Court of Queen's Bench in the Steam Roller case has been heard. The Lord Justices of the Court of Appeal unanimously upheld the judgment of the Lower Court in favor of the company on every point raised.

WILLIAM THOMAS MAKINS,
Governor.

HORSEFERRY ROAD, WESTMINSTER, S. W., *24th July,* 1885.

9524 CONSTRUCTION AND CARBONIZING DEPARTMENT.

I hereby certify that the whole of the company's manufacturing and other stations under my charge have been maintained, and are now in good working order.

(Signed) G. C. TREWBY,
Constructing and Carbonizing Engineer-in-Chief.

HORSEFERRY ROAD, WESTMINSTER, S. W., *22d July,* 1885.

Distribution Department.

I hereby certify that the whole of the distribution plant is in good order, and in a thoroughly efficient state of repair.

(Signed) ROBERT HARRIS,
Distributing Engineer.

146 Goswell Road, E. C., *22d July*, 1885.

Products Department.

I hereby certify that the whole of the plant, engines, boilers, stills, trucks, machinery and tools in connection with the company's products works under my charge have, during the past half-year, been maintained in good working order and repair.

(Signed) THOS. WILTON,
Superintendent of Products Works.

9537 UNITED STATES OF AMERICA,
Southern District of New York, ss:

I, John A. Shields, Clerk of the Circuit Court of the United States of America, for the Southern District of New York, in the Second Circuit, do hereby Certify that the foregoing pages, Volume IV, Exhibits, numbered from 8805 to 9536 inclusive, contain a true and complete transcript of the record and proceedings had in said Court, in the cause entitled Consolidated Gas Company, Complainant-Appellee, against Julius M. Mayer, as Attorney General, *et al.*, Defendants-Appellants, as the same remain of record and on file in my office (Vol. IV, Exhibits).

In Testimony Whereof, I have caused the seal of the said Court to be hereunto affixed, at the City of New York, in the Southern District of New York, in the Second Circuit, this 15th day of May, in the year of our Lord One Thousand Nine Hundred and eight and of the Independence of the said United States the One Hundred and thirty-second.

[Seal of U. S. Circuit Court, South Dist. New York.]
JNO. A. SHIELDS, *Clerk.*

[Endorsed:] United States Circuit Court of Appeals for the Second Circuit ——— *vs.* ———. Transcript of Record from the Circuit Court of the United States for the Southern District of New York.

9576 COMPLAINANT'S EXHIBIT 377.

(For Identification.)

DANBURY, CONN., *November 22nd,* 1905.

W. H. Bradley, Esq., Chief Engineer Consolidated Gas Co.

MY DEAR SIR: The apparently simple questions left for me to answer by Mr. Wood, relative to the results of making oil gas in vertical retorts according to my plan, has led me into a perfect wilderness of figures and reports, extending over a period of 15 years. If Mr. Wood had struck in here about a week after starting; that is to say, about the middle of April, 1890, I could have told him all about it, right away, without any ifs, ands, or buts; but, when it comes to running one machine for 15 years, there's lots of things turn up. There's shortage of naphtha and oil to account for, there's cutting up of gas meters, big ones and little ones; there's leakage of gas to charge up against the machine; the ups and downs of the thermometer, the hoppings of the barometer, the heighth above the sea, and the depth of human cussedness and neglect; now as the only way out of the maze, I shall, as you will see, charge them all up against the machine. There seems to be no other way out. I therefore send you a table of the performance since the beginning. The last six years' running has been on gas oil, with an occasional tank of Texas oil; the first nine years on naphtha. A salient feature is, that the machine is carbonizing more oil per hour under fire, and making more gas per hour than it did in the start; also that it has performed a little better on gas oil than on naphtha, but that is possibly due to improved handling. Under the head of naphtha gas made is included the gas used in purging out at the beginning and end of runs; the analyses will show more correctly the proportion of oil and water gas.

Yours very truly, H. H. EDGERTON.

9577 DANBURY, CONN., *Nov.* 30*th*, 1905.

W. H. Bradley, Esq., Chief Engineer Consolidated Gas Company.

MY DEAR SIR: I enclose you herewith, a copy of some of the analyses of the Danbury Gas, together with an account of the working for the past fifteen years. As before stated, on account of the loss and discrepancies of the naphtha and oil account I have reduced the results to the gallon of oil paid for.

As you might suppose this is a little hard on results from the machine, but under the circumstances, I shall have to stand it.

There is another question or two of Mr. Woods that I have not yet answered, but I will tackle them on my return from N. Y. the first of next week. I have been jogging the boys up to get themselves on dress parade, as the gas has been down a couple of candles, owing to a leak in one of the retorts, but I think they have it in hand, for I notice the gas went up to 36.4 candles, in spite of this cold snap today. What I want to do, is to make a series of analyses of the gas from gas oil, in connection with the yield; after testing the station meters and the small measuring tanks, and see what I can get out of the thing, by watching the running myself, I notice the men have got into a very comfortable way of running things, to suit their own convenience; for instance, when I told Mat the other day that he must keep square up to candle power, to show these New Yorkers what a fifteen old machine would do, he very coolly told me that he thought that 33 candle gas was good enough for anybody!

Yours very truly, H. H. EDGERTON.

9578 RESULTS FROM THE USE OF THE DANBURY PROCESS OF UPRIGHT RETORTS.

At Danbury, Conn., there has been in use since March, 1890, a setting of nine upright retorts, until the present time, November, 1905. The following is an account of the performance of this setting, in regard to the points indicated:

MI-TURE.

Year.	Naphtha used, gallons.	Naphtha gone.	Yield per gallon, cu. ft.	Coal per M.	Candle power.	Hours run.

Remarks:—The yield per gallon of naphtha, or oil, is based upon the amount gone from stock, reduced to a temperature of 60 degrees Fahr., since the time the temperatures were recorded; namely, in 1893.

The use of gas oil began in September, 1899, and has continued since that period, with the exception of the fall and winter of 1902-1903 during which Texas oil was used.

9579 Gallons of naphtha carbonized per hour, Year 1891 ....69.0 gals.
Gallons of gas-oil carbonized per hour, Year 1904......78.2 gals.
Gallons used per hour per retort, Year 1904.......... 8.68 gals.
Size of retort, 12 in. diameter, 8 ft. long, area 31.4 sq. ft.

The candle power is determined by the use of a burner giving a fourteen candle flame; standardized by a burner giving a 22 to 25 candle flame, the rating of the gas would be raised to about 44 candles; or 8.8 candles per cubic foot instead of 7.5 candles.

ANALYSES OF DANBURY GAS MADE AT VARIOUS TIMES FROM 1889 TO 1896.

By Mr. C. H. Hinman, State Gas Inspector, for Massachusetts March 6th and 7th, 1889:

Illuminants	26.46
Marsh Gas	42.88
Hydrogen	18.38
Carbonic Oxide	8.50
Nitrogen	2.41
Oxygen	.09
Carbonic acid	1.28
	100.00

Gas made, 36,500. Naphtha used, 381 gals. Candle power (by 14 C flame)

Total yield per gal., 95.9 ck f. Yield of Naphtha gas per gal., 68.0 cu. ft.

Illuminants per gallon, 25.2 cu. ft.

ANALYSES BY H. H. EDGERTON.

	Dec. 25, 1892.	Dec. 22, 1892.	Oct. 26, 1895.	Feb. 3, 1896.	Feb. 7, 1896.	Feb. 7, 1896.	Nov. 28, 1892.
Carbonic acid	1.38	2.58	3.50	2.54	3.00	2.92	4.43
Oxygen	....	....	....	.46	.39	.21	....
Illuminants	22.27	19.31	20.82	20.30	23.60	23.40	.48
Marsh gas	45.05	33.80	37.72	41.16	39.15	39.06	1.27
Hydrogen	21.19	24 53	21.20	21.36	19 54	19.74	50.70

Illumin'ts pr. gal	24.2	28.8	26.9	25.3	30.8	30.8	
Ill't'g power	35.8	....	36.1	32.9	38.2	38.2	
Temperature	....	....	....	....	....	....	
At Sta. meter	....	....	70.0	59.0	63 0	63.0	
Naphtha used	....	....	....	....	....	....	

Naphtha gone from stock; no comparison can be made on this item, on one day's run: the fall of temperature, or rise, on a large stock of naphtha causes such a difference of volume, as to make comparison impossible.

TAR RESIDUE.

During the year 1904, there were 17,813 gallons tar burned under boiler.

During the year 1905, there were 21,319 gallons tar burned under boiler.

Gas oil gone from stock, 1903, 238,237 gallons; per cent. tar, 7.5% made.

Gas oil gone from stock 1904, 273,874 gallons; per cent. tar 7.7% made.

It is to be noted that the fiscal year ends May 31st, and the year as above named, is that in which the year ends.

DANBURY, CONN., *March 9th,* 1905.

Cost to manufacture gas at Danbury, Conn., year 1902-1903, the cost based upon the thousand cubic feet of 17.6 candle gas sold.

Thousands of cubic feet of 44 candle gas sold	21,273,000
Thousands of 17.6 candle, based upon the light equivalent	53,183,915

At works.	Cost.	Cost per thousand 17.6 candles.	
For Fuel	$3,756.35	7.063 Cents.	
For lime	23.00	.043	
For Gas-oil	9,061.86	17.039	
For Gen'l Expense	2,131.20	4.007	
For Station Repairs	182.90	.344	
For Station Wages	4,098.43	7.706	
Total at Works	$19,254.04	36.202	36.202 Cents.
9581 Distribution:			
For Dist'n Labor	$938.37	1.764	
For Tools	221.39	.416	
For Street Lamps	38.08	.072	
For Services Repairs	101.19	.190	
For Main Repairs	108.76	.204	
For Insurance	266.05	.500	
For Meter Repairs	256.44	.482	
Total Distribution.	$1,930.23	3.628	3.628
Management:			
For Salaries	$3,772.08	7.093	
For Rent	428.54	.806	
For Office Expense	468.00	.880	
Total Management.	$4,668.62	8.779	8.779
For Bad Debts	449.86	.846	.846
For Taxes	1,112.87	2.093	2.093
For Depreciation	2,534.84	4.766	4.766
For Dividends (Gas)	7,875.00	14.808	14.808

Total cost of Gas per 17.6 candle M, including interest	71.122 Cents.
Gas Bills, Less Discounts, $58,849.10; per M, sold 110.657 cents	110.657 Cents.
Surplus, Gas receipts over expenses, depreciation and interest, $21,023.59	39.535

9591 MAXIMUM RESULTS.

The enquiry has been made as to the maximum results that have been attained by the employment of the upright retort. In view of the want of balance between the oil used, and that gone from stock, there is some difficulty in arriving at any statement of maximum results, that will be free from criticism. Looking only at those from the use of gas oil within the last few years, it will be noted that during a number of months the statement of oil used, and that gone from stock come to a reasonable agreement. Among these may be noted the following:

May 1901	12,363	13,030	134.6	78.2	35.6
June 1903	13,254	13,880	129.7	80.0	33.9
Aug. 1903	17,028	17,630	126.1	81.4	33.6
May 1903	14,910	14,717	121.3	74.0	37.4
	57,555	59,257	511.7	313.6	138.5
Mean			127.9	78.5	34.6
Yield, based on oil gone			124.1		
Reduced to 60 deg. temp			119.5		

Per cent. of illuminants, on the average required for 34.6 candles, is 21.3%.

This, into yield per gallon, equals 25.45 cu. ft. of illuminants per gallon.

While this result can hardly be looked upon as a maximum, as it is the average of four months of working, during which the disagreements between the oil gone from stock, and that measured in the small feed tanks, had come to a minimum. The result is also based upon the oil gone from stock.

A fairer statement of an average maximum may be taken from a test made at Wallingford, in October and November, 1884; this was as far as the writer is aware, the first use of "gas oil," then called intermediate oil, ever made.

9592 The average result was: 107 cubic feet per gallon of 39.95 candle gas, tested according to the Danbury method; that is by ascertaining the durability of a 14 candle flame from 2 cu. ft. of gas. Pro rata yield, at 35 candles, 122.1 cu. ft.; per cent. illuminants, due 35 C. gas, 22.59 per cent.; per cent. of illuminants by yield, in cu. ft. per gallon, 22.59 x 122.1, gives quite approximately cu. ft. illuminants per gallon, 27.6.

MAXIMUM RESULTS FROM GAS OIL.

At Wallingford with Upright Retorts.

Nov. 1st, 1884, yield per gallon 124.5 cu. ft. of 39.72 candle gas.

Pro rata yield of 35.0 candle gas, equal 141.3 cu. ft.

Illuminants required in average 35.0 C. gas, equal 22.59 per cent.

Illuminants per gallon, 141.3 x 22.59 equal 31.8 cu. ft. per gallon.

During the above test, of which a copy is enclosed, the meters were tested, the water level was carefully adjusted and kept correct by means of an overflow, connected with inlet of the meters. There were two meters used, one for the oil gas and one for the water gas.

There was no analysis made of this gas, but analyses made subsequently of gas made from gas oil by the Wallingford machine gave as follows, December 1st, 1892:

	%
Carbonic acid	3.00
Illuminants	27.92
Carbonic oxide	16.14
Marsh gas	30.74
Hydrogen	18.82
Nitrogen	3.33
	99.95

9593 This gas shows the higher ratio of illuminants to marsh gas, which obtains from the gas made from gas-oil, and with the smaller diameter retorts.

It is obvious, that the short runs made during the Wallingford test, were not favorable to uniformity of results, and it is not at all surprising that the results differ. It is to be noted that in this case the water gas did not go through the oil gas retorts, but was drawn off entirely separate; therefore the result is got from oil without the so called preserving effects of the water gas.

The above test of gas oil was undertaken at the instance of Mr. Warden of the U. G. I. Co., and is to be noted as the first successful use of that quality of oil. Tests with the Lowe machine in use at that time had proved unfavorable.

9594 THE DANBURY PROCESS OF GAS MAKING.

The Danbury method of carbonizing oil vapors consists essentially in setting the retorts on end, preferably of cylindrical shape, and the retorts are open, the full diameter both at top and bottom. The setting is heated by "producer gas"; the current of combustible gas travelling from the top downwards; the secondary air for the burning of the gas, is introduced into the top of the setting. The oil or bituminous vapors are turned loose into the common chamber, beneath the lower ends of the retorts, and find their way upward through the retorts, becoming decomposed into fixed gases, on the way up. The theory of the process depends upon the fact that the resultant gases are much lighter in gravity than the vapors from which they are made; not only that, they are made much hotter on the way, through the retorts. From this fact, it is supposed that each retort will draw in proportion to its capacity to heat and gasify; it is supposed that each retort will deliver at the upper end, gases of uniform weight and composition; that in the transit through the retorts the gases and vapors are in perfect equilibrium, and that signifies that they are in all parts proportionally and equally heated, and that being equally heated, decomposition into lighter gases will take place in each retort uniformaly. Although the ascending vapors, which are in immediate contact with the sides of the retort, receive heat in proportion to the square of the distance, inversely, yet it is impossible to suppose the superheated vapor will remain in that position; there is a constant eddying inwards of the heated vapors, as may be seen in fluids under similar conditions. It is practically noticeable that the transition from tarry matter to carbon is sharper and more definite in the case of these vertical re-
9595 torts, than is the case with horizontal retorts. Neither is there required in the case of vertical retorts, a "carrier," as it is sometimes called to preserve the vapors from overheating, or to sweep them out, as it is termed; the extra levity of the "cooked" gases, performs this service. That the action takes place in the manner described is perfectly observable to any one who is practically acquainted with the operation of the upright retort; and if a correct proportion of length to diameter in the retort were observed· it is probable that neither tar nor carbon would be formed in the operation of gasifying. It is probable that the length of the Danbury retorts could be increased somewhat in the use of the intermediate, or "gas oil," with improved results. It has been already noted in the case of the lighter oils, that nearly the total weight of the oils appeared in the form of the resulting gases. It has also been noted that by the use of a smaller diameter retort that the results from gas oil, in the shape of gas, and total luminosity of the gases was materially increased. During the first nine years of service of the Danbury setting the naphtha gases and the water gases were led off separately; that is, there was no water gas sent through the upright retorts along with the naphtha gases. The results during that period can be taken as a demonstration of the

feasibility of sending the vapors through the heated retorts without being "carried" or swept out by an inert, and non-decomposable gas. It is altogether probable that the presence of an inert gas is required in the use of the various superheater systems, heated by direct internal heat, for the reason that there is no ready escape for the cooked gases; and besides the heat at the beginning must be considerably higher than at the end of the operation. Also, in
9596 the use of horizontal retorts, there seems to be an actual advantage in the use of an inert gas, in order to save from overheating, the hydrocarbon vapors; the inert, or non-decomposable gases being lighter than the vapors, can generally be supposed to take the upper part of the retort, or even if supposed to be so thoroughly mixed that no practical separation by gravity takes place, still the effect of dilution will necessarily be preservative, in lessening the time of exposure and intimacy of contact with the heated surface. Judging by the practical results from the working of this Danbury system, it must be admitted that the advantage of allowing the gases to rise freely by the force of increased levity, is fully established, for the results from retorts set horizontally and used without the intervention of inert gases are far below those shown in quality and quantity and regularity. It is notable in the use of the Danbury retorts, no such thing as a stopped retort had occurred during a period of twelve years' use, or until the use of Texas oil was begun; and only then through the inexperience of the men in the handling of such oils. During all this time no especial steps had to be taken to burn out or clean out carbon in the retorts; the ordinary reversals of blast and heating up being sufficient to keep them clean, and it is doubtful in view of the construction, if even that was necessary, to keep the inside of the retorts clean. Each retort was provided with a sight hole for the purpose of watching the heats, and the condition of the retorts, and such was the regularity of the heating under the system that the custom of inspection fell into disuse for years at a time, the practical handling being carried on by the clock, the blast pressures and the color of the issuing gas from a test cock. The machine has run from the starting in 1890, until the present time without letting
9597 down, and such alterations or improvements that have from time to time been made, have been accomplished without letting down the heats, and without any essential repairs. There have been introduced since the start some improvements in running, which in the aggregate have been of considerable importance, and which in the starting of a new machine could be availed of at once, to the considerable advantage of results. As an instance, the method of stopping leaks in the setting was an afterthought, and was of great importance, particularly as to those in the bottom joints, with which in the usual operation of the work, only the hydrocarbon vapors came in contact.

In fact the operation as a process was being continually made over, to suit the different oils, and, as shown by the results, that a fifteen-year-old machine is doing superior work, with an inferior and cheaper quality of oil than at the outset. For instance, the first year's running on naphtha took a gallon of material for 95.69 cu.

ft. of average 34.38 candle gas, while the year ending May 31st, 1905, required a gallon of gas-oil (gone from stock) for 106.86 cu. ft. of average 34.8 gas. It may as well be stated at this point, how the photometry of this gas has been determined and entered in the accounts.

Photometric methods used at Danbury, in reporting candle power. This is an important point, because it is a well-known fact that poor gases can be rated a higher and rich gases at a lower value than is practically obtained by the consumer, even with the best and most suitable burners in each case. The whole matter rests on the fact that the same gas can obtain different ratings, per five cubic feet, according to the greater or less candle power of the flame used to obtain the rating. For instance, if a three-foot rate of con-
9598 sumption is obtained and tested with a suitable flat flame,
and a five-foot rating of the gas given thereby, it will give a decidedly inferior rating to the gas than if burned in a suitable burner at the rate of five feet. For the above reason it was determined to standardize the Danbury gas by a standard candle power flame, and the power of the flame was put at fourteen candles, because at that time, 1879, it was the actual five-foot rating of the gas in use (coal gas). The Danbury gas can be actually burned, and is so used by many customers in flames of 30 to 33 candles. There was no obligation to standardize by so small a flame as 14 candles, save the facility it gave for comparison with the former gas, coal gas. Standardized with a 22 to 25 candle flame the pro rata candle power of Danbury gas is raised from 14 candles for 2 c. f. rate to 17.6 candles for a 2 c. f. rate; and this is the actual comparative value of the gases when with gases using as high as a 22 candle flame to standardize. The Danbury system of testing is practically the same in principle as the system used in Paris, and is carried out in practically the same way, only substituting a 14 candle flame instead of a "Carcel." The rating instead of being reported in litres per hour to give a "carcel," is reported in number of minutes; two cubic feet of gas will last while giving a fourteen candle flame. This system of testing has been introduced into England, after years of haggling, and now legalized. The system was introduced at Danbury in 1879; or, I believe, five years before its advantages were fairly described in an English publication. No particular originality is pretended for it, but it certainly does away with the troublesome incongruity of photometric results, and moreover places the rating of greatly differing qualities of gas on an eminently practical
9599 as well as scientific basis. With the advent of the Welsbach
burner into practical use, came an itching desire to lower quality all round, and along with it came this long suspended recognition of the superior advantages of the improved photometry. Is it possible that scientific thought is entirely moulded by pecuniary considerations? Gas below standard was ill treated by the old 5 cu. ft. an hour plan; Welsbach brought a desire for lower standards to please pocket; pocket wants improved photometry, and gets it; science couldn't, except among "monkeyfied" Frenchmen; pocket beats science in the domain of science! This is a good place

for a word about candles per gallon of oil. Whoever invented the method of rating results from oil in candles per gallon; his name remains unknown. Sensible people took to using it, in the same fashion that scholars are sometimes pleased to use slang. No one seems to know who invented the "French system" of measuring electric lights, so long in use, but it is shrewdly suspected that the candles per gallon man and the French system arc man is either one and the same person or of the same family. Neither practice has any real basis, but both serve a commercial purpose. It will be conceded that the gas product from one gallon of oil, added to 1,000 feet of water gas would give no light, nor would two gallons give any sensible light, not until four gallons per thousand is reached does the light become a practical quantity; the addition of the 5th, 6th and 7th gallon give each an increase per gallon, where the light is tested by the method of equal flame powers in each case. Different experimenters might differ slightly as to the point where a maximum effect was to be obtained from a given quantity of oil, but by using the equal flame power method of photometry the difference would be slight.

9600 FUEL REQUIRED.

As to the fuel required to make a thousand feet of the pure oil gas, the records of operations give us only a clue. During October, 1903, there was required, in the cupolas, 26# per thousand. This amount of coal furnished the heat for making about 700 feet of oil gas, as well as the fuel and carbon for 309 feet of water gas; the latter could not probably have been less than 15# leaving 11# per thousand for seven hundred feet of oil gas, together with the fuel necessary for blowing up a heat to make up for an average of 460 hours lying off during the month.

REGULARITY.

While the quality has generally averaged above the point stipulated the records do not by any means disclose the regularity of which the system is capable. The method generally pursued to regulate the candle power of the gas to one point was as follows: Every morning before the time arrived for gas making, the quality of the gas in the holder as going to the city was determined on a Bunsen photometer, except that a standard light equal to 14 candles was turned on the burner (a 1-in. E. H. Batwing) and the durability of a 14-candle flame, while using at the rate of 2 c. f. per hour, was determined. The result should be 5 minutes for one-twelfth of a cubic foot, or 60 minutes for 2 cubic feet. Whatever the gas lacked, or exceeded this amount was marked on a slip for the guidance of the gas maker.

The gas maker was provided with two burners of equal capacity, one on each limb of a differential gauge. One of these was supplied with gas from the street main, and the other was supplied from

the gas making. The directions were to keep the flames visi-
9601 bly equal, when the quality was right in the holder, and to exceed or diminish the making gas, as the holder gas was below or above the 60 minutes standard. While the above method carefully carried out will give a very fair result, as carried out, there were sometimes intervals of several days between tests at Danbury, on many occasions, thus giving an opportunity for the gas to sag in cold weather or rise above the mean in the spring season. Not only is more oil required in cold weather, but even with the increased quantity shown in the records, the gas would sag below standard, and this is particularly noticeable since the use of gas oil. As before stated the writer believes the length of the Danbury retorts to be too short for cracking up the vapors into their most permanent forms of illuminants; although they probably give a somewhat larger result in light during moderate weather. The analyses of gas made with smaller retorts, and from oil, point forcibly to this conclusion, and while it may not be possible to make a gas which will not require somewhat more of oil during the excessively cold weather of our winter, it will be possible to greatly restrict this difference by means of giving a greater ratio of length to diameter, than obtains in the Danbury plant.

In order to weather the "minimum standard" point in bad weather, close hauled and close to, the plan put in use in New Orleans and very closely watched for fouls from the poop deck of the City Hall, during a period of several months, the enclosed log, or record, is offered.

The plan followed was that of the gas clock, which, according to the recollection of the writer was designed and constructed by Mr. Milsted of the American Meter Co. The "gas-clock" was designed and used on the assumption that in the best practise of gas
9602 making, the quality of the gas could not be prevented from deviating from the given standard, the use of the gas clock was to so record and expose the result of the deviations during a day's make, that the gas could be averaged to the standard by the workmen in charge of the operations. The writer will not go into the details of the working of the gas clock at this time; suffice it to say, the result of its careful use led to an uniformity in the production of a high candle power gas, that has probably never been equalled. The record kept at New Orleans, or rather a certified copy thereof, is offered as evidence of how close the minimum can be shaved by means of the upright retort, worked according to the indications of the gas clock, of Mr. Milstead.

It has been claimed by some that the construction and operations of works under the management of the U. G. I. Co. of Philadelphia, may be taken as models of efficiency, economy, and regularity of product. The writer therefore calls attention to the works at Fall River, Mass., as an example. According to the Inspectors' report, (19th annual) the highest quality was 26.7; the lowest, 18.2; the average, 20.59; a range of 8.5 candles, or a range of 41 per cent., taking the mean as a basis. This, the result of 47 inspectors; less than one per week; therefore the chances were one to six against catching either the highest or lowest quality. Contrast this with Haverhill, employing a retort process; highest, 22.4; lowest, 18.6; range, 3.8, or a range of 18.4 per cent. of the mean quality. But this performance was with naphtha. At New Orleans the extreme range on 96 daily tests was 4.56 candles on average 33.33. or 13.5 per cent. As this extreme range happened within 24 hours, it is altogether probable it was the result of some peculiar derangement at the works, for it occurred but once in six months.

9603 COPY OF THE CITY SURVEYOR'S TESTS OF THE QUALITY OF NEW ORLEANS GAS.

This is to certify that at the request of Mr. H. H. Edgerton, I have made the accompanying copies of the weekly report of the daily tests of gas from the letter book of 1885, in the office of the City Surveyor. These tests extend from July 24th, 1885, to December 1st, 1885, when they were discontinued. These tests were made by me and reported to the Council by D. M. Brosnan, City Surveyor. For identification, I have paraphrased all the accompanying copies, as follows: "O. K. L. M. Brown, Ass't City Surveyor."

(Signed) L. M. BROWN,
Ass't City Surveyor.

NEW ORLEANS, *July 28th*, 1885.

To the Honorable Mayor and City Council of the City of New Orleans:

GENTLEMEN: I have the honor to report on the testing of both gas and electric lights as follows:

The photometer loaned the City by Mr. H. H. Edgerton has been placed in position in the old drafting room on the fourth floor of the City Hall building, and the following tests of the intensity of lights from gas made:

July 24th, 1885.

	At the rate of 3 cu. ft. per hour.	At the rate of 5 cu. ft. per hour.
1st.	19.3 candles.	32.10 candles.
2nd.	20.0 candles.	33.33 candles.
3rd.	19.9 candles.	33.20 candles.
4th.	20.9 candles.	33.60 candles.
5th.	19.6 candles.	32.70 candles.
6th.	19.1 candles.	31.80 candles.

July 27th, 1885.

1st.	20.4 candles.	34.0 candles.

July 28th. 1885.

1st.	20.4 candles.	34.0 candles.
2nd.	20.0 candles.	33.33 candles.
3rd.	19.9 candles.	33.15 candles.

These tests were made with the gas burning at the rate of three (3) cubic feet per hour, although the recognized photometer 9604 test is made on a basis of five cubic feet per hour. As the burners for water gas will not admit of its burning at the rate of five (5) cubic feet per hour, the tests are made with three-foot burners, and by calculation that at the rate of five cubic feet per hour is obtained.

In relation to the testing for brilliancy of electric light, as ordered by your Honorable body, this office having no photometer for the purpose, has availed itself of the use of one owned by the New Orleans Gas Light Co., set up in the residence of Mr. Walton Clark, an employee of the said company, at the corner of Robertson and Canal streets.

NEW ORLEANS TESTS FOR QUALITY OF GAS.

These tests were made on the 8th of June, last, and on the 24th of the present month, on which occasion Honorabe William Moon, Michael Carroll, Peter Farrell and Victor Maubert, members of the Committee of Testing of Lights, were present, also Mr. Shields, Council Committee Clerk and Mr. L. W. Brown. Draftsman, etc., of this office. The following intensities were obtained:

June 8th, 1885.		July 24th, 1885.	
1st.	366 candles.	1st.	768 candles.
2nd.	708 candles.	2nd.	938 candles.
3rd.	780 candles.	3rd.	783 candles.
4th.	162 candles.	4th.	449 candles.
5th.	343 candles.	5th.	431 candles.
6th.	126 candles.	6th.	837 candles.

The method of making these tests is the same as that in testing the gas lights, with the exception, that while the assumed or known power of the lights in the gas tests remained stationary, and the semi-transparent disc used for obtaining one point of equal illumination between the two lights is moved along a bar, they are reversed in testing the electric lights. For further testing of these lights the City should have a similar photometer, and a horse and wagon to move it about.

Very respectfully,
(Signed) D. M BROSNAN,
City Surveyor.

9605 August 4th.

GAS TESTS.

At 3 feet pr hour, candle power.			Calculated to 5 cu. ft. per hour.
July	28th.	19.9 candles.	33.15 candles.
	29th.	19.2 candles.	32.06 candles.
	30th.	19.4 candles.	33.00 candles.

AN ORDINANCE

OF THE

CITY OF PHILADELPHIA.

Approved November 12th, 1897, Authorizing a Lease of the

PHILADELPHIA GAS WORKS

TO

THE UNITED GAS IMPROVEMENT COMPANY.

AN ORDINANCE

Authorizing the Execution of a Contract with The United Gas Improvement Company, its successors and assigns, by the City of Philadelphia, for the lease to the former of the gas works, street mains, conduits, pipes. services, meters, and other property, real and personal, of the latter, used for and in connection with the manufacture and distribution of gas in the City of Philadelphia; for the operation, maintenance, enlargement, extension, and betterment of the same; for the manufacture and distribution of gas in said city by said The United Gas Improvement Company, its successors and assigns, and for the exclusive supply, by said lessee and its assigns, of all gas to be supplied to consumers by or with the consent of said city during the term of the lease; and 9623 also consenting to the entry of The Equitable Illuminating Gas Light Company of Philadelphia upon the streets of the City of Philadelphia, in case of its becoming an assignee of the United Gas Improvement Company to such extent as shall be necessary to enable it to perform its duties as such assignee.

WHEREAS, The sole source of supply of gas in the City of Philadelphia, saving of that manufactured and supplied to said city under its contract dated the third day of August, 1888, with the Philadelphia Gas Improvement Company, and also of that supplied by the Northern Liberties Gas Light Company, which latter Company claims a right also to supply gas in portions of said city is certain property known collectively as the Philadelphia Gas Works, owned by said city and now operated by it; and,

WHEREAS, Very large sums of money ought now to be expended in laying additional mains, services, and connections in supplying meters and appurtenances, and in the erection of new and additional apparatus necessary for the economical manufacture, storage, and distribution of gas sufficient to supply the present and prospective demands for gas by the city and its inhabitants; and,

WHEREAS, The requirements of the city for other municipal purposes are of such a pressing character that it would be extremely inconvenient for it to make said expenditures at the present; and,

WHEREAS, It is deemed desirable to secure by contract with a responsible company the maintenance, operation, development, and extension of its gas plant, and of its system of distribution

9624 of gas, for a term of years, and also to resume at the end of said term possession of its works and plant, modernized and fully equipped, without impairment of the exclusive privilege of supplying gas within the limits of said city now vested in it; and,

WHEREAS, Said object can be accomplished by leasing all its property, real and personal, known collectively as the Philadelphia Gas Works, and the appurtenances, for a comparatively long term of years, under a contract insuring to the lessee during said term possession of said works and of the exclusive right, except as hereinafter noted, to supply the citizens of Philadelphia with gas; now, therefore,

SECTION I. *The Select and Common Councils of the City of Philadelphia do ordain:—*

That the Mayor of said city be, and hereby is authorized to execute and deliver on the part of the city to The United Gas Improvement Company, a corporation of the State of Pennsylvania, its successors and assigns, a lease and contract in the words following, and that the same, when delivered, shall be binding upon the City of Philadelphia:—

THIS AGREEMENT, made this day of , 189 , between the *City of Philadelphia* of the one part, and *The United Gas Improvement Company,* a corporation duly organized under the laws of the State of Pennsylvania, having its principal office in said city of Philadelphia, of the second part, *witnesseth:*

WHEREAS, By an ordinance of the City of Philadelphia entitled "An Ordinance Authorizing the Execution of a Contract with The United Gas Improvement Company, its successors and as-

9625 signs, by the City of Philadelphia, for the lease to the former of the gas works, street mains, conduits, pipes, services, meters, and other property, real and personal, of the latter, used for and in connection with the manufacture and distribution of gas in the City of Philadelphia; for the operation, maintenance, extension, and betterment of the same; for the manufacture and distribution of gas in said city by said The United Gas Improvement Company, its successors and assigns, and for the exclusive supply, by said lessee and its assigns, of all gas to be supplied to consumers, by or with the consent of said city during the term of the lease; and also consenting to the entry of The Equitable Illuminating Gas Light Company of Philadelphia upon the streets of the City of Philadelphia, in case of its becoming an assignee of The United Gas Improvement Company to such extent as shall be necessary to enable it to perform its duties as such assignee," duly approved the day of , 189 , it was provided for the reasons therein set forth that this contract should be executed; now,

Therefore, It is agreed between the parties hereto as follows:

Clause I. The City of Philadelphia does hereby lease to the said The United Gas Improvement Company, its successors and assigns, for the term beginning the day of , 189 , and ending December 31, 1927, all the property, real and personal, collectively known as the Philadelphia Gas Works, with the appurtenances, including, *inter alia,* the property particularly described in Exhibit A, hereto attached, which is to be taken as a part of this contract, comprising, generally, the land, buildings, tene-

ments, machinery, apparatus, tools, mains, pipes, services,
9626 meters and other appurtenances possessed or used by or for the City of Philadelphia in the manufacture, storage, sale, distribution, and supply of gas, it being understood that the specification of said leased property in said Exhibit A shall not be construed in such way as to exclude from the list any items omitted which should have been herein included; and that no unpaid bills for gas or liens against real estate for the same nor unpaid accounts for residual products existing at the date when the lessee takes possession are included or intended to be included in the property herein assigned and leased; and it being further understood and agreed that The United Gas Improvement Company, its successors and assigns, shall at its own expense assume and pay any and all ground rents and the rental of any land, building or buildings, of which the city is a lessee, which are used in connection with the city's gas business. Delivery shall be made of all such property to said The United Gas Improvement Company, its successors and assigns, by the City of Philadelphia, as soon as may be after the execution of these presents and antecedently to the date fixed for the commencement of the lease and upon the performance by the said The United Gas Improvement Company of the obligations imposed upon it by Clause 3 of this agreement, it being understood that the City of Philadelphia also must do all necessary on its part to be done to enable said The United Gas Improvement Company to know the amount to be paid under Clause 2. And said lessee hereby agrees that it will pay all rents or other charges for water which shall be used by the lessee upon the leased premises or any part thereof.

The City of Philadelphia does hereby authorize and em-
9627 power the said The United Gas Improvement Company, its successors and assigns, hereafter during the term of this contract to retain possession of, maintain, change, alter, and repair, and to operate said gas works and appurtenances and all the property hereby leased and to lay, repair, remove, relay, extend, and maintain mains, pipes, services, and appurtenances along and beneath the surface of the highways, streets, avenues, lanes, alleys, ways, and public places in said city for the supply and distribution of gas; and said Company, its successors and assigns, during the continuance of this contract, shall have the exclusive right, for said purposes, to enter upon and occupy all said highways, streets, avenues, lanes, ways, alleys, and public places, and to supply and distribute gas through pipes laid therein: *Provided, however,* That to such extent as the Northern Liberties Gas Light Company is now possessed of a right to supply gas within any portion of the City of Philadelphia, this contract shall not be construed as intended to vest in the lessee any right in such territory, except such rights as the City has therein. The City of Philadelphia agrees that during the term of this contract it will do nothing, by ordinance or otherwise, which will in any way interfere with, or limit, restrict, or impair this exclusive right hereby vested in said The United Gas Improvement Company, its successors and assigns. All openings, excavations, and repaving shall be made subject to such general rules and regulations as from time to time shall be in force concerning the opening, excavation, and repaving of streets, and the protection of travel

along same, and the trenches shall be refilled and repaved with the same material and character of paving as before they were 9628 opened. All openings, excavations, repaving and refilling shall be subject to the approval of the Department of Public Works. If at any time The United Gas Improvement Company, its successors and assigns, shall neglect or refuse to refill any trenches and repave over all openings which it or its successors or assigns shall have made, upon notification from the Department of Public Works, said Department is hereby given full power and authority to do such refilling and repaving at the expense and cost of The United Gas Improvement Company, its successors and assigns, and if the City of Philadelphia at any time in the future build and construct a suitable subway that the said lessee, its successors and assigns, shall and will when so requested by the City of Philadelphia place its pipes in such subway at its own cost and expense, and no rental shall be charged therefor by the City of Philadelphia. It shall be unlawful for the said The United Gas Improvement Company to assign this contract to The Equitable Illuminating Gas Light Company of Philadelphia, and to any other corporation of Pennsylvania having power to exercise the franchise, and also to enter into an agreement with said Company, or with any other of said Companies, for the performance in whole or in part, of this contract, or for vesting in such assignee any rights under this contract, and to authorize such other company or companies to do all things necessary in and about such performance, including the occupancy and use of the highways, streets, avenues, lanes, ways, alleys, and public places in laying, repairing, removing, relaying, extending, and maintaining mains, pipes, services, and appurtenances, and supplying gas. Authority is hereby given to the said The Equitable 9629 Illuminating Gas Light Company of Philadelphia, assignee as aforesaid, and to any other corporation which may thus become the assignee or covenantee of the said The United Gas Improvement Company, to enter upon and to occupy the highways, streets, avenues, lanes, ways, alleys, and public places of the City of Philadelphia during the existence of this lease, but no longer, for the purpose of laying, repairing, removing, relaying, extending and maintaining mains, pipes, services, and all other appurtenances and appliances necessary for the distribution of gas to the City of Philadelphia and to the inhabitants thereof. Such assignees, including the said The Equitable Illuminating Gas Light Company of Philadelphia, may manufacture, distribute, and sell gas in all parts of the City of Philadelphia subject to the same limitations and restrictions as are herein imposed in the grant to The United Gas Improvement Company, to said City and to the inhabitants thereof at all times hereafter during the existence of this lease. No assignment of this lease, or of any of the rights or privileges herein granted, nor any contract with the said The Equitable Illuminating Gas Light Company of Philadelphia, or any other company, shall in any way diminish the primary obligation and liability of the said The United Gas Improvement Company to perform all the obligations of this contract. Its obligation hereunder shall in no respect be diminished or impaired by any such assignment or contract, but it shall remain liable jointly with such assignee or covenantee for the performance

of all the obligations hereof to the same extent as if no assignment, sublease, or contract had been made by it. In any case in which an assignment or assignments of this contract shall be made,
9630 written notice that an assignment has been made, giving the name of the assignee and the date of the assignment, shall be filed by The United Gas Improvement Company in the office of the Mayor before the assignee shall acquire any rights under this contract.

Clause 2. An inventory and appraisement shall be prepared by the Director of Public Works of all coal, coke, tar, and lime on hand at said City's Gas Works and of all gas on hand in the holders, mains, and pipes of the City when the property leased shall be delivered to the lessee hereunder, and said The United Gas Improvement Company shall pay to said City the amount of this appraisement at once upon presentation to it of such inventory and appraisement. In making such appraisement the Director shall be guided by the cost (in case of gas in holder, mains, and pipes, it shall be the City's holder cost) of the articles named therein. The appraisement of this inventory shall be made by the Director of the Department of Public Works, or by an appraiser or appraisers appointed by him; said appraisers shall be guided by and bounded by the market price of the articles which will be enumerated in the said inventory at the date this ordinance becomes a law. The current bills for gas shall be collected by the United Gas Improvement Company, which shall pay to the City Treasurer as received the proportion of said receipts to which it is herewith agreed said City shall be entitled, which proportion shall be represented in each case by a fraction having as its denominator the number of days covered by the bill and for its numerator the number of said days during which gas was supplied to said consumer by the City.

Clause 3. Simultaneously with the execution of this agreement, The United Gas Improvement Company shall execute and
9631 deliver to the City of Philadelphia its bond, with surety or securities, in the penal sum of one million (1,000,000) dollars, conditioned for the faithful performance of the obligations hereof. Such bond shall be in such form as shall be approved by the City Solicitor, and the surety or sureties thereon shall be approved by him.

Clause 4. The said The United Gas Improvement Company, its successors and assigns, shall, at the expiration of two years from the date of the lease, surrender, release, and deliver to the City of Philadelphia full and absolute possession of all that part or portion of the property known as the Ninth Ward Station, described as follows, to wit: All that certain lot or piece of ground with the buildings thereon erected, bounded on the south by Chestnut street, on the east by Twenty-fourth street, on the north by Market street, and on the west by the Schuylkill River; and also, all that certain lot or piece of ground with buildings thereon erected, bounded on the south by Market street, on the west by the Schuylkill River, on the north by the Pennsylvania Railroad, and on the east by Twenty-third street: *Provided, however,* That the said The United Gas Improvement Company, its successors and assigns, shall have the right to remove the works, machinery, and appliances located upon the property so to be delivered, surrendered, and released, to other portions of the leased property at any time prior to the surrender of said two above described lots or pieces of ground and buildings thereon erected.

Clause 5. The City of Philadelphia hereby assigns to the said The United Gas Improvement Company, its successors and assigns, all its rights under its contract with the Philadelphia Gas 9632 Improvement Company dated the third day of August, 1888, and it agrees that said Philadelphia Gas Improvement Company may assign the same contract to the said The United Gas Improvement Company, its successors and assigns.

Clause 6. If, on or before the first day of July, 1907, (and time in this respect shall be of the essence of this contract), there shall have been served upon The United Gas Improvement Company a written notice, signed by the Mayor of the City of Philadelphia, of the desire of said City to terminate this contract at the expiration of ten (10) years from the first day of January, 1898, and if, on or before said first day of July, 1907, an ordinance providing for such termination shall have been duly enacted by said City of Philadelphia, then it shall be the right of said City of Philadelphia to terminate this contract at the expiration of ten (10) years from the first day of January, 1898: *Provided,* That on or before December 31, 1907 (and time in this particular shall be of the essence of this contract), the payments herein provided to be made to the said The United Gas Improvement Company, its successors and assigns, shall have been fully and completely made by said City. In case of failure to pass said ordinance on or before said first day of July, 1907, or of a failure to notify The United Gas Improvement Company on or before that date of the desire of the City to take possession of the leased property in pursuance of said ordinance, or of the failure of the City of Philadelphia to pay in full, on or before the thirty-first day of December, 1907, the amount of money herein provided, this option on the part of the City of Philadelphia to terminate this contract prior to December 31, 1927, shall cease and 9633 be forever at an end. The payment which must be so made to The United Gas Improvement Company, its successors and assigns, shall be a reimbursement of all sums of money expended by the said The United Gas Improvement Company, its successors or assigns, subsequent to the date of this contract, in or about the buildings, apparatus, machinery, mains, pipes, services, connections, meters, appliances, and appurtenances of the Philadelphia Gas Works and of the gas works now owned and operated by said Philadelphia Gas Improvement Company, including, however, such sum or sums of money only by said Company, its successors and assigns, paid in and about the alteration, enlargement, removal, extension, betterment, and improvement of all said manufacturing and distributive systems and plants, with interest thereon at the rate of six (6) per centum per annum, simple interest; together with a sum which shall be the equivalent of the appraised value of the property now belonging to the Philadelphia Gas Improvement Company used as aforesaid, and interest thereon at the rate of six (6) per cent. per annum, simple interest, from the date of this lease to the date of payment. Said appraised value shall be ascertained by the report of at least a majority of three (3) appraisers, one to be appointed by the City of Philadelphia, one by the said The United Gas Improvement Company, and the third by the two first chosen. Said report of the appraisers shall be filed with the Mayor of the city within sixty (60) days after the date of this contract. In order to aid in the appraisement last provided for, an inventory showing in detail the property now belonging to the Philadelphia Gas Improvement Company, used for the purpose of carrying out its contract 9634 with the City of Philadelphia, shall be made not later than thirty (30) days after the execution of this agreement. This shall be certified to as being correct by either the President or the Treasurer of The United Gas Improvement Company and the Mayor of the City of Philadelphia, representing the City. Upon the execution and delivery of this contract and of the demised premises, there shall be delivered to the Mayor the agreement of the Philadelphia Gas Improvement Company assenting to, accepting, and agreeing to be bound by the provisions of this Clause 6 relative to the property of that Company. On the first day of February, 1898, The United Gas Improvemnet Company, its successors or assigns, shall file with the Controller of the City of Philadelphia a statement showing in detail expenditures during the year 1897 for alterations, enlargements, removals, betterments, and improvements not including repairs made by it in and about the Gas Works, and for the mains, meters, services, and appurtenances. On the first day of February of each year following during the continuance of this lease the said The United Gas Improvement Company, its successors and assigns, shall file with the Controller of the City of Philadelphia a similar statement of expenditures in and about the same matters made during the calendar year immediately preceding, and on the thirty-first day of December, 1907, shall file such a statement for the year ending on that date. Interest upon the amounts so shown shall be calculated and paid at the rate of six (6) per centum per annum, simple interest, from the first day of the year succeeding that in which the expenditures were made to the date of payment by the City of Philadelphia. The Controller of the City of Philadelphia shall have the right to examine, audit, and verify the 9635 statements so to be filed as herein provided. Said The United Gas Improvement Company hereby agrees that upon the receipts of payments aforesaid it shall and will execute and deliver to the City of Philadelphia good and sufficient deeds and instruments in writing necessary to transfer and convey said property so paid for to said City of Philadelphia. Said option shall only be exercised in the way and manner and upon the terms herein provided. If it shall so happen that the said City cannot exercise or shall not exercise this option upon the terms herein provided, this contract shall be treated as though said option had never been given.

Clause 7. Upon the termination of this lease by the expiration of the term specified in Clause 1 of this contract, namely on December 31, 1927, said The United Gas Improvement Company, its successors and assigns, shall deliver to the said City the property herein leased in the same good order and condition in which the same now is, to such extent as said property shall not have been altered or changed under this contract by the enlargements, extensions, betterments, and improvements made in and about the manufacturing and distributing systems and plants during the period of this lease, and together with all such alterations, changes, enlargements, extensions, betterments, and improvements, all of which shall be so delivered to the City in good first-class order and condition at such termination of the lease. Said The United Gas Improvement Company, its successors and assigns, shall also at the same time deliver to the said City in good first-class order and condition the property now belonging to the said Philadelphia Gas Improvement Company, used under said contract between it and the City of Philadelphia as above provided, and also all extensions, enlargements, improvements, and betterments of said property, free and clear of all debts and obligations of every sort, kind, and description; and together with the right to use all processes of every kind useful in the manufacture of gas then established and in use at any of said works. All the changes, alterations, constructions, removals, and repairs which shall be necessary to be made from time to time in the proper maintenance, extension, improvement, and betterment of the said leased Gas Works and appurtenances and the plant of the Philadelphia Gas Improvement Company, shall be made and done by said The United Gas Improvement Company, its successors and assigns, and the City of Philadelphia shall receive the same, together with the said plants and all the property of the Philadelphia Gas Improvement Company, in an efficient state at such expiration of this lease without any charge or cost to the City of Philadelphia. It is the intent of this agreement that the City of Philadelphia at the end of the term, namely on December 31, 1927, shall, without charge or cost, receive all of the said works in the condition of alteration, improvement, and change in which the same shall then exist, and the same shall be so maintained as to be then in first-class order and condition. Said The United Gas Improvement Company shall at its own cost and expense keep the buildings, machinery, and other property of the City of Philadelphia delivered to it, and which shall be constructed by it under this lease of the character usually insured by gas companies insured to the extent that such properties of gas companies are usually insured (but not less than the total insurance now carried by the City on said property), and shall insure the buildings, machinery, and other property of the City of Philadelphia delivered to it under this lease to an amount not less than the total insurance of the same now carried by the said City, and shall expend all sums received by it under any such policies of insurance upon the repair, replacement, or reconstruction of the city's buildings, machinery, and other property so damaged or destroyed by fire, received by said lessee hereunder. Upon the termination of this contract, either on December 31, 1907, or on December 31, 1927, the City of Philadelphia shall have the option to purchase all the coal, oil, coke, tar, lime, and other gas-making supplies and residual products then on hand at said works at the then market price, or to have the said The United Gas Improvement Company, its successors and assigns, remove the same at its own cost and expense as soon as conveniently can be done. All the gas in the holders, mains, and pipes of said works at the termination of this contract, either on December 31, 1907, or on December 31, 1927, shall be accounted for at holder

9636

9637

cost by the City to The United Gas Improvement Company when paid for by consumers.

Clause 8. The United Gas Improvement Company agrees for itself, its successors and assigns, that it shall and will within three (3) years from the date of the delivery to it of the said Gas Works, expend in the alteration, improvement, extension, and betterment of the manufacturing and distributive system, and mains, services, meters, connections, and appurtenances of said Gas Works referred to in this ordinance, at least five million (5,000,000) dollars, and thereafter in each year during the continuance of this contract expend such sum of money as may be needed from time to
9638 time to extend the same to provide for the growth of the business so as to supply gas wherever it may be demanded in accordance with the terms, provisions, and conditions of this clause of the lease. It is estimated that the total of such expenditures will be at least fifteen million (15,000,000) dollars, and the said The United Gas Improvement Company hereby agrees and binds itself, its successors and assigns, that it shall and will expend said sum of fifteen million (15,000,000) dollars during said period of thirty (30) years, and that it shall and will also expend all such other amounts over the above fifteen million (15,000,000) dollars, which may be required for the purposes stated above. The said the United Gas Improvement Company, its successors and assigns, shall extend the pipes and mains for the distribution of gas on such highways, streets, avenues, alleys, ways, and public places as may be necessary to meet the demand for gas, provided that at least one (1) consumer for every one hundred (100) feet of the extension of mains or pipe so made necessary shall first in writing agree to take gas from the said The United Gas Improvement Company, its successors and assigns, for a period of not less than one (1) year at the general rates for gas then in force; or in lieu of a consumer so contracting for each and every single building fitted with gas pipes, and for which application for the introduction of gas shall be made, such extension of one hundred (100) feet of mains or pipes so made necessary shall be made accordingly: *Provided, further, however,* In no case shall said Company, its successors and assigns, be required to lay any pipes while frost is in the ground. The laying or extension of pipes and mains for the distribution of gas shall
9639 be at the expense of the lessee and not chargeable to the consumer. Said The United Gas Improvement Company, its successors and assigns, shall at its own expense lay and furnish connecting or service pipes from the main or distributing pipes to the inside of the consumer's property line, and furnish and set the necessary meters (for which no charge or rental shall be made), and shall also at its own expense furnish and place a shut-off or stop-cock inside of the curb line whenever it desires to place the same. The intention of this agreement is that all changes, extensions, improvements, removals, and alterations in said Gas Works in the mains, pipes, and appurtenances thereto, and in the property needed to meet the demands for gas as herein provided, shall be made in such way and manner as shall maintain said Gas Works in first-class condition, with the best and most economical processes in use that are customary in the best regulated gas works. It is the

further intent of this agreement that without cost to the City of Philadelphia all such extensions, improvements, alterations, and betterments in the manufacturing or distributing system of said Gas Works shall, upon the termination of the lease by the expiration of its full term, viz., on December 31, 1927, pass to and vest in the City of Philadelphia upon the terms and conditions herein provided.

Clause 9. Said The United Gas Improvement Company or its assigns shall furnish proper stations for testing the candle-power of the gas, located at a distance of not less than one (1) mile from each point of manufacture and shall equip the same with a bar photometer and other appliances customary and necessary for such
purposes. Tests shall be made and recorded daily by The
9640 United Gas Improvement Company or its assigns, and such
records shall be at all times open to the inspection of the City.
All such tests shall be made in the presence of a representative of the City appointed by the Mayor, who shall have the right to also make such tests himself at such stations in the presence of the Company's representative. Such representative of the City shall be the inspector of meters, if City Councils shall provide by this contract or otherwise for the appointment of such an official. The said The United Gas Improvement Company, its successors or assigns, shall as soon after the delivery to them of said Gas Works hereunder as is possible with due diligence and despatch, supply gas of good quality of not less than twenty-two (22) candle-power, daily average, tested as above, and maintain said supply during the continuance of this lease unless prevented by accidents beyond their control. After the expiration of two years from the date of this lease, for every failure of The United Gas Improvement Company, its successors or assigns, to comply with the terms and conditions of this clause relative to tests, quality, and candle-power of gas, the said The United Gas Improvement Company, its successors and assigns, shall pay to the City of Philadelphia a penalty of five hundred (500) dollars for each day during which such failure continues. In every case of such default and demand made by the city for the payment of the fine The United Gas Improvement Company, its successors or assigns, shall make payment of the fine to the city, but said The United Gas Improvement Company, its successors or assigns, shall be entitled to repayment of the same by the City if it shall be shown
that the default on account of which the fine was imposed
9641 was due to causes beyond the control of the said The United
Gas Improvement Company, its successors and assigns.

Clause 10. The United Gas Improvement Company, its successors and assigns, shall from time to time as the same shall be demanded by the City of Philadelphia, supply to it in each year without charge delivered in its various public buildings, along the line of its mains, such amounts of gas as may be required for illuminating purposes in said public buildings; said The United Gas Improvement Company, its successors and assigns, shall also supply gas without charge to the city's street lamps and lamps in Public Squares, along the line of its mains up to the number that are being lighted at the beginning of this lease; and shall also in each succeeding year supply gas without charge to three hundred (300) street lamps or lamps in Public Squares in each year along the line of its mains in addition to the number supplied in the preceding year when directed so to do by ordinance of Councils, which shall also specify the location of the same. All said lamps shall be furnished with burners which shall give not less than 22 candle-power, and shall be lighted every night and all night. Said The United Gas Improvement Company, its successors and assigns, shall at its own cost and expense run all services and make all connections between said street lamps and its distributing pipes or mains, furnish all burners required on said street lamps, and light, clean, extinguish, and repair all lamps and lanterns, and keep in repair all lampposts, lamps, and lanterns in use during the term of this lease.

Clause 11. The price which shall be charged to all con-
9642 sumers other than the City of Philadelphia by the said The United Gas Improvement Company, its successors and assigns, shall, until otherwise provided by ordinances of Councils, be one (1) dollar per thousand cubic feet. It shall be competent for Councils to reduce these charges from time to time by ordinances; but said ordinances shall not at any time reduce the price below the following: Until and including the thirty-first day of December, 1907, ninety (90) cents per thousand cubic feet. From January 1, 1908, until and including December 31, 1912, eight-five (85) cents per thousand cubic feet. From January 1, 1913, until and including December 31, 1917, eighty (80) cents per thousand cubic feet. From January 1, 1918, until and including December 31, 1927, seventy-five (75) cents per thousand cubic feet. The said The United Gas Improvement Company, its successors and assigns, shall be entitled to enforce the same penalties for non-payment of bills at the offices of the Company within five (5) days after presentation as are now in force in the city of Philadelphia, and the same remedies against consumers for breaches of their contracts for the supply of gas. But it is distinctly understood and agreed that nothing herein contained shall give to said The United Gas Improvement Company, its successors or assigns, any lien or claim upon a property for a tenant's or occupant's gas bills, or give the right to said The United Gas Improvement Company to refuse to furnish gas to any subsequent tenant or occupant of said property by reason of prior tenant or occupant having failed to pay the bill: *Provided, however,* That said The United Gas Improvement Company, its successors or assigns, shall not be required to furnish gas to any person, firm, or body corporate indebted for arrear-
9643 ages due for gas theretofore supplied to them. In order to provide for the amicable settlement of any disputes or disagreements which may arise between consumers and said The United Gas Improvement Company or its assigns, as to the amount of gas for which bill has been rendered and payment demanded, the correctness of which is disputed by the consumer, said The United Gas Improvement Company agrees, for itself and for its successors and assigns, that it will provide a proper and convenient place or places on the leased property at which its meters may be inspected, with the proper and customary apparatus therefor, for the use of the official and his assistants who may be appointed by the Mayor

as inspector of Meters. Upon complaint of any consumer doubting the accuracy of the bill and declining to pay the same, lodged with such Inspector alleging that the amount of gas for which the bill has been rendered and payment demanded is in excess of the amount consumed by such consumer, and upon demand thereafter made by the Inspector in writing to The United Gas Improvement Company or its assigns, said The United Gas Improvement Company or its assigns shall disconnect the meter in question and deliver it to the inspection station for examination, where the testing of the meter for the purpose of ascertaining the correctness of its measurements shall be made by such Inspector in the presence of the representative of said The United Gas Improvement Company or its assigns. Such tests shall be made according to the established and well-known methods used for such purposes. Any such meter shall be disconnected by said Company or its assigns between the hours of eight o'clock A. M. and three o'clock P. M. 9644 within 48 hours of the time when said Company or its assigns shall receive notice to disconnect such meter for such reasons; and the same shall be tested and returned to said The United Gas Improvement Company or its assigns within twenty-four (24) hours from its receipt at the testing station, bearing a seal upon which shall be written the report of the Inspector that the meter in question is correct or incorrect, and if the latter the percentage which it runs fast or slow, and the bill of the consumer about which the complaint has been made shall be corrected, according to such finding and report of the Inspector. Such Inspector of Meters and such assistants as the Mayor shall deem necessary shall be appointed by the Mayor and shall be duly sworn in conformity with the law to faithfully, honestly, and diligently perform the duties of their respective offices. Said The United Gas Improvement Company agrees for itself and its successors and assigns that it will annually and at the beginning of each year of the lease to pay to the City of Philadelphia the sum of ten thousand (10,000) dollars towards paying the salaries and expenses of the Inspector of Meters and his assistants, after the same shall be appointed in pursuance of this clause, and also towards der*f*aying the expenses which the city may be put to in connection with tests of gas made in p*ru*suance of Clause 9 of this lease. When a meter is removed for the purpose of testing, the said Company shall place a meter in place of one removed at their own cost and expense, the object being that no consumer shall be without light. The type of meter used for the measurement of gas shall be such type as shall be in general use in other large cities in the United States. Any consumer desiring such test shall, on making his application 9645 to such Inspector, pay to him the sum of one (1) dollar, taking his receipt therefor, which amount shall be returned to the consumer if the tests and reports of the Inspector shall show that the meter in question is fast, but otherwise shall be paid by the Inspector into the Treasury of the City of Philadelphia. Bills shall not be rendered more frequently than are now rendered to various classes of consumers.

Clause 12. The United Gas Improvement Company, its successors or assigns, shall pay to the city of Philadelphia in each year during the continuance of this agreement as follows, viz.: Upon all gas sold prior to January 1, 1908, all sums received by them in excess of ninety (90) cents per thousand cubic feet. Upon all gas sold after December 31, 1907, and prior to January 1, 1913, all sums so received in excess of eighty-five (85) cents per thousand cubic feet. Upon all gas sold after December 31, 1912, and prior to January 1, 1918, all sums so received in excess of eighty (80) cents per thousand cubic feet. Upon all gas sold after December 31, 1917, and prior to January 1, 1928, all sums so received in excess of seventy-five (75) cents per thousand cubic feet. Statements shall be rendered and payments made under this clause by the lessee to the City as follows: Within twenty-five (25) days after the expiration of each quarter of each year for which any payment is to be made, beginning with the quarter preceding the first day of January, 1898, said The United Gas Improvement Company shall file with the Controller of the City of Philadelphia a statement sworn to by its President or Vice-President, or by its Secretary or Treasurer, which shall state the quantity of gas measured in cubic feet sold hereunder 9646 within the quarter ending with the last day of the preceding month, the amount of money collected for such sales or for sales in any previous quarter and the amount of money due and payable to the City of Philadelphia under the provisions of this clause out of such receipts; and shall make payment to the City Treasurer of such amount so ascertained to be due to the City of Philadelphia hereunder within five (5) days after the expiration of said period of twenty-five (25) days. The City of Philadelphia shall have the right at all reasonable hours during the continuance of this contract, by its proper officers, to examine those books of the lessee which show the amount of gas so sold and paid for, so as to verify the correctness of said statements.

Clause 13. The City of Philadelphia shall have the right at all times, by its proper officers, during the continuance of this lease to enter upon and examine the premises leased, to inspect the same, and to test the candle-power of the gas. Full facilities for these purposes shall be afforded by the lessee.

Clause 14. No indebtedness of the City of Philadelphia for or by reason or on account of the property hereinabove described, or the operations carried on therein or with the same prior to the delivery of the leased property shall be chargeable against the said The United Gas Improvement Company, its successors or assigns. The same shall be chargeable to and payable by the City of Philadelphia: *Provided, however,* That said The United Gas Improvement Company does herewith expressly agree to assume and discharge all contracts made for the Bureau of Gas for the purchase of supplies for the manufacture of gas which have not been delivered prior to the date when this lease takes effect.

9647 *Clause 15.* The said The United Gas Improvement Company, its successors or assigns, shall at all times during the continuance of this lease indemnify and save harmless the City of Philadelphia from all loss, injury, or damage which may be suffered by said City to or for any person, natural or artificial, by reason of any negligence of said Company, its successors or assigns, and the

COMPLAINANT'S EXHIBIT 392

Cost of Danbury Gas of 32.95 c. p. as given in papers accompanying letters of November 22d and 30th, 1905, to Chief Engineer Bradley and *pro rata* cost of 24 c. p. (N. Y.) gas, based upon the light equivalent theory of H. H. Edgerton.

	H. H. E.'s Cost of 32.95 c. p. Gas at Danbury, Year 1902-3. (Cents per M. by A. C. H.)		Cost per M. 24 c.p. Gas, Based on Danbury Cost.
	Amount $	Cents per M. c.	c.

Balance to Cover Interest and Dividends	28,898.89	135.848	98.95

Gas Made, 25,151 M. cu. ft. Gas Sold, 21,273 M. cu. ft.

REMARKS.

The method of arriving at the cost of 24 c. p. gas is precisely the same as that used by Edgerton—this is best shown by checking his cost of 36.202c. per M. for 17.6 c. p., he having assumed that the 32.95 c. p. gas was 44 c. p., thus: (44:17.6::90.508:x) X=36.203c., and (32.95:24::90.508:x) X=65.92.

REPAIRS AND DEPRECIATION.

Station	$182.90
Services	101.19
Mains	108.76
Meters	256.44
Depreciation	2,534.84
Total	$3,184.13

Or 14.96c. per M. for Repairs and Depreciation, dividing by amount sold, namely, 21,273 M.

COMPLAINANT'S EXHIBIT 393

Comparison of Costs of Manufacture of Oil and Water Gas, Danbury. Actual Costs of 32.95 c. p. Gas, as compared with Edgerton's Estimated Costs of 28 c. p. and 50 c. p. Gas for New York, and the *pro rata* costs of 28 c. p. and 50 c. p. Gas based upon the light equivalent theory of H. H. Edgerton.

(pp. 5025-7, etc.)

	1	2	3	4	5
	Danbury 32.95 c.p.Gas Cost per M. (See Sheet 1.)	"Pro Rata" Cost per M. Based on Danbury H. H. E. Theory.		H. H. E.'s Estimated Costs per M. for New York.	
		28 c. p. Gas (32.95:28:: Col. 1:x).	50 c. p. Gas (32.95:50:: Col. 1:x).	28 c. p. Gas (Compare Col. 2).	50 c. p. Gas (Compare Col. 3)
	c.	c.	c.	c.	c.
Generator Coke	..	..	..	4.400	3.87
Boiler Coke	..	..	..	1.160	1.16
Total Fuel	14.935	12.691	22.663	5.560	5.03
Lime	..	..	..	.750	.75
Oxide	..	..	..	.250	.25
Total Purification	.092	.078	.139	1.000	1.00
Gas Oil	36.030	30.617	54.674	23.265	37.60
Oil and Waste, Sundries	..	..	..	.370	.37
Water	..	..	..	.170	.17
General Expenses	..	..	..	.500	.50
Total General Expense	8.474	7.201	12.859	1.040	1.04
Repairs	.727	.618	1.103	1.500	1.50
Labor	..	..	..	1.780	1.78
Supervision, etc	..	..	..	.500	.50
Total Station Wages	16.295	13.847	24.737	2.280	2.28
Total Cost of Mfg	76.553	65.052	116.165	34.645	48.45

Comparing Columns 2 and 4 we find the *pro rata* cost of 28 c. p. Gas based on Danbury results almost *doubled* Edgerton's estimated cost for 28 c. p. Gas for New York.

Comparing Columns 3 and 5 we find the *pro rata* cost of 50 c. p. based on Danbury results to be *139.7 per cent. greater* than Edgerton's estimated cost for 50 c. p. Gas for New York.

Comparing Columns 1 and 5 we find the *actual* cost to manufacture Danbury Gas of *32.95 c. p.* to be *28.1c. per M. more* than Edgerton's estimated cost for *50 c. p.* Gas for New York.

The Oil used at Danbury to make 32.95 c. p. Gas was *9.348 gallons* per M. cu. ft. (corrected for temperature by H. H. E.) while in Edgerton's estimated cost of 50 c. p. Gas for New York he shows *8.88 gallons* of oil per M.

Furthermore, the cost of oil at Danbury for the period here considered was *3.97c. per gallon* ($9,061.86 -:- 28,346), while in estimated costs for New York the price is *4.23.*, *showing* that actual cost at Danbury has the benefit of the lower price.

Cupola Coal used at Danbury for 32.95 c. p. Gas averaged *37.32 lbs.* per M., while Edgerton's estimated cost of 28 c. p. Gas only includes *22 lbs.* per M.

In this connection see Edgerton's answer to question, p. 5035: A. Yes, making rich gas. It does not take anything like the amount of coke per thousand to make rich gas that it does to make poor gas—

Q. Do you mean to say this rich gas you use requires less fuel? A. I mean exactly that. A great deal less, that is what is the matter.

NOTE—After completing the above tables it was discovered that the c. p. given by H. H. E. (32.95) and used in the tables for comparison is incorrect upon his own detail figures. Examination of figures for the several years shows that he obtains his yearly averages of c. p. by dividing the sum of monthly averages by 12. This is incorrect as to method as the average should be obtained by multiplying the amount of gas made each month by its average c. p. and dividing the sum of these products by the total make for the year. Following this correct method and accepting the monthly candle powers given by H. H. E. as being true averages, and then calculating the correct averages, the true average for the year is found to be 33.79 c. p. But following his incorrect method the average is found to be (408 -:- 12 =) 34 c. p.

Then the comparisons for costs of manufacture shown above become as follows:

Actual Cost per M. of 34 c. p. Danbury Gas (as before)	76.553c.
Pro rata Cost per M. of 28 c. p. Gas, H. H. E. Theory	63.044c.
Pro rata Cost per M. of 50 c. p. Gas, H. H. E. Theory	112.578c.
Edgerton's Estimated Cost per M. of 28 c. p. Gas for N. Y. (as before,	34.645c.
Edgerton's Estimated Cost per M. of 50 c. p. Gas for N. Y. (as before)	48.450c.

COMPLAINANT'S EXHIBIT 394

CITY'S EXHIBIT 3.

No. 6.

THE CITY OF NEW YORK,

DEPARTMENT OF

WATER SUPPLY, GAS AND ELECTRICITY.

BID OR ESTIMATE

For Furnishing Gas or other Illuminating Material for, and for Lighting, Extinguishing, Cleaning, Repairing and Maintaining the Public Lamps (and supplying Gas, etc., for New Lamps, when required), and for making certain Repairs to Lamp-posts, and for Furnishing Burners and Appliances of Improved Systems of Lighting on Streets, Public Buildings, Avenues, Piers, Parks and Public Places in the Borough of The Bronx, in The City of New York, for the term of nine months and sixteen days, from March 16, 1905, to December 31, 1905, both inclusive.

[On the margin:] The bidder's name and residence or place of business must be inserted here, and in case of firms, the name and residence or place of business of each and every member of the firm must be inserted.
347 of Ordinance.

Made this fourteenth day of March, 1905, by Consolidated Gas Co. of New York.

*1. Consolidated Gas Co. of New York do declare that we (are) the only person, persons or corporation interested in this bid or estimate; and that no other person, persons or corporation than are herein named have any interest in this bid or estimate, or in the contract proposed to be taken.

9655 2. We further declare that this bid or estimate is made without any connection with any other person, persons or corporation making a bid or estimate for the same work, and is in all respects fair, and without collusion or fraud.

Chapter 327, Laws of 1900.—3. We further declare that no member of the Board of Aldermen, head of a department, chief of a bureau, deputy thereof, or clerk therein, or any other officer of The

---

*NOTE.—In case a bid shall be submitted by or in behalf of any corporation, it must be signed in the name of such corporation by some duly authorized officer or agent thereof having knowledge as to the facts stated in the bid or estimate, and such officer or agent shall also subscribe his own name and office. If practicable, the seal of the corporation should also be affixed.

City of New York, is, shall be or become interested, directly or indirectly, as contracting party, partner, stockholder, surety or otherwise, in this bid or estimate, or in the performance of
Charter 1533. the contract, work or business to which it relates, or in any portion of the profits thereof.

349 of Ordinance.—4. We further declare that the names of the persons affixed to the consent hereto annexed were written by said persons respectively, and that said persons are householders or freeholders, in The City of New York, or duly authorized officers or agents of a guaranty or surety company duly authorized by law to act as surety.

5. We have examined the contract (including the specifications) for the supplies and work, in the form approved by the Corporation Counsel, and will contract, in the form so approved, to perform and complete the work mentioned in said contract and specifications, and furnish the supplies on the following terms, viz.:

OPEN FLAME GAS LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

I. For furnishing illuminating gas (of not less than 20 candle-power to burners consuming 3 cubic feet of gas per hour, by
9656 photometric test, made at a distance of not less than one mile from the place of manufacture) for each lamp, at each lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes and burners, the replacing of cross-heads, lamp-irons and lanterns, and the replacing and repairing of lamp-posts when owned by the Contractor, as specified and as noted in proposals, clauses Nos. 7 and 9, for the term of this contract, in the Borough of The Bronx, to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($......) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

OPEN FLAME NAPHTHA LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

II. For furnishing illuminating material other than gas for each lamp, at each lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons,
9657 the painting of lamp-posts and cross-heads, the furnishing,
repairing and replacing of cocks, tubes and burners, burning appliances, lanterns, lamp-irons and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 7 and 9, for the term of this contract, in the Borough of The Bronx, to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

OPEN FLAME NAPHTHA LAMPS—LAMP-POSTS FURNISHED BY CONTRACTOR.

III. For furnishing illuminating material other than gas for each lamp, at each lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burners, burning appliances, lamp-posts, lanterns, lamp-irons and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 7*a* and 9, for the term of this contract, in the Borough of The Bronx, to wit:

9658 For furnishing all the above for each lamp, at each lamp,
for .... in number of same, the sum of ....
Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

MANTLE GAS LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

IV. For furnishing and connecting, ready for use, each mantle gas lamp, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it, including illuminant. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lanterns, lamp-irons, frames and cross-heads thereto, and repairing and replacing the lamp-posts when owned by the Contractor, as specified and as noted in proposals, clauses Nos. 8 and 9, for the term
9659 of this contract, in the Borough of The Bronx, to wit:

For furnishing all the above for each lamp, at each lamp, for 5,723 in number of same, the sum of Twenty-two 9212/10000 dollars ($22.9212) per lamp, or at the rate of Twenty-eight 75/100 ($28.75) per lamp, per annum, burning 3925 hours.

For furnishing all the above for each lamp, at each lamp, for 22,500 or more in number of same, in either the Borough of Manhattan or The Bronx, or both, the sum of Nineteen 7322/10000 dollars ($19.7322) per lamp, or at the rate of Twenty-four 75/100 ($24.75) per lamp, per annum, burning 3925 hours.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

MANTLE NAPHTHA LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

V. For furnishing and connecting, ready for use, each mantle lamp, using illuminating material other than gas, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-
9660 heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lanterns, lamp-irons, frames and cross-heads thereto, as

specified and as noted in proposals, clauses Nos. 8 and 9, for the term of this contract, in the Borough of The Bronx, to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

MANTLE NAPHTHA LAMPS—LAMP-POSTS FURNISHED BY CONTRACTOR.

VI. For furnishing and connecting, ready for use, each mantle lamp, using illuminating material other than gas, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts
9661 and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lamp-posts, lanterns, lamp-irons, frames and cross-heads thereto, as specified and as noted in proposals clauses Nos. 8*a* and 9, for the term of this contract, in the Borough of The Bronx, to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

VII. For furnishing, maintaining and putting in place all the abovementioned items, excepting the cost of illuminating gas only, as specified and as noted in clauses No. 7, No. 8 and No. 9 of the proposals, for the period of this contract, the sum of .... Dollars ($.........).

VIII. For furnishing, maintaining and putting in place all the above mentioned items, excepting the cost, of illuminating gas only, as specified and as noted in clauses No. 7*a*, No. 8*a*, No. 8*b* and No. 9 of the proposals, for the period of this contract, the sum of .... Dollars ($.........).

9662 IX. For repair of lamp-posts and erection of new lamp-posts, for the term of this contract, in the Borough of the Bronx, when owned, furnished or hereafter acquired by The City:

(*a*) For each lamp-post straightened, the sum of .... Dollars ($.........).

(*b*) For each column releaded, the sum of .... Dollars ($.........).

(*c*) For each column recalked, the sum of .... Dollars ($.........).

(*d*) For each column refitted, the sum of .... Dollars ($.........).

(*e*) For each service pipe refitted, the sum of .... Dollars ($.........).

(*f*) For each stand pipe refitted, the sum of.................. Dollars ($.........).

(*g*) For each lamp-post removed, the sum of.................. Dollars ($.........).

(*h*) For each lamp-post reset, the sum of...................... Dollars ($.........).

(*i*) For the erection of each new lamp-post, complete (with service and stand pipes when for gas), and with cross-heads, lamp-irons and lanterns in place, stating the price per post, the sum of .... Dollars ($.........).

X. For furnishing illuminating gas of not less than 20 candle-power, when tested, as provided for gas street lamps, including the service pipes from the gas mains to the building and a proper meter for registering the gas, for the term of this contract, for each of the public buildings and offices in the Borough of The Bronx, the lighting of which is now, or hereafter may be, under the jurisdiction and control of the Department of Water Supply, Gas and 9663 Electricity, per 1,000 cubic feet, at a pressure of not less than one and one-half (1½) inches at the meter end of the house service pipe, in the sum of .... Dollars ($.........).

CONSOLIDATED GAS CO. OF N. Y., [L. S.]
By W. R. ADDICKS, *Vice-President.* [L. S.]

COLIN C. SIMPSON,
Ass't Secretary.

[On the margin:] Name(s) of bidder(s). Each and every person bidding and named above must sign here. If the bidder is a corporation the corporate name must be signed, also the name and designation of the officer or agent signing for the corporation, and if practicable the seal of the corporation should be affixed.

THE CITY AND STATE OF NEW YORK,
County of New York, ss:

WALTER R. ADDICKS, being duly sworn, says for himself, that the several matters stated in the above estimate are in all respects true.

W. R. ADDICKS.

Subscribed and sworn to before me, this 15th day of March, A. D. 1905.

CORNELIUS A. LAUGHLIN,
Notary Public, New York County.

(Blanks for consent of Sureties and Affidavits on next leaf.)
[SEAL.]

[On the margin:] Signature(s) of bidder(s). This affidavit must be made by the person or persons bidding for the contract; in case of a firm, by each and every member of the firm; in the case of a corporation, by a duly authorized officer or agent having knowledge as to the facts stated.

SURETIES' AGREEMENT.

IN CONSIDERATION of the premises, and of One Dollar to us and each of us in hand paid by The City of New York, the receipt whereof is hereby acknowledged—

9664 We, the undersigned, consent and agree, that if the contract for which the preceding estimate is made be awarded to the person, persons or corporation making the same, we will, upon its being so awarded, become bound as his, their or its sureties for its faithful performance; and if the said person, persons or corporation shall omit or refuse to execute such contract, if so awarded, and give the proper security within five days after the written notice that the same is ready for execution, we will pay, without proof of notice or demand, to the said The City of New York, or its successors, any difference between the sum to which such person, persons or corporation would be entitled upon the completion of such contract and the sum which The City of New York may be obliged to pay to the person, persons or corporation to whom the contract shall be awarded at any subsequent letting; the amount in each case to be calculated upon the estimated amount of the SUPPLIES and WORK by which the bids are tested.

This consent must be signed by the two sureties, with their places of business or residence added.

IN WITNESS WHEREOF, we have hereunto set our hands, this 15th day of March, one thousand nine hundred and five.

THE UNITED STATES FIDELITY & GUARANTY COMPANY.
By SYLVESTER J. O'SULLIVAN,
Manager.

Name of first surety,

Notary Public or Commissioner of Deeds.

STATE OF NEW YORK, *County of New York, ss:*

On the 15th day of March, in the year 1905, before me personally came Sylvester J. O'Sullivan, to me known, who, being by me duly sworn, did depose and say that he resided in the City of New York; that he was Manager of The United States Fidelity and Guaranty

Company, the corporation described in and which executed the foregoing instrument; that he knew the seal of said corporation; that the seal affixed to said instrument was such corporate seal; that it was so affixed by order of the Board of Directors of said corporation and that he signed his name thereto by like order. And the said Sylvester J. O'Sullivan, further said that he was acquainted with George E. Hayes, and knew him to be the Attorney-in-fact of said Company; that the signature of the said George E. Hayes, subscribed to the foregoing instrument, was in the genuine handwriting of said George E. Hayes, and was subscribed thereto, by like order of said Board of Directors, and in presence of him, the said Sylvester J. O'Sullivan.

GEO. FRANK SWEENEY,
Commissioner of Deeds, New York City.

THE CITY OF NEW YORK,

DEPARTMENT OF

WATER SUPPLY, GAS AND ELECTRICITY,

Borough of ....

1905.

PROPOSALS FOR BIDS OR ESTIMATES

FOR GAS AND NAPHTHA LAMPS, ETC.

1. Sealed Bids or Estimates will be received at the office of the Department of Water Supply, Gas and Electricity, Room 1536, No. 21 Park Row, in The City of New York, until 2 o'clock P. M., on .... Day ...., 1905.

[Ordinances, Section 351.]

[Title.]

[Ordinances, Section 354.]

For Furnishing Gas or other Illuminating Material for, and for Lighting, Extinguishing, Cleaning, Repairing and Maintaining the Public Lamps (and Supplying Gas, etc., for New Lamps when required), and for Making Certain Repairs to Lamp-posts, and for Furnishing Burners and Appliances of Improved System of Lighting on Streets, Public Buildings, Avenues, Piers, Parks and Public Places, in the Borough of ...., in The City of New York, for the term Nine Months and Sixteen Days, from March 16, 1905, to December 31, 1905, both inclusive.

[Ordinances, Section 346.]

2. The amount of security required is TWENTY-FIVE (25) PER CENTUM of the total amount of bid or estimate.

9671 Furnishing estimate.—3. The person or persons making an estimate shall furnish the same in a sealed envelope, indorsed with the title given above, of the work for which the estimate is made, with his or their name or names and the date of presentation to the head of the Department, at the said office, on or before the date and hour above named, at which time and place the estimates received will be publicly opened by the head of the Department and read, and the award of the contract made according to law as soon thereafter as practicable.

Number of lamps.—4. In the whole Borough of ...., the total number of ordinary gas lamps now burning is about ....; the total number of Welsbach gas lamps now burning is about ....; the total number of Welsbach naphtha lamps now burning is about ....; the total number of ordinary naphtha lamps now burning is about ....; but the Commissioner of Water Supply, Gas and Electricity reserves the right to designate the location and number of the lamps of each kind as to districts, streets, avenues, piers, parks and public places or parts thereof. Bidders must satisfy themselves by a personal examination of the number and kind of lamps required in each Borough, as numbers given above must be taken only as a close approximation of the number of lamps that may be required.

Number of lamps in district to be stated.—5. Bidders are required to state in their estimates the districts or several streets, avenues, piers, parks and places, or parts of streets, avenues, piers, parks and places in which they propose to perform the requirements herein contained, giving also the number of lamps they propose to supply.

9672 Gas and naphtha lamps.—6. The burners for open flame or mantle gas lamps will be of such a kind and construction that they will burn not less than three cubic feet of gas per hour under a pressure of not less than 1½ inches. The gas furnished shall have an illuminating power of not less than 20 candles when tested by photometric test at a distance of not less than one mile from the place of manufacture, and bidders will state the price per lamp for the term of this contract for gas of the illuminating power, and in the quantity and at the pressure specified. If open flame and mantle lamps shall use illuminating material other than gas, then the burners to be used for such illuminating material will be of such kind and construction that they shall give a light (by photometric test) equal to the light given by the three-foot open flame or mantle gas burners of similar type as used in the public lamps in The City of New York, furnished with 20-candle-power gas.

Illuminating power.—Bidders are required to state the illuminating or candle power of the gas they propose to furnish when tested at a distance of not less than one mile from the place of manufacture, and bidders proposing to furnish any illuminating material other than illuminating or coal gas must state distinctly what kind and grade of material they propose to furnish, and the illuminating power of the light they propose to furnish. When the term "illuminating material other than gas" is used in these proposals or the annexed contract and specifications, it shall mean either naphtha or gasolene.

Open flame gas or naphtha lamps, lamp-posts, etc., owned by The City.—7. Bidders will state in their bids or estimates a price per lamp for the term of this contract, for furnishing gas or illuminating material other than gas to the public lamps in the Borough of and for other fixtures or appliances for illuminating material for each open flame gas or naphtha lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, replacing and repairing of the cocks, tubes and burners, the replacing of lamp-posts, cross-heads, lamp-irons and lanterns, which lamp-posts, cross-heads, lamp-irons and lanterns now owned or hereafter acquired by The City of New York, will be furnished to the Contractor by the said City, and put in place by him as required for the amount of this bid, with the exception of lamp-posts. The repairing, replacement or erection of lamp-posts owned by The City to be as per bid on clause No. 10 in this proposal. 9673

Open flame naphtha lanterns, lamp-posts, etc., furnished by Contractor.—*7a.* A price for furnishing illuminating material other than gas to the public lamps in the Borough of , and for other fixtures or appliances for illuminating material other than gas, including lighting, cleaning, extinguishing, reglazing and painting of lanterns, the painting of lamp-posts, lamp-irons and cross-heads, the furnishing, replacing and repairing of the cocks, tubes, burner appliances, lanterns, lamp-irons, cross-heads and lamp-posts, all the above, for each lamp, at each lamp, to be furnished by the Contractor and erected by him as required for the term of this Contract for the amount of this bid.

Mantle gas or naphtha lanterns, lamp-posts, etc., owned by The City.—8. A price for furnishing lanterns complete, including cross-heads, lamp-irons and improved burner appliances and incandescent mantles for gas or naphtha burners to produce a light of not less than sixty (60) candle power each, and including the illuminating material for each lamp, at each lamp, in the Borough of , lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns, lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, replacing and repairing of the mantles, cocks and burning appliances, the replacing of lamp-posts, cross-heads, lamp-irons and lanterns, which lamp-posts, when owned or hereafter acquired by The City of New York, will be furnished to the Contractor by the said City and put in place by him, as required for the amount of this bid, with the exception of lamp-posts. The repairing, replacement or erection of lamp-posts owned by The City to be as per bid on clause No. 10 in this proposal. 9674

Mantle naphtha lanterns, lamp-posts, etc., furnished by Contractor.—*8a.* A price for furnishing lanterns complete, including lamp-irons, cross-heads, incandescent mantles and improved burning appliances for illuminating material other than gas to produce a light of not less than sixty (60) candle power each and including illuminating material other than gas for each lamp, at each lamp, in the Borough of , the lighting, extinguishing, cleaning, reglazing and painting of lanterns, the painting of lamp-posts, lamp-irons and cross-heads, the furnishing, replacing and repairing of mantles, cocks, burning appliances, lanterns, lamp-irons, cross-heads and lamp-posts, all the above to be furnished by the Contractor and erected by him as required for the term of this contract for the amount of this bid.

8*b*. A price for furnishing, maintaining and putting in place all the above mentioned items, excepting the cost of illuminating material in case of gas only, with lamp-posts as above noted, for the period of this contract.

9675 Lamp-posts.—9. All lamp-posts for use with gas or naphtha lanterns to be erected in new locations will be provided for the term of this contract by The City of New York, and the erection of same shall be charged for at the prices given for this item in clause No. 10 of this proposal.

(*a*) In the Boroughs of Manhattan, The Bronx and Brooklyn, the lamp-posts for gas lamps are almost entirely owned by The City, and The City will continue to supply same. In these, or other boroughs where any lamp-posts used for naphtha or gas lighting, either mantle or open flame, may belong to the Contractor, and are not to be replaced by a later successful bidder, the right is reserved to The City of New York to substitute its own lamp-posts for these if it so desires. If The City does furnish these lamp-posts, they shall be erected by the Contractor for the charge specified for this item in the bid on clause No. 10 in this proposal; but when these lamp-posts are now owned or furnished by the Contractor, all repairs and renewals shall be made by him without any charge to The City.

(*b*) Where one contractor shall replace the lanterns or lamp-posts, or both, owned by another, on account of a change in the contractor from the previous successful bidder to the successful bidder on this contract, then the first erection of lamp-posts and lanterns by the successful bidder, lamp-post for lamp-post, replacing those that may then exist shall be made with no further charge to The City of New York, although The City may exercise its right to supply its own lamp-posts.

9676 Lanterns.—(*c*) The cross-heads, lamp-irons and lanterns used for open flame gas lamps in the Borough of Manhattan, The Bronx, and Brooklyn are almost entirely owned by The City of New York, and The City will continue to supply same. In these or other boroughs where gas lanterns may belong to the Contractor, he shall furnish same, including all repairs and renewals, without any additional charge to The City.

Lanterns, burning appliances, lamp-irons and cross-heads for open flame naphtha lamps shall be furnished by the Contractor for the term of this contract for the amount of this bid.

Any other contractor bidding successfully, where lanterns are not owned by The City, must supply same, including all repairs and renewals, without any additional charge to The City.

(*d*) In all boroughs, the above conditions and reservations as to the furnishing, repairing, replacing and painting of lamp-posts, cross-heads, lamp-irons and lanterns in the above clauses, No. 7, No. 7*a*, No. 8, No. 8*a*, No. 8*b*, No. 9, No. 9*a*, No. 9*b*, and No. 9*c* shall apply as the ownership of said lamp-posts, cross-heads, lamp-irons and lanterns shall appear, but nothing in the above shall be construed that The City of New York obligates itself to supply new lamp-posts in place of those now erected, but not owned by it, unless it so desires.

10. Bidders will state in their bids a price for the repair of lamp-posts, owned or supplied by The City, for use with gas or naphtha lamps, including straightening and releading, and for each new lamp-post fitted up, as follows:

(*a*) For each lamp-post straightened, stating the price per post.
(*b*) For each column releaded, stating the price per post.
9677 (*c*) For each column recalked, stating the price per post.
(*d*) For each column refitted, stating the price per post.
(*e*) For each service pipe refitted, stating the price per post.
(*f*) For each stand pipe refitted, stating the price per post.
(*g*) For each lamp-post removed, stating the price per post.
(*h*) For each lamp-post reset, stating the price per post.
(*i*) For the erection of each *new* lamp-post (complete with service and stand pipes, when for gas), and with cross-heads, lamp-irons and lanterns in place, stating the price per post.

Gas for public buildings.—11. Bidders will state in their bids or estimates a price per thousand cubic feet of gas of not less than 20 candle power for all or any of the public buildings or offices in the Borough of ...., the lighting of which is now, or hereafter may be, under the jurisdiction and control of the Department of Water Supply, Gas and Electricity. This price will include, in all boroughs, the service pipes from the gas mains to the building, and a proper meter for registering the consumption of gas.

Alterations, etc.—12. Should any alteration, change, replacement or any attachment be required to the whole or any portion of the lamps or lamp-posts, except as mentioned in these proposals and specifications, for which estimates are made, in consequence of the use of improved appliances for the gas or 9678 naphtha lighting under this contract, then such alteration shall be done and such attachment placed on the posts without expense to The City.

Reservation.—13. The right is reserved to the Commissioner to determine and designate in any locality, at any time after the estimates are opened, what illuminating material shall be used in the public lamps, or any number of them, in such locality, during the term of this contract; also, upon such determination, to decline any estimate, or part thereof, for lighting such locality with illuminating material other than that so determined upon; also to decline all estimates for any particular locality, or all localities, if deemed for the best interests of The City.

Time to connect to lamp-posts.—14. If the estimate of any bidder shall include any lamp-posts with which the pipes or conductors of such bidder are not connected at the time of the making of the bid, and a contract for furnishing the illuminating material for any such lamp-posts shall be awarded to such bidder, in that case, **THIRTY DAYS from the date of the execution of such** contract, and such further time, not exceeding thirty days, as may be deemed reasonable by the Commissioner, shall be allowed to such bidder in which to connect such pipes or conductors with such lamp-posts, and all such connections shall be made by the Contractor without expense to The City.

Payment reserved.—15. No payment to such bidder, on account of any such lamps, will be made for the time so allowed, nor until the same shall have been connected with the mains or conductors of such bidder, nor except for the time during which all
9679 the requirements in this proposal and in the contract, including specifications, which shall be awarded and entered into under this proposal, shall have been fully performed.

Determination of lights.—16. The number, kind and location of lights to be furnished under the contract to be awarded and entered into under this proposal shall be determined and prescribed by the Commissioner.

Responsibility of bidders.—17. No bid will be entertained unless the Commissioner shall be satisfied that the party or parties bidding are possessed of sufficient plant to carry out the provisions of the contract.

Award of contracts.—18. The award of any and all contracts under this proposal, and all contracts entered into in pursuance of said proposal, will be subject and subordinate to the rights of all persons, parties or corporations under contracts or agreements (if there are any such) which are now binding and obligatory upon The City of New York.

Burning hours.—19. The number of hours the gas or naphtha lamps are to be kept burning during the contract is 2,936 5-60 at the rate of 3,925 hours per year as per time-table attached.

Form of estimate.—20. Bidders will *write out* the total amount of their estimates in addition to inserting the same *in figures*.

Rejection.—21. The Commissioner reserves the right to reject any or all bids or estimates if the Board of Estimate and Apportionment shall determine it is for the public interest of The City so to do.

[Charter, section 530.]

Identity of bidders.—22. Each bid or estimate shall contain the name and place of residence of the person making the same, the names of all persons interested with him
9680 therein, and if no other person be so interested it shall distinctly state that fact; also that it is made without any connection with any other person making an estimate for the same purpose, and is in all respects fair, and without collusion or fraud; and that no member of the Board of Aldermen, head of a department, chief of a bureau, deputy thereof, or clerk therein, or other officer of The City of New York, is, shall be, or become interested, directly or indirectly, as contracting party, partner, stockholder, surety or otherwise in, or in the performance of the contract, work or business to which it relates, or in any portion of the profits thereof. The bid or estimate must be verified by the oath, in writing, of the party making the estimate that the several

[Ordinances, section 347.]

[Charter, section 1533.]

matters stated therein are in all respects true; or, if the bidder is a corporation, by the oath, in writing, of an officer of such corporation, with knowledge of the facts and having authority to make such sworn statement.

Sureties.—23. Each bid or estimate shall be accompanied by the consent, in writing, of two householders and freeholders in The City of New York, or of a guaranty or surety company, duly authorized by law to act as surety, and shall contain the matters set forth in the blank forms mentioned below.

[Ordinances, section 349.]

Check with estimates.—24. No bid or estimate will be considered unless accompanied by money or a certified check drawn on a National or State Bank located in The City of New York, to the order of the Comptroller, to the amount of five per centum of the amount of the bond required, as provided in section 420 of The Greater New York Charter.

[Charter, section 420.]

Particulars of work.—25. For particulars as to the repairs or the quantity or quality of the supplies, or the nature and extent 9681 of the work, reference must be made to the specifications on file in the Department.

Forms for estimates.—26. Bidders are requested to make their bids or estimates upon the blank form prepared by the Commissioner, a copy of which, with the proper envelope in which to inclose the bid, together with a copy of the contract, including the specifications, in the form approved by the Corporation Counsel, can be obtained upon application therefor at the office of the Commissioner of Water Supply, Gas and Electricity, Room 1321, No. 21 Park Row, The City of New York.

THE CITY OF NEW YORK............, 1905.

JOHN T. OAKLEY,
Commissioner of Water Supply, Gas and Electricity.

9682

THE CITY OF NEW YORK,

DEPARTMENT OF WATER SUPPLY, GAS AND ELECTRICITY,

BOROUGH OF...........

CONTRACT AND SPECIFICATIONS

For Furnishing Gas or other Illuminating Material for, and for Lighting, Extinguishing, Cleaning, Repairing and Maintaining the Public Lamps (and Supplying Gas, etc., for New Lamps when required), and for making certain Repairs to Lamp-posts and for furnishing Burners and Appliances of Improved System of Lighting Streets, Public Buildings, Avenues, Piers, Parks and Public Places, in the Borough of ...., in The City of New York, for the term of Nine Months and Sixteen Days, from March 16, 1905, to December 31, 1905, both inclusive, per Specifications and Proposals herein contained or hereto attached.

Parties.—THIS AGREEMENT, made and entered into this .... day of ...., in the year one thousand nine hundred and five, by and between The City of New York, by the Commissioner of Water Supply, Gas and Electricity, party of the first part, and ....
....
....
Contractor , party of the second part, pursuant to the provisions of The Greater New York Charter,

9683 Covenant.—WITNESSETH, That the parties to these presents, each in consideration of the agreements on the part of the other, herein contained, have mutually agreed and hereby mutually agree, the party of the first part for itself and its successors, and the party of the second part for itself and its successors, as follows:

Parties described.—(*A*) Wherever in this contract the words "The City," or "The Commissioner," or a pronoun in the place of either of them is used, they shall mean and intend the party of the first part or the Commissioner of Water Supply, Gas and Electricity of The City of New York; wherever the words "Borough President" are used in this contract they shall mean and intend the President of the Borough above mentioned; wherever in this contract the words "the Department," or a pronoun in place of them is used, they shall mean and intend the Department of Water Supply, Gas and Electricity in The City of New York.

(*B*) Wherever in this contract the word "Contractor" or a pronoun in the place of it, is used, the same shall mean and intend the party of the second part to this agreement.

"Engineer" described.—(*C*) Whenever the word "Engineer" is used in this contract, it shall mean and be taken to mean and in-

tend the Engineer of the Bureau of Lamps and Gas of the Department, or the Engineer, or other person or official in charge of the Lighting Bureau of the borough for which this contract is made, acting either directly or through any Assistant or Inspector duly appointed or designated therefor, pursuant to The Greater New York Charter, as amended, by the Engineer or either of the
9684 Engineers, to inspect, test, examine and accept the supplies of gas or other illuminating material, repairs or supplies, which are the subject of this contract, limited by the particular duties intrusted to him.

Subject matter.—(*D*) The Contractor will furnish and deliver to the party of the first part, at the Contractor's own cost and expense, at the times and places and in the manner and under the conditions herein specified, gas or other illuminating material for, and light, extinguish, clean, repair and maintain the public lamps (and supply gas, etc., for new lamps when required), and make certain repairs to lamp-posts, and furnish burners and appliances of improved system of lighting on the streets, public buildings, avenues, piers, parks and public places in the Borough of ...., in The City of New York, for the term of 9 months and 16 days from March 16th, 1905, to December 31st, 1905, both inclusive, and will accept as full compensation therefor the sum or price hereinafter named, which sums or prices are the amounts at which this contract was awarded to the Contractor at the public letting thereof. The said specifications, the proposal for bids or estimates, the bid or estimate and the bond required are and shall be a part of this contract.

No extra compensation.—(*E*) The Contractor will not ask, demand, sue for or recover for any supplies delivered, repairs made, illuminating material furnished, or work performed under this contract, any extra compensation beyond the amounts payable for the several classes of work and supplies herein enumerated, which shall be actually supplied at the price therefor, herein agreed upon and fixed.

Inspection.—(*F*) The Engineer shall inspect and test or
9685 have tested the gas or other illuminating material, lamps, meters, regulators, repairs and supplies furnished, and see that the same strictly correspond with the specifications hereinafter set forth, and the Engineer is hereby authorized and empowered to reject any of the said gas or other illuminating material, lamp-posts, lamps, meters, regulators, repairs and supplies offered under this contract, for the reason that the same do not comply in quality, or quantity, or pressure, or time or place of maintenance, with the specifications herein contained or hereto annexed.

Engineer's substitute.—(*G*) Whenever the Engineer shall be unable to act, in consequence of absence or other cause, then such assistant or other persons as shall be designated by the Commissioner shall perform all the duties and be vested with all the power herein given to the Engineer.

Arbitration.—(*H*) To prevent all disputes and litigations, the Engineer shall, in all cases, determine the amount, quantity and quality of the supplies, illuminating material, and work, which are to be paid for under this contract, and he shall determine all questions in relation to said gas or other illuminating material, repairs and supplies, and he shall in all cases decide every question which may arise relative to the execution of this contract on the part of the Contractor, and his estimate and decision shall be final and conclusive.

Explanation.—(*I*) Any doubt as to the meaning of the contract, including the specifications, or any obscurity as to the wording of them, will be explained by the Engineer, and all directions and explanations required, alluded to, or necessary to complete any of the provisions of these specifications, and give them due effect, will be given by the Engineer.

9686 Time of beginning and completing work.—(*J*) The Contractor shall commence the delivery of the lamps and other apparatus called for by this contract, and the furnishing of the illuminant required, and the lighting of the lamps, as soon as he shall be ordered so to do by the Commissioner; he will carry on such contract as required from time to time, with such force and in such manner and order, and at such times and seasons, as may be directed by the Commissioner, and that he will fully and entirely perform this contract on his part on the 31st day of December, 1905.

[Ordinances, section 354.]

Liquidated damages.—(*K*) In case any lamp shall fail to burn continuously throughout each and every night, during the term of this contract, during the hours specified in the time-table hereto annexed, or such hours as the Commissioner may from time to time prescribe, and such failure shall not be due to any act or omission of The City, its officers, agents, or employees, the Contractor shall and will pay to The City a sum of money equal to one two hundred and ninetieth (1/290) of the contract price of such lamp for the term of this contract, for each and every night or part thereof that such failure shall continue, which said sum, in view of the difficulty of ascertaining the loss which The City will suffer by reason of such failure, is hereby agreed, fixed and determined by the parties hereto, as the liquidated damages that The City will suffer by reason of such failure, and not as a penalty, and The City shall and may deduct and retain the amount of such liquidated damages out of any moneys which may be due or become due to the Contractor under this agreement.

Extension of time.—(*L*) Neither an extension of time, for any reason, beyond the date fixed for the delivery of supply of 9687 gas, or other illuminating material, lamps, repairs and supplies, nor the delivery and acceptance of any said delivery of supply of gas, repairs and supplies, called for by this contract, shall be deemed to be a waiver by the Commissioner of the right to abrogate this contract for abandonment or delay in the manner herein provided.

Skilful workmen.—(*M*) The Contractor will employ only competent, skilful and faithful men to do the work, and he further agrees that whenever the Commissioner shall inform him in writing that any man engaged in the work is, in his opinion, incompetent or unfaithful, he will discharge him from the work and will not again employ him upon the work.

Prices.—(*N*) The Contractor shall receive the following prices as full compensation for furnishing and maintaining the lights, lamps, apparatus and accessories, and performing the services herein provided to be performed by the Contractor, viz.:

9688 OPEN FLAME GAS LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

I. For furnishing illuminating gas (of not less than 20 candle-power to burners consuming 3 cubic feet of gas per hour, by photometric test, made at a distance of not less than one mile from the place of manufacture) for each lamp, at each lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes and burners, the replacing of cross-heads, lamp-irons and lanterns, and the replacing and repairing of lamp-posts when owned by the Contractor, as specified and as noted in proposals, clauses Nos. 7 and 9, for the term of this contract, in the Borough of .... to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

9689 OPEN FLAME NAPHTHA LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

II. For furnishing illuminating material other than gas for each lamp, at each lamp, including the lighting, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burners, burning appliances, lanterns, lamp-irons and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 7 and 9, for the term of this contract, in the Borough of .... to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, tne sum of .... Dollars ($........) per lamp.

9690 OPEN FLAME NAPHTHA LAMPS—LAMPS-POSTS FURNISHED BY CONTRACTOR.

III. For furnishing illuminating material other than gas for each lamp, at each lamp, including the light, extinguishing, cleaning, repairing, reglazing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burners, burning appliances, lamp-posts, lanterns, lamp-irons and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 7*a* and 9, for the term of this contract, in the Borough of ...., to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

9691 MANTLE GAS LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

IV. For furnishing and connecting, ready for use, each mantle gas lamp, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it, including illuminant. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lanterns, lamp-irons, frames and cross-heads thereto, and repairing and replacing of lamp-posts when owned by the Contractor, as specified and as noted in proposals, clauses Nos. 8 and 9, for the term of this contract, in the Borough of .... to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

9692 MANTLE NAPHTHA LAMPS—LAMP-POSTS OWNED OR FURNISHED BY THE CITY.

V. For furnishing and connecting, ready for use, each mantle lamp, using illuminating material other than gas, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lanterns, lamp-irons, frames and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 8 and 9, for the term of this contract, in the Borough of .... to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

9693 MANTLE NAPHTHA LAMPS—LAMP-POSTS FURNISHED BY CONTRACTOR.

VI. For furnishing and connecting, ready for use, each mantle lamp, using illuminating material other than gas, with improved burner appliances and incandescent mantles, including cocks, tubes, burners, mantles, globes, chimneys, rods and regulating apparatus, necessary for each lamp, at each lamp, and also operating and maintaining it. The operation and maintenance to include the lighting, extinguishing, cleaning, reglazing, repairing and painting of lanterns and lamp-irons, the painting of lamp-posts and cross-heads, the furnishing, repairing and replacing of cocks, tubes, burner appliances, mantles, chimneys, globes, rods, regulating apparatus, lamp-posts, lanterns, lamp-irons, frames and cross-heads thereto, as specified and as noted in proposals, clauses Nos. 8*a* and 9, for the term of this contract, in the Borough of .... to wit:

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

9694 For furnishing all the above for each lamp, at each lamp, for .... in number of same, the sum of .... Dollars ($........) per lamp.

VII. For furnishing, maintaining and putting in place all the above-mentioned items, excepting the cost of illuminating gas only, as specified and as noted in clauses No. 7, No. 8 and No. 9 of the proposals, for the period of this contract, the sum of............. ....Dollars ($........).

VIII. For furnishing, maintaining and putting in place all the above-mentioned items, excepting the cost of illuminating gas only, as specified and as noted in clauses No. 7*a*, No. 8*a*, No. 8*b* and No. 9 of the proposals, for the period of this contract, the sum of...... ....Dollars ($........).

IX. For repair of lamp-posts and erection of new lamp-posts, for the term of this contract, in the Borough of..................., when owned, furnished or hereafter acquired by The City:

(*a*) For each lamp-post straightened, the sum of.............. .... Dollars ($........).

(*b*) For each column releaded, the sum of.................. .... Dollars ($........).

(*c*) For each column recalked, the sum of.................. .... Dollars ($........).

(*d*) For each column refitted, the sum of.................... .... Dollars ($........).

9695 (*e*) For each service pipe refitted, the sum of........... .... Dollars ($........).

(*f*) For each stand pipe refitted, the sum of.................. .... Dollars ($........).

(*g*) For each lamp-post removed, the sum of................. .... Dollars ($........).

(*h*) For each lamp-post reset, the sum of.................... .... Dollars ($........).

(*i*) For the erection of each new lamp-post, complete (with service and stand pipes when for gas) and with cross-heads, lamp-irons and lanterns in place, stating the price per post, the sum of....... .... Dollars ($........).

X. For furnishing illuminating gas of not less than 20 candlepower, when tested, as provided for gas to street lamps, including the service pipes from the gas-mains to the building and a proper meter for registering the gas, for the term of this contract, for each of the public buildings and offices in the Borough of............., the lighting of which is now, or hereafter may be, under the jurisdiction and control of the Department of Water Supply, Gas and Electricity, per 1,000 cubic feet, at a pressure of not less than one and one-half (1½) inches at the meter end of the house service pipe, in the sum of .... Dollars ($........).

9696 Payments only for complete performance.—(*O*) No payment will be made or allowed on account of supply of illuminating materials, repairs and supplies to any lamp, except for the time during which all the requirements herein mentioned shall have been fully performed in accordance with the specifications.

Suspension and relighting.—(*P*) In case the Contractor shall be unable at any time during the continuance of this contract to supply illuminating material to, or light any of the lamps specified in this agreement, then the Contractor shall give immediate notice to the Commissioner of his inability to furnish illuminating material to, or to light such lamps, stating the streets in which the supply of illuminating material to the lamps cannot be furnished and the cause thereof. And in case the use of any of the lamps shall be suspended or discontinued, and other lamps shall be used in consequence of such suspension or discontinuance, then the gas or other lamps which may have been suspended, or discontinued, shall not be supplied with illuminating material except pursuant to an order for such supply by the Commissioner.

Indemnity.—(*Q*) The Contractor shall indemnify and save harmless The City, its officers, agents and servants, and each of them, against and from all suits and actions of every name and description brought against them or any of them, including suits based on or arising out of the alleged infringement of any patent or patent right, and against, and from all damages and costs to which they or any of them may be put by reason of any such alleged infringement or by reason of injury to the person or property of another, resulting from negligence or carelessness in the performance of the work to be done under this contract, or otherwise, or from any improper or 9697 defective material, machinery, implement or appliance used in performing the same, or from any act or omission of the Contractor or his agents or servants. So much of the moneys due to the Contractor under and by virtue of this agreement, as shall or may be deemed necessary by the Commissioner, shall or may be retained by The City until all such suits, actions and claims shall have been settled, and evidence to that effect furnished to the satisfaction of the Commissioner.

Failure to perform.—(*R*) In case the Contractor shall fail or neglect to keep the covenants herein contained, or any of them, or neglect to operate, repair, paint, clean or fit up the lamps as before mentioned, or any of them, the Commissioner may and shall have the power to cause such work to be performed by other parties, and to deduct the expense thereof, from any moneys which may be due or may become due to the Contractor, and to hold the Contractor and his sureties liable for the amount thereof, which may be in excess of the prices stipulated in this agreement; and in case such expense is less than the sum which would have been payable under this contract if the same had been completed by the Contractor, he shall forfeit all claim to the difference.

Annulment of contract.—(*S*) If the Contractor shall not well and truly observe, perform, fulfill and keep all and singular the covenants and conditions hereinbefore mentioned and contained, on its part and behalf to be observed, performed, fulfilled and kept according to the true intent and meaning of these presents, then and in that case the Commissioner may and shall have the power, on the part of the said party of the first part, to declare this contract annulled and vacated, and thereupon it shall become and be thenceforth null and void.

9698 Payments.—(*T*) On or after the first day of each and every month during the term of this contract, the Contractor shall furnish proof to the satisfaction of the Commissioner that it has fully performed and fulfilled this contract in all the particulars and conditions aforesaid during the preceding month, and particularly that it has furnished the illuminating material of the quality hereinbefore specified, and that all the lanterns have been cleaned three times in each week of said month, and also that the gas burners have consumed three cubic feet of gas each per hour, as required by this contract, during all the time that the lamps were required to be kept lighted, and also proof to the satisfaction of the Commissioner as to all extinguishments of lamps, including the location of each lamp extinguished, the date and length of extinguishment in each case, whereupon the Commissioner shall certify the fact, and in his certificate state the amount to which the Contractor shall be entitled for all the duties performed by it during such preceding month, and annex thereto a requisition upon the Comptroller to pay the Contractor therefor the sum to which he shall be so entitled; and without such certificate and requisition the Contractor shall not be or become entitled to any payment under and in respect to the terms of this contract, or for the light, lamps and accessories or in respect to services which were required to be done, or should have been done, in such preceding month. On the requisitions above provided being presented to the Comptroller of The City, he shall, within thirty days thereafter, pay to the Contractor the amount thereof in lawful money.

No estoppel.—(*U*) The City shall not, nor shall any department or officer thereof be precluded or estopped by any return or 9699 certificate made or given by the Commissioner, any Engineer or other officer, agent or appointee of The City under any provision of this agreement from at any time (either before or after the final completion and acceptance of the work and payment therefor pursuant to any such return or certificate) showing the true and correct amount and character of the work done and materials furnished by the Contractor, or any other person under this agreement, or from showing at any time that any such return or certificate is untrue and incorrect, or improperly made in any particular, or that the work and materials, or any part thereof, do not in fact conform to the specifications; and The City shall not be precluded or estopped, notwithstanding any such return or certificate and payment in accordance therewith, from demanding and recovering from the Contractor such damages as it may sustain by reason of his failure to comply with the specifications.

Comptroller's indorsement.—(*V*) This contract shall not be binding or of any force unless the Comptroller of The City shall indorse hereon his certificate that there remains unexpended or unapplied, as provided in The Greater New York Charter, a balance of the appropriation or fund applicable thereto sufficient to pay the estimated expense of executing this contract, as certified by the officers making the same.

[Charter, sections 149 and 413.]

Notice to Contractor.—(*W*) The residence or place of business given in the bid or estimate upon which this contract is founded, is hereby designated as the place where all notices, letters and other communications shall be served, mailed or delivered. Any notice, letter or other communication addressed to the Contractor and delivered at the above-named place, or deposited in a post-paid 9700 wrapper in any post-office box regularly maintained by the post-office shall be deemed sufficient service thereof upon the Contractor. The place named may be changed at any time by an instrument, in writing, executed and acknowledged by the Contractor and delivered to the Commissioner. Nothing herein contained shall be deemed to preclude or render inoperative service of any notice, letter or other communication upon the Contractor personally.

Prior rights considered.—(*X*) This contract shall be subject and subordinate to the rights, claims and demands of all persons, parties or corporations under contracts or agreements (if there are any such) which are valid and lawful charges and liabilities against The City of New York, and which the law requires shall be defrayed and answered unto by The City.

Personal attention.—(*Y*) The Contractor will give his personal attention constantly to the faithful prosecution of the work; he will not assign, transfer, convey, sublet or otherwise dispose of this contract, or his right, title or interest in or to the same or any part hereof, without the previous consent in writing of the Commissioner indorsed hereon or hereto attached; and he will not assign, by power of attorney or otherwise, any of the moneys to become due and payable under this contract, unless by and with the like consent signified in like manner. If the Contractor shall, without such previous written consent, assign, transfer, convey, sublet or otherwise dispose of this contract, or of his right, title or interest therein, or any of the money to become due under this contract, to any other person, company or other corporation, this contract may, at the option of the Commissioner, be revoked and annulled and The City shall thereupon be relieved and discharged from any and all liability 9701 and obligations growing out of the same to the Contractor, and to his assignee or transferree; provided that nothing herein contained shall be construed to hinder, prevent or affect an assignment by the Contractor for the benefit of his creditors, made pursuant to the statutes of the State of New York; and no right under this contract, or to any money to become due hereunder shall be asserted against The City in law or in equity, by reason of any so-called assignment of this contract, or any part thereof, or of any moneys to grow due hereunder, unless authorized as aforesaid by the written consent of the Commissioner.

Execution.—IN WITNESS WHEREOF, The Commissioner of Water Supply, Gas and Electricity has hereunto set his hand and seal on behalf of The City, and the Contractor has caused its corporate seal to be hereunto affixed and its President and Secretary hereto to set their hands, and the parties hereto have executed triplicate copies hereof, one of which is to remain with the Commissioner, one other to be filed with the Comptroller of The City, and the third to be delivered to the Contractor, the day and date herein first above written.

Comptroller.

9709

SPECIFICATIONS

For Furnishing Gas or other Illuminating Material for, and for Lighting, Extinguishing, Cleaning, Repairing and Maintaining Public Lamps (and Supplying Gas, etc., for New Lamps when required), and for making certain Repairs to Lamp-posts, and for Furnishing Burners and Appliances of Improved System of Lighting of Streets, Public Buildings, Avenues, Piers, Parks and Public Places, in the Borough of ...., in The City of New York, for the Term of Nine Months and Sixteen Days, from March 16, 1905, to December 31, 1905, both inclusive.

Lighting.—1. The lamps shall be lighted during such times as the public lamps throughout The City of New York may be required to be lighted by the regulations of the said party of the first part, in accordance with a time-table hereto annexed, marked "A," and made a part of these specifications. The Commissioner may direct and require, by notice of that effect, that all or any portion of said public lamps shall be lighted, and kept burning, at any

other time or times during the continuance of this contract; and the Contractor shall and will light the same, and continue them burning, in accordance with any and every direction of the Commissioner to that effect. Provided, that if, in compliance with the direction of the Commissioner, the whole number of hours during which the said lamps, or a portion of them, are kept burning, shall exceed the number of hours specified in the said time-table, which
time-table shall aggregate a total of 2966 5-60 hours for the
9710 term, then, in that case, the Contractor shall be entitled to
claim, and receive, for such additional number of hours during which the lamps, or such portion of them, in the district aforesaid, are kept burning, in accordance with such direction of the Commissioner, an additional compensation, equivalent to a pro rata increase of the compensation allowed by the foregoing contract and proportioned to the increased number of hours beyond the said number, and the number of lamps so kept burning. And also, provided that if, in compliance with the direction of the Commissioner, the number of hours during which the said lamps, or any portion of them, are kept burning, shall be less than the aforesaid number of 2966 5-60 hours per term, then, in that case there shall be deducted an amount equivalent to a pro rata decrease of the compensation allowed by the foregoing contract and proportioned to the decrease of the number of hours below the said number, and to the decrease of the number of lamps so kept burning. If the lamps are to be lighted by means of gas or naphtha, then it is expressly agreed that all the lamps shall be lighted within one hour from the time fixed in the time-table as the time for beginning; and it is also expressly agreed that all the lamps shall be extinguished within fifty (50) minutes from the time fixed in the time-table as the time for the beginning of extinguishing. It is also agreed that they shall be lighted either by means of a torch or the use of a ladder, and that the lamplighters will not be permitted to climb the lamp-posts for such a purpose. The Contractor shall keep the service pipes and stand pipes in said lamps free from all obstructions, at his own cost and expense.

Increasing or diminishing of lights.—2. The Commissioner shall
have the right at any time to increase or diminish the num-
9711 ber of lamps required to be lighted by the Contractor under
this contract, and the right is reserved by the Commissioner, at any time during the continuance of this contract, to increase or diminish the number of hours during which the said lamps or any portion of them are to be kept burning, and to change said time-table in any particular, and to determine and from time to time to change the said number and location of the lights in any public building or office, and the amount and kind of illuminating material used and to be used therein, and the public buildings and offices and parts thereof lighted and to be lighted under the foregoing contract.

Illuminating material, quality of.—3. If the material to be furnished under this agreement shall be illuminating gas, then such gas shall have an illuminating power of not less than twenty candles, when tested at a distance of not less than one mile from the place

of manufacture, on the improved form of the Bunsen Photometer, by means of a Bray slit, Union No. 7 burner, consuming five cubic feet of gas per hour. The testing candle shall be of sperm, of six to the pound, and consuming, as near as possible, one hundred and twenty grains of spermaceti per hour; and no test shall be recorded in which the candle consumes less than one hundred and fourteen or more than one hundred and twenty-six grains of spermaceti per hour. And as regards purity, gas shall be clean and of such quality that it will not deteriorate the mantles in the mantle lamps using same so as to shorten their length of life under similar conditions. The gas shall be entirely free, within limits not injurious to the public health, from ammonia, sulphureted hydrogen
9712 and other sulphur of noxious compounds. In case the
illuminating material shall be illuminating material other than gas, then the quantity of light produced by the burner used for such material shall be equal to the quantity (by photometric test) produced by the twenty candle-power gas, above described, consumed by the three-foot gas burners called for in this agreement.

Test of illuminating power of lantern.—4. The City shall have the right at any time to test the quality and illuminating power of the lamps and light as furnished on the street, and for that purpose at least twenty-five (25) lamps may be selected from those in actual use, by the Engineer, in each and every calendar month, and their illuminating power shall be determined photometrically by The City Gas Inspector or the Engineer, at The City's Laboratory, or elsewhere, at the discretion of the Engineer. The average candle-power of the lamp so tested shall constitute the basis for calculating the light furnished by the lamps burning during the month and for which the charge is made. The term "Lamp" herein means the burner complete with mantle and chimney, if any, as found set up for use in any of the streets or public places, and the test herein referred to shall be made through uncolored clear glass of the same character as incloses the lamp on the street, and under the same conditions of supply of gas; the object of the test being to determine that the actual illuminating power, as contracted for, is given on the street, and to determine that each burner is consuming at least the required three cubic feet of gas per hour. Each lamp shall be tested with the gas furnished by the company furnishing gas to said lamp when in actual service on the street, the gas being first tested for candle-power. Twenty candle-power
9713 gas is herewith defined as gas which, when tested, at a dis-
tance of not less than one mile from the place of manufacture, on the improved form of Bunsen Photometer, by means of a Bray slit, Union No. 7 burner, consuming 5 cubic feet of gas per hour, shall give 20 candle-power; the testing candle shall be of sperm of six to the pound, and consuming, as near as possible, 120 grains of spermaceti per hour; and no test shall be recorded in which the candle consumes less than 114 or more than 126 grains of spermaceti per hour.

When desired by the Commissioner, these tests will be applied to each of the different classes of lamps, viz.:

Open flame gas.
Mantle gas.
Open flame naphtha.
Mantle naphtha.

The Contractor operating and maintaining the lamps tested shall replace said lamps whenever they are taken down for test, free of cost to The City, and shall always keep in stock ready for operation, at least 25 lamps of each class.

Lamps using other illuminant than gas will also be tested photometrically as to actual street illuminating power with the illuminating material they may contain when taken down, and they shall furnish the same illuminating power as a lamp of similar type using gas of 20-candle power supplied at the rate of three cubic feet per hour.

9714 The minimum candle power required of each type of lamp consuming not more than 3 cubic feet per hour per lamp, under the conditions herein specified, will be as follows:

Open flame gas	12 candle power.
Mantle gas	60 candle power.
Open flame naphtha	12 candle power.
Mantle naphtha	60 candle power.

The open flame lamps to be supplied with 20 candle power gas at the rate of not less than three cubic feet per hour. The mantle gas lamps to be supplied with at least 3 cubic feet of gas per hour, at 1½ inches pressure as may be required. The naphtha lamps, both open and mantle, shall be supplied with sufficient naphtha to equal the candle power of the similar type of gas lamp when supplied with gas under the specifications given above.

Burners.—5. All burners used for the illuminating material commonly called illuminating gas shall be of the capacity to burn at least three cubic feet of gas per hour in street lamps; and each of said burners shall burn at least three cubic feet of gas per hour at a pressure of 1½ inches as noted during all the time the lamps are required to be kept lighted, and they shall be kept in good order and repair, and renewed whenever required by the Engineer, and he shall also have same tested for consumption of gas when it is deemed necessary.

Should the illuminating material be naphtha, then the burners to be used for such illuminating material shall give a light (by photometric test) equal to the light given by the gas-burners in use in the public lamps of similar type in The City of New York. The burners are to be kept clear at all times, so as to allow a free 9715 and unobstructed flow of illuminating material, and to permit a full and normal flame. All checks or automatic regulators shall be of a type approved by the Engineer, and shall be cleaned at least once in each year, or oftener if ordered by the Engineer.

Change of burners.—6. The party of the first part shall have the right to require that burners of a greater consuming capacity than three cubic feet of gas per hour shall be furnished to the public gas-lamps, or any portion of them, at any time during the aforesaid term of this contract, provided that the party of the first part will pay to the Contractor, for the lamps so furnished, an additional compensation, equivalent to the increase of the compensation allowed by the foregoing contract and proportioned only to the increased amount of gas consumed by each burner over and above three cubic feet per hour.

Sample lamps and burner tips.—7. Sample lamps, showing all burning appliances and connections for each type of mantle or other lamp to be furnished, shall be submitted when called for by the Commissioner to the Engineer for the purposes of comparison and test. Such sample lamps shall be complete in every respect, and shall accurately represent the burner which the Contractor uses on each type of lamp under this contract, and the sample lamp, like lamps in service, shall be so combined and adjusted as to secure, under all ordinary variations of pressure, an intensity of candle power of not less than sixty in the case of mantle lamps and twelve in the case of open flame lamps.

Change of burners and mantles.—8. Incandescent mantles for either gas or naphtha lamps when supplied for the lamps now using same, or for lamps which may be hereafter specified by the
9716 Commissioner, shall be of the very best quality, capable of
producing and maintaining under the conditions of this contract not less than 60 candle power. Whenever the mantles become smoked or deteriorated to such an extent that at least 60 candle power is not obtained, they must be replaced by new mantles by the Contractor. The Commissioner reserves the right to have the lamps and the character of mantles furnished, tested, basing test on the same conditions as those under which they are required to burn on the streets, and to reject any lamps and mantles furnished that do not comply with the above requirements as to candle power. Anti-vibrators for lamps, using incandescent mantles, should be furnished with each lamp, and samples of same should be submitted to the Engineer for approval with the sample of lamp furnished him as mentioned elsewhere.

Street signs.—9. The Borough President or the Commissioner shall have the right at any time to place signs designating the names of the streets on any lamp or lamp-posts situated on the street corners of any street to be lighted under this contract without further expense to The City, whether the said lamp or lamp-posts shall belong to The City or not.

Such glass or other street signs as are at present in place upon the lanterns or lamp-posts shall be retained in their proper places and position.

All the lamps and street signs are to be kept in such a cleanly condition that not more than ten per cent. (10%) of the light of the lamps shall be absorbed or obstructed by the uncolored glass; and the lamps and street signs shall all be cleaned at least
9717 three times in each week, and oftener if the Commissioner
shall direct or require the same; and in each of these cleanings, all the glass of the lanterns, as well as the glass of the street

signs, shall be thoroughly cleaned both on the inside and on the outside, and all dust and dirt shall be brushed from the frames.

Repairing and reglazing.—10. The lamps, including the bottoms, are to be repaired and reglazed within twenty-four hours after any portion of the same shall be broken, and all the work or material for either of said purposes is to be furnished by the Contractor, without cost to The City.

Stained glass of a ruby color of such tint and arranged in a manner approved of by the Commissioner shall be placed in the fire alarm signal lamps, and shall also be required in the tops of the glass lanterns nearest several fire alarm signal boxes and in the tops of the glass lanterns on the street corner nearest said boxes. And in case any of said stained glass should be broken after being placed in the lamps, then the Contractor shall replace the same, but in the Borough of Manhattan, where fire alarm lanterns on mantle lamps, the glass will be provided by The City and put in place by Contractor without further cost to The City.

Cocks, tubes and burners.—11. The cocks, tubes, tips, mantles, chimneys, globes, burners and checks which may become worn out or useless, or which, in the opinion of the Commissioner, are worn out or useless, shall be immediately replaced by the Contractor, at his own cost and expense.

Repairing lamp-posts. —12. Whenever the Commissioner shall require that any lamp-post or posts shall be reset or straight-
9718 ened, or that any column or columns be releaded or recalked,
or that any lamp-post or posts be repaired in any other manner, in this contract specified, the same shall be done within twenty-four hours after the Department shall notify the Contractor of such requirement.

Painting.—13. The lamp-posts, lamp-irons, brackets and lanterns, used for gas or naphtha, are to have one heavy coat of best paint, ground in oil, as follows: The lamp-posts, cross-heads and stand-pipes of open-flame bracket lamps to have one coat of dark green paint, blue shade. The square lamp-irons, brackets, and outside of open-flame lanterns to have one coat of green paint, pea-green shade, the design being to make a strong contrast between lamp-posts and lanterns. The tin work on inside of lanterns to be painted in all their parts with one heavy coat of best white lead paint; the round lamp-irons and under side of the reflectors of the boulevard type of lamps to be painted with one coat of the best white lead paint, and so much of the stand pipes as project above the lamp-posts to be painted in the same manner as the lamp-posts.

The mantle gas or naphtha lanterns shall be painted in such a manner, and of such a color as shall be satisfactory to the Commissioner.

Fire-alarm lamp-posts and lanterns shall be painted as specified above, except as to color, which shall be of such color as the Commissioner may direct. This Contractor, however, is not to paint the telegraph boxes on the fire-alarm posts. All the material shall be of the best quality, and prepared so as to present a gloss finish. While
painting the lanterns care must be taken that the glass shall
9719 not be daubed or smeared with paint. All the painting is to
be completed by the first day of July next and the Commis-

sioner is to be notified when and where the painting is to be commenced. All new lamp-posts to be painted immediately upon erection.

Removing lamp-posts.—14. All lamp-posts shall be taken down which the Commissioner may require to be removed for any purpose.

New gas lamp-posts, service and stand pipes.—15. New gas lamp-posts are to be fitted up on any street, avenue, pier, park or public place, wherever the same may be required by the Commissioner. The butts and columns are to be placed in a strictly perpendicular position, the socket of the butt to be calked with yarn gasket and melted lead, the lead to be tamped and then trimmed even with rim of butt. The service pipe shall be one (1) inch wrought-iron pipe, which shall be properly connected to a one (1) inch wrought-iron stand-pipe, which shall be galvanized upon its outer surface. At the lower extremity of the stand-pipe the service pipe shall make an angle bend of easy curvature, so as to avoid any congestion of any material that may collect within the pipe, and thence have a direct fall to the main. The service pipe shall receive a heavy coat of asphaltic paint before there is any filling-in around it. The service pipe and bend on bottom of stand-pipe shall rest on solid earth to prevent the same from settling and forming a trap; the earth is to be thoroughly tamped about the butt as the same is thrown into the excavation. Bracket lamps are to be fitted up in lieu of lamp-posts, when required, the brackets and stand-pipes to be fastened to the wall in a firm and secure manner. The service pipes, stand-pipes and fittings
9720 are to be furnished and connected by the Contractor.

Lanterns.—16. All lanterns, cross-heads, lamp-irons, service pipes, stand-pipes and lamp-posts used for gas or for naphtha lamps, which, in the opinion of the Commissioner, may become so worn out, broken or useless as to be unfit to be repaired, are to be removed and other lanterns, cross-heads, lamp-irons, service pipes, stand-pipes and lamp-posts substituted in lieu thereof (and globe lamps substituted for square lamps) by the Contractor as noted in the proposals.

Cartages.—17. All supplies, which under this agreement, may be required to be furnished by the party of the first part, will be so furnished, but the cartage thereof shall be done by the Contractor.

Extension of lines.—18. Subject to the provisions of section 469 of The Greater New York Charter, the Contractor will, upon being required so to do by the party of the first part, extend its pipes or conductors, erect new lamps in and along any or all the streets, avenues and public places within the limits aforesaid or adjacent thereto, and will relight the gas lamps situated on the lines of the mains of the Contractor, which are now suspended or may hereafter be suspended, when ordered so to do by the Commissioner.

Illuminant to be used.—19. The Commissioner may determine and designate in any locality, after the estimates are opened, what illuminating material shall be used in the public lamps, or any number of them, in such locality, during the period above mentioned: also upon such determination to decline any estimate or part thereof for lighting such locality with illuminating material other than so determined upon.

9721 Gas to public building meters.—20. In supplying gas to public buildings under the jurisdiction and control of the Department of Water Supply, Gas and Electricity, the Contractor shall supply, put in place and connect the service pipes from the gas mains to the building and install a proper meter for registering the gas consumed. The service pipes shall be extended through any court yards, alleys, open spaces, squares, etc., to the point where the meter is situated, without extra charge to The City; and the gas company shall protect their services when required by inclosing same in proper casing, to prevent condensation, when so ordered by this Department.

The gas supplied shall be of twenty (20) candle power and not less than one and one-half inch pressure at meter end of the house service pipe.

The Department may regulate the pressure inside the building by means of a gas-pressure regulator if it so desires.

No meter shall be installed, changed or replaced in any public building, except in case of emergency, unless due notice shall be given the Bureau of Lamps and Gas twenty-four (24) hours before such new meter is installed or change is made, so that the Inspector of such bureau can be present to check the reading of the meter. All new meters installed shall be installed reading at zero, except when permission is given otherwise. When meters are changed on account of an emergency, the Bureau of Lamps and Gas shall be notified as soon as possible thereafter.

The location of any meter or meters in public buildings shall be finally decided by the Bureau of Lamps and Gas, so as to
9722 avoid, as far as possible, the placing of same in such a position that it is almost impossible for an ordinary man to read the meter without great difficulty.

Meters should be of size satisfactory to the Department of Water Supply, Gas and Electricity, and should be equipped with a key for the purpose of turning on and off the gas.

When more than one meter is installed in a building, each meter should be labelled to show the portion of the building supplied through it.

Meters and tips.—21. All gas meters used for supply of gas to public buildings or public places in The City of New York may be tested by the Engineer whenever the Commissioner may so order, and the Contractor shall replace same during test, if necessary, free of charge. If meter be found defective, same shall also be repaired or replaced by the Contractor without further charge to The City.

Tips for open flame gas burners used in public buildings shall be supplied by the Contractor furnishing illuminating material, and such tips and other burning appliances shall be approved of by the Engineer before being installed and the Contractor shall not furnish such tips or burning appliances to lamps in any public building without first obtaining such approval.

The Engineer may test or have tested such tips or burning appli-

ances whenever he deems it advisable in order to determine their consumption of illuminant. These tips shall not consume more than six cubic feet of gas per hour, unless otherwise especially ordered; and in case they shall consume over this amount, new ones may be
ordered put in their place by the Contractor without further
9723 expense to The City during the term of this contract.

Meter readings.—22. In order that bills, when rendered to The City by the Contractor, shall agree so far as it is possible, with the meter readings as obtained by the City Inspectors, it will be required that on proper notification from The City, the Inspectors of the company will read the various meters on the same day as they are read by The City's Inspectors.

Extension of system.—23. If the requirements of The City, under this contract, include any lamps with which the pipes or conductors of the Contractor were not connected at the time of the making, such estimate or bid, thirty days from the date of the execution of this agreement, and such further time, not exceeding thirty days, as may be deemed reasonable by the Commissioner, will be allowed the Contractor in which to supply and connect service pipes, bends, reducers and stand-pipes, as specified above, to such lamps and all such connections, material and labor shall be furnished by the Contractor without other expense to The City; provided that the Contractor has or shall procure a consent, grant or franchise from the proper municipal or other authority, authorizing the laying of gas-mains or conductors in the streets or parts of streets and public places in which the said lamps are located; and that no openings shall be made in the pavements for the purpose of such connections prior to the first day of March, 1905, nor until permits shall have been obtained from the Commissioner, authorizing such openings.

Payments postponed.—24. No payment on account of any such
lamps will be made to the contractor for the time so allowed,
9724 nor until the same shall have been connected with the mains
or conductors of the Contractor, nor will payment be made on account of supply of gas or other illuminating material at any lamp except for the time during which all the requirements herein mentioned shall have been fully performed in accordance with the specifications.

Patent rights.—25. The Contractor shall indemnify and save The City harmless from any and all claims and suits for damages by reason of any infringement of patent rights in the use under this contract of any illuminating material or any burning appliances connected therewith, or for repairs or supplies to lamps or lamp-posts.

Time or period of lighting.—26. The Contractor shall have the right to lay, subject to the provisions of the laws now in force, pipes or conductors at any time between March 1 and December 31 during the term of this contract, upon giving forty-eight hours' written notice to the Department, and subject to the approval of the Commissioner, of its intention to break up or open any street, avenue, or public place, or part thereof, or to remove any part of the pavement thereof, for the purpose of laying, subject to the provisions of statute, or repairing the pipes or conductors, to conduct the said gas or other illuminating material. And the Contractor shall, whenever it shall break up or open any street, avenue, or public place, replace the earth which may be removed in so doing, before sunset of the day on which such opening shall be made (the earth to be thoroughly tamped as the same is thrown into the trench or excavation), and replace the pavement, and repave and repair the same, in such reasonable time and manner as the Borough President may direct, and in as 9725 good and firm a manner as such street, avenue, or public place, or part thereof, was in before being broken up for the purpose aforesaid, and shall, from time to time, as required by the Borough President, readjust and fill and finish the same as long as, in the opinion of the Borough President, may be necessary on account of the settling of the earth or pavement caused by the opening. Also, all such repairs as shall at any time become necessary to said pavement by reason of laying the said pipes or conductors, shall be made and done by the Contractor, at his own cost and expense. And the Contractor shall furnish to the Commissioner a report weekly, stating therein the location of each and every opening made in the pavements during the preceding week. And no street, avenue, or public place, or part thereof, shall or will be broken up or opened, or the pavement thereof removed, or be again filled up or repaired, except under the direction and supervision of a competent person, to be appointed by the Commissioner; but the party of the first part shall not be called upon to pay any sum, to any party or parties, for the inspection of any pavement which may have been removed and repaved by the Contractor, but the expense of such inspection shall be paid by the Contractor when required by the Commissioner. The Contractor shall and will so conduct the manufacture and manufactories of gas, or stations for other illuminating material, as not to create a nuisance, and it will in all things be governed by such reasonable rules and regulations as the Borough President may from time to time establish or direct, relative to the opening of such streets, avenues, or public places, or parties thereof, and laying down 9726 the pipes and conductors, and for lighting, cleaning and protecting the lamps and street signs aforesaid.

Map of lighting district.—27. In order that the Commissioner and his assistants may determine whether the gas lamps are lighted and extinguished in accordance with the timetable hereinbefore mentioned, the Contractor shall furnish to the Commissioner a map or maps showing the lamps in the district of each lamplighter, and designating the particular lamp at which each lighter commences to light, and also the lamp at which he completes the lighting; and in extinguishing the lamps the lamplighter shall begin and finish at the same lamps as are designated for beginning and finishing the lighting; and the Contractor shall notify the Commissioner of any change which may be made in the beginning and finishing points on any lamp district during the term of this contract. The Contractor shall furnish to the Commissioner a report daily, stating therein the number and location of all new lamps fitted up and lighted, of lamp-posts removed and reset, and of lamps discontinued during the preceding week. Nothing herein contained shall be construed or deemed as granting to the Contractor any sole or exclusive right or privilege, or as preventing the party of the first part from granting the like privileges as are hereby given to the Contractor, to any other company, persons or parties whatsoever, or as preventing any person or persons, residing in or adjacent, or near to any of the said streets, avenues, or public places, or parts thereof, from erecting, in or upon his or their own premises, any building or apparatus, to light with gas or other illuminant his or their own house, store, manufactory or premises.

(Here follows time table, marked p. 9727.)

TIME TABLE

For Lighting and Extinguishing the Public Gas and Naphtha Lamps for the Year 1905.

Begin to Light at Time Given Below and Complete Lighting in One Hour.		Begin to Extinguish at Time Given Below and Finish in Fifty (50) Minutes.

Department of Water Supply, Gas and Electricity,
New York, March 4, 1905.

The above table will show the time for lighting and extinguishing the public lamps during the year 1905. See specifications, paragraph 1.

JOHN T. OAKLEY,
Commissioner of Water Supply, Gas and Electricity.

March 16 to December 31, 1905, inclusive, 2,966 hours and 5 minutes.

9727

9728

CITY'S EXHIBIT 64.

Before the State Board of Tax Commissioners.

In the Matter of the Assessment for Taxation of the Special Franchises of the Consolidated Gas Company of New York.

Assessment of 1905.

Complaint.

The Consolidated Gas Company of New York complains of the assessment and valuation for taxation of its special franchises, such assessment and valuation of said franchises as fixed and determined by the State Board of Tax Commissioners being $30,500,000.

Your complainant alleges that the said assessment is erroneous, unequal and illegal in the following respects:

First. Said assessment largely exceeds the value of complainant's special franchises. The value of complainant's special franchises in the City of New York does not exceed the sum of $4,261,156.00. The extent of the said over-valuation is, therefore, $26,238,844.00. The rights, permissions and franchises of the complainant to occupy the streets in the City of New York exist under certain laws specified in the complainant's report to the State Board for the year ending June 30, 1899, and complainant has acquired no new or different rights, permissions or franchises since the filing of said report. The assessments of complainant's special franchises in previous years were: $13,950,000 in 1900; $13,990,000 in 1901; $16,275,-
9729 000 in 1902; $17,985,000 in 1903, and $21,900,000 in 1904;
although there has been no variation in the value of complainant's special franchises during said years, and the same are not more valuable at the present time than they were in the year 1900.

Second. There is no method or evidence by which the value of the intangible right to lay and maintain mains and pipes in the streets can be determined. There exists no market or demand for such rights, permission and franchises. The price at which complainant's franchises or rights would sell, under ordinary circumstances, is merely nominal. The municipal authorities of the City of New York have never fixed any amount as the consideration for granting such a franchise, and the right to lay mains and pipes in the streets has always been procurable from said municipal authorities without the payment of any monetary consideration therefor. The number of such franchises which may exist at any one time has never been limited by said municipal authorities. The value of the said right to occupy the streets does not exceed the cost of procuring such a right from the City, and that cost is nominal.

Third. Three other gas companies operate and maintain systems of mains and pipes in the streets of the Borough of Manhattan, in the City of New York, namely, the Standard Gas Light Company of the City of New York, the New Amsterdam Gas Company, and the New York Mutual Gas Company. Each of these companies possesses a franchise or right to lay and maintain pipes and mains in all the streets of the said Borough of Manhattan. The franchise of each of the said companies is coextensive with that of the franchise of the complainant. The assessment of the State Board of Tax Commissioners upon the special franchises of each of the said companies in Manhattan Borough, for the year 1905, is as follows:

9730 Standard Gas Light Company	$4,840,000
New Amsterdam Gas Company	6,590,000
New York Mutual Gas Company	4,058,000

Fourth. Complainant's special franchise is, therefore, assessed approximately $25,000,000 higher than any identical franchise of any other gas company in the Borough of Manhattan, of said City of New York.

Fifth. The actual number of cubic feet of space occupied by the mains and pipes of this complainant, in the streets, avenues and public places of the City of New York, is 3,051,210. The assessment of $30,500,000 upon the special franchises of this complainant, including complainant's tangible property in the streets, is, therefore, an assessment of $9.668 for each cubic foot of space occupied. If the value of the tangible property in the streets ($4,261,156) is deducted from the amount of the assessment, the assessment alone is $8.599 for each cubic foot of space occupied by the mains and pipes of the complainant in the streets of said City. The tax based upon this assessment, at the rate of taxation in the Borough of Manhattan in the year 1904, would amount to fourteen and one-half cents (14½ cts.) for each cubic foot of space occupied.

Sixth. On information and belief, on October 9, 1902, the City of New York granted to the Pennsylvania, New York and Long Island Railroad Company a franchise to construct tunnels for the operation of railways under 31st, 32d and 33d Streets, in the Borough of Manhattan, from the North River to the East River. The compensation fixed by the municipal authorities for the right, franchise and license of said railroad company under, on or above the said streets is fifty cents (50 cts.) for each lineal foot of single track constructed by said company in, under, on or above 9731 the said streets, excluding 31st and 33d Streets between Seventh and Ninth Avenues. The compensation fixed as aforesaid for the right, franchise and license in, under, on or above 31st and 33d Streets, between Seventh and Ninth Avenues, is $14,000 per annum. At the said rates of compensation the annual payment to the City of New York will be, as computed upon the plans and specifications for the said tunnels, at the rate of $.00129 per cubic foot of actual space used under the streets for a double track tunnel.

Seventh. The tax based and levied upon the present assessment of the special franchises of this complainant will, therefore, be more than one hundred (100) times as great as the annual compensation fixed by the City of New York itself for the valuable tunnel privileges and franchises under streets of the Borough of Manhattan of the said City, although the franchises and rights of the complainant to lay and maintain gas pipes and mains under the streets and avenues of said City are of very much less value than the said tunnel franchises and rights possessed by the said Pennsylvania, New York and Long Island Railroad aforesaid.

Eighth. The mains and pipes of complainant underlie 3,910,571 square feet of the surface of the streets, avenues and public places of the Borough of Manhattan of said City. The assessment of $30,500,000 upon the special franchises of this complainant, including its tangible property in the streets, is, therefore, an assessment of $7.79 for each square foot of street surface which the mains and pipes of complainant underlie. If the value of the complainant's tangible property in the streets is deducted from the amount 9732 of the present assessment, the assessment upon the intangible element of complainant's special franchises alone is $6.70 for each square foot of street surface which the mains and pipes of the complainant underlie. The complainant possesses no rights, privileges or franchises upon the surface of the streets of the said City, and this assessment for subsurface rights is grossly excessive.

Ninth. Upon information and belief: All of the street railway companies in Manhattan Borough, having underground trolley systems, have rights for the use of the streets similar to those of complainant, and far more valuable, and yet these street railway special franchises have been valued this year, and for several years last past, at proportionately far less than the special franchises of this complainant. On information and belief, that the assessment of the special franchises of the street railway companies in Manhattan Borough does not exceed $9.00 for each cubic foot of space in the streets occupied by the tracks, conduits and other appurtenances of said companies, as compared with the assessment of $9.66 per cubic foot of space occupied by the mains and pipes of complainant. The special franchises of the street railway companies include the right to use and occupy the surface of the streets, which is a right much more valuable than the exclusively subsurface rights of complainant The street railway companies also possess the right to occupy the middle and most desirable and most valuable portions of the streets, while the complainant is compelled by the municipal authorities to lay its pipes near the curb line and in the least desirable portion of the street.

Tenth. All telegraph, telephone and electric companies, 9733 and all companies in Manhattan Borough having rights for the use of the streets similar to those of the complainant, and far more valuable, have been valued by the State Board for this, and for several years last past, at proportionately far less than said valuation of the complainant's said franchises.

Eleventh. The net earnings of complainant from operation, as shown by its report for the year ending June 30, 1904, were $5,039,669.49, being an increase over the earnings of previous year of $111,270—or an increase of 2.25 per cent. The special franchise assessment for 1905, $30,500,000, is an increase over that of 1904, $21,900,000, of $8,600,000, or an increase of 39.27 per cent. The rate of increase in the assessment is, therefore, 17.45 times as great as the rate of increase in earnings. The tax upon the increase of the special franchise assessment, at the prevailing rate of taxation in New York City, will be $137,600, which is greater than the increase in the net earnings of complainant, $111,270; in other words, the increased tax upon the special franchise, based upon the present assessment, will exhaust the increased net earnings. The large increase in the present assessment, therefor, effects a confiscation of the entire amount of the increased earnings of the complainant, and notwithstanding the greater volume of business transacted and the greater profit realized therefrom during the last year, the profits of the complainant, after the payment of taxes, will be less than during the previous year.

Twelfth. Complainant further alleges that said assessment is unequal in that it has been made at a higher proportionate valuation than the assessment of other land, real estate and real property in the City of New York, and especially in the Borough of 9734 Manhattan, in said City, and of other land, real estate and real property in the State of New York outside of said City, and your complainant specifies all the land, real estate and real property in the City of New York and each and every parcel thereof upon the assessment rolls of said City as instances in which such inequality exists, and of the extent thereof; that the said assessment is 25 per cent. higher than the assessment of all other land, real estate and real property in the City of New York on the same roll, made by the Department of Taxes and Assessments of said City. Complainant further shows said assessment and valuation is unequal in that it is far greater than the assessments placed on similar real property in said New York City by said State Board, and complainant cites as instances of said inequality each and every assessment upon special franchises in said New York City, as fixed by said State Board.

Thirteenth. Complainant further alleges that said assessment is illegal and erroneous, not only by reason of the overvaluations and inequalities hereinbefore stated, but also for the reason that Chapter 712 of the Laws of 1899, as amended, under which this Board assumed to and did make such assessment and valuation is unconstitutional and void and confers no power or authority upon this Board to make said assessment or valuation.

Fourteenth. Complainant further alleges that such assessment is illegal and erroneous in that Chapter 712 of the Laws of 1899, under which Act said State Board assumed to and did make this assessment and valuation is unconstitutional and void, in that it violates Article 10, Section 2, of the Constitution of the State of New York; that it attempts to confer jurisdiction, powers and functions 9735 upon the State Board of Tax Commissioners which under the Constitution can only be exercised by local assessors selected by the locality in which the tax is sought to be collected.

Fifteenth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has included therein, not only the value of all franchises, rights, authority and permission to construct, maintain and operate in, under, above, upon or through the streets, highways and public places of the City of New York, the mains, pipes, etc., of the complainant, with their appurtenances for conducting gas, but has also included therein the franchises of said company to make and sell gas. These franchises are all valuable ones, but under Chapter 712 of the Laws of 1899 cannot be included in the assessment and valuation of special franchises.

Sixteenth. Complainant further alleges that said assessment is illegal in that the same is in violation of those provisions of the Constitution of the State of New York and the Constitution of the United States which prohibit the taking of property without the due process of law, for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, which said State Board claims confers upon it the right, power and authority to act in the premises, and to fix and determine the valuation of said rights, permissions and franchises, did not or do not prescribe any definite rule, method or principle of valuation of such rights, permissions and franchises, and is so vague and indefinite that it cannot be administered by the taxing officer or enforced by the courts, and said State Board in fixing and determining the valuation of such rights, permissions and franchises, did not follow or 9736 apply any rule, method or principle of valuation, but fixed said assessment arbitrarily and without evidence of the value of said rights, permissions and franchises.

Seventeenth. Complainant further alleges that said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, is in conflict with and in violation of those provisions of the Constitution of the United States, which provide that no State shall deny to any person within its jurisdiction the equal protection of the laws.

Eighteenth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that this Board has omitted to assess and value separately the tangible and intangible property constituting said special franchises.

Nineteenth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has failed therein to separately fix and determine the valuation of each special franchise of the complainant or to state which special franchise or special franchises of the complainant are included in its assessment.

Twentieth. Complainant further alleges that by reason of said unequal, erroneous and illegal assessment and valuation, it will sustain injury and damage.

CONSOLIDATED GAS COMPANY,
By R. A. CARTER, *Secretary.*

9737 STATE OF NEW YORK,
County of New York, ss:

Robert A. Carter, being duly sworn, deposes and says, that he is Secretary of the Consolidated Gas Company of New York, the complainant above named; that he has read the foregoing complaint, and knows the contents thereof, and that the same is true of his own knowledge, except as to the matters therein stated upon information and belief, and as to those matters he believes it to be true.

Deponent has been continuously engaged in the gas business since the year 1877, having been employed by the Consolidated Gas Company and one of its predecessor corporations in various capacities from that of junior clerk to that of general accountant; and deponent has also been for several years connected with the Consolidated Gas Company in an official capacity, having served that company as comptroller and as secretary. Deponent is thoroughly familiar with the gas business in the City of New York, and especially in the Borough of Manhattan, in said City. Deponent knows the extent and nature of the special franchises possessed by the Consolidated Gas Company, and by all the other gas companies operating and doing business in the Borough of Manhattan, and is familiar with the business and operations of all said companies. Deponent has made a careful and thorough study of all details of the gas business, and is familiar with the intrinsic and relative values of the special franchises possessed by the different gas companies in the Borough of Manhattan, in said City.

R. A. CARTER.

Sworn to before me this 20th day of March, 1905.

FREDERICK N. GILBERT,
Notary Public, Kings County.

Certificate filed in New York County.

9738

CITY'S EXHIBIT 65.

BEFORE THE STATE BOARD OF TAX COMMISSIONERS.

In the Matter of the Assessment for Taxation of the Special Franchises of the CONSOLIDATED GAS COMPANY OF NEW YORK.

Assessment of 1906.

Complaint.

The CONSOLIDATED GAS COMPANY OF NEW YORK complains of the assessment and valuation for taxation of its special franchises, such assessment and valuation of said franchises, as fixed and determined by the State Board of Tax Commissioners being $31,900,000.

Your complainant alleges that the said assessment is erroneous, unequal and illegal in the following respects:

First. Said assessment largely exceeds the value of complainant's special franchises. The true value of complainant's special franchises in the City of New York and the amount for which the same would sell under ordinary circumstances does not exceed the sum of $14,000,000. The extent of the said overvaluation is $17,900,000. The rights, permissions and franchises of the complainant to occupy the streets in the City of New York exist under certain laws specified in the complainant's report to the State Board for the year ending June 30, 1899, and complainant has acquired no new or
9739 different rights, permissions or franchises since the filing of
said report. The assessments of complainant's special franchises in previous years were: $13,950,000 in 1900; $13,990,000 in 1901; $16,275,000 in 1902; $17,985,000 in 1903; $21,900,000 in 1904, and $27,300,000 in 1905; although there has been no variation in the value of complainant's special franchises during said years, except in the slight increase from year to year of the amount of tangible property in the streets, and the intangible rights are not more valuable at the present time than they were in the year 1900.

Second. Three other gas companies operate and maintain systems of mains and pipes in the streets of the Borough of Manhattan, in the City of New York, namely, the Standard Gas Light Company in the City of New York, the New Amsterdam Gas Company, and New York Mutual Gas Company. Each of these companies possess a franchise or right to lay and maintain pipes and mains in all the streets of the said Borough of Manhattan. The franchise of each of the said companies is coextensive with that of the franchise of the complainant. The assessment of the State Board of Tax Commissioners upon the special franchises of each of said companies in Manhattan Borough, for the year 1906, is as follows:

Standard Gas Light Company....................	$4,793,000
New Amsterdam Gas Company....................	6,175,000
New York Mutual Gas Company..................	4,075,000

Third. Complainant's special franchise is, therefore, assessed approximately $26,000,000 higher than any identical franchise of any other gas company in the Borough of Manhattan, of said City of New York.

Fourth. The actual number of cubic feet of space occupied
9740 by the mains and pipes of this complainant, in the streets,
avenues and public places of the City of New York, is 3,086,870. The assessment of $31,900,000 upon the special franchises of this complainant, including complainant's tangible property in the streets, is, therefore, an assessment of $10.33 for each cubic foot of space occupied. The tax based upon this assessment, at the rate of taxation in the Borough of Manhattan, in the year 1905, would amount to fifteen and two-fifths cents (15 2-5 cts.) for each cubic foot of space occupied.

Fifth. On information and belief, on October 9, 1902, the City of New York granted to the Pennsylvania, New York and Long Island Railroad Company a franchise to construct tunnels for the operation of railways under 31st, 32d and 33d Streets, in the Borough of Manhattan, from the North River to the East River. The compensation fixed by the municipal authorities for the rights, franchises and license of said railroad company under, on or above the said streets is fifty cents (50 cents) for each lineal foot of single track constructed by said company in, under, on or above the said streets, excluding 31st and 33d Streets between Seventh and Ninth Avenues. The compensation fixed as aforesaid for the right, franchise and license in, under, on or above 31st and 33d Streets, between Seventh and Ninth Avenues, is $14,000 per annum. At the said rates of compensation the annual payment to the City of New York will be, as computed upon the plans and specifications for the said tunnels, at the rate of $.00129 per cubic foot of actual space used under the streets for a double track tunnel.

Sixth. The tax based and levied upon the present assessment of the special franchises of this complainant will, therefore, be 9741 about one hundred and twenty (120) times as great as the annual compensation fixed by the City of New York itself for the valuable tunnel privileges and franchises under streets of the Borough of Manhattan of the said City, although the franchises and rights of the complainant to lay and maintain gas pipes and mains under the streets and avenues of said City are of very much less value than the said tunnel franchises and rights possessed by the said Pennsylvania, New York and Long Island Railroad aforesaid.

Seventh. The mains and pipes of complainant underlie 3,975,636 square feet of the surface of the streets, avenues and public places of the Borough of Manhattan, of said City. The assessment of $31,900,000 upon the special franchises of this complainant, including its tangible property in the streets, is, therefore, an assessment of over $8 for each square foot of street surface which the mains and pipes of complainant underlie. The complainant possesses no rights, privileges or franchises upon the surface of the streets of the said City, and this assessment for exclusively subsurface rights is grossly excessive.

Eighth. Upon information and belief: All of the street railway companies in Manhattan Borough, having underground trolley systems, have rights for the use of the streets similar to those of complainant, and far more valuable, and yet these street railway special franchises have been valued this year, and for several years last past, at proportionately far less than the special franchises of this complainant. On information and belief, that the assessment of the special franchises of all street railway companies in Manhattan Borough does not exceed $6.00 for each cubic foot of space in the streets 9742 occupied by the tracks, conduits and other appurtenances of said companies, as compared with the assessment of $10.33 per cubic foot of space occupied by the mains and pipes of complainant. The special franchises of the street railway companies include the right to use and occupy the surface of the streets, which is a right much more valuable than the exclusively subsurface rights of complainant. The street railway companies also possess the right to occupy the middle and most desirable and most valuable portions of the streets, while the complainant is compelled by the municipal authorities to lay its pipes near the curb line and in the least desirable portion of the street.

Ninth. All telegraph, telephone and electric companies, and all companies in Manhattan Borough having rights for the use of the street similar to those of the complainant, and far more valuable, have been valued by the State Board for this, and for several years last past, at proportionately far less than said valuation of the complainant's said franchises.

Tenth. The net earnings of complainant from operation, as shown by its report for the year ending June 30, 1905, were $4,953,051.21, being less than the net earnings from operation of the previous year by the amount of $86,618.28. The special franchise assessment for 1906 ($31,900,000) is an increase over that of 1905 ($27,300,000) of $4,600,000, or an increase of nearly 17%, notwithstanding the decrease in the net earnings from operations.

Eleventh. Complainant further alleges that said assessment is unequal in that it has been made at a higher proportionate valuation than the assessment of other land, real estate and real property in the City of New York and complainant specifies the assessment of all the land, real estate and real property in the City of New York, especially in the Borough of Manhattan, and of each and every parcel thereof upon the assessment rolls of said City as instances in which such inequality exists, and of the extent thereof. That the said State Board in making the aforesaid assessment of complainant's special franchises, has fixed and determined as the value thereof a sum in excess of the full and true value of said special franchises. Upon information and belief that in the City of New York other real property is not assessed at its full value; but the assessment of all other land, real estate and real property in said City by the Department of Taxes and Assessments for the year 1906, is made at a valuation equal to about seventy-five per centum of the full and true value of the land, real estate and real property so assessed. That the said assessment of complainant's special franchises is therefore to the extent of at least twenty-five per centum thereof unequal, disproportionate and erroneous. Complainant further shows said assessment and valuation is unequal in that it is made at a higher proportionate valuation than the assessments placed on similar real property in said New York City by said State Board, and complainant cites as instances of said inequality each and every assessment upon special franchises in said New York City, as fixed by said State Board.

9743

Twelfth. Complainant further alleges that said assessment is illegal and void in that the same is in conflict with and violates those provisions of the Constitution of the United States and of the Constitution of the State of New York which prohibit the taking of property without due process of law, for the reason that the said State Board in fixing the amount of the aforesaid assessment upon which taxes will be levied and collected from complainant upon its special franchises did not follow or apply any rule, method or principle of valuation and did not determine and ascertain the value of said special franchises, but fixed the aforesaid

9744

amount arbitrarily as the basis upon which said special franchises should be taxed without reference to their value, and that the said assessment is the result of mere guesswork and conjecture on the part of said State Board of Tax Commissioners.

Thirteenth. Complainant further alleges that said assessment is illegal and void in that said State Board has not only included in said assessment the value of all franchises, rights, auhoritty, and permission to construct, maintain or operate mains, and pipes in, under, above, upon or through the streets, highways and public places of the City of New York, and the value of the mains and pipes of complainant with their appurtenances for conducting gas; but has also included therein the value of the franchise of complainant to make and sell gas, the value of the good will of the business of complainant and the value of complainant's contracts with its patrons, over none of which the said State Board has jurisdiction.

Fourteenth. Complainant further alleges that said assessment is illegal in that Chapter 712 of the Laws of 1899, as amended, under which the said State Board assumed to and did make said assessment and valuation, is unconstitutional and void in that it violates Article 10, Section 2 of the Constitution of the State of New York, that it attempts to confer jurisdiction, powers and functions upon the State Board of Tax Commissioners which under the Constitution of the State of New York can be exercised only by local assessors
9745 selected by the locality in which the tax is sought to be collected.

Complainant further shows that by reason of the aforesaid overvaluation, inequality and illegality in the aforesaid assessment it is aggrieved and will be injured.

CONSOLIDATED GAS COMPANY,
By R. A. CARTER, *Secretary.*

STATE OF NEW YORK, *County of New York, ss:*

Robert A. Carter, being duly sworn, deposes and says, that he is Secretary of the Consolidated Gas Company of New York, the complainant above named; that he has read the foregoing complaint, and knows the contents thereof, and that the same is true of his own knowledge, except as to the matters therein stated upon information and belief, and as to those matters he believes it to be true.

Deponent has been continuously engaged in the gas business since the year 1877, having been employed by the Consolidated Gas Company and one of its predecessor corporations in various capacities from that of junior clerk to that of general accountant; and deponent has also been for several years connected with the Consolidated Gas Company in an official capacity, having served that company as comptroller and as secretary. Deponent is thoroughly familiar with the gas business in the City of New York, and especially in the Borough of Manhattan, in said City. Deponent knows the extent and nature of the special franchises possessed by
9746 the Consolidated Gas Company, and by all the other gas companies operating and doing business in the Borough of Manhattan, and is familiar with the business and operations of all

said companies. Deponent has made a careful and thorough study of all details of the gas business, and is familiar with the intrinsic and relative values of the special franchises possessed by the different gas companies in the Borough of Manhattan, in said City.

R. A. CARTER.

Sworn to before me, this 26th day of March, 1906.

HENRY W. CLARK,
Notary Public, New York County.

9747

CITY'S EXHIBIT 66.

In the Supreme Court of the State of New York.

THE PEOPLE OF THE STATE OF NEW YORK *ex Rel.* CONSOLIDATED GAS COMPANY OF NEW YORK
against
STATE BOARD OF TAX COMMISSIONERS.

To the Supreme Court of the State of New York:

The petition of the Consolidated Gas Company of New York respectfully shows to the Court:

That the petitioner is a corporation, duly incorporated and existing under the laws of the State of New York, having been formed and organized in 1884 by the consolidation of the following named companies or corporations under Chapter 367 of the Laws of 1884: New York Gas Light Company, Manhattan Gas Light Company, Metropolitan Gas Light Company, Municipal Gas Light Company, Knickerbocker Gas Light Company and Harlem Gas Light Company, and located and doing business as such, and having its principal place of business in the Borough of Manhattan, in the City of New York.

9748 That on October 1, 1899, it was and still is the owner of certain mains and pipes laid or placed in certain streets, highways, or public places of the City of New York together with franchises, rights, permissions and consents to construct, maintain or operate in the streets, highways and public places of the City of New York mains and pipes for conducting gas; each of said franchises, rights, permissions and consents with the said tangible property in connection therewith being denominated in the Tax Law of this State as a Special Franchise.

That since January 1, 1902, George E. Priest, J. Edgar Leaycraft and Lester F. Stearns have constituted, and still constitute, the State Board of Tax Commissioners.

Your petitioner further shows that the rights, permissions and franchises so owned and possessed by your petitioner were granted to and acquired by your petitioner or its grantors under and pursuant to contracts with the State and City of New York, and upon conditions and stipulations in reference thereto, which exempt the said rights, permissions and franchises from taxation upon assessments made by said State Board or by any other Board or Officers under the statute hereinafter mentioned, namely, Chapter 712 of the Laws of 1899 and all the amendments thereto.

Your petitioner further shows that, pursuant to Section 43 of the Tax Law of the State, and within thirty days after the said section took effect, it made a written report to said State Board of Tax Commissioners as to each of said Special Franchises owned by it as aforesaid, and as to all matters required by said section to be reported to said State Board, and has, in the manner required by law, made all reports and supplemental reports required by law or by said State Board to be made to it.

9749 Your petitioner further shows that it also reported to said State Board all statutes of the State, general or special, all resolutions of the Common Council of the City of New York relating to said several Special Franchises, and all provisions of law which by said statutes and resolutions made conditions to the acceptance of said Special Franchises and were agreed to by your petitioner and have always been fully performed.

Your petitioner further shows that in said reports and supplemental reports made as aforesaid your petitioner duly reported to said State Board that the tangible property included in Special Franchises consisted of pipes and mains laid under said streets, highways and public places and the value thereof, based upon the cost of reproducing the same, as required by said State Board.

Your petitioner further shows that said State Board, claiming to act pursuant to the Tax Law of this State, and claiming and alleging that the said Special Franchises owned by your petitioner as aforesaid were subject to assessment in the City of New York, proceeded to fix and determine the valuation thereof, and, as your petitioner is informed and believes, did, on or about the 28th day of January, 1903, fix and determine the valuation of said Special Franchises to be the sum of eighteen million three hundred and eighty-five thousand dollars ($18,385,000), and did thereupon make the assessment of said Special Franchises at the sum aforesaid.

Your petitioner further shows that immediately after making said assessment, said State Board gave to your petitioner a notice in writing, stating in substance that such assessment had been made and that the total valuation of said Special Franchises was eighteen million three hundred and eight'-five thousand dollars
9750 ($18,385,000), and that the said State Board would meet
at its office in the City of Albany on the 18th day of February, 1903, at 11.30 A. M., to hear and determine any complaint concerning such assessment. That pursuant to such notice, and at the time and place therein stated, your petitioner attended before said State Board. That your petitioner, upon said hearing, requested to be informed by said State Board as to the amount which said State Board had determined to be the valuation of the tangible property of your petitioner, constructed in, upon, under or above the streets, included in the assessment of said Special Franchises, and as to the amount fixed and determined by said State Board to be the valuation of the rights, permissions and franchises to

construct, maintain and use such pipes under said streets, highways and public places, as aforesaid, but that said State Board refused to give your petitioner such information, and also refused to state, or to inform your petitioner as to the rule or method adopted and applied in ascertaining and determining the said valuation. That your petitioner thereupon complained of said assessment and filed with said State Board a written statement under oath, specifying the grounds of its complaint, a copy of which statement is hereto annexed marked "A," and is a part of this petition.

Your petitioner further shows that thereafter and on or about the 3d day of March, 1903, the said State Board, still claiming to act pursuant to the Tax Law of the State, and still claiming that the said pipes of your petitioner and the rights, permissions and franchises to construct, maintain and use the same were subject to assessment in the City of New York, finally determined the valu-
9751 ation of said Special Franchises to be the sum of seventeen million nine hundred and eighty-five thousand dollars ($17,985,000), and on or about March 3d, 1903, filed with the Department of Taxes and Assessments in the City of New York, a written statement of such valuation as finally fixed and determined by said State Board and duly verified by the Secretary thereof, and at or about the same time gave notice in writing to your petitioner that such written statement had been filed with the Clerk of the City of New York.

Your petitioner further shows that by the provisions of the Greater New York Charter, the Commissioners of Taxes and Assessments of the City of New York constitute the Board of Taxes and Assessments for said City and also are the Department of Taxes and Assessments in the City of New York, and were required by law beginning with the first day of April in each year to prepare assessment rolls for the several parts of said City, containing valuations of real and personal property and to certify and deliver said assessment rolls to the Municipal Assembly of said City on the first Monday of July in each year. That said Commissioners of Taxes and Assessments since the first day of April, 1903, prepared the assessment roll of said real and personal property of the several parts of said City for the year 1903 and entered thereon before the final review or certification of such rolls by them, the valuation of said Special Franchises of your petitioner as so fixed by the said State Board as aforesaid, and having annexed thereto their certificate that the said rolls were correct and in accordance with the entries in the several books of record in the said department, duly verified the same and delivered the said assessment rolls to the Municipal Assembly of said
9752 City, as required by law, on the first Monday of July, 1903.

Your petitioner further shows upon information and belief, that the said State Board in making the assessment aforesaid of said Special Franchises, fixed and determined the value thereof at a sum in excess of the full and entire value thereof.

Your petitioner further shows that the Tax Law of the State defines, declares and makes a Special Franchise for the purpose of assessment and taxation, as and to be land, real estate and real property.

Your petitioner further shows that in the City of New York no land, real estate or real property is assessed at its full value, but that all land, real estate and real property in said City, as elsewhere in the State, is assessed at a valuation equal to about seventy-five per cent. of its full value. That it is the official duty of the said State Board to investigate and examine the methods of assessment through the State and to furnish to local assessors information to aid them in making assessment of real and personal property, and said State Board and each of its members well knew in making the assessment of said Special Franchises as aforesaid, that land, real estate and real property within the State, and especially within the City of New York, was assessed at less than its full value, and notwithstanding such knowledge, and well knowing that to assess the said Special Franchises of your petitioner at their full value would be to assess them at a higher proportionate valuation than other land, real estate and real property in said City, they made the assessment aforesaid.

Your petitioner further shows that, claiming to be aggrieved by said assessment and alleging that it will be injured thereby, it specifies:

9753 *First.* That said assessment is illegal in that the same is in violation of those provisions of the Constitution of the United States which prohibit the taking of property without the due process of law, for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, which said State Board claims confers upon it the right, power and authority to act in the premises, and to fix and determine the valuation of said rights, permissions and franchises, did not or do not prescribe any definite rule, method or principle of valuation of such rights, permissions and franchises, and is so vague and indefinite that it cannot be administered by the taxing officers or enforced by the courts, and said State Board in fixing and determining the valuation of such rights, permissions and franchises did not follow or apply any rule, method or principle of valuation, and by such reason thereof complainant has not been given such a hearing before said State Board as it is entitled to under the Constitution of the United States, and is void.

Second. That said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, is in conflict with and in violation of those provisions of the Constitution of the United States, which provide that no State shall deny to any person within its jurisdiction the equal protection of the laws, and is void.

Third. That said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, impairs the obligations
9754 of the contracts by which said Special Franchises were acquired and are now held by your petitioner, and is therefore

in conflict with and in violation of those provisions of the Constitution of the United States, which provide that no State shall pass any law impairing the obligations of a contract.

Fourth. That said assessment is further illegal in that said State Board refused to inform your petitioner as to the valuation fixed and determined by it of the tangible property included in said Special Franchises, or as to the rule or method adopted and applied by said State Board in fixing and determining the valuation of the rights, permissions and franchises to construct, maintain and use said pipes under said streets, highways and public places as aforesaid, and that by such refusal your petitioner was deprived of such a hearing as it was entitled to by the Constitutions of the State and of the United States, before a final assessment could be made against it, and is void.

Fifth. That said assessment is erroneous by reason of overvaluation, and the extent of such overvaluation is thirteen million nine hundred and seventy-two thousand seven hundred and forty-three dollars ($13,972,743).

Sixth. That said assessment is unequal in that it has been made at a higher proportionate valuation than the assessment of other land, real estate and real property in the City of New York, and of other land, real estate and real property in the State of New York outside of said City, and your petitioner specifies all the land, real estate and real property in the City of New York and each and every parcel thereof upon the assessment rolls of said City as instances in which
such inequality exists, and of the extent thereof; that the said
9755 assessment is 25 per cent. higher than the assessment of all
other land, real estate and real property in the City of New York on the same roll, made by the same officers, to wit, by the State Board of Tax Commissioners or by the Department of Taxes and Assessments of said City, and your petitioner will be injured thereby. That your petitioner will give testimony of such inequality upon the hearing of this proceeding.

Seventh. That said State Board of Tax Commissioners in making the assessment and valuation of your petitioner's special franchises proceeded upon no legal or equitable basis, rule, theory or principle, but, on the contrary, said assessment and valuation is the result of mere guesswork on the part of said State Board of Tax Commissioners.

Eighth. That said State Board of Tax Commissioners has, in making the assessment of the special franchises of your petitioner, failed to assess and value separately each special franchise of your petitioner and to state which special franchise or special franchises are included in said assessment and valuation, and has failed in said assessment and valuation to separately fix and determine the valuation of each special franchise which your petitioner derived from its other constituent companies named in said report, as it is required to do under Chapter 712 of the Laws of 1899.

Ninth. That said State Board of Tax Commissioners has included in said assessment and valuation not only the value of all franchises, rights and authority or permission to construct, maintain or operate in, under, above, upon or through the streets, highways and public

places of the City of New York, the mains, pipes, etc., of
9756 your petitioner, with their appurtenances, for conducting gas,
but has also included therein the franchise of your petitioner to make and sell gas. This franchise is a valuable one, but under Chapter 712 of the Laws of 1899 cannot be included in the assessment and valuation of special franchises.

Your petitioner further shows that fifteen days have not elapsed since the final completion and filing of the assessment roll in said City of New York. That no previous application has been made for a writ herein.

Wherefore, your petitioner prays that a writ of *certiorari* may be allowed and issue out of this Court, directed to the said State Board of Tax Commissioners, commanding them to certify to this Court:

1. All and singular the proceedings herein referred to and had by the said State Board of Tax Commissioners relating to said valuation and assessment, with the dates thereof respectively, together with that part of the record relating to the same.

2. All and singular the papers submitted to your petitioner and filed with the said State Board of Tax Commissioners.

3. Any other evidence or information, if any, before said State Board of Tax Commissioners or considered by it in arriving at the decision aforesaid, and if there was no such evidence or information, a statement to that effect.

4. A concise statement of such other facts as may be pertinent and material to show the value of the property assessed and the grounds of the valuation made by you.

5. Any and all documents, records and papers, if any such there be, not embraced in the above specifications relating to and
9757 concerning the valuation and assessment aforesaid, and a statement of any other matters material to the determination of the application of said petitioner, to the end that the said determination and proceedings of the said State Board of Tax Commissioners in the premises may be reviewed and corrected as shall be in accordance with the law and facts in this matter, and, further, that your petitioner may have herein such other and further relief as to this Court may seem to be just.

Dated, New York, July 15, 1903.

CONSOLIDATED GAS COMPANY OF
NEW YORK,
(Signed) By R. A. CARTER, *Secretary.*

Boardman, Platt & Soley, Attorneys for Petitioner, 35 Wall Street New York City.

9758 CITY AND COUNTY OF NEW YORK, *ss:*

R. E. Carter, being duly sworn, says: That he is the Secretary of the Consolidated Gas Company of New York, the petitioner above named; that he has read the foregoing petition and knows the contents thereof; that the same is true of his own knowledge, except as to those matters therein stated to be alleged on information and belief, and as to those matters he believes it to be true. That the reason why such petition is not verified by the petitioner is that the petitioner is a corporation. That deponent derives his knowledge of the facts herein set forth from the employees, agents and officers of the said petitioner and from information acquired by him in the performance of his duties.

(Signed) R. A. CARTER.

Sworn to before me this 15th day of July, 1903.

[SEAL.] (Signed) WALLACE YOUNG,
Notary Public, New York County.

9759 "A."

Before the State Board of Tax Commissioners.

In the Matter of the Assessment and Valuation for Taxation of the Special Franchises of the CONSOLIDATED GAS COMPANY OF NEW YORK.

Complaint.

The Consolidated Gas Company of New York complains of the assessment and valuation for taxation of its special franchises, such assessment and valuation of said franchises as so fixed and determined being $18,385,000.

Your complainant alleges that said assessment and valuations are erroneous, unequal and illegal in the following respects:

First. Said assessment and valuation largely exceeds the value of said special franchises.

Second. Said assessment and valuation is erroneous and unequal in that the same has been made at a higher proportionate valuation than the assessment of other real estate on the tax rolls of the City of New York, Borough of Manhattan, for the same year. Real estate in the Borough of Manhattan is largely and almost universally assessed at an amount not in excess of 75 per cent. of its full
9760 value, while the special franchises of your complainant are assessed and valued by this Board at an amount greatly in excess of their actual value.

Third. Said complainant further alleges that said assessment is illegal and erroneous, not only by reason of the overvaluations and inequalities hereinbefore stated, but also for the reason that Chapter 712 of the Laws of 1899, as amended, under which this Board assumed to and did make such assessment and valuation is unconstitutional and void and confers no power or authority upon this Board to make said assessment or valuation.

Fourth. This complainant further alleges that said assessment and valuation is also illegal and erroneous in that this Board has omitted to assess and value separately the tangible and intangible property constituting said special franchises.

Fifth. This complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has failed therein to fix and determine the valuation of each special franchise of the complainant or to state which special franchise or special franchises of the complainant are included in its assessment.

Sixth. This complainant further alleges that said assessment is illegal and erroneous in that said Board has failed therein to separately fix and determine the valuation of the special franchises which the Consolidated Gas Company derived from the Harlem Gas Light Company.

Seventh. This complainant further alleges that said assessment is illegal and erroneous in that said Board has failed to separately fix and determine the valuation of the special franchises which the Consolidated Gas Company derived from the Metropolitan Gas Light Company.

9761 *Eighth.* This complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has included therein, not only the value of all franchises, rights, authority and permission to construct, maintain and operate in, under, above, upon or through the streets, highways, and public places of the City of New York, the mains, pipes, etc., of the complainant, with their appurtenances for conducting gas, but has also included therein the franchises of said company to make and sell gas.

Ninth. This complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has included therein the value of the franchises to make and sell gas which said Consolidated Gas Company derived from the Harlem Gas Light Company, and from the Metropolitan Gas Light Company.

Tenth. This complainant further alleges that, by reason of said unequal, erroneous and illegal assessment and valuation, it will sustain injury and damage.

CONSOLIDATED GAS COMPANY OF
NEW YORK,
By R. A. CARTER, *Secretary.*

9762 CITY AND COUNTY OF NEW YORK:

R. A. Carter, being duly sworn, says that he is the Secretary of the Consolidated Gas Company of New York; that he has read the foregoing complaint, and that the same is true to his own knowledge, except as to the matters therein stated upon information and belief.

That the reason this verification is made by deponent is because the complainant is a domestic corporation of the State of New York, and that deponent is the secretary of said corporation.

R. A. CARTER.

Sworn to before me this 16th day of February, 1903.

[SEAL.]

WALLACE YOUNG,
Notary Public, Nassau County.

Certificate filed in New York County.

9763 CITY'S EXHIBIT 67.

Supreme Court, Albany County.

THE PEOPLE OF THE STATE OF NEW YORK *ex Rel.* CONSOLIDATED GAS COMPANY OF NEW YORK

against

GEORGE E. PRIEST, LESTER F. STEARNS and WILLIAM HALPIN, Composing and Constituting THE STATE BOARD OF TAX COMMISSIONERS OF THE STATE OF NEW YORK.

1904 Assessment.

To the Supreme Court of the State of New York:

The petition of the Consolidated Gas Company of New York respectfully shows to the Court:

That the petitioner is a corporation, duly incorporated and existing under the laws of the State of New York, having been formed and organized in 1884 by the consolidation of the following named corporations under Chapter 367 of the Laws of 1884: The New York Gas Light Company, Manhattan Gas Light Company, Metropolitan Gas Light Company of the City of New York, Municipal Gas Light Company of New York, Knickerbocker Gas Light Company 9764 and Harlem Gas Light Company, and located and doing business as such, and having its principal place of business in the City of New York.

That on October 1, 1899, it was and still is the owner of certain mains and pipes laid or placed in certain streets, highways or public places of the City of New York together with franchises, rights, permissions and consents to construct, maintain or operate in the streets, highways and public places of the City of New York mains and pipes for conducting gas; each of said franchises, rights, permissions and consents with the said tangible property in connection therewith being denominated in the Tax Law of this State as a Special Franchise.

That from January 1, 1902, and until the 18th day of March, 1904, George E. Priest, J. Edgar Leaycraft and Lester F. Stearns constituted the State Board of Tax Commissioners; upon said 18th day of March, 1904, William Halpin was appointed a member of said Board in the place and stead of said J. Edgar Leaycraft, and since said date the said George E. Priest, Lester F. Stearns and William Halpin have constituted and still constitute said State Board of Tax Commissioners.

Your petitioner further shows that the rights, permissions and franchises so owned and possessed by your petitioner were granted to and acquired by your petitioner or its grantors under and pursuant to contracts with the State and City of New York, and upon conditions and stipulations in reference thereto, which exempt the said rights, permissions and franchises from taxation upon assessments made by the said State Board or by any other Board or officers under the statute hereinafter mentioned, namely, Chapter 712 of the Laws of 1899 and all the amendments thereto.

9765 Your petitioner further shows that, pursuant to Section 43 of the Tax Law of the State, and within thirty days after the said section took effect, it made a written report to said State Board of Tax Commissioners as to each of said Special Franchises owned by it as aforesaid, and as to all matters required by said section to be reported to said State Board, and has, in the manner required by law, made all reports and supplemental reports required by law or by said State Board to be made to it.

Your petitioner further shows that it also reported to said State Board all statutes of the State, general or special, all resolutions of the Common Council of the City of New York relating to said several Special Franchises, and all provisions of law which by said statute and resolutions made conditions to the acceptance of said Special Franchises and were agreed to by your petitioner and have always been fully performed.

Your petitioner further shows that in said reports and supplemental reports made as aforesaid your petitioner duly reported to said State Board that the tangible property included in its special franchises consisted of pipes and mains laid under said streets, highways and public places and the value thereof, based upon the cost of reproducing the same, as required by said State Board.

Your petitioner further shows that said State Board, claiming to act pursuant to the Tax Law of this State, and claiming and alleging that the said special franchises owned by your petitioner as aforesaid were subject to assessment in the City of New York, proceeded to fix and determine the valuation thereof, and, as your petitioner is informed and believes, did, on or about the 17th day of February,
9766 1904, fix and determine the valuation of said special franchises to be the sum of twenty-two million two hundred thousand dollars ($22,200,000), and did thereupon make the assessment of said special franchises at the sum aforesaid.

Your petitioner further shows that immediately after making said assessment, said State Board gave to your petitioner a notice in writing, stating, in substance, that such assessment had been made and that the total valuation of said special franchises was twenty-two million two hundred thousand dollars ($22,200,000), and that the said State Board would meet at its office in the City of Albany on the 8th day of March, 1904, at 12 o'clock M., to hear and determine any complaint concerning such assessment. That pursuant to such notice, and at the time and place therein stated, your petitioner attended before said State Board and complained of said assessment and filed with said State Board a written statement under oath, specifying the grounds of its complaint, a copy of which statement is hereto annexed marked "A," and is made a part of this petition.

Your petitioner further shows that thereafter and on or about the 21st day of March, 1904, the said State Board, still claiming to act pursuant to the Tax Law of the State, and still claiming that the said pipes of your petitioner and the rights, permissions and franchises to construct, maintain and use the same were subject to as-

sessment in the City of New York, finally determined the valuation of said special franchise to be the sum of twenty-one million nine hundred thousand dollars ($21,900,000), and on or about March 21st, 1904, filed with the Department of Taxes and Assess-
9767 ments in the City of New York, a written statement of such valuation as finally fixed and determined by said State Board and duly verified by the Secretary thereof, and at or about the same time gave notice in writing to your petitioner that such written statement had been filed with the Clerk of the City of New York.

Your petitioner further shows that by the provisions of the Greater New York Charter, the Commissioners of Taxes and Assessments of the City of New York constitute the Board of Taxes and Assessments for said city and also are the Department of Taxes and Assessments in the City of New York, and were required by law beginning with the first day of April in each year to prepare assessment rolls for the several parts of said city, containing valuations of real and personal property and to certify and deliver said assessment rolls to the Municipal Assembly of said city on the first Monday of July in each year, or if said first Monday of July shall fall on a legal holiday, then to certify and deliver said assessment rolls to said Municipal Assembly on the next succeeding day thereafter. That said Commissioners of Taxes and Assessments since the first day of April, 1904, prepared the assessment rolls of said real and personal property of the several parts of said city for the year 1904, and entered thereon before the final revision or certification of such rolls by them, the valuation of said special franchises of your petitioner as so fixed by the said State Board as aforesaid, and having annexed thereto their certificate that the said rolls were correct and in accordance with the entries in the several books of record in the said departments, duly verified the same and delivered the said assessment rolls to the Municipal Assembly of said city, as required by law, on the next succeeding day after
9768 the first Monday of July, 1904, the first Monday of July, 1904, falling upon a legal holiday.

Your petitioner further shows upon information and belief, that the said State Board in making the assessment aforesaid of said special franchises, fixed and determined the value thereof at a sum in excess of the full and entire value thereof.

Your petitioner further shows that the Tax Law of the State defines, declares and makes a special franchise for the purpose of assessment and taxation, as and to be land, real estate and real property.

Your petitioner further shows that in the City of New York no land, real estate or real property is assessed at its full value, but that all land, real estate and real property in said city, as elsewhere in the State, is assessed at a valuation equal to about seventy-five per cent. of its full value. That it is the official duty of the said State Board to investigate and examine the methods of assessment throughout the State and to furnish to local assessors information to aid them in making assessments of real and personal property, and said State Board and each of its members well knew in making the assessment of said special franchises as aforesaid, that land, real estate and real property within the State, and especially within the City of New York, was assessed at less than its full value, and notwithstanding such knowledge, and well knowing that to assess the said special franchises of your petitioner at their full value would be to assess them at a higher proportionate valuation than other land, real estate and real property in said city, they made the assessment aforesaid.

Your petitioner further shows that, claiming to be aggrieved by said assessment and alleging that it will be injured thereby, it specifies:

9769 *First.* That said assessment is illegal in that the same is in violation of those provisions of the Constitution of the United States and of the Constitution of the State of New York which prohibit the taking of property without due process of law, for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, which said State Board claims confers upon it the right, power and authority to act in the premises, and to fix and determine the valuation of said rights, permissions and franchises, did not and does not prescribe any definite rule, method or principle of valuation of such rights, permissions and franchises, and is so vague and indefinite that it cannot be administered by the taxing officers or enforced by the courts, and said State Board in fixing and determining the valuation of such rights, permissions and franchises did not follow or apply any rule, method or principle of valuation, and by reason thereof, complainant has not been given such a hearing before said State Board as it is entitled to under the Constitution of the United States and under the Constitution of the State of New York, and is void.

Second. That said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, is in conflict with and in violation of those provisions of the Constitution of the United States, which provide that no State shall deny to any person within its jurisdiction the equal protection of the Laws, and is void.

Third. That said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all
9770 amendments thereto, under which said State Board assumed to and did make said assessment and valuation, impairs the obligations of the contracts by which said special franchises were acquired and are now held by your petitioner, and is therefore in conflict with and in violation of those provisions of the Constitution of the United States and the Constitution of the State of New York, which provide that no law shall be passed impairing the obligations of a contract.

Fourth. That said assessment is illegal in that Chapter 712 of the Laws of 1899, as amended under which the said State Board assumed to and did make said assessment and valuation, is unconstitutional and void in that it violates Article 10, Section 2 of the Constitution of the State of New York; that it attempts to confer jurisdiction, powers and functions upon the State Board of Tax Commissioners which under the Constitution of the State of New York can be exercised only by local assessors selected by the locality in which the tax is sought to be collected.

Fifth. That said assessment is further illegal and erroneous in that said State Board has omitted and failed to assess and value separately the tangible and intangible property constituting said Special Franchises.

Sixth. That said assessment is erroneous by reason of over-valuation, and the extent of such over-valuation is seventeen million eight hundred twenty-nine thousand one hundred and sixty dollars ($17,829,160).

Seventh. That said assessment is unequal in that it has been made at a higher proportionate valuation than the assessment of other land, real estate and real property in the City of New York, and of other land, real estate and real property in the State of New York outside of said City, and your petitioner specifies all the land, real estate and real property in the City of New York and each and every parcel thereof upon the assessment rolls of said City as instances in which such inequality exists, and of the extent thereof; that the said assessment is 25 per cent. higher than the assessment of all other land, real estate and real property in the City of New York on the same roll, made by the same officers, to wit, by the State Board of Tax Commissioners or by the Department of Taxes and Assessments of said City, and your petitioner will be injured thereby. That your petitioner will give testimony of such inequality upon the hearing of this proceeding. 9771

Eighth. That said State Board of Tax Commissioners in making the assessment and valuation of your petitioner's special franchises proceeded upon no legal or equitable basis, rule theory or principle, but, on the contrary, said assessment and valution is the result of mere guesswork on the part of said State Board of Tax Commissioners.

Ninth. That said State Board of Tax Commissioners has, in making the assessment of the special franchises of your petitioner failed to assess and value separately each special franchise of your petitioner and to state which special franchise or special franchises are included in said assessment and valuation, and has failed in said assessment and valuation to fix and determine separately the valuation of each special franchise which your petitioner derived from its several constituent companies named in its report to said State Board, as said State Board is required to do under Chapter 712 of the Laws of 1899.

9772 *Tenth.* That said State Board of Tax Commissioners has included in said assessment and valuation not only the value of all franchises, rights, authority or permission to construct, maintain or operate in, under, above, upon or through the streets, highways and public places of the City of New York and of the mains, pipes, etc., of your petitioner, with their appurtenances, for conducting gas, but has also included therein the value of the franchise of your petitioner to make and sell gas. This franchise is a valuable one, but under Chapter 712 of the Laws of 1899 cannot be included in the assessment and valuation of special franchises.

Eleventh. That said State Board of Tax Commissioners has also erroneously included in said assessment and valuation the value of the good will of the business of your petitioner and the value of your petitioner's contracts with its patrons.

Your petitioner further shows that fifteen days have not elapsed since the final completion and filing of the assessment roll in said City of New York. No previous application has been made for a writ herein.

Wherefore, your petitioner prays that a writ of *certiorari* may be allowed and issued out of this Court, directed to the said George E. Priest, Lester F. Stearns and William Halpin, constituting the State Board of Tax Commissioners, commanding them to certify to this Court:

1. All and singular the proceedings herein referred to and had by the said State Board of Tax Commissioners relating to said valuation and assessment, with the dates thereof respectively, together with that part of the record relating to the same.

9773 2. All and singular the papers submitted by your petitioner and filed with the said State Board of Tax Commissioners.

3. All other evidence or information, if any, before said State Board of Tax Commissioners or considered by it in arriving at the decision aforesaid, and if there was no such evidence or information, a statement to that effect.

4. A concise statement of such other facts as may be pertinent and material to show the value of the property assessed and the grounds of the valuation made by said State Board.

5. Any and all documents, records and papers, if any such there be, not embraced in the above specifications relating to and concerning the valuation and assessment aforesaid, and a statement of any other matters material to the determination of the application of said petitioner.

To the end that the said determination and proceedings of the said State Board of Tax Commissioners in the premises may be reviewed and corrected as shall be in accordance with the law and facts in this matter, and, further, that your petitioner may have herein such other and further relief as to this Court may seem to be just.

Dated New York, July 18, 1904.

CONSOLIDATED GAS CO. OF NEW YORK,
By R. A. CARTER, *Secretary.*

BOARDMAN, PLATT & SOLEY,
Attorneys for Petitioner, 35 Wall Street, New York City..

9774 CITY AND COUNTY OF NEW YORK, *ss:*

R. A. Carter, being duly sworn, says: That he is the Secretary of the Consolidated Gas Co. of New York, the petitioner above named; that he has read the foregoing petition and knows the contents thereof; that the same is true of his own knowledge, except as to the matters therein stated to be alleged on information and belief, and as to those matters he believes it to be true. That the reason why said petition is not verified by the petitioner is that the petitioner is a corporation. That deponent derives his knowledge of the facts herein set forth from the employees, agents and officers of the said petitioner and from information acquired by him in the performance if his duties.

R. A. CARTER.

Sworn to before me this 18th day of July, 1904.

[SEAL.]

WALLACE YOUNG,
Notary Public, No. 5, Kings County.

Certificate filed in New York County.

9775 "A."

Before the State Board of Tax Commissioners.

In the Matter of the Assessment and Valuation for Taxation of the Special Franchises of THE CONSOLIDATED GAS COMPANY OF NEW YORK.

Complaint.

The Consolidated Gas Company of New York complains of the assessment and valuation for taxation of its special franchises, such assessment and valuation of said franchises as so fixed and determined being $22,200,000.

Your complainant alleges that said assessment and valuation are erroneous, unequal and illegal in the following respects:

First. Said assessment and valuation largely exceeds the value of said special franchises. The extent of said overvaluation is $18,129,160. The valuation which has been so placed upon the special franchises of the complainant and the tangible property connected therewith is far in excess of the value which the State Board has placed this year and for several years on similar rights and property of other persons and corporations. All of the street railroad companies in Manhattan Borough having underground trolley systems have rights for the use of streets similar to those of the complainant, and far more valuable, and yet these have all been valued by the State Board for this and for several years last past at proportionately far less than said valuation of the complainant's said rights. All telegraph, telephone and electric companies and all companies in Manhattan Borough having rights for the use of the streets similar to those of the complainant, and far more valuable, have been valued by the State Board for this and for several years last past at proportionately far less than said valuation of the complainant's said rights.

9776

Second. Complainant further alleges that said assessment is unequal in that it has been made at a higher proportionate valuation than the assessment of other land, real estate and real property in the City of New York, and of other land, real estate and real property in the State of New York outside of said city, and your complainant specifies all the land, real estate and real property in the City of New York and each and every parcel thereof upon the assessment rolls of said city as instances in which such inequality exists, and of the extent thereof; that the said assessment is 25 per cent. higher than the assessment of all other land, real estate and real property in the City of New York on the same roll, made by the Department of Taxes and Assessments of said city. Complainant further shows said assessment and valuation is unequal in that it is far greater than the assessments placed on similar real property in said New York City by said State Board, and complainant cites as instances of said inequality each and every assessment upon special franchises in said New York City, as fixed by said State Board.

Third. Complainant further alleges that said assessment is
9777 illegal and erroneous, not only by reason of the overvaluations
and inequalities hereinbefore stated, but also for the reason that Chapter 712 of the Laws of 1899, as amended, under which this Board assumed to and did make such assessment and valuation is unconstitutional and void and confers no power or authority upon this Board to make said assessment or valuation.

Fourth. Complainant further alleges that such assessment is illegal and erroneous in that Chapter 712 of the Laws of 1899, under which act said State Board assumed to and did make this assessment and valuation is unconstitutional and void, in that it violates Article 10, Section 2, of the Constitution of the State of New York; that it attempts to confer jurisdiction, powers and functions upon the State Board of Tax Commissioners which under the Constitution can only be exercised by local assessors selected by the locality in which the tax is sought to be collected.

Fifth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has included therein, not only the value of all franchises, rights, authority and permission to construct, maintain and operate in, under, above, upon or through the streets, highways and public places of the City of New York, the mains, pipes, etc., of the complainant, with their appurtenances for conducting gas, but has also included therein the franchises of said company to make and sell gas. These franchises are all valuable ones, but under Chapter 712 of the Laws of 1899 cannot be included in the assessment and valuation of special franchises.

Sixth. Complainant further alleges that said assessment is illegal in that the same is in violation of those provisions of the Constitu-
tion of the State of New York and the Constitution of the
9778 United States which prohibit the taking of property without
the due process of law, for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, which said State Board claims confers upon it the right, power and authority to act in the premises, and to fix and determine the valuation of said rights, permissions and franchises, did not or do not prescribe any definite rule, method or principle of valuation of such rights, permissions and franchises, and is so vague and indefinite that it cannot be administered by the taxing officers or enforced by the courts, and said State Board in fixing and determining the valuation of such rights, permissions and franchises, did not follow or apply any rule, method or principle of valuation.

MAPS

TOO

LARGE

FOR

FILMING

Seventh. Complainant further alleges that said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, is in conflict with and in violation of those provisions of the Constitution of the United States, which provide that no State shall deny to any person within its jurisdiction the equal protection of the laws, and is void.

Eighth. Complainant further alleges that said assessment is further illegal for the reason that said statute, viz., Chapter 712 of the Laws of 1899, and all amendments thereto, under which said State Board assumed to and did make said assessment and valuation, impairs the obligations of the contracts by which said special franchises were acquired and are now held by your petitioner and violates contracts with the State of New York and with the City of New York under which complainant is operating, and is, therefore, in 9779 conflict with and in violation of those provisions of the Constitution of the State of New York and the Constitution of the United States, which provide that no law shall be passed impairing the obligations of a contract.

Ninth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that this Board has omitted to assess and value separately the tangible and intangible property constituting said special franchises.

Tenth. Complainant further alleges that said assessment and valuation is illegal and erroneous in that said Board has failed therein to separately fix and determine the valuation of each special franchise of the complainant or to state which special franchise or special franchises of the complainant are included in its assessment.

Eleventh. Complainant further alleges that by reason of said unequal, erroneous and illegal assessment and valuation, it will sustain injury and damage.

CONSOLIDATED GAS CO. OF NEW YORK,

No. 774.

APPEALS FROM THE CIRCUIT COURT FOR THE SOUTHERN DISTRICT OF NEW YORK.

5 Motion to Advance.

The appellants above named respectfully move to advance this cause, and to set the same for argument at the earliest date convenient to the court.

The matter involved, briefly stated, is as follows: By a statute of 1905 the State of New York reduced the price of gas supplied to the City of New York by the gas companies therein from 90 to 75 cents per thousand cubic feet. By a statute of 1906 it reduced the price of gas sold to private consumers in said city from $1 to 80 cents per thousand cubic feet. By the final decree in this cause the defendant Jackson (who also appeals), the Attorney General of the State, and another are enjoined from enforcing said statute of 1906 by actions for penalties or otherwise. The appellants Willcox *et al,* constituting the Public Service Commission, are enjoined from applying for a mandamus or injunction to compel compliance with said statute. The appellant The City of New York is enjoined from enforcing by penalty or otherwise said statute of 1905. The finding of the Circuit Court upon which said decree is mainly based is that said statutes are void as taking property without due process of law, because the net income obtainable by this appellee under said statutes, as estimated by the court, is but little above 5% upon the present value of its property as so estimated.

No private consumer of gas is a party or privy to this suit; but the expense of litigating the question involved is so great that it is not within the power of any private consumer so to do. This suit was commenced May 1, 1906, and since that date nearly all of the private consumers have paid the dollar rate for their gas. Up to the entry of the final decree herein, this appellee deposited with the Clerk of the Court, for the protection of said private consumers, the sum of $4,823,485.68, stated by it to represent the difference between the 80 cent rate and the dollar rate on their gas from May 1, 1906, to March 30, 1908. Since the final decree no further deposit has been made. The number of such consumers was stated by the appellee at the commencement of the suit to be over 390,000. There is no adequate remedy to the individual consumer, who either must pay the dollar rate, relying or the good faith of the company for its repayment in case these appellants shall be successful, or must submit to having his gas supply stopped, or must enter into litigation with this appellee at an expense practically prohibitive. The number of citizens interested in this litigation, as well as the amount involved, is, therefore, unusually large.

Similar questions of law arise also in several similar cases involving other gas companies in the same city, in which preliminary injunctions have been granted, and deposits made with the Clerk which amount to several millions of dollars.

The cause involves also very important questions which have never yet been passed upon by this court, and which have been little considered anywhere. For complainant's property is valued in this record at a sum vastly greater than the amount of capital which has been actually invested by complainant therein. This is because, first, the present value of the land upon which the appellee's plants are situated is greater than its original cost; second, the expense of laying pipes underground in New York City streets has increased by reason of modern pavements, as well as occupation of the soil under the streets for other purposes, so that to duplicate appellee's present mains and services would exceed what it paid for putting them in; and third, the Circuit Court has found that the appellee owns franchises in the public streets which it values at a large sum, although nothing was paid for them.

The learned judge at Circuit thought the franchise item alone to be sufficient in amount to control the decision of the cause. He states (see record and also 158 Fed. Rep. at pp. 872-7) that as an individual he regards the inclusion of such franchises as a separate element of value to be fallacious, but that he considers himself obliged to give them a separate valuation by reason of certain passages in judicial opinions which he cites. The question has never arisen for determination here, the franchise in the Monongahela case, 148 U. S., 312, having had a conceded value by reason of its including a right to take tolls up to an amount securing an 8% dividend upon the stock of the corporation which owned it. No element of this kind is included in any of the franchises claimed by the appellee. The franchises being valued by the trial judge at $12,000,000, their elimination would so far reduce his estimate of capitalization as to raise the appellee's net income under said statutes to a sum over 6¼%. If further deduction be made so as to reduce the valuation of the land, mains and services to the capital originally invested therein, the rate of return is over 8%. The rate of return on the nominal capitalization of the appellee, minus the book value of its investments in stocks of other companies, is over 7%.

Upon the facts above recited the court will perceive that this case raises certain fundamental questions, as yet undecided, which are of the great-

POOR CO

est importance, and which were not involved and could not be decided in cases where present value was less than original cost.

It is contended that under such circumstances the duty of the state legislature on the one hand is very different from that of a Federal court, applying the Fourteenth Amendment, on the other. It is believed to be the duty of the state legislature to allow a fair rate of profit to a gas company upon the money which it has actually invested in the enterprise; that in estimating the rate of profit the special risks of the business as well as the general rate of return expected by investors in similar enterprises should be considered; and that true public policy requires the rate thus allowed to be not simply fair, but so liberal as to attract investment of capital in similar enterprises, as well as in other businesses that are specially subject to state legislation. It is contended to be the duty of a Federal court, on the other hand, simply to see that property is not taken without due process of law. It is contended that property is not taken within the meaning of the Fourteenth Amendment to the United States Constitution, so long as it is allowed to receive as high a return as is received by property safely invested; in other words, that there is a wide margin between the rate of return guaranteed by the Fourteenth Amendment and the rate of return which a state legislature ought to permit; this margin representing the difference in responsibility as to local affairs between the United States and the State, between the legislature and the judiciary. If this contention be correct, the Federal Constitution guarantees only the minimum average rate of interest on permanent investments of money, said rate to be computed upon the present value of the capitalization of the company; although the state should permit a much higher rate, computed however upon the money actually invested by the company, and omitting any increment of value that has cost it nothing. Furthermore, it is contended that a separate valuation, for the purpose of increasing prices to the consumer, of a franchise such as those claimed by the appellee (as distinguished from a franchise such as that under consideration in the Monongahela case), not only is fallacious as argued by the court below in its opinion, but also, when the franchise was given without compensation, contravenes the implied understanding of the parties.

In addition to these fundamental questions, various other questions of general importance are raised by this record, as well as questions whose importance is more peculiar to the present case; which questions are set forth in the assignments of error of the respective appellants.

Notice of this motion has been accepted by the appellee.

And now comes the appellant and moves this Court, upon a certified copy of the transcript of the record herein, to advance this cause upon the docket of the Court for the October Term, 1907, and to set the same for argument at as early a date as may be convenient to this Court.

Statement of Matters Involved.

The matters involved and the reason for this application are as follows:

This cause presents the question whether or not the statute of the State of New York known as chapter 125 of the Laws of 1906, which fixes the price that may be charged for illuminating gas in the City of New York at eighty cents per thousand cubic feet, takes the property of the appellee without due process of law and without due compensation and denies to the appellee the equal protection of the law, in contravention of the Fourteenth Amendment to the Constitution of the United States; and involves the determination of the following questions:

First—Whether the matters and things charged in the bill of complaint show that the complainant had a complete and adequate remedy at law.

Second—Whether the allegations of the bill of complaint and the facts disclosed by the record show that this suit, although in form brought by a citizen of the State of New York against the appellant as an officer of the State of New York is not, in fact, brought against the State of New York, to test the constitutionality of the said statute.

Third—Whether the record contains sufficient evidence to show that the rate of eighty cents per thousand cubic feet for gas sold in the City of New York does not afford a fair and reasonable return to the companies doing business in the said City, the evidence being limited to the valuation of property of the complainant alone, and further that record does not show but that the said rate would afford a fair and reasonable return upon the value of property employed in the making and distributing gas, in the same territory as complainant, by a company well located and equipped and economically managed.

Fourth—Whether the record contains sufficient evidence to show the reasonable and necessary operating expenses of the complainant. The evidence being limited to its actual receipts and disbursements during a period from November 1, 1904, to December 31, 1905, supplemented in part only by the experience of other periods and being entirely insufficient for that purpose.

Fifth—Whether the valuation of this complainant's property upon which the Court's calculation is based, is correct, it being an estimate of present value, arrived at by a valuation of the reproductive cost of complainant's identical plant and each part thereof, without regard to whether the same was originally economically produced or commercially and economically worth reproducing, or as to obsolence of the type or advancement of the art. And whether the same should not be based either upon the cost thereof or the reproduction of an economically constructed modern plant that would produce the same kind, quantity and quality of gas.

Sixth—Whether the finding the valuation of the complainant's real estate was not erroneous as being (a) in excess of its original cost to complainant and its predecessor companies; (b) in excess of the true valuation thereof, having been valued as vacant lots, and not in conjunction with the buildings thereon, and for the uses and purposes to which it was devoted; (c) in excess of the value at which it was carried on complainant's books.

Seventh—Whether the valuation of the real estate, plants, mains and services and each of them are correct, being in excess of the sworn valuation made by the officers of the complainant in the return to the State Board of Tax Commissioners, for the assessment of the franchise tax, and of the testimony of its officers before the joint committee of the Senate and Assembly of the State of New York, and being based entirely upon the testimony of complainant's experts.

Eighth—Whether the Court erred in finding that complainant's special franchises should be valued at $12,000,000 and that it was entitled to earn a return thereon.

Ninth—The consideration of various exceptions taken to specific findings as to the estimated profits of the complainant; the existence and validity of franchises; and the total valuation of its tangible property and together with its intangible property.

Tenth—Whether the Court erred in finding that six per cent. is the lowest rate of return which can be considered legislatively fair, just or reasonable, upon the value of the property employed by complainant in the business of manufacturing and selling gas, and that the net annual income which complainant can earn on its gas business as aforesaid is less than six per centum.

Eleventh—Whether a judgment for costs can be given against this appellant as Attorney General of the State of New York.

Reasons for Advancement.

The questions involved are of great public interest and concern the validity of an act fixing the price of a necessity to the four million inhabitants of The City of New York. Many of the questions involved have not been considered by this Court, and have an important bearing on all cases involving rate regulation by States. Pursuant to the preliminary injunction there has been deposited with the Clerk of the Circuit Ccurt for the Southern District of New York twenty cents on each thousand cubic feet of gas sold by the complainant, which at the time of the entry of the final decree amounted to the sum of $4,823,455.68. And there are seven cases similar to this cause brought by gas companies other than complainant that have not yet been tried and are awaiting the decision of this case, in five of which preliminary injunctions have been granted and deposits made with the Clerk which amount to several millions of dollars.

Supreme Court of the United States

OCTOBER TERM 1908.

WILLIAM R. WILLCOX, William McCarroll, Edward M. Bassett, Milo R. Maltbie and John E. Eustis, constituting the Public Service Commission of the State of New York for the First District,
Appellants,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 396.

Appeal from the Circuit Court for the Southern District of New York.

APPELLANTS' BRIEF.

In this brief page references, not otherwise stated, are in the record.

This is one of three appeals taken from the final decree in the suit originally entitled *Consolidated Gas Company of New York* vs. *Julius M. Mayer as Attorney General etc. et al.*

There have been changes of parties defendant during the pendency of the suit, and the present appellants do not hold the same relation toward the controversy that was held by the defendants for whom they were substituted. The statement as to their position in the opinion of the Circuit Court (p. 389) is erroneous. They hold office under a statute which took effect July 1, 1907, succeeding to certain functions of the original defendants Frederick E. Gunnison, John C. Davies and Lucien L. Shedden, constituting the New York State Commission of Gas and Electricity, who went out of office on that day by repeal of the statute under which they had been appointed, and also to certain functions theretofore belonging to the defendant William S. Jackson as Attorney General of the State of New York.

The relations of the parties defendant are a little complicated, owing to three peculiarities of the case: first, that the complainant joined in its bill of complaint two entirely independent controversies, although no point was made by the defendants on the ground of multifariousness; second, that the statutory provision by reason of which Gunnison *et al* were originally joined as defendants has since been declared unconstitutional by the New York Court of Appeals; and third, because the powers pertaining to the office of Attorney General of the State of New York during the first year of this litigation were thereafter divided, and a part transferred to these appellants.

Statement of the case.

This is one of the suits, now so familiar, by which state officials and a municipality are sought to be enjoined from enforcing a maximum rate imposed under authority of a state statute, upon the ground that the statute violates the Fourteenth Amendment to the constitution of the United States.

The statutes complained of.

The complainant below, Consolidated Gas Company of New York, was one of four companies supplying gas to the public and to private consumers within the territory known as the Borough of Manhattan. Up to the time of the passage of the statutes next hereinafter set forth, it was restricted to maximum rates of $1 per thousand cubic feet as against private consumers and 90 cents per thousand cubic feet as against the muincipality (Statute of May 7 1897, ch. 385, Record, p. 5264).

A further reduction was made by the New York legislature by statute of June 3, 1905, which reduced the maximum price for gas sold the City of New York to 75 cents per thousand cubic feet, and provided a *penalty* for violation of the statute to the amount of "one thousand dollars for each offense *to be sued for and recovered in the name of and by the city of New York* for its benefit" (Record p. 21). The defendant the City of New York is interested in the case by reason of this statute only; it has no duty or power to represent the consumer (Richman *v.* Consolidated Gas Co. 114 App. Div. at p. 224; and see, as to exclusive functions of Attorney General and Public Service Commission, People ex rel. Lehmaier *v.* Interurban Street Ry. Co. 85 App. Div. 407; affd. 177 N. Y. 297); and the other defendants have no interest in the statute except so far as any of them may happen to be taxpayers in said city.

On the same day, by Chapter 737 of the Laws of 1905, the state established the Commission of Gas and Electricity, and gave this commission the power to fix maximum rates (Record pp. 22, 27). The commission was given power to enforce its orders by application to the state courts for a writ of mandamus (p. 28). It was given no power to enforce rates not fixed by itself. The original defendants Gunnison *et al.*, having been appointed commissioners under this statute, investigated the rates charged for gas in the Borough of Manhattan, and by order dated February 23, 1906, directed this complainant company to charge no rate higher than 80 cents per thousand cubic feet (pp. 28-30). That portion of Chapter 737 under which this investigation was held and order made were subsequently, however, declared by the Court of Appeals to be unconstitutional under the constitution of the State of New York (Village of Saratoga Springs vs. Saratoga Gas Co., 191 N. Y. 123).

On April 3, 1906, by Chapter 125 of the laws of that year, the state fixed certain maximum rates for gas furnished to consumers other than the City of New York within the territory of that city. The rate fixed for the Borough of Manhattan (with which alone we have to deal) was 80 cents per thousand cubic feet, and the statute was therefore familiarly known as the "80-cent gas law". The act imposed a *penalty* for its violation of "one thousand dollars for each offense *to the people of the state*" (pp. 30-31).

This statute (substantially following like provisions of Chapter 736 of 1905) contained the following provision as to the *candle power* and *pressure*:

> § 2. The illuminating gas furnished by any such corporation, association, copartnership or person shall have an illuminating power of not less than twenty-two sperm candles of six to a pound, burning at the rate of one hundred and twenty grains of spermaceti per hour tested at a distance of not less than one mile from the distributing holder by a burner consuming five cubic feet of gas per hour * * *. The pressure of illuminating gas in any service mains in the said city at any distance from the place of manufacture shall not be less than one inch, nor more than two and one-half inches.

The portion of the section which we have omitted related to the standard of purity of the gas, and is not here complained of. The provision as to *candle power* is the same as the prior law except that the words "distributing holder" are substituted for the words "place of manufacture" (Record p. 5265). The provisions as to *pressure* are new.

The original and present defendants.

(*a*) *The Attorney General.* The defendant originally first named was Julius M. Mayer, sued "as Attorney General of the State of New York". He pleaded that the suit was against the state (p. 54). Mr. Mayer's term of office having expired on December 31, 1906, his successor William S. Jackson was substituted as defendant upon his own application (p. 321). The Circuit Court held that the suit was not against the state (pp. 421-2) and this question is not raised or argued by the present appellants; but the final decree is entered against Mr. Jackson as Attorney General and the costs are awarded against him as such, with an apparent suggestion that an appeal be taken upon the point (p. 434); and he has assigned error accordingly (pp. 481, 484). As to the Attorney General *the decree* is that he be (p. 434)——

> "perpetually enjoined and restrained *from suing for the penalty or forfeiture* described in said chapter 125 of the Laws of 1906 or in any way enforcing or attempting to enforce the said Act or the order of the Commission of Gas and Electricity aforesaid against this Complainant."

(*b*) Defendants Gunnison *et al.*, constituting the old Commission of Gas and Electricity, were sued to enjoin them from enforcing their own order aforesaid. The decision of the Court of Appeals in the Saratoga case shows that this joinder was unnecessary. They may be disregarded.

(*c*) *The Public Service Commission.* The present appellants succeeded not only to the functions of the old Commission of Gas and Electricity but also to some of those of the Attorney General, as appears by the following provision of the statute under which the Public Service Commission was established (Laws of 1907, Chap. 429, § 74):

> "Whenever either commission shall be of opinion that a gas corporation * * * is failing or omitting or about to fail or omit to do anything required of it *by law* * * * or is doing anything or about to do anything * * * contrary to or in violation *of law*

> * * * it shall direct counsel to the commission to commence an action or proceeding in the supreme court of the state of New York in the name of the commission for the purpose of having such violations or threatened violations stopped and prevented either by mandamus or injunction. Counsel to the commission shall thereupon begin such action or proceeding [etc.]."

Prior to this statute the Attorney General by virtue of his office had implied authority to commence proceedings of the nature stated in a proper case. This implied authority is superseded by the express authority now given to the Public Service Commission. The Public Service Commission law took effect July 1, 1907, and on October 2 of that year these appellants were substituted as parties defendant by consent (p. 379). By *the decree* they are (p. 434):

> "perpetually enjoined and restrained *from applying for a mandamus or injunction* to compel compliance with said chapter 125 of the Laws of 1906 or with said order of the Commission of Gas and Electricity or in any other way enforcing or atempting to enforce the said act or the order of the Commission of Gas and Electricity aforesaid against this Complainant."

So far as this suit and the final decree refers to the order of the Commission of Gas and Electricity it is of course unnecessary, in view of the decision of the Court of Appeals; but the motion for reargument of the Saratoga Gas case in that court was not finally disposed of until after the entry of the decree.

(*d*) *The City of New York* is by the decree (p. 434)

> "perpetually enjoined and restrained *from suing for the penalty or forfeiture* described in said chapter 736 of the Laws of 1905 or in any other way enforcing or attempting to enforce the said Act against this Complainant."

(*e*) William Travers Jerome as District Attorney of New York County was also a defendant in the case by reason of his statutory authority to sue for penalties in the name of the state, an authority which he shared with the Attorney General. The decree joined him with the Attorney General, but he considered it unnecessary to join in the latter's appeal.

Omitted Defendants.

The parties really and beneficially interested in the enforcement of the 80 cent gas law—the private consumers of gas in the Borough of Manhattan—are not joined as defendants herein. It does not even appear that any one of the official defendants is a resident of that Borough. The omission was not accidental, but was called to the attention of the Circuit Judge, who purposely refrained from enjoining the consumers, although recognizing that they would probably leave the defense of their rights to their statutory protectors (pp. 136, 145). But the latter were not sued as their representatives in the sense of the term used in equity procedure (p. 136), and this has been recognized by the State courts and has an important bearing upon the question of jurisdiction, as will be seen.

History of the Litigation.

We have had no actual experience under the 80-cent gas law, because its enforcement was immediately enjoined by Judge Lacombe by a temporary restraining order (pp. 36-7). The injunction was continued by a further order made upon affidavits of both sides (pp. 145-7). The opinion of Judge Lacombe is to be found in the record at pages 135-45 and is reported at 146 Fed. Rep., 150.

On July 5, 1906, Judge Lacombe referred the case "to Arthur H. Masten, Esq., one of the Standing Masters of this Court to take the testimony, make all needed computations and fully find the facts, all in conformity to the practice indicated by the Supreme Court in Chicago M. & St. P. R. R. *v.* Tompkins, 176 U. S., 179." He directed the Master to serve a draft report in accordance with the local practice, and to "be careful in taking the testimony to conform to the practice indicated in Blease *v.* Garlington, 90 U. S., 1." He apportioned among the parties the ninety days allowed for taking testimony; directed the Master when necessary to sit from day to day and hold two sessions a day; required leading counsel to provide competent junior counsel if they should wish to take a summer vacation; and authorized either party to read the testimony of any witness from the record of the Gas Commission upon producing the witness for further cross-examination (pp. 148-9, 150). The Master in pursuance of the court's policy in pressing the suit expedited the complainant's case by permitting it to introduce confessedly incompetent evidence, compiled from sources not open to the defendants for a deliberate outside investigation or fishing excursion except so far as complainant chose to open them in such a way as to enable it to get in its side of the case with greater speed than the ordinary rules of evidence permit, and putting a burden upon defendants from which they are usually much relieved by the necessities of the complainant, from which a fair working compromise can be evolved (see for instance pp. 537-8, 632, 743-4, 778-9, 803, 840, 1043 and the Master's explanation at pp. 1859 and 2356-7). The case was conducted all the way through under great pressure from the Master and the Court, as to the taking of testimony (see for instance pp. 1130, 1558, 1661, 3160, 3250-1, 3555-6, 3579, 3598-9, 4512) and yet without corresponding pressure as to supplying the defendants with information (see for instance pp. 1047, 1856), and under circumstances which seemed to us to have put the complainant, which had also of course the original advantage of being the insider, in a position of great advantage. But these appellants were not before the court at that stage of the case, and we understand that counsel for the City of New York will discuss this phase of the case, so far as it may warrant discussion in this court.

The cause was argued before Judge Hough, and the final decree is to be found at page 430. His main opinion is to be found at page 388, and his supplementary opinion at page 422. He disallowed some of the large items of capitalization allowed by the Master, largely reduced others, and recalculated the expenses and income. The Master, whose main report covers pages 151-250 of the record and whose rulings on questions submitted by the parties cover pages 252-91, reached the conclusion that "the property on which complainant is entitled to a return" (termed in the final decree its "capitalization") is $83,357,000, and that its net earnings under the legislation in question would be $2,327,328.31, or 2 $^{8}/_{10}$% (pp. 247-8). Judge Hough found "the true valuation as of the time of the beginning of this suit of the complainants' property actually employed in its business of manufacturing and supplying gas" to be $59,831,435, and its net income under this legislation to be $3,024,592.45 (p. 432), a little over 5%.

The oral testimony.

For the purpose of this brief nearly all of the testimony on behalf of the defendants, occupying the whole of Volume III and the first portion of Volume IV of the record, or from page 1890 to page 3854, may be passed over.

The bulk of this consists of testimony of three witnesses, Messrs. Bemis and Marks on behalf of the city and Mr. Edgerton on behalf of the Attorney-General. The testimony of these gentlemen was not accepted by the Master. Without discussing whether or not any part of their testimony ought to have been given weight for the purposes of this appeal, we shall accept the Master's view and base no argument upon anything in it. The complainant in its argument below made much of a few concessions contained in this testimony, concessions which were generally steps in a calculation that it would have found disastrous to accept *in toto,* and which are entitled to no more weight than the rest of their evidence. The Master (doubtless owing partly to his helplessness under the rule in Blease v. Garlington) permitted a very large amount of so-called expert testimony on both sides, which a tribunal having power to exclude testimony would probably have excluded. We shall submit this case upon the facts proved, and not upon the speculations of witnesses as to their effect.

Most of the other witnesses for the defendants were called upon points as to which the Master decided in defendants' favor, or upon points as to which we acquiesce for the purposes of the appeal in his decision.

The oral testimony in this portion of the record to which we shall direct the court's attention will be practically confined to brief extracts from the testimony of the three experts produced on behalf of the defendants upon the present valuation of the complainant's real estate, and one or two admissions made by complainant's officers or witnesses in previous testimony, which were allowed to be read into the evidence by the city's expert, Prof. Bemis.

Certain of the counsel before the Master seemed to be under the impression that documentary matter could be got upon the record by asking some witness upon direct or cross-examination whether he knew of it. Passages alleged to have been extracted from scientific publications or elsewhere, and which were read to witnesses without being recognized by them, were subsequently used as if they were facts proved in the case. Caution is to be observed in the treatment of this class of material.

Our argument will be based upon three classes of testimony: First, that of the complainant's main witnesses, (particularly its Vice President, Walter R. Addicks; its Secretary, Robert A. Carter; its Chief Engineer, William H. Bradley; its Superintendent of Mains, Colin C. Simpson; and its leading expert, Alexander C. Humphreys; its real estate experts, William H. Wheelock and Edmund C. Preiss; and its construction expert, Frederick J. Mayer) especially as developed in their cross-examination by Mr. Page, whose previous experience both as a member of the Stevens Committee of 1905 and as counsel in the Gas Commission investigation of 1905-6 had familiarized him with the facts of the case, so far as they had become accessible to outsiders; second, certain exhibits prepared at the request of its own counsel or of Mr. Page by officers of the complainant company; and third, the facts developed in the legislative investigation of the complainant company by the Gilbert Committee of 1885-6.

We do not wish to be understood, however, as conceding that this court for the purposes of the present appeal should regard all of the complainant's witnesses as trustworthy. The contrary is especially the case with regard to the testimony of Mr. Carter, its secretary. The sworn statements made by him to the tax officers, and his attempts at explanation of them, deprive him of any standing as an expert witness, although we have no reason to doubt the correctness of the extracts which he furnishes from the books of the company. The value of the expert testimony of Dr. Humphreys is also much weakened by his unsuccessful attempt to explain satisfactorily the testimony which he had given in the Holyoke investigation, when called to testify by the city.

The Exhibits.

Certain of the most convenient and valuable of the exhibits, although introduced by the state or city, are admissions of complainant, such as its tax report of 1905 (State's Exhibit C) and its complaint against the assessment of 1906 (City's Exhibit 65); or else statements made up by its employees at defendants' request, such as the statement of book valuations of its investments in securities of other companies (State's Exhibit B), and its tabulation of repairs and renewals, State's Exhibit L). Other useful exhibits are certain tabulations prepared from the complainant's books by defendants' experts, such as that setting forth the monthly record of gas purchased, made and sold for the calendar year 1905 (Vol. V, City's Exhibit 87B), that of the complainant's real estate (Vol. VI, City's Exhibits 87 A, B, C, D, E), and those made from the books of complainant's predecessor companies in 1885 by Mr. Yalden (City's Exhibit 48). Some slight corrections were made by complainant in the first of the tabulations just referred to from City's Exhibit 87, but they were not sufficiently important to affect materially the calculation.

The Yalden account (City's Exhibit 48) would of course have been of doubtful competency had it been objected to, as Mr. Yalden was long since dead, and some of the books from which his figures were drawn have disappeared. It is in evidence without objection, however. Another exhibit to which objection might have been made upon the ground of competency, but which has been admitted by consent and is for some purposes valuable, is Complainant's Exhibit 369, comprising pages 6071-6561 of the record. This is the entire testimony taken before the Gilbert committee of 1885, containing the evidence of many witnesses since deceased. There are also a number of other exhibits introduced by the complainant to which objections that seem to us well founded were taken at the time, but which are convenient and seem to be correct, and which we have accepted as such.

There are certain exhibits in the case, however, which together occupy considerable space, which seem to us to be entirely improper, upon which we shall base no argument, and upon which it seems to us that no argument should be based by any of the parties hereto.

The real estate assessments of 1906. These are set forth in State's Exhibit A (pp. 4922-4). The history of this exhibit is as follows: Complainant undertook to prove from its first witness the appraised value of its respective parcels of real estate for the current year. The assessments were offered "as some evidence of the value of our real estate." Objection was made to the competency of the evidence, and it was very properly excluded by the Master. Nevertheless, under the rule in Blease *v.* Garlington, it had to go into the record (p. 503). It appeared that the witness had been abstracting the records, and he produced from his pocket a memorandum from which he read off certain figures (pp. 504-5). Counsel for the state desired to have the memorandum marked in evidence as part of the cross examination, but without prejudice to the objection already made. It seems to us that that course was proper, and that the procedure under Blease *v.* Garlington is impossible without such a privilege to the objecting party. The Master however said that the defendant could not "offer it with strings tied to it," but admitted it and marked it a state exhibit (p. 520). The Master then seems to have considered that the state had waived its objection to the asesssed values, and proceeded to use them in the decision of the case. Their introduction led to the subsequent introduction by the city of a large mass of petitions verified by the complainant and objecting to many of these assessments as too high (pp. 2103-62).

Gilbert Committee Report of 1886. This appears as Complainant's Exhibit 227 at pages 5325-88 of the record. The facts are these: An investigating committee was appointed by the State Senate in 1885 for the purpose of inquiring whether the statute under which the complainant company had then just organized had been violated, and whether the capitalization of the company was fair. The committee consisted of Senators John I. Gilbert, Chairman; Thomas Robinson and Michael C. Murphy. It appointed counsel and an accountant, and the testimony and accountant's report are to be found in full in the record. The committee failed to agree. The chairman reported adversely to the company. Messrs. Robinson and Murphy reported in its favor. Their reports were lengthy, and merely expressed the variant views of these gentlemen on matters as to which this court now has all the information that they had, and considerably more. It is conceivable that the opinion of the chairman may have outweighed in the estimation of their neighbors and contemporaries the combined opinion of the other two members, or *vice versa.* It seems to us that there were some mistakes in both reports, and that they are incompetent for any purpose.

Affairs of other localities. A large amount of evidence, oral as well as documentary, has been introduced as to the capitalization, earnings and dividends of particular companies in other localities, and as to the regulations and forms of accounts prescribed elsewhere, and particularly in England and in the State of Massachusetts. This line of testimony originated, indeed, from the defendants' side, but had the natural effect of a bad example. The capitalization, gross and net earnings and dividends of another company, situated in another city, raise a collateral issue, whose fair trial requires a volume of testimony and exhibits of its own. None of the collateral issues thus raised were actually tried out in the present case, for defendants used up their allotted time in their main case, and there was no time left for surrebuttal. The position of the present complainant is so immensely stronger than that of almost any other gas company in the world, and the few whose situation is comparable in strength are so differently situated in various respects, that trial by analogy, which can sometimes (however improper under the rules of evidence and however oppresive by way of expense) lead to fairly good results when applied to one of a group of similar cities of similar size, is useless here. The laws, regulations and forms of action prescribed by other states and nations are also useless as well as incompetent. They are not prescribed for the purpose of ascertaining the net earnings of the companies from the point of view of the Fourteenth Amendment to the Constitution of the United States. These remarks apply to all such exhibits as Reeson's Complete Gas and Water Acts (City's Exhibit 53), the Boston Graphic Record (City's Exhibit 58), the Massachusetts tabulations (Complainant's Exhibits 378-390), the Philadelphia ordinance (Complainant's Exhibit 391), the estimates of gas cost in Danbury, Conn. (Complainant's Exhibits 392-4), and the considerable number of similar papers scattered through the oral testimony.

Complainant's history.

Complainant was organized in the fall of 1884 by consolidation of six existing gas companies.

These companies, and the dates of the franchises then owned or claimed to be owned by them, were as follows:

New York	Gas	Light	Company	1823
Manhattan	"	"	"	1833
Metropolitan	"	"	"	1858
Harlem	"	"	"	1855
Municipal	"	"	"	1874
Knickerbocker	"	"	"	1865 and 1871

The Knickerbocker Company was then owned by the Municipal. The charter of the Municipal Company has since confessedly expired. It is contended by the state and city that the original franchises of the New York, Manhattan, Metropolitan and Harlem companies have also expired, and that they are now holdovers, either on sufferance or, at the best, as tenants from year to year. It is also contended by the state and city that the franchise of 1865 claimed by the Knickerbocker Company was invalid, and that neither of the two franchises claimed by that company ever became its property. The law and facts as to these franchises are set forth in Appendix A to this brief.

Complainant's manufacturing plants were derived as follows:

14th	St.	plant	from	Manhattan	Co.
18th	"	"	"	"	"
21st	"	"	"	New York	"
42d	"	"	"	Metropolitan	"
44th	"	"	"	Municipal	"
99th	"	"	"	Knickerbocker	"
111th	"	"	"	Harlem	"

Of these the 18th St. and 111th St. plants have been partly condemned by the city. The former has been altogether abandoned and the latter is in disuse (pp. 1713-14). The old 65th St. plant, purchased by the Metropolitan of the Manhattan company, had before the consolidation been destroyed in a similar manner (pp. 6343-4). It is now represented by a holder station, and there is a holder also at 111th St.

After the consolidation, the complainant continued as a gas company, without other complications, until the year 1900. It then became also a holding company on a large scale, this being partly the result of a gas war between itself and the other companies operating in the Borough of Manhattan. Its principal outside investments are now in the form of stock, bonds and securities of the three rival gas companies (the New York Mutual, Standard and New Amsterdam, the latter in turn owning the stock of the Central Union, a company operating in the Borough of the Bronx); similar securities of electric companies; and similar securities of the Astoria Light, Heat and Power Company, a corporation which commenced manufacturing gas just before the termination of the testimony before the Master herein. It also holds various securities as temporary investments of a fund derived from the issue of debentures for the purposes of the Astoria enterprise.

Complainant's capitalization.

Nominal capital. Complainant's original capitalization was $39,078,000. It had been originally intended to be $45,000,000, but the New York Mutual Gas Light Company, to which was allotted $5,922,000, did not join (see pp. 4821, 4825). The manner in which these figures were arrived at was described in the testimony before the old Gilbert committee (pp. 6078, 6084-5, 6124, 6134, 6138-9, 6144-6, 6161, 6308, 6372-3, 6513, 6521-2, 6524). The tangible property was first appraised. Each company employed its own appraiser, both for its own property and, where desired, to estimate upon the property of the others. It was recognized that, as long as the appraisements were proportionately fair, it was of no particular importance as between the companies whether they were high or low. There was a difference of opinion as to whether the capitalization should be made high or low, but the majority of the committee (which had been to a certain extent packed by giving the Municipal and Knickerbocker each one member, although the latter company was owned by the former,) decided to have it high. One of the appraisers originally employed was dropped because he did not appraise quick enough or high enough;

but Mr. Rowland, who took his place and who either prepared or revised the appraisements of all of the manufacturing plants except that of the Harlem Company, was concededly a man of standing. The basis of the appraisal, however, was not what the properties were intrinsically worth, but a larger amount representing what they could have been duplicated for at the time. The real estate, mains, services and meters were appraised by the members of the committee themselves.

The day after the appraisement of the tangible property was completed, the total capitalization was taken up for consideration (pp. 4925, 5012, 6140, 6377, 6520-1). Complainant contends that this total valuation was arrived at by taking the total valuations of the stocks of the various companies as they then stood in the market, plus the bonded indebtedness. This was indeed the statement of one or two of the witnesses, and is followed in the report of the committee, but it is not true, and the total valuation was very much larger than the combined values of the capital stocks and bonds (pp. 84-88, *infra*). Having reached by agreement a figure for the total capitalization, an amount equal to one thirtieth thereof was reserved for working capital. The difference between the remaining twenty-nine thirtieths and the total appraised valuation of tangible property was then put down as "Rights, franchises, etc.," and was divided up among the companies on a somewhat arbitrary basis (pp. 88-91, *infra*).

The following tabulation, taken from pages 4821 and 5605, gives the appraised valuation of the tangibles of each company, its finally allotted share in the "Rights, franchises, etc.," its actual allotted share (being the sum of the two preceding figures) and its nominal share (being the last figure plus its nominal contribution to the working capital):

	Tangibles.	*Intangibles.*	*Actual share.*	*Nominal share.*
N. Y. Co.	6,143,000	1,417,000	7,560,000	7,821,000
Manhattan Co.	9,611,000	2,329,000	11,940,000	12,352,000
Metropolitan Co.	5,312,000	1,863,000	7,175,000	7,422,000
Municipal Co.	3,925,000	1,175,000	5,100,000	5,276,000
Knickerbocker Co.	2,472,000	528,000	3,000,000	3,104,000
Harlem Co.	2,531,000	469,000	3,000,000	3,103,000
	29,994,000	7,781,000	37,775,000	39,078,000

The capitalization has been increased to $80,000,000 in two stock issues of March and July, 1900 (pp. 5018, 5020), besides an issue of nearly $20,000,000 of convertible debenture bonds for the purposes of the Astoria enterprise (p. 855).

Complainant is now, however, as just stated, a holding corporation as well as a gas corporation. The book value of its outside holdings, apart from the securities of the Astoria Company, is $53,041,134.52 (State Exhibit B, p. 5052). This book value represents their actual cost (see pp. 847-9, 852-3, 855-6), except that the New York Edison Co. stock cost only $15,517,200 instead of the amount stated. As thus corrected it is as follows:

Brush Electric Illuminating Co., bonds	$275,000.
New Amsterdam Gas Co., stock and bonds	4,814,608.03
New York Edison Co., stock	15,517,200.
New York Mutual Gas Light Co., stock	5,703,290.65
Standard Gas Light Co., stock	14,587,495.23
United Electric Light & Power Co., stock, bonds and loans	9,452.063.48
Westchester Lighting Co., stock and bonds	5.707.50
National Coke & Coal Co., stock	50,000.
	$50,405,364.89

To the $80,000,000, however, must be added $1,387,000 for bonds outstanding, $32,518.76 for premiums on bonds, and $14,322,217.95 for premiums on capital stock (State Exhibits F, S, pp. 5075, 5260). On the other hand there was reserved in 1884 from the original issue a sum of $2,329,000 to pay off obligations of the old companies. These were paid off by 1899 (p. 5037), presumably out of the item last above stated. Its nominal capital invested in the gas business is therefore as follows:

Present stock, par value	$80,000,000.00
Premiums on bonds and stock	14,354,736.71
Debenture bonds of 1888	1,387,000.00
	$95,741,736.71
Deduct bonds paid off	2,329,000.00
Present nominal total capitalization	$93,412,736.71
Less stockholdings as above	50,405,364.89
Present nominal gas capitalization	$43,007,371.82
Less original capitalization of 1884	39,078,000.00
New capital since 1884	$3,929,371.82*

Probably this last figure is somewhat too high, and should be subject to further deductions on account of outside investments. For instance, it appears that there is an outstanding loan to the East River Gas Company, part of which was made prior to the issue of the Astoria debentures, and therefore should apparently be charged to this account (See p. 856 and State's Exhibits Q, R, p. 5260).

---

* Of the $14,354,736.71 item, $11,205,975 are premiums on the stock issues of 1900 (p. 849). The balance, added to the $1,387,000 item and subtracting the $2,329,000 item, gives the amount of new capital that came in before 1900—$2,206,261.

Capital actually invested. The amount actually invested by the stockholders of the constituent companies out of their own pockets is very much less than $39,078,000, the difference representing, first, arbitrary writing up of intangible property at the time of the consolidation of 1884; second, appreciation in the value of land; and third, extensions of the plant purchased out of surplus earnings.

Mr. Yalden's tables showing the capital actually contributed by the stockholders of the constituent companies are liberal, since some of the capital was paid for in property and not in money. $1,178,000 of Metropolitan stock was issued for property at fifty cents on the dollar (pp. 6168-9, 6332). The figures are as follows (pp. 5615, 5646, 5672, 5690, 5703):

	Issued for cash.	*Issued for property.*	*Stock dividend.*	*Total.*
N. Y. Co.	750,000		3,250,000	4,000,000
Manhattan Co.	3,280,000		720,000	4,000,000
Metropolitan Co.	612,700	1,887,300		2,500,000
Harlem Co.	1,569,050	150,950	280,000	2,000,000
Municipal Co.	2,515,300	458,900	25,800	3,000,000
	8,727,050	2,497,150	4,275,800	
		Total stock		$15,500,000
				4,275,800
		Stock paid for in cash or property		$11,224,200
Deduct for Metropolitan stock issued at fifty cents				589,000
				$10,635,200

The $17,000,000 capitalization sometimes spoken of includes the $1,500,000 stock of the Knickerbocker company (see p. 5731); but the assets of this company belonged to the Municipal company at the time of the consolidation, and are represented by the last one million dollars of the cash capital of the Municipal (pp. 5600-1, 5690).

The $25,800 of the Municipal company represents a discount on stock sold below par; $100,000 of the stock issued for property was paid for stock of an old corporation whose advantage to the company is not shown; and the balance of $350,000 was issued in 1876 and 1877 for patents, which have now of course expired (pp. 5599-5600). The $25,800 is treated by Mr. Yalden as equivalent to a stock dividend (p. 5726); and probably the figure $10,635,200 is somewhat larger than the actual value contributed by the subscribers to the stock of the constituent companies.

There were some bonds and other obligations outstanding at the time of the consolidation, which were assumed by the complainant company, amounting to $2,329,000 (p. 5606). These it subsequently paid off, and they are not now represented in its capitalization.

If, therefore, stock issues representing surplus earnings over and above dividends are to be regarded for the purpose of a case like this as contributions by the consumers rather than contributions by the stockholders, the amount of capital actually invested is as follows:

Investment of constituent companies, not over............	$10,635,200.00
Subsequent additions	3,929,371.82
Capital actually invested..	$14,564,571.82

The additions to the nominal capitalization which represent stock dividends, or other sums representing surplus earnings over and above ordinary dividends, all date from periods when very large actual dividends were being declared (pp. 28-9 *infra*). Indeed the old companies were deliberately hiding away the amount of their profits by their bookkeeping, as complainant's counsel pointed out below, citing Mr. Yalden's conclusion as expert accountant to the Gilbert committee, at page 6396.

Complainant's Net Earnings and Dividends.

There has been no real investigation into the complainant's net earnings except those for the fourteen months ending December 31, 1905. This was not by consent, as might be inferred from the Master's language on pages 155, 216, but because the complainant insisted, and the Master ruled, that the year 1905 should be taken as the standard, on the ground that the time allowed by the court for the trial of the case did not permit more thorough investigation. The Master permitted complainant to introduce evidence from other years for the purpose of changing certain figures in the 1905 account, and finally permitted to defendants full investigation as to these particulars, but did not permit them to make a "fishing excursion" to see if any other corrections should be made (see pp. 565, 632, 779, 803, 1043, 1047-8, 2175, 2198-9, 2286-8, 3275-8), and excluded information as to other periods when they picked up any (pp. 3579, 3598-9).

The Court, after allowing to the complainant some considerable items which were contested, has found that its total net income for the calendar year 1905 was $5,891,597.45 (p. 407). It finds that if the complainant company during the calendar year 1905 had been upon the 80 cent basis, its net income would have been $3,224,592.45.*

The former figure was at the rate of over 13½% on the nominal capitalization employed in the gas business, and over 40% on the capital actually invested and employed in the gas business. The latter figure would have been at the rate of about 7½% on the nominal capitalization employed in the gas business, and nearly 23% on the capital actually invested and employed in the gas business (see pp. 23, 25 *supra*).

Complainant was permitted to put in evidence a tabulation purporting to show its rate of dividend since 1884 (Complainant's Exhibit 83, p. 5035), but the tabulation is valueless and misleading. For instance, from 1900 on the complainant was not only a gas company, but also a holding company. Nearly $37,000,000 is represented by its stock holdings (p. 23 *supra*), on which it nets less than 3% (State Exhibit B, p. 5052). It is also now paying interest on nearly twenty millions of 6% debenture bonds issued for the purpose of raising money for its investments in the stock and securities of the Astoria Company. Part of the cash thus obtained is being held in temporary investments, but the balance is not at present bringing in any actual return (pp. 742, 749, 865, 5034, 5077). The present abnormally low dividend rate due to these heavy outside commitments is being used on the court and the public for the purpose of giving the impression that the fear of 80 cent gas is keeping down present dividends.

But when we go back of 1900 to the period when the complainant was a gas company and not a holding company, the table is misleading because it is computed upon a valuation which exceeds the total value of its property, exclusive of the fictitious items included in the capitalization of 1884. The total dividends for the 15 1-3 years from November 11, 1884, to March 15, 1900, appear as $33,345,598.50, or a little over $2,100,000 per annum. This is at the rate of over 7% on the $29,994,000 appraised value (see p. 22 *supra*). The assets increased nearly $7,775,000 during this period (p. 5032), of which about $2,206,261 came from new capital (p. 23, *supra*). Hence over $5,500,000 must have been contributed from earnings. So that more than an 8% dividend was earned, of which one-sixth was reinvested.

---

* $3,234,997.45 (p. 407) *minus* $10,405 (p. 423).

Dividends of the constituent companies before 1884. These are fully tabulated in the report of Mr. Yalden.

The New York Gas Light Company was the oldest of the constituent companies. It was created in 1823 and commenced paying dividends in 1825. In that year it paid 6.33%; in the following year 11.58%; and it thereafter averaged over 10% for the next twelve years. It paid 9% from 1839-1849 inclusive; then 10% until 1856, with an extra dividend of 10% one year; it paid 30% in 1857, 15% in 1858, 40% in 1859, 41% in 1860, 45% in 1861 and a regular dividend of 110% with a stock dividend of 33.33% in 1862. Mr. Yalden's figures after this date are too low for this company, because (unlike his tabulation in the case of the Manhattan Company) he computes the dividends upon the inflated capital instead of upon the genuine capital. Applying his figures to the genuine capital of $750,000, the dividends for the succeeding years are as follows: 1863 26.66%, 1864 40%, 1865 66.66%, 1866 120%, 1867 93.33%, 1868-70, each year, 66.66%, 1871 506.66%, and for the period from 1872 to 1884 an average yearly dividend of over 60% (pp. 5668-70).

The Manhattan Gas Light Company obtained no franchise until 1833 (p. 5089). Its first substantial contribution of capital was made in that year, and it seems to have been first ready to do business in 1836 (pp. 5612, 5626, 5630). It paid dividends averaging less than 4% for its first seven years, but thereafter averaged a much higher rate, and in 1856, beside the regular dividend, declared a stock dividend, the two together amounting to 44.17%. Thereafter the dividends ranged all the way from 9.76% in 1880, after a gas war, to 42.68% in 1876 and 1884, 46.95% in 1872, 48.78% in 1875 and 53.76% in 1873. The average dividend for the entire period from the charter of the company to the consolidation was over 25% (pp. 5642-4).

The Metropolitan Gas Light Company appears to have been first equipped to do business in 1863 (p. 5684). It began dividends in 1866, with a dividend of 8%, and as early as 1870 was able to declare one of 53%. It passed the dividend in 1873, but in other years paid at so high a rate that its average for the whole period from the date of its organization, in 1860, was over 13½% (pp. 5688-9).

The Municipal Gas Light Company commenced in 1876 and declared its first dividend in 1879; yet in 1884 it had already averaged about 14½% (p. 5701).

The older books of the Knickerbocker Gas Light Company are lost (pp. 6228-9, 6242). In 1880 it was absorbed by the Municipal.

The Harlem Gas Light Company was the least prosperous of the lot. It averaged considerably over 10% up to 1872, then reduced to 8% for four years, to 6½% in 1877, suspended for four years, paid 6% for two years, and at the rate of less than 5% for 1884 (pp. 5716-17).

Complainant's valuation as of May, 1906.

This valuation, called by the court "the capitalization of complainant for the purposes of this suit" (p. 430) is found by the court to be as stated in the following tabulation (p. 432):

Real estate	$11,985,435
Plants	15,500,000
Mains	12,636,000
Services	1,994,000
Meters and miscellaneous	4,100,000
Working capital	1,616,000
Total of tangible assets	$47,831,435
Special franchises	12,000,000
Total	$59,831,435

The court reached this result by reducing the Master's estimates of real estate and working capital, and striking out its investments in other companies, together with the item of goodwill (pp. 430-1).

We now take up these various items separately:

Real Estate.

This phrase is used in the record as describing all of the complainant's real property outside of the manufacturing plants and holders and the mains and services. It includes land, bulkheads, office buildings, buildings rented to tenants, sheds, &c. It was capitalized by the Master at $13,461,000 (pp. 160, 165, 247). The Court did not disturb any of his valuations, but disallowed certain items as not pertaining to the gas business, thus reducing the total figure to $11,985,435 (pp. 394, 422-3, 430, 432). This is merely an approximate figure, reached by a sort of compromise, the court considering that absolute accuracy was impossible and that any errors unfavorable to complainant were offset by corresponding errors unfavorable to defendants (pp. 423-4). Appellants' objections are set forth at page 436 (Assignment II).

Book Value.—Complainant's book valuations were made in 1884 by the consolidation committee. They were based in part on appraisements, in part on figures made by the officers of the consolidating companies, whose correctness was disputed (pp. 6144, 6145, 6161, 6308, 6513, 6523). They total $10,332,000. Subsequent transactions have increased the amount to $10,929,789.87 up to October 31, 1905 (Complainant's Exhibit 79, p. 5032), as certain of the original land has been sold or condemned since 1884 (p. 516), while other land has been purchased (pp. 499-500). The book value is also to be diminished by reason of the land which is still included because it has not yet been paid for, although it has been taken by the city (p. 156), and by reason of the lots disallowed by the Master and court (pp. 165, 394).

Assessed Valuation.—The Master excluded the assessed values of the various parcels as incompetent (pp. 503-9). Nevertheless, under the rule in Blease *vs.* Garlington, they went into the record. They total $8,508,100 (p. 509). The city therefore introduced a series of petitions, signed by the complainant and verified by its Vice-President, complaining of assessments as "in excess of what the property would sell for under ordinary circumstances" (pp. 2103-62). Upon the hearing there was a conflict of testimony as to these assessments, complainant's real estate experts claiming that it was the general custom to assess at less than true value, while defendant's experts considered them as often too high, Mr. Thompson stating that since 1903 at least "the assessed valuation *of the Gas Company* in almost every instance has been very high indeed" (p. 2219). This would seem to be in line with complainant's theory as to the malicious intent of the public authorities, but the assessments are incompetent, the assessors not having been called nor their expertness as valuers of real property shown. The Master's ruling to that effect is supported by the weight of authority (Flint *v.* Flint, 6 Allen, 34-37; Randidge *v.* Lyman, 124 Mass., 361; Anthony *v.* R. R. Co., 162 Mass., 60, 65; Martin *v.* R. R. Co., 62 Conn., 331, 343; Hanover Co. *v.* Ashland Co., 84 Pa. St., 279, 285; Nelson *v.* Village of West Duluth, 55 Minn., 497, 499; Lockhart *v.* Woods, 38 Ala., 631; 2 Lewis on Eminent Domain, § 448, and cases cited). The assessed valuation in the Jasper case seems to have been considered by this court because it was in the nature of an admission by the company (189 U. S., at pp. 443-4). These assessments are for local taxes, in which the State does not share. They are not made by State officers, and are not admissions of the State.

Cost of Reproduction or Duplication.—If the correct measure is to be "the amount required for complainant's gas business upon the basis of cost of reproduction,"—or its equivalent, the amount which a rival company would have to pay in order to duplicate complainant's outfit with another equally effective,—complainant has not supplied us with sufficient evidence to reach an exact figure, but has supplied us with enough to show that a large cut would have to be made in the court's valuation. The burden was here, as everywhere else, of course upon the complainant.

All of the manufacturing plants, including the "relief holders" at the respective works, would undoubtedly be located outside of the Borough of Manhattan, and connected by a tunnel; in other words, a rival company would doubtless do precisely what this complainant until very recently intended (if it does not now really intend) to do.

We quote as follows from the cross-examination of Mr. Bradley, complainant's chief engineer (p. 625):

> "Q. There is room on your vacant land in the City of New York for the construction of some other plants and some other holders, is there not? A. We might make a piece of patchwork gas plant; there is room for holders, and we might continue to patch, and keep patching up indefinitely, but it will be more expensive both to the company and to the consumer to undertake to do that.
>
> Q. You do not call 'patching up' the construction of a new plant, do you? A. When I say 'patching up' I mean patch on to some

> other works. Where the site is not desirable, or the site is too valuable, or too much surrounded by dwelling houses.
>
> Q. Then the value of the site does have something to do with the question. You say the site might be too valuable? A. Yes, in that respect.
>
> Q. What do you mean by that? A. *Because where a site is sufficient to build one plant in the City of New York, it is probably worth more than the whole Astoria plant, where there will be twelve plants* [sic],

Hence a tract in the Borough of Manhattan (the witness is evidently using "the City of New York" in its archaic sense) would be worth for gas purposes but a small fraction of its value for other purposes.

But while the manufacturing plants would be placed by any company in some location like that in which complainant intends to place them, for the reason stated by Mr. Bradley, the distributing holders would be left in Manhattan (the distinction between a relief and a distributing holder being explained at pages 656-7 by him). An economical distributing holder will have a capacity of at least 5,000,000 cubic feet. Comparing this with four of the old fashioned holders of 500,000 feet each, he says that it will "occupy the same ground space, therefore it is much more economical to build large holders than small ones" (p. 640). They have been growing steadily larger since 1884, and none have been built since then of less than 3,000,000 feet, except one small one in a suburb. Their total capacity (excluding one that has been condemned) is 29,200,000 feet (pp. 587-8). The latest is at 132nd Street near the Hudson river, with a capacity of 5,000,000 feet, finished in 1906 (pp. 541-2). The land upon which it is built cost $235,000 in 1892, is assessed at $265,000, and is valued by the Master at $445,000 (pp. 500, 509, 4896, 160). The total holder capacity is 44,270,000, but this includes all of the relief holders at the various stations (pp. 540-1). The holders up to three-quarters of the daily manufacturing capacity of coal gas plants and one-half of the daily manufacturing capacity of water gas plants must be regarded as relief holders (pp. 1639-40). The required capacity for the distributing holders is the balance of the total manufacturing capacity of the plants (p. 1640). This as to coal gas is 9,500,000 feet and water gas 41,500,000 feet (pp. 1714-5). Hence the distributing holders required would have a capacity of 23,125,000 feet, and on the basis of the 132nd Street holder site would require real estate of only $2,058,125 in value even at the Master's very high figure. To this should be added the Irving Place headquarters valued at $300,000; also the properties described at pages 1150-1, 1152-3, used for office and local purposes, valued at $182,000 (p. 159), making in all $2,540,125.

The real estate at Astoria actually cost the complainant $1,132,558.28 (p. 1646) although it is much larger than necessary to supply the gas now being made by the company (p. 577). A tunnel large enough to carry 60,000,000 feet (see p. 543) would cost about three-quarters as much as the one actually built at Astoria (p. 577), the corrected cost of which, including the lining, is $2,650,000 (pp. 1645-6). The total real estate investment for duplicating the manufacturing plants may therefore be set down at not over $3,120,000.

A liberal duplication figure would therefore be

$5,660,125, or about $6,325,310 less than the value stated in the decree herein.

Original cost. An attempt was made by Mr. Yalden, the accountant of the Gilbert committee of 1885, to ascertain the original cost of the property of the six consolidating companies. This was partially unsuccessful as to the properties in general, but practically complete as to the land, except as to the Knickerbocker company, whose books were even then missing. A computation was also made in this proceeding by Marwick, Mitchell & Co., accountants, but is based on insufficient data. Complainant made no attempt to supply the information, although it could probably have been easily done, as the true consideration was generally stated in early deeds. The Master ruled that the burden of proof was upon the defendants (p. 167).

The land conveyed to complainant by the New York Gas Light Company is described at pages 4868-71, 5877-8, and the state of the real estate investment account of the old company for each year from 1824 to 1884 is to be found in Mr. Yalden's report at pages 5661-3. There was a considerable reduction in the account in 1840, but there is no indication of any policy of writing off actual assets. Hence the reduction may be assumed to mean a sale of property. There was a gradual reduction, totaling about $27,500 from 1842 to 1847, but here again there is nothing indicating a policy of writing off. There was a good deal written off the value of the plant in 1850-2, and again in 1863-70; but nothing written off the value of the real estate. Marwick, Mitchell & Co. report, however, that during this early period there was written off in depreciation the sum of $66,803.67 which is to be added to the $366,500 at which the account stood in 1870 (p. 5873). In the following year an arbitrary appreciation was written up as part of the plan of increasing the nominal capital to $4,000,000, when the company was reorganized (see pp. 4856, 5654, 5662, 5667, 5670, 6329-30). In 1882-3 $20,000 more real estate investment was made (p. 5663), bringing the genuine amount up to $453,303.77 (p. 5873). Of this sum about $182,000 represent additions after 1860 (pp. 5662-3), although all of the present land, including the water right, then already had been acquired (pp. 6328-9). So far as appears, the works were still on the original site, purchased in 1824 at an expense of about $18,000 (p. 5661), the $453,303.77 representing partly bulkhead, partly grading and filling, partly old buildings which may now no longer exist, and partly value now duplicated under the heading of "plant." We shall assume it, however, as a maximum figure.

The land conveyed to complainant by the Manhattan Gas Light Company is described at pages 4871-5, 5874-5, and the cost is given in Mr. Yalden's report at pages 5624-8. No depreciation was ever written off. The trifling sum referred to by the Master at page 269 as representing "depreciation marked down by the Manhattan company" was off "buildings and improvements," which column seems to have included part of what is now called "plant" (p. 5624). It probably was upon property since condemned and not entering into the present calculation (compare pp. 5554, 5564). (*a*) The cost of the "East River property," now called the "14th Street property," is put down at $367,495.* The buildings left in 1884 on this parcel, exclusive of "plant" were stables then appraised at $6413 (p. 4935). The office building, sheds, walls, etc., are embraced in the "plant" (pp. 1314-17). (*b*) The cost of the "North River property", now called the "18th street property", is put down at $473,173.51. Part of this has however since been condemned by the city, and taken, and does not enter into the present calculation. The part thus taken is now valued by complainant at $1,392,500 (p. 156), and the Master disallowed another parcel of $400,000 (p. 165). The rest is valued by the Master, who substantially adopts complainant's figures, at $1,270,000 (p. 160). As complainant does not tell us how much of the original purchase price represents the real property now capitalizable, we can best approximate it by taking the ratio of $1,270,000 to $3,062,500. The figure thus obtained is less than $197,000. We have a description of the buildings on this parcel in 1884 at pages 4925-30, and of those still remaining there at pages 517-18. The only ones to be found upon both lists, and not belonging to the "plant", are the stables, appraised in 1884 at $10,552 (p. 4930). The Irving Place parcel with the buildings and improvements cost $90,203.94 (p. 5625). The total cost of the Manhattan real estate was therefore greatly overstated by Marwick, Mitchell & Co., who included much of the plant in their figures. It should be put at $671,663.94.

---

* Mr. Yalden includes the bulkheads in his statements of cost of real estate. This appears from the deed of the bulkhead from 15th to 16th street with other property, bought in 1856 for $125,000, which entire amount is set down in the "cost" column. The deeds conveying the bulkheads are at pp. 6009, 6012, 6015-16.

The land conveyed to the complainant by the Metropolitan Gas Light Company, including bulkheads, is described at pages 4880-6, 5879-80, and the cost is given in Mr. Yalden's report at pages 5679-82. Excluding the New Jersey property, which is not involved in this case, it was $848,601.36.

The land conveyed to the complainant by the Harlem Gas Light Company is described at pages 4877-80, 5877, and the cost is given in Mr. Yalden's report at pages 5710-11, amounting to $158,899.81. A piece was sold to the city in 1875 for over $23,000 (p. 5873), but its original cost does not appear, and as it may have been very small we make no deduction. The bulkhead in the case of this Company is not included in the real estate account, but as a part of the plant. It was built after 1870 (see pp. 4878-9), and was valued in 1884 at $100,000 (p. 5014). The valuation of this company was especially questioned (p. 6525); but assuming that it cost that amount, the real estate may be put down at $258,899.81. The office building is regarded as part of the plant (pp. 1337-8).

The land conveyed to the complainant by the Municipal Gas Light Company is described at pages 4875-6, 5876. Mr. Yalden does not give the cost of the real estate. Its book value was $561,462.83, which seems to have included the bulkhead (p. 5698). There is nothing to indicate that this is not a full, or more than full, figure.

The land conveyed to the complainant by the Knickerbocker Gas Light Company is described at pages 4876, 5876. Mr. Yalden was unable to state its cost or book value as the books of the company had already been lost (p. 4465). The real estate was appraised in 1875 by the President and Secretary and by one of the principal creditors of the old Union Gas Light Company at from $150,000 to $200,000. This apparently includes the bulkhead, which appears to have been then already built, although not yet fully protected by filling in (pp. 3544, 3546, 3547-8). Precisely in what way the property passed to the Knickerbocker Company does not appear, but it seems to have been through a foreclosure or judgment sale at or about the time when the other assets were sold to that company for the sum of $1,000 (pp. 5108-14). The bulkheads, piers and water rights were afterwards turned over to complainant at an estimated valuation of $115,000 (p. 5697). It would appear from the above facts that a liberal estimate of original cost would be $250,000.

The original cost of the real estate purchased in 1884 by complainant from the original companies may therefore be estimated as follows:

New York Gas Light Co......	$453,303.77
Manhattan Gas Light Co....	671,663.94
Metropolitan Gas Light Co....	848,601.36
Harlem Gas Light Co.......	258,899.81
Municipal Gas Light Co......	561,462.83
Knickerbocker Gas Light Co..	250,000
	$3,043,931.71

There may be further items that should be allowed if complainant supplied us with better information, but they would be small, and undoubtedly with all the evidence attainable, especially from the consideration clauses of the old deeds, the total would be greatly reduced.

After the consolidation the present company purchased various properties at a total cost (after deducting a parcel in New Jersey) of $651,396.18 (p. 5880). It is also credited by Marwick Mitchell & Co. with certain real estate expenditures, some of which are doubtless proper for the present purpose; but no such item appears in the testimony as the "New Shop, 66th St." (see pp. 5559, 1147, 1282). It would seem to be something subsequently taken down. The nature of the "Sundry Expenditures" allowed by these accountants does not appear, but allowing everything but the "New Shop" and deducting the item of "Assessments Recovered" (p. 5880) we reach a net amount representing cost of "real estate" since 1884 of $1,271,626.61. On the other hand, four parcels of land have been sold by the company (pp. 5874-5, 5877, 5878, 5879-80). (*a*) The first of these sales was of a part of the plot bought in 1855 for $92,000 (see pp. 5553, 6012-14). The part sold consisted of one half of the forty street lots marked on the map opposite page 6014. The other half were retained, together with the four corner lots and the fourteen other avenue lots. Reference to the tabulation at page 5874 will show that the proportion of the 1855 cost price represented by the lots sold was as $130,000 to $403,000. Hence the cost of the lots sold was about $30,000. (*b*) The appraised value in 1884 of the lots sold out of the Harlem parcel was over 12% of the total land and bulkhead value (p. 5877) so that its original cost was over $31,068. (*c*) The appraised value in 1884 of the bulkhead and appurtenant rights, partly transferred to the city out of the New York company's parcel, was over one eighth of the total real estate value (p. 5879) so that its original cost was over $57,912. The bulkhead itself was taken away (pp. 2278, 4432) which is regarded as a great injury by the company's engineer (p. 647). It would therefore be fair to deduct $50,000 for this transaction. (*d*) The portion sold out of the 62d St. parcel was over 52½% of its 1884 appraised value (pp. 5879-80). The parcel originally cost $212,993.14 (p. 5679). The part sold therefore originally cost over $111,670.

Substracting the total estimated cost of these four parcels, or $222,758, from the real estate expenditures since 1884, the net addition in cost since that date is $1,048,868.61.

A further deduction must be made, because the court has disallowed certain items included in the Master's valuation, namely, the "land leased," "land vacant" and "land unimproved" (see pp. 161-4, 165-6, 394). The record is obscure as to the details of this deduction, but an approximate figure can be reached by the method above used. The deduction lowered the Master's figure from $13,861,000 to $11,985,435, taking off $1,875,565, or 13.53%. A sufficiently close approximation to the original cost of the "real estate" for the purposes of this appeal is therefore made by the following table:

Purchases before 1884 ...	$3,043,931.71
Purchases since 1884	1,048,868.61
	$4,092,800.32
Deduct 13.53%, or	553,755.84
Cost of "real estate" ...	$3,539,044.48

The "unearned increment" which has been allowed by the court is therefore about $8,446,000.

The Master's basis of valuation.—As to bulkhead values the Master closely followed Mr. Greene (pp. 158, 160) and as to other values Mr. Preiss (pp. 422-3). There is a radical difference in character between the bulkheads and the other properties. The former can be sold as they are and bring nearly or quite full value for land and improvements. The latter can be sold only if the plant be scrapped, and the improvements are as likely to diminish the price as to increase it.

Mr. Greene's method was, in the absence of other indications of value, to estimate the rental value of the bulkhead and capitalize that at five per cent. (pp. 1257, 1263, 1265, 1267, 1270, 1272-4).

Mr. Preiss states his basis of valuation as follows (pp. 1295-8):

> Q. Your valuation of the land is what the land would be worth if those buildings were removed? A. The land value without any buildings on.
>
> Q. How much does this building on there depreciate the value of the land as it stands to-day? A. That I cannot tell you, because I do not know the value of the buildings.
>
> Q. I know; but if you valued these as lots, you would have to remove the buildings? A. Yes.
>
> Q. To get what they would be worth without any buildings on them? A. In that case you would have to give a much higher figure probably. I give you the value as it is to-day, provided possession of the land is given. What you do with the buildings—that is a matter that does not enter into my calculations at all.

Q. You are valuing what the vacant plot of ground would be worth in that particular locality? A. This block of ground would be worth in this locality, yes.

Q. Without any buildings on? A. Without any buildings on.

Q. Now, if they were to sell them, in their present condition, they would have to pay something for taking away these buildings, would they not? A. They might use the material. *There is nobody else that would buy these buildings.* That is a matter that I cannot judge about, what they would do with the buildings in that case.

Q. I am asking, what would be the effect on the land having those buildings on there? A. It would be worth just as much to-day as it is, because nobody will buy the land with the buildings on. They would buy the land for the purpose of improving, and not with the gas houses on.

Q. Therefore, for the purposes of sale those gas houses on there are a detriment, are they not? A. The gas houses are a detriment, certainly.

* * * * * * *

[p. 1297] "Q. Then you have not valued, as you have just testified, the land as it would be with the buildings all removed? A. I have, but conditionally. For instance, if a man were to come and buy that whole plot to-day and the gas houses were to be removed, my figures would be altogether too low, but if a man would come along and buy only a portion, not objecting to the presence of the gas houses, or what might be left of them, then my figures are correct.

Q. Then, as I understand it, your figures are based on a partial removal of the plant and with the gas plant in operation? A. To some extent, yes, sir.

Q. And it is not the value of the land with the building entirely removed, as you have

> testified here a few moments ago? A. It is, conditionally, but not simultaneously, not the whole block.
>
> Q. As I understand it, your value of the land is a progressive one; as the buildings are torn down your value attaches, and when the buildings are all removed then there would be a still greater value? A. There would be on account of the whole neighborhood being benefited and attaining an entirely different character. * * * [p. 1298]. I believe that you could get 15 per cent. at least more for the property."

Mr. Wheelock, complainant's other real estate expert, also testified he was "only concerned in the land alone," and was valuing it at "what it would sell for as vacant land to-day" (p. 1154). Mr. Bradley, its chief engineer, also testified to the worthlessness of the plant as an increment in value to the land (p. 1703), saying in defense to his valuations in reports to the tax officers (pp. 1719-20)——

> "I know perfectly well that a block of ground with a gas holder on it is worth less than it would be with the gas holder not on it, because whoever purchases it would have to remove the gas holder.
>
> Q. If it has a gas manufacturing plant on it, anyone who purchases it will have to remove that, won't he? A. Exactly.
>
> Q. And so to that extent, you think the existence of the plant depreciates the value of the real estate? A. Within certain limits.
>
> Q. What limits would you say? A. I suppose the assessed valuation would be less; the actual valuation might be the same.
>
> Q. Well, then you mean that the existence of a gas plant on property is valued at a depreciating factor for taxation purposes? A. Yes, sir.

> Q. But not for any other purposes? A. Not for any other purposes; that is what I gathered from the counsel's instructions.
>
> Q. And what counsel was it that advised you? A. The general counsel of the company.
>
> Q. Mr. Sterling? A. Mr. Sterling."

So Mr. Carter, complainant's secretary, testified that its tax report was (p. 1243)——

> "A. Made up on the theory that the property of the company occupied by its gas plants sold under ordinary circumstances would practically bring nothing more than the value of the land. It is pretty well established by our own experience and by other people who have occasion to sell property of that sort.
>
> *Mr. Burr.*—I move to strike that out.
>
> *The Master.*—Strike it out.
>
> *Mr. Mathewson.*—Cannot that stand? Isn't that fair to state our experience?"

Thus it will be perceived that the Master has valued the land at a sum which is only sustained by the evidence if he gives no value to the plants; yet he gives the plants their full value.

The Master's figures.—Contrary to what we contend to be the rule of this court, the Master treated the case as if it were to be tried *de novo*, as if the state had never passed on the matter at all, and therfore followed the witnesses who impressed him the more favorably, although all the witnesses on both sides were qualified experts and none of them were impeached. The court considered the burden to be as usual upon the side excepting to the Master's report, thus allowing him to outweigh the legislature (p. 391). The difference in valuation between the two parties was about $3,200,000 (p. 157). The question involved is an important one. Our contention being that in such a case the action of the state is conclusive unless the proof to the contrary is so strong that failure to find in accordance therewith would afford a presumption of unfair-mindedness in the tribunal to which the decision is confided, we shall discuss briefly the grounds upon which the Master states that his decision was based, believing that we can show him to have read the testimony with rather slight care.

We take up first the grounds stated at the top of page 158.

Standing and Qualifications of the Various Witnesses.—Complainant's witnesses were Messrs. Wheelock, Greene and Preiss. The City's were Messrs. Thompson and McHale. The State's was Mr. Wells.

Wheelock. His qualifications are stated at pages 1136-8, 1171-4. He was thirty years old, and had been in the real estate business over eight years, of which about five years were spent in work such as would qualify him for testifying. During these five years he had had valuable experience, being an employee and afterwards a director of one of the most important real estate concerns in the city. He had been a commissioner in a number of condemnation proceedings, and had acted for many of the most influential and powerful interests. He was testifying for a fee yet to be fixed (p. 1195).

Greene. He was a civil engineer, called to prove waterfront values only. He had been Chief

Engineer of the Dock Department of the old city from 1875 until 1898, and as such in constant conference with the Commissioners of Docks in fixing rentals. This was his only experience, but he had also been called to testify in other cases as to waterfront values, and this was his only direct experience, but he had "some knowledge of the very few sales there are" of such property (pp. 1248-9, 1252-3, 1273).

Preiss. He is spoken of by the Master as "a real estate dealer and appraiser of many years' experience," in contradistinction to the City's witnesses, who are treated as persons of less experience outside of judicial proceedings (p. 158). He was sixty-five years old, and had had thirty-nine years' experience. He describes his own business as "Buying and selling, exchanging, appraising, procuring loans, testifying in courts and before Referees" (p. 1275). Being asked to specify, however, he disclosed no buying, selling or exchanging (pp. 1275-6):

> "Q. Will you state some of the clients for whom you have acted in appraising real estate, or purchasing or selling? A. I have been and still am employed by the elevated railroad companies and *have testified for them in about four hundred and sixty cases* on the different lines, and especially on the easterly lines, Third Avenue, Second Avenue, First Avenue, 23rd Street, 34th Street and 42nd Street. I have been employed very extensively by the New York Central & Hudson River Railroad in appraising all their holdings on Manhattan Island—I have the papers here—for the purpose of testing the tax assessments; went over that twice. All of their property on the westerly side. I have here the map.

> Q. We do not care for the map, just give the names? A. Then I have been testifying in insurance proceedings for the New York Life Insurance Company; I have been testifying and also appraising property for the Ayer Estate in Boston. I have been appraising and testifying for the New York Edison Company, their holdings in the city; in condemnation proceedings of the Bellevue Hospital site, and extension; condemnation proceedings for the Chanler Estate, 14th to 15th street, between 10th Avenue and the river. I have been appraising for John Pierpont Morgan; I have been appraising for different members of the Jay Gould family, in a variety of instances.
>
> Q. And for the Gould Estate? A. Yes."

His own counsel dropped the matter here, but it was taken up again on cross examination (p. 1284):

> "Q. I understand you to say that you have appraised real estate for purposes of testimony five hundred times? A. Yes, sir.
>
> Q. And four hundred and sixty of those were in elevated railroad cases? A. Well, I am permitted to tell you, I have appraised and testified on Fourth Avenue for the New York Central and Harlem Railroad Company and the elevated, I put them altogether, as a rough guess, perhaps it is not five hundred and not five hundred and fifty; it would be between that, between five hundred and six hundred anyway, five hundred and fifty at least."

and again (pp. 1286-7):

> "Q. How many years since you sold property on Third Avenue? A. That I cannot tell you. It may be ten years and fifteen

> years that I have not sold anything on Third Avenue in that section. Most of my time has been taken up *with all this*, and I am all alone.
>
> Q. Most of your time has been taken up in preparing these books that you have prepared? A. Well, how could I prepare my cases and get through with it *for fourteen years* if I didn't get posted? It is pretty hard work to be posted.
>
> * * * * * * *
>
> Q. I understand from your testimony that for the last ten or fourteen years your business has been that of an appraiser rather than as a broker? A. No, well, I have been selling property whenever I had the time to do it.
>
> Q. Your time has been so engaged in making appraisals that you have not had much time to sell? A. I have not been extensively engaged in selling property for the last few years, that is true. *I have not had the physical time to do it.*"

Thompson. He was forty-two years old and had been in the real estate business in New York for fourteen years, coming from Nashville. His work had been about equally divided between appraisements and actual transactions. He had bought and sold property all over the island (pp. 2176-7). He had been retained by the city as expert in many important cases, including *certiorari* cases (p. 2163); and had also appraised for many large estates and corporations which he named (pp. 2163-4). He was retained also in over three hundred *certiorari* cases on the other side, to contest assessments (p. 2189). Among these were a number for this complainant, the Consolidated Gas Company, concerning property here under consideration. In all of these he was retained to appraise, report and testify. He had reported his appraisements to the complainant, and had actually testified on its behalf in half or two-thirds of the cases, testifying for it, indeed, to lower values than are now given by him, as there has been an increase in value meanwhile (pp. 2216-20). The cross-examining counsel seemed to think that there was something inconsistent in his testifying a second time to the truth of his appraisements, after the interests of the respective parties had been reversed; that consistency would require him to follow the custom of complainant's officers, and have two sets of valuations. The Master does not advert to this, and it seems to us on the contrary that an expert should feel bound in duty to testify the second time under such circumstances, when called upon by the other party to do so.

McHale. He is concededly considered to be a competent expert (pp. 3993-4). He is the superintendent of real estate of the United States Mortgage and Trust Company, appraising property to be sold by it as trustee and looking after its loans, leases, etc. He has been twenty-one years in the real estate business in New York City, and is an appraiser, but not a broker. He gives a partial list of his clients (pp. 2221-2). Like Mr. Thompson, he had appraised and testified for this complainant in its *certiorari* proceedings concerning property here under consideration. In some he had advised a discontinuance of the proceedings. In some his present figures were very much higher than those which he had given to the company on the appraisement (pp. 2234, 2247-9, 2251-

2). He was not cross examined upon his qualifications.

Wells. He had been a real estate auctioneer, broker and appraiser in New York City for thirty-three years. He had been a member of the Board of Taxation and Assessment for nearly three years under Mayor Strong, and its president for two years under Mayor Low (pp. 3066-7, 3127). The Master refers to him as not engaged in as extensive current transactions as those in which Wheelock was engaged; but this simply means that the state's counsel made no attempt to have him enumerate his clients on the direct, and that complainant's counsel considered it wise not to cross-examine upon his qualifications. Quite possibly he could not have enumerated as many extensive current transactions as Wheelock. A clerk of thirty in a large corporation law office is often engaged in more extensive current cases than a leader of the bar at sixty.

Degree of care devoted to their investigations and familiarity with general real estate conditions. —These phrases of the Master at the top of page 158 are partially particularized by the following remark on the same page concerning Messrs. Thompson and McHale, the city's experts:

> "Their cross-examination disclosed numerous instances in which they disclaimed knowledge of *actual sales* in the immediate vicinity of the parcel under consideration, *notwithstanding such sales were matters of public record.*"

and by the following remarks at pages 158-9 in discussing the evidence of Mr. Wells, the state's expert:

> "Like the other witnesses called by Defendants, he was not familiar in many instances with recent sales of property in the immediate neighborhood of the particular parcel under consideration."

The italicized clauses in the first of these passages show that it was intended to refer, as to Mr. Thompson, to his alleged failure to bring with him to the trial any memoranda of certain sales claimed by complainant's counsel to be material. At pages 3990-2 a list of these sales is read to Wheelock, who answers that they were reported in the *Record and Guide* or *City Record,* as the case may be. As these pages read, they certainly look black for Thompson. Referring back to Thompson's testimony, the blackness fades out.

Premising, it is to be noted that all of the questions asked of Wheelock might have been objected to, and upon citation of authority would doubtless have been excluded, for the prices and circumstances of the sales of properties not in suit raise collateral issues, and can be asked about only upon cross-examination (Kerr *v.* South Park Commissioners, 117 U. S. 379; Matter of Thompson, 127 N. Y. 463; Jamieson *v.* Kings Co. El. Ry. Co. 144 N Y. 322). Witnesses, however, are often cross-examined about sales of particular pieces of neighboring property, although they cannot be asked about them by their own counsel if the opposing counsel is alert, and hence they generally take to court with them memoranda of the transactions upon which they have based their appraisements, and of those which they anticipate will be relied upon by the other party. Such an expert as those produced by the defendants keeps a set of real estate maps on which his clerks mark down every reported or known sale, with the prices when ascertainable (the latter being a minority, as the considerations stated in deeds are now generally either nominal or fictitious). When retained to appraise a piece of property he examines it, and also goes over the recent transactions in the neighborhood as shown upon his maps. When called to testify, he directs his clerks as to what class of transactions shall be transcribed for him to carry along.

Complainant's counsel at pages 3990-2 represents Mr. Thompson as having had no record of any one of seven different sales reported in the publications mentioned. Reference to his testimony fails to disclose any reference to first and fifth of these transactions. The second, a sale six years old, he had at his office, but had not brought it along. The third was missed by the fault of the examining counsel himself, who named the wrong street. The fourth the witness had considered, although he could not recall the price while upon the stand. The sixth related to a sale of two lots in 1901 at $8,000 each. He had brought along a note that one of them had sold in 1900 and again in 1901, and that the former sale was for $8,000. He regarded the sales as irrelevant, for reasons stated by him. Of the seventh he had no memorandum. It was a sale of an inside avenue lot at $10,000. Its bearing was upon an adjacent avenue lot of similar character. This he had appraised at $10,000, *and both of complainant's experts had already testified to the same figure about it* (pp. 1166, 1305, 2210, 3992). Is there any reason why he should have brought any memoranda to sustain this particular appraisement?

As to the other transactions about which Mr. Thompson is stated by complainant's counsel at pages 3990-2 to have been questioned, he had a note of the first. The second he was not asked about, because counsel had the wrong figure on his notes (compare pp. 2771, 3137). The third and fourth were not publicly known, and counsel learned of them through confidential information of Wheelock's.

Mr. McHale was asked about no particular transactions except with relation to bulkhead property. He testified that the sales of this class of property were so few, and the circumstances surrounding each sale so peculiar, that he did not base his testimony upon them or consider them of any value, and showed but moderate ability to state from memory the exact figures, but based it on capitalizing rentals (pp. 2260, 2269). He thus took the same course as complainant's expert Greene. He was extensively cross-examined as to sales of particular pieces of property, and also about a class of transactions upon which complainant for obvious reasons (as they carry generally large figures) much relied upon, but which are not universally respected, namely, awards of commissioners in condemnation proceedings instituted by the city. Complainants made a particular point of one of these, namely, a supposed award of $900 per foot for a bulkhead at 22nd street. The nearest property here in question is at 42nd street, a mile away. Mr. Greene thought such an award had been made (pp. 1254-5). Mr. McHale did not know of it and doubted it, but thought it too far away to be important (p. 2261). Mr. Thompson denied the fact of the award, having searched the record and been unable to find it (pp. 2280-1, 4011). He also said that it would not modify his opinion if it had been made, as the property could not be made to pay on that basis (p. 2601). Mr. Wheelock testified that such an award had been made (p. 3987), thus making a conflict of testimony. The best evidence was not produced. Is the Master justified in condemning the city's witnesses for not searching independently for a paper which both of them thought immaterial, whose existence is not proved, and which if it existed was a matter of record in the office of their own counsel, so that they had a right to rely on him to inform them about it?

Taking up now the case of Mr. Wells, he is stated in five questions at pages 3990-2 to have been unable to find upon the notes that he had brought with him to the trial any record of certain transactions reported by the *Record and Guide.* His testimony fails to disclose any reference to the transactions mentioned in the first, third or fourth question. The fifth related to a portion of the city, his notes of which he did not bring with him to the trial. As to the second, the facts were as follows: The property as to which he was testifying consisted of inside lots on 20th, 21st, and 22nd streets. He gave values of $7,500 per lot, based partly on a sale of 426 East 19th street in 1905 and a sale of 508-10 East 19th street in 1906. The sale which he did not bring with him was an earlier and therefore less important one, of 436-8 East 19th street in 1904, for $8,050 a lot. He had had the sales of 1904, 1905 and 1906 culled out of the records, but this one had failed to be noted (pp. 3140-1).

As to the other transactions about which Mr.

Wells is stated by the examining counsel to have been questioned, the first, second and fourth he had, but correctly said that the reported price was nominal. As to the third he was not asked. It does not appear that the fifth, in which Wheelock was concerned as broker, was publicly known.

Whether complainant's witnesses would have had a larger proportion of transactions at their tongues' ends if cross-examined on this line, nobody can tell. They were not put to the test. Quite possibly they would have had their ammunition nearer at hand. Cross-examinations of this kind are more valuable as exhibitions of skill by counsel than for elucidation of the issue. It is more a test of preparation by counsel than of preparation by witnesses; but a first-class real estate appraiser, whose judgment is highly relied upon by dealers, seldom cuts as brilliant a figure in expounding theories by use of collateral transactions on the witness stand as that cut by a professional witness like Preiss or a capable and active young assistant like Wheelock.

Demeanor Under Cross-examination.—This is a thing which is not apparent on the record. The remark has been attributed to the late Mr. Justice Blatchford that in print all witnesses are six feet high. But within this court's rulings as to the burden of proof, can a state statute be declared unconstitutional upon a Master's report as to the impression made upon him by the demeanor of paid experts?

Assessed Valuations.—Having already, and properly, excluded these from evidence (pp. 31-3, *supra*), the Master actually used them in making up his report, and to the extent of discrediting the city's witnesses because "in a dozen or more instances their valuations approximated, or were substantially below," the assessment (p. 158). Yet these very assessments were being contested by complainant, who had retained these very witnesses to testify that they were too high, having first itself, upon oath of its Vice-President, filed petitions to that effect (p. 32, *supra*). Yet the city charter requires the assessments to be at full value (pp. 4918-19), and complainant is here complaining that the public authorities do not treat it fairly.

Plottage.—The Master also discredits the defendants' witnesses because they hold a different theory from complainant's, which he considers to be the proper and prevailing one as to "plottage" (p. 159). Perhaps upon this point it is sufficient to say that one of the most experienced and skilled judges of the state Supreme Court has since decided that the complainant's theory of plottage was wrong (Matter of City of New York, 56 N. Y. Misc., 306, 310).

Plant.

This term includes the manufacturing and distributing system, except the mains, services and meters.

Book value.—This also is based upon the appraisement of 1884, with subsequent variations which we shall describe when we come to state the facts as to Repairs, Renewals and Depreciation. It was thus increased from $12,182,491.41 in 1884 to $16,087,428.72 on October 31, 1905 (complainant's Exhibit 79, p. 5032), and $16,319,811.69 on June 30, 1906 (p. 754).

Tax reports.—Complainant's valuations of its plant in its verified reports to the public authorities, and its explanations thereof on various occasions, are as follows:

On May 17, 1904, nearly a year before the investigation by the Stevens committee, Secretary Carter presented to the Corporation Counsel a statement giving the total valuation of the gas works excepting street mains at $8,593,694.54 (p. 1033). He was examined upon this figure in connection with an application for revision of the taxes of the complainant, and testified as follows (pp. 1034-5):

> "Q. What does that represent? A. The valuation placed upon the plant by the Chief Engineer.
>
> Q. Who is he? A. Mr. William H. Bradley.
>
> Q. Is this supposed to include all your machinery or gas tanks, everything which constitutes the plant for the manufacture and transmission of gas? A. Yes, except the mains.
>
> Q. Everything except the mains? A. Except the mains and what would be classified as personal property."

On November 30, 1904, complainant filed according to law its written report to the State Board of Tax Commissioners. This report was verified under oath by the same gentleman as follows (p. 5074):

> "R. A. Carter, Secretary of the Consolidated Gas Co. of N. Y., being duly sworn, deposes and says that the foregoing statements have been compiled from the books and rec-

> ords of this company, and after careful examination of the same, declares them to be a true, full and correct statement of the property of said company and the value thereof at the close of the year ending June 30, 1904, as well as of its financial condition and affairs on the said date, to the best of my knowledge and belief."

The prescribed form contains a schedule headed "Schedule D, Statement of Assets and Liabilities, June 30, 1904." The first item entered herein is "Real Estate and Plant $19,673,075.42" (p. 5068).* Mr. Carter was examined the following spring about this item by Mr. Hughes, counsel to the Stevens committee, and testified as follows (pp. 859-61; we omit what did not form part of the Hughes examination).

> "Q. Will you please take the item in that report, the first item of real estate and plant, $19,673,075.42. Now, that is a statement of the value of the real estate and plant of the Consolidated Gas Company to June 30, 1904, is it not? A. That is exactly what it is.
>
> Q. That is exactly what it is? [A.] As near as we could determine.
>
> Q. That is what I am asking you? A. That was the value of the property at that time.
>
> Q. That's it exactly. In other words when you came to make up the report to the State Commissioners for the year ending June 30th, 1904, you sought to ascertain fairly what the value of the property of the company was? A. Precisely.
>
> Q. And you took the various properties of the companies with which you were familiar and you fixed what you decided to be the fair value of the properties and stated these values in your report? A. Precisely.

---

* The plant valuation included herein is $8,456,595.71 (p. 5276).

Q. And under the head of Real Estate and Plant you put down the figures $19,673,075.42 as the value of the real estate and plant of the company? A. Yes, sir.

Q. Before you get to that as suggested, is that the value that was arrived at after consideration of the matters by others besides yourself? A. That is the case, Mr. Hughes.

Q. And with whom did you advise in making the determination of value? A. The engineers of the company.

Q. Who were they? A. Mr. Bradley and Mr. Woods.

Q. And who else? A. The Assistant Secretary who has charge of the distributing system of the company.

Q. Who was that? A. Mr. Simpson, Mr. C. C. Simpson.

Q. Anybody else? A. I think if we were in doubt I would have consulted with the President from time to time with regard to the figures that went into these reports.

Q. Yes, sir, and probably with other counsel? A. Probably—always—always with counsel. Reports are always submitted to counsel and fully approved before being filed.

Q. You sought in this way to get from all persons connected with the company who had expert information as to the value of the property what would be a proper valuation thereof on that day? A. Yes, sir.

Q. And the amounts which are stated in this Schedule B that you have before you, and that report of 1904, were those arrived at and stated? A. Yes, sir.

Q. And with the concurrent judgment of these various men familiar with the facts? A. Yes, sir.

Q. Taking then the first item of real estate and plant $19,673,075.42, and taking that as the value thus arrived at of the real estate and plant, state whether or not that covered

> all the real estate and plant of the company; that is to say, the land, the buildings thereon, and stoves, the holders and various apparatus which are connected with your business of gas making and apart from the items which are separately mentioned later on, such as mains and services and meters, stoves and personal property; is that correct? A. That is correct."

The assets contained in Schedule D aforesaid, after deducting the items representing Bonds, Obligations and Stocks of other companies, Accounts and Bills Receivable, Cash on Hand, Unclaimed Dividends, Metropolitan Fund, and Contracts, Rights, etc., foots up $27,298,576.50, and Mr. Carter was further examined by Mr. Hughes about this total (pp. 1007-17). The witness stated that Schedule D purported to be "a statement of the assets and liabilities at their actual value as nearly as we could ascertain it," and further testified on examination by Mr. Hughes as follows (pp. 1014, 1016):

> "Q. * * * I am anxious, however, to ascertain, and I believe you have testified that the figures in there are the values on June 30, 1904, of that property. Is that not so? A. That is true.
>
> Q. That is true? A. Yes, that is the value, as we estimate it."

* * * * * * * *

> [p. 1016] "Q. It was what you believed it to be worth? A. Yes, sir.
>
> Q. That is what we mean by value, is it not? A. Practically.
>
> Q. What we mean by actual value? A. I only want to make it very plain, Mr. Hughes.
>
> Q. When you were trying to make up this statement, in consulting the other gentlemen

> who knew about the matter your effort was to make a statement of the actual value, was it not? A. Yes, sir.
>
> Q. And you believed that was the statement? A. We believed that, sir.
>
> Q. And that statement of the real estate and the plant—— A. Always.
>
> Q. The meters and services and everything outside of the cash assets and securities foots up $27,289,576? A. Yes, cost of reproduction, less depreciation."

Further explaining, the witness drew a distinction between "estimated actual value" and "worth", the latter including "its use, application, good-will of the people with whom the company was doing business, its relation with the public. That would contribute somewhat to its worth, but that would not figure in its value on the basis of cost of reproduction, less depreciation. * * * Those figures you are showing amounting there to $27,000,000, represented our estimated value of this plant on the basis of the cost of reproduction less depreciation" (p. 1017. In this last sentence the word "plant" is used as including also the real estate, mains and services, material and supplies, meters, stoves and other personal property. See Schedule D, p. 5068).

After the report of the Stevens committee, on the following November 30, complainant filed its next annual report, likewise verified under oath by Mr. Carter with the same form of verification (p. 5063). The figure given for Real Estate and Plant in the same schedule was $19,678,612.76 (p. 5057).

This report was filed after the proceeding before the Gas Commission had already commenced (see p. 5). In his testimony before the commission Mr. Carter testified that his memory had been refreshed by talking to Mr. Bradley, and that he had obtained this valuation by "taking one-half of the value of the plant as representing the value of the holders, plus some scrap value of the plant which would be dismantled in connection with the removal of the [*sic*] Astoria" (p. 1036). The president and Mr. Woods were not called, but Mr. Bradley, being recalled on behalf of the company, testified as follows (p. 1702):

> "A. Mr. Carter applied to me for a figure, and I took advice with our general counsel on the subject and was informed as to what the law was in the case. Acting upon that advice I simply cut the book value in half and added to that—the absolute figure I cannot give you; I have not got them—but I added to that, if my recollection serves me, between $600,000 and $700,000 as the scrap value of the plants to be dismantled, understanding that we were going on with our Astoria business and that within a very short time practically the works would be dismantled and simply scrapped, as we had no market for them. The resulting figure from that, half of the book value and the six or seven hundred thousand dollars that I added, was the figure that Mr. Carter used in the tax report."

The Master refers to the explanations as "not altogether satisfactory," and (disregarding Mr. Carter's oral testimony on the Hughes' examination) says that tax reports "are, in the case of large corporations, ordinarily prepared by counsel" and "in the nature of pleadings, and are so drawn as to support the theory on which it is hoped to secure the most favorable results" (which in the case of large corporations, in the

Master's opinion, apparently permits their being disregarded where they would not lead to the results aforesaid), and he adds "Under these circumstances, when, as in the present case, it appears that taxes are being constantly contested, it must very commonly occur that views are expressed on behalf of the corporation more or less inconsistent with the valuations it would put upon its property for purposes of sale, condemnation or such an action as the present" (p. 216).

He therefore brushes these admissions aside as "of no particular value as evidence", because on his theory the valuation of the plant is to be "its structural value" (p. 216); and he thinks that the state violated constitutional rights by allowing for the depreciation which the complainant itself has continued to claim in its tax reports based upon an intended early removal to Astoria and consequent early scrapping of the plant.

Value as Real Estate.—Like most manufacturing plants, this plant is conceded to add little or nothing to the cost of the land (see p. 215; also *supra,* pp. 43-6).

Cost of reproduction or duplication.—If the measure of value of the present plant is to be the amount which a rival company would have to pay in order to duplicate complainant's outfit with another equally effective, we have no sufficient information about it. The state took the objection that this should be the point of the inquiry (p. 1515) but the objection was overruled, and complainant proceeded on the same theory as in the case of the land values, as will appear.

We can not take the cost of the new Astoria plant as a measure, because that is expected to do much better work, by saving by-products and otherwise. While it is more costly per thousand cubic feet of estimated output, there is no present means of estimating the savings to be effected by such matters as "better equipment," the manufacture of cyanogen and other "by-products that have never been recovered by any gas company in this country," the placing of machinery "that is not in any other plant in this country" (Bradley, pp. 579, 642, 1722, 1732) which will make the Astoria plant worth more in proportion to its cost.

The present plants on the other hand, in the language of Chief Engineer Bradley, "are too much cut up into small units that are impractical to be placed on a modern up to date works. Everything is too small" (p. 1718). The coal gas plants have retorts "that are small, they require a great deal of labor, and the use of a great deal more coke under the benches to keep them going than the type of furnace they have in the Bronx" (Wood, p. 2339; Carter, p. 4525). These plants, in Bradley's words, are "out of date and somewhat antiquated" (p. 1732). Their apparatus is not "inefficient; simply comparatively inefficient" (p. 1733). It requires more labor and "brings up the cost of production" (p. 1733). To extend them would be "patchwork" (p. 626). As to the 14th St. station, "Nobody else would want to buy it for a gas manufacturing plant" (p. 1738).

Various figures have been named as representing standard cost of plants per thousand cubic feet of maximum daily output, as $400 per thousand for coal gas and $200 for water gas (Addicks, pp. 1639-40, Bradley, p. 1721), or $340 and

$123 respectively, excluding the holders (Mayer, pp. 1455-6, 1458-9) or 30 cents per thousand cubic feet of annual sales (Humphreys, pp. 1684-5) but these are exploded by actual experience. The capacity of complainant's own works, coal and water gas together, was increased 31,500,000 feet at an expenditure of $5,132,620.41 (p. 1716), or at the rate of less than $165 per unit (and see as to 21st St., pp. 538-9, 1715). It is plain on reflection that there must be a great variance between different works, and that there are many parts of the works that do not vary in expense in the ratio either of daily output or of annual sales.

Original cost. Our assignments of error do not make this question material in relation to the plant.

The Master's basis of valuation. He mainly follows the figures of Mr. Mayer, although Dr. Humphreys makes depreciation greater (pp. 1801-2), and it is therefore important to ascertain the theory upon which they are based.

Mayer testifies on cross-examination as follows (pp. 1347-8):

> "Q. And you computed then that works that produce one million feet are worth so much, and works that produce five million are worth five times as much, is that the way you did it? A. No, sir, I did not.
>
> Q. Well, how did you? What figure did you use as a multiplier? A. I figured on each and every apparatus and each and every connection throughout the entire works, separately, and applied as a factor the particular cost of each apparatus."

And again (pp. 1394, 1396):

> "Q. Then, as I understand it, you are not attempting to find the capital of the company that was invested in the plant, but what someone would have to pay if they got you to build them a plant somewhat similar to this to-day, is that it? A. That is the idea exactly, with the exception that it would be *an exact duplicate of the plant as it exists to-day.*
>
> Q. If, however, you were going to build a coal gas plant to-day of a capacity of 9,500,000 cubic feet per day, *would you reproduce this identical plant? A. I would not.*
>
> * * * * * * * *
>
> [p. 1396] Q. I understand that if you were to produce a plant to-day which would produce the results that this plant does, that you would not build this kind of a plant; is that right? A. Not if I were asked to build a plant with the total maximum capacity as it exists to-day.
>
> Q. And you could build such a plant cheaper could you not than the estimate which you have given? A. No, it would cost more, but it would be better. It would include a great many apparatus which these plants do not include.
>
> *Q. But your result in the cost of gas produced at that plant would be very much less, wouldn't it? A. Yes."*

And again (p. 1460):

> "Q. If you were called upon to construct a plant for the use of the Consolidated Gas Company, to-day, would you scatter the works around as they are here? A. No, sir, I certainly would not.
>
> Q. The works divided into five manufacturing stations require a much larger investment in plant, do they not, than it would to

bring them together into one station? A. Decidedly.

Q. And also the cost of operation is very much more in the scattered stations than it would be in the one station? A. Yes, sir.

Mr. Mathewson.—This witness has not operated plants. I don't think he should be asked that."

And again (pp. 1481-2):

"Q. Now, as I understand you, in examining the 14th and 42nd Street plants, for instance, you did not take into consideration whether they were commercially or economically worth replacing, did you? A. No, sir; I only figured on what I found there.

Q. That is what it would cost to reproduce that apparatus, whether or not it was commercially and economically an apparatus that would be built to-day? A. I paid no attention to that whatever.

Q. And did you take into consideration whether gas could be reproduced at those particular plants at $1.50 or 50 cents per thousand cubic feet? A. I did not consider it at all because it had no bearing whatever on the apparatus as I found them.

Q. As you valued it? A. As I valued it.

Q. Now where a plant was of an old type which, owing to the advance in the science of gas engineering, would not be built to-day, did you allow anything for depreciation by reason of that fact? A. No, sir."

And again (pp. 1495-6):

"If I had to build that plant over again new, of course, as I said, I would construct it differently, for the full capacity that it is now. For that particular district where that plant was originally intended to supply gas, the location was very favorable.

Q. Would you say, that taking all these plants together as a whole, they are up to date construction?

A. I have said the other day that if I was to construct them new for full capacity, I would construct upon different lines than those laid out, which is due to the fact that they were built in small units at the time and added to from time to time until they finally reached their present capacity, but if built for the whole capacity the basis of construction would be an entirely different one of course.

* * * * * *

Q. And those circumstances under which they were developed to their present size did not operate to make them up to date construction, did it?

A. Why no, it could not be so, because some of those plants originated away back in the fifties, when the plants as used to-day were not known, and the buildings were arranged for that character of apparatus. In order to change them, as I said before, it would cost tremendously to do it on the present site as compared with a new site.

Q. Is there anything to prevent the company from taking these plants one by one and reconstructing them and bringing them up to date, as far as construction is concerned, and increase the capacity of each one as it is rebuilt?

A. There is no chance for any decided increase in capacity. As I said before, they can be improved with modern apparatus, but it would cost a great deal more to do it on the present site, as compared with a new site."

And on re-direct examination (p. 1504):

"Q. Now, as a matter of fact in your experience, is a plant which has been built up for the last sixty or eighty years to supply gas, being increased in capacity from time to time as the requirements of the consumers increase, in any instance exactly the same as a new plant which you would install for the full capacity if you were to do it over again to-day?

A. No, sir. If I should build a plant for the full capacity it would be built on different lines.

Q. But where a plant is built up in this way, is it ever possible to get it exactly on the lines as you would produce it to-day?

A. Not at all."

And again on re-direct (p. 1510):

"Q. I finally ask you whether from your observation of these plants, knowing that they have been built up during the last sixty or eighty years, you consider the plants as efficient and in good condition or otherwise?

A. I believe I have already stated that in my testimony. I think that all of the plants that are operated to-day for the manufacture of gas are as perfect as can be made under the conditions under which they were built and developed."

And on re-cross (p. 1512):

"A. I did not examine the operating results at all."

Of course this method did not result in a figure representing what it would cost to build other plants that would produce the same amount of gas and by-products at the same expense, nor have we the material for such a computation. If complainant has the burden of proof, then complainant must suffer for the omission. The point was taken at the close of Mayer's testimony, by motion to strike out (p. 1515).

What value is to be attached to calculations based upon Mr. Mayer's method may be illustrated from the case of the holder cover. In ancient times it was considered necessary to put a gas holder into a building. There is one of these venerable buildings on complainant's property, and it is in very good preservation.

In Rowland's appraisement of 1884 it appears as follows (p. 4928):

"BLOCK No. 2.

West 18th Street, above 10th Avenue, two inclosed gas holders, also well.

1. Gas holder building, 188 x 92, brick, with heavy stone trimmings, extra heavy roof and internal posts, framing, etc. .... $45,251"

In Mr. Mayer's appraisal of the 18th St. plant we find the following (pp. 1451-2):

> "Brick and brownstone building used as enclosure for holders, $169,328 without depreciation; $155,784 with depreciation.
>
> Q. What do you mean by that, that the holders are put inside of a brownstone front or not?
>
> A. Well, there it is, a large building in which are located two holders as a protection for the holders against snow and inclement weather, and the man that has to go on top of the holder to clean it. *It is an old construction that would not be carried out in these days.*
>
> Q. It is absolutely useless is it?
>
> A. No, it is not absolutely useless. The building is there and contains the holders, and the holders are distributing holders.

Q. Well, I say the building does not serve any purpose. You say a holder will last forever if left exposed to the elements. Then what necessity is there for enclosing it in a brownstone front?

A. *I would not build it to-day, but it was built in the days when they considered it necessary to have a building around it to protect it.*

Mr. Mathewson.—And it is not necessarily a brownstone front, Senator?

Mr. Page.—He says it is a brownstone front.

The Witness.— No, brownstone — brown trimmings around the windows and things like that. In Chicago the holders were enclosed up to the year about 1880, in very large circular buildings, and it has only since 1880 been abondoned; the use of those holders there, and the weather was very severe.

By Mr. Kirby:

Q. They do not enclose holders now where the climate is severe, do they?

A. Yes.

Q. All over the world except in Canada and in England?

A. None enclosed in England and none in Canada.

Q. None in Canada that you know of?

A. Yes.

Q. Old construction?

A. Yes.

Q. No new construction?

A. No, sir.

Mr. Mathewson.—It depends upon the section; there are some sections still using them and erecting them.

By Mr. Page:

Q. If you were erecting this plant, which I understand the company wishes to have valued and for which purpose you have been

> retained to testify, as to what you could produce this plant for to-day, you would eliminate this brick and brownstone building from any such estimate, would you not?
>
> A. If I was asked to make a valuation of that now? No, I should not eliminate it because it is there and represents the value that I have given it in my schedule. I have valued everything that I found on the premises that was in actual operation or use.''

He had added ten per cent. engineering charge and five per cent. interest on capital pending construction, so that the holder cover was valued at $179,151 (pp. 1332-3, 4660), at least $146,662 of which the Master and court have allowed (see p. 175). On re-direct examination he said (pp. 1507-8):

> ''Q. You were questioned as to a building at 18th Street enclosing some holders there. Is that form of construction, enclosing holders in a building, in use anywhere to-day?
>
> A. No, I believe it has been universally abandoned, even in severer climates.
>
> Q. Was it formerly a construction that was recognized by engineers?
>
> A. Well, yes, it was used many times. I have constructed some of those buildings myself.
>
> Q. Does not that reduce the cost of taking care of apparatus inside?
>
> A. Yes, sir.
>
> Q. Saving the expense of cleaning snow off the holders and doing various other things?
>
> A. It was not so much the expense entailed in cleaning the holders from snow, but at that time it was considered dangerous or almost an absolute impossibility to clean holders in severe climates as Canada or Chicago from snow during heavy storms. By better

and improved construction of the holder recently we have applied complete stairways extending from the ground level to the top, so any portion of any holder, no matter how large, can be conveniently reached by the men that go on top to shovel off snow."

Thus this obsolete building, on which even Rowland, back in 1884, allowed a very heavy depreciation, is now capitalized against the consumers by the Master at $100,000 more than the amount at which it was put into the owners' capitalization, nearly a quarter of a century before.

We understand that elsewhere, in view of the appreciable, although very slight, convenience afforded by such structures, they have been appraised at cost less ninety-seven per cent. discount.

Of course we have selected the most striking *reductio ad absurdum* of the theory on which the court's decree is based, but there are others.

Mains and Services.

Book Value. This also is based upon the appraisement of 1884, with subsequent variations as in the case of plant. The valuation of the mains was increased from $5,233,962.10 in 1884 to $7,852,151.03 on October 31, 1905. The corresponding valuations of the services are $1,034,241.41 and $1,212,071.09 respectively (Complainant's Exhibit 79, p. 5032).

Tax Reports. Complainant's valuations of its mains and services in its verified reports to the public authorities and its explanations thereof, are as follows:

In Mr. Carter's verified tax report of November 30, 1904, in Schedule K, he gave as "Present value of property in streets, highways, and public places on basis of cost of reproduction (new)" $5,613,221.12, and as "Present value of property in streets, highways and public places (allowing depreciation)" $4,261,156.39; and in Schedule D, under "Mains and Service", $4,261,156.39 (pp. 5068, 5072). The same figures with a slight increase were repeated in 1905 (pp. 5057, 5061). Carter was examined about this by Mr. Hughes, and testified that the figures were decided upon after conference with the parties who were acquainted with the facts, with his own experience and knowledge of the facts, and that the present value of the pipes, allowing for depreciation, would be $4,261,156.39 (p. 1009). The explanation given was that he got these figures from Mr. Simpson, the Superintendent of Mains and Services; and the latter testifies they represented the value of the material, taking the cost of laying the pipe under the most favorable conditions, including only the bare cost of material, and the labor for laying in soft dirt streets; ingenuously saying "I did it for taxation purposes, and I thought those were the right kind of conditions to take" (pp. 719-20). Simpson denies however that he gave the estimate for services in the tax report, saying "It is an absurd figure" (p. 1680).

Original Cost. The charges and credits since 1884 have been at cost. The appraisement of that date was made at a time when the cost of material and labor were both high (Rowland, pp. 6084, 6095).

Hence the book values, aggregating $9,064,222.12, represent the actual cost of the mains and services, as nearly as it is now ascertainable.

The Master's Basis of Valuation. In the case of the mains and services the cost of duplication at the present time becomes a favorable measure for the complainant. The Master adopts it.

In this way the actual cost or book value of the mains is raised from $7,852,151.03 to $12,636,150, and that of the services from $1,212,071.09 to $1,994,034.35, the figures stated in the decree. The total increase is thus $5,605,962.23.

Simpson's testimony was to the effect that the price of iron pipe rose from $25.50 to $28.90 from 1885 to December, 1905, as of which date the valuation was made, and that the additional labor cost is 20% (p. 691). The labor figure is probably exaggerated (p. 706). The price of pipe is $1.70 higher than the average for 1904 (p. 5313). The total tonnage is 122,018.4 (p. 3895). Hence by taking the price of 1905 instead of the price of 1904 complainant gained over $200,000; exactly half, indeed, of the total gain over 1884.

Simpson further testified, and it is undoubtedly the fact, that pipe laying has become in recent years more expensive in many streets on account of other subsurface occupation (pp. 672-3), and in most of the streets on account of the laying of new pavement (pp. 670-1).

He had indeed testified before the State Commissioners of Gas and Electricity in the proceeding which was pending before them from November, 1905, to February, 1906 (p. 5), that the value of the mains was $11,687,466.41, based as he then stated upon a mileage of 880 miles (pp. 1750-1).

In the present proceeding, in July, 1906 (p. 666), as above stated, he raised his figure about $1,000,000, although upon a mileage of only 822 miles (p. 668). His explanation when confronted with his former testimony was that he did not know that about seventy miles had been "written off the books." Nevertheless he insisted that his former estimate had been based on 822 miles, "whatever that testimony was" (pp. 1751-2). Assuming this insistence to be correct, he nevertheless failed to account for the difference in figures, and was not fully cross-examined about it. This could not have arisen from differences in cost of pipe. Not only is the increase nearly five times as much as the total increase of this item from 1904 to 1905, but the prices upon which his present valuation purports to be based are prices contemporaneous with the proceeding before the State Commission (p. 691). But Simpson's higher figure was endorsed, upon his statements, by complainant's expert Dr. Humphreys (pp. 1695-6) and adopted by the Master. It includes 27 miles of disused mains, but he testifies that these amount only to $103,207.01 (p. 4498). Simpson, who was a somewhat elastic calculator, got a little margin by estimating on the assumption that 90% of the street mileage was covered with new pavement, although the actual figure was 88% (see pp. 671, 684).

Present Condition. Simpson, whose testimony has been followed by the court testifies that the mains and services are as good as new. "They are absolutely physically as good as the day they were laid," and he has found no deterioration "in a single instance" (p. 669, see pp. 699-701, 703). They have indeed been injured at two points by electrolysis (as to which see pp. 129-30, *infra*), but these have been repaired. The mains are subject only to the risk of being superseded by larger mains, or relaid to conform to the city's requirements as to use of the subsurface; the services, to supersession when private dwellings are superseded by apartment houses.

Franchises.

It was conceded by us that complainant had franchises to operate in the streets, and all of the valuations involve this assumption, as without franchises it could not be valued as a going concern. But for some years past there has been much discussion as to whether or not these franchises are revocable, so that they can be terminated by the state or city, at will or upon not over a year's notice. The subject was not formerly considered an immediately important one, although interesting as bearing upon the price to be paid if the city should ever conclude to condemn the property and take it over; but the present case brought it prominently forward by Judge Lacombe's holding that the franchises, if not revocable, could be made the basis of a very large exaction from the public in the matter of gas rates; and immediate litigation seemed to be challenged by the Master's extraordinary ruling that complainant's claims must be conceded because the city and state had not exercised the right of revocation or brought any judicial proceedings to oust the complainant from the streets (p. 192). It was the opinion of the undersigned that there was neither legal necessity nor propriety for an arbitrary and immediate revocation, nor for an ouster suit; that complainant should be left in possession, although we believed it to be but a holdover tenant, subject to reasonable regulation of its rates, until the city should, if ever, desire to operate a municipal plant; that in that case reasonable notice should be given and an equitable adjustment arrived at; and that meanwhile the Master's ruling was too revolutionary and ill reasoned to be the basis of any action, until it should have been reviewed by the court; and the court did not sustain it (p. 419 top). The Attorney General, however, had felt called upon by the language of the report to bring a *quo warranto* action, and asked leave of court to do so. Leave was denied on the ground that whatever rights might exist were in the city, not the state. The *status* of these franchises has therefore never yet been determined by the state courts.

Existence of the Franchises.—Annexed hereto is an Appendix in which the law and facts bearing upon this subject are fully set forth.

The Special Franchise Tax.—This, which Judge Lacombe and Judge Hough regarded as so important a matter, amounting to an estoppel upon the state, seems to us to have no bearing whatever, because neither the incidence of the tax nor its measure is at all affected by the question whether the franchises are or are not revocable. We shall set forth the state law and its practical construction in the body of the brief (pp. 233-4, *infra*).

Valuation of the franchises.—Dr. Humphreys' valuation of the good-will at $7,500,000 seems to have been intended to include the franchises. It was a valuation of "the good-will of that business, including the value of the established business, and its connections with consumers and other elements which go to make up good-will as distinguished from its tangible plant" (p. 209). Complainant's only other direct evidence was the assessment of the "special franchises" by the State Board of Tax Commissioners in 1906. The amount of the assessment was $31,900,000, which includes the mains and services as well as the intangible property. William Halpin, the chairman of that board, was called as a witness. He was not qualified as an expert, and the assessed value had already been ruled out as incompetent, but he was permitted to state without objection that in his opinion this was a fair and reasonable value (p. 1848). The testimony was irrelevant, because the state treats the special franchise tax as in the nature of an income tax. It is not regulated by the length of the franchise, but is the same whether the franchise be revocable or irrevocable (pp. 233-4, *infra*). This tax was fixed "as of the second Monday in January, 1906, when all taxes are determined" (p. 1850). At that time the legal rate for gas was one dollar, at which rate the complainant made an income justifying a very much larger assessment (pp. 26-7 *supra*).

The complainant filed on March 28, 1906, a complaint against this assessment, verified by the oath of its secretary, Mr. Carter, in which it furnished a valuation as follows (p. 6697):

> "The true value of complainant's special franchises in the City of New York *and the amount for which the same would sell under*

> *ordinary circumstances* does not exceed the sum of $14,000,000.'"

Mr. Carter had shortly before testified before the State Commission of Gas & Electricity that the value of the tangible portion of the special franchises, that is, of the mains and services, was $11,687,466.41 (p. 1751). Hence his valuation of the intangible portion of the franchises is at a figure not over $2,312,533.59.

In his oath to the complaint, whose truth he reiterates on the trial (p. 3085), after stating his experience as an employee of the complainant and one of its predecessor corporations in various capacities since the year 1877, he testifies as follows as to his expert qualifications (pp. 6700-1):

> "Deponent is thoroughly familiar with the gas business in the City of New York, and especially in the Borough of Manhattan in said City. Deponent knows the extent and nature of the special franchises possessed by the Consolidated Gas Company, and by all the other gas companies operating and doing business in the Borough of Manhattan, and is familiar with the business and operations of all said companies. Deponent has made a careful and thorough study of all details of the gas business, *and is familiar with the intrinsic and relative values of the special franchises* possessed by the different gas companies in the Borough of Manhattan in said City."

The Master remarks that this is "of but slight assistance in arriving at a satisfactory conclusion," and pursues his general policy not "to attach particular importance to statements of the character appearing in the complaints above quoted,'' since "they do not, under the authorities, constitute an estoppel, although sometimes valuable as evidence'' (p. 203). The Court considers it as no evidence at all (p. 416). Neither Master nor Court adverts to the qualification clause or considers complainant's act in presenting this valuation as coming from an expert valuer to be an important admission.

The Court raises the valuation of the intangible portion of the franchises to $12,000,000 by a train of reasoning which (assuming the inferences correctly to follow from the facts stated) is based upon mistake as to the facts. Judge Hough states that upon the origination of the company in 1884 "it then issued stock of the par value of $7,781,000, representing the franchises it then acquired *and nothing else*'' (p. 417); and then, without any evidence whatsoever to support him, and in square opposition to the repeated oath of the complainant (pp. 6691, 6697) makes them grow *pro rata* with the growth of the tangible property in valuation. The history of this $7,781,000 valuation is detailed at considerable length in the record, and must be set forth in some detail, in view of the importance attributed to it by the Court.

The $7,781,000. This, together with the $1,303,000 working capital, forms the residuum of the total capitalization as arbitrarily fixed by the consolidation committee in 1884. With all the liberality applied to the appraisement of the tangible property, it had reached only $29,994,000 *plus* the valuation of the New York Mutual Company, which subsequently refused to join (pp. 20-2 *supra*). There was a sharp difference of opinion as to whether the capitalization should be made high or low (pp. 6377-8). Mr. Zollikoffer, President of the Metropolitan Company, favored a capitalization of $35,000,000. On the day after the date of the appraisements he put a motion on the committee record to the effect that the capitalization should be $43,000,000. He was overruled, and it was made $45,000,000 (pp. 6520-1). The Mutual also objected (p. 6377).

Judge Hough in his supplementary opinion states that defendants moved to correct his franchise valuation by having it "declared that the $7,781,000 valuation of 1884 was fixed by ascertaining the then market value of the share capital of the constituent companies and deducting therefrom the appraised valuation of the tangible property of the same" (pp. 424-5). The motions do not appear in the record. No motion involving that proposition was made by these appellants. They, as well as the Attorney General, denied that the capitalization had any relation to the market value of the share capital, and argued that on the contrary it was very much inflated even over that figure.

Judge Hough, when dealing with the question of the "rate of return," has assumed the right to take judicial notice of the market values of gas stocks and bonds and securities of a similar nature; a right as to which we are not aware of a precedent either way. If the right exists, it can only be accurately exercised by following the advice of Mr. Samuel Sloan (p. 6149), and examining "the price in the stock list." The standard publication for such matters in New York is the *Commercial & Financial Chronicle.* If it is proper to examine the quotations for the purpose of taking judicial notice of the rate of return a year or two back on similar securities, we take it to be equally proper to take judicial notice of the quotations of twenty-four years back, for the purpose of testing this claim of the complainant that its capitalization was but equivalent to the sum of the market values of its stocks at the time. If so, the question can be quickly settled, for the bid and asked prices are set forth in the *Commercial & Financial Chronicle* for those dates. We annex hereto as Appendix B a tabulation showing the combined valuations of the stocks of the five companies (the Knickerbocker stock being included in the valuation of the Municipal stock) as near as obtainable to the beginning of each month from July, 1883, to August, 1884, inclusive, with the valuations for each week from September 6, 1884, to November 22, 1884, inclusive (it being remembered that the negotiations for consolidation began in 1883, the capitalization was determined after September 9, 1884, and the consolidation agreement dated September 29 and filed November 10). It will be remembered that the total capitalization, after the New York Mutual dropped out, was $39,078,000, from which should be deducted the obligations of the various companies amounting to $2,329,000 (p. 23 *supra*). The total market values of the capital stocks, if made the basis of the nominal capitalization, should therefore have been $36,749,000. But they did not reach $30,000,000 until January, 1884; and even in the speculative period immediately preceding the consolidation they were below $33,000,000. When the deal was consummated and the capitalization fixed, the bid price ran up for a moment to nearly $34,500,000, while the asked price was marked up over $35,500,000, but both bid and asked prices ran off rapidly, and in five weeks even the latter had fallen below $33,000,000.

But there is enough in the record to show that the capitalization was not based upon market values, although the quotations appear there as to one date only (July 1, 1884, p. 6450).

Thus Mr. Lees, the President of the New York Gas Light Company, testifies that the stock of that company "was 160 or 170; somewhere along there; 160, perhaps; I should think 160 was all it was worth, and all it would sell for at that time, on an average" (p. 6330). The amount outstanding was $4,000,000. The indebtedness was $6,000 (p. 6132). It should therefore, on complainant's theory, have appeared in the total capitalization at $6,406,000. It did appear at $7,821,000 (p. 4821).

Mr. Zollikoffer the younger, secretary of the Metropolitan Gas Light Company, testifies that before the consolidation the stock of that company was down to 225 (p. 6513). The amount outstanding was $2,500,000. The indebtedness was $68,800 (p. 6132). It should therefore, on complainant's theory, have appeared in the total capitalization at $5,693,800. This stock had been falling in value, and some time previously had sold at from 245 to 255 (pp. 6162, 6513). Even upon the latter basis its capitalization should have been $6,443,800. It actually appeared at $7,422,000.

In the testimony of Mr. Moss of the Harlem Gas Company it appears that the stock of that company stood at 130 (p. 6307). The amount outstanding up to the time when the consolidation took effect was $1,800,000 (pp. 5702, 5717). The indebtedness was $170,000 (pp. 5602, 6132). The amount apportioned to the Harlem Company, on complainant's theory, should therefore have been but $2,510,000. It was really $3,103,000 (p. 4821).

The Manhattan seems to have been the only company whose stock was not grossly overvalued, even on the basis of the very much inflated valuations of September, 1884. The company put in a claim for $12,000,000 in order that it should get 7% interest thereon. For this purpose it was only necessary to rate its stock at 300, which was about the actual value. It put in a claim at 320 and got a little above 300 (See pp. 6176, 6211-12, 4821).

Complainant's contention and the court's mistaken supposition as to the basis of the capitalization are based on a mistaken statement in the old Gilbert committee report, which itself is based on the statement of President Zollikoffer that the $7,781,000 item was arrived at "partly by value of stocks as they sold; but I don't know what else" (p. 6162) and that the reason suggested for fixing $45,000,000 as the total amount was that that "was about the value or the market price of the stocks at that time" (pp. 6521-2), and partly upon the statement of Mr. Day, counsel for the Municipal (which came out best in the transaction) that "that was my view generally" and that the committee took "all the capital of the companies at their fair valuation in the market" (p. 6211). Mr. Gawtry, who was the secretary of the committee of adjustment (p. 6129) and Vice-President of the Municipal Company (p. 6107), gives a different reason (p. 6134), and the younger Zollikoffer, who was present at all of the meetings of the committee, testified that the capital was not fixed with regard to the market value of the stocks to his knowledge, and that its apportionment was made entirely regardless of market price (p. 6510).

The actual facts above shown with relation to the values of the New York, Metropolitan and Harlem stocks show the latter testimony to be correct, and that if there was any understanding among any members of the committee as to matching values of the new stock against values of the old stock, the value of the new stock must be taken at some figure below par. The new stock seems to have been quoted at 84 at that time (p. 6176).

It thus appearing that the capitalization was fixed without any reference to the market values of the stocks, but by a majority report of a committee of adjustment it remains to ascertain what the surplus, over and above the appraised values, was supposed to represent. This of course is best ascertainable by inquiry into the method by which the amount was divided up among the different companies. The evidence makes the truth of the following statements perfectly clear: first, *that the surplus was $7,084,000, not $7,781,000*; second, *that it did not represent franchises except nominally;* third, *that it involved no valuation of franchises;* and fourth, *that it was a mere stockwatering operation, divided up in proportion to the actual sales of gas for a selected period.*

Among the papers submitted to the committee was a resolution providing for a certain plan for dividing up this balance. It was read to a witness who was inclined to assent to it as the plan actually adopted, and it seems by the other evidence to have been the plan adopted. It is as follows (p. 6213):

> "When all of the values are fixed and determined upon, the amounts thereof shall be aggregated and the difference between the total thereof and the amount of the capital of

> the new company, as heretofore fixed, shall be deemed to be the value of the good-will and franchises of the several existing companies, and shall be divided between them in proportion to their individual sales of gas as adjusted and confirmed by the present committee of one of each company, to the gross amount of sales by all the companies so adjusted for the period from October 15, 1882, to October 14, 1883, and the sum thus divided shall be added to the schedule value of each of the existing companies, and shall together form the capital of the new company."

The younger Zollikoffer, who was present at all the meetings of the committee (p. 6510) testifies that the division was based on the business for the year October, 1882, to October, 1883, and continues as follows (p. 6509):

> "Q. How was that business estimated? A. That was the actual business of the companies, the actual sales.
>
> Q. You mean the sales of the gas? A. Yes, sir.
>
> Q. And the sales of gas for the entire year? A. The entire year."

Mr. Gawtry testified as follows about it (pp. 6134-6):

> "Q. How, in arriving at that basis, did you estimate the value, so called, over and above the values, so-called, of the properties, rights and franchises of the constituent companies to the amount of $7,781,000, including Mutual? A. That was based upon the amount of business done by the companies, if I remember right.
>
> * * * * * * * * *
>
> [p. 6135] Q. You mean the number of cubic feet of gas? A. Of gas sold. * * *

Q. You took the total amount of gas as reported from the consumers' meters? A. Yes, sir.

* * * * * * * * *

Q. You took the gas product and measured that, not by indexes at the place of production, but by the meters of the consumers? A. We did not take the gas product; we took the gas sales; that is not an intelligent question; leave out the word 'gas product'; the gas made at the works and the gas delivered to the customers is a very different thing; if you will use the word 'sales', that will be more intelligent.

Q. Whether the business was based on the product or receipts? A. The receipts had nothing to do with it.

By the Chairman:

Q. What receipts had nothing to do with it? A. The money received from the gas sold; the amount of dollars and cents did not enter into the question at all.

Q. State what did form that basis? A. It was the sales of each one of the companies for a certain period. * * * * *

[p. 6136] Q. Now having ascertained the business of each company, what was the next step in arriving at this figure, $7,781,000? A. I don't remember.

* * * * * * * * * * * * * *

Q. Is your memory capable of being refreshed by any memorandum? A. I should want the sales of each company for the time, whatever it was.

Q. Given sales for each company for a given period of time, what next? A. Take the amount of capital over and above the valuations and apportion it.

Q. That is to say you agree on what the capital should be first? A. No, sir; after the valuations were finished we did.

> Q. And the difference between the valuation and the agreed capital was made the subject of estimate and apportionment among the various companies? A. It was made the subject of apportionment among the various companies.
>
> Q. And after that estimate and apportionment the amount arrived at was put down, and it was upon that basis which you have stated that the capitalization of the Consolidated Company was arrived at? A. I believe that was so."

Mr. Moss testified as follows (p. 6310):

> "Q. Do you know how this item, $469,000, in rights and franchise of the Harlem Company was arrived at? A. It was upon the assumed valuation of all the rights and franchises of the company; and the right to sell gas in the city.
>
> Q. How was that parcel apportioned to the Harlem? A. Because of their right to sell gas to the city.
>
> Q. Their proportion of the difference between the total valuation of the properties of all the companies and the proportion of capitalization? A. Less a certain amount reserved for working capital.
>
> Q. And that was apportioned to the Harlem Company, according to the amount of gas sold by them for a year or two previous? A. The sales of a certain year was taken as a basis.
>
> Q. From October, 1882, to 1883? A. October, 1882, to October, 1883."

That the franchises claimed by the companies had nothing to do with this item is further shown by the testimony regarding certain of these franchises, which shows that they were not considered as a matter of any importance.

Mr. Lees, the President of the New York Company, who had been with that company since the beginning of 1861 (pp. 6322, 6329) did not know what special privileges his company had had prior to 1871 except that "it had originally exclusive rights in the city for a few years, but they had expired long before I went there" (p. 6345). It will be borne in mind that whatever rights the company had, were derived from the original grant in 1823. He thought that they had some rights; "I cannot say what; it had a right, certainly, to lay mains in the streets" derived from the city, but he could not say when; an exclusive right "at the beginning, but that expired long before my time" (pp. 6345-6). If the franchises of the various companies had been looked into, Mr. Lees would hardly have been so vague about it, only one year later.

But the most striking testimony with relation to the immateriality of the franchises was that of the elder Zollikoffer, President of the Metropolitan Gas Light Company. It will be borne in mind that the franchise of that company, according to the argument now advanced by the complainant, was precisely the same as those of the New York and Manhattan companies, and was perpetual. Mr. Zollikoffer testifies as follows (pp. 6526-7, 6528):

> "A. We had a right under the ordinances of the city to lay mains, service pipes, and to furnish gas and collect those bills afterwards under the laws of the State of New York, and to conduct the business in a manner according to the rules; but every thing was guaranteed to us that we should not be interrupted.
>
> Q. By whom? A. By the city, provided we got the franchise from the State.

Q. Was anything said as to its duration? A. It was thirty years from 1859, I think.

Q. *So that would expire in 1889?* A. *Eighteen hundred and eighty-nine, yes, sir.*

Q. That was really all the right you had, or all the franchise you had your company? A. Yes, sir; ours was for the whole Manhattan island.

* * * * * * *

[p. 6528] Q. In fixing the values of the rights and franchises so-called, as apportioned to your company, was the circumstance of your charter expiring in 1889 mentioned in the committee? A. I think they all knew it; I do not know that there was particular mention made.

Q. No particular stress made of it? A. No, sir; *but they all knew it."*

If the respective franchises had had anything to do with the question it would be impossible to explain why the New York, Manhattan and Metropolitan companies (each now claimed to have had a franchise unlimited in time and space) got $1,417,000, $2,329,000, and $1,863,000 resuectively; while the Municipal company, whose franchise confessedly was to expire in twenty-three years, and had been rendered very doubtful by the then recent decision in Anderson *v.* Equitable Gas Light Company (12 Daly, 462), was allowed $1,175,000. The Knickerbocker Company, which claimed a franchise to the whole city running six years longer than the Municipal's, and also claimed a permanent franchise north of 79th Street, was allowed only $528,000 in all.

The companies almost certainly had valuable patents, but these were not taken into consideration in fixing the capitalization, possibly because at the end of their respective terms of seventeen years each they would expire. It is barely possible that they may have all run out by 1884, and that those spoken of by Mr. Roome at page 6465 may not then have been acquired; but if those mentioned in the record as having lately belonged to these companies were still in existence in 1884, their value may be inferred from the fact that the right to use one of them had been sold by the Municipal company to the New York company for $300,000, the patent rights of the former company having been purchased at an expense of at least $350,000 in capital stock (p. 5600).

Other capitalizable property.

Meters and miscellaneous.—This item in the Master's report we did not contest before the court, nor have we filed any assignment of error thereon. As to this and the next item our course was determined by the general policy of raising in this court no questions not involving a very considerable amount.

Working capital.—This item in the Master's report was modified by the court to $1,616,000 (see p. 396), and we have filed no assignment of error to its conclusion. According to the Master's report, it would seem that this subject was not fully argued before him (p. 180). The reserve for working capital was arrived at in 1884 by taking one-thirtieth of the book value. It was at first $1,500,000 (p. 4821), and then proportionately reduced to $1,303,000, which is the nearest round sum to one-thirtieth of $39,078,000. One thirtieth of the present book value (p. 5032) would be about $1,590,000.

National Coal & Coke Co.—This was merely an investment in stock of a company with which the complainant did business. As the complainant held all of its stock, the company could conceivably be used as an instrument for creating fictitious apparent expenses, or as a cover for the concealment of actual profits. In either case the misuse could be corrected in ascertaining the complainant's true net income; but the court perceived the impropriety of including the stock as part of the capital, and struck the item out.

Goodwill.—The Master allowed $20,000,000 for franchises and goodwill as a single item (pp. 205-10). The court struck out $8,000,000 as representing the goodwill, which was disallowed (pp. 410-11).

Both the Master and the court recognize that complainant, being in the nature of a monopoly and not being subject to competition under the laws as they at present exist, has no goodwill in the ordinary sense of the term. In a competitive industry, the word denotes the probability of the customers' continuing to trade at the old stand. In a non-competitive industry like this one, it can mean nothing more than the probability of holding the customers if competition should be established. The Master used the term in substantially the same sense as that in which the term "going concern" is used in the Knoxville water case, now before the court, although he then proceeded to cite as authorities two cases which related to genuine goodwill (pp. 208-9). He admitted that none of the methods suggested by the evidence or otherwise afforded a satisfactory basis for a specific finding (p. 210).

The only testimony in the record on the subject came from two witnesses called by the complainant, and in both cases was admitted over the defendants' objection and exception; but of course, in view of the subsequent action of the court, the exception became immaterial.

Vice-President Addicks, being asked what concessions in his experience are necessary to draw business from an established company, named a minimum of 10% on the selling price of gas to private consumers (pp. 1580-1). He had not shown any experience on the subject. He had come into the employ of the complainant long after competition ceased in its own territory, and it does not appear that there was any gas war in Boston or Chicago during his previous experience there (pp. 1562-3); nor would a consumer have the same temptation to permit the introduction of a new service and meter during an ordinary gas war (expectedly to be of short duration and then terminate by a merger of some kind) which he would have in case of the establishment of a permanent municipal plant.

Dr. Humphreys fixed the goodwill at $7,500,000. He gave no reasons and was not cross-examined about it; but complainant's counsel stated in their argument below that the valuation was "at $20 per consumer". Both the Addicks and Humphreys calculations (and, it seems to us, all possible calculations of the kind in a maximum rate case) are based upon the assumption that the consumer can be made to pay more cents per thousand feet for his gas than would otherwise be proper, because of an expert opinion as to what his own future action would probably be, if he and the other consumers should join together in establishing a municipal plant. Dr. Humphreys thinks that on the average each consumer should pay a reasonable rate of return per annum on $20, not on account of any outgo on the part of the complainant, but on account of this supposed probability about his own possible future action.

It has already been noted that Dr. Humphreys' valuation seems to have included the franchises as well as the goodwill (pp. 80-1, *supra*).

"Astoria, i. e., capital invested in production of gas secured from other companies." This rather singular item in the Master's report was stricken out of the complainant's capitalization by the Court, but the Court allowed deductions from income by reason of the same matter which, capitalized at 6%, would amount to about $3,333,333 (p. 99, *infra*), in addition to the item it allowed (and which we do not contest) as part of the operating expenses which on the same basis would amount to nearly $1,000,000 more (p. 102, *infra*).

Since the decree (very properly, it seems to us), treats the matter as one belonging not to capital but to income account, we shall discuss it at that place.

Complainant's Net Income.

On account of the Master's ruling that the year 1905 should be taken as the basis of computation, except so far as complainant should claim or defendants be able to establish (without the privilege of a preliminary examination of complainant's books) that it was an abnormal year, all calculations must necessarily start with Complainant's Exhibit 94, which is set forth in full, and with the items of operating expense conveniently numbered, at pages 217-20 of the Master's report.

This shows the output and sales of complainant for 1905 to be as follows:

Gas made by itself........	10,657,810,000	cu.	ft.
Gas purchased from other companies	2,929,210,322	"	"
Gas made and sold......	10,419,461,426	"	"
Gas purchased and sold..	2,863,702,341	"	"
Total sales	13,283,163,767	"	"

The small differences are due mainly to leakage, and to gas consuméd by complainant itself. Nearly all of the sales were at the rate of one dollar per thousand cubic feet, or as it is commonly called, "per M." The City of New York, however, paid ninety cents per M upon 398,525,978 cubic feet, or about 3% of the whole, besides various amounts for special services which complicate the calculation and make an apparent return of over one dollar (pp. 5052, 5076). The gas actually sold at the dollar rate was 12,884,637,789 cubic feet. The gross profits (gas sold but not paid for, being treated by complainant as an operating expense) were therefore about $13,243,110.

The operating expenses disallowed by the Court are those numbered by the Master as 54 and 69, and portions of items 58, 61, 66 and 67. Items 47, 53 and 62 are misleading as stated in the table. They represent expenses incurred by complainant, but expenses which either were reimbursed or else related to items of Miscellaneous Income, and not to the price of gas. The final columns in the exhibit, headed "Cost per M. c. f. made," and "Cost per M. c. f. sold" are for this and other reasons entirely worthless (see Judge Hough's remarks at pp. 400, 428). The inclusion of these columns is part of the general policy adopted by this complainant and gas companies in general to obscure the situation with misleading statistics of operating expense, as will be otherwise illustrated further on.

Deducting the operating expenses disallowed, the Court found the net income in 1905 from complainant's own product to have been $4,015,475.02, and from purchased gas $1,865,117.43, making a total net income of $5,881,192.45, which at eighty cents would have been, as the Court calculates, $3,224,592.45 (pp. 404-5, 407, as corrected at pp. 423, 430).

From this figure, and on the assumption that in 1906-7 the purchased gas will be made at Astoria, he proceeds to make a deduction of $200,000, (which would be the income at 6% of a capitalization of $3,333,333,) substantially to represent what the Master put down as "Astoria, *i. e.*," &c. (pp. 406-8). To this deduction we assign error.

The main operating expense disallowed by the Court was contained in item 67 (p. 220) of ten cents per M on total sales under the heading of "Contingent Expense (includes renewals)." This, generally called the "Ten Cent Item," is sustained by the Master after a long discussion to be found at 224-38, a discussion replete with the fallacies inherent in all arguments based upon the theory that operating expense varies per thousand cubic feet of sales. The Court threw out most of it, and substituted an "Eleven

Cent Fund," or an allowance of eleven cents per thousand cubic feet of complainant's own output, to take the place of items 34, 35, 36, 47, 48, 49, 50, 51, 52 and 67 (pp. 401-4).

The Purchased Gas.

This gas is purchased from four other companies in the Borough of Manhattan, whose stocks are held by complainant as follows (p. 184):

New Amsterdam Gas Co.	99%
New York Mutual Gas Light Co.	51%
Standard Gas Light Co.	92%
Central Union Gas Co., owned by New Amsterdam Co.	

The gas is really purchased, and is so treated by the court, but for some reason the contracts for its manufacture are in the form of, and are called—

Agency Agreements. There is no such agreement with the Central Union Company, which is under no written obligation to supply the gas (p. 1096). The written agreements with the other companies are in most respects the same. They are all dated December 31, 1902, *and they all run to December 31, 1907* (pp. 5047, 5049, 5050), or until eight months after the expiration of the period specially in contemplation by the court (Decree, p. 432), provided, that in each case either party could terminate the agreement upon one year's notice. It does not appear that notice had been given by any company, although the testimony herein did not close until 1907.

The other important clauses of the three agreements are as follows (pp. 5047-51):

I.—The Consolidated Gas Company of New York hereby employs the Company as its agent and upon the terms hereinafter mentioned to manufacture, produce and deliver to it for the term of five (5) years, such illuminating gas of the illuminating power required by the laws of the State of New York as it may require during each year, for the said term of five (5) years, estimated to be equal to at least cubic feet per year, and to deliver the same to the gas holders, mains or meters of the Consolidated Gas Company of New York in such quantities and at such times as may be reasonably required by it.

The Company agrees to manufacture [&c.]

II.—The Company shall, as agent for the Consolidated Gas Company of New York, and at reasonable rates, purchase all the constituent materials and furnish the labor necessary to such manufacture, production and delivery, and employ in such manufacture, production and delivery its own plant and appliances.

III.—At the expiration of each month, the Company shall render to the Consolidated Gas Company of New York an account of all expenditures for constituent materials and labor made by it, as aforesaid, during such month, and the Consolidated Gas Company of New York agrees to pay to the Company, within ten (10) days thereafter, the amount due, according to such accounts, together with an additional ten per cent (10%) which shall be in full for its services and the use of its plant and appliances during the said month.

The agreement with the New Amsterdam Company contained also the following provision, which has been overlooked by the Master and court (pp. 5049-50; see pp. 4459-60):

> 5. The Consolidated Gas Company of New York further agrees that it will at the end of every period of six months during the term of this agreement pay to the New Amsterdam Gas Company interest at the rate of five (5) per cent per annum for the previous six months upon the amounts expended by the New Amsterdam Gas Company in making additions to its Ravenswood Works since March 1, 1901, for the purpose of increasing or facilitating the manufacture of gas.

During 1905 the New Amsterdam Company was still engaged in making additions to its plant, as is shown by the fact that the interest paid under this clause for the year ending October 31, 1905 was $56,132.72 (p. 1090), while for the year ending December 31, 1905, it was $58,149.04 (p. 5778). For the latter period it represented at the five per cent a capitalization, in cost of additional construction, of $1,162,980.

Gas Furnished Under the Agreements.—The amounts estimated in the "agency agreements", and the amounts actually furnished during the year ending October 31, 1905, are as follows respectively (pp. 5047-50, 5299):

	Amount Estimated.	Amount Furnished.
New York Mutual Co..	100,000,000	319,210,100
New Amsterdam Co...	500,000,000	2,112,227,300
Standard Co.	500,000,000	447,756,300
Central Union Co......	....	93,555,400
Total	1,100,000,000	2,972,749,100

For the year ending December 31, 1905, the total purchased gas was a little less, but the falling off was in the Mutual gas, in which complainant was interested only 51%, while the supply from the New Amsterdam, in which it was interested 99%, increased to 2,173,196,400. The new additions, just above referred to, so increased the capacity of the latter company that it supplied in each of the last four months of 1905 far more than the complainant's two coal gas plants, the 14th and 42d street stations, combined (p. 5807).

Necessity of the Purchased Gas to Complainant. —Its use was undoubtedly profitable, or complainant would not have taken nearly three times as much gas as it was obliged to take. But it had works of its own to fall back upon, as for instance the 111th street works with a capacity of 2,420,000 feet daily maximum (p. 1467), or 484,000,000 feet per annum, or more than the total gas purchased from the Standard Company. These works the court has capitalized against us despite our objection that the plant was idle (see pp. 175, 423, 1467, 4430; and as to other reserves see pp. 636, 1431-2, 1446, 3788).*

These idle works must be regarded as held in reserve, because gas can be purchased more cheaply than it can there be made.

---

* There is no sufficient basis for the Master's statement that the complainant's maximum daily sales during 1905 were about 70,000,000 feet. It had daily station records showing the facts (p. 1647) but did not produce them. The figure was taken from assumptions in questions of the city's counsel, not very positively assented to even by Mr. Addicks (p. 1654). They are opposed to probability. The average daily sales varied from about 45,275,000 down to less than 26,000,000 (p. 5807). Mr. Bradley is reported as saying that the maximum variance is 6,000,000 (p. 547). He probably meant a variance between two days in the same month (see pp. 556-7). The statement that its maximum capacity was but 51,000,000 feet is also misleading. The figures relate only to *rated* capacity. In emergencies, a much larger output can be obtained. The 14th Street plant, rated at 3,500,000, averaged over 4,500,000 in January (pp. 1714, 5709). *There is no probability that complainant was ever called upon for more than its own rated capacity.*

Profitableness of the Business to the Other Companies.—The court assumes that it is not a paying business to them, but only continued from necessity; overlooking their unexercised option to terminate the relation, and the fact that they are furnishing three times the supply that the agreements call for.

The New Amsterdam is indeed under complainant's thumb, but of the Mutual stock complainant owns but a bare majority, so that that company cannot be imposed upon without a remedy; yet it is supplying three times the gas estimated in the agreement.

The explanation of the transaction is that the selling companies are no longer expanding in territory. They "are confined within a limited area" (p. 4499), so that their main opening for increased output is in selling to complainant. Judge Hough admits that "possibly" this "has afforded to the selling companies a method of disposing of surplus product"; but if so, why does he say that the business "cannot and ought not continue"? (p. 406).

The special clause which we have quoted from the New Amsterdam agreement (p. 102, *supra*) proves that at least the New Amsterdam gas is actually surplus product; for when it requires an extension of plant, the Consolidated pays to have the extension built. The clause also proves that to this company at least the transaction is profitable; for *when the extension is built it buys from the New Amsterdam, of which it owns 99%, in preference to the Mutual, of which it owns but 51%* (p. 103, *supra*).

Astoria.

This name for short is given to the property of the Astoria Light, Heat & Power Company, whose stock is held by the complainant.

We have already made some use of the figures given as the cost of the land, tunnel and plant of this company, and adverted to the fact that its ratio of operating expense cannot be foretold (pp. 35, 65-6, *supra*). It is located in the old village of Astoria, in the Borough of Queens, across the East River from the Borough of Manhattan.

The land and tunnel are intended for a collection of separate plants or "units" (p. 546), but at present only one "unit" is under construction, which will have a capacity of 20,000,000 cubic feet a day, or 4,000,000,000 annually (pp. 542-3, 546).

Time of Construction.—Work began on a small scale perhaps as early as 1902, but not seriously until the summer of 1903 (pp. 1573-4). The first "unit" was still under construction on January 30, 1907 (p. 4570), although it had then already been putting out some gas. The testimony having closed immediately after that day, we are uninformed as to whether it was completed during "the year beginning May 1, 1906."

Commencement and Extent of Operation. It started to produce gas on December 3, 1906, about 11.50 A. M. (p. 4226). Being still unfinished, it naturally could accomplish but little. Being asked as to the daily output, Vice-President Addicks testified on January 23, 1907, as follows (p. 4292):

> "A. Commencing with about 200,000 feet on the 3rd of December and increasing grad-

> ually to about 500,000 I should say, or possibly 800,000, and then the second house was started, as I remember it, and that was allowed to come up gradually to possibly a corresponding amount.
>
> Q. By the second house you mean part of the first unit? A. Yes, the second house of the first unit, and then they were both gradually increased, so that now they are making over 4,000,000 feet a day, the two of them.
>
> Q. You have been receiving that gas since the 3rd of December without any agreement as to what is to be paid for it, is that true? A. None whatever.
>
> Q. No agreement whatever has been made? A. No agreement whatever. The amount in December was something like between 40 and 50 million feet for the whole month, so that the average, you see, was a little over a million feet."

It will be noticed that even on January 23 the unit was turning out only one-fifth of its rated capacity. In December it turned out only from 40,000,000 to 50,000,000 feet as against 324,000,000 feet of purchased gas in December, 1905. When the testimony was given, it was only supplying at the rate of 124,000,000 feet per month as against 320,000,000 feet of purchased gas in January, 1905 (p. 5807).

This gas was sent through the new sixty inch main to the New Amsterdam works at Ravenswood, and thence through that company's tunnel under the East River to the Borough of Manhattan (pp. 3861, 3981-2, 4292).

No price was fixed; but as the complainant owns the whole of the stock of the Astoria company, this would be a mere matter of bookkeeping (pp. 4292, 4568, 4581). In fact it would appear from Mr. Addicks' testimony that, up to January 23 at least, the operation was experimental only (pp. 4292-3):

> "A. Sooner or later we will have to arrange for the payment of the expenditure to make the gas.
>
> Q. Well, if that is the price, you will sooner or later have to arrange it? A. Yes, they cannot run on forever without getting something for their product."

This, it will be noted, was nearly three-quarters through the "year beginning May 1, 1906," during which the court finds that four billion cubic feet of gas was supplied from the Astoria works (pp. 408, 425-7, 432).

Probable Use of the First Unit. There is some indication of unsettled purpose on the part of the complainant, and even of a desire to threaten retention of the unpopular coal gas plants in Manhattan as a means of getting rid of the eighty cent gas law (Addicks, p. 1587).

The ostensible plan at the time of the trial in 1906 was to use the first unit as a substitute for the purchased gas. Complainant's counsel, often afraid to trust his witnesses to testify uncoached, interrupted the cross-examination of the Secretary (p. 944), and led the Vice-President (p. 1573), to be sure that this should be matter of record; and the court follows them in its opinion (p. 406).

But if this be really the plan now, it is a new and changed one. When the Astoria construction was begun in 1902, it was with the purpose of scrapping the existing plants and using gas made over there (Bradley, p. 577). Plainly this was to be the use of the first unit, for after work was begun at Astoria the "agency agreements" above described were made, and made to run until long after the first unit should be completed. The same purpose was publicly announced in the spring of 1904, to make public sentiment in support of a bill then before the Governor for his action, which bill was for the purpose of confirming a claim to a franchise to lay pipes in Long Island City (p. 2300, see pp. 3161, 3792, 5961). That bill was indeed vetoed (p. 3161); but the required pipe was laid just the same, and is the conduit by which the gas is conveyed to Ravenswood (Bradley, p. 545; Simpson, pp. 3861, 3981; see p. 895). The purpose was the same when the "Ten Cent Item" was hurriedly introduced into the accounts after the Stevens Investigation of 1905 (see pp. 871-6, 943); and during 1905 new construction was being done at Ravenswood to permit the manufacture of additional gas for sale to the complainant (p. 102, *supra*), which would hardly have happened if it had been intended to discontinue use of the new construction in the following year.

But a mere purpose in the minds of the directors of one of the gas companies affected will not, we suppose, be held enough to annul a statute. If the company can reasonably conform to the statute without suffering a deprivation of property, due process of law is respected. Hence the question is not what the directors really intend to do, whether they mean what they say or are trying to hoodwink the public and the court, but what they may reasonably be asked to do by the state.

The two coal gas plants on Manhattan Island are the 14th St. plant with a daily rated capacity of 5,000,000 cubic feet, and the 42d St. plant with a daily rated capacity of 4,500,000 (pp. 1714-15).

Multiplying these figures by 200 (pp. 546-7) gives their respective annual capacities at 1,000,000,000 and 900,000,000.

The New Amsterdam plant, which is practically owned by complainant, has by an expenditure of over one million dollars for that purpose been enabled to supply complainant with gas at the rate of 2,173,196,400 feet per year, or fifteen per cent more than the rated capacity of the other two plants combined, and it is now actually producing in proportion (pp. 102, 103, *supra*).

The cost of manufacture at the two Manhattan stations was 37.88 cents and 34.87 cents respectively (pp. 3357-8, 3360, 5976-7). The cost of manufacture at New Amsterdam was 29.01 cents for the year ending October 31, 1905 (p. 3489, see p. 4469).

This gives us the following tabulation, showing what would be the cost of producing 1,900,000,000 cubic feet of gas, at the old works, and the cost of producing the same amount at New Amsterdam:

14th St. (1,000,000 Ms at .3788)	$378,800
42d St. (900,000 Ms at .3487)	313,830
	$692,630
1,900,000 Ms at .2901..........	551,190
Saving at New Amsterdam....	$141,440

This is a saving of six per cent on a capitalization of over $2,350,000 or of five per cent on a capitalization of over $2,825,000. In addition, the complainant would be able to realize the present value of the land under the 14th St. and 42d St. plants. This is valued by the Master at $3,620,000 (pp. 159-60); from which sum should be deducted the comparatively small items disallowed by the court as lands vacant, &c., and the value of the land under the large holder at 14th St. if that is desired to be retained as a distributing holder; and to which sum should be added the value of the land at 21st St. which is occupied by an oil gas plant for enriching the coal gas. These savings amount to far more than the combined value of the two plants to be scrapped (p. 175).

It may be suggested that growth of its own business may cut off future assistance from New Amsterdam. But there is no evidence to support such a finding. What evidence we have is the other way; and the burden of showing it if true was upon complainant, which does not seem to have overlooked any point of advantage to itself.

It may be further suggested that we are taking the actual cost at New Amsterdam, while the complainant will pay cost plus ten per cent. This is true, but it will get back the ten per cent through its ownership of the New Amsterdam stock, so that this figure will not enter into the calculation.

Probable Increase of Sales. The court, as part basis for deducting $200,000 per annum from complainant's net income, assumed that there would be *an increase of sales which would increase the net cost of production.* This increase he figured roughly at one billion cubic feet for "the year beginning May 1, 1906" over the calendar year 1905, saying that he "preferred to rest the assumption upon normal increase of population and advance of business as being better justified [than increase from diminution of price] by the evidence before the court" (pp. 406, 427).

But the "evidence before the court" directly opposes this theory, instead of supporting it. The increase from 1904 to 1905 was less than one-eighth of that amount, or 112, 404,000 (Complainant's Exhibit 85, p. 5039), considerably less than one per cent of the total sales. As Dr. Humphreys points out (p. 1825), *per capita* it was a falling off (p. 1593). *The sales in 1906 were very likely even less than in 1905.* Vice-President Addicks testifies as follows in September, 1906 (p. 1607):

> "Q. Are you selling more gas this year than you did last year? A. I am a little in doubt whether we are selling a little bit less or a little bit more. Some months I remember we have sold less. Month before last we had a material gain, evidently on account of the very dark weather we had during one month.
>
> Q. Are you buying more gas this year than you did last year? A. I have not got that figure in my mind."

As to the expected increase in 1907 over 1906 (p. 1592):

> "Q. Then you agree with the statement in which he concludes 'that the people are consuming about as much per capita as they will be likely ever to consume?' A. I think it is very probable, taking conditions as we see them existing to-day in the island of Manhattan."

In fact New York already consumes almost 9,200 feet *per capita*, or more than any other city in the world, London coming next at from 8,000 to 8,500 feet (p. 1591). The population of the Borough of Manhattan is now increasing but slowly, and Mr. Addicks endorses the theory of Dr. Humphreys that the "point of saturation" is "about reached"; in other words, "that the people are consuming about as much *per capita* as they will be likely ever to consume" (pp. 1591-2).

Complainant took the position all through the hearing that, because the point of saturation had been so nearly reached, no considerable increase could be expected even from a lowering of price; that the experience of the gas war of 1899 and the anthracite coal strike of 1902 can not be repeated. This is a matter of pure speculation, since Judge Lacombe's injunction prevented the experiment from being made. A vast amount of guesswork about it, and of argument based upon remote analogies, has been put into the record. It seems to us to be a region where the state can guess to a limited extent, but where a Federal court can not guess for the purpose of annulling a state statute.

Cost to Complainant of the Astoria Gas. As the Astoria is a separate company, we must figure on the theory that the gas is purchased, even though the complainant owns one more per cent of its stock than it owns of that of the New Amsterdam. On the other hand, it is matter of indifference to complainant's directors whether they put the purchase price high or low. Hence we must reach an equitable adjustment of the price of whatever gas if any we assume to be bought during the year 1906-7. This price should represent the cost of manufacture and an adequate return upon that part of the Astoria capitalization which is applicable to the purchased gas.

For the purposes of this appeal we are willing to accept the court's estimate of fifty cents per M for the product of the first Astoria unit (p. 407), the court's miscalculation being as to the amount of output.

Repairs, Replacements and Contingent Expense.

The standard method, theoretically considered. This is expounded by Dr. Humphreys, who is introduced to us as the leading living authority in Europe or America; nor have we any criticism to make of it as a system adapted to the standard (that is, the average) gas company. Our objection to it here is one of inadaptability to the very peculiar history and circumstances of this particular company.

The method is not presented as a mere theory of Dr. Humphreys, but as one generally approved by the gas pundits (p. 1819), and (although it does not adopt it) by the complainant in particular.

The *maintenance* ("total maintenance" he calls it) of a gas plant involves expenses for *current repairs, current renewals,* and *deferred renewals* (p. 1832). The first two items make no difficulty here, as they have been always paid for out of operating expenses (p. 1797; State's Exhibit L, p. 5078). The deferred renewals, or *final renewals,* are often but inaccurately called *depreciation* (p. 1806). They do not represent normal and expected *deterioration,* as do the current renewals, but depreciation from causes previously unknown, like electrolysis, loss of undeteriorated plant by obsolescence or "supersession", extraordinary accidents, increase in the general rate of wages, unexpected legal restrictions as to candle-power, &c. (pp. 1692-5, 1827-8, 1845).

To take care of these risks, this standard method provides two funds: first, a *depreciation* or *renewal fund* of so many cents per M of sales, or so much per cent *of depreciable capital,* each year; and second, a *reserve fund* equaling ten per cent. *of the total capital invested in the business,* to be accumulated by setting aside five cents per M per year until the required amount has been reached (pp. 1692-5).

The amount to be set aside for the former purpose is ascertained by estimating the life of the plant. In this case he estimated the life of the manufacturing plant at 33 years, and of the distributing plant at 60 years, and averaged them up at 40 years (p. 1803). He therefore took 2½% of the depreciable capital as an amount which would replace it in forty years (p. 1694). He included Astoria in the capital, thus raising it from $26,919,418.38 to $34,919,418.38 (p. 1818). This called for a depreciation charge of $860,480 annually (p. 1826) or .65592 cents per M for 1905 (p. 1692).

Assuming the constitution of such a fund, what is to be done with it until it is needed? One of the city's experts said "Put it aside at compound interest." This, as he and Dr. Humphreys agree, would make the annual charge for the first (or depreciation) fund only 1.05 cents per M instead of 2.50. Dr. Humphreys advises *that it be put into extending the plant,* but *that the additional plant thus acquired should not be regarded as part of the capital of the company.* He says (pp. 1797-1800):

> "I advocate taking the reserve for depreciation and putting it back into the business, keeping very careful track of that reserve and how it is spent, so it cannot be considered as a warrant for extra capitalization. In other words, it is against the depreciation to the limits of my estimate. * * * Now the question is how shall we invest that

money. If the business is lying dormant and is not extending and there is no use for further capital, then of course we will put it out to accumulate at compound interest and of course the day of the death of the business is coming. If we do not go ahead, we will go back very shortly. But if the business is active and there is use for capital to cover extension of business, I claim it is the wise policy to take that depreciation fund so far as it will go—you will probably require a good deal more, but so far as it will go—and use that depreciation fund not only for the current renewals and even the deferred renewals, but for the final renewals, to offset the final renewals and invest it in extensions so as not to draw in that extra capital which otherwise would be necessary for those extensions. * * * Now, if you are not ready to use the surplus from depreciation charges for exhausted part of the plant, at any particular moment, you have the opportunity to use it for extensions, and you put it into extensions. How much you will have in forty years, of course, is problematical.

Q. On those extensions you get an increased busines?

A. Yes, and you need it.

Q. That goes on to your general earnings on gas sales?

A. Yes.

* * * * * *

[p. 1799] Q. Where are you going to get your money from to build your new plant, or old plant?

A. So far as you had used that money in advance for extensions, in lieu of depreciation, you would have to put out capital at that later day rather than at the earlier day. You would have saved yourself capital charges in the meantime.

* * * * * *

Q. But you are putting it into extensions,

so at the end of this time you have a larger plant and you may have reproduced a plant that was the same value of your original plant, but you have nothing back to take care of your original plant which has given out?
A. We will take a simple case and say that there is no necessity for renewals in the meantime and that the plant ceases to exist at the end of 40 years and goes out of existence at once. In the meantime I have taken my 2½ per cent., which multiplied by 40 is 100, and at the end of 40 years I have reproduced that much more property, and my original plant goes out. I have got the 100 per cent. for the old 100 per cent."

And again (p. 1807):

"Q. A final renewal fund—is it for a fund which will replace a plant when it wears out? A. Not entirely, no, sir. It is to maintain the asset of plant at par. Now, it may not be used for renewals at all. We have fulfilled our duty as managers if we have kept our plant asset at par and can do that by placing certain moneys as I have explained in extensions, *and do not recapitalize them,* but have that piece of extension take care of that piece of depreciation. Of course that is practically being done all over the world in every business."

And again as to the second or *reserve fund* (p. 1826):

"A. I would invest it the very best way I could, whether in the business or any other way.
Q. Well, the best way—— A. *It would not be capitalized,* and would not be given out as dividends.
Q. The best way you could discover to invest your $2.50 was to put it back into the gas

business, it being one of the most productive things you could think of? A. Yes.

Q. Would you put this back in the same way? A. I don't know whether I would or not. There would be no objection to doing it in my mind.

Q. And if you did and there should come some of these untoward circumstances which you think might possibly happen, where would your money be to take care of them? A. You would not have invested that in the business unless you needed that extra capital. You would simply have then deferred the bringing in of the extra capital. When the trouble occurred you would now get that capital which otherwise you would have obtained outside in the first instance."

And again, on further cross-examination as to the status of the property bought with moneys out of these funds (p. 1830):

> "I should say it would be obtained from the depreciation of the capital already invested. In other words, you would impair your capital to that extent *but it would not be new capital.*
>
> * * * * * * * *
>
> It would be obtained from new money brought into the business but it would not be from my standpoint new capital. *I should not feel warranted in considering it new capital.* I should simply consider it money obtained somehow to repair losses I had made.
>
> Q. And not new capital being received it is not an extension of the present business? A. Not an extension, no, sir."

And again as to the reserve fund (pp. 1836-7):

> "Q. You would consider that if it were put into extensions of plant or a new unit added,

that would be proper business management? A. It would temporarily take the place of moneys that would otherwise have to be brought in.

Q. A new unit would be an extension of plant, would it not? A. Not necessarily.

Q. You consider the Astoria plant is an extension of the Consolidated Gas Company, do you? A. Yes.

Q. And you consider this 5 per cent. reserve might properly be invested in that plant, would you not? A. Temporarily invested until needed, when they so defer the day for borrowing money for that.

Q. And when needed capital would have to be obtained from other sources to take its place?

A. That is right.

Q. And put into the Astoria plant in place of that which you take out, for the purposes reserved and set aside?

A. That is one way.

Q. And you expect this 5 per cent. invested in the Astoria plant would be earning as much return as is reasonably to be expected from a plant of that kind?

A. Yes.

Q. And then, if a company had the good fortune to have created at the end of forty years a plant of the same size as that which it started with, out of this depreciation fund, paying for those renewals which would otherwise have to be taken out of depreciation, out of its current repair account, you would have a plant of twice the value of the original plant, would you not?

A. If you were able to take from what I call, for present purposes, my final renewal fund of 2½ per cent., and you were able to keep up the present plant, not only in full working order, but so as to take care of all exhaustion of life, and also build a plant of the same value, you would of course have a plant of double value.

Q. And that plant would have been paid for without any increase of capitalization of the company?

A. Yes, sir.

The standard method, considered in the light of experience. Is this method, which may be good for the average company, applicable to one which holds the strategic position of this complainant? This question can best be answered by actually applying it *nunc pro tunc,* and seeing how we come out.

The total of the new construction, together with all additions to real and personal property up to October 31, 1905, amounted to $9,693,595.90 (Complainant's Exhibit 79, p. 5032). The amount contributed toward this expense by new capital can not have been more than $3,929,371.82 (p. 23, *supra*). Hence current net earnings must have contributed at least $5,764,224.08, over and above all current and final renewals found necessary for the first twenty-one years of the company's existence. The $9,693,595.50 increased the manufacturing output to two and one-half times that of 1884, and increased the distributing capacity to an extent enabling complainant to more than quadruple its sales. But none of this amount would have been required from Dr. Humphrey's two funds, which are intended only to keep capacity and condition at par.

If it were now the intention of complainant to continue in business as a manufacturer of gas, its 21 years of experience should afford the best test of the annual contribution necessary to establish and keep up a depreciation or final renewal fund.

As we have seen, Dr. Humphreys estimates the life of complainant's manufacturing plant at 33 years; much of it was pretty old at the time of the valuation of 1884, so that its depreciation must have been considerable; it has been very largely renewed during the past few years; and the new plant makes two and a half times as much gas as the old. Mr. Mayer, whose appraisement has been accepted by the Master and court and is the basis of this decree, finds a present depreciation in this plant of but 3½%, or $604,988. The court deducts from Mayer's total valuation but $32,489, whether for additional depreciation does not appear (pp. 175, 1342, 4587). The mains and services are practically eternal under the conditions prevailing in New York, barring supersession and electrolysis (p. 78, *supra*). Simpson values them without depreciation. The court, in adopting his figures, necessarily finds that they are as good as new, past renewals having provided for electrolysis and for maintenance of past value upon supersession.

How much per cent per year then has to be put aside by a company in the extraordinarily favorable position of this company, in order to provide a fund that will provide against all contingencies reasonably to be expected?

Complainant's "depreciable capital" at the beginning was about $20,000,000 (this excludes the real estate and franchise items), and at the end about $29,000,000 (Complainant's Exhibit 79, p. 5032). The increase was more rapid during the first years of the period (Complainant's Exhibit 78, p. 5032). Hence we may assume $25,000,000 to be about the average amount for the whole period upon which Dr. Humphreys would have based his depreciation or renewal fund.

Assuming the court's correction of the Mayer valuation, just above noted, to be due entirely to depreciation, we find that the following amount, by the actual experience of this complainant, had to be provided for:

Renewals 1884-1904 (p. 5079)......	$4,663,838.32
Renewals to Oct. 31, 1905 (p. 5080)..	194,666.87
Depreciation allowed by Mayer....	604,988.00
Depreciation allowed by the court..	32,489.00
Total	$5,496,982.19

A depreciation fund of $1.05 per annum per $1,000 of depreciable capital would have yielded the following result:

$25,000,000 at .0105, each year......$	262,500.00
Same for 21 years without interest..	5,512,500.00
	5,496,982.19
Surplus, Oct. 31, 1905..........	$15,517.81

It may be suggested that $1.05 per $1,000 was the figure of Prof. Bemis, the city's expert; but Prof. Bemis was expecting to lay his $1.05 up at compound interest, and the basis of his calculation was the same as that of Dr. Humphreys. The fact is that both these gentlemen have been going about the country testifying in various tribunals about necessities of the average company, and they figured here on the same theory, without noticing how different the conditions of a New York City company are. Averages taken from other cities' experience are inapplicable in New York, and Dr.

Humphrey's calculation of depreciation was as wide of the mark as the similar calculations of the City's expert.

To keep up this $1.05 annual fund, the sum necessary in 1905 would be calculated upon a depreciable capital estimated by complainant at $29,000,000 (*supra*, p. 120; Dr. Humphreys at page 1818 makes it only $27,000,000 exclusive of Astoria) and would be $304,500, or about 2.29 cents per M upon the total sales for that year. The actual renewals were $282,219.67 (p. 5080), *a difference of only $22,220, or less than .0017 per M.*

But if a depreciation fund of uniform constitution, pursuant to Dr. Humphreys' plan, would require a charge of only 2.29 cents per M in 1905, why were the actual renewals for the whole 21 years' period 3.01½ cents per M, as he points out at pages 1692-3 (10.60 for repairs and renewals, less 7.5858 for repairs)? Simply because the whole calculation based on average repairs and renewals per M, by which the Master was misled although the Judge was not, is based upon the favorite fallacy of all gas company accountants, and of this complainant in particular—the fallacy included in the assumption that expenses vary per M. The fallacy is exposed by analysis of State's Exhibit L (pp. 5077-80), which is an annual account of repairs and renewals, prepared by the complainant (p. 939; and see Humphreys, p. 4775).

It is sufficient to set forth a few comparisons in the following tabulation:

REPAIRS AND RENEWALS.

Year.	Total cost.	Do., cost per M.
1885	$338,510.33	8.59
1905	$974,286.65	7.34

Year.	Total cost.	Do., cost per M.
1891	$1,028,278.60	16.40
1904	$1,079,941.74	8.19
1896	$938,042.58	13.71
1900	$976,700.35	9.87
1905	$974,286.65	7.34

If the company had kept up a depreciation fund from 1884 on Dr. Humphreys' plan, it would have come out as follows:

Interest on $25,000,000 for 21 years at 2½%, uncompounded.........		$13,125,000.
Renewals, &c. (p. 121, *supra*)	$5,496,982.19	
Additions (p. 119, *supra*)	5,764,224.08	
		$11,261,206.27
	Surplus	$1,863,793.73

It would thus have paid not only for all the renewals (the purpose for which it was intended), but as well for all the additions that actually have been made out of net income, besides nearly half of those made out of new capital (p. 23 *supra*).

This may suggest that at least $5,764,224.08 should be deducted from the capitalization as representing what was actually collected out of the consumers for use as a depreciation fund, invested as such funds are properly invested, and according to complainant's leading expert non-capitalizable; but no assignment of error has been based upon this theory by any of the defendants.

The company has never found necessity for a reserve fund, if a full depreciation fund and an eight per cent. dividend on non-imaginary capital keep a company out of a necessitous condition.

In view of the facts just set forth, there is no probability of any increased rate of repairs and renewals in the future, if the manufacture of gas be continued.

But the complainant intends to discontinue the manufacture of gas, and instead buy its gas from the Astoria Light, Heat & Power Company; and it complains that this will involve a depreciation in the form of plant-scrapping in the Borough of Manhattan, estimated by Vice-President Addicks at $10,400,000, a figure for which no definite detail is given (p. 1588).

But this step is not taken on account of any depreciation or supersession. Retirement from business is not depreciation, when it does not appear that the business is becoming less profitable. Complainant is not going out of manufacturing gas perforce. It is abandoning that branch of its business for motives of policy. This can only be because in the long run the change will prove profitable, for the reasons already stated (p. 66, *supra*); to which may be added that the change will release real estate which will sell for 15% more in the opinion of the experts to whom the Master gave credence than their own figures; and which on that basis should net a greater sum than the plant-scrapping loss (pp. 159-60; *supra*, pp. 35, 45); most of this being "unearned increment" of which complainant has never yet taken the advantage (see pp. 42-3, *supra*).

No depreciation fund has been laid aside unless, if we adopt Dr. Humphreys' method now as against the consumer, we adopt it *nunc pro tunc* as of 1884. In that case it must be stricken out of the court's capitalization of the depreciable property (see pp. 114-17, *supra*).

Complainant's former method. — Until the Stevens investigation of April, 1905, no depreciation fund, final renewal fund or reserve fund was created. A "depreciation account" was kept. This was simply an account of articles "scrapped" for any reason. They were set down at their book value, (that is, their appraised value if inherited in 1884, their cost if bought since). The amount of the "depreciation account" was offset by the amount spent for renewals. Any amount spent for renewals over and above the amount of the "depreciation account" was treated as "additions" or "new construction." No distinction was made between "current renewals" and "final renewals", between those required by current wear and tear and those due to "supersession," although so large a part were due to the latter cause, as the works have been rebuilt and their capacity more than doubled (pp. 1713-16). The system is described by Mr. Carter at pages 4506-8.

Complainant's new method—the "Ten Cent Item."—The Stevens investigating committee held its first session on March 30, 1905, and its last public sitting on April 21 of that year (p. 1673). It shortly thereafter reported that complainant could afford to furnish gas at 75 cents. The complainant at once began to prepare to weather the storm and this "Ten Cent Item," being an entry among operating expenses of ten cents per M on the total sales of gas, was conceived. It was adopted in May (p. 871). A new account was opened under sary to guard agains accidents any further than by its fire insurance account. The damage claims against the company were, and still are, treated as an item under the general head of "Expenses, General Office," amounting in 1905 to $30,438 (p 5788). Mr. Carter and Dr. Humphreys both tried to think up extraordinary precedents of accidents, but in the whole history of gas making they were only able to remember the Boston case, mentioned by the Master at page 224, and explosions in Philadelphia, London and Liverpool. They remembered none in over eighty years' experience in New York. Of course, if an accident of great magnitude should occur here, the company would be at liberty to make application for relief under Mr. Justice Brewer's provision, approved by this Court, in Smyth *v.* Ames (169 U. S., pp. 477, 549-50; see also Hough, J., at pp. 403-4, 426-7, 434).

Fluctuations in business.—It is difficult to conjecture the meaning of this item of Mr. Addicks. It does indeed appear that the rate of increase in the business was considerable at some periods, although scarcely perceptible in 1905 and possibly succeeded by a slight decrease in 1906 (pp. 110-11, *supra*). But the output of this company is flexible and conforms itself to the demand. If there be any extraordinary fluctuation, like the supplanting of gas by electricity on a scale not now foreseen, it can be dealt with on the principle of Smyth *v.* Ames, just above cited.

Cost of materials. Complainants have presented their accounts for 1905 on the theory that that is a typical year, and the Master has refused defendants leave to examine its books for the purpose of showing that it was really untypical (p. 26. *supra*). If it is a fairly typical year, it is an average year, so that if the expenses happen to be higher than next year they will presumably be compensatingly lower later on, and *vice versa.* Hence if it is assumed to be a typical year—and if it is not a typical year there is no evidence to support a decree in this case—there is no reason why the state should make provision for a contingency fund against increase in cost of materials.

Such evidence as we have is to the effect that 1905 was a year of particularly high prices, and therefore one in which operating expenses in this particular were presumably above the average, which indeed is so well known that perhaps it can be judicially noticed. We have already pointed out that the increase in price of iron pipe was as great from 1904 to 1905 as it had been from 1884 to 1904 (p. 77, *supra*). But nearly all of the machinery is iron and steel, and its value is estimated by its weight (pp. 171-3). In 1906, the year as to which the calculations in the decree are made and during which the testimony was taken, the price of steel at least was lower than in 1904 (Mayer, p. 1442). Hence we have proof that 1905 was a particularly high year for all expenses of replacement. The price of iron and steel is commonly an index of the price of all materials, and there is nothing to the contrary here.

Electrolysis. This is the name given to the action of stray currents of electricity in the street, which under certain conditions will corrode the iron pipes. This is a trifling danger. Complainant admits that there is no danger from the electric light pipes belonging to the Edison system (Lieb, p. 4090), and that none has been experienced from the subway. Up to this time only two cases of injury from electrolysis have been noticed. One of these is at the Brooklyn Bridge, where there are various electric currents, and the other at West Broadway and Spring Street, the elevated railroad having a power house at that point (pp. 674-5, 677, 687, 707, 4104). The latter is one of the most dangerous spots in the city (p. 4158). The electrification of the elevated road had been completed from three to five years before the testimony was taken, so that past experience shows the danger from electrolysis to be small. Prof. Sever of Columbia, who testified for the state, said that the danger was decreasing (p. 2892). The complainant's witness Lieb also admitted that conditions on the elevated railroad were improving (pp. 4106, 4108). Superintendent Simpson testified in the strongest terms that the mains were all as good as new in 1906 (p. 78, *supra*). Upon this testimony the Master must have come to the conclusion that the danger from electrolysis is too small to be considered; for he capitalizes the mains and services at their full value without depreciation. If they had been injured by electrolysis, this finding would of course have been impossible.

Having considered the reasons stated by Messrs. Addicks and Carter for the Ten Cent Item, and stated by the Master, we now take up the three further reasons assigned by him.

Candle power. The old Gas Commission in its estimate allowed an increase of 1.81 cents to the operating cost on account of the increase from 20 to 22 candle power, and Vice-President Addicks claimed 1.83 before the Master (p. 231). The court having stricken out the Ten Cent Item, complainant unsuccessfully attempted to have the 1.83 allowed as a special item of itself (p. 424). The facts about it are as follows:

The 22 candle power provision was introduced into the law in 1897, but by some oversight no penalty for its violation was provided (Act of 1897, chapter 385, p. 5264). The act was enacted subsequent to the city charter, which had provided for 20 candle power with a penalty, and it was conceded before the court that the charter provision, although re-enacted in 1901 in the revised charter, did not prevent the continued effect of the 22 candle power provision (Greater New York Charter of 1897, chapter 378, § 578). The complainant however disregarded the law until it was re-enacted with a penalty in 1905, the new statute taking effect on July 1 of that year (Bradley, p. 648). Except for the insertion of a penalty provision, the only new requirement in the act of 1905 was that the city tests were now required to be made within a mile of the "distributing holder" instead of within a mile of the "place of manufacture" (p. 5, *supra*).

The complainant urged before the court that it should be allowed to charge a higher rate to the consumer on account of the imposition of this penalty, just as the street car conductors are said to have demanded a raise of salary when they were first made to ring up their fares.

The average candle power found by the city tests during the first six months of 1905 was precisely 22. The average during the last six months was 24.19 (City's Exhibit 47, p. 5540). The average for the whole year was therefore over 23. There was considerable controversy on the trial as to whether an average of 23 allowed sufficient margin to the company, and the company claimed that there was so much variation in the amount of loss between the works and the testing point as to make so small a margin unsafe. On the contrary, Mr. W. H. Gartley of Philadelphia, for whom Dr. Humphreys had "the highest respect" and "would hesitate a long time before I doubted anything that he stated," claimed that actual experience under the Philadelphia 22 candle power requirement showed that by adopting a proper method an almost uniform candle power could be supplied. Mr. Gartley's paper was evidently most important, but the record is very blind about it. Dr. Humphreys states that it was "a new proposition which Mr. Gartley has brought forth," and one about which he himself would not as yet express any opinion (pp. 4785-8). Complainant introduced a tabulation, got up by Mr. Carter (p 4498), purporting to show that there was a very great and very irregular loss in candle power between the works and the testing place (Complainant's Exhibit 368, p. 6068); but the tabulation is entirely misleading. It is misleading because the gas tested by the city is not gas purely of complainant's manufacture, but a general mixture of its own gas and that purchased from other companies. The purchased gas, which is between one-third and one-quarter of the whole, is delivered by the other companies into complainant's holders or mains, so that it is impossible even for the companies as between themselves to keep any account of how much of the mixture passing under the streets comes from the companies other than the complainant, except by estimates based on their total output and the total demand of their other consumers (Carter, pp. 894-5, 1666; Bradley, p. 1729; Simpson, pp. 1759-60). The new Astoria gas is all delivered by the Astoria Company to Ravenswood, and thence comes into the Borough of Manhattan mixed with the New Amsterdam gas; mixed, therefore, with the gas which the New Amsterdam is furnishing to its own consumers as well as with the gas which it is selling to the complainant (Simpson, pp. 3861, 3981).

Vice-President Addicks' estimate of 1.83 cents as the cost of enrichment (p. 1613) seems to be as erroneous as the rest of complainant's testimony on this point. The most direct evidence which we have is that of complainant's own experience, comparing November-December 1904 with November-December 1905. This comparison we are able to make by reason of the fact that we have in Complainant's Exhibits 93 and 94 detailed statements of operating expense for the year ending October 31, 1905, and for the year ending December 31, 1905, respectively. The reliability of these statements is not conceded by the defendants, but complainant is estopped from claiming that they do not give in every particular (except as otherwise stated by it) a perfectly fair estimate of the expense of making gas. The conditions remained almost the same, as complainant's output for the two periods varied only in the percentage of .0002. The proper way to arrive at the cost of the unit candle power in gas is to divide the cost of one gallon of oil by five for each candle power (Bradley, pp. 663, 658-9). In other words, an increase of two candle power requires two-fifths of a gallon of oil per M; and to raise 10,657,810 Ms from 20 to 22 candle power would therefore require 4,263,124 gallons. But the actual increase was only 371,763 gallons (pp. 979-80, 2050).

Hence either the actual increase in candle power was less than 0.18, or else there was some economy introduced which lessened the amount of oil required to make a thousand cubic feet of gas.

Taxes. The Master's estimate of an increase of 1.13 cents per M on taxes is based upon testimony of Secretary Carter at page 1667. He divides the expected increase into two items.

The first item is a special franchise tax of $68,563.87 or a percentage of .0052 per M. These special franchise taxes are all contested, so that the items are simply reserved for payment at some future day. The business done by the company during 1905 was practically the same as during 1904, and in 1906 may be less (p. 111, *supra*). Hence there is no probability that the special franchise tax, whatever it may be, will be higher in either of the two latter years than in the former. Furthermore, the tax is assessed as of the month of January. Hence the tax assessed in 1906 belongs to the year ending April 30, 1906, if years are to be computed on the basis assumed in the decree herein. If the 80-cent gas law is sustained, complainant will be assessed very much less for the year 1906-7 (pp. 233-8, *infra*).

The other item is $81,307.81 or .0061 per M, on account of the fact that there has been an increase in assessments aggregating $5,455,000. It appears from the question of complainant's counsel that the new assessments are being contested. It does not appear whether the increase is on real property or personal property. This item is not as gross an improbability as the increase in special franchise tax, but as it constitutes an increase of nearly one-third in the rate in a single year, either complainant was already grossly over assessed or else it will be probably reduced. The item is quite speculative; and we may add that if it was not grossly under-assessed in 1905, its real estate has been grossly over-estimated by the Court below; for the tax rate being 1.490519 (p. 1002), and the real estate tax in 1905 $179,778.95 (p. 223), it would follow that the real estate assessment was under $12,065,000 for that year. But this includes all of the real estate rejected by the Master and Court, and also all of the plant which by law is regarded as real estate, although not so called by this company; and assessments in New York City are at the sum for which the property would sell under ordinary circumstances (pp. 4918-19).

Labor cost. There is nothing in the evidence to indicate that labor cost is likely to increase. So far as appears, the tendency is the other way. Care should be taken to distinguish between *labor cost* and the *rate of wages.* It is a familiar fact that labor cost often goes down when wages go up; in other words that people getting better wages do better work, and that the improvement in output is more rapid than the increase in wages; also that the improvement in wages is often accompanied by an increase in labor saving machinery, so that the number of employees is less. It is not claimed by complainant that the general rate of wages was reduced in 1905. It is matter of common knowledge and of proof in this case that wages were rising; yet Vice President Addicks testifies that the labor cost in 1905 was less than the average labor cost for the previous five years by an amount equalling .78 cents per M. (p. 1639), although the winter of 1904-5 was so severe a one that Simpson's payrolls were one-third higher than in the winter of 1905-6 (p. 716). Every labor item was lower in November-December 1905, than in November-December 1904, although the output was less by a percentage of .0002 only (Complainant's Exs. 93, 94, p. 5050). The reduction in 1905, in face of the heavy payroll, must have been due to increased efficiency of the working force, or to the introduction of labor saving machinery. The latter is the explanation given by complainant's expert Mayer, whose testimony was accepted by the Master. He says (pp. 1478-9):

> "Q. I thought you said that within the last two years there has been no material increase or decrease in the rates of steel or labor, didn't you? A. If I remember my testimony correctly, I think I stated that the material at present was perhaps slightly less and the labor slightly more, so that one would compensate the other approximately.
>
> Q. It would amount to about the same thing? A. Yes; now, when I speak of labor I mean total labor for the entire construction. Of course you understand that the wages are very much higher at present than they were at that time.
>
> Q. At what time? A. In 1903 and particularly 1904. From 1903 to 1904 the rates were jumping very fast.
>
> Q. When did they cease to jump—in 1904? A. They have not ceased to jump yet, and God only knows when they will, nobody knows.
>
> Q. Then, as I understand you, as labor jumps up, material jumps down, so that they keep about an equilibrium? A. Not absolutely. No, that was merely an opinion that I

> gave you off-hand, because I had that condition in my mind at the time I said that. I believe that it is approximately correct. For instance, *the reason that the total cost of labor is less at the present time than it was in 1903, is due to the fact that we were compelled to improve our field machinery in order to offset the constantly increasing demand for wages.*
>
> Q. That has been the experience of every line of manufacture, hasn't it? A. Yes, I presume so.
>
> Q. That is, as wages increase the inventive genius of man on the other hand produces labor saving machinery and therefore we arrive at the result that we can produce cheaper although we pay more for labor? A. Yes, I presume that the same conditions exist in other branches of business the same as ours."

In rebuttal, over defendants' objections, complainant introduced testimony to the effect that there has been an increase (not of labor cost, but) of wages, of "substantially 10 per cent," at some date not stated, but apparently in 1906. Based on 1905, this increase is estimated at $180,000 a year, alleged to wipe out the above difference of .78 in labor cost and make .62 additional. But the .78 was a percentage of decrease of labor cost, while wages were rapidly increasing up to 1905, as has just been shown. The two radically different items, wages and labor cost, are confused. We can find in the record no information warranting a finding as to the labor cost of 1906, one way or the other.

Mr. Mayer admits that while labor was "*a little bit* higher" on August 31, 1906, than two years previous, building material was "a little bit less," so that in his line at least the total averaged about the same (p. 1442). Exclusive of the slight increase in consumption of oil, attributed by complainant to the new candle power requirement, and of the increase in its price, due to a contract with the Standard Oil Company as to whose propriety there was a great deal of evidence and dispute before the Master and Court, the materials enumerated in Exhibits 93 and 94 (p. 5050) decreased in cost slightly from November-December 1904, to November-December 1905; but this was mainly due to improved methods whereby an equal amount of gas could be made with a little less raw material.

General summary.—Complainant characteristically picks out a few items where it claims an increase in 1906-7 over 1905, while keeping its books closed and supplying no general account for any period after December 31 of the latter year.

It does not even give an item showing what it claims to be the general expense of 1906, or any part of that year, as compared with 1905.

It does inadvertently show in the Exhibits last referred to the general result of November-December 1904, as compared with November-December 1905. Notwithstanding the fact that the candle power and pressure provisions were in force after July 1, 1905, in the later period the cost of manufacturing gas was .0026 less per M than in the earlier. Probably if there are any small items of increase in 1906 over 1905 they would be offset if a proper reduction were made in the item of "Expense, General Office," whose increase of $63,176.29 in November-December, 1905, over November-December 1904, an increase of nearly one-quarter of the whole, or of .006 per M, can hardly be due to anything but work at Astoria; thus showing that this large item should be heavily cut down for the whole year; a fact suspected by the city's accountants, but which they unaccountably failed to follow up (p. 5789).

Items not claimed by Complainant.

There are two items which are often allowed, but which this complainant does not claim.

Going concern.—In case of condemnation by the city, this item would be included. It would not be included because complainant had incurred any expense which ought to be reimbursed, but because the state or city would be trying to get a valuable property without losing the time necessary to build it up. The state or city would be trying to save not only the item of "interest pending construction," but also the item of interest after completion of the construction and up to the time when a fair rate of income is earned on the investment. "Going concern value," in the true sense of the term, has been discussed in the Knoxville water case now pending before this court, and the phrase has been defined by the President of the appellee company in that case as "a summation of the deficiency of earnings in the first years of business to provide for a fair return on the capital invested therein"—an extension of part (a diminishing part) of the item of interest pending construction. This item is discussed and allowed in a condemnation proceeding by Mr. Justice Brewer in National Water Works Company *v.* Kansas City, quoted by the Master at pages 206-7.

This "going concern" expense, in fixing rates, can conceivably be capitalized for all future time, or else satisfied by allowing an extra high rate of profit during the first years after the concern becomes actually profitable. It seems to us that the latter should be regarded as the most satisfactory method of dealing with the item, both from the point of view of the public and from that of the promoters of the new enterprise. There should be no variance in the permanent capitalization of two companies otherwise similar, only because one took longer to get agoing than the other. In the case of the present company the item received the latter treatment, as we have already shown (pp. 28-9, *supra*).

Amortization. When the public grants a franchise for a limited term, it ought to permit the recipient to charge a sufficient extra rate for his gas to make up for the property that he is going so soon to use. The public pays more for its gas in order to keep better control. According to the opinion generally held until recently, and the opinion which we maintain to be correct, this complainant's franchises, so far as it owns them and they are valid, were limited in term and therefore good cause for an amortization item; but complainant's progenitors, who obtained the franchises, charged rates sufficient to cover this item (pp. 28-9, *supra*). Complainant's new theory is that some of these franchises are perpetual; and if so, there is of course no amortization item.

Skill of officials. The Master quotes from a report of another Special Master certain *obiter dicta* to the effect that the skill of the employees of a company is a proper item of capitalization (p. 207). Complainant, so far as we are aware, has made no claim of such startling novelty. The officers and employees of a corporation are not the corporation itself in any sense. They are hired by it, and can be hired away by another company by offer of a little higher wages; and whatever rate of wages is necessary to pay, the corporation must pay and is entitled to charge up as against its customers. Rates for gas cannot go up and down according as expert witnesses swear before a commission or a court that the corporation is more or less fortunate in securing skilled employees. The state must fix rates on the theory that the employees are competent, and take measures to enforce proper service if it turns out that they are not competent.

Rate of return.

The Circuit Court did not decide the question of the reasonable rate of return upon the evidence, but "in part by taking judicial cognizance of local business conditions"; concluding therefrom that 6% is not "a profitable, satisfactory or attractive rate for the investment of capital in a gas business," but "the lowest rate which in the City of New York can be considered legislatively fair," etc. (p. 428).

If the court can take judicial notice of the fair local rate for gas investments, the right must be exercised by examining the actual quotations for the stocks and bonds of corporations engaged in that business; and this is practically impossible so far as the Borough of Manhattan is concerned, because the complainant has been since 1900 largely a holding company, holding securities of other companies at a very low rate of profit (State's Exhibit B, p. 5[illegible]), and because all of the other companies doing business therein are controlled, and all but one are almost entirely owned, by the complainant.

The facts upon which the court based its judicial notice do not appear. So far as they are represented by market quotations, the present post-panic prices can be found in the Bond and Quotation Supplement of the *Commercial & Financial Chronicle,* published monthly. By examining these quotations it will be perceived that any mortgage bond issued by a company comparable with complainant, running for a considerable time in the future, will net the investor somewhat less than 5%,* although prices have of course fallen a little in the last two years. Market quotations of gas stocks are so much affected by special considerations that it is difficult to get much use out of them. Moreover, quotations for the past year are abnormally low, while the state legislates with relation to the conditions of the average year. The stock of this complainant stands in the market as a security of the same class as the stocks of the highest class of railroad companies, and can be compared with them as to the relation between market price and customary and expected dividend.

---

*See for instance, Bridgeport Gas Light Co. 4s, 1952, 86 bid; Brooklyn Union Gas Co. 5s, 1945, 107 asked; Consolidated Gas Co. of Baltimore 5s, 1939, 110⅛ bid; do, 4½s, 1954, 92 bid; Laclede Gas Co. 5s, (St. Louis), 1919, 101½ bid; Newark Gas Co. 6s, 1944, 128 bid; Newark Consolidated Gas Co. 5s, 1948, 103½ bid; Troy Gas Co. 5s, 1939, 106 bid; Washington Gas Co. 4s, 1927-9, 98 bid. The bonds of the minor New York companies are on about a 5% basis (B. & Q. Suppl., Oct. 3, 1908, pp. 44-5).

The only reported cases of which we are aware, where the court has taken judicial notice of the rate of return, are New Haven Trust Co. *v.* Doherty, 74 Conn., 468, where it noticed that 1¾% was below the current rate, and Collins *v.* Wardell, 63 N. J. Eq., 371, where it noticed the fact that the return upon safe investments had been continually diminishing for many years, and had come down to a 4% basis.

Complainant's testimony intended to bear upon the rate of return was considered by the Master to be of little value (pp. 243-4). The witnesses were bond brokers or gas men.

Their testimony was objected to by the defendants.

Mr. Halsey expected at least 10% upon the value of the property (p. 1697). On cross examination, however, he said (pp. 1698-9):

> "A. It depends entirely upon the conditions, but I should think that a stock that paid 5 per cent. and was certain to continue to pay 5 per cent. would sell very much better than that; sell close to par.
>
> Q. It would probably sell at 102 or 104? A. It might; it might sell at 75, depending on all the conditions, franchise and the location, permanency of the business; all of those things enter into it."

He said that "you can buy a great many securities to-day on an 8 or a 10% basis if you wish to," but would not deny that a 4% basis might apply on "securities that have paid their dividends for the last twenty years, where the company has a monopoly of the business and has paid its dividends regularly" (p. 1699). Messrs. McMillin, Bertron and Forbes testified to various high rates expected by persons investing in gas enterprises. The city called Secretary Carter to the same effect, and other similar testimony, in the shape of extracts from affidavits, was admitted over objection. (See pp. 807-8, 1676-8; Complainant's Exhibits 225-234, pp. 5281-8.)

It does not appear that any of these witnesses or affiants had in mind, or had had in their experience, any enterprise approaching in value that of this complainant.

Defendants' testimony.—The state presented no testimony on this point, relying upon the insufficiency of the complainant's case. The city called two statisticians, and put in certain stock quotations indicating that gas securities of established companies were sold upon a basis averaging less than 5%. These quotations are set forth by the Master at page 245. He justly observes that in each case there may be many special elements tending to inflate the market value; but complainant, while putting in a good deal of testimony as to some of the companies referred to, presented none tending to show that there were any companies in cities comparable with New York whose gas stocks stood on a higher basis than those produced. The testimony therefore seems to be entitled to some weight, unless it is to be assumed, in the absence of all evidence to that effect, that it is the universal custom of such companies to hold back a very large proportion of the earnings, for the purpose of cutting melons in the future. The Master also fails to call attention to the fact that two of the stocks mentioned by Professor Bemis are preferred stocks, which therefore cannot increase their returns by melon-cutting. These are the preferred stock of the Massachusetts Gas Companies, which was quoted in September, 1906, on a 4.52 basis, and the preferred stock of the Laclede Gas Light Company of St. Louis, which was then quoted on a 5.26 basis (p. 2672).

The Master also omits entirely the significant quotations of gas bonds, which are set forth at page 2673, being abstracted from the *Commercial & Financial Chronicle* for September 8, 1906 (see pp. 2348, 2530-2). Taking the quotations of 5% bonds of companies in large cities, having twenty-five years or more to run, we obtain the following abbreviated tabulation (p. 2673):

City.	Date of Maturity.	Return on Investment.
Baltimore	1939	4.5
Brooklyn	1945	4.4
Buffalo	1947	6.4
Chicago	1947	4.7
Montreal	1933	5
Newark	1948	4.7
Paterson & Passaic	1949	4.9
St. Paul	1944	5
Syracuse	1946	5
Troy	1939	4.4
Westchester	1950	4.4

Certainly the Consolidated Gas Company could issue bonds that would stand as well as those of the companies in Brooklyn, Troy and Westchester, and which therefore would sell on a 4.4% basis.

The Buffalo company, by the way, is managed by complainant's witness Dr. Humphreys (p. 4759).

Complainant's experience. Complainant's stock has been too speculative an article to afford very much assistance. While earning an average dividend of 8% (p. 28, *supra*), and prior to the purchase of securities of the other companies, it ranged from 111 up to 168 during the hard time years 1894-6, and from 136½ up to 241½ during the years of recovery 1897-9 (pp. 5034-5).

Other testimony bearing on the rate of return. There is quite a little testimony in the record bearing on this question, which was not introduced for that purpose, and which therefore possesses a special value.

The rate of return regarded as sufficient by the stockholders of the old Manhattan Company in 1884 was 7%, as appears from the following testimony of Mr. Day (p. 6212):

> "the Manhattan people said 'our stock is worth 320'; and if the stock is put in at market price into the Consolidated, 'we ought to have the new stock at par to measure our capital, at 320, high enough, so that if we simply get on our new stock seven per cent. interest we will be satisfied,' and we will not be satisfied with less. * * * they said they did not expect to get over seven per cent., and they ought to have the stock par for that.'

Mr. Mayer testifies in effect that the rate of interest on capital used in construction is 5% (p. 1321). Dr. Humphreys puts it lower (p. 1685).

Dr. Humphreys also testifies quite extensively about the rate of return to be expected from extensions to the plant, paid for out of earnings and offsetting depreciation (see pp. 114-119, *supra*). He makes the rate 4% (pp. 1674, 1798, 1823); or probably more than 4% (p. 1801); 5% (pp. 2762, 4762).

In a controversy between the Holyoke Water Power Company and the City of Holyoke, he based his valuation upon the earnings of the company, taking them at the rate of 5%. His testimony proceeded as follows (p. 2353, as corrected at p. 424):

> "Q. Why do you take 5 per cent. as the sum at which you capitalize the net earnings of the company? A. In my judgment that was a fair return on that kind of an investment.
>
> Q. By that do you mean annual return to the persons who put their money into it? A. Yes.
>
> Q. And if the investment were represented by stock, you would mean that dividends should be paid at the rate of 5 per cent? A. Yes, sir. * * *
>
> Q. And I understand you to say that you valued this plant on the same basis that you valued the plants which you were employed to appraise in New York and New Jersey and other States? A. The same conditions generally. * * *
>
> I did not go into that very specifically, but I reinforced my opinion as to the values by my general impression that gas properties and lighting properties in Massachusetts are perhaps a little better protected than in other parts of the country. I did not make any special allowance, but I thought that reinforced my judgment as to the values."

Dr. Humphreys tried to explain away this testimony when called in rebuttal. The court may judge whether he succeeded in doing so (p. 4708).

Dr. Humphreys' testimony referred to by the Master at page 243 is to be found at pages 1689.

1836, It is to the effect "that *the original investors up to the time the business is well established* are entitled to 10%, and the final average must be made up on the basis of what the new capital can be brought in at in view of the natural hazards," and figures out a return of 10% on a capitalization of 3.50 per thousand of annual sales; or at the rate of 10% for forty years upon all of the capitalization except "the reinvestment covering depreciation" (see pp. 1689, 1836). This testimony does not seem to be applicable to the present controversy, in view of the antiquity of this complainant's predecessor companies, their very large early dividends, and their large reserve funds accumulated out of earnings (pp. 28-9, *supra*).

Another interesting piece of testimony is that of Mr. Greene, complainant's expert on bulkhead values. There are very few sales of that class of property, and all the witnesses used the rentals to a considerable extent as a basis of capitalization. Mr. Greene testified as follows (p. 1257):

> "Q. What did you base your valuation of $4 per square foot of that land under water upon? A. Because land under water is rented, leased for platforms and things of that kind at various prices, sometimes downtown and on the North River at 25 cents per square foot per annum, and further uptown at less prices, and my judgment is that land under water at that locality could be leased for 20 cents per square foot per annum, which, *capitalized at 5 per cent.*, makes $4 for the value."

And again (p. 1263):

> "Q. Now, you give a valuation there of five dollars a square foot? A. Yes, sir.

Q. On what basis did you arrive at that figure? A. Because land under water on the North River will rent for platform purposes or things of that kind for twenty-five cents per square foot per annum which *capitalized at five per cent.* gives five dollars."

And again (p. 1265):

> "Q. You say you capitalized the 25 cents per square foot at 5½ per cent.? A. Five per cent.
>
> Q. Why do you capitalize it at 5 per cent.? A. Well, a matter of custom and a matter of somewhere near right; *between 4 and 5. I use 4½, sometimes 5.*
>
> Q. You regard that as a fair return on the investment? A. I think it would be fair in this particular case."

And again (p. 1267):

> "Q. And you testified that in your opinion the land under water at this particular point, Pleasant Avenue, between 110th and 111th Streets, is fairly valued at $3 per square foot? A. I do.
>
> Q. What consideration entered into your mind in forming that opinion? A. That it would rent for 15 cents per square foot per annum, which *capitalized at 5 per cent.*, would amount to $3."

And again (p. 1270):

> "Q. Is there any relation between rental value and the real value? A. I think so. I think that the real value is ascertained by capitalizing the net rental value at a given percentage, 4 or 4½ or 5."

He seems to have followed an established custom of the Dock Department in giving these figures (p. 1273).

The Master and Court have followed Mr. Greene's valuations, obtained by capitalizing rental values on a 5% basis, and then held that the State will be guilty of confiscation if it did not permit complainant to net 6% on property thus capitalized.

Pressure.

The Attorney General has undertaken to brief the question of pressure, and we therefore do not go into the facts as to that branch of the case. The Court should be cautioned, however, that, as we are informed, the State never relied upon the testimony of Mr. Edgerton, which is the basis of the remarks of the Circuit Court in its opinion. It relied upon the system of district governors discussed in the cross-examination of Mr. Bradley by Mr. Page; as to which complainant did not assume the burden which the law casts upon it, of showing that the expense of such a system would be prohibitory.

Summary of Facts.

The following are the more salient facts bearing upon complainant's history and finances:

Original capitalization of complainant.—This company was formed in 1884 by consolidation nominally of six old companies (one of which, however, owned all the stock of another), on which occasion there was a recapitalization. The plants were appraised on the basis of duplicating them as they stood, and the real estate was appraised by agreement. A valuation for the tangible property of each old company being thus obtained, the total capitalization of the new company was then fixed by agreement at $45,000,000. The difference between the latter figure and the total value of the tangibles was next divided up among the various old companies in proportion to their sales of gas for the year ending October 14, 1883. One-thirtieth of the share of each old company was then set aside as working capital. The balance was set down as "rights, franchises, &c.," but was merely an arbitrary figure, not based upon any theory or estimate. The resulting capitalization was as follows:

Tangibles at appraised value as of 1884	$29,994,000
Working capital	1,303,000
Rights, franchises, &c	7,781,000
Nominal capitalization of complainant	$39,078,000
Assigned to N. Y. Mutual Gas Light Co., which failed to come in	5,922,000
Total valuation as originally agreed	$45,000,000

Out of the shares of the various old companies the new company retained an amount sufficient to pay off their obligations, amounting to $2,329,000.

Capitalization of the original companies. This consisted of the stocks of the five companies*............$15,500,000
The amount actually invested by the stockholders was not over......... 10,635,200

The balance is made up by stock issued at fifty cents on the dollar, and by stock dividends made out of net earnings, the regular dividends also being very large.

Present capitalization of complainant.—This is now nominally fixed at................$80,000,000 besides debenture bonds, convertible but not yet converted into stock, and invested in certain outside enterprises, and besides certain other bonds, to the amount of......................$1,387,000

The stocks and bonds were partly sold at a premium, however, and on the other hand the new capital was mainly invested in the securities of other companies. The new capital brought in since 1884 and invested in the complainant's own business is not over............$ 3,929,371.82
Original nominal capital........... 39,078,000.00

Present nominal capital in gas business $43,007,371.82

Of this the amount actually invested by the stockholders is as follows:

Before 1884 (as above)............$10,635,200

---

*The stock of the sixth company was owned by one of the five, which paid for it $1,000,000 out of the above $15,500,000.

Since 1884 (as above)	3,929,371.82
	$14,564,571.82
Complainant's investment in securities of other companies is	$50,405,364.89

Net earnings of complainant.—Down to March 15, 1900, when it began investing in stocks of other companies, its dividends were......$33,345,598.80
And its earnings invested in addition to the plant are............... 5,500.000

This shows a net return of over 8% on the appraisement of 1884, after throwing out the fictitious items of $1,303,000 and $7,781,000. Since March 15, 1900, its capital has been largely tied up in other enterprises. Its return on the stocks represented by securities of other companies has been under 3%, and on part of the debentures it has had no income at all.

Its net income during the year 1905 is estimated by Judge Hough at................$5,891,597.45
or if 80 cents had been the price of gas 3,224,592.45

The 80 cent price would have yielded a return as follows in 1905:

On the $43,007,371.82 nominal capitalization about	7½%
On the $14,564,571.82 capital actually invested nearly	23%

Defendants contend that these estimates of net income should be increased in order to make them applicable to conditions after May 1, 1906, as the annual value of the complainant's permission to do business will be diminished by the reduction in the price permitted to be charged for the sale of gas. This will require some reduction in the "Special Franchise Tax" item of.....$406,909.23

Complainant's real estate. This originally cost about	$3,539,044.48
To duplicate it with real estate sufficient to accomplish the work which complainant is doing would cost about	$5,660,125.00
The present value is found by the Court to be	$11,985,435.00
but if the appraisements of the city's and state's witnesses (woh are qualified and unimpeached experts) were taken, the amount would be diminished by about	$3,200,000.00

In reaching its estimate of present value the Court has taken the price which would be paid for each plot if the company's plant were removed from that plot but left on the adjoining plots. If the plot were sold with the plant on it, the plant would in no case add materially to the value, and would sometimes slightly diminish the value on account of the cost of removing it. If the plot were valued on the assumption that ail of the plants in the vicinity were removed, its valuation would be increased about 15%.

Complainant's manufacturing plant. The original cost is not shown. The amount necessary to duplicate it with another plant capable of an equal output at equal expense is not shown. The Court has valued it as it was valued in 1884, namely, on the theory of duplicating it as it stands today. It would not, as matter of fact, be so duplicated by a new company, but would be replaced by one more economical. The Court

estimates its value at.............. $15,500,000
The complainant in verified reports to the taxing officers, and its secretary under oath, have recently valued it at about............ $8,500,000
apparently on a theory of depreciation due to a forced early abandonment of gas manufacture in the Borough of Manhattan.

Complainant's mains and services. Their book value, representing actual cost, is.. $9,064,222.12
To this the Court adds the sum of.. $5,605,962.23
to represent value added by the city in putting improved pavement over them, so that they cannot be duplicated for their original cost. Nevertheless the complainant in verified reports to the taxing officers, and its secretary under oath, have recently valued them at........... $4,261,156.39

Complainant's franchises. It is conceded by these appellants that complainant has franchises, but contended that they are all revocable upon short notice. Their book value of $7,781,000 was reached in the manner above stated.

Complainant's capacity, output and sales. Complainant has a rated capacity of 51,000,000 cubic feet of gas per day, but can produce more than this in a day upon an emergency at its regular plants, besides having a reserve plant. The highest average demand for gas in 1905 was under 46,000,000 feet per day in January, and probably the highest demand in any day was not above its rated capacity.

It buys, however, over one-fifth of its total product from other companies. This course of business is profitable to both parties and not likely to be altered in the immediate future.

The increase in sales is now very slight from year to year, and there was very likely a decrease from 1905 to 1906.

Astoria. Complainant owns the stock and securities of a company which is putting up a gas manufacturing plant at Astoria, in the Borough of Queens.

The Court deducted $200,000 a year from its estimate of the complainant's net income for the year beginning May 1, 1906, on the theory that it would have an increased demand for one billion cubic feet and would cease buying three billion cubic feet from the companies whose gas it had been previously buying, would buy it from Astoria at a higher price. This was a theory invented by the Court and questioned by both sides on a rehearing, but adhered to. It was founded on various misapprehensions. The four billion cubic feet would be the total capacity of the Astoria plant for an entire year. The plant did not commence producing until the year was seven months gone. It was uncompleted when the testimony closed two months later still. It was even then supplying but a fraction of the amount customarily purchased. The proof also showed that complainant could put the new supply to a more profitable use than by substituting it for the gas previously purchased; and it indicated a decrease rather than an increase in sales for 1906.

Specification of Errors.

While believing that, if it were customary for this court to analyze all the evidence and review all the findings of the court below, its decision would be modified in other respects also, we have confined our assignment of errors to certain particulars wherein it seems to us that the court below has very clearly departed from the general principles that should guide a court of equity in a controversy like this. We have not assigned error to any rulings upon conflicting evidence, except (1) so far as it seems to us that the court was bound by the rules governing this class of controversies to follow the testimony for the state, or (2) where the complainant's witnesses adopted an erroneous basis of valuation, or (3) where the valuation was contradicted by complainant's own admissions, or (4) where the testimony in support of it was clearly and substantially improper as well as incompetent.

Besides the general assignments of error (I *e*, XI, XIII, XVI and XVII) we specify particularly the following (the errors being all assigned to the final decree, the paragraphs referred to being paragraphs of that decree, pp. 435-439):

I. * * * * * * * * *

(*a*) Because the record does not contain sufficient evidence to show whether or not the price of eighty cents per thousand cubic feet for gas, permitted by said statute, afforded a sufficient rate of return upon the capitalization of any of the other companies doing business in the same territory with the complainant, or upon that of a company well located and equipped, economically managed and not overcapitalized, but the case was decided on the theory that if a statutory maximum price does not afford in the opinion of the court a sufficient rate of return upon the present capitalization of a particular company doing business in the territory, the statute is void as to that company, irrespective of its effect upon the other companies doing business therein, or upon a company well located and equipped, economically managed and not overcapitalized.

(*b*) Because the record does not contain sufficient evidence to show the reasonable and necessary operating expenses of the complainant, evidence of its actual disbursements during the period from November 1, 1904, to December 31, 1905, inclusive, supplemented in part only by experience of other periods, being insufficient for that purpose.

(*c*) Because the capitalization upon which the court's calculation is based is an estimate of present value, or of cost of reproduction, or of partly present value and partly cost of reproduction, not limited to the cost of complainant's property, or to the amount actually invested as capital by complainant and its predecessor companies.

(*d*) Because, it is accompanied by no condition that the complainant reduce its rate to such sum as the court finds to be constitutional.

* * * * * * * *

II. In fixing (Paragraphs I*a*, II) the valuation of the portion of complainant's "real estate" actually and necessarily employed by it in its gas business at $11,985,435 (it appearing that its plants, mains, services, and special franchises are not included in its real estate as such term is used in the decree); said valuation being excessive for each of the following reasons:

(*a*) It is in excess of the original cost of such real estate to the complainant and its predecessor companies.

(*b*) It is in excess of the amount required for complainant's gas business upon the basis of cost of reproduction.

(*c*) It duplicates in part the valuation given by the court to the plants, since it could not be realized until the plants thereon were removed.

(*d*) In estimating value the court adopts valuations given by testimony for the complainant, whereas the valuations testified to by unimpeached expert witnesses for the defendants, as well as complainant's own book values, and those stated by it in its Tax reports, were lower.

III. In finding (Paragraphs I *e*, II) that the valuation of the intangible special franchises of the complainant is at least the sum of $12,000,000, whereas

(*a*) The complainant owns no special franchises not terminable at the will of the State of New York or of the City of New York.

(*b*) The franchises claimed by it, if owned, are not proper subjects of valuation for the purpose of ascertaining its capitalization.

(*c*) The record does not sustain the valuation given.

IV. In finding (Paragraph I *h*) that the sum of $1,865,717.43, therein stated, represents more than a normal profit upon the volume of purchased gas, and in particular

(*a*) In finding that the amount paid by complainant to other companies for the same was paid under temporary and expiring agreements, whereas only a part of said gas was supplied under said agreements, and whereas said agreements did not expire until after the termination of the year beginning May 1, 1906; and (*b*) In finding that said amount did not include any reasonable recompense or return upon the value of the investment required to produce said gas, which finding is not supported by the record.

V. In finding (Paragraph I *h*) that while the total net income for the year beginning May 1, 1906, would remain the same upon the basis of the prices charged for gas during the calendar year 1905, yet if the price for gas were reduced as provided by the statute of 1906 and by chapter 736 of the Laws of 1905 the net income of complainant for said year would be reduced to the sum of $3,024,592.45, on the ground that such finding is speculative and not supported by the record; and, in particular also

(*a*) In finding a probable increase in sales of gas tending to a reduction as aforesaid.

(*b*) In finding a probable increase in cost of gas obtained from other companies, leading to such reduction.

(*c*) In finding a probable change in the source of manufacture of some portion of such gas, leading to such reduction.

(*d*) In overlooking the decrease in "Expenses" due to the reduction in the complainant's special franchise tax, payable to the State of New York, which would result from the diminution of its net profits through reduction of its rate for gas, said special franchise tax item being included by the court in the "Expenses" of 1905 to the amount of $406,909.23, as shown by the Master's report.

VI. In failing to make an express finding as to the present existence of the franchises claimed by complainant by derivation from the following corporations respectively (such failure in the case of each of such companies being separately assigned for error), whereas the court should have found that as to each of said franchises the complainant is no more than a holdover occupant, whose right of occupancy is terminable at the will of the State of New York or of the City of New York;

(*a*) The New York Gas Light Company.

(*b*) The Manhattan Gas Light Company.

(*c*) The Municipal Gas Light Company; and this alleged franchise was at all times invalid on account of lack of authority in the Mayor, Comptroller and Commissioner of Public Works to grant it.

(*d*) The Metropolitan Gas Light Company.

VII. In finding (Paragraph I *h*) that the following franchises claimed by complainant exist and are owned by it and are sufficient to meet all its requirements (such finding in the case of each of such companies being separately assigned for error), whereas

(*a*) The alleged franchise claimed by derivation from the Anthracite Gas Lighting and Heating Company through the Knickerbocker Gas Light Company was invalid on account of lack of authority in the Board of Aldermen to grant it, and the alleged assignment thereof to the Union Gas Light Company was also invalid for lack of authority to assign it, and said alleged franchise in any case expires on September 17, 1913.

(*b*) The franchise claimed by derivation from the so-called State Grant through the Knickerbocker Gas Light Company was not assignable to, and did not even purport to be assigned to, complainant or either of its alleged predecessor corporations, and said franchise did not cover any part of the City of New York, Borough of Manhattan, south of 79th Street.

(*c*) The franchise claimed by derivation from the Harlem Gas Light Company expired February 1, 1905, and as to that franchise complainant is but a holdover occupant, whose right of occupancy is terminable at the will of the State of New York or of the City of New York, and said franchise did not cover any part of the City of New York, Borough of Manhattan, south of 79th Street.

VIII.—In finding (Paragraph II) the valuation of the complainant's plants actually employed in its business of manufacturing and supplying gas to be $15,500,000; said valuation being excessive, being based upon an estimate by complainant's witnesses of the cost of reproducing the plants as they now stand, instead of the lesser cost of replacement with plants of more modern character, which would perform equal service, and being greater than the cost thereof, and than the value thereof as stated by it in its tax reports.

IX.—In finding (Paragraph II) the valuation of complainant's mains to be $12,636,000, said valuation being excessive for each of the following reasons:

(*a*) It is in excess of the original cost of such mains to the complainant and its predecessor companies.

(*b*) In estimating value the court adopts the highest valuations given by complainant's witnesses, which valuations are greater than other valuations previously given by said witnesses and than complainant's own book valuations, and than the valuations stated by it in its tax reports.

X.—In finding (Paragraph II) the valuation of complainant's services to be $1,994,000, said valuation being excessive for each of the following reasons:

(*a*) It is in excess of the original cost of such services to the complainant and its predecessor companies.

(*b*) In estimating value the court adopts the highest valuations given by complainant's witnesses, which valuations are greater than other valuations previously given by said witnesses and vastly greater than complainant's own book valuations, and than the valuations stated by it in its tax reports.

XII.—In finding (Paragraph III) that the lowest rate of return which can be considered legislatively fair, just or reasonable, upon the value of the property employed by complainant in the business of manufacturing and supplying gas, is six per cent.

XIV.—In finding (Paragraph IV) that compliance with the requirement in the statute of 1906 and in chapter 736 of the Laws of 1905 as to pressure is commercially impossible under the rates for gas prescribed therein.

XV.—In finding (Paragraph V) that complainant has no adequate remedy at law for the injury which would result from the threatened enforcement of the statute of 1906 and that such injury would be irreparable; whereas complainant would have an adequate remedy at law as against the enforcement of said act by these appellants, the members of said Public Service Commission, by defense to any application brought by them in the courts of the State of New York for a mandamus or injunction to compel compliance; complainant's remedy as against the enforcement of penalties (as to which these appellants have no right, duty or interest), if said penalties are so great as to render proceedings for their enforcement at present inequitable, being by injunction against the enforcement of the clause concerning penalties, said clause being separable.

The city's assignments of error. As the City of New York has filed a much larger number of assignments of error, a paragraph seems to be necessary as to them. They mainly consist of assignments directed to language in the Master's report. We do not understand that it is necessary, in a reference of this kind (if anywhere) to assign errors to a Master's report (see p. 160, *infra*). We understand the assignments to be properly directed either to the decree or to important rulings upon questions of evidence. This report is not in a form adapted to the raising of questions thereon by exception or assignment. The proper practice seems to us to be like that of the courts of many states, where the judge or referee writes an opinion, not subject to exception, and files also a series of separately stated and numbered findings of fact and of law. The Master here has hopelessly mixed opinion and findings all up together. The city has raised various questions which we have not raised, because we have confined ourselves to questions which could be passed upon without weighing the testimony of witnesses in the ordinary sense of the term, as well as which involved each a very large amount of money. Our failure to raise such inquiries as, for instance, the cost of oil, should not be taken as indicating a difference in opinion between ourselves and the city upon that subject. We disagree with the city at some points, however, as to what the Circuit Court has actually held; the city conceding that it has held adversely to us, while we understand that it has held partly if not wholly in our favor, as for instance the Eleventh assignment at page 449. Thus the Ninety-ninth assignment, at page 472 (see pp. 204, 252-3), states in effect that the court sustained a train of reasoning based on the assumption that complainant claimed its net earnings on gas sales only to have been in round figures $4,588,000 in 1905. The Master's sentence is merely *arguendo,* for the purpose of an illustration. The court does not consider the matter, and actually estimates the net income from gas sales at $5,891,597.45 (p. 407). We also disagree with the city at some points as to what the facts actually are. Thus in the Thirteenth assignment, at page 450, the city takes the position that the $7,781,000 item of 1884 had a relation to the market prices of the stocks of the constituent companies; a position which we have shown to be untenable, and which was opposed by the Attorney General as well as ourselves before Judge Hough.

ARGUMENT.

I.

The questions raised by this assignment of errors are all properly cognizable by this court.

We are of course aware that as a general rule this court does not reverse rulings of the Master which have been confirmed by the Circuit Court, upon questions as to which there is a conflict of testimony.

In a *consent* reference indeed, such as those under consideration in Kimberly *v.* Arms, 129 U. S., 512, 523-5, and Davis *v.* Schwartz, 155 U. S., 631, 636-7, the Master's report is equivalent to that of a referee, or to the special verdict of a jury, or to findings under Rev. St. § 649, and therefore are reviewable only in the most limited sense.

In ordinary references to a Master the rule, and the exception thereto, are stated in Tilghman *v.* Proctor, 125 U. S., 136, 149, and Callaghan *v.* Myers, 128 U. S., 617, 666-7, to be that

> "the conclusions of the master, depending upon the weighing of conflicting testimony, have every reasonable presumption in their favor, and are not to be set aside or modified unless there clearly appears to have been error or mistake on his part."

Here, as will hereinafter appear, the Master and the Circuit Court have persistently overlooked the weight of the burden of proof that rests upon a complainant in a case of this nature, and indeed frequently overlooked the burden of proof altogether, or rather assumed that it was upon the defendants. Hence it is submitted that their findings, so far as in complainant's favor, are not entitled to any favorable presumption at all.

We do not discuss the voluminous exceptions to the Master's report, because we do not understand that exceptions are necessary to the various reasonings, illustrations and computations of a Master in a reference like this one. This is not like the ordinary reference to a Master on an accounting, where he has a large number of separate and independent questions to pass upon. Here there was but one ultimate question of fact before him, namely, "Under the conditions existing on May 1, 1906, what rate of return can be earned, at the rate of 80 cents for gas, by a company reasonably capitalized and properly equipped and managed?" Every other question was evidential, not ultimate.

The points raised by our specification of errors against the valuations which have been confirmed by the court below may be classified as follows:

(*a*) Either the property of the complainant is valued upon a wrong basis (I*c*, II*a*, *b*, VIII, IX*a*, X*a*),

(*b*) Or the same value is counted twice (II*c*),

(*c*) Or the court has followed complainant's witnesses in points where it was bound, according to the legal burden of proof, to follow those of the state (II*d*, III*c*, IX*b*, X*b*),

(*d*) Or the testimony is too speculative to be considered (III*c*, IV, V*a*, *b*, *c*),

(*e*) Or it is contradicted by complainant's own admissions (VIII, IX*b*, X*b*, XIV),

(*f*) Or an item is omitted from the calculation (V*d*).

In main, these specifications of error may be defined as a demurrer to certain of the complainant's evidence.

II.

Complainant has an adequate remedy at law, and there is therefore no equity in the bill.

This defense is duly pleaded in the answer of the state (p. 54). But the court will dismiss in such a case, although the defense is not pleaded

(Allen *v.* Pullman Palace Car Company, 139 U. S., 658).

A simple allegation that a statute is unconstitutional is not sufficient to give jurisdiction to equity, even if the allegation be true. This is no exception to the rule that equity can only be resorted to when there is no adequate remedy at law (Cruickshank *v.* Bidwell, 176 U. S., 73; Indiana Manufacturing Co. *v.* Koehne, 188 U. S., 681, 684).

This is unmistakably clear as regards the Public Service Commission and the City of New York. The only thing which the Public Service Commission can do to the complainant is to bring an action of mandamus or for an injunction under the New York Code of Civil Procedure. To either of these forms of action the constitutional objection could be interposed as a defense. The question could then be tried out in the New York State courts under the protection of the constitution of that state, which does not permit (except by consent) that the testimony should be taken before one officer while the decision is made by another (New York Constitution, Art. VI., § 3). There could not be any multiplicity of suits, or other hardship calling for equitable relief.

Complainant's case as against the City of New York is in no better position. It depends entirely upon the statute of 1905. There could be no multiplicity of parties. The statute applies to no other consumer but the city. The city, on the other hand, has no interest in or function in respect to the statute of 1906, and is not enjoined in respect thereto by this decree. It is not claimed to be insolvent. The question would naturally arise in the state courts by the complainant suing the city upon a *quantum meruit* for its gas bill. The city would defend by basing itself upon the statute of 1905, and the company would rebut by claiming that statute to be unconstitutional. The question would then be tried out according to the state practice. Complainant would render no bill to the city until it was ready to sue. Thus, if it failed in its suit, it would suffer but one $1,000 penalty.

The suit can not be maintained on the ground that it prevents *multiplicity of actions* by private consumers. None of them were made parties, in which respect among others this suit differs from that under consideration in *Ex parte* Young, 209 U. S., 123, 129, which joined "individual defendants representing the shippers of freight upon the railroad." Moreover, that case, as well as Smyth *v.* Ames, 169 U. S., 466, 469, 517-18 (referred to by Judge Hough at page 422 of the record) were stockholders' suits, thus basing themselves upon an independent ground of equitable jurisdiction. Judge Lacombe expressly excludes suits by individuals from the scope of the injunction (pp. 136, 143), and their suits are actually now pending in large numbers in the state courts (See Richman *v.* Consolidated Gas Co., 114 App. Div., 216, 224; 186 N. Y., 209). The rights of A and B as against C can not be affected by C's suing D to declare that there are no such rights, even if D is given some power and duty to protect them. A and B must be sued personally, or through some representative.

Judge Jones in Alabama has announced a novel principle of equity jurisdiction, namely, that the state executive authorities represent each citizen for the purpose of an action such as this, even if the legislature has repealed all statutes giving them any power or duty to protect him, and left the entire enforcement of its maximum rate laws to the citizen himself. He treats the suit as *quasi in rem,* although citing no authority (Central of Georgia Ry. *v.* Railroad Comm. of Ala., 161 Fed. Rep. at pp. 981-2). No such doctrine was relied upon by Judge Lacombe. It has no basis in anything heretofore decided, or in any principle of equity procedure. It is unnecessary because the complainant, if it have otherwise a proper case for injunctive relief, may get jurisdiction of the parties by joining some of the citizens to represent the rest, as illustrated in the Young case. Judge Jones' innovating spirit is in striking contrast with Judge Hough's conservatism when the state asked a new application of the rules of procedure, as discussed in the last point of this brief.

It is of course a convenience to have a single test case made, but we do not understand that mere convenience, unaccompanied by other bases of equitable jurisdiction, is enough to justify the interference of the Chancellor, although it is a good reason for interfering if there are such other bases in the record.

As to the Public Service Commission complainant may urge, however, that it succeeds to certain of the functions which at the time when this suit was brought pertained to Julius M. Mayer as Attorney General of the State of New York, one of the original defendants; and that if equity had jurisdiction over him it retains that jurisdiction over his successors, notwithstanding the division of his functions between the present Public Service Commission and the present Attorney General. It may be further contended that one of his functions (namely, the one retained by the present Attorney General), is the bringing of civil actions for penalties, and that that involves hardship and multiplicity of actions, and is therefore a ground of equitable relief.

Hence we proceed to discuss the penalty aspect of the case, as to which Judge Lacombe and Judge Hough seem to us to have fallen into a clear error through misconstruction of the state law upon that subject.

The penalty clause (which is misprinted at p. 138 of the record) is as follows:

> "§3. Any corporation, association, copartnership or person violating any provision of this act shall forfeit the sum of one thousand dollars for each offence *to the people of the state.*"

Judge Lacombe indeed, at pages 138 and 139 of the record, refers to another and more drastic penalty clause, contained in section 21 of the old Gas Commission law. This is immaterial for various reasons. It is indisputably unconstitutional in itself, for the reasons stated by the learned judge. It is therefore a nullity (Norton *v.* Shelby County, 118 U. S., 425, 432). It was severable even from the rest of the old law (Reagan *v.* Farmers' Loan & Trust Co., 154 U. S., 362, 394-6), as was stated orally from the bench by the Chief Judge of the State upon the argument of the Saratoga Gas case, 191 N. Y., 123, in which case the rest of the old law was held unconstitutional, so far as interests us here. So far as the consumers in New York City are concerned, the clause was never applicable, because (as a penalty clause in an older and general act) it was *pro tanto* superseded by the later and special act (United States *v.* One Bay Horse, 128 Fed. Rep., 207). It was a sporadic legislative freak, never seriously treated and never repeated, and altogether contrary to the general course of the legislation of our state.

Returning then to the penalty clause above quoted from the statute of 1906, in the first place it is clearly separable from the rest of the statute, under the Reagan case, *supra.* Hence whether it is constitutional or unconstitutional in itself cannot be material in deciding whether a court of equity has jurisdiction. If it is unconstitutional, that is a defense to any action that may be brought by the Attorney General or the District Attorney in a state court to collect penalties; and if the state court decides erroneously, a writ of error lies to this court from its decision.

This brings us to the position considered by the court in *Ex parte* Young, 209 U. S., 123, 147-8, 163-5; namely, whether prosecutions for penalties would be so harassing, and produce such multiplicity of litigation, and risk of such enormous loss, that equity has the right to interfere although the penalty clause in itself be valid. It may be suggested that if the law be upheld the injunction will be dissolved, and the penalties will then become collectible from the beginning, so that unless the whole statute be void the injunction is no benefit. But this suggestion seems to have been overruled by the court in the Young case, and the whole question is an academic one here, as we shall now proceed to show.

The distinction between this case and *Ex parte* Young is in the penalty clause itself. Whether or not penalties are multiplex and harassing depends upon the construction of the clause which provides for them. Judge Lacombe and Judge Hough have construed the penalty clause in the present statute, and if the construction which they have given it were correct, and the assertion of a constitutional right mulcted to the extent of $390,000,000 a month, not even to indemnify the individual consumers against costs of litigation, but as a fine into the state treasury, then it would indeed be an enormity; and this court (209 U. S., 147) evidently supposing that construction to be the admitted and intended one, have referred to the present case as a striking example of undue penalties. But that construction has never been contended for by the state, in this action or out of it. On the contrary, it has been expressly disavowed. Our contention is that it was manifestly wrong, and that neither of the learned judges would have permitted it if the statute had been concededly constitutional and the company had come before him merely on the question how many penalties it must pay.

It ought to be sufficient to refer to the general rules of construction that a statute should never if possible be construed so to be unconstitutional or so as to be absurd (Oates *v.* National Bank, 100 U. S., at p. 244; Grenada County *v.* Brogden, 112 U. S., at pp. 268-9). But there are state decisions in point.

In Cox *v.* Paul, 175 N. Y., 328, the statute under consideration, which gave to stockholders a right of examination of corporate books, provided a penalty for "*any* refusal to allow such books to be inspected" (Stock Corporation Law, § 53). Plaintiff made three applications. One of them was refused by the secretary, the other two by the president. In the lower court he recovered one penalty against the secretary, two against the president, and three against the corporation. The Court of Appeals reduced the judgments to one penalty as against each, drawing a distinction between the imposition of a penalty for "*any* refusal" and an imposition for "*each and every* refusal" (p. 330), and saying "that this court is committed to the doctrine that a party suing for penalties can recover but for one violation or one default prior to the commencement of the action."

In Topham *v.* Interurban Street Railway Co., 96 App. Div., 323, 325, the question arose upon the "free transfer" provision relating to street railways in New York City, which was accompanied by a penalty provision for the benefit of passengers to whom free transfers were refused. The statute provided a penalty "for *every* refusal." This was held by the intermediate appellate tribunal of the state to be equivalent to the words "for *each* offence," words which had already been held by one of the other intermediate appellate courts to permit recovery of cumulative penalties, and distinguishing Cox *v.* Paul, *supra.* While the plaintiff's judgment was reversed upon other grounds, the judgments, similar in this respect, in Griffin and Scudder against the same defendant, were affirmed (96 App. Div., 340, *id.,* 636). The Court of Appeals however modified both these judgments, reducing their amount so as to permit a recovery for one penalty only, following Cox *v.* Paul and other previous cases, and holding the words "for every refusal" to be no better than the words "for any refusal" (179 N. Y., 438, 448-9). Motions for reargument were entertained, but resulted only in adherence to the decision already made. Referring to a case where cumulative penalties had been sustained under a statute imposing a penalty "for each offence," it was indeed remarked "that 'every' is not always *necessarily* the synonym of 'each' " (180 N. Y., 538); but if the present statute had said "for every offence" instead of "for each offence", the meaning would not have been different.

Two of the New York precedents cited by the Court of Appeals in the Griffin case are cited and approved by this court in *In re* Snow, 120 U. S., at p. 286; and many other cases are there cited to the same point; and the ruling has been followed in the New York courts in the later case of United States Condensed Milk Co. *v.* Smith, 116 App. Div., 15, affirmed without opinion at 191 N. Y., 536.

It is therefore clear that only one penalty at a time could be sued for by the Attorney General or the District Attorney for failure to observe the requirements of the statute of 1906 as to candle power, or as to pressure, or for overcharging the consumer. There is no allegation or proof indicating that the Attorney General or the District Attorney threatened to bring an unreasonable number of penalty actions, or that there was any reason to suppose that either of them would do so.

But even if they should sue every month, the total penalties recoverable for overcharges from the beginning of the controversy up to the date of this argument would not have amounted to $30,000—surely a most moderate penalty in a business of this magnitude. For the penalty would not be $390,000,000 a month, but $1,000 a month, for sending out the 390,000 monthly bills to private consumers, or for receiving payment for the same. Judge Lacombe assumes that each constitutes a separate offence, punishable by a separate penalty; an assumption based upon the remarks of Mr.

Justice Brewer in the Cotting case, 183 U. S., at pp. 99-102, but which remarks were made tentatively, and not after hearing argument (p. 102). *The assumption might be true if the penalty were recoverable by the individual to whom the bill is sent, to redress the violation of his rights and pay his expenses of litigation in asserting them; but it is not. It is recoverable by the state, and is for the purpose of punishing an offence, although one not even amounting to a misdemeanor.* There is no presumption that a penalty is multiplex when it can equally well be construed as single. On the contrary, no principle of statutory construction is more familiar than the strictness of construction of a penalty law (France *v.* United States, 164 U. S., 676, 682-3; Bolles *v.* Outing Co., 175 U. S., 262, 265; United States *v.* One Bay Horse, *supra*). A construction involving 390,000 penalties in such a case as this would be abhorrent, and we venture to say that if this case came before a court as a simple case of construction of the penalty clause, there would be no hesitation in saying "The fault is the same, whether the company may happen to have 9,000 or 90,000 or 390,000 customers. Under the rules of construction of penalty laws, you must show me some reason for it, before I adopt a construction that puts so enormous a sum into the state treasury without benefiting a single consumer."

In United States *v.* Patty, 2 Fed. Rep., 664, the defendant was indicted in the first count, for sending on each and every secular day from November 1, 1879, to February 10, 1880, a certain unlawful communication in large quantities through the United States mail; in the second count, for sending 100 unlawful printed circulars through the mail; and in the third count, for so sending 500 circulars. A motion was made to quash the indictment for duplicity, on the ground that the first count charged 45,000 offences, the second count 100, and the third count 500. That the case was well and fully argued is a safe inference from the fact that L. S. Dixon was counsel for the defendants. Judge Dyer, in denying the motion said (p. 666):

> "I think there can be no doubt, although it might be, under this statute, an offence to deposit a single letter or circular concerning a lottery in the post-office to be carried by mail, that if a number of deposits are charged as made at or about the same time, so that they consist of a single act, or of successive stages in a single transaction, then we may properly say that one offence has been committed."

Can there be any doubt about this? Can a man be indicted 10,000 times for stealing 10,000 peanuts? Or for printing a 10,000 edition of a copyrighted book?

A packer was convicted of shipping at an unlawful rate 67 tierces of oleo oil from Kansas through various states to New York. "This is a single continuing offense, not a series of offenses," as this court said (Armour Packing Co. *v.* United States, 209 U. S., 56, 77). The *innuendo* was indeed that it was not a single offense in each state. Even the Attorney General did not claim that it was 67 offenses. Could he have done so?

In United States *v.* Eagan, 30 Fed. Rep., 498, Judge Thayer held on demurrer for duplicity that placing a number of fictitious names on the registration list at the same time and place constitutes but one offense.

In Taft *v.* Stephens Lithographic Co., 38 Fed. Rep., 28, plaintiff sued as informer under the copyright law to recover $1,000,000 for printing and circulating 10,000 pirated copies of a copyrighted chromo. Judge Brewer held that "when the printing of many copies is a single continuous act, only one offense is committed thereby," citing the Eagan case.

The principle is indeed as old as Creeps *v.* Durden, Cowp. 640, where a baker had been convicted of 4 crimes for selling 4 small hot loaves of bread on a Sunday. Lord Mansfield said: "It is but one offense, whether longer or shorter in point of duration; so, whether it consist of one, or a number of particular acts. The penalty incurred by this offense is five shillings. There is no idea conveyed by the act itself, that if a taylor sews on the Lord's day, every stitch he takes is a separate offense; or if a shoemaker or carpenter work for different customers at different times on the same Sunday, that those are so many separate and distinct offenses."

In Central R. R. Co. *v.* Green, 86 Pa. St., 427, the railroad company excluded at the same time two colored people. Each recovered the $500 penalty for exclusion "of any person or persons on account of color or race"; but one penalty only was allowed on appeal.

See also Gimbel *v.* Hogg, 97 Fed. Rep., 791, 793; United States *v.* Central Vt. Rway., 157 Fed. Rep., 291, 293; Parks *v.* Railway, 13 Lea, 1.

Hence the Attorney General and District Attorney could institute but one proceeding every month for the $1,000 penalty. But even if they could sue every day, the penalty would be but $365,000 a year, and is that an amount sufficient to warrant equitable interposition of a Federal court when the state court has not been applied to, and when the total demand of the company is $13,000,000, and the sum in controversy $2,500,000?

Nor is it alleged or proved that the Attorney General or District Attorney threatened to be unreasonable about it. The bill of complaint does not even charge distinctly that the statute can bear the construction which Judge Lacombe and Judge Hough have put upon it. It only alleges (p. 18) that—

> "*If* it should be held that every charge in excess of the 80 cent rate is a violation of the provisions of Chapter 125 of the Laws of 1906, for which a forfeiture of one thousand dollars should be imposed, and your orator should make such a charge in excess of the 80 cent rate each month to each of its consumers, numbering, as hereinbefore stated, over 390,000, the aggregate of the penalties so incurred during one year would amount to over $4,680,000,000 and would be over fifty-four times as great as the value of all the tangible assets and franchises belonging to your orator," [etc.]

It is moreover settled in the New York courts that a succession of actions for penalties, when only one penalty can be recovered in each action, is not sufficient multiplicity of litigation to give jurisdiction to equity (Wallack *v.* Society, 67 N. Y., 23, 29); and we respectfully submit that this is a reasonable ruling, which should be followed in the Federal Court. In Mississippi Railroad Commission *v.* Illinois Central Railroad Co., 203 U. S., this point was not brought to the attention of the court, and the answer did not plead lack of equity. That the New York legislature construed this penalty clause as we do is indicated by the similar clause in the Public Service Commission Law (N. Y. Laws of 1907, Ch. 429), under which our clients hold their office. Section 73 of that law, in providing for the enforcement of lawful orders of the Public Service Commission, imposes this same penalty of "not to exceed the sum of one thousand dollars for each offence"; but follows it up with the following significant explanation, evidently in view of the decision in the free transfer cases:

> "Every distinct violation of any such order or of this act, shall be a separate offense, and in case of a continuing violation each day shall be deemed a separate offense. * * * In any such action all penalties and forfeitures incurred up to the time of commencing the same may be sued for and recovered therein, and the commencement of an action to recover a penalty or forfeiture shall not be, or be held to be, a waiver of the right to recover any other penalty or forfeiture."

The section then proceeds to provide, as to remission of penalties, that—

> "if the defendant in such action shall prove that during any portion of the time for which it is sought to recover penalties or forfeitures for a violation of an order of the commission the defendant was actually and in good faith prosecuting the suit, action or proceeding in the courts to set aside such order, the court

> shall remit the penalties or forfeitures incurred during the pendency of such suit, action or proceeding."

Another example of the language used by the New York legislature, when such a result is intended as that supposed by Judge Lacombe in the present case, is shown by People *v.* Koster, 121 App. Div., 852, 854.

III.

Assuming equity to have had jurisdiction, it should not have been exercised, but jurisdiction should have been declined and the controversy remitted to the state courts.

In *Ex parte* Young, 209 U. S. at pp. 166-7, this court said:

> "Finally it is objected that the necessary result of upholding this suit in the Circuit Court will be to draw to the lower Federal courts a great flood of litigation of this character, where one Federal judge would have it in his power to enjoin proceedings by state officials to enforce the legislative acts of the State, either by criminal or civil actions. To this it may be answered, in the first place, that *no injunction ought to be granted unless in a case reasonably free from doubt.* We think such rule is, and will be, followed by all the judges of the Federal courts."

Even had Judge Hough's findings as to ascertainable values been supported by a preponderance of evidence, was he entitled to rest upon this, and then indulge in the speculative guesses upon which he founded this permanent injunction? Was he entitled to hold this to be "a case reasonably free from doubt"?

He finds a corporation doing an annual business which, after paying operating expenses, would have netted during the past year about $3,235,000 at the 80 cent rate (p. 407). He figures its tangible assets at about $47,830,000 (p. 423), upon which the rate of return would therefore be 6¾%. But without any definite figures he speculates, first, that the lower rate will increase the sales; second, that present arrangements (which are all under complainant's own control) will be altered in such a way as to increase the expense of the business; and third, without any definite evidence about it, that $200,000 will be the net extra expense of the new business; and this sum he accordingly deducts (pp. 406-8, 425-8). This reduces the net income item to about $3,025,000 (p. 430). He then takes an alleged intangible franchise item, as to whose value there is no competent evidence, puts it at $12,000,000 "in a finding opposed to the settled opinion" of himself (p. 425), and by adding this item gets the reduced income figure almost down to 5%. He then holds this figure confiscatory, citing as his authority a judge in a San Francisco water case (p. 418), who said that a 5% return should not be held confiscatory (124 Fed. Rep., at pp. 598-9, 601). And yet this is one of the oldest and most assuredly profitable establishments in the New World. It is, in his own words, "as nearly a conservative an investment as any private manufacturing enterprise can furnish" (p.

409); and its return, after all of his speculative reductions, is within one per cent of what this court had held "more than is necessary" for the risky business of a California irrigation company (192 U. S., at pp. 213, 216).

We respectfully submit that upon such a state of facts he should have dismissed the suit as not being one of so grave a nature as warrants the interposition of the Federal power in purely local affairs. The state courts are open. They can enjoin, as well as try mandamus cases. Had jurisdiction not been seized by the Federal court, the case would have been tried by a judge or referee in the state court,—by an officer with judicial powers, who could exercise some control over the proceedings, could confine the record within the limits of reason and intelligibility, and who would under the state constitution see and hear as well as decide.

The question is twofold.

It is in the first place a question between one man in a gown and three or more men without gowns; a question whether a judge is better qualified to pass on such a question than a commission, or a legislature and governor. We say "better qualified" because we are not here considering the subject of plain, mathematically demonstrable and indisputable violations of common right. We are considering questions of some difficulty, involving the weighing of testimony, the choice between different degrees of probability, the exercise of prophecy, and the application of business experience. We believe that the majority of thinking people, taking the general average rather than any particular case, would consider a commission as the best qualified, a judge as the next best, and a legislature as the least. A commission generally is, and theoretically ought to be, a body of men chosen, so far as it is composed of lawyers, from the same class of material as the judges, including however members of corresponding rank and prominence from other professions or from the business world. It spends all of its time in studying the particular subject, and acquires both from independent study and from contact with the leading men of the railroad and gas and electric world a vast store of information as to practical as well as theoretical questions. Upon difficult questions, like those involving maximum rates, it is able to take plenty of time to decide. The judge on the other hand is no better a man than the commissioner when appointed. He is at least as busy a man, most of his time being taken up in the study of other questions. He can give but a limited time to the hearing of the case. When the number of hours allotted to each counsel is exhausted, counsel is cut off sharp and heard no more. He cannot even calculate beforehand how best to use the time allotted, for much of it is often exhausted in answering questions of the court about some minor detail. The judge then finds the voluminous papers on his desk, piled up among a mass of other papers equally pressing; and he has to decide without the knowledge and experience which had aided the commissioners. Upon questions of fact and discretion he is especially at a disadvantage. He is less likely to know which witness is lying, and is more apt to be misled by a false assertion of impracticability.

In the second place the question is between the State and the Federal judge. In this aspect it is a question of comity and a question of public policy. It seems to be assumed by many financiers and many lawyers that only Federal judges are capable of deciding fairly in such a case. State judges are classed in with the despised commissioners and legislators. We respectfully submit that the judges of the state courts of this country should be accorded the same respect as the judges of the Federal Circuit and District courts, and that in matters of purely local interest the Federal Circuit and District judges should as a rule, out of comity, refrain from interposing; instead of leaving the state judges, as in this case, to exercise the comity and refrain from administering justice in their own proper sphere.

And municipal trolley lines and lighting plants are on a different basis in this respect from interstate railroads. Rate cases on interstate railroads involve interstate problems. It is often charged that the state is trying to load the expense of its local traffic onto interstate traffic, or onto the local traffic of other states. When a conflict is suggested between state and nation, or between two or more states, there is more reason for the Federal courts to interfere. It may be wise for Congress to enact further legislation for the protection of interstate as against local traffic, and put its execution into the hands of a Federal tribunal, independent of the Fourteenth Amendment. But it is submitted that the Federal courts should be slow indeed to issue injunctions against the enforcement of state laws regarding the rates of fare or other details of management of local trolley lines or gas companies or electric light companies or water companies or irrigation companies. If the action of a state legislature or a state commission is to be annulled or suspended by the fiat of a single man, it is submitted that in local matters it would be more in accordance with public policy to put that responsibility upon a man elected by the people of the state or appointed by its own governor, rather than upon a man appointed at Washington; that the traditions and the habits of local self-government should be observed as far as compatible with modern conditions; and that therefore the full jurisdiction of the Federal judiciary, like the full jurisdiction of the Federal executive and legislature, should be most cautiously and sparingly exercised in matters of purely local concern.

It is important not only to have cases decided right, but also to have them so decided as to inspire public confidence in the decision. Public confidence in such a decision, if the decision involves an overturning of the work of a state commission in which the community have confidence, is greater when reached after trial in open court than when the real trial is *in camera* before a Master of whose existence the people had been previously unaware. To one brought up under the New York constitution, which for sixty years past has guaranteed to the defendant in an equity suit the right to have his case tried in open court and decided by a judge who has actually seen the witnesses, the public feeling in this regard seems a natural one.

We submit that the action of the Federal court in this case has been unduly precipitate, and does not contrast well with the dignified posture of the state judiciary in deferring to the jurisdiction which the co-ordinate tribunal had stepped in front of them to take. In his unreported Special Term opinion in Richman *v.* Consolidated Gas Co., Justice Leventritt said of this complainant "That it did not originally invoke State jurisdiction, where the same questions might have been passed upon, may be a matter of regret, but it is not one for condemnation, nor should it be permitted to influence the Court to disregard well-established principles of comity. * * * The Circuit Court has by its preliminary injunction taken unto itself the determination of the same questions that underlie these motions, and accepted practice, founded on very wise rules, forbids indirect interference by the State courts" (and see opinions on appeal at 114 App. Div., 216).

It may be asked why, after so strenuous a litigation and upon so voluminous a record, this court should be asked to remit the case and dismiss the bill upon a point that does not reach the merits of the controversy. Our answer is, that we do not think that the course of the proceeding before the Master was such as to bring out the full and fair merits of the defendant side of the case. We should prefer that the decision of this court should involve a ruling upon more specific propositions, but think that in no event can it be anything but a reversal and dismissal of the bill.

IV.

There is no unconstitutional or improper discrimination in fixing the 75 cent rate for the City of New York, while making the rate higher for other consumers within the same territory. Quite to the contrary, the rate for the city is unquestionably constitutional, irrespective of the fate of the private consumers.

This discrimination in price between gas furnished the municipality and gas furnished to its constituent members, the private consumers, is one of long standing, and was never before brought into court by the gas companies. The table of rates from 1897 down, in the Borough of Manhattan, under Chapter 385 of the Laws of 1897 (Record, p. 5264), and under the acts in question, is as follows:

	Consumer.	*City.*
1897	1.20	1.
1898	1.15	.97½
1899	1.10	.95
1900	1.05	.92½
1901-5	1.	.90
1905-6	1.	.75
1906	.80	.75

The complainant relied upon Lake Shore Railway *v.* Smith, 173 U. S., 684, where the Michigan Mileage Book Act was held unconstitutional because it discriminated in favor of married men against single men, and in favor of persons who could afford $20 investments against persons who could not; and this although the point was not made on the part of persons discriminated against. That case is not an authority to the effect that a legislature cannot establish discriminations which are neither arbitrary nor unreasonable. This discrimination between gas furnished the inhabitants of the city in their corporate capacity and gas furnished them as individuals is one whose propriety seems self-evident, and is confirmed by the fact that it was so long acquiesced in by this complainant and its sub-companies. If the price of the gas bought by the municipality were raised, the taxpayers would have to pay the difference; and theoretically the consumers who were not taxpayers would pay their share by way of rent.

The character of the service is also different. The municipality burns of course considerable gas in its public buildings, notwithstanding the fact that in most of them the occupants lock up and go home at a pretty early hour; but the vast bulk of its gas is burned in the street. It is unmetered. Special services are specially paid for. As to all of the city gas, the companies are saved the risks and many of the annoyances involved in its dealings with the 390,000 individual consumers.

Quite to the contrary, the 75 cent gas law is constitutional under the principles which have been laid down by this court in the railroad rate cases, irrespective of the validity or invalidity of the subsequent 80 cent law. The gas furnished the city amounted in all to about 400,000,000 cubic feet (p. 5076). A reduction of 15 cents on this would amount to the sum of about $60,000. The total net income of the company under the old law is found by Judge Hough to be $5,891,597.45 (p. 407). Deducting the loss by reduction of the city's gas from

90 to 75 cents the total net income was still about $5,831,500 under the law of 1905, or nearly 10% upon Judge Hough's $59,831,435 capitalization. Thus the decrease in price to the city amounted only to a reduction of about 1% in the net receipts of the complainant, and left them still nearly 4% over the standard fixed by him.

Nor did the statute of 1905 require the gas company to furnish any of its gas at a loss. The company's only complaint is that this particular portion of the gas did not pay its full proportion of profit. Its cost is not claimed even by Mr. Addicks to approach 75 cents (pp. 231-2).

If the statute of 1905 was valid when passed, notwithstanding the very slight fractional deduction made in the net profits of the company, it of course could not be made unconstitutional by the passage of the subsequent 80 cent law. If that law is invalid the consumer loses the benefit of the reduction which the legislature intended for his benefit, but retains his share of the benefits of the earlier and previously constitutional act. For if the statute of 1906 were unconstitutional, it would be a nullity. It could not be void in itself and at the same time make a prior statute void *nunc pro tunc.*

Is it then a violation of the Fourteenth Amendment to the Constitution of the United States for a state to require of a public service corporation a certain service to be performed at a rate which, though affording a large margin over expenses of operation, does not pay its full share toward profit on capital? This question is answered by the authorities in the negative, and they go even so far as to sustain statutes that require certain services to be rendered at a loss, provided the company is left on the whole with a fair profit.

This point is first noticed in the concurring opinion of Mr. Justice Harlan in Ruggles *v.* Illinois, 108 U. S., 526, 538 and is implied in the decision of the Wellman case, 143 U. S., 339. In both these cases the court was dealing with an act simply regulating passenger fares, and was not informed whether the railroad would not earn a sufficient return out of its freight.

In the Gill case, 156 U. S., 649, 665-6, this court held that a railroad company could not claim the right to earn a net profit from every part of its line.

In Smyth *v.* Ames, 169 U. S., 466, 541, it was indeed held that losses from low rates on local transportation could not be put upon the interstate business, but that was on account of lack of power in the state to cast a burden upon the latter class of business.

In San Diego Land Co. *v.* National City, 174 U. S., 739, 760, the court say that a case attacking rates must be decided by "looking at them in their entirety—and we cannot properly look at them in any other light."

The question was squarely presented for decision in Minneapolis & St. Louis R. R. Co. *v.* Minnesota, 186 U. S., 257. The railroads contested the rate fixed by the State Commission for the transportation of hard coal in carload lots. The company showed that the new rate, if applied to all the freight, would not pay operating expenses. This court said that the undisturbed rates for other merchandise "may be sufficient to earn a large profit to the company, though it may earn little or nothing upon coal in carload lots"; that a state comission may "reduce the freight upon a particular article, provided the companies are able to earn a fair profit upon their entire business, and that the burden is upon them to impeach the action of the commission in this particular" (p. 267).

In Atlantic Coast Line *v.* North Carolina Corporation Commission, 206 U. S., 1, one step further was taken. The order in question directed the railroad to change its schedule so that close connection could be made with another railroad at a certain point in the afternoon of each day. Assuming that to run this train would result in a loss, the railroad's contention was that this established a case under the Fourteenth Amendment (pp. 23-4), relying on Smyth *v.* Ames. The latter case, and those preceding it, were distinguished however on the ground that they only involved a general scheme of maximum rates, and are inapplicable to a case "when the question is as to the validity of an order to do a particular act, the doing of which does not involve the question of the profitableness of the operation of the railroad as an entirety," relying on the Gill and Minnesota cases above referred to (p. 25). The court further say that a carrier may be compelled to furnish adequate facilities "although by doing so as an incident some pecuniary loss from rendering such service may result."

V.

The burden of proof is upon the complainant, and is so strong that it must show that the state authorities could not fairmindedly have come to the result which was reached.

From the first judicial assumption of the power to declare a statute unconstitutional, it has been uniformly held that every presumption is in favor of its constitutionality.

In the Gettysburg Park case, 160 U. S., 668, 680, the court said of an act of Congress:

> "In examining an act of Congress it has been frequently said that every intendment is in favor of its constitutionality. Such act is presumed to be valid unless its invalidity is plain and apparent; no presumption of invalidity can be indulged in; it must be shown clearly and unmistakably. This rule has been stated and followed by this Court from the foundation of the government."

The same rule holds with respect to a State statute. Thus in Sweet *v.* Rechel, 159 U. S., 380, 392-3; the court said:

> "But in determining whether the legislature in a particular enactment, has passed the limits of its constitutional authority, every reasonable presumption must be indulged in favor of the validity of such enactment. It must be regarded as valid unless it can be clearly shown to be in conflict with the constitution. It is a well settled rule of constitutional exposition, that if a statute may or may not be, according to circumstances, within the limits of legislative authority, *the existence of the circumstances necessary to support it must be presumed.*"

In the final clause of this paragraph the Court follows the language of the Supreme Court of Massachusetts in Talbot *v.* Hudson, 16 Gray, 417, 422, which in turn adapted that of Chief Justice Shaw in Wellington, Petitioners, 16 Pick., 87, 96-7.

The presumption being in support of the defendants, and being so strong, it follows not only that the burden of proof is upon the complainant at every point, but that it is a burden to be lifted only by production of evidence of a peculiarly clear and convincing nature.

This court has ascribed to the findings of the Interstate Commerce Commission "the strength due to the judgments of a tribunal appointed by law and informed by experience" (Illinois Central R. R. Co. *v.* Interstate Commerce Commission, 206 U. S. 441, 454, and cases cited). The findings of a state railroad or gas or public service commission will doubtless receive the same ascription; and in the present instance, while the rate was finally fixed by act of the legislature, it was the same rate that had previously been fixed by a state commission after long investigation, and was higher than the rate recommended by an able legislative committee after the investigation of the year previous (p. 132).

It is not necessary to prolong the argument, because this court has recently considered in a series of cases the weight of the burden of proof which rests upon a corporation challenging a maximum rate fixed by state authority.

In San Diego Land Co. *v.* National City, 174 U. S. 739, 754, speaking by Mr. Justice Harlan, the court said:

> "But it should also be remembered that the

> judiciary ought not to interfere with the collection of rates established under legislative sanction unless they are so plainly and palpably unreasonable as to make their enforcement equivalent to the taking of property for public use without such compensation as under all the circumstances is just both to the owner and to the public; that is, judicial interference should never occur unless the case presents, *clearly and beyond all doubt, such a flagrant attack upon the rights of property under the guise of regulations* as to compel the court to say that the rates prescribed will necessarily have the effect to deny just compensation for private property taken for the public use."

In Chicago, Milwaukee etc. Railway *v.* Tompkins, 176 U. S. 167, 173, speaking by Mr. Justice Brewer, the court said:

> "The case must be a clear one in behalf of the railroad company or the legislation of the State must be upheld."

In San Diego Land Co. *v.* Jasper, 189 U. S. 439, 441-2, speaking by Mr. Justice Holmes, the court said:

> "In a case like this we do not feel bound to re-examine and weigh all the evidence, although we have done so, or to proceed according to our independent opinion as to what were proper rates. *It is enough if we cannot say that it was impossible for a fair-minded board to come to the result which was reached.*"

Applying the test thus established to this 80 cent rate, adopted after the Stevens-Hughes investigation of 1905 and the Gas Commission's re-investigation of 1906, and not discussing for the present what this court would do if it were willing to "sit as a general appellate board of revision for all rates and taxes in the United States" (189 U. S. at p. 446), we proceed to inquire whether Judge Hough has upon each point of the discussion of this problem kept in view—

The test:

Could a fairminded board have sustained the defendants' contention upon this point?

The present decree is based upon findings made by a master with whose methods satisfaction is expressed (p. 391), except so far as they are specially disapproved; and all the Master's valuations as to items capable of anything approximating to an exact valuation have been adopted and confirmed without further discussion by the court. *But the Master considered the burden to be upon the defendants,* and to be so strong that their contentions are sustainable only if "so decisively settled for all purposes as to admit of no further question" (p. 164, foot); that complainant's title to property "cannot be adjudicated in this action," but must be conceded as to all property "occupied by complainant under a claim of title and used by it in connection with its business of gas making" (*id.*); that the burden is on defendants to disprove the necessity of complainant's real estate holdings, even if complainant did not see fit to prove the use to which they are put (pp. 165-6); that if the original cost of the complainant's real estate was relevant to the inquiry, the burden was upon the defendants to show it (p.

167); that the burden was upon the defendants to show that the franchises of the complainant had ever been attacked, if they were here to be claimed to be revocable (p. 192); that the validity of a state statute purporting to grant a franchise to the complainant "must be assumed for the purposes of the present proceeding" (p. 194, foot); that if complainant contradicts itself, however immorally, and the state has believed its less self-favoring statement, he may believe the other (p. 216); that complainant may be excused from adopting appliances required by statute when the evidence affords no sufficient basis for an estimate of the cost of their installation (p. 250).

So too the Judge, while he refers to the true rule as to burden of proof, forgets it in his action. Thus he allows land to be capitalized as to which "very serious doubts are entertained", because he is trying "to reach an average favorable to the complainant" (p. 423).

It is submitted that both the Judge and the Master have been willing, if we may use the language of Chief Justice Marshall in Fletcher *v.* Peck, 6 Cranch at p. 128, to set aside a statute "on slight implication and vague conjecture."

Corollaries of the rule.

The rule in the Jasper case has the following corollaries, whose application to various points in the present case will be discussed elsewhere in this brief.

(1) As between two unimpeached and qualified expert witnesses, the valuations most favorable to defendant must be adopted.

(2) Under the well settled rule that the testimony of experts or employees is not binding (as to which very familiar rule of evidence we need only cite Chicago & Grand Trunk Railway Co. *v.* Wellman, 143 U. S. 339), a statute cannot be declared unconstitutional upon such testimony, unless the state admits its correctness.

(3) Complainant is entitled to no higher valuations than those which it has itself fixed under oath.

(4) Items incapable of exact valuation must be put down at the minimum amount that a fair-minded state board could fix.

(5) The judgment of the state must be taken as to the rate of return to be allowed, so long as that rate of return is above the limit of confiscation. Above that limit responsibility must be left with the state; and whatever power of judicial review there may be is confided to the state judiciary.

VI.

The following additional rules are applicable to the determination of the maximum rate question:

(1) *At least as to all items of capitalization over and above the actual cost of the property, the test must be this: Is it logical or equitable that the consumer should pay more cents per thousand cubic feet of the gas he burns because of the inclusion of this item?*

The present case is the first in which this court has been called upon to deal with a case of *appreciation*—with the case of a corporation which can win only by proving a capitalization vastly greater than its investment—which can win only upon unearned increments. All of its discussions of rate questions have been in cases where the company has fought for the standard of actual cost, and where the state has fought for the standard of actual value—where the case was one of *depreciation.*

While the language of this court in these discussions has been general in form, we understand it to have been particularly directed to the facts in each case respectively, and that it should be read in the light of those facts (Cohens *v.* Virginia, 6 Wheat 264, 399; Carroll *v.* Lessee of Carroll, 16 How. 275, 286; Woodruff *v.* Parham, 8 Wall. 123, 138; Barney *v.* Rickard, 157 U. S. 352, 364; Pollock *v.* Farmers' Loan & Trust Co., *id,* 429, 574-5).

In all these discussions it has been recognized that the subject cannot be treated from the standpoint of the company alone, any more than from the standpoint of the consumer alone, but it has not been necessary to analyze this out further than to hold that the company can rely neither upon its nominal stock and bond capitalization nor upon its original cost of construction, if these standards would result in a rate unreasonably high from the consumer's point of view.

In Covington Turnpike Co. *v.* Sandford, 164 U. S. 578, 596-597 the court said:

> "It is alleged here that the rates prescribed are unreasonable and unjust to the company and its stockholders. But that involves an

> inquiry as to what is reasonable and just for the public * * * . In short, each case must depend upon its special facts; and when a court, without assuming itself to prescribe rates, is required to determine whether the rates prescribed by the legislature for a corporation controlling a public highway are, as an entirety, so unjust as to destroy the value of its property for all the purposes for which it was acquired, its duty is to take into consideration the interests both of the public and of the owner of the property, together with all other circumstances that are fairly to be considered in determining whether the legislature has, under the guise of regulating rates, exceeded its constitutional authority, and practically deprived the owner of property without due process of law."

In Smyth *v.* Ames, 169 U. S., 466, 544, 546-7, discussing the company's contention that it was entitled to earn operating expenses, fixed charges, and some dividend, the court said:

> "It is unsound in that it practically excludes from consideration the fair value of the property used, omits altogether any consideration of the right of the public to be exempt from unreasonable exactions, and makes the interests of the corporation maintaining a public highway the sole test in determining whether the rates established by or for it are such as may be rightfully prescribed as between it and the public. * * * (p. 546). We hold, however, that the basis of all calculations as to the reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public. And in order to ascertain that value, the original cost of construction, the amount expended in permanent

> improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration, and are to be given such weight as may be just and right in each case."

Certain contentions of complainant, by which a considerable part of the capitalization in this decree is defended, are based on a very literal interpretation of the second sentence in the passage last quoted. It is maintained that complainant must be allowed an income upon the fair value of its entire property now used in the gas business, even though as between itself and the consumer of gas that result would be inequitable by reason of elements existing in this particular case which were absent in Smyth *v.* Ames, and whose possibility elsewhere could hardly have occurred to the mind of the court. We take it that no proposition here advanced by us will be held to have been overruled in Smyth *v.* Ames, for "no proposition of law can be said to have been overruled by a court, which was not in the mind of the court when the decision was made" (Woodruff *v.* Parham, *supra*).

The rule of "the fair value of the property" was adopted as an equitable one. When it is not equitable, the reason of the rule fails and an exception thereto is called for.

In fact, in the Ames case itself Mr. Justice Brewer contended for the original cost as the equitable basis of ratemaking, when it was expended in good faith (Ames *v.* Union Pacific Ry. Co., 64

Fed. Rep., 165, 178). It was unnecessary to decide the question and the remarks of this court above quoted are *obiter*. The equitable solution of the difficulties involved in this question between original cost and present value we shall endeavor to find, when we come to discuss the unearned increments on land, mains and services, and the hypothetical franchise values, and also the duties of the state authorities as distinguished from those of the Federal courts. Suffice it to say here that the Circuit Courts seem to regard the question as still an open one. Judge Seaman in the Milwaukee Electric case (87 Fed. Rep., 577), and Judge Lacombe in the case at bar (p. 137), seem to regard as the basis, in the words of the latter, "what has been adventured in the enterprise on the faith of the state's franchises." (And see to the same effect San Diego Water Co. *v.* San Diego, 118 Cal., at pp. 569-70, 572, 573.)

(2) *While as a general rule the valuation for ratemaking purposes is the same as in condemnation proceedings, there are exceptions to the rule.*

An element, whether tangible or intangible, may be properly taken into consideration in a condemnation proceeding by the city, when it could not equitably be allowed as capitalization for the purpose of increasing the price to be charged for gas furnished the inhabitants of that city. It may be taken into consideration in a condemnation on behalf of some government or corporation other than the city, when it would not be taken into consideration in a condemnation by the city.

Thus suppose, as we contend here, that some of the property used by the company is more than necessarily expensive. Thus the company's plant may be built upon land which could more properly be devoted to some other purpose. In condemnation proceedings, the land could not be taken away without allowing its value; but as between the company and the consumer, the company would be entitled to capitalize it at no greater figure than would represent a necessary expense in the manufacture of gas.

Another instance is the "going concern" item (p. 139, *supra*).

(3) *Values and charges should not be duplicated in favor of the company and against the consumer.*

There was a good deal of such duplication in the Master's report, which has been stricken out by the court.

For instance, the Master, besides allowing practically the highest sworn value of the plant, added also the value of the investment at Astoria, although when the latter investment should become effective it was the intention of the company to scrap part of the older plants (p. 215).

He also allowed the so-called "ten cent item" which included indeed renewals, a proper charge, but most of which was intended as insurance against the general risks of business. These are the same risks, however, which are insured against by the rate of profit allowable to a business enterprise over and above the interest earned by capital loaned on safe security.

Both the Master and Judge Hough have, as will be shown, allowed a duplication by adding to the value of each plant the full value of the land under the plant, although that valuation could not be realized unless the plant were scrapped.

(4) *The period to which attention must be directed is the month of May, 1906. If 80 cent gas was profitable under the conditions then existing, it cannot be held unconstitutional on account of any inferences or speculations as to changes in conditions at a later period.*

This would seem to go without saying, if it were not that Judge Hough has adopted a different rule. He has deducted $200,000, or the interest on a capitalization of $3,333,333, from complainant's net income, on the assumption that there would be an increase of sales which (together with the most profitable part of the present business) he supposes would be provided for by gas made at Astoria.

Yet the testimony in September 1906 indicated a falling off instead of an increase in sales; and Astoria gas had not yet passed the experimental stage, or reached more than a fraction of the estimated output, at the end of January, 1907 (pp. 105-6, *supra*).

A new legislature was in session from the beginning of January, 1907, and if conditions had changed so that 80 cent gas was not longer profitable, *non constat* that the legislature would not have dealt fairly with the situation; or, in case of its failure fairly to deal therewith, that would be the time for the interposition of a court.

This bill was filed May 1, and the temporary restraining order was filed May 18, 1906 (pp. 34, 38). They can be sustained only by reference to the conditions existing at that time.

Yet the decree bases its calculations upon the supposed experience of the complainant during the year ending April 30, 1907, and largely turns upon what is supposed to have happened after February 2, 1907, the day on which the testimony closed and after which we have no information on the subject whatever.

The legislature of 1906 had a right to infer that the conditions of 1906 would continue for the immediate future, and at least until the next session of the legislature; so far as appears in this record they did so continue; and this court in Smyth *v.* Ames, at 169 U. S., 549-50, has provided a remedy if they should change and not be otherwise remediable.

VII.

Applying the foregoing rules to this record, we find that 80 cent gas will give complainant a return of over 9½% upon its proper present capitalization, according to the experience of 1905.

We now proceed to take up for consideration the various items of capitalization and income as to which we have assigned error. These items are as follows: (1) the "real estate"; (2) the plants; (3) the mains and services; (4) the franchises; (5) the supposed loss of earnings from increase of sales; (6) the special franchise tax.

(1)

The "Real Estate."

For the facts as to this, see *supra*, pp. 30-58.

While believing that the decree capitalizes certain large items that should be omitted or reduced for reasons special to themselves, we have not asked the court in our assignments of error to assume that task. Judge Hough imposes on us a compromise (p. 423) which we shall not complain about in that respect. We shall discuss only three points of general application, which involve from $3,200,000 to $8,446,000 apiece.

(*a*) *The basis of valuation should not exceed the cost of the property.*

Suppose two gas companies long established in the same community. Each serves half the consumers of that community. With one exception the circumstances and conditions of the service are alike. That exception is an accidental one. When the companies started, they bought sites for their respective plants which were of equal area and equally well located for the purpose. The locations of the plants are still equally well located for the purpose for which they were originally bought, and for which they are now used. But owing to movements of population—movements upon which nothing done by either of the companies had any influence—Company A's site is in a region now much more valuable for general business purposes than Company B's. The value of B's still remains at the figure which it originally cost. The value of A's has risen so greatly as to increase the expert valuation of that fortunate company's total property 15%. The experts value that company's property at 15% more than the property of its equally deserving but less fortunate companion. Otherwise the two are alike. Each has the same capital stock. Each has the same gross sales and the same operating expenses.

Is the lucky company entitled to charge 3½ cents more for its gas than the unlucky company? Or rather, is its unlucky consumer to pay more for his gas than the lucky consumer of the unlucky company? If the state undertakes to fix maximum rates, must the maximum rate in the one case be 3½ cents greater than in the other?

We speak of an increase of 15% in the total valuation, because the actual increase which Judge Hough has made in his capitalization by reason of the unearned increment on real estate is about 15%. We say 3½ cents increase in rate, because Judge Hough's increase of 15% in capitalization results in an increase of over 3½ cents in what he considers a constitutional rate, as will appear by calculation. To an equity lawyer or an equity judge it seems to us that but one answer to this question should occur. He must instinctively appreciate the inequitable character of the result which has been reached by the Master and by Judge Hough. But while it is plainly inequitable, it is very plausible. It seems at first glance to follow naturally from the principle that the basis of calculation "must be the fair value of the property being used by it for the convenience of the public." The real estate is being used. Why not allow its fair value?

The fallacy seems to us to lie in the assumption that the company must necessarily be allowed the full value of the property which it uses, whether or not it is requisite that so valuable a property be used. Only so much of the value of the property as was covered by the original investment is really used as capital in gas making. For that purpose the value has never increased. The extra valuation which the expert swears to represents wealth that is being hoarded for enjoyment at some future time, when it shall be released by the removal of the gas plant.

The stockholders of the Consolidated Gas Company are undoubtedly entitled to obtain the full value of each parcel of land, whenever that parcel shall be sold or otherwise disposed of. This they have recently done as to one of the parcels, since it has been condemned by the city and its present value paid. Indeed, they will probably in each case get more than the present full value, because they will be removing a nuisance. The increment in value is indeed unearned by them. It is due to the industry of the whole community, which has built up this great city and enhanced the value of the land upon which the city is built. It is the result of the combined work of the inhabitants of the city; in other words, of the consumers of gas therein. It is in no sense the result of any special wisdom on the part of the managers of this complainant and its predecessor companies. They selected the sites for the various plants of the company, not on account of their estimated salability as building lots in another century, but on account of their appropriateness for the special purpose for which they were to be used in the company's business.

The stockholders of the complainant company will be entitled to their shares in the unearned increment of this real estate, just as they will be entitled to their shares in the increased value of the stock of the New York Edison Company, if that stock shall ever be sold. There is no claim that the present market value of the stocks held in the New York Edison Company is to be taken as part of the property upon which complainant is entitled to a return by joint contribution of the gas consumers of the city. Does the unrealized profit that lurks in the market value of this real estate stand in any better position?

Clearly it does not, because the difference between the present market value of the real estate (if vacated) and its original cost *does not represent property used in the manufacture and distribution of gas.* The proof of this proposition lies in the fact that the difference in value can never be realized until the property ceases to be used for the manufacture or distribution of gas, and is either transferred to general investment account or is disposed of to other parties. So long as the property is occupied by manufactories or holders or for storage it represents for gas purposes no greater investment than its original cost. The difference in value is not wealth used in the manufacture and distribution of gas, *but wealth which the manufacture and distribution of gas keeps out of use.*

This can be illustrated by putting a case.

Suppose that the company had two plants for the manufacture of the gas, one within a quarter of a mile of the corner of Wall and Broad Streets, and the other on the Bronx Kills, and that the same amount of gas was made at each, at the same expense. Suppose now that one plant was about to be scrapped upon removal to Astoria. Would it make any difference to the consumer which plant was scrapped? Suppose the downtown plant should be scrapped, the land sold, and the money put in bank. Would the consumer be asked to pay six per cent thereon? But suppose that the company should scrap the uptown plant, thinking that the other would rise so rapidly in value that some time it would sell for double its present market price. Is the consumer to pay the six per cent upon this *latent* increment of value, although he would not have had to pay it if the latent element had been realized?

Again: Suppose that the company should invest its present surplus in a land speculation, buying vacant lots in the newer portions of the city and holding them for a rise. So long as they were allowed to remain as land entirely vacant, there would certainly be no claim that they could be included as part of the invested capital upon which the people of the city must pay toll. Suppose, however, that the company should make some use of them, "as, for example" (in the language of the Master) "the storage of coal, coke, pipe fittings tools and castings" (Report, p. 166 top). Suppose that the speculation, (owing to its management by gentlemen having such intimate knowledge as some of the directors of this company have with respect to the future lines of development of the city) should be very successful, and should add millions of dollars to the wealth of the company, which should thereupon clear away the coal and the pipe fittings and realize upon the land. Is the price of gas to be raised when this deal is closed, in order to represent a reasonable return upon its profits? And if it is not to be raised at the termination of the period, is it meanwhile to be raised so long as the speculation is going on, revaluing the property every year so as to add that year's increment to the total valuation, thus making the gas consumers of the city not only carry the speculation (as they do now by paying the taxes), but pay in addition a reasonable dividend every year upon its estimated although as yet unrealized profit? This is just what the Court holds in the present case.

The fact (if it be a fact) that somebody pays taxes on an assessment equalling or approaching the present valuation, does not affect the correctness of our analysis any more than does the payment of taxes on other investments of the company. Complainant is of course taxed upon its investments necessary to its gas business and also upon its investments unnecesary to its gas business. But all the taxes on the land covered by the gas plant, coal and pipe fittings are in fact paid by the consumer, and so treated in this decree.

The original cost of the land, which should be taken as its valuation for the purposes of this proceeding, is of course its cost to the original company, not the nominal amount at which it was put in to the capitalization when the consolidation was effected in 1884. The price of gas to the consumer cannot be increased simply because the gas company recapitalizes and revalues its property from time to time. The consolidation of the six old companies, by which this complainant was formed, was not equivalent to the purchase of the property by an outsider. No one was interested to cut the figures down. The reason for the valuation was to get figures which would give each "constituent company" its *proportion* of the total stock to be issued. It was immaterial as between the parties whether the valuations were high or low, if all were high or all were low alike; and in fact parties arranged to have them high. Such a transaction affords no competent evidence.

Nor even (to complete the discussion by putting a case not relevant here) if the property as a whole had been purchased by a new company, would the purchaser thereby be authorized to charge a higher price for gas than the person from whom it purchased. The new purchasing company would simply buy the right that its predecessor had. It could not buy a right to charge more than he could charge. The increased amount which it might have to pay, by reason of the fact that the land owned by the vendor company had accumulated a large unearned increment of value, would simply stand as an investment to be realized upon whenever the purchaser company should abandon business or move its plant. It would be an example of the very common situation where one company, determined to buy out another, has to buy and pay for a good deal of property which it cannot immediately use and is not strictly necessary for which the purchase is made; but which will ultimately be worth its cost, and is bought because the buyer would rather purchase than compete.

(b) If the basis of valuation is to exceed the cost of the property, it should still not exceed the estimated cost of replacing it with other property capable of accomplishing the same result.

The decree is based upon valuations which are made on the theory that the plant is removed and the land thus freed for other purposes, but that the plant is replaced in the same immediate neighborhood. In other words, the valuations are based on the value of property otherwise similar in the immediate neighborhood of the plant, but not covered by the plant. This is a situation which there is no reason to suppose will ever occur. There is no reason to suppose that the company will ever scrap a plant in order to remove it to another place in the same immediate neighborhood. There is no reason to inflate its capitalization upon any such hypothesis. It would doubtless go to the cheapest property which would be available for its purposes; that is, to the cheapest property which could be brought into near connection with its trunk lines of pipe.

The method of valuation proposed by complainant's experts and adopted by the Master and Judge Hough duplicates the valuation of the plant, which admittedly would be destroyed if the land were sold in the market for the prices which they have fixed. Market value, in the heart of a great and rapidly growing city, the sum of the value of the land considered as vacant *plus* the value of the building thereon. If the land has increased rapidly in value since the building was erected, the increase can only be allowed to appear in the total valuation by deducting an equivalent amount from the valuation of the building. This is especially the case when the building has been used for a manufacturing purpose. It is most especially the case when, as with a gas holder, the purpose is one that would not be useful for any purchaser of the property. The valuations of manufacturing property generally put the building down at little more than a nominal sum.

To take a simple case, suppose that a man buys a lot of land in a residence district, and puts up a handsome house. If he was wisely advised, the total value of his house and land at the start is the sum of the values of the house and the lot considered separately. Suppose however that the character of the neighborhood changes, and that it becomes very valuable for business purposes. The valuation of his lot alone often runs to a figure far surpassing what had been the total valuation of his house and lot; but at the same time the valuation of his house, although it may be as good as new, or even immensely improved, becomes *nil*. The reason of this is that the great value of the lot is due to the fact that it can be used for a different class of improvement. It is no longer wanted for a handsome house, but for a handsome store. A gas plant is much like a handsome house that has been built in the taste of a rich proprietor, whose taste is shared by nobody else. In such a case the house adds nothing to the value of the land upon which it is built. This was illustrated when the two million dollar mansion of the late A. T. Stewart, once one of the wonders of New York, was pulled down a few years ago.

In the present case the complainant wanted to have credit for the full valuation of its plants, and in our computation we shall give it credit for what the Master and court have put it at, although the figure seems too high; but it also wanted to have credit for the full value of the land, just as if the plants were not there. In other words, it wanted to have its cake and eat it too, and it is being given that permission.

It is well settled in the New York courts, in accordance with common sense and with the prevailing views among real estate men, that the land and improvements are to be valued as a unit, and not each independent of the other; so that if the building does not enhance the value of the land it is to be disregarded altogether (Matter of Blackwell's Island Bridge, 118 App. Div., 272; Matter of Town of Carmel, 56 N. Y. Misc., 311, 318).

(*c*) *The valuations of the witnesses for the state and city should have been followed.*

The fundamental vice of the position of Judge Hough was in assuming that it was simply a Master over whom he was sitting in review. He was reviewing the action of a state. He could increase its figures only by showing that it acted upon figures which would not have appealed to a fairminded man. A fairminded man could have believed the testimony of Messrs. Thompson, McHale and Wells. That is sufficient to dispose of this branch of the case.

The judgments of this court have been upon actual facts proved as to cost and expenses, not upon anybody's guesses as to matter of opinion. "Is the validity of a law of this nature dependent upon the opinion of two witnesses, however well qualified to testify?" (Chicago & Grand Trunk Ry. Co. *v.* Wellman, 143 U. S., 339, 343). Can a law be set aside by one man who has not seen the witnesses, acting upon the impression which they made upon the mind of another man?

If the state produced no witnesses at all upon the point, or if its witnesses proved entirely incompetent, or grossly unprepared, or dishonest, and no application was made to produce qualified testimony, a different case from this would be presented. It is respectfully submitted, however, *that a statute cannot be declared unconstitutional because persons employed and paid by complainant swear that in their opinion it is unconstitutional, or, what is equivalent, that in their opinion certain valuations ought to be given to certain pieces of property, from which valuations unconstitutionality of the statute would be inferable.*

In other words, it is respectfully submitted that when the complainant pays gentlemen to express opinions as to the value of its property, and the state and city pay other gentlemen, honest and qualified, to testify to a smaller valuation, the presumption in favor of the constitutionality of a statute is strong enough to sustain it, unless the state concedes figures from which the contrary deduction must be made.

Complainant is also bound by its own tax return values, which are almost precisely the same as those given by the state's expert witness. It is not bound by a technical estoppel, but because a fairminded board could have believed that its tax reports were true (p. 189, *supra*).

(2)

The plants.

For the facts see *supra,* pp. 58-75.

One fallacy inherent in the valuation is in the fact that they would never be reproduced as they now stand. If a new and rival company should be established, or if the municipality should itself go into the gas business, modern and not ancient plants would be built. The present company would then undoubtedly have to reduce its rates to meet this new competition, and it would therefore appear that the present plants are not really worth what it would cost to reproduce them as they stand, but the very much smaller price which it would cost to produce plants of modern construction which could do the same amount of work.

There is no very satisfactory evidence as to the amount which should be stricken off on this account. If it were the turning point of the case, the record would therefore have to be returned for further testimony. But this seems unnecessary, in view of the tax valuation.

A fairminded committee had the right to believe Secretary Carter's testimony (p. 189, *supra*), and that would reduce the valuation of the plant by about $7,000,000. Whether this belief, being fairminded, was also justified, a Federal court can not inquire, if our understanding of the cases is correct. In other words, if a company gives low figures to a tax officer, and repeats them to an investigating committee, it has estopped itself from going into a Federal court to deny them, whatever remedy it may have before the state judiciary.

Whether the tax valuation is correct or not depends upon whether the early destruction of the plants is, by necessity or for profit—that is whether it is a case of genuine depreciation. In our computation we assume that it is not by necessity but for profit (p. 124, *supra*). This assumption gives a higher valuation to the plants, but also bars out all "Astoria" items; for if Astoria will be so much more profitable as to cause such a change in policy, it means that all expense incurred there, including loss of interest pending construction, will come back in reduced cost of operation.

(3)

Mains and services.

For the facts, see *supra*, pp. 75-9.

The book value and the value given to the tax commissioners of the mains and services fairly represents the original cost, and fairly represents their present value if the streets had not been repaved over them, and if the expense of laying down other pipes under otherwise similar circumstances and conditions had not been increased by the increased occupation of the streets for other purposes. On account of this greater occupation of the streets at present, and most particularly on account of the new pavements, the value of the mains and services has been so largely raised.

If cost of reproduction (that is, cost of duplication by a new rival company, or by the municipality if it should go into the gas business,) is the proper standard of valuation, there may be still some question about the correctness of complainant's figures, which are increased every time that its witness goes on the stand; but conceding the figures to be correct, why is not the same principle applied to the plant? Why is that not also valued on the basis of what it would cost to build another plant doing the same work? Why is it not applied to the real estate? Why it that not also valued on the basis of what it would cost to buy other real estate, in a more appropriate neighborhood, to hold that other plant?

Taking the matter up in another light, what equity is there as between the company and the consumer in raising the latter's price of gas because the city has repaved the streets? The company has not paid a cent for the improvement. It is even excused under the state law from paying assessments (Matter of Anthony Ave., 46 N. Y. Misc., 525; Matter of West Farms Road, 47 *id.*, 216). The paving is paid for by the property owners of the vicinity; that is, by the consumers or their landlords; and if by the landlords, the cost is presumably collected out of the consumers by way of rent.

Under what principle of equity are the gas consumers of the city, having paved it at their own expense, required thereafter to pay to this gas company, on account of those improvements, an annual bonus in the shape of increase in the price of gas?

Suppose there to be two gas companies in the same city, each serving half the inhabitants. Each has put up plants at the same cost and is operated under the same conditions. Then the city, with money collected out of the inhabitants of the territory served by one of the two companies, puts an improved pavement on the streets occupied by the mains of that company. Is that company, although it has not contributed a cent to the expense, to be permitted thereafter to charge a higher rate for gas than can be charged by the other company to the inhabitants of the other half of the city? Must its consumers, who have paid for the repaving, pay it tribute because the streets have been repaved?

It may be suggested that the new pavements increase the expense of repairs to the mains. Very true. But this increased expense is paid by the consumer, not by the gas company. It appears on page 219 of the Master's report as "Repairs to Mains, "$126,110.31" and "Repairs to Services, $89,033.46." The cost of renewing mains and services, when they have to be renewed, is also paid by the consumer (p. 404).

(4)

The franchises.

For the facts and for the law as to the validity and duration of the franchises which complainant claims, see Appendix A hereto.

For the facts bearing upon their value, see *supra*, pp. 20-22, 80-94.

Judge Hough admits, or rather we should say insists, that in his own individual opinion the question of franchises on such a valuation is without justification and reason, and is a judicial fallacy (pp. 411-13); and he refers to his inclusion of the franchise valuation (although that inclusion forced him to decide in complainant's favor instead of dismissing the bill) as "a finding opposed to the settled opinion of the Judge who happens to constitute the Court" (p. 425). He came to the conclusion however that he was forced to the contrary ruling by a supposed "trend of decision," by "methods of reasoning pursued in well considered cases dealing with kindred topics," and "by the *dicta* of courts of approved authority," indicating "a train of thought" opposed to his own and our view as to what the law ought to be; that on the principle by which "private citizens may acquire vested property rights through a series of even erroneous decisions," he is obliged, in order not to be "doing violence to theories of law and habits of legal thought fairly discoverable in these cases," to allow complainant $12,000,000 which he does not believe belongs to it, "because to refuse would disregard views expressed by higher courts" (pp. 413-14).

We have carefully examined the cases which are referred to with this mixture of respect and disrespect. In only one of them (namely, the Spring Valley Water Works case, which he has refused to follow upon the question of the rate of return to be allowed by a Federal court) do we find any justification for his application of them. In that one exceptional case, we find that Judge Morrow has fallen into the same error with Judge Hough—he has failed to observe the distinction between two entirely different classes of franchises. Neither this court nor the New York Court of Appeals have made an erroneous decision, or fallen into bad habits of legal thought, or made *dicta*, or taken a trend, or expressed views, which justify the conclusion which the learned District Judge has reached.

We think that he has been misled, both at this point and in his insistence elsewhere upon the state's so-called "special franchise tax" as having a bearing on this part of the controversy, *because he has been using the term "franchise" as if there were only one species of franchise.*

He has overlooked the fact that the word "franchise" is commonly used in a broad sense, to include rights whose limitations as well as duration are quite diverse.

There are three distinctions whose observation will clear away the fog which has obscured the vision of the learned judge.

First distinction. Between a franchise with, and a franchise without, the right to charge a minimum toll, or earn a minimum dividend.

Customs have differed widely in different states as to the breadth of franchises, as well as their duration. Some states incorporate in their franchises some provision as to the minimum rate of toll or dividend, often at the same time putting a time limit on the entire franchise. Other states generally put no express limitation on the franchise, but on the other hand accompany it with no special guarantee against future legislation limiting the earnings. New York belongs to the latter class.

Hence an argument as to whether or not a "franchise," *per se,* should be separately valued, is an argument based upon insufficient information. It is necessary first to ascertain whether any particular rate of return is guaranteed.

When the "franchise" includes a provision by which a company is privileged always to charge a toll of not less than a given amount, or to charge such tolls as will enable it always to earn a dividend of 8%, there is of course a contract which the state can neither directly nor indirectly break.

Such a case was Monongahela Navigation Co. *v.* United States, 148 U. S., 312, relied upon by Judge Hough at page 414 of his opinion. This case arose under a statute providing for the condemnation and removal of a certain lock and dam. The statute expressly provided that no compensation should be awarded for "the franchise of said corporation *to collect tolls*" (p. 313); and this franchise "to collect tolls" was excluded from consideration by the court below (p. 319). Mr. Justice Brewer speaks in his opinion of "*both* the right of the company to have its property there *and* the franchise to take tolls" (p. 341), and refers to the latter again as a separate affair at pages 342 and 344; and he says that "*these tolls,* in the nature of the case, *must enter into and largely determine the matter of value*" (p. 329). Judge Hough's misinterpretation of the case was due to his erroneous assumption that in speaking of "*both* the right of the company to have its property there, *and* the franchise to take tolls," the court was not speaking of two separate provisions in the charter of the company whose property was being condemned, but was discussing a charter in the common New York form, like those claimed by this complainant. Justice Brewer says that "the amount of compensation was subject to the determination of the State of Pennsylvania" and that the "prices which may be exacted under this legislative grant of authority are the tolls" (p. 329); and by examination of the legislative grant of authority, which was both pleaded and proved and was printed in the record before the court, it will be perceived that the company was originally created with a statutory right to a nine per cent toll, afterwards raised to twelve per cent besides the permission to establish a contingent fund of not over $50,000, afterwards altered by providing that one-half of the tolls above ten per cent dividends should be paid to the commonwealth (Monongahela Record pp. 33, 39, 50). By a subsequent agreement between the state and the company it was provided that "no reduction shall be made at any time so as to afford a less dividend than eight per cent per annum on the capital stock" (p. 53). The report of the case contains a full statement of the argument by the United States; and it will be perceived that no question arose as to whether or not the franchise to collect tolls was in itself a right of independent value. The only points made were that the state franchise was not good as against the United States, and that the state had reserved an option, which the United States might exercise, to take over the property at a fixed sum (pp. 320-3).

The other Federal cases upon which Judge Hough relies have no bearing on the point, except Judge Morrow's opinion in the Spring Valley case, 124 Fed. Rep. at p. 594, which has no independent discussion but simply follows what he erroneously supposes to be the Monongahela ruling. In the Reagan case it is clear that tangible property only is in mind in the Court's discussion (154 U. S. at pp. 402-3, 405-7, 411). The Reagan case had nothing to do with what he seems to cite at p. 415 of his opinion (Rates from St. Louis to Texas Common Points, 11 I. C. C. Rep. 238, 264). That is an opinion of Mr. Prouty about a valuation of railroad property under a Texas statute of 1894, for the purpose of limiting the issuance of stocks and bonds.

The New York Court of Appeals opinion upon which he relies is that in the famous Broadway Railroad case, People v. O'Brien, 111 N. Y. 1, 41. It received the concurrence of three judges only, doubtless because in its *obiter dicta* it went a little too far. For instance, a franchise can hardly be inheritable if granted only for a term of years; nor is it strictly accurate to speak of it as alienable if granted in language which does not permit of voluntary alienation. The franchise then under consideration was practically if not literally perpetual, and was also alienable. All the adjectives and descriptive phrases used in the opinion were properly descriptive of the case in hand, and their inapplicability to other conceivable situations was not perceived. The question involved was whether the legislature had the right, by arbitrarily repealing the charter of the company, to deprive its bondholders and stockholders of the right to have its tangible property maintained as a going concern; in other words, to realize more than its scrap value.

With franchises of the Monongahela class however, which carry a right to charge a minimum compensation and therefore are capitalizable at a valuation additional to that of the tangible property, this court has had frequent information, as in the Detroit case, 184 U. S. 368.

Second distinction. Between short and long term franchises.

This is an obvious distinction. A franchise originally granted for fifty years, and terminable to-morrow, is protected by the constitution until to-morrow, but is negligible in a condemnation or rate making case, even if it carries a guaranteed 10% dividend.

Third distinction. Between revocable and irrevocable franchises.

This distinction also is one which hardly needs consideration. A revocable franchise is equivalent to a revocable license; and the courts have recognized that no value need or should be assigned to such a franchise or license, when the sovereignty which has granted the license concludes to condemn the property. Condemning the property involves the revocation of the license (Kingsland *v.* The Mayor, 110 N. Y. 569, 583). In the Monongahela case, *supra,* this principle was indeed unsuccessfully relied upon by the United States; but the court held that the United States could not avail itself of a power of revocation reserved to itself by the state.

Bearing in mind these distinctions, let us now proceed with the main argument.

(*a*) *The franchises claimed being unconstitutional, or not the property of the complainant, or revocable immediately or upon short notice, they cannot be capitalized as against the city or its inhabitants.*

(*b*) *A franchise to build and operate, without any special contract as to rates of fare, has no value cognizable in ratemaking or condemnation proceedings except that it gives the company the right to have its tangible assets valued at a sum higher than their scrap value.*

We are speaking now of the *simple* franchise to build, operate and make reasonable charges, as distinguished from what may be called a *compound* franchise guaranteeing also a minimum rate.

Of course if the company had no franchise—if it could be turned out of the streets at any moment—its plant, mains and services could not be valued at anything approaching original cost, or cost of reproduction. They would be almost a total loss, except so far as covered by the unearned increment on the real estate, which the removal of the plant would enable the company to realize. The franchise has indeed an enormous value so long as it is not terminable or terminated by expiration or revocation, "because" in Judge Hough's words "it authorizes the gainful use of private property in a particular manner" (p. 413); "because" to use his language again, it is "an attempt to protect those investing their property upon the faith thereof, * * * the property which it renders fruitful" (*id.*).

In the main case under the New York "special franchise tax law" (*People ex rel Metropolitan Street Railway Co.* v. *Tax Commissioners,* 174 N. Y., 417, subsequently before this court at 199 U. S., 1), Judge Vann, in discussing the tangible property in the streets, says that it is "so incidental to and dependent upon the special franchises as to have no substantial value unless used in connection with them" and therefore to have a relation with them "so intimate as to be inseparable in any practical system of estimating values," and that all the "mains and pipes, poles" etc., "when separated from their special franchises, have no value except as firewood or old iron. Their only substantial value is the right to use them in connection with the franchise, and hence they are incidental to the franchise. As part of the franchise they are worth something, but severed from it nothing to speak of"; and hence that the tangible and intangible property in the streets constitute "a new entity, which as a going concern *can neither be assessed* nor sold to advantage, *except as one thing, single and entire.*" This is substantially Judge Hough's reasoning. Judge Vann does not hint that a special franchise can have any value *additional to* the immense value to which it thus contributes, when there is no charter or contract right to charge any particular rate.

Judge Vann's reasoning but adopts that of Thomas F. Rowland, who built parts of complainant's plant and appraised other parts of it in 1884. Being asked to value the franchises, he said that without them he could not "conceive that the property is worth anything except what it is worth for old material," and that his valuation of tangible property is a "valuation of that property in the manner which it was used at the time I made the appraisal. * * * That is no use except to have the right to open the streets" (p. 6097).

In *Brunswick Water District* v. *Maine Water Co.*, 99 Me., 371, 375-81, cited in Beale and Wyman on Railroad Rates, § 362, as opposed to the separate valuation of franchises, the court discuss the franchise question at considerable length, and come to the conclusion that the franchise is what makes the structure legally "a going concern structure" and "that some difficulty in discussion has arisen from attempting to differentiate in logic what is inseparable in fact," and that the property cannot be valued "separate from its inherent characteristics" and therefore cannot "be valued in entire disregard of its franchise characteristics," and that even when the statute does not specially mention franchises "it must have been implied that the property was to be valued as rightfully where it was, and rightfully to be used, for what are pipes in the ground worth as pipes, or reservoirs or dams or fixtures, unless they can be rightfully used, and reasonable tolls charged? And these rights are the franchise, at any rate, the most important ones" (pp. 376-8). The court concludes "that the value of money invested, in whatever form it now is, is affected by the right to use it in that form. That is, by the franchise" (p. 380). This also is substantially Judge Hough's reasoning.

Summing up the doctrine of these cases as we understand them, we may say—*A simple franchise is the right to operate as a profitable going concern what would otherwise be a job lot of second hand material.*

That a simple franchise can not be given a separate and independent value, for the purpose of increasing the price of gas against the consumer, is obvious.

There was no implied agreement or understanding, when the franchises were granted, that the grantees should earn a reasonable return on anything more than the capital invested. The grants were made subject to the state's right to so limit the return. It was for this very reason that compound franchises, guaranteeing a higher return, have been so commonly asked for, and so often granted. They were asked because that was the only method by which a specially high return could be secured.

It is now well settled that, whether a franchise be exclusive or not, whether it be perpetual or not, it is subject to the right of the sovereign, in the exercise of the policy of power, to fix a maximum reasonable rate. The right to fix such a rate has been long settled, and is complete unless there has been a most clear and accepted contract between the sovereign and the grantee, by which the right is waived or limited (Smyth *v.* Ames, 169 U. S., at pp. 545-6).

Since then a franchise is granted subject to the fixing of a reasonable maximum rate, it is a matter of mathematical demonstration that no value of the franchise itself can come into the calculation by which that reasonable rate is arrived at. The franchise is held subject to a servitude, and a servitude cannot be got rid of indirectly by any process of computation based on the assumption that it does not exist. The very large return which is received by the owners of many franchises is due partly to the fact that sovereigns recognize the right of people who have risked their money in such enterprises to receive a higher rate of return than is received by persons who invest in safer securities, and partly because ignorance and inertia and preoccupation often delay for a long series of years any action (indeed any investigation) by the sovereign upon the matter at all. The immense sums at which the so-called public service franchises in our large cities have been recapitalized by promoting syndicates have been based upon the doctrine of chances; the chance that the sovereign will not find out how much the company is really making (if that can be concealed by over-capitalization, especially through bond issues and consequent low dividends upon the stock), or that it will not enact or enforce a system of reasonable rates.

The absurdity of complainant's theory is well illustrated by the court's calculation that the value of the franchise has so enormously increased since 1884. Certain testimony elsewhere criticized by us is to the effect that in that year the difference between the agreed value of the tangible property and the agreed total capitalization, being $8,084,000, was divided up arbitrarily into $1,303,000 "Working Capital" and $7,781,000 "Rights, Franchises, &c.," and that the latter figure has been accepted as a valuation of franchises by the Master and court. Assuming the figure to be a correct valuation as of that date, then if a reasonable maximum rate had been fixed by the state in the year 1884, and since then maintained, the item could never have grown above that figure. But the court now finds that this same intangible property (it is not claimed that any new franchise has been since acquired) has increased in value by a sum exceeding $4,200,000, *this increment in value constituting more than one-fifteenth of what is fixed as the present capitalization.* And this burden upon the consumer who has got to pay six per cent upon the increment results from no action taken by complainant for his benefit, but only because the number of consumers and their necessary use of gas have increased, and *because the public authorities for so long a period lay idle,* whether from ignorance, indolence, corruption, or from a *bona fide* desire to let an enterprise earn a high rate of interest as long as it should be in any sense an "infant industry."

What doctrine could be more absurd? What doctrine could be more pernicious to our government? What doctrine could have a greater influence and effect in putting railroad companies and gas companies into politics? For every year that by manipulating primaries and conventions, and arranging deals, and diverting the attention of legislators and municipal officers, they can postpone the evil day of state regulation, they can gain an eventual increase of income when that evil day shall finally arise. *And what they shall thus have gained will be protected by the Federal Constitution and will be a perpetual asset.*

A new company starts off with its real property, construction, equipment, and working capital. It has permission from the public to operate for a definite or indefinite future time, charging tolls. Sometimes a charge is made for the permission, which the company pays as a commission for getting the business, as part of its initial expense. There is an implied understanding that the tolls shall be high enough to give the company a fair return. A fair return on what? Suppose the charter guaranteed a profit of 6%, but failed to mention the amount upon which the profit should be calculated. What would counsel advise a proposed purchaser about it, the day after the company opened for business? According to our contention it would be calculated upon the capital invested, which has been spent in obtaining the aforesaid real property, construction, equipment, working capital, and permission. But if it is to be the capital invested *plus* something further, then *plus* what amount? Surely the sum must be knowable, if it is to be taken into a calculation. If there is an implied agreement about it, there must be some way of finding out what the public agreed to.

Again, suppose the sum to be ascertainable, so that the public could be told "You have given away $1,000,000", or "$7,781,000". How does this gift grow afterwards? How does it get to be $12,000,000? In the earlier years of the industry a company like this ought to be allowed to earn a specially high return, a return higher than would be permitted to concerns engaged in older and better understood kinds of business, because it is good policy to attract the investment of capital in novel enterprises. *But by what process does the allowance of this specially high rate during the period of special risk increase the capital as well as the income of the company?* If there were any result like this to be feared, would it not deter the state from encouraging new enterprises, for fear of their levying tribute on posterity? Is there any equity or reason or public policy or common sense in a doctrine which permits the gift to grow in capitalized value as against the giver, after it is given? Is there any of either in a doctrine which values the gift as a separate item even at the start?

What then is the item which nowadays we see so often capitalized by promoters under the head of "franchise and goodwill"? This item is not peculiar to public service companies. It is as common in "industrials". It is merely the promoters' estimate of what the purchasers of the stock will consider the chance of being able to sell goods at such rates as to make an extra high profit, over and above a satisfactory rate of profit on the rest of the capitalization of the company. In the case of an "industrial", there is no appreciable risk of state reate regulation, but there is risk of competition. The "franchise and goodwill" represents probability of making that extra high profit, notwithstanding the risk of competition. In the case of a public service corporation there is no longer now much risk of competition, but there is risk of state rate regulation. Here again the "franchise and goodwill" represents the same probability—a probability that for some reason the company will be permitted to make a profit that is over and above a reasonable and satisfactory percentage on the capital actually invested. In either case the item represents a commercial wager that may be lost.

Complainant put much reliance upon Matter of Water Commissioners of White Plains, 71 App. Div., 544, 176 N. Y., 239. This is an obscure case and a border case; a reversal by a bare majority of the Court of Appeals, the present Chief Judge dissenting, of a unanimous opinion of the Appellate Division, in which one of the present judges of the Court of Appeals concurred. As we understand it, it does not affect any question here, and as Judge Hough did not cite it, we presume that he read it as we do. It was a condemnation proceeding by the Village of White Plains. The company's tangible property had cost nearly $330,000, but was assessed by the commissioners at only $103,000, upon the theory that the franchise which gave it its value was about to expire. This theory the Court of Appeals held to be erroneous. That court has no jurisdiction to consider any question of fact, and upon holding the commissioners' theory to be erroneous could only reverse and direct further proceedings. Judge Vann concurred in the opinion, and there is nothingg in the case to indicate that he regarded the franchise in any other light than that described by him in the special franchise tax case (p. 221, *supra*).

We have already pointed out that there is no judicial precedent sustaining a separate franchise valuation except Judge Morrow's misreading of a decision of this court (p. 218, *supra*), which is disapproved by Beale and Wyman (Railroad Rates, § 362); while in the Stanislaus County case that afterwards came to this court (192 U. S., 201, 216), a claim for such a valuation, having at first been put forward, was afterwards formally withdrawn by the complainant's counsel (113 Fed. Rep., at p. 935), undoubtedly because discussion had convinced him of its indefensibility. In Judge Seaman's very careful discussion of the Milwaukee Electric case no franchise item was taken into consideration, although the franchises had twenty-six years to run (87 Fed. Rep., at p. 583).

(*c*) *The "special franchise tax" has no bearing upon the question.*

It was the existence of this tax that seems to have mainly influenced both Judge Lacombe (pp. 142-3), and Judge Hough (pp. 416, 425). That they acted under an entire misconception of the New York statute and of the proceedings thereunder will be shown when we come to the discussion of the special franchise tax item.

(*d*) *If the franchise is susceptible of separate valuation, only a nominal sum is allowable.*

Complainant claims no exclusive franchises. Hence considerations with which this court is already familiar show that a franchise valuation must be small, if at all allowable. The state can at any time authorize or direct the city to build its own lighting plant. This would be equivalent to the abolition of all advantage to the complainant, except its monopoly during the time necessary for the city to build and equip. When it builds and equips, the company must drop its claim for a profit on its alleged franchise or lose all its customers. It will doubtless drop part of its charge, even if it can compete at all. This was conceded and assumed by everybody in the litigations over the statutes permitting municipalities to go into competition with other public service corporations, as for instance the Skaneateles Water case, 161 N. Y., 154, 184 U. S., 354, and the Newburyport cases, 168 Mass., 541, 555, 103 Fed. Rep., 584, 193 U. S., 561.

Judge Hough substantially concedes that there is no direct evidence of value (p. 416). His fanciful method of valuation (pp. 417-8, 424-5) is without support in facts, as we have shown in the statement of facts (pp. 83-93, *supra*). The state has valued these alleged franchises at zero, or at a nominal sum. Under the rules laid down by this court (pp. 188-9, *supra*) it was incumbent upon complainant to show that this ruling of the state was "a flagrant attack upon the rights of property" and one which would be "impossible for a fairminded board." Yet this very complainant, just before the passage of this 80 cent gas law and the commencement of this suit, had filed with the state a paper sworn to by an officer whom it presented as a fully qualified expert, stating that all its property in the streets, tangible and intangible, would sell for less than the amount at which the tangible part is put down in the decree. This is as good testimony as any other testimony in the case. *Could not a fair-minded board believe it?*

Never has a state statute been denied enforcement upon reasoning so speculative. Indeed, if this court has ever affirmed a case overthrowing a rate law on any speculative reasoning at all, we have overlooked it. This suit, if it terminates in a decree for the complainant, will be a long step forward in the movement for substitution of the judicial for the legislative discretion. Would this be in accordance with the traditions of the comity of the judiciary to the legislature? Or of the comity of the Federal to the state government? Would it be in accord with a true public policy?

(5)

The supposed loss of earnings from increase of sales.

For the facts as to this, see *supra*, pp. 100-112. The facts need no comment.

So far as they are disclosed, they disfavor complainant's contention. So far as they are undisclosed, we know only that they are facts which the complainant might have furnished had it chosen to do so, but which it prevented defendants from getting, by successfully shutting off investigation both into its own operations after December 31, 1905, and into the affairs of the other companies. The year 1906-7 was three quarters over when it closed its case in rebuttal and successfully objected to any surrebuttal. It did not offer to show how much gas it had had to supply, or where that gas had come from. It is subject to the presumption against a party who will not show his books, but relies upon friendly experts instead (Sturgis v. Clough, 1 Wall. 269, quoted in The Conqueror, 166 U. S. 110, 128, 134).

The whole mix-up is an illustration of the juggling made possible by the recent legislation permitting one company to control the stock of another, which controls the stock of a third, and so on. Here the main company gets a $200,000 income allowance, which is equivalent to an allowance of $3,333,333 on the capital side of the account, as representing capital invested in Astoria stock. It gets the allowance on the theory that it will transfer its patronage to the Astoria subcompanies from the older subcompanies. The latter have 80 cent cases of their own, just like this case. When their cases come up for trial, we shall probably find that the 1906-7 gas was really made by them, so that there should have been no $200,000 allowance here; that in effect its allowance here represented capital invested in their stock; but that they are entitled to disregard the decree here, not having been technically parties to it, and to be allowed for all of their own capital against their own consumers. Thus $3,333,333 of the capital of the Standard and the other companies will have been counted once against their own customers, and once against those of the complainant.

Even if we lay aside all evidence tending affirmatively to discredit this deduction, it is entirely speculative, for complainant has the burden of proof, and nothing in the record supports it; while on the other hand, *a considerable amount should be added to the net earnings in the calculation, because the state is entitled to assume an increase of profits from increase of sales at the lower price, and this assumption can not be overthrown by mere speculation on the part of the court.*

In any event the $200,000 should be subject to a deduction of $58,149.84, interest on cost of New Amsterdam construction (p. 102).

(6)

The special franchise tax.

The Master and the learned judges below have discussed this tax as if they had only read its name, and not its definition. They have assumed that a franchise must necessarily be something of a permanent nature. Yet the language of the New York special franchise tax law is set forth in the Master's report at page 201.

The words "special franchise" include not only a "franchise", but other things also. They are defined as follows:

> A franchise, right, authority or *permission* specified in this subdivision shall for the purposes of taxation be known as a "special franchise."

The words "specified in this subdivision" refer to the paragraph also quoted by the Master as follows:

> The value of all franchises, rights, authority or permission to construct, maintain or operate in, under, above, upon or through any streets [&c.] any mains, pipes, [&c.] for conducting * * * gas, &c.

Thus a company that has no franchise, but holds an annual license or simple permission,—whose status is that of a tenant from year to year, or at will, or by sufferance—is just as fully taxable as if it had an exclusive franchise in perpetuity.

A *permission,* so long as the permission continues, yields just as large an *income* as a perpetual franchise for the same number of mains and pipes. The annual value being the same, the assessment and tax should be the same; and the statute so evidently contemplates. A man ninety years old pays the same tax upon the land which he holds in life estate as his grandson will pay when he comes into its ownership in fee simple absolute.

The way in which the tax is assessed, as described by the Master in his report at page 204, makes it in effect a tax upon the total earning capacity of the company, *minus* such an amount as may properly represent its tangible property otherwise assessed.

The statute has received a practical construction, both from the state assessors and from the various referees who have dealt with it in certiorari proceedings. *The tax is the same whether the company has a franchise or right, or only an authority or permission.* The question whether the streets are occupied under a perpetual contract, or long term contract, or revocable license, has never cut any figure. *It is only the annual value which is taxed,* and the actual net profits are the basis of the valuation. Of course the rate of fare, or the price per cubic foot or kilowatt, is one of the principal factors governing the net profits, and through them the rate of tax. For if the state and city permit a company to occupy the streets *pro tempore* with what is for the time being an exclusive privilege of supplying gas to the community, and do not, on the other hand, put any limitation upon the price which it may charge, *the permission tax,* called in the statute a *special franchise tax,* will be very considerable. But if, on the other hand, the state reduces to the extent of twenty per cent the rate charged, the tax will be very much less.

This shows the fallacy of the idea that the state is estopped, when it lays an annual tax upon a permission to occupy the public streets, from denying that that permission constitutes a perpetual franchise. The Constitution gives the power to grant franchises to the legislature. No action of a tax officer can constitutionally grant a franchise. Any franchise granted by a tax officer would be a nullity. A franchise granted indirectly by levying a tax under that name would be no better. The tax officer cannot even give right of possession (Consolidated Ice Co. *v.* The Mayor, 166 N. Y., 92, 101-2) unless he is the duly authorized agent of the State for that purpose.

People frequently have tried to claim grants from the state by getting tax officers to tax them upon pieces of land; but they never succeeded in doing so, so far as we are aware. If the taxing officers try to tax a man upon some piece of property which he does not own, his remedy is to prove that he does not own it. This would have been the complainant's proper method of relief, if it were being taxed upon a franchise which it did not possess. It did not dispute, but admitted, that it had a franchise taxable under the act if the act were constitutional. Consequently no decision of any court in any proceeding under that act is a decision upon the question whether the complainant had a franchise or not. But that is immaterial; *for we concede that it has franchises, taking issue only as to their duration.*

Furthermore, how can the complainant assert an estoppel as against the consumers, based upon a tax *which the consumers pay,* and from whose payment the complainant is relieved? There has never been any dispute in this case over the proposition that whatever special franchise tax might be payable in 1907 or 1908 must be charged as an operating expense against the consumer (see pp. 223, 383).

Hence there would be no estoppel on the State, as stated by Judge Hough at p. 425, even if the tax officials had acted on a theory of permanence of franchises. Upon what reasoning the estoppel idea was based, we have never been able to discover.

In view of complainant's insistence upon the assessment of 1906, however, it may be well to analyze just what happened. Assessments are made every year as of the second Monday of January, under the practical construction given to the Greater New York Charter (Ash's edition, 1906, pp. 578-9), read in connection with section 42 of the Tax Law as amended. The present assessments were in fact made as of that date (p. 81, *supra*). On the second Monday of January the rate was a dollar, and the value of the special franchise at that period was such as the net earnings based upon a dollar rate would indicate. The 80-cent gas law was not enacted until May. Immediate objection was made to the assessment, and it is not claimed that the question has been as yet finally settled either by compromise or adjudication.

Not only in 1906 however, but in 1907 and 1908 as well, it has been the duty of the State Assessors (whether they have done their duty or not) to assess the "special franchise" on the theory that the dollar rate continues. They must assume that it continues until this suit is otherwise decided. It is the duty of complainant's counsel, on the other hand, to resist payment of a tax upon this basis. The consequent litigation must remain pending until the final settlement of the present controversy. Each party to the litigation must act as if the other were going to win. This is the uniform experience of a tax upon the exercise of a privilege which the owner considers more valuable than the state admits. The main controversy is over the value of the privilege. The tax upon it must temporarily remain unadjusted.

The tax rate is under .015% (p. 1002). Assuming the tangible special franchises, that is, the mains and services, to be finally assessed at their full cost or book values (p. 77, *supra*) or together at $9,064,822.12, the tax would be under $136,072. If assessed at the Master's values, or together at $14,630,184, the tax would be under $219,452. If the 80 cent gas rate should turn out to give the company only a reasonable return on its tangible property, then there would be no intangible special franchise to tax, and the balance of the $406,909.23 special franchise tax item of 1905, after deducting the tax on the mains and services, would have to go out of the calculation. For the figures of 1905 are only relevant so far as they afford a presumption that the expenses will be the same thereafter (p. 399).

How far the $406,909.23 item will be wiped out is a matter that can not be calculated until we have calculated the probable return to be earned under the 80-cent gas law. The method is shown by People *ex rel.* Jamaica Co. *vs.* State Board, App. Div., 3d Dept., Sept. 1908☆(S. P. Chicago Union Traction case, 114 Fed. Rep., 557, 561). The calculation is as follows: First ascertain the value of the tangibles, excluding the tangibles in the streets (mains and services) which are classified as part of the special franchise. Next ascertain the net income, assuming there to be no special franchise tax. Subtract from the latter sum 6% on the former sum. Capitalize the remainder on a 6% basis to give the real value of the permission for the current year. Equalize this by reference to the general basis of assessments, if it is not customary to assess at full value. Then about 1½% on this sum (p. 1002) will be the special franchise tax to be paid during the current year.

Summary.

Capitalization (Judge Hough's) less than		$59,831,435
Deduct real estate values not part of the wealth employed in supplying gas (p. 43, *supra*) about	8,446,000*	

---

*If other theories are adopted instead of the one which we believe to be the correct one, the figure to be deducted would be $6,325,310, (p. 36), or $3,200,000 (p. 47). Even with the latter modification the net income would be over 8%.

☆112 N.Y.Supp.392.

Mains and services, excess over book value (p. 77, *supra*) about	**5,605,962**	
Franchises	**12,000,000**	
		26,051,962
		$33,779,473

The net income for 1905 at the 80 cent rate according to Judge Hough would have been about $3,225,000.* This is over 9½% on the above capitalization.

If we regard the removal to Astoria as a forced one, there is to be deducted about $7,000,000 as representing depreciation in plant, as shown by the tax report.

VIII.

The basis of the maximum rate regulation should not be a figure exceeding the capital actually invested in the enterprise, and upon that basis 80 cent gas will give complainant a return of over 22% according to the experience of 1905.

In the summary statement just given, the capitalization of the company has been estimated upon the basis of present value, less certain items

---

*This is his figure *for 1905*. He deducts $200,000 on account of supposed variations *in 1907*. We base our calculation on the date as to which the evidence was taken.

But the $3,225,000 should be largely increased owing to the reduction in the special franchise tax due to reduction in price of gas. This, as well as the fact that complainant has been grossly underassessed in the past, is shown by the Jamaica case, cited on the previous page.

not equitably capitalizable as against the consumer for the purpose of increasing the price which he should pay for his gas. The elimination of these inequitable items practically reduces his capitalization to actual cost. We believe that there should be a still further reduction, and in order that the discussion of the subject should be complete we set it forth, although we believe that we have already reduced Judge Hough's figures to an extent several times sufficient to require the dismissal of this bill of complaint.

If the capital actually invested in the enterprise be taken as the basis of discussion, its amount is considerably smaller than the original cost of the present property. The difference arises from the fact that *part of the cost was paid by the consumer, and is properly to be credited to him and not to the company.* Eliminating that portion of the capital which was the contribution of the consumer and not of the company, would reduce the capitalization to about $14,564,571.82 (p. 25, *supra*) upon which the return (without any allowance for special franchise tax) would according to the experience of 1905 have been over 22%.

This raises two questions: (*a*) whether the capital actually invested in the enterprise is the true basis of capitalization for the purpose of establishing maximum rates; and (*b*) whether amounts secretly expended out of surplus earnings in extension of the property, during periods when very high dividends are being paid, and without the real facts being known to the public, are to be regarded as contributed by the stockholders or by the consumers.

(*a*) *Where the present value of the property is greater than the capital actually invested therein, the latter and not the former is the proper basis of capitalization.*

The cases which have previously come up to this court have been all cases of *depreciation* in value. No case of *appreciation* has appeared here. If we are to be content with purely superficial reasoning, and not really look into the equities of the situation, it is of course easy to say that if the company is going to lose the benefit of part of its investment when values depreciate, it must get the benefit when values appreciate. Like much other superficial reasoning, this is plausible and sounds fair, and the Master has cited *obiter dicta* of Judges Ross and Thayer in its support (pp. 168-9); while Judge Hough seems to regard any argument to the contrary as a reflection upon the state (p. 393).

The problem does not seem to us to be one that can be so easily disposed of. It seems to us that there are more factors in the situation than have been allowed for.

Maximum rate legislation is based on the assumption that the companies whose rates are to be regulated are practically monopolies. So long as real competition exists, government interference is unnecessary and as a matter of fact does not occur. The period for maximum rate regulation arrives when as here one company has a monopoly, or when competition between two companies is avoided by an alliance between them.

For the result is the same in either case, and we may therefore consider the subject on the assumption that there is but one company, which holds a practical monopoly because (whether on account of the constitutional prohibition, or legislative policy, or local policy) no franchise is given to a competing company. We also assume that there is no express or implied agreement preventing the state from giving a franchise to a competing company, and no moral obligation upon it not to do so.

In case the values of the company's properties appreciate by reason of circumstances over which it has no control, and without expense to itself, the question is as we have previously stated, one of equity as between itself and the consumers. In case of depreciation of values, the state is free to grant a franchise to a competing company, or to permit the municipality to enter the business; and such a course, as frequently held by this and other courts, is perfectly legitimate; and it has been conceded by counsel and recognized by the courts in all cases in which such a situation has been considered that the establishment of the new company will at once destroy any ability of the old company to charge a higher sum than a reasonable rate upon the present value of its property, after charging off the depreciation.

Nevertheless there would seem to be often considerable equity in favor of the original company. For instance, it may have been a pioneer in the new business, and rapid progress of invention may have caused great waste by destruction of fixed capital for the purpose of improving service and keeping it up to date. The Milwaukee case was such a one, this class of waste being estimated by the court at two-sevenths of the entire investment. It seems to us that on the one hand the state rate-making body ought to recognize an equity in favor of the company and as against the public, and therefore for a reasonable period of time permit a higher toll to be exacted by the company than would otherwise be proper; but on the other hand that expense thus unfortunately wasted should not be allowed to be permanently capitalized as against the consumer. The equities should be worked off within a limited time, and the consumers not subjected for all eternity to the payment of higher rates than they could get from a competing company.

Let us now turn to the company whose property has appreciated in value, owing to the growth of the community about it. It seems to us that its basis of capitalization for the purpose of fixing maximum rates should be *the capital actually invested*, or so much thereof as has been actually expended for its lawful purposes.

In the first place, that conforms the calculation to the original implied contract between the public and the company at the time of the granting of the franchise. The franchise is granted subject to the right of the community to fix reasonable rates, but the implied understanding is that a reasonable return will be allowed upon the capital invested, in view of the risks of the enterprise. If assured that the public will protect him to the extent of allowing him to make, if successful, a profit proportionate to the special risk of the enterprise, the investor will take that risk; and the percentage of expected profit which he has in mind is a percentage upon the amount of money which he is putting at risk. It may be that he calculates also on a speculative profit in real estate; but if so, he does not expect to get it until he sells the real estate and moves his works somewhere else.

In the second place, from the point of view of public policy, this basis of calculation is well adapted to the encouragement of new enterprises. If assured in case of success a reasonable return, proportionate to the risk, upon the money which is put at risk, the adventurer will adventure his money. He will not refrain from adventuring it, simply because he is told that the public will not pay him a profit in addition on any imaginary amounts that he is not putting at risk.

In the third place, this basis is a practical one, and not dependent on the guesses of paid experts. If accounts are properly kept, the amount of capital invested and the way in which it was invested are matters of permanent record. The ratemaking official cannot make a finding of present value except upon testimony which is notoriously unreliable.

(b) Properties purchased out of surplus earnings over and above high dividends, the facts not being disclosed to the consumer, should be regarded as having been contributed by the consumer and not by the company, and hence should not be treated as capital for the purpose of fixing maximum rates.

The subject is one which has been much discussed recently, and a broader rule than that above formulated has been contended for by counsel in a case before the Interstate Commerce Commission, in which it is claimed that a certain railroad company has doubled its own capitalization out of the proceeds of overcharges to the consumer, and is now insisting upon a constitutional right to earn a 6% profit upon the capitalization thus doubled.

During the period to which we allude, the old companies (complainant's predecessors) were paying just as high dividends as they dared to allow the public to know about. In order to dispose of the surplus profits they were using them to extend their lines, leaving the public to suppose that the dividends covered all that the properties made, over and above operating expenses.

It does not seem to us to need argument to demonstrate the correctness of the proposition that purchases which the consumer was led to believe were made out of operating expenses are to be treated, as against the consumer, as having been so made. *Non constat* that otherwise the rates would not have been then regulated.

IX.

Assuming Judge Hough's capitalization, however, complainant would have earned in 1905 at the eighty cent rate a return within two-fifths of one per cent of that which has already been sustained by this court.

Here again we calculate without any allowance on account of special franchise tax. Judge Hough has allowed a depreciation item of which about $156,000 should be charged against the 6% percentage of return.

It is true that no assignment of error has directed special attention to this item, but the whole question of the rate of return to be allowed upon this enterprise is brought up by Assignment XII. We now discuss merely the question whether risk of depreciation over and above the past experience of the company should be considered as a separate item of operating expense or whether such risks are covered by the five, six, seven or higher percentage of return which the State allows on the investment.

The depreciation items allowed in the Milwaukee and San Francisco cases, (87 Fed. Rep., at p. 583; 124 id. at p. 599) corresponded to the item of repairs and replacements in this complainant's accounts (except that the repairs and replacements had been neglected, so that the item referred to a future expense caused by a past omission) and were not, as the Master seems to think (pp. 228-9) a general contingent allowance. While these cases do not sustain the Master, those which he cites from State courts do, as he admits, oppose his ruling. In Cedar Rapids Water Co. *v.* Cedar Rapids, 118 Iowa, 234, 263, the court say that setting aside a depreciation fund may be good business policy, but it is in no just sense a charge affecting the net earnings of the works. The interesting opinion of Judge Garoutte in the San Diego Water case, 118 Cal., at p. 583, reaches the same conclusion.

These last two cases (a fact which the Master overlooked) are sustained by a recent decision of this court. In San Diego Co. *v.* Jasper, 189 U. S. 439, the rates of which the water company complained, which were fixed by the county board of supervisors, permitted a net return of 6% according to the calculation made by the courts, and that calculation did not make any allowance whatever for depreciation over and above repairs. Complainant claimed 6% per annum on the cost of its pipes, and 2% per annum on the cost of its reservoir and dam, claiming that they would be in time ruined by peculiarly destructive agencies in the soil. Mr. Justice Holmes said (p. 446):

> "We will say a word about the opposite contention of the appellant, *that there should have been allowance for depreciation over and above the allowance for repairs.* From a constitutional point of view we see no sufficient evidence that the allowance for six per cent on the value set by the supervisors in addition to what was allowed for repairs is confiscatory."

It will hardly be claimed that the business of supplying gas in the Borough of Manhattan is not considerably less risky than the business of supplying water to San Diego. Judge Hough himself concedes it to be "as nearly a conservative investment as any private manufacturing enterprise can furnish" (p. 409). If 6 per cent including depreciation is a sufficient return for the latter business, surely a much smaller per cent including depreciation is a sufficient return for the former.

This ruling of the court is but an application of long settled and universally recognized principles of political economy. All corporate profits over and above the average rate of interest upon loans on safe security—say 3½% plus taxes—represent insurance against the risks of the business in which the corporation is engaged. If the business is an old, well established and reputedly safe one, the margin between that average rate of interest and the corporate profit tends to become low if the business is competitive. Riskier businesses call for proportionately higher rates of profit. If the corporation provides a sinking fund of just the right size to take care of the special risks of its own business, that fund represents its normal profit, less the average rate of interest. It matters not how much of the normal profit over and above the average rate of interest goes into the sinking fund and how much into dividend. This depends on the conservatism of the management of the corporation. A conservatively managed corporation makes some provision against contingencies, and takes some risk in order to declare a dividend. We quote from John Stuart Mill's classic work on Political Economy, Book I, Chapter XV, §1, (See also Prof. J. Lawrence Laughlin's Elements of Political Economy, ed. 1902, p. 202):

> "Of the gains, however, which the possession of a capital enables a person to make, a part only is properly an equivalent for the use of the capital itself; namely, as much as a solvent person would be willing to pay for the loan of it. * * * * * What a person expects to gain, who superintends the employment of his own capital, is always more, and generally much more, than this. The rate of profit greatly exceeds the rate of interest. The surplus is partly compensation for risk. By lending his capital, on unexceptionable security, he runs little or no risk. But if he embarks in business on his own account, he always exposes his capital to some, and in many cases to very great, danger of partial or total loss. For this danger he must be compensated, otherwise he will not incur it. He must likewise be remunerated for the devotion of his time and labor. * * * * * The gross profits from capital, the gains returned to those who supply the funds for production,

> must suffice for these three purposes. They must afford a sufficient equivalent for abstinence, indemnity for risk, and remuneration for the labor and skill required for superintendence. * * * * * And the three parts into which profit may be considered as resolving itself, may be described respectively as *interest, insurance,* and *wages of superintendence.*"

This division of profits has not been disturbed by subsequent authorities, although "abstinence" is not now regarded as the basis of the interest charge.

The last item, wages of superintendence, is not a part of *corporate* profits. It is not now generally reckoned as part of the profits of a business at all by political economists, although it is so reckoned by individuals who conduct their own business. In the case of a corporation it does not belong to the stockholders, but to the officers. It is a part of the operating expense. In the case of this complainant, it is paid by the consumer with the other operating expenses and taxes. If the consumer were also to contribute to the contingent fund a sum sufficient to represent the risks of the business, he would thus make the business as safe as a loan upon good security, and as he pays the taxes, he could not be charged with a greater sum on account of profits than enough to enable the company to pay a 3½% dividend.

We have shown in our statement of the facts of the case (pp. 119-24, *supra*) that the Master was entirely misled in allowing a large depreciation item; that nothing in the past experience of the company warranted it; that there was no probability of any new element coming into the calculation except the removal to Astoria; and that if this is a voluntary and not a forced renewal (as must be assumed if no depreciation is marked off the manufacturing plants) that gives no color to a depreciation item. Judge Hough evidently felt these things by instinct, and for that reason abandoned the Master's basis of calculation, undertaking to substitute the complainant's actual experience in the past for baseless speculation as to new risks for the future. Nevertheless, while modifying the Master's figures, he failed to get away entirely from one of the fallacies which underlay them—the fallacy of assuming that expenses of repair and renewal vary per M, a fallacy which he himself pointed out at pages 402, 403 and 428. He bases his computation on the fact that the average expenditure for repairs and renewals from 1885 to 1905 was 10.89 cents per M of gas sold, taken in connection with the fact that it is between that figure and 11 cents per M of gas manufactured by the complainant (p. 402). He accordingly makes an allowance of 11 cents per M "on the maximum production of complainant's own works to cover repairs, renewals and depreciation mediate and ultimate" (p. 404).

This allowance swelled the operating expenses and to the same extent decreased the net income, although it is not separately mentioned in the decree.

The true method of calculation is by taking, not the percentage per M (see p. , *supra*), but the proportion which the repairs and replacements of each period bear to the total property of the companies which is subject to repair and replacement. We have accordingly made an estimate based on State's Exhibit L (p. 2078), and on

Complainant's Exhibits 78 and 79 (p. 5032). We have made a separate estimate for each of the three periods 1890-4, 1895-9, and 1900-4. We have taken the average of repairs and replacements from Exhibit L and the average value of the complainant's property from Exhibit 78. As the "real estate" was a nearly constant item, and not subject to repair and replacement we have deducted each year (except 1905) from the total valuation the sum of $10,630,894.78, being the average valuation of the real estate as shown by Exhibit 79, and each year also the arbitrary $7,781,000 valuation of intangible property.

This gives us the following tabulation:

Date	*Plants, &c.*	*Rep. and rep.*	*Prop.*
1890-1894	24,099,626.80	881,175.53	.0365
1895-1899	26,358,982.95	893,276.79	.0339
1900-1904	28,221,316.69	996,792.94	.0353
1905	28,954,195.34	974,289.66	.0336
1890-1905	average for sixteen years		.0351

It will be noticed how little variation there is between these five year periods. The average of the five years ending 1904 is about equal to the average for the previous ten years. If we take .0351 as the proper percentage on the valuation of October 31, 1905, in order to conform to the sixteen year average, we find that the amount which should be credited to complainant is $1,016,292.25. The amount credited by Judge Hough is $1,172,359.10, leaving a difference of $156,066.85, which represents the amount which Judge Hough must be taken to have allowed for "depreciation mediate and ultimate" as distinguished from average yearly repairs and renewals. Hence we have the following figures:

Capitalization	$59,831,435.00
Net income	3,224,592.45
Depreciation	156,066.85
Total net income	3,380,659.30

This shows that, if the 80 cent gas law had gone into effect January 1, 1905, complainant would have actually made under it a profit of over 5.65% during that year, even upon Judge Hough's full capitalization.

X.

If property earns 3½%, or at the most from 4 to 4½%, it should not be deemed to be "taken" within the meaning of the Fourteenth Amendment.

The whole subject of the non-confiscatory rate has been in a fog up to this time. Each judge at Circuit has practically adopted the old measure of the length of the Chancellor's thumb. It seems important that some consistent measure should be adopted, which should be capable of reduction everywhere to approximate certainty, and which should mark the upper limit of the jurisdiction of the Federal court to interfere with state local regulations, leaving upon the state the responsibility of giving to each public service corporation the protection to which it is equitably entitled above that limit.

This limit, it seems to us, should be either the rate of *net interest,* which averages about 3½% all over the country, or the rate of *gross interest,* which varies in different parts of the country, and in New York City averages probably about 4%, although some might put it a little higher.

It is now admitted by everybody that there is some percentage below which the state can not go. What it is, by what form of research or reasoning it is to be ascertained in a given case,—is a question thus far left open.

It is generally admitted that there is a difference between the lower limit of reasonableness, below which the state ought not to go, and the upper limit of confiscation, where the Federal courts may and should interfere and stop it.

We believe that the question of fairness and propriety is a very difficult and delicate one for the ratemaking power, but that the question of constitutionality is a comparatively simple one for the Federal court.

In Dow *v.* Beidelman, 125 U. S., 680, 690, the distinction between the merely unreasonable and the confiscatory rate was first noticed by this court, Mr. Justice Gray saying that—

> "the court has no means, if it would under any circumstances have the power, of determining that the rate of three cents a mile fixed by the legislature is *unreasonable. Still less* does it appear that there has been any such *confiscation* as amounts to a taking of property without due process of law."

In the next rate case (Chicago, Milwaukee & St. Paul R. R. Co. *v.* Minnesota, 134 U. S. 418) Mr. Justice Blatchford said that it was unconstitutional to deprive a company "of the power of charging *reasonable* rates" (p. 458). Mr. Justice Miller said that a legislative rate must not be "*so unreasonable* as to practically destroy the value of the property" &c.; and this latter and more accurate language was used in the opinion of the court, by Mr. Justice Shiras, in the Gill case, 156 U. S. at p. 657.

In the Reagan case (154 U. S. at p. 397) Mr. Justice Brewer drew the distinction between the inquiry "what under all circumstances would be fair and reasonable as between the carriers and the shippers," which the courts do not undertake, and the inquiry whether the body of rates "is unjust and unreasonable, *and* such as to work a practical destruction to rights of property."

In Smyth *v.* Ames, Mr. James C. Carter observed that no case necessitating a decision of the point had as yet arisen (169 U. S. at p. 515). In that case (p. 547) and in San Diego Land Co. *v.* National City (174 U. S. at p. 757) Mr. Justice Harlan uses the phrase "fair return," but each time the capitalization and not the rate of return was under consideration; and "fair return" is a phrase used by Mr. Justice Holmes in the Jasper case, 189 U. S. at p. 442, in which case the rate of 6% to include depreciation was held sufficient (pp. 445-6).

In Cotting *v.* Kansas City Stock Yards Co., 183 U. S. at p. 91, Mr. Justice Brewer stated the authorities up to date as follows:

> "As to parties engaged in performing a public service, while the power to regulate has been sustained, negatively the court has held that the legislature may not prescribe rates which, if enforced, would amount to a confiscation of property. But it has not held

> affirmatively that the legislature may enforce rates which stop only this sidé of confiscation and leave the property in the hands and under the care of the owners without any remuneration for its use.''

The Stanislaus County case (192 U. S. 201) was that of a rural irrigation company. This is a business which is far more risky than an old established gas business in a metropolis. It is liable to destruction, for instance, by the giving way of a dam (see 208 U. S. at p. 367). This court found that 6% was earned under the rates fixed by the local authorities, and Mr. Justice Peckham said (pp. 213, 216):

> ''It is not confiscation nor a taking of property without due process of law, nor a denial of the equal protection of the laws, to fix water rates so as to give an income of six per cent upon the then value of the property actually used, for the purpose of supplying water as provided by law, even though the company had prior thereto been allowed to fix rates that would secure to it one and a half per cent a month income upon the capital actually invested in the undertaking. If not hampered by an unalterable contract, providing that a certain compensation should always be received, we think that a law which reduces the compensation theretofore allowed to six per sent upon the present value of the property used for the public is not unconstitutional. There is nothing in the nature of confiscation about it. * * * * Much of the capital was invested between twenty and thirty years ago, and to be able still to realize six per cent upon the money originally invested is more than most people are able to accomplish in any ordinary investment, and more than is necessary in or-

> der to give just compensation for property at the time it is used for the public purpose originally intended."

The Circuit Court rulings are little more than attempts to ascertain and apply the decisions of this court. The most elaborately reasoned is the Milwaukee Electric case, 87 Fed. Rep., 577. Both that and the Spring Valley Water case, 124 Fed. Rep., 574, were based largely on evidence as to local rates of return on investments.

In the Milwaukee case, which was one of a company that had spent $7,000,000 wisely and economically in construction and equipment, but the present reproduction value of whose property was not over $5,000,000, Judge Seaman says (87 Fed. Rep., at pp. 585-6):

> "The interest rate fixed in the bonds issued by the company is 5 per cent. The rate which prevails *in this market*, as shown by the uncontroverted testimony, is *6 per cent. for real estate mortgages and like securities.* If the $5,000,000 basis be adopted, surely a better rate must be afforded for the risks of investment than can be obtained on *securities of this class,* in which there is no risk. Upon the basis of $7,000,000, which is more logical and just, the 5 per cent. named in the bonds is clearly not excessive, and should be accepted by a court of equity as the minimum of allowance."

In the Spring Valley case many affidavits as to the prevailing rate of return were received, but the evidence seems to have related to corporate investments instead of real estate mortgages as above. An abstract of them is set forth at 124 Fed. Rep., 582-4. Only one affiant put it at less than 6% in San Francisco, and nearly half of them put it higher. Judge Morrow said (pp. 598-9):

> "The weight of evidence is clearly in favor of a rate of not less than 6 per cent. per annum. * * * But in the present inquiry all doubts as to facts in controversy should be resolved in favor of the defendants, having in view what was said by the Supreme Court in San Diego Land Co. *v.* National City, 174 U. S., 739, 754, 19 Sup. Ct., 804, 43 L. Ed., 1154, that judicial interference should never occur unless the case presents clearly and beyond all doubt a flagrant attack upon the rights of property. In view, therefore, of all the circumstances, the court is of the opinion that the complainant is entitled to receive at least 5 per cent. as the net compensation it is entitled to receive on the value of its property."

On page 601 he says again that "6 per cent. per annum is the smallest income that can be considered reasonable for the investment under consideration, and 5 per cent. per annum the smallest income which the court can, under all the circumstances of this inquiry, consider as reasonable and just"; holding therefore that 4.40 per cent "is unreasonably low and confiscatory, and amounts to the taking of private property for public use without just compensation, thereby depriving the complainant of its property without due process of law."

In his extensive opinion in the pending Alabama case (169 Fed. Rep., at pp. 992-6), Judge Jones thinks that the state usury law should afford the standard; but the fallacy of that theory is exposed by Judge Hough at p. 408 of this record.

The state usury law is generally ancient in date, representing conditions long past. It is intended mainly to establish a maximum rate, and not to discourage the loaning of money at lower rates. In New York it represents the rate of loans on weak security, while time loans on good security range all the way from four and one-half per cent down under ordinary conditions.

The British case of Canada Southern Ry. Co. *v.* International Bridge Co., L. R., 8 App. Cas., 723, merely relates to the question of a reasonable charge to be judicially fixed as between two public service corporations, in the absence of any statute on the subject. This rate is often higher than the *minimum* rate that a statute may fix; and this again higher than the confiscatory rate which brings the Fourteenth Amendment into play.

In the San Diego case, three of the California Supreme Court judges put the confiscatory limit at from 3½ to 3 per cent (118 Cal., at pp. 581-2. 584, 587).

Summing up these authorities, it appears that this court is as yet uncommitted on the subject of the rate of return, except that 6% is high enough for a California water supply or irrigation company, and that the Circuit Courts disagree about it.

Let us now consider first the function of the Federal court, and then that of the state ratemaking body.

The court acts solely under the Fourteenth Amendment. It acts only when it finds that property is being "taken" without due process of law.

We contend that property is not "taken" as long as it is allowed to earn the current rate of interest on money loaned upon good security; that hence if that rate is allowed the Fourteenth Amendment is not violated; and that the present case can be disposed of upon this ground alone, as well as those to which Judges Seaman and Morrow refer upon the question of the standard rate, namely, to the doctrine of comity, and to the principle that Federal courts will intervene only in a flagrant case.

We do not of course wish to be understood as arguing that a state ought ever to cut down the net earnings of a public service corporation to the confiscatory limit; or as conceding that the State of New York ever has done so, or has threatened to do so, or that there is any reason to fear that she ever will do so. But the Federal court gets jurisdiction only if the property is *taken* without due process of law. Until property is *taken* the matter remains one purely of state jurisdiction. The state police power may intervene to cut down the normal income of property in the most serious degree so long as the property is not *taken*. It may do so even in the case of property not devoted to a public use, as is illustrated by the recent tenement house case (*infra*, p. 275).

This distinction between property *taken* and property whose enjoyment is unreasonably interfered with is the distinction between confiscation and unreasonable but non-confiscatory regulation, discussed in some of the cases.

The question is not one which has ever been discussed with anything resembling exact reasoning, and we do not know that it is capable of such discussion; but the best reasoning of which it is capable seems to sustain the contention which we have set forth.

Suppose a man to have a sum of money in hand to invest. He may put it in a safe non-taxable security on a 3% basis sometimes, on a 4% basis at other times, on a 3½% basis on the average. He can invest it at ½% or 1% higher interest if he is willing to take the risk of the tax collector, and incur a little personal trouble and annoyance. He can get a higher rate still by putting it into an established business, and a much higher rate by putting it into a pretty risky business. The state ought not to interfere with whatever investment he wishes to make, except for some valid reason of public policy. But is this money *taken* as long as it is earning the average customary rate for safe investments? When *money* is not taken, *other property* of equal value is not taken. The same rate of return must be void or valid, to whichever form of capital it applies. If the money or property are already invested in a business, and are allowed to earn the same rate of interest, are they *taken?* It seems to us that they are not *taken,* but only, if the business is appreciably risky and the amount of return is not correspondingly higher than the ruling rate of interest, *put to undue risk;* and this the state should not do; its constitution, and the laws, ordinances and decisions of its three departments should make such a thing impossible; but none of the three corresponding departments of the Federal government have jurisdiction of the matter. We have some remnants left of Anglo-Saxon local self government; and where there is local self government there is local responsibility. Is it wise that the sense of responsibility be taken away?

It will naturally be asked "What will be the event if a company has bonded itself at 5%? Is it to be wiped out because it can not earn interest on its bonds?" We may answer "What if the city authorities unlawfully pull down my house as a nuisance, when it is not one? Am I to have no remedy?" There is a remedy, but it is in the State courts, because the Federal constitution has not yet been amended so as to centralize all remedial justice at Washington.

The application of the Fourteenth Amendment must be the same, whether the company has built and equipped itself with borrowed money or not. If the stockholders have borrowed nothing and built with their own money, they are entitled to as good a return as if they had borrowed everything and used none of their own money. And whether they borrowed or not, they ought to have a return which will repay all interest that a normal company would pay on as much of the property as would represent the normal company's loan, and handsome returns on the balance. But that is not the question in this case.

It will naturally be suggested that this reasoning puts the stockholders of a local corporation to a serious risk—a risk of pecuniary loss by the action of the local authorities, without any really efficient relief. They have long been subjected to a similar risk—that of being imposed upon by their own managers without any really efficient relief. These are risks of corporate investment, and there are other risks in all investment and in all life. Dividends occasionally stop, just as a house sometimes stands empty. A man who has lost his life by arson or his brother by murder could in some parts of the country get better justice from the Federal than from the local government. And yet we have not yet reached the stage of preferring an efficient bureaucracy at Washington to a perhaps less efficient administration of justice at home. A State which does not treat its corporations fairly will soon suffer and soon repent, and will not the education that it will have received compensate in the long run for the temporary loss that investors will have suffered?

Experience has shown that the line we draw is one that still, however unfortunately, leaves to the judicial branch of the Federal government a great deal of work to do. States sometimes take property, within our definition. But to draw the line at any higher point seems to us to involve an unnecessarily loose construction of the Fourteenth Amendment, and to throw upon the Federal courts a burden that they are not as yet equipped to bear. The public service corporations throughout the nation have reached the stage of practical monopoly. The era of competition has disappeared. Inevitably they are being subjected to government regulation, a thing almost unheard of until the public realized that competition was a thing of the past. If the Federal district judges (subject to appeals to this court) are to sit as courts of general appellate jurisdiction over the state commissions, there must be more circuit and district judges—perhaps more Supreme Court judges—than there are now, or parties interested in other forms of litigation will feel the consequent delay and disturbance of business to an increased extent. They are already beginning to feel it now. Nor is it seemly that a single man, whatever be his title and by whomsoever elected or appointed, shall have general appellate jurisdiction over a tribunal of specialists established by a state,—a judgment practically final upon questions of fact, for is this court able to read the record and review his work?

The state legislature or commission, on the other hand, should endeavor to reach a result which is fair and equitable and in accordance with the best public policy, both from the point of view of the public and from the point of view of the public service corporation. From the latter point of view there are two main objects which it seeks to attain: first, adequate compensation for the risk involved; and second, encouragement for the investment of new capital in the state. To encourage new capital, special consideration must be given to new enterprises. Generally speaking there is more risk in a new enterprise than in an old one. Hence the new enterprise should be allowed a higher rate of profit, according to the rules of political economy, and according to the customs which have been almost universally observed. As an enterprise becomes old and its profitableness becomes established and generally recognized, and its risk turns out to be comparatively small, political economy teaches that its profit must decline, and practical experience confirms the teaching. Additional capital is obtainable at a comparatively low rate of return, and the market value of the stock rises.

If the recognized analysis of corporate profits (pp. 248-9, *supra*) is correct, and if our theory that the Fourteenth Amendment guarantees to the corporation the element of *interest on capital* is correct, then the function of the state ratemaking officials is to ascertain in the case of each corporation or class of corporations what rate of return should be allowed as representing the element of *insurance against risk.* For the element of *wages of superintendence* is, as we have shown (p. 249, *supra*), no part of the profits of a corporation, because the wages of superintendence belong to the officers and not the corporation, and because they are paid by the consumer as part of the operating expenses.

When the return realized by a corporation which is relieved from payment of wages of superintendence includes full interest on the capital invested, and full insurance against the special risks of the investment, then the rate of return is reasonable. There is of course a considerable margin of doubt as to where the line should be drawn; but the upper limit of the margin is the maximum reasonable rate. Anything which the company might earn above that would be a monopoly figure. For if there were competition, the company would be unable to earn the amount.

How is the capital to be estimated, upon which this reasonable rate is to be figured? Is it the original cost of the property, or some figure which experts may swear to as its present supposed value, or the probable present cost of reproducing the property as it stands, or the probable present cost of producing other property which would accomplish equally good results. This we have already considered (pp. 200-9, *supra*).

If there be any serious question about the contention which we have set forth, it seems to us that it is a question of detail, which is immaterial to the present appeal—namely, whether the interest rate which is to be the limit of the jurisdiction of the Federal courts is the *gross interest* or the *net interest* rate. "Interest on capital" in the economical sense represents the amount of return for which the investor will let some one else use his money when the risk is at the *minimum.* It is approximately uniform at any given place and time. It is considered to average about 3½%, although higher at times. Interest is nominally higher on many classes of good security, because, as the word is commonly used, it includes an element of insurance against risk,—risk of the personal property tax—a risk not run by complainant, whose taxes are paid by the consumer. Interest is also nominally a little higher on certain good securities, such as bond and mortgage on local real estate, because it includes an element of "wages" for the annoyance of looking after the investment and collecting the money. On the other hand it is nominally lower on United States bonds because it is offset by the advantages of those bonds to national banks; and on certain other forms of wealth because of their advantage for social distinction or other reasons. This 3½% interest is called at present by political economists *net interest,* while the current rate of interest upon local loans involving a little risk and a little trouble is called *gross interest,* and of course is much more variable (Alfred Marshall, Principles of Economics, Book VI, Ch. VI, §§ 4, 5). It is the *gross interest* which was assumed by Judge Seaman to be the maximum limit of the jurisdiction of the Federal court; and he overlooked the fact that this included the risk of paying taxes, which is one of a pretty deterrent character. The gross interest is not very far off from the rate of profit on an established business, for "capital cannot be permanently loaned at rates much higher or lower than the returns to capital actually engaged in production" (J. L. Laughlin, at p. 206).

It is unnecessary for the purpose of the present appeal to fix precisely the average rate of *net interest,* or even *gross interest* in the City of New York. Of course both vary. Recently they have been very high; but the constitutionality of a statute of the State of New York certainly does not vary with the timidity of capital from year to year. It does not contract when the money market goes up and expand when the money market goes down. It is the average rate and not the rate for the moment that must decide.

Reference to any standard publication showing rates in New York, whether as to state or municipal bonds, or railroad bonds, or stocks of companies such as the complainant, or loans on first mortgage on improved real estate will show, we are confident, that the *net interest* rate averages about 3½%, while the *gross interest* rate is from one-half to one per cent higher. Just now all rates are particularly high, but for a long period of time the rates for first mortgage loans on good improved property had been 4 to 4½%, although the individual investor ran a risk of being taxed from one-third to one-half of his income therefrom, and although there is some risk (especially of delay) and some trouble about such an investment.

If the rate of *net interest* (say the average rate paid in average times upon good municipal bonds) be taken, then we have a standard which is the same all over the United States, and which can be applied without taking testimony in a particular case.

If the rate of *gross interest* (say that upon approved local first mortgage bonds) be taken, then each Federal judge will have to receive testimony as to that rate, or else take judicial notice of it.

If any higher rate than this be taken, where can the line be drawn, short of giving the Master, and the District Judge on appeal from him, and this Court, on final appeal, a general appellate jurisdiction to decide not only the question of fact "What will this company make?" but also the question of business judgment "On the whole how much, in view of its special risks, ought it to be permitted to make?" And has not this Court already in effect decided negatively as to this general appellate jurisdiction, in the Jasper and Stanislaus County cases?

XI.

Assuming complainant to have been entitled to 6% on any of its investment, it should not have been given 6% on the whole.

Judge Hough states that he treated it is a "private manufacturing enterprise" (p. 409, foot). Assuming that this entitled it to 6% on the value of its plants, it does not follow that it was entitled to 6% upon the rest of its property. To some extent the evidence is to the contrary.

Much evidence upon these points has been collected from the record (pp. 144-9, *supra*). Thus

Mr. Greene, complainant's own expert as to bulkhead properties, fixes the value of the bulkhead by multiplying its income by twenty; and he explains this by saying that the accepted rate of return upon bulkhead property is 5%. Yet Judge Hough, having accepted his valuation, then holds that the property is *taken* from the complainant within the meaning of the Fourteenth Amendment unless complainant is allowed to make 6% *on the capitalization thus fixed.* It seems to us that the consumer rather than the company is entitled to appeal to the Fourteenth Amendment as to that item.

Companies not approaching complainant in strength of position can borrow in ordinary times at 4.40% (p. 145, *supra*). Surely then complainant could borrow for half its tangible property at 4¼.

There is no evidence justifying a return of 5%, or 4%, on the $12,000,000 franchise item.

Hence what criticism could be made by the company on a schedule allowing 4¼% on half the tangible property, 7% on the balance, and 3½% on the franchise item? Yet that would give an income of $3,120,000, or less than it would have earned in 1905 at the eighty cent rate.

XII.

The information contained in this record is not sufficient to permit the court to make an affirmative decree in favor of the complainant.

The burden was upon complainant to produce sufficient evidence to form the foundation of a decree. Insufficient facts being found, the decree can not be sustained.

(*a*) *Too short a period was selected as the test.*

It might be inferred from the language of the Master (pp. 155, 216), that the calendar year 1905 was selected as the test by consent of the parties. The contrary is true. The selection was made by the complainant's counsel and by the Master himself, against the strenuous and persistent protest of the defendants, and the reason why all the witnesses used the operation of this calendar year 1905 as the basis of their calculations was that they had no other period to use, except the last two months of the year 1904, which seem to have made no particular difference. Defendants insisted that the complainant's book entries and vouchers for the fourteen months ending December 31, 1905, covered a period neither long enough nor typical enough to afford a sufficient or safe test of the expense of making gas; and they also protested against the special exception granted to the complainant by the Master, whereby the complainant was permitted to increase its estimate of operating expenses in the matter of repairs and replacements, while the defendants were not permitted to examine the complainant's books for other periods of time in order to see whether corresponding or greater deductions should not be made in other items (see pp. 779, 802-3, 876-8, 1042-3, 2197-8, 2286, 2288, 3275-8). What evidence they were able to pick up as to the other years was excluded from consideration by the Master when objected to (pp. 3578-80, 3598-9).

It appears in the bill of complaint and in the testimony that during the year 1905 the rates charged by this complainant were under investigation by a legislative investigating committee, and that an act was actually passed in the spring of that year largely reducing the rate which it was allowed to charge the City of New York; while before the end of the year an investigation appears to have been commenced by the State Commission of Gas and Electricity for the purpose of ascertaining what should be the reasonable rate charged to private consumers. There was, therefore, every temptation for the complainant to pad its books for the year 1905. It did admittedly change its form of accounts immediately after the investigation.

The complainant took, and the Master sustained, the position that it had the right to select whatever periods and whatever items in its past history it should choose to disclose, and to confine defendants' inquiry to those particular periods and those particular items; that it might increase the operating expenses as shown by 1905 by proving that the average expenses for some particular item were higher, but that it was not obliged to permit an examination by defendants to ascertain whether they could not prove that the average of some other item was lower. In refusing defendants' request for leave to make such an examination the Master held that it would be "something far beyond the scope of any *judicial inquiry*", and impossible because "*this case has to be closed in ninety days under the equity rule*" (Testimony, pp. 1047-8). If this be true, it is a concession that *judicial* methods are insufficient to really ascertain the cost of gas, and that this can only be shown by a legislative committee or an administration commission. Certainly it is an extraordinary situation if, when it comes into court, the state, in defense of the consumer, can only look into the particular doors which the gas company thinks it advisable to leave open. The Master's remarks show the need of most extreme caution in attempting to review a system of rates by the machinery of a Federal court.

We have not assigned particular rulings during the trial for error, because the result of the Master's whole course of proceeding seems to us to be a fatal defect of proof.

In Smyth *v.* Ames, 169 U. S., 466, upon which complainant and the Master largely rely, the court based its conclusions upon a careful review of three years' past experience of all the railroads of Nebraska.

In the Reagan cases (154 U. S., 362) it examined three and a half years' experience of all the railroads of Texas.

In the Tompkins case (176 U. S., 167), it went back four years.

In the Covington Turnpike case the experience of "a number of years" was given (164 U. S., 578, 595).

Defendants insisted, as we have above pointed out, that a longer period than fourteen months should be taken for special investigation; claiming the right to go back to 1900, or at least to 1903, on the one hand, and down to the middle of 1906 on the other. It seems to us that the precedents given by the Supreme Court in the cases just followed should have been followed, and that both requests of the defendants should have been granted; and especially the last one, since the first six months of 1906 included the period when the eighty cent gas law went into effect.

Taking the experience of a single year alone is reasoning but from one particular. Even if complainant were entitled to the presumption that its strenuous opposition to the examination of its books for earlier and later periods was opposition in good faith, it is easy to pad the accounts of any one year without knowing it. Thus a man who makes up his annual household accounts on the first of July may have ordered his next winter's coal supply and paid the bill in June, or the bill may come in and be paid in July. A company may, like the individual housekeeper, pay for its coal or its oil twice as much in one year as in another. It may, as it seems to have done here, make much fewer repairs and replacements in one year than another. It may come out worse on its by-product account. It did admittedly have unusual items, such as the expenses of the first legislative investigation for twenty years, and the expenses, and arrears of interest, incident to an unsuccessful attack upon a new form of taxation.

Moreover there may be a "lean year." The constitution does not guarantee a profit at every moment of time, any more than it guarantees a profit at every mile of route, or from every class of traffic (See Harlan, J.'s opinion in Ruggles *v.* Illinois, 108 U. S., 526; opinions of the court in the Wellman case, 143 U. S., 339, and the Reagan case, 154 U. S., at p. 412). There may be a time when old equipment does not do the best work, or when prices and wages are especially high. If over a considerable time there is profit enough to carry the company over the lean year, the constitution is satisfied.

(b) The experience of the other companies, as well as of this complainant, should have been shown.

The New Amsterdam Gas Company during the year ending October 1, 1905, seems to have made gas at 29 cents, or, allowing for loss in distribution, at 30 cents; and the corresponding figures of the Central Union Gas Company for the same period were about 26½ cents and 28½ cents, respectively, although the New Amsterdam's candle power was higher than complainant's (pp. 2325-6). The Master explains these figures in various ways (pp. 241-2). The testimony as to these matters is in dispute and we do not go into them further than to point out that even the Master admits an advantage to the New Amsterdam Gas Company as against the complainant, of 1.61 cents per thousand, "which is practically all accounted for by difference in cartage, as to which the New Amsterdam Company has special advantages. The item of station cost, which is less because of the New Amsterdam Company having but one station as against several used by complainant, and other similar items."

It is also to be noticed that during that year its item of "cost of gas mfg. under agency agreements" is 34.04 for gas "made," that is, bought from the subcompanies, and 34.82 for gas "sold", as against 32.42 and 33.17 respectively for its own gas (p. 219). But the subcompanies' figures include a profit of 10%. This shows that their average rate of production (including those less advantageously situated as well as the New Amsterdam and Central Union Companies) was about a cent and a half less per thousand than that of the complainant.

Complainant's view seems to be that whether by reason of its having an old-fashioned plant, or a disadvantageous location, or too great a subdivision of plants, or inferior facilities in other respects, it could not make gas in 1905 as cheaply as its subcompanies; that the result of its new facilities in 1906 is as yet speculative, or at least is not before the court; that its capitalization is very large, owing to the unearned increments aforesaid; and that therefore an eighty-cent rate would not give *it* as much net profit as *it* ought to receive in order to rank as a prosperous company. From this premise it deduces the conclusion that the statute is unconstitutional as to *it;* in other words, that a statute establishing a uniform maximum rate for the sale of gas in a given locality is unconstitutional unless *every* gas company, well or ill situated and managed, can make a good profit; or else the statute is unconstitutional *as to the ill situated or ill managed company,* so that it must be permitted to go on charging a higher rate while better situated or better managed companies are held down to the statutory reduced rate; thus establishing as against the latter what is known in the railroad business as a "differential." This is surely absurd. *It would violate the rights of the well-managed company under the Fourteenth Amendment, as construed in the Cotting case,* 183 U. S., 79, 114-15.

To quote the words of this Court in the Gill case, 156 U. S., at p. 657:

> Given the case of a general law prescribing rates to all companies, can the courts inquire whether such rates are reasonable, and may they find that as to one company the prescribed rates permit it to do business at a profit, and as to another, whose facilities are inferior, or where expenditures are greater, the rates afford no profit? And will the fate of the law, as to its validity, depend, in each case, on the result of such an inquiry?

We are not aware that the courts have ever gone to this extent. It must be remembered that in the railroad rate cases the subject of discussion is a schedule establishing, not a general rate as if the whole state were a single "zone" under the Austro-Hungarian system, but a special rate as between each pair of localities. Hence as a usual thing each special rate applies to but a single railroad company; and for this reason each railroad company, as in the Reagan case (154 U. S., 362), is to a large extent to be considered separately. But in that case, as in Smyth *v.* Ames, 169 U. S., 466, the experience of the other companies, as well as of the complainant, was made the basis of consideration.

The question is analogous to that decided in Moeschen *v.* Tenement House Department, 203 U. S., 583. There was no opinion filed by this court, but the opinions of the state courts in the same case are cited as authorities, and therefore are to some extent adopted (89 App. Div., 526; 179 N. Y., 325); and the remarks which we shall quote were not *obiter*, but essential to the decision. It appeared that the state regulation under consideration in that case would in some cases impose slight hardship, while in other cases it would almost or quite wipe out the owner's equity in the property affected. The plaintiff's case was one of the latter class. In one of the opinions thus referred to by this court, Judge O'Brien said (89 App. Div., at p. 538):

> "We have not overlooked the contention based upon the relation of the cost of removing the school sink and replacing it by other accommodations, to the equity which the defendant has in the property. It would appear that the effect of the change would be to practically wipe out the defendant's equity and thus, so far as she is concerned, the law will if enforced be a great hardship. It will be noticed that her equity is about one-third of the full value of the premises; but, apart from this, if the extent of the injury which would be inflicted upon a particular individual was controlling upon the constitutionality of the act, then it would be difficult if not impossible to have any fixed criterion for determining its constitutionality, because, with respect to the value of certain premises on which a school sink was required to be replaced, *the cost as compared with the value of the property might be very small, whereas in the case at bar it equals and we can conceive of instances where it might exceed the equity of the owner.* We have examined the affidavits upon the subject of the character of the premises, the conditions prevailing and the advisability of the changes, but think that they present considerations which are proper

> to be addressed to the Legislature and not to the court."

In the other of these opinions, Judge Bartlett said (179 N. Y., at p. 330):

> "It is not the hardship of the individual case that determines the question, but rather the general scope and effect of the legislation as an exercise of the police power in protecting health and promoting the welfare of the community at large."

Upon the argument below we stated the *ultimate fact* to be the percentage of return which a well-equipped and well-managed company would earn upon its capitalization under present conditions at the eighty cent rate; the *ultimate question of law* to be whether that percentage of return is confiscatory.

We criticised the Master's handling of the case because it did not afford us an answer to this question. The court answered with a counter-criticism; namely, that we were dealing with an ideal company, and that there might be no actual company which met the requirement (from which we suppose the inference to be drawn that there might be no company well enough equipped to be able without considerable change in its equipment to earn the necessary percentage of return, and that therefore there might be a lean year during which little or no return would be had, while the equipment was being adjusted to modern conditions). Our reply to this counter-criticism was twofold: First, that so far as appears one or more of the subcompanies may be well enough equipped and managed to earn the necessary percentage. We are not fully informed about their cost of operation. We have no evidence at all upon the other necessary element, to wit, their genuine capitalization. And secondly, it is not necessary for the purposes of the constitution that they make any particular return the first year, provided that within a reasonably short future period they do earn on the average a constitutional compensation, including the first year in the average. In the history of all corporations there are periods of time, just as in the history of all corporations there are departments of business, in which no compensation is earned, or in which even a loss is made. It is the average which the constitution deals with, as has been more than once shown when complaint was made by railroad companies that statutory passenger rates were insufficient to pay for the passenger business, considered by itself.

The majority of the cases in this court upon the question of rate regulation of public service corporations, as affected by the Fourteenth Amendment to the Constitution, have involved the consideration of railroad rates, or rates of water companies. But different railroad companies are not carrying on business under the same conditions; they run through different territory; the classes of traffic required by the different territories are different; the population to be served is different; the necessary cost of construction differs in accordance with the gradients, the number of rivers to be bridged, and generally the character of the country over which the railroads operate. So also as to water companies; the source of their supply is different; the cost of obtaining it is different; so that what is a reasonable charge for one company would not necessarily be for another, even in the same city. Gas companies, stock yard companies, and electric lighting companies, on the other hand, operate under substantially the same conditions, serving customers in the same territory, with no necessary difference in the cost of production and with no necessary difference in the cost of plants. Hence while a rate which might be reasonable as to one railroad company might be unreasonable as to another; and a rate which might be reasonable as to one water company might be unreasonable as to another; yet, generally speaking, the same rate would be reasonable for all gas companies serving the same territory and under the same conditions.

When, therefore, the question arises as to the reasonableness of the railroad rate prescribed by the Legislature or by a Commission, it may be solved by a showing of the facts which are peculiar to such company, namely, the proper capitalization of its plant and business facilities, the amount which will be realized on its traffic, and its operating expenses; so that the rate on one railroad from A to B may differ from the rate on another railroad from C to D, the distances being the same. But as to gas companies a different situation arises. If there is any reason why a certain rate is remunerative to one company and not to another, that reason would depend upon matters which cannot properly govern the amount of the rate, namely, the amount of its capitalization, the economy of management, the exercise of good business judgment as to the selection of the locality and construction of its plants, and other matters of the same kind.

This reasoning leads to the result that there is not sufficient evidence to sustain a decree in favor of the complainant. The experience of a particular company during a particular year (the test year being selected by itself), is insufficient—even when supplemented by evidence about its experiences for other years as to a certain item (that item being also selected by itself). It is merely a reasoning from particulars—in fact, from a single and suspicious particular. It is as if a real estate expert for the valuation of property were to base his opinion upon the sale of a single piece of other property somewhere in the neighborhood.

Cases have sometimes been sent back to a Master under such circumstances for the purpose of taking further testimony.

Complainant is estopped from asking any such favor here. The defects in its case were due to its own deliberate withholding of further information, and its successful attempt to put the state and city into the dilemma of either having to go without information of the experience of other companies and other periods of time, or else blindly putting in evidence the books of the gas companies, on the chance of being able thereafter to find out what they contained which the companies were preferring to withhold, and the certainty of their being used by the companies, so far as they might favor their side of the litigation. The state and city, put in this dilemma, wisely refrained from disturbing the *status quo.*

By so refraining, they allowed complainant to subject itself to an estoppel from which there is no escape. It has deliberately refused to produce sufficient evidence to make out a case for itself. It has disregarded all warnings. It has refused to permit the state and city to inquire into the true facts. It must stand upon the record which has been made, and that record can result only in a dismissal of the bill.

XIII.

The provision as to pressure is severable from the rest of the statute, and therefore does not affect the foregoing argument.

It is in form an entirely separate and independent provision. The provisions as to rates are in section 1. The first sentence of section 2 concerns candle power. The second sentence is the pressure provision, and is as follows (Record, p. 31):

> "The pressure of illuminating gas in any service mains in the said city at any distance from the place of manufacture shall not be less than one inch, nor more than two and one-half inches."

The report of the Stevens Investigating Committee of 1905, which gave rise to this legislation, shows that the pressure provision was intended for an additional guarantee to the consumer, in order that the candle power provision should not be evaded by increasing the pressure (p. 132). The report is annexed to one of the answers. We do not claim the right to refer to it because it is annexed to an answer, but because it is a document which forms part of the history of the statute, and of which the court can therefore take judicial notice (Holy Trinity Church *v.* United

States, 143 U. S., 457, 463-5; Johnson *v.* Southern Pacific Co., 196 U. S., 1, 19).

The test of severability is laid down in Reagan *v.* Farmers' Loan & Trust Co., 154 U. S., 362, 395, as follows:

> Any independent provision may be thus dropped out if that which is left is fully operative as a law, unless it is evident from a consideration of all the sections that the legislature would not have enacted that which is within, independently of that beyond its power.

The tests as stated in the Employers' Liability Cases, 207 U. S., 463, 501, are whether "effect may be given to the legal provisions by separating them from the illegal", and whether "it is plain that Congress would have enacted the legislation with the unconstitutional provisions eliminated." In the case last cited the provisions under consideration were held not to be severable; but the argument in support of the decision particularly well illustrates our contention here (see pp. 491-502). The pressure provision being merely an additional guarantee to the consumer that his gas shall be cheapened without loss of illuminating power, striking it out would be simply striking out one provision for the enforcement of its main purpose, and it is therefore a case parallel to that of the penalty clause which was eliminated from discussion in the Reagan case, *supra.*

XIV.

The pressure clause is constitutional.

The main point insisted upon during the hearing by the complainant was that the pressure could not practically be kept uniform on account of the difference in height above sea level of the different parts of Manhattan Island. Defendants' theory was that the complainant could regulate the pressure in these cases by means of district governors. Complainant's expert insisted that this method was unpractical, although he admitted that it was in use in other cities. How expensive the construction and maintenance of the necessary district governors for the elevated portions of the island would be, does not appear. The burden of course was upon complainant to show that it would be too great. Afterwards Edgerton, a witness on behalf of the State, proposed an alternative system which the Master reports would cost $4,000,000.

The master sums up the evidence as follows (p. 250):

> "Under the distributing system as now existing and in operation, it is not possible to fulfill the statutory requirements as to pressure. It would, however, apparently be possible to remedy this condition, at least to some degree, by dividing the city into different districts, according to the varying levels and by regulating the pressure in each by district governors. The efficacy and safety of such governors is not free from doubt and the evidence affords no sufficient basis for an estimate of the cost of their installation or the

> expense of making the necessary changes in the system of mains."

Under the rule respecting the burden of proof in such cases (pp. 188-9, *supra*) this finding would seem to settle the question. If complainant has not succeeded in providing the court with a "sufficient basis for an estimate" as to the expense involved, it is the necessary inference, in support of the action of the state authorities, that the expense is not so great as to render the provision unconstitutional. The court has no jurisdiction to consider doubts as to efficacy and safety.

Judge Hough however takes the Edgerton alternative proposition alone, disregarding the district governors altogether; and he seems to think that the state is without power to compel the complainant to adopt any new appliances that will not bring it additional profit. His remarks are as follows (p. 420):

> "By the expenditure of about $4,000,000 for construction of mains and valves alone, exclusive of any pumping stations or other apparatus it might be possible to establish and maintain the pressure called for by these acts. Such a thing is commercially impossible, and even if it were done (of course at complainant's expense), it remains commercially impossible since the other parts of the statutes cut off the surplus income out of which alone complainant could be expected to perform the work. A change by means of new capital would be impossible, because when made it would not add a dollar to income."

The position that a state cannot compel a citizen to incur expense upon his property without receiving compensation therefor has been so long exploited that its reappearance here is difficult of explanation. The more recent cases are cited in Moeschen *v.* Tenement House Department, 203 U. S., 583. That case involved the constitutionality of a provision in the New York Tenement House Act (set forth in full at 179 N. Y., 326) requiring tenement house owners to remove school sinks and put in water closets of prescribed construction. The constitutionality of the law was contested under both the State and Federal constitutions. The plaintiff in error owned a tenement house valued at $16,500, in which her equity was only about $3,500 (p. 329). The expense to which she was being put might range from $750 to at least $1,750 (p. 333). It was not claimed that there would be any corresponding increase in rental, if indeed there would be any increase at all. The constitutionality of the statute was sustained by every judge of every court before whom it came for consideration. Among the cases cited by this court in affirming the judgment were Gardner *v.* Michigan, 199 U. S., 325, where owners of garbage were required to part with it without compensation, although it could have been sold for a substantial price; Health Department *v.* Rector, 145 N. Y., 32, where tenement house owners were required to put in running water, and in which the subject is extensively considered in an opinion of Judge Peckham, often since quoted; and Commonwealth *v.* Roberts, 155 Mass., 281, where judgment was ordered upon a verdict against a property owner for refusing to put a water closet into his house upon order of the Board of Health. Mrs. Moeschen was doubtless obliged to make the improvement to her house "by means of new capital"; for the Tenement House Department was hardly willing to permit delay until $1,750 should have been saved out of the surplus income of a $16,500 house. Statutes requiring railroads to put in safety appliances may not correspondingly increase the net income of the railroads, but they must be complied with by all railroads, poor or rich, and the expense of complying with them is properly capitalizable as new construction or equipment.

If it be true that the Edgerton plan would cost $4,000,000, the other plan can be adopted; but complainant can raise even the amount named, and pay the necessary interest thereon, without having its property taken without due process of law. There is plenty of margin after the necessary corrections have been made in the other figures.

XV.

Assuming that an injunction were proper in this case, it should have been conditioned upon complainant's reducing its charge for gas to whatever sum would be deemed constitutional, nunc pro tunc as of May 1, 1906, and paying back to the consumers all amounts which it had collected from them over and above that figure.

Under Judge Hough's opinion, an 84-cent rate would have been constitutional. Nevertheless he entered a decree upon which complainant is entitled to retain all amounts that have been paid in at the old dollar rate, and to collect at that rate from the consumers who have not yet paid.

Whatever may be the finding of the court upon this tangled record, the 80-cent gas law is not an absolute nullity. It merely stands suspended in operation until conditions change so that the court is able to find that the rate is remunerative. Any decree enjoining the enforcement of the statute would therefore contain a clause permitting an application at its foot for the reopening of the case (Smyth *v.* Ames, 169 U. S., at pp. 447, 550; 64 Fed. Rep. at p. 189); and this is recognized by Judge Hough both in his opinion and in his decree (pp. 403-4, 434). The word "void" is therefore a misnomer in connection with this statute, whatever be the result of this suit.

On the other hand, an application for an injunction is to a certain extent an application to the discretion of the court. If Judge Lacombe had enjoined only the collection of the penalties, the Attorney-General, or later the Public Service Commission, would doubtless have commenced a proceeding for mandamus or mandatory injunction in the State courts. A defense of unconstitutionality would have been interposed. The question would have been tried out in the State courts under the state constitutional right to trial before a judge or referee to hear and determine, without the intervention of a Master. Very likely different findings of fact would have resulted; but the whole case could have come here upon writ of error. The decision of this court in the Young case has given to the public service corporation a choice of forum, while the state has no choice of forum, but must sue in its own court. In the Young case this court has said that the jurisdiction should be but cautiously exercised. We respectfully submit that to give such a complainant its choice of forum, to try the case in a manner which the state constitution disapproves, to reach upon the findings thus obtained a conclusion that the statutory rate is four cents too low, and then to make a decree which requires the payment by the consumer of an amount of twenty cents above the statutory rate for the whole period of the litigation and until the legislature can again act on the controversy, is contrary to comity, contrary to equity, and a conclusion at which the public mind has good right to be shocked.

The power to enjoin being discretionary, the court has the right to place any proper condition upon its exercise. What condition can be more proper than to say to the complainant—"It is discretionary with us to remit you to the state tribunal. It is discretionary with us to remit you to a trial at law. As a condition of coming into equity and having your case tried by the Federal procedure, you must do equity by charging no higher a sum than is found by that procedure to be constitutional?"

There is no decision exactly in point, but the conditions which have been placed upon equitable relief under the maxim "He who seeks equity must do equity" are discussed in 1 Pomeroy's Eq. Jurispr., §§ 385-6, 389-93, and particularly in the passage quoted from him in De Walsh *v.* Braman, 160 Ill., 415, 420-1 (see also Veazie *v.* Williams, 8 How., 134, 161; Willard *v.* Tayloe, 8 Wall., 557, 567-9; People's Bank *v.* Marye, 191 U. S., 272, 281-2, 285-8, and cases cited; 3 Dill., 19, 34; Farmers' Loan & Trust Co. *v.* Denver Co., 126 Fed. Rep., 46, 51; Thomas *v.* Evans, 105 N. Y., 601, 615;

Fanning *v.* Dunham, 5 Johns., Ch. 122, 142-7, and cases cited; Stanly *v.* Gadsby, 10 Pet., 521; Tiffany *v.* Boatman's Inst., 18 Wall., 375, 385; Knoth *v.* Manhattan Railway Co., 109 App. Div., 802, 807-10, affirmed 187 N. Y., 243).

Judge Hough thought that the state's equity to the enforcement of a constitutional law was not strong enough to warrant the imposition of a condition upon the complainant, and also advanced the singular proposition that the litigation might terminate if he imposed the condition, so that this court would not decide a legal question which interested him (p. 429).

If this court agrees with him, as to the equity of the state, the question still remains as to the procedure to be adopted when the Federal courts are asked to take cognizance of local controversies of this nature, ousting the state tribunals and the state procedure. They can impose what conditions they please upon the exercise of such a jurisdiction. It seems to us that the condition which we propose is eminently proper, would tend to prevent disharmony between state and nation, and should be adopted *ut sit finis litium.*

Federal jurisdiction over this case can be sustained only by adopting a new principle of equity procedure. Why not accompany the new principle, if adopted, with a condition so equitable, and so analogous to what has already been decided under circumstances somewhat similar?

Respectfully submitted,
Edward B. Whitney,
George S. Coleman,
Of Counsel for Appellants.

APPENDIX A.

FRANCHISES CLAIMED BY COMPLAINANT.

It is not until very recently that complainant has claimed the ownership of perpetual franchises; although it has claimed the right to operate north of 79th Street in perpetuity under an old Tweed franchise commonly called the State Grant of 1871.

As recently as the time when the testimony was taken in the case reported as Matter of City of New York, 56 N. Y. Misc., 306, 309, no perpetual franchise was claimed to exist south of 79th Street, nor were the present claims as to the extent and perpetuity of the New York, Manhattan and Metropolitan franchises as yet advanced. The question then arose in a proceeding for the condemnation of a portion of the 18th Street plant, within the territory formerly belonging to the Manhattan and Metropolitan companies. Nevertheless, complainant claimed only under the Municipal company's grant. That was a thirty year grant which confessedly expired on March 22, 1907. Its approaching expiration seems to have incited the complainant to a voyage of discovery among the old franchise documents whose importance had been supposed to have ceased.

Of the grants now put forward by complainant, we contend that the first four (the New York, Manhattan, Metropolitan and Harlem) have expired; that the fifth (the Anthracite) was void *ab initio;* and that the sixth (the State Grant of 1871), which is not claimed to have become complainant's property, was so framed that it could not pass into the management of a corporation.

As applicable to some or all of these various grants, we refer to the following well settled principles:

(1) In construing a grant of lands, franchises or privileges by the State, every intendment is to be taken in favor of the public and against the grantee, as the grantee is presumed to have drafted the paper, and to have made it as strong as he could in his own interests (Charles River Bridge *v.* Warren Bridge, 11 Pet., 420; Coosaw Mining Co. *v.* South Carolina, 144 U. S., 550, 561-2; Freeport Water Co. *v.* Freeport, 180 U. S., 587, 599; Cleveland Electric Co. *v.* Cleveland, 204 U. S., 116, 129-30). It is also laid down by the courts of the State of New York (Auburn & Cato Plank Road Co. *v.* Douglass, 9 N. Y., 444, 451; *In re* N. Y. & H. R. R. Co. *v.* Kip, 46 N. Y., 546, 551; People *v.* Broadway Ry. Co., 126 N. Y., 29, 37; People *ex rel.* 3d Ave. Ry. *v.* Newton, 112 N. Y., 396-399; Trustees *v.* Vail, 151 N. Y., 463, 472; Skaneateles Case, 161 N. Y. at p. 163, and cases cited).

(2) The application of the foregoing rule is not affected by a provision in the grant that it is to be benignly construed (People *v.* Chicago Theological Seminary, 174 Ill., 177, 181; 189 Ill., 439; 188 U. S., 662, 675, 676-7).

(3) A person to whom real property has been granted, demised and to farm let, if he holds over after the expiration of his term, becomes a tenant at sufferance or from year to year (Schuyler *v.* Smith, 51 N. Y., 309; Morgan *v.* Wm. Harison Lim. (1907), 2 Ch. 137). By holding over he cannot get adverse possession (Driggs *v.* Phillips, 103 N. Y., 33, 41; Deshong *v.* City of New York, 74 App. Div., 234). This principle applies to a

tenant of incorporeal real property, such as an easement or franchise to lay pipes and mains, as much as to a tenant of any other real property.

The grants should be considered in chronological order, as the practical construction of the first grant in order of time was undoubtedly in the minds of all parties at the time of the later grants; although complainant ingeniously reversed the order in its discussion of these grants in the court below.

The New York Gas Light Company.

This company was incorporated by the Act of March 26, 1823, chapter 85. Certain gentlemen were incorporated under the above name and it was provided that "by that name they and their successors may have *perpetual* succession." The powers of the corporation were to be as follows (p. 4826):

> "and by the name and style aforesaid, the said corporation shall have full power and authority to manufacture, make, and sell gas, to be made of coal, oil, tar, peat, pitch or turpentine, or other materials; and to be used for the purpose of lighting the said city, or the streets thereof, and any buildings, manufactories, or houses therein contained and situate; and to enter into, make and execute any contracts, agreements or covenants in relation to the objects of this incorporation, and of enforcing the same, and be capable of purchasing, taking and holding any estate or property, real or personal, as shall be necessary to give effect to the purposes of this incorporation, or for the accommodation of their business and concerns."

The grant was limited by the following proviso (pp. 4826-7):

> "*And provided, also,* That no public street, lane, or highway in the city of New York, shall be dug into, or in any wise injured or defaced without the permission of the corporation of the said city first had and obtained."

It will be noticed that no franchise for the occupation of the streets was granted by the legislature. It is clear that the proviso was intended as confining the question of street franchise to the proper authorities of the City. No restrictions upon the action of these local authorities is expressed or implied. They had the right to affix to their permission for digging up the streets such conditions as they should see fit, so far as such conditions would not contravene any of the provisions of the statute.

There is no better indication of the true construction of a document, whether a statutory grant or a contract, than its contemporaneous construction (Insurance Co. *v.* Dutcher, 95 U. S., 269, 273; Steinbach *v.* Stewart, 11 Wall., 566, 576; Woolsey *v.* Funke, 121 N. Y., 87, 92; United States *v.* Pugh, 99 U. S., 265, 269; United States *v.* Alabama R. R. Co., 142 U. S., 615, 621).

The statute became law on March 26. The incorporators immediately applied to the city authorities for a franchise thereon, and this franchise was granted by an agreement dated May 12. signed by the Mayor and accepted by the grantee. By this agreement the city did "hereby grant, demise and to farm let" to the corporation and its successors the sole and exclusive privilege of "laying or placing underground pipes" in that part of the city south of Grand and Canal streets "to have and to hold and to enjoy the same" until May 12, 1853 (pp. 5081-2).

By accepting this grant, the corporation accepted the time limitation thereof, and the joint action of the Common Council, the Mayor and the gas company confirmed what in its absence would have been the natural construction of the statute, namely, that the power to fix the extent and duration of the franchise was in the city authorities. The city authorities had the same jurisdiction over the franchise limits as to time that they had over franchise limits as to space; and it was never claimed, during its sixty years of operation as an independent company, that the grantee could extend its mains north of Grand and Canal streets.

In 1853 the franchise expired. Its possession of the streets was not disturbed, and it went on as before until the consolidation, when it merged with a company which had a franchise still running.

The Master adopted the extraordinary theory that the complainant must be held entitled to whatever it might claim to own, so long as the contrary had not been adjudicated in some other form of action, although its claim might be entirely baseless, or might be terminated by immediate revocation of its rights. This theory, first applied to the real estate (p. 164) was again applied to the franchises (p. 192). Judge Hough disapproved it (although not until it had already led to the litigation next hereinafter mentioned), but made no ruling as to the validity of either the New York, Manhattan or Metropolitan franchises.

It will be remembered that the state is the sole legal protector of the individual consumer, and that the city has no right or duty to represent him (pp. 3-4, 162-3, *supra*). The Master's decision seemed to put the defendants into a curious position. The city had the right to grant franchises, was obtaining its own supply of gas from the complainant, had no other source of supply, was not asked by any consumer to interfere with the present arrangements, and had no reason for modifying existing arrangements except as to the price of gas to be furnished to itself. The state on the other hand was the protector of the consumers, but had granted to the city the right to grant franchises by a statute over which the Attorney-General had no control. The upshot was that the Attorney-General, after considering the Master's opinion, applied for leave to bring an action in the nature of a *quo warranto* to vacate the charter of this complainant. The opinion of the Appellate Division sustaining the denial of such leave (the matter could not be appealed to the Court of Appeals) is reported as Matter of Attorney-General, 124 App. Div., 401, 407-8). It is applicable to the four grants which have expired (the Anthracite Grant and the State Grant of 1871 having been for some reason omitted by the Attorney-General in his application). Justice Scott discusses the matter as follows:

> "The several statutes under which the constituent companies were organized gave to them power and authority to manufacture, distribute and sell gas, with incidental power and authority to lay pipes or mains in the

public streets and avenues, subject, however, to the qualification that no street or highway should be dug into for the purpose of laying such mains without the consent of the municipal authorities first had and obtained.

The franchise to be a corporation and to transact business comes from the State, as does also the right, incidental and necessary to the enjoyment of the franchise, to lay pipes and mains in the streets, to maintain them when laid so long as necessary for the beneficial enjoyment of the corporate franchise, and for that purpose to dig into and open the streets. The State might have given authority to open the streets without any consent from the local authorities and has done so in many cases, but in general and particularly in the case of the constituent companies mentioned in the petition it has required the consent of the local authorities to be obtained before a street surface should be disturbed for the purpose of laying gas mains.

In these cases the right to lay mains comes from the State, *permission to exercise the right being made dependent upon the consent of the local authorities. It was competent for the local authorities to give a general consent covering a fixed period of time, or running during the life of the corporation,* or to give consents from time to time as the necessity for opening the street surface arose. *The first alternative was chosen,* and to each company was given a general consent, *limited as to areas to which it applied, and as to the time during which it should remain effective.* These periods of time have expired, and while it was undoubtedly competent for the local authorities to extend the time, or to have granted new consents, it appears that this had not been done, unless acquiescence amounts to such a consent (People *ex rel* New York & Richmond Gas Co. *v.* Cromwell, 89 App. Div., 291). The contention of the At-

> torney General is that with the expiration of the time limited by the municipal consent for the laying of pipes then also expired the right to maintain and use those already laid. Although we do not consider it necessary to pass upon this question, we may say that the argument in favor of the Attorney General's contention in this regard appears to us to be far from conclusive. It is sufficient to say that the matter is one for consideration by the municipal authorities, and is no concern of the State" [etc.].

The dissenting judge concurred in the proposition that a corporation by holding over in possession of such an easement or franchise after the expiration of its term afforded no ground for forfeiture, and that the questions arising in respect thereto are to be adjusted between corporation and city without the intervention of the State (*Id.*, p. 409).

This case leaves open the question whether the thirty year limit in the city's franchise grant relates to the maintenance of the pipes, or only to the right to put them in. The latter construction is unnatural in view of the language of the grant, which is that of a lease of real property. It is hard to conceive why a time limit should have been put on at all, if it did not apply to the maintenance of the pipes. Moreover the grant was exclusive so far as it existed at all, and it was understood by the company that so far as it was exclusive it lapsed at the end of the charter period (p. 92, *supra*; and see the Metropolitan franchise, p. 303 *infra*). The whole question is settled by the presumption against the grantee in such a conveyance (p. 292, *supra*). The case also leaves open the question whether acquiescence in holding over by a corporation amounted to a new consent. But there is no reason for any distinction between the rights of a holdover after the expiration of a limited term in an easement to lay gas pipes, and those of a holdover after the expiration of a limited term in a corporeal hereditament. If one holding over by tacit consent after the expiration of the term in possession of an easement acquires any further right therein than as tenant at sufferance or from year to year, what right does he obtain?

An easement may of course become vested by adverse possession if the tenant is proved to have set up an adverse claim, and the period of the statute thereafter expires. No such claim was ever made by this complainant or any of its constituent companies. The testimony of Mr. Lees (p. 92 *supra*) makes it extremely improbable that any such thing could have occurred at any time; and the company's own reliance on the Municipal franchise, in a controversy between itself and the City of New York (p. 291, *supra*), is an admission that no adverse claim was outstanding.

The Cromwell case, cited in the opinion above quoted, does not concern the status of a company holding over after a limited tenancy. It held that in the absence of any other evidence, the fact that a corporation had been supplying gas to three towns and their inhabitants for a period of nearly fifty years authorized an inference that the necessary consents had been obtained from the local authorities of those towns.

The Manhattan Gas Light Company.

This company was incorporated by an Act of February 26, 1830, with the following power (p. 4830):

> "with full power and authority to manufacture, make and sell gas, to be made of coal, oil, tar, peat, pitch and turpentine, or other materials, and to be used for the purpose of lighting the city of New York, or the streets thereof, and any buildings, manufactories or houses, therein contained and situate, and to lay pipes for the purposes of conducting the gas in any of the streets or avenues of the said city."

The act incorporated (although not in the form of a proviso) the proviso above quoted from the Act of 1823 (pp. 4826-7):

> "and that no public street, lane, or highway, in the city of New York, shall be dug into, or in any way injured or defaced, without the permission of the corporation of said city first had and obtained."

If the first of the two passages above quoted contained a legislative franchise for the purpose of conducting gas in any of the streets and avenues of the city, it could not be restricted by the city authorities, and their permission would only be a right to regulate such use of the streets. They would have had no more right to limit the legislative grant as to space than as to time.

The other construction, leaving it free for the city authorities to limit their permission both as to space and as to time, is supported by the similarity of much of the language to that of the Act of 1823; for there is much indication that the legislature intended to grant to the Manhattan company the same nature and extent of power which it had granted to the New York company, and to put into the hands of the city the same power which it had, and had exercised, in the New York company's case.

The practical construction given to the statute by the parties under the act of 1823 had been, as we have shown, that the statute delegated to the city the right to restrict the street franchise both as to space and as to time. In quoting the exact language of the former statute as to the city's powers, it was therefore to be presumed that the legislature intended the construction previously adopted to apply to the new statute (Copper Queen Mining Co. *v.* Arizona Board, 206 U. S., 474, 479; New York, New Haven & Hartford R. R. Co. *v.* Interstate Commerce Commission, 200 U. S., 361, 401; United States *v.* Falk, 204 U. S., 143, referring to 20 Op., 80, 82; Kealoha *v.* Castle, 210 U. S., 149, 154).

The practical construction given by the parties in interest to the Manhattan statute was the same which had been given to the former statute. Three years elapsed before the city made any grant at all. Then, on May 8, 1833, it did "grant and demise" to the Manhattan company "the privilege and right to lay or place underground pipes in any and all of the streets, avenues and public places of the City of New York" north of the north line of the grant of 1823, "to have, hold, use and enjoy the said right and privilege" until May 12, 1853, the day on which the New York company's grant was to expire (p. 5089).

On May 5, 1848, the Manhattan company obtained from the city an extension of its franchise until May 5, 1868; and as a condition of this time extension it submitted to a limitation as to space, accepting 42nd Street as its future northerly line (pp. 427-8).

The stockholders of the company reincorporated themselves for a period of fifty years under the Act of April 20, 1867 (p. 4834), but obtained no further franchise grant.

The Metropolitan Gas Light Company.

This company was incorporated by the statute of April 17, 1855, with the following power (pp. 4852-3):

> "with full power and authority at any time hereafter to manufacture, make and sell gas, to be made of coal, oil, tar, peat, pitch and turpentine or other materials, and to be used for the purpose of lighting the city of New York, and the streets, avenues, lanes, alleys and squares thereof, and any building, manufactories or houses therein contained and situate, and to lay pipes for the purpose of conducting the gas in any of the streets, avenues, lanes, alleys and squares of the said city, and to adopt any other necessary means to furnish gas to any inhabitant of said city."

This statute expressed explicitly the power of the city to limit the use of the franchise (p. 4853):

> "and that no public street, avenue, lane, alley, square or highway in the said city shall be dug into or defaced or other means adopted in regard thereto for the purpose aforesaid, without the permission of the two boards of the Common Council of said city first had and obtained, and the said boards are hereby authorized to grant and vest exclusive permission and authority to and in said company for said purposes to such extent and under such regulations as to them shall seem expedient, and such permission

> and authority shall be conclusive, *and shall continue as thus fixed during the period designated by said boards at the time of granting the same.*"

The grant by the city of a franchise "to lay pipes" was made over the Mayor's veto on December 22, 1858. It expressed no space limitation, but a time limitation of thirty years. It referred to the New York and Manhattan grants, and was clearly intended to carry similar and equal privileges (p. 5094). Yet this is the franchise which Mr. Zollikoffer, President of the company, referred to as expiring in 1889 (p. 93, *supra*).

The Harlem Gas Light Company.

This company was incorporated under the Gas Light Corporations Act (p. 309, *infra*), on February 7, 1855, its term of existence being fifty years (p. 4857). Its grant from the city was approved by the Mayor on April 25, 1855. It was restricted to that portion of the city lying north of the centre line of 79th Street, and contained no time limitation. It contained a reservation of the right of the city to purchase at any time from the company all its personal and real property upon payment of the cost of the same *plus* 10% (pp. 5092-4)

The value of the franchise, while it existed, could at any time have been reduced by the legislature to an amount not exceeding 10% of the cost of the real and personal property of the company, by authorizing the city to purchase as required in the contract, if such authorization were followed by a purchase thereunder.

But it is unnecessary to consider this, because the Harlem grant expired on February 1, 1905, having been made to a company whose term of existence was fixed at the time of the charter as expiring on that day.

There is no presumption of perpetuity in the grant of a franchise, and when a grant is made to a corporation incorporated for a limited term of years it is presumed that the franchise was intended to last for that term of years. This principle has just been enforced in a very important case by this court (Blair *v.* City of Chicago, 201 U. S., 400, 481, 488; S. C. below as Govin *v.* City of Chicago, 132 Fed. Rep., 848, 855; and see cas. cit. at 161 Fed. Rep., 771; S. P. State *ex rel.* Walker *v.* Payne, 129 Mo., 468).

The principle upon which these decisions proceed, and which is a mere application of the general rule that franchises are construed most strongly in favor of the public and as against the grantee, is best explained in Coosaw Mining Co. *v.* South Carolina, 144 U. S., 550, 561-2.

There is a remark by Parker, C. J., in the Ghee case, 158 N. Y., 510, 513, to the effect that a gas franchise granted under the Transportation Corporations Act is perpetual. This remark was unnecessary to the decision of the question before him. The case was decided against the gas company. The authority from which he cites expressly reserves the question, saying that such franchises are for a long term of years, for the life of a corporation, or in perpetuity (Deehan case, 153 N. Y., 528, 533). The argument which the Chief Judge was making would have been equally satisfied by assuming the franchise to be for fifty years. The question, moreover, is not the same under the Transportation Corporations

Act as under the statutes existing in 1871. Gas corporations are now permitted to extend their corporate existence, and also to transfer their franchises. Hence the presumption that the Legislature intended the franchise to be limited to the fifty year term of the life of the corporation grantee is not nearly so strong, if it exists at all. For present purposes it is sufficient to say that the Court of Appeals will not be embarrassed by this remark, as the court itself said in the Colonial City Traction Case, 154 N. Y., 493, 495:

> "If, as sometimes happens, broader statements were made by way of argument or otherwise than were essential to the decision of the questions presented, they are the dicta of the writer of the opinion and not the decision of the court. A judicial opinion, like evidence, is only binding so far as it is relevant, and when it wanders from the point at issue it no longer has force as an official utterance. The failure to read the opinions of courts with this fact in mind gives rise to much fruitless litigation."

We quote again from the Matter of Attorney-General, 124 App. Div., 401, 407:

> "It was competent for the local authorities to give a general consent covering a fixed period of time, *or running during the life of the corporation.*"

The complainant has relied mainly upon remarks of the Chief Judge in the Broadway Railroad case, People *v.* O'Brien, 111 N. Y., at page 38. Those remarks related to street railroad franchises, and are subject to five comments. First, the history of these railroad franchises in the city is quite different from that of gas companies. Gas franchises were always until a comparatively late period, restricted to comparatively short terms. Street railroad franchises on the contrary had been considered perpetual, as shown by the cases cited in the Broadway case. Second, the argument of the court in the Broadway case, at pp. 41-2, was largely based upon legislation peculiar to railroad corporations and which in 1871 and for nearly twenty years thereafter was not applicable to gas companies. Gas companies had no power to transfer franchises or (until 1884) to consolidate with other companies, or to lease, as I shall show a little further on. Third, that portion of the discussion which related to the question of perpetuity was not concurred in by the majority of the court. Two judges did not sit, while two judges concurred upon grounds separately stated by them. Fourth, the discussion as to perpetuity was entirely unnecessary to the decision of the case. It was sufficient for the purposes of the case to hold as the concurring judges said, that the property and franchises "survived" the annulment of the corporation. It made no difference to the result whether the franchises were granted in perpetuity or for a long term of years. The Court of Appeals does not feel bound by expressions used under such circumstances (Colonial City Traction case, *supra*). Fifth, the cases cited by the chief judge as authorities for the statement that the estate was in perpetuity are themselves *obiter dicta*.

The recent Miner case, 123 N. Y., at pp. 249-51, which very hesitatingly lays down that the franchise of a steam railroad is perpetual, is of course based upon entirely distinct grounds. An ordinary steam railroad (as distinguished from a street railroad) is a structure permanent in itself and requiring acquisition of the fee of real property by eminent domain. It will therefore be perceived that there are reasons for inferring a legislative intent that a steam railroad franchise should be perpetual which do not exist in the case of an ordinary street franchise, especially a franchise for the maintenance of mains and pipes, which, as all users of the public streets know to their sorrow, are continually being taken up and replaced.

Some confusion in mind seems to exist as to the effect of an extension of the life of a corporation to which such a franchise has been granted. It is of course true that the legislature, as in the Detroit case, 184 U. S., 368, 395, may grant to a corporation a franchise which will by its terms outlive it; and in such a grant it is necessarily implied that the franchise may be assigned to a successor, or may be enjoyed by the grantee for the full term if its life be thereafter extended. This does not affect the construction of the original grant. The limitation of the grant to fifty years for instance, in a corporation whose life is limited at that time to fifty years, is a rule of construction of a written instrument. It is presumed that the legislature considered the corporation as a being whose existence was to terminate upon a certain date, and intended to do no more than to give it a franchise which also would expire upon that date. It is not presumed, unless the contrary be in some way expressed, that the grant is for the fifty years *plus* such further period as may be covered by any extension of life that may be obtained in the future under a general or special statute not yet enacted.

The Knickerbocker Gas Light Company.

This company was incorporated under the General Law on June 24, 1876. It claimed two franchises. One of these—the Anthracite franchise—was for the whole city, but to expire September 17, 1913. The other—the State Grant of 1871—was perpetual, but confined to the territory north of 79th Street.

The Anthracite Franchise.—Nothing had ever been done under this. The company to which it was granted never did any business (p. 6205). It was bought up by the Union, on whose collapse the Knickerbocker was organized, but the business was confined to the territory north of 79th Street, claimed under the State Grant (p. 6099).

The local authorities on September 17, 1863, over the Mayor's veto, had granted a fifty-year franchise for all the streets in the city of New York to a corporation by the name of the Anthracite Gas Lighting and Heating Company. On May 26, 1865, this franchise was amended by making it run to the assigns of that company (pp. 5095-7). The franchise was sold on the following day to another corporation which had been organized under the name of the Citizens' Mutual Gas Company of New York (p. 5101). This corporation again, on November 22, 1871, assigned the franchise to another corporation which had then just been formed under the name of the Union Gas Light Company of the City of New York (p. 5104). Charles E. Appleby was subsequently ap pointed receiver of this last named company in an action brought by the people of the State of New York (pp. 5105-7) and upon his petition he was directed to sell "all the right, title and interest" which it or he "may have" in this franchise (pp. 5108-9). Under this sale the franchise if any passed to the Knickerbocker Gas Light Company (pp. 5110-14).

The fatal objection to this Anthracite franchise was that it was not granted to a gas light company but to a manufacturing company. The certificate of incorporation is set forth in the record (p. 5097), and expressly states the statute under which the company was organized.

There was no general authority to the Common Council of the City of New York to grant gas franchises, nor did the Manufacturing Corporations Act of 1848 (which was Chapter 40 of the laws of that year) contain any such authority. The right of the local authorities to grant franchises to gas companies is contained in the Gas Light Corporations Act of 1848, which was passed before the Manufacturing Corporations Act (being Chapter 37 of the Laws of that year) and was contained in section 18 thereof, as follows:

> "Any corporation *formed under this act* shall have full power [etc.] to lay conductors [etc.] with the consent of the municipal authorities of such city, village or town, and under such reasonable regulations as they may prescribe."

The Manufacturing Corporations Act did not contemplate the incorporation of public service corporations, although corporations for the purpose of *manufacturing* gas could properly have been incorporated under it.

The Anthracite charter is just one of those numerous charters obtained in order to be hawked around, which were until recent years so common, and to such a large number of which the state courts have given their quietus. The fact that the company was organized under the wrong act shows that it was not a serious enough project even to have been submitted to competent legal advice.

It may be added that the Citizens Mutual Gas Company, to whom the first assignment was made, was also incompetent for the same reason, having been incorporated under the Manufacturing Corporations Act (p. 5098).

The next claimant by way of assignment, the Union Gas Light Company, was organized under the right act; but no action was ever taken by the state or municipality to recognize the Union Company as owner of any such franchise, or in any other way to validate the claim. So far as appears, no such action was ever asked.

The State Grant of 1871.—This is the franchise granted by the statute of June 12, 1871, chapter 944, entitled "An Act to authorize the construction of gas works, and the manufacture and sale of gas for the purpose of lighting a portion of the City of New York, and the streets, avenues, squares and buildings therein, and to lay pipes for that purpose." This statute provided that Isaac P. Martin and others, and their assigns, were authorized and empowered to manufacture, make and sell gas for the purpose of lighting that portion of the then city lying north of the centre line of 79th Street, with power to lay pipes in the streets, etc. It provided that "the rights and privileges hereby granted are exclusive." It contained no power to incorporate, but provided that the persons named should select an executive committee of not less than seven, nor more than thirteen members "who shall have the control and management of the business authorized to be done and carried on by the provisions of this act" (pp. 5119-21).

The true inwardness of this statute was speedily disclosed by a series of assignments whereby whatever rights there might be thereunder passed to William M. Tweed, Richard B. Connolly, Thomas C. Fields, A. Oakey Hall, Peter B. Sweeney, Henry W. Genet and certain gentlemen associted with them (pp. 5123 *et seq.*). A long series of further assignments vested the property in its present owners, who are not the complainant or any of its predecessors, but certain gentlemen named at pages 5244-52.

An executive committee was appointed, and the chain of title contains a curious series of assignments whereby the members of this committee from time to time "do hereby release, relinquish, assign and set over" to the persons mentioned "all the rights, powers and control which we have acquired or can in any way exercise or have as such executive committee." The chain of title does not show who were the original executive committeemen elected, or whether they were properly and validly elected, although it contains a call for a meeting for that purpose (p. 5122). There is an affidavit annexed to this notice, signed by one William Foster, Jr., stating that he was for a long time chairman of the executive committee, and that certain persons at one time elected members of it were ineligible; but this was an affidavit made many years afterwards, and its competency does not appear (pp. 5122-3). A few months after this original meeting occurs the first release, relinquishment and assignment, signed by certain persons claiming to be members of the original executive committee, including Messrs. Genet, Connolly, Fields, Sweeney and Hall. Although the membership of this committee is prescribed by the statute to be from seven to thirteen, Genet and his fellow claimants to that office undertook to "release, relinquish, assign and set over" to Cornelius S. Bushnell, Henry J. Davison and Gordon H. Waddell "and their assigns, all the rights, power and control which we have acquired, or can in any way exercise, or have, as such executive committee" (pp. 5199-5200)! On December 5, 1876, an entirely new set of claimants to the position of executive committeemen appear, namely, Charles E. Appleby, William Foster, Jr., James M. Townsend, Eben F. Bacon and Samuel J. Young; and these release, relinquish, &c., to seven other persons mentioned (p. 5225). The Union Gas Light Company consents to this assignment (pp. 5225-6). Five of these seven, on May 20, 1878, release, relinquish, etc., to William Bayard Cutting, Robert F. Cutting, M. Bayard Brown, O. P. C. Billings and William W. Moir (p. 5234). These five assignees, together with the other two members of the original executive committee, on March 11, 1880, release, relinquish, etc., to O. Ottendorfer, H. E. Gawtry, Henry Day, Philip Allen, Charles G. Francklyn, Peter Gardner, L. C. Thompson and their assigns (p. 5254). There is no provision in the statute for the assignment of their powers or duties by the executive committeemen.

On February 25, 1874, William Foster, Jr., and six others, by an indenture reciting that they "now constitute the executive committee for the control and management of the business authorized to be done and carried on by the provisions of said act" (although there is no evidence that any one of them was ever elected to that position), grant and assign to the Union Gas Light Company, for and during the whole term of its corporate existence (namely, until October 26, 1921), "the right to do, exercise and perform as the agents and attorneys of the parties of the first part and their successors, hereby irrevocably constituted all and every the rights, privileges, franchises and immunities given and granted or created" by the statute of 1871; and covenanting to hold these, together with any franchise that they may thereafter get, and on request of the corporation or its successors to elect a new member in place of any member of the committee who may die or resign, etc.; and that upon request of the corporation to "grant and delegate to any other corporation or association the right as the agents and attorneys *of such executive committee* to manufacture, make and sell gas," etc., with covenant for further assurance (pp. 5212-14).

Its interest having been sold by its Receiver (pp. 5108-14), the Union Gas Light Company requested certain persons stated to be the executive committee to grant and delegate all their rights and privileges to the Knickerbocker Gas Light Company (pp. 5225-6). Thereupon, and on the same day, a new agreement was made between the pretended executive committeemen of that date and the Knickerbocker Gas Light Company, similar to the former agreement with the Union Gas Light Company (pp. 5229-32).

The complainant has failed to prove title in the executive committeemen who made these extraordinary contracts. It is always incumbent upon a party claiming a franchise to prove that he has got it; and a franchise emanating from Tweed and his associates is a particularly fit object for the application of this rule.

Furthermore, this very sweeping franchise was to be exercised by individuals appointed in a certain way, and without power to choose their own successors. It may have been the object of the legislature to have the franchise, if accepted, managed by men who would be personally individually responsible. However this may be, the duties devolved upon the executive committee could not be delegated by them to a corporation (Phelps *v.* Mayor, 112 N. Y., 216; People *v.* Brooklyn Cooperage Co., 187 N. Y., 142; People *ex rel.* Comatus *v.* Willis, 9 App. Div., 214; Providence Retreat *v.* City of Buffalo, 29 App. Div., 160, 165; Day *v.* Green, 4 Cush., 433; *In re* Jetter, 78 N. Y., 601; Matter of Presbytery of N. Y., 9 Daly, 116; aff'd no op. 80 N. Y., 642).

The case is equivalent to the leasing of a railroad without the consent of the State (in New York the State consents in that particular case), which is an illegal delegation.

Thomas *v.* Railroad Co., 101 U. S., 71, 83.

APPENDIX B.

MARKET VALUES OF GAS STOCKS, 1883-4.

These figures are taken from the *Commercial and Financial Chronicle* of the dates named.

The Knickerbocker securities were held by the Municipal and their value is therefore reflected in the value of the stock of that company. The amount of Harlem stock outstanding is given by the *Chronicle* as $1,850,000, although Mr. Yalden gives it at only $1,800,000. Assuming the higher figure as more favorable to the company, we have the following tabulation showing the amounts of stocks outstanding:

Harlem Co.................	1,850,000
Manhattan Co..............	4,000,000
Metropolitan Co............	2,500,000
New York Co...............	4,000,000
Municipal Co...............	3,000,000

The following tabulation gives the bid and asked prices of the various companies at the dates mentioned, and the total valuation of the stocks of the various companies outstanding, at the dates named respectively:

	July 7, 1883		Aug. 4, 1883		Sept. 1, 1883	
	bid	asked	bid	asked	bid	asked
Harlem Co.	102	105	104		104

*Consolidation Agreement made Sept. 29 (p. 4819).

Office Supreme Court, U. S.
FILED.
NOV 5 1908
JAMES H. McKENNEY,
CLERK.

SUPREME COURT OF THE UNITED STATES.

October Term, 1908.

No. 396.

WM. R. WILLCOX ET AL., Constituting the Public Service Commission of The State of New York for the First District, Appellants,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

REPLY BRIEF FOR APPELLANTS.

Edward B. Whitney,
George S. Coleman,
Of Counsel for Appellants.

ERRATUM.—The $1,303,000 reserved for working capital was originally a fictitious item, but was contributed to the treasury and sold as treasury stock, bringing its full value besides a part of the premium which has been allowed in our calculations. Hence the calculation of dividends up to March 15, 1900, at page 28 of our main brief, should be made upon the basis of $29,994,000 + $1,303,000, which would reduce the average dividend rate to a trifle under 7 per cent., and the average rate of net earnings to a trifle under 8 per cent. A corresponding correction should be made at page 150*c*.

SUPREME COURT OF THE UNITED STATES.

October Term, 1908.

No. 396.

WILLIAM R. WILLCOX ET AL., Constituting the Public Service Commission of the State of New York for the First District, Appellants,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

REPLY BRIEF FOR APPELLANTS.

The appellee refers to our brief of 317 pages as "voluminous," apparently with reference to the common notion that the party with the longest brief has the laboring oar. We do not dispute the correctness of the notion, but notice that the appellee feels obliged to file 423 pages, which, if it had supplied the court with as good print and liberal margin, would have been 504. As, however, so much reading matter is being imposed upon the court by all of us, we shall make this reply as terse as possible.

The page references are to the record, except those headed "App. Br.," which are to the main brief filed by us on behalf of the Public Service Commission.

We take up first Mr. Mathewson's brief on the facts, second Mr. Beck's general brief, and third Mr. Garver's brief on special franchises and good will.

Mr. Mathewson's Brief.

It would too much expand this brief to make all necessary corrections as to statements of alleged fact. We have made a very careful and we think accurate statement in our own main brief, while upon some matters we shall comment when we come to discuss Mr. Garver's, but make the following specific corrections here:

(Page 3, top:) It might be inferred from this statement that Mr. Rowland appraised all the tangible property. He appraised only manufacturing plants, and not all even of them. His appraisals were not on the basis of what they were intrinsically worth. The appraisals by others were not made in a manner deserving very serious consideration (pp. 6078, 6083-5; App. Br., pp. 20-1). The plants have been so largely changed since then that Rowland's own estimates are for present purposes practically valueless.

(Pages 15-17:) This is a discussion of Yalden's estimate of $20,942,632.85 as the cost of the tangible property turned over to complainant by the constituent companies in 1884. We have not based any calculations on this figure, as it seemed to us that all points presented by the assignments of error could be brought out by much simpler calculations.

The discussion is summed up in a tabulation claiming to show an original cost of $29,106,098.56 in addition to certain items unknown; a tabulation introduced as part of the testimony of complainant's secretary, Carter (p. 4490). To begin with, we object to the use by complainant of any evidence by that gentleman which is not supported by other testimony, unless complainant concedes the correctness of his most deliberate sworn statements, statements accompanied by an oath to his own expertness, concerning the valuation of the plants, mains, services and special franchises, and the course of value of the latter items since 1900 (App. Br., pp. 59-60, 76, 81-3). The Master seems to think that his oaths should be condoned, in view of the fact that he was making them on behalf of a large corporation which was interested in having him swear as he did (p. 216); but surely if his former testimony is to be disregarded when it is no longer self-serving, his present self-serving testimony must go with it.

In order to make up this tabulation, he twists a phrase out of Yalden's testimony at page 6394, concerning certain appreciation written up by the New York Gas Light Company—an operation which Yalden had just previously described as "a sort of raising the wind out of nothing." The appreciation written up by that company during its whole career of sixty years was $500,000 more than all the depreciation written off (p. 5657); and Yalden's testimony, quoted by Carter and again in the brief, does not refer to the writing up in 1884, but to a previous writing up in 1871 (p. 6394; compare pp. 5657, 5660).

In the same tabulation the Manhattan company is credited with an additional value of $2,030,000 as having been charged off on a plant that was still as good as new; the impression intended to be conveyed being that the plant then was worth $2,030,000 more than its book value. Yalden's testimony at pages 6315 and 6338 is referred to as authority for this. At the former page it will be found that he simply testifies that the Manhattan company wrote off $2,030,000 as against a plant costing $2,400,000, as illustrating that in less than ten years a plant costs its value over again (a proposition now denied by complainant). At page 6338 he testifies that a large depreciation item had been charged twice over by the Manhattan company, but that on discovering the error it was corrected; and that items scheduled by the complainant at $9,611,000 cannot have cost more than $4,873,000 in round figures. Carter seems to have put down this item of $2,030,000, which really represented repairs and replacements, as part of the original cost of the property, thus duplicating the value of the existing plant to that extent.

The two page references given for the paragraph about the Municipal company are entirely misleading. The first is a quotation from Carter, not Yalden. The second refers to the New York company, not the Municipal. The testimony referred to at page 20 of our main brief shows that the Municipal company was claimed in 1884 to have obtained an unduly high appraisal.

We can find no basis for Carter's statement that the Harlem company had practically doubled its plant capacity out of operating expense. Mr. Moss, who is referred to, only says (upon hearsay) that prior to his own time the lots east of First Avenue were filled in up to the bulkheads out of expense account.

(Page 18:) The paragraph as to mains and services is inaccurate. Two of defendant's experts are referred to as testifying that "pipe actually cost during *the* period in which a large part of the systems were laid, cost as high as $76 a ton." Marks' testimony is simply "that products of iron, such as pipe," were even higher than $50 or $60 a ton "in the 70's." Edgerton says that he does not know the price in New York city, but that he "paid $72 to $76 a ton for pipe in the 70's"; but that he was surprised to find "that the pipe laid was very little *less* than it is now"; that pipe at $76 is more expensive than pipe at $28.90, but that "I saw the actual figures of the cost of laying the Mutual pipes, and it differed very little from what it is today"; that the period of laying this pipe was from 1870 to 1872 (p. 2992). The sole ground for the statement in the brief is therefore that pipe at some other point than New York went as high as $76 a ton at some time during the 70's, according to the recollection upon cross-examination of an expert whose main testimony complainant discredits. As against this we have the contemporary testimony of Rowland that when the appraisals were made in 1884 the cost of manufacturing a plant was no greater than twenty years ago (p. 6084); that the cost of iron (in respect to mains) "is not as low as it was thirty years ago"; that the iron of the Manhattan system would cost more than fifteen or twenty years earlier to lay; and that "the cost of laying the mains now I think would be much larger than it was fifteen years ago" (p. 6095). The correctness of Edgerton's recollection as to the date when the cost of laying the pipes of the New York Mutual Company was less than the 1906 figures, when he testified, is shown by Yalden's report. It appears that the bulk of these pipes were laid about the year 1871 (pp. 5608, 5722). It is a familiar fact that prices went down after the panic of 1873. The period referred to by Marks and Edgerton must have been a very brief one, probably just before the panic. There is no proof that "a large part of the systems were laid" at this epoch, nor anything so indicating. The mains and services laid by the Manhattan company during 1872 and 1873 were only a trifle over $25,000 in cost (p. 5633). Those of the New York company do not separately appear, but would probably, in view of the geographical location of that company, be even less in proportion. The Municipal company did not begin construction until after the panic (p. 5690). The Knickerbocker had only in part constructed its works at that time (p. 6087), and there is no indication that it had as yet put in any mains and services. The Harlem company invested about $66,000 in mains and services in 1872 and 1873 (p. 5710), and the Metropolitan company invested about $142,000 therein in those years (p. 5684). The total appraised valuation of mains and services at the time of consolidation having been about $6,225,000 (p. 5730), it will be perceived what a very trifling figure can have been cut by these temporary high prices, and why they were disregarded by Rowland in his contemporary testimony.

At the foot of page 18 there is another quotation from Carter, and similar quotations appear from time to time witnesses if they be honest, no matter how incompetent or uninformed they may be demonstrated to be." If they are demonstrated to be incompetent or uninformed, they cannot be believed by a fair-minded commission, and that is the test. Counsel deems it proper to make a statement outside the record as to what occurred at the trial, which perhaps makes it proper for us to say that complainant's counsel before the Master submitted a series of propositions claimed to establish the alleged ignorance of the defendant's experts, and which as stated gave that appearance, and which we believe to have caused the Master to make the statements quoted on page 33, but which are not repeated here, although we had made statements which challenged their repetition (App. Br., pp. 54-7).

(Page 42:) Let us see whether appellants overlooked anything as to appellee's two coal gas plants. Complainant's witness testifies that an up-to-date plant would be worth $71.50 more per M. of daily rated capacity. The rated capacity of the two plants is 9,500,000 per day, or 1,900,000,000 per year. If the saving in cost at the up-to-date plant were five cents per M. (see p. 642 and App. Br., p. 109), it would be $95,000 per year, and would save six per cent. on an additional construction of $1,583,333. The additional cost of an up-to-date plant would be only $679,250 (9,500 × $71.50). And the new plant could be built on cheap land, releasing very valuable land, which could then be sold (App. Br., p. 109).

(Page 51:) This repeats from page 18 the unfounded statement upon which we have already commented with relation to the original cost of the mains.

(Pages 56-8:) The market value of complainant's stock has fluctuated in the most violent manner. It is immaterial upon a question like this, although we have discussed the market values of the stocks of the old companies for the purpose of showing that the capitalization of the present company was not based upon them. The finding at the bottom of page 56 was claimed by the complainant and held by the Master to be immaterial, and we agree with them. The price of complainant's stock represented the probability of its being allowed to overcharge for gas, *plus* the supposed future value of its outside investments. The comparison with conditions in other cities was introduced into this case by one of the other defendants, and in our opinion raises collateral issues which have not been fully tried out in this case, were incompetent, and would probably, if competent, help the defendants more than the complainant, as so many cities supply gas at 80 cents or less.

(Pages 59-64:) Complainant's discussion of its tax reports fairly states Mr. Carter's excuses for having sworn to them, and a portion of the Master's remarks thereon, but all of the latter should be read, for they show the Master's point of view, which was an obstacle that defendants were unable to overcome. Counsel seems to think that the complainant and its secretary acted justifiably, and that no fair-minded State board could have discredited the explanations and credited the reports. We have already expressed our views of Mr. Carter, and we cannot agree with counsel as to the amount of honesty which should be required from corporations and their officers and attorneys. A corporation which is guilty of such reports should, under the tests laid down by this court, be remitted to the tribunals of the State for any remedy. The State legislature is entitled, in our opinion, to a higher degree of respect than such a corporation.

(Page 65, foot:) The city's witness Marks is represented as stating that Simpson's figure of $12,636,150 "is a 'moderate and fair' estimate of present value" of mains. The language used by him at that point was "moderate and fair, but unnecessary," and was qualified by stating that Simpson's figures were assumed to be correct (p. 2786). After making the affidavit from which this statement was taken, the witness came to the conclusion "that an allowance should be made for excessive capital investment in mains" on account of "a duplication and triplication of mains in the streets" (p. 1961); thus pointing out the fallacy in complainant's figures if cost of duplication is the test. He afterwards testified that the cost of laying the mains under cobble pavement would appear to be $7,141,231.51.

Complainant then proceeds to state that the estimate of the State's witness Edgerton amounted to a still larger sum "when supplemented by items of cost omitted by him." The reference is not to any testimony of Edgerton, but to a tabulation made by complainant's own superintendent of mains, Simpson, of whom the best that can be said is that he stands a little better than Carter as a witness. Testifying twice within a few months, he succeeded in raising his own valuation nearly $1,000,000 (App. Br., p. 77). Edgerton's estimate was $8,919,792.55 (pp. 2983-4). The rest of Simpson's figure represented what he claimed to be Edgerton's errors and omissions (p. 2926).

(Page 67:) Here begins a series of attempts to offset errors of the court below by claims that it had erred in rulings against the complainant upon other points. Complainant's right to this form of defense will be more conveniently discussed in connection with page 68 of Mr. Beck's brief.

(Page 69:) A tabulation is here given, alleged to be a bill of particulars of the parcels of land which were allowed by the Master, but disallowed by the court. If the complainant had desired to go into this question upon the appeal, it should have seen that a bill of particulars was in some manner incorporated in the final decree. We can find no warrant for such a tabulation in the record. The theory of the court below was that if it had made any mistake as to any of these lots, the mistake was offset by the inclusion in capitalization of certain parcels as to which "very serious doubts are entertained" and "particularly the so-called 111th Street plant;" and that taking the real estate as a whole the corrected figures "represent all that complainant can justly ask" (p. 423). Following our general plan of not raising questions in this court which did not involve a very considerable item of capitalization, we accepted the compromise thus forced on us, and filed no assignment of error to the inclusion of the 111th Street manufacturing plant and the real estate on which it stands, although that plant is not in use and does not appear to have been in use since 1884. This portion of complainant's brief calls upon the court to examine a large number of trivial items, without sufficient information to figure out the allowance made by the Master for any one of them. As we do not understand the question to be properly before the court, we do not go into its details, which would require a brief of considerable bulk.

(Page 75:) In view of the remarks just made, it is unnecessary to discuss the alleged concessions by the city's witnesses. It is our contention that such concessions should not be treated as of much value, as they form parts of calculations the result of which would be fatal to complainant (App. Br., p. 11); which seem to us to be frequently based on insufficient information or insufficient consideration, although not generally approaching the corresponding calculations of complainant's witnesses in these respects.

(Page 77:) In its discussion of the item of Working Capital, complainant concedes that the court below was unfamiliar with the record. This we agree to as a general proposition, but this particular matter was fully argued. He allowed more working capital in proportion to the total book value of the property than was allowed by complainant itself at the time of its organization, and it was computed upon the book value, not upon the sales of gas (App. Br., p. 94). This should be the best evidence, as expressing deliberate judgment of persons familiar with the business. The amount needed for working capital is very small, because complainant can force prompt payments from its customers by threat of shutting off their gas. Hence the bad and doubtful debts amount to a trifling figure, as pointed out by the court at page 396. As against these figures, claims of complainant's witnesses and claims of its counsel as to the effect of his cross-examination of the city's experts were properly disregarded by the court. Dr. Humphreys' estimate involves the persistent fallacy that expenses vary per M. (see App. Br., pp. 122-123). A vastly greater amount of gas may be driven through the mains for delivery to consumers who have got to pay up every month, without much increase in the requirements for working capital.

(Pages 81-4:) Complainant claims that all stock held by it in companies engaged in the manufacture of gas which it uses, or in the carting of supplies which it purchases or sells, must be regarded as part of its capital engaged in the gas business; and characteristically rests itself, as to this legal proposition, in part upon supposed admissions of the city's non-legal experts. Its claim that such a concession was made by counsel is not sustained by its references to the record.

The amount involved in the National Coal & Coke Company item was comparatively trifling, and had not attracted the attention of counsel in drawing the original exceptions to the Master's report, but the omission was promptly supplied when the present appellants came into the case (pp. 382, 386). The error in this respect was pointed out to the court, citing Noyes on Intercorporate Relations, § 299; 2 Cook on Corporations, § 709, and auth. cit., and 1 Morawetz on Private Corporations, §§ 232, 233; to which we may add Peterson *v.* Chicago, etc., Railway Co., 205 U. S., 364.

391. **It is now common for one person to hold all of the stock of a corporation, but it would be a new doctrine to make him responsible for its debts. When one corporation acquires control of another, the two continue to exist as before, and are legally distinct.** Complainant may manufacture its own gas or buy from another company. Complainant may cart its own coal, or pay another company to do the carting. In either case, the expense appears among operating expenses. It may afterwards invest in the stock of that other company; but if it does so, the stock simply stands as an investment. The item of operating expense is unchanged. The only change in the situation is that the expense item must be more carefully looked into by the public, in order to see that an overcharge is not being made for the purpose of reducing the apparent amount of complainant's net profits

To the Astoria investment—the stock held in the Astoria Light, Heat & Power Company—is applicable the foregoing discussion of the National Coal & Coke Company investment. We have already discussed at length the facts concerning the purchased gas and the Astoria investment (App. Br., pp. 97-112).

Suppose that complainant sells its stock in the Astoria company and invests the money in other speculations; that it then realizes on part of those speculations and buys back half the Astoria stock; that it then realizes on the rest of those speculations and buys back the rest of the stock; that our fellow-defendant, the Attorney General, then sues it as a monopoly, and it divides the stock among its stockholders *pro rata;* that when the storm blows over it buys the stock back, except part which has been sold to others in the market. At each of these steps is the price of gas to fluctuate?

(Page 86:) We do not simply seek "to throw doubt" on the Master's statement as to complainant's maximum daily output, but have shown that it is contrary to most conclusive evidence. Complainant endeavors to avoid the natural inference from its failure to produce its daily station records, by saying that it was not asked to produce them. It was for complainant to produce them voluntarily, if it regarded the matter as important. They would undoubtedly, in connection with the record of gas purchased, show with substantial accuracy the amount of daily sales. The average daily sales for the heaviest months being but little over 45,000,000 cubic feet, and the maximum variation between two different days being 6,000,000 cubic feet, the statement that the maximum daily sales are 70,000,000 feet is clearly absurd, and a maximum of even 50,000,000 is altogether improbable. The Master was plainly misled on reading over the record, and the court was misled by the Master.

(Page 87:) The tabulation at this page is based upon some statements of complainant's chief engineer Bradley, who has frequently had to qualify his testimony, although he stands much higher as a witness than Carter or Simpson. He is responsible for the capacity ratings of the various plants which have been accepted in the case, and we have shown that the plants can actually for a considerable period be worked far above their rated capacity (App. Br., p. 103*n*). The capacity rating evidently allows for a very considerable reserve; indeed, for all or most of the twenty per cent. reserve claimed by Bradley. In the case pointed out by us, the reserve was over the twenty per cent.

(Pages 88-9:) This argument is based on the fundamental error as to the maximum daily requirement.

(Page 90:) The argument that legislative acts "necessarily look to the future" is disposed of by the obvious proposition that so long as they do not violate constitutional rights as to present conditions, they cannot be enjoined on expert testimony as to what may be expected to happen at some future time (App. Br., pp. 198-9).

(Page 91:) Here begins an attempt to justify the Master's capitalization of the "Astoria" item, which was stricken out by the court. We pressed below, as we are pressing here, the argument that the record is defective in not showing the actual facts regarding the other companies doing business in this complainant's territory (App. Br., pp. 273-80); and to this extent the action of the court in effect sustains the argument. It will be perceived that complainant's contention calls upon the court to speculate about facts of which it was in its power to supply full information, such as the probable value of the land and plants of the other companies, their holder capacity, reserve capacity, etc.

(Page 95:) Here again complainant picks one item out of a computation by one of the opposing witnesses, although the acceptance of his computations in general would be fatal to itself; and in this instance although it concedes his figures to be upon an erroneous basis. He was not a State's witness, and is not claimed or conceded by the State to be an expert. The matter is not particularly important, because the whole argument is without legal basis. We have shown that the purchase of this gas was mutually beneficial to the purchasing and selling companies (App. Br., pp. 100-104); and as above pointed out, the fact that complainant has within a few years past bought control of the stocks of these companies cannot affect the situation.

(Page 96:) Complainant persists in its statement that the calendar year 1905 was selected with the concurrence of all parties, and its insistence that the defendants were allowed full privilege of looking into other periods and putting the results in evidence. Comment is made on the fact that we were not present at the trial; but we have examined the record and made some inquiry for an explanation of it; and our former source of information is the sole source that can be availed of by the court. The page references for the statements which we make are to be found at pages 10, 26 and

270 of our main brief. Under this heading, as often elsewhere, complainant insists on referring to the city's witnesses as witnesses for the "appellants"; and here it goes outside of the record to quote from documents not in evidence. A good deal of the information finally opened up to the defendants was opened up at a comparatively late period of the hearing; and at the same time they were under pressure from what seems to us a very extraordinary action of Judge Lacombe in accompanying a preliminary injunction with provisions that imposed conditions upon the persons against whom the injunction was granted; conditions which the Master himself substantially admitted to be inconsistent with a thorough investigation (p. 1047).

(Page 105*a*:) Objection to the court's computation of the amount of income from purchased gas seems to be admitted to be an objection in form only. It therefore does not need consideration. The concession as to candle power makes it unnecessary to consider the facts stated by us (App. Br., pp. 130-4).

(Pages 106-8:) The argument at this point has been answered by us (App. Br., pp. 100-12, 198-9, 231-3).

(Page 108:) The special franchise tax matter has been discussed by us (App. Br., pp. 233-8), and will be further discussed in connection with Mr. Garver's brief.

(Pages 109-16:) This is a series of speculations based upon the theory that there will be an increase of sales of over 1,000,000,000 cubic feet during the year commencing May 1, 1906. We have shown that this period is not one which it is proper to speculate about (App. Br., pp. 198-9), and that it is probable that there will be a decrease rather than an increase of sales (*Id.*, pp. 110-11). The course of speculation about this mythical item is characteristic of the brief. It begins with repeating a comparison between the average sales per meter in 1885 and those in 1905; a comparison upon whose basis certain words were put into the mouth of the expert witness Forstall before the Master (pp. 4331-2). The figures were entirely misleading, because the falling off had been caused by some cause which ceased to operate in 1898, and from that time there had been a very rapid rise in consumption per meter, terminating in a period of comparatively slight decline (pp. 5040-41). Most of the latter decline was from the nominal year to the calendar year 1905. The items of distribution and general expense cannot be compared from Exhibits 93 and 94, because the accounting system was changed, and because the item of "Expense—General Office" was very largely increased, evidently because it is stuffed with items improper in this case, as we have pointed out (App. Br., pp. 138-9). It is noticeable, however, that while the amount of meters considerably increased, and while the total consumption of gas diminished, the item of "Repairs to Meters" remained substantially at a standstill. The items of "Expense" and "Distribution," which include part of the work on the meters together with the bookkeeping and collecting charges (pp. 5778-80), decreased considerably. The increase of meters does not mean corresponding increase of services, in a borough whose additional population lives in tenement and apartment houses. The book value of complainant's services declined substantially from 1903 to 1905 (State's Exhibits Q.-S., p. 5230). Many expenses must be very much reduced per M. by such a situation; as, for instance, repairs to mains. The testimony of complainant's own books cannot be neutralized by expert testimony as to experience in London or St. Louis. Under this heading again, complainant undertakes to build up an argument on figures derived from the report of the Stevens Investigating Committee. It did not introduce these figures in evidence, and we do not understand that a report which was not put in evidence can be referred to for such a purpose. We have referred only to its final recommendations, as being judicially noticeable in corroboration of what otherwise would be presumably the legislative intent of the pressure provision (App. Br., pp. 281-2). There is nothing to indicate that the items upon which complainant's computations at pages 112-13 are based, are made up of the same particulars in 1901 as in 1905. For instance, the latter figure includes the large item of repairs to city lamps, which is plainly improper (p. 428), and was very likely omitted by the committee. We have pointed out that the item of general office expenses has been in all probability stuffed with expenses belonging to Astoria. The conclusion finally drawn by complainant's calculator from this tabulation is that there is a great increase of proportionate expense when there is a great increase in sales; but the very table which he quotes from the Stevens report shows just the contrary. It shows that the great increase in sales from 1901 to 1904 was accompanied by a very substantial diminution in proportionate distribution and general expenses (p. 73). Complainant's calculator then proceeds to figure out that there would have to be an increase of investment in distributing system and apparatus of $1,670,358 in order to handle this mythical additional output, which he estimates at 1,136,298,000 feet. The increase from 1903 to 1905 was about 517,000,000 feet (p. 5041). The valuation of the mains remained almost stationary. That of the services substantially decreased. That of the meter cocks and connections decreased. That of the entire "plant, property, and construction," deducting the "real estate," manufacturing plant, franchises and rights, increased during the two years only about $335,000 (State's Exhibits Q-S, p. 5260). Tabulations prepared by complainant's expert and referred to at the foot of page 115 of its brief are conclusions from facts not stated, and which, if stated, would be incompetent (App. Br., pp. 17-18, and cases cited at p. 53). We do not think that the private consumers or their statutory protectors should be held responsible for the city's assignments of error (App.

Br., p. 158); but the quotation from one of those assignments at page 116 is misleading. The inadequacy there complained of was in the matter of protection against improper pressure.

(Page 116:) We are somewhat surprised at complainant's attempting to base a calculation on a statement of ours in our "Brief below." Our statement was that the mains and services increased in value only $137,004.43 from 1904 to 1905, referring to Carter's sworn statements in the tax reports, to be found at pages 5057, 5068. The balance of the $200,000 was a guess at the probable increase in meters. The source of this calculation was stated, so that complainant's counsel when he read this brief knew precisely the source of the figures which he quotes from us. We, like the State officials who had preceded us, had put some reliance on the statement of Secretary Carter. State's Exhibits R and S, however (p. 5260), show the precise figures. They show that the mains and services greatly decreased, and that the total increase in mains, services, and meters was according to complainant's own balance sheets, but about $100,000 during that year. The figures on the balance sheets are for December 31, and those on the tax reports are for June 30; but this does not greatly affect the calculation. The figures quoted from our brief below were part of a calculation which we did not think worth making here, in view of other facts which we had ascertained from the record, and which make the whole topic academic; but it seems to us that in dealing with an opponent's brief a higher degree of ingenuousness should be observed than is observed in complainant's treatment of the testimony and exhibits in the record.

(Pages 116-17:) The propriety of the item of interest on taxes was conceded by the court below (p. 401), but not by us. It would have been perfectly feasible for the complainant to pay its taxes and assure their recovery in case they were held excessive. It was not because of lack of protection that their payment was withheld. Furthermore, it was the almost unanimous opinion of the bar, justified by the unanimous decision of this court, that the appeal here was dilatory and unfounded, and that there was no propriety whatever in charging any direct or incidental expense thereof to the consumers. Furthermore, the decision of this court was made May 29, 1905 (199 U. S., 53), before the sample year was half over. There has been no propriety in contesting the subsequent assessments, because, as we have already pointed out (App. Br., p. 239*n*), and shall set out more particularly in connection with Mr. Garver's brief, all the special franchise taxes up to and including that of 1906 have been grossly underassessed.

The above remarks apply also to the item of franchise tax litigation expense.

As to the third item, of legislative investigation expense, there had been no previous legislative investigation for twenty years, and there has been none since. To refer to the expenses of the present suit begs the question. If the present suit ought not to have been commenced, its expenses would not be properly charged as against the consumer.

Complainant's counter-claim as to taxes and wages has been answered by us (App. Br., pp. 134-9).

(Page 119:) This point of complainant's is based on the unsustainable assumption that the first unit of Astoria must be treated by the State as affording a substitute for the purchased gas. This we have fully discussed (App. Br., pp. 100-12, 231-3).

(Page 122:) This is an appeal to the judgment of an engineer, whom the complainant has insisted all through the trial to be an incompetent person, upon a question not of engineering but of law. He was not hired by the State, and the State has always taken the same view of his qualifications as the complainant. His testimony shows that he had not the faintest conception as to the legal effect of a holding of stock by one company in another company. Hence he fell into the blunder of giving an allowance for the so-called "Astoria" item. The allowance which he gave was $5,097,-389.56 (p. 1940). This is a trifle more than what in effect the court itself has given, namely, an allowance of income which is equivalent to a capitalization of $3,333,333, *plus* another item just short of $1,000,000 (App. Br., pp. 232-3). We venture to disagree with complainant and the court as to the propriety of the former figure, even when corroborated by the legal opinion of Mr. Marks. Mr. Marks is here (as he and Prof. Bemis at so many places are elsewhere) referred to as "appellants'" witness. We cannot call attention to the impropriety of this designation at every place where it occurs, but we trust that the court will bear it in mind. They were retained solely by the city, which is not jointly interested with the State, has no power or duty to protect the individual consumer, is not interested in the same statute, and could probably not have been joined as a defendant in this suit, had any of the defendants taken objection thereto (App. Br., p. 3). The city hired its own experts, and conducted its case in its own way, frequently disagreeing with the counsel for the State as to what ought to be done (as for instance see page 807). Its expert witnesses were permitted to submit tabulations of figures whose preparation required considerable knowledge of law, and which the counsel for the State thought involved mistakes of law that were favorable to the complainant; which were protested against in the court below, and which have been protested against here (App. Br., p. 11). To the city these concessions of its experts are of comparatively small importance, because the city can not only accept Judge Hough's figures but concede a large part of the Master's additional figures and still win its own case (*Id.*, pp. 183-4). We welcome the very valuable assistance of the counsel for the city upon this appeal, but object to all attempts to identify us with the vague errors of its experts upon the trial.

These remarks are of course applicable to the opening sentence of complainant's next point, at page 123.

(Page 124, top:) The statement as to the purchased gas is incorrect. The amount paid for this gas was as follows (pp. 5777-8):

Cost of labor and materials	$854,459.57
10% thereon	85,445.96
	939,905.53
Less gas sold	1,014.68
	938,890.85
Interest on capital invested in procuring said purchased gas	58,149.04
	$997,039.89

In this as in various other places, the Master and court fell into a plain error; and through an erroneous calculation came to overlook the fact that interest was actually being paid by complainant on capital invested in the manufacture of the purchased gas.

(Page 125:) It is rather absurd for complainant to submit such calculations as this, when it has not submitted all of the facts relating to the capitalization, income, expense, and physical condition of the other companies. One of our grounds of objection to the decree is that this information should have been given us (App. Br., p. 273); and we have pointed out that the transaction is doubtless a profitable one to those companies (*Id.*, p. 104). When a corporation is already earning enough in its own natural territory to pay expenses and give a reasonable profit on fixed capital, it is very common for it to sell gas at a much reduced rate in other territories. This is because its fixed charges are already provided for, so that they may be disregarded, and the profit computed upon operating expenses alone. It is for this reason, as well as on account of the operation of the tariff laws, that so many of our manufacturers sell their surplus output abroad at a lower rate than at home. This is doubtless the case with these subcompanies, which are so anxious for a business that pays a profit of ten per cent. over operating expenses, when it requires no additional fixed capital on their part; while on the other hand a return of five per cent. is required by them on all such capital necessitated.

Complainant's argument at page 129 has no basis in the record. It nowhere appears that the subcompanies (except the New Amsterdam) were worked up to the limit of their previous capacity, even when they supplied all their respective shares of this purchased gas. The fact that the New Amsterdam company is paid interest on the new construction which the "agency agreement" renders necessary—paid by the complainant and the amount charged up against its consumers—is conclusive to the contrary.

It is very evident that complainant is trying to get out of its own consumers a profit on its investment in the stocks of the other companies: while when the similar suits of those companies come on to be tried, it will see that they get credit for their whole capitalization and are not debited with any more income than they actually earn out of this purchased gas. The same capitalization will thus be charged twice, once against the consumers of the complainant and once against the consumers of the other companies.

The foregoing discussion covers everything in the brief under consideration up to page 135.

(Page 136:) The ten cent. item involves only matters of fact, and not of law. Complainant's argument is as usual based on statements of experts, which in turn are based on insufficient or incorrect information. We have stated the facts, which are much more simple than they seem (App.

Br., pp. 113-26). Instead of underestimating the depreciation, the court has overestimated it (*Id.*, pp. 250-2).

(Page 139, foot:) These alleged additional items—candle power, taxes, labor cost—we have fully considered (*Id.*, pp. 130-9). The last of the three items relates to an increase of wages, which may have occurred after May 1, 1906 If so, it could not be considered in support of this injunction (*Id.*, pp. 198-9).

(Pages 141-3:) A collection of alleged admissions on the part of the defendants is here furnished to the court. The first of these admissions is in the introduction of State's Exhibit L; but State's Exhibit L confutes complainant's claims (App. Br., pp. 122-3, 250-1). The next admission is in obtaining from the Master a finding that complainant expended an average of 10.89 cents per M. of gas sold during the twenty years preceding 1905. This is a fact, but it does not carry the conclusion of law which complainant desires We hardly need discuss the quotation from the Attorney commission (p. 14). The State's answer denies that the New York State Gas Commission is a quotation from complainant's own complaint. That complaint annexes an exhibit which it alleges to be an opinion or statement of the commission (p. 14). The State's answer denies that the paper "was rendered by the said commission in connection with its said order," and avers that it "is a statement made to the public press merely" (p. 50). It is not, however, inconsistent with anything in our argument, since we concede that a slight increase was necessary to bring the expenditures for repairs and replacements up to the average of the previous twenty years (App. Br., p. 251). Here again complainant attempts to charge the State with the vagaries of the city's witness, Prof. Bemis. We have already shown how he was misled by using in this case ideas derived from testimony in other parts of the country, without sufficient examination of the experience of the complainant itself (*Id.*, p. 121). In what way a report of a "Chicago Committee" of undefined origin and character is an admission binding our clients, we are unable to guess (p. 144). Here again complainant concedes that the court below was unable to grasp clearly the facts of the case, on account of the limited time at its disposal and the size of the record. This agrees with our own views, that the time which is actually allowed by a Federal judge for the discussion before him of a record made up before a Master is totally inadequate to the proper handling of such a case, especially in view of the rule in Blease *v.* Garlington. In our opinion at least treble the time allowed by the judge was necessary to the proper hearing of this case; although the time (a little over four days) which he did allow might have been sufficient had the Master been able, as a State commission or a State court would have been able, to keep incompetent and irrelevant testimony out of the record.

(Pages 146-7:) Having stated that its sales of gas through its mains had reached "the enormous amount of about one hundred and sixty-four billion cubic feet," complainant criticises us for not accepting the test of average cents per M as "the most safe and accurate guide" as to repairs and renewals. Yet it presents testimony to the effect that these same mains are as good as new, and will not depreciate in a century, and obtains a decree for a sum very much larger than the original cost of the mains, based upon that proposition (App. Br., p. 78). It is stated somewhere in the case that the repairs to mains in the small city of Holyoke, where most of them are laid in soft earth and not covered with pavement, are higher per M than in the city of New York. The tabulation on page 251 of our main brief shows how the proportion of repairs and replacements has been reduced, notwithstanding the fact that during the later period the distributing portion of the plant has been used for purchased as well as home-made gas. It is interesting to see how complainant, when struggling for the life of its favored fallacy, for the first time concedes that there are "practical witnesses on both sides of this case." We believe that this is the first instance of such a concession. Defendants on the hearing before the Master felt obliged to meet complainant with counter-testimony upon its own theory of proof, although the State at least disputed the correctness of the theory. The Master followed complainant's line of argument on this, as on almost every other point, but the judge recognized the fallacy and endeavored to keep clear of it by using "as the basis for computation, not the cost per thousand of gas, but the cost per annum of complainant's whole gas business" (p. 428); consequently miscalculating (if our reasoning is correct) only to the amount stated at page 251 of our main brief.

(Pages 148-9:) It is not shown that the agreement to open the new account with the ten-cent item, or the vice-president's testimony in Boston, was prior to the introduction of the resolution under which the Stevens committee was appointed, or that its first discussion was prior to the time in 1903 when the city stopped payment on all its gas bills upon the claim that they were too high (see Brooklyn Union Gas Co. *v.* City of New York, 188 N. Y., 334).

(Pages 149-50:) The court will find our computation to be correct. It is all taken from complainant's own figures. It shows the amount of new capital brought in from the outside since 1884, and the amount of that new capital which was expended in other enterprises. The balance is not over the sum mentioned, $3,929,371.82 (App. Br., pp. 22-3). The basis for our statement that the sum shown by complainant's Exhibit 79 increased the manufacturing output to the extent named is to be found in the cross-examination of defendant's chief engineer by Mr. Page at pages 1714-16 of the record and in complainant's Exhibit 85, page 5039. The words "more than" in our brief, at the place quoted, should read "nearly." The sales of 1884 were probably on the basis of something less than 3,900,000,000, while those of 1905 were 13,283,164,000 (p. 5039).

(Pages 152-3:) The testimony does not show, as stated, that the other companies "do business wholly in the more congested part of the Island of Manhattan." It does state that the complainant has to maintain candle power in the "most remote districts of the city:" but this is a use of the word "city" in the old sense of the term. Complainant is practically confined to the Island of Manhattan. If the facts as to the other companies had been put in evidence, as we contend that they should have been, any special factors in the situation would doubtless have been brought out.

(Pages 153, 154:) We respectfully protest against Dr. Humphreys and Mr. Carter being described as "the witnesses of both appellee and appellants." On the contrary, we have already protested against the acceptance of any statement of Mr. Carter unless otherwise corroborated; and this would be peculiarly applicable to estimates of station cost of gas of other companies, made in rebuttal without opportunity of surrebuttal.

(Page 157:) This point of complainant's brief is entirely in line with our own argument (p. 17). We therefore do not discuss it, although we do not understand that all of its statements of fact would have stood if the collateral issues had been fully tried out. But for Blease *v.* Garlington we would probably have been spared this large section of the record.

(Page 162:) The question of pressure we shall discuss in connection with Mr. Beck's brief.

(Page 176:) This is an attack by complainant's counsel upon the Stevens Investigating Committee of 1905, extracted from an affidavit sworn to by Secretary Carter.

It may cause surprise that an *ex parte* statement of this kind should get into evidence at all.

This is one of a set of extracts from affidavits which came into the record in a very singular way, over the objection and exception of the counsel for the State, and by a ruling which as against them seems to us to be grotesque (pp. 807-8, 952-3, 957, 1669, 1670, 1676-8).

These *ex parte* reflections on the Stevens committee were so entirely irrelevant to any question in the case that the defendants seem to have left them, as complainant here states in italics, "uncontradicted."

In speaking of the Senate Committee Report of 1886, it omits to state that the committee consisted of three members, of whom the chairman most vigorously dissented.

The affidavit states that the investigation by that committee was one "lasting nearly a year." The committee convened on October 15 (p. 6071). The last hearing was on December 30 (p. 6514). The minority and majority reports are dated on February 26 following (pp. 5382, 5388).

In stating the completeness of the investigation, it fails to note the fact that one of the most important witnesses left the State before his examination was completed, and stayed away until the committee adjourned (p. 6516).

As to the Stevens investigation, the fact that the companies had no "right" to participate by counsel is mentioned. It is admitted that the "courtesy" of the committee permitted "brief addition of questioning or data" and (while evidently endeavoring to give the contrary impression) carefully refrains from stating whether or not the courtesy was so exercised as to permit the necessary facts to be brought out. Had the affidavit been more frankly and less cautiously drawn, it might have appeared that extensive cross-examinations were permitted on the part of the counsel to whose brief we are replying. The force of the statement that the company was not permitted to address the committee at the conclusion of the investigation is somewhat broken by the fact that the Master subsequently declined to hear oral argument of this case until after he had filed his report. The witness was incompetent to state whether the committee had "time or opportunity to consider written memoranda submitted, prior to preparation of its report to the legislature." We have just commented on the fact that complainant claims the court below to have had insufficient familiarity with the present record; and we believe that we have shown remarkable unfamiliarity with certain portions of it, on the part both of the Master and of the court.

It seems to us that it would be extraordinarily improper to give any weight to the general statements of Mr. Carter as to evidence before the committee. It would seem sufficient that he reproaches the committee with believing his own statements under oath; statements which we have quoted at some length at pages 59-63 of our main brief. The fact is that the Stevens committee as to nearly all of the facts reported relied upon the admissions of the complainant's officers and employees; admissions which under the advice of counsel they afterwards disavowed, but which fully justified the recommendations of the committee as to the reasonableness of a seventy-five cent rate for gas, and which are supported by the actual facts as we understand them, and as we have stated them to this court.

(Page 177:) This sets forth another part of the same Carter affidavit, containing reflections on the Gas Commission.

It is not charged that the commission took insufficient time to consider the case, which is admitted to have been pending before it for about three months and a half (p. 5). It is not claimed that either party before the commission was forced to proceed without sufficient preparation or to rest before the testimony was all in; or that there was any such extraordinary pressure upon counsel as characterized that period of the present suit when the record was being made up.

The first paragraph quoted from the Carter affidavit charges the commission with excluding certain items, part of which were excluded by Judge Hough, and most of the rest of which we believe this court will exclude.

The second paragraph states the newspaper criticisms upon the commission for not more promptly reporting in favor of 80 cent gas; criticisms of a nature not infrequent with relation to courts as well as other tribunals (except so far as they are restrained by fear of punishment for contempt of court) and which in themselves show that the commission insisted upon proper deliberation before it acted. It then goes on to set forth the efforts made to obtain the passage of an 80 cent bill by the legislature, based on the Stevens committee report, without waiting for the conclusion of the proceedings before the commission. It ends by stating that a bill was introduced in the legislature by Senator Stevens to abolish the commission. There is nothing in this paragraph that would afford a ground for inference that the commission, who as Carter admits were deliberating when outsiders were pressing for immediate action, were affected by outside pressure in coming to their decision; and the fact that they fixed the rate at eighty cents instead of seventy-five cents as had been recommended by the Stevens committee, together with the admissions that had been made by the complainant and the facts that had been brought out in this record, give such ample justification for the decision to which they finally came, that the reflections which counsel makes under cover of the Carter affidavit seem to us to be grossly improper; and the Master should not have stretched or reversed the rules of evidence to admit such a paper into the record of this case. Had Carter been asked by his own counsel the questions commencing at the foot of page 178 of

Mr. Mathewson's brief, they would doubtless have been objected to by the State.

The act of 1906 establishing the 80 cent rate was passed because of the threats of the gas companies to attack the constitutionality of the act establishing the Gas Commission, as unlawfully delegating legislative power. After two investigations, and with this doubt existing, it was thought that there was enough evidence to justify the reduction to 80 cents, and that all technical obstacles should be removed by act of the legislature.

(Page 179:) The Stevens report, that complainant's "gas making plant, including whatever franchises it may own, does not exceed the sum of $30,000,000" (p. 80), is accompanied by the figures upon which it is based; and these figures are those which were sworn to by Mr. Carter himself, in the affidavit and oral testimony set forth in full upon our brief (p. 78; App. Br., pp. 59-63, 76). This showed a total value of the tangible properties at $27,298,576.50. The reasons stated for giving but a small value if any to the franchises are set forth at pages 78-80. We respectfully submit that this report (which was reputedly drawn by a lawyer of the highest standing at the bar of New York) shows better consideration of the subject than those of the Master or of the court below upon the same question, and are fully supported by the facts and law as set forth in our main brief.

The final climax at the foot of this page is a reference to the special franchise tax assessment. We should hardly regard this claim of relationship between the so-called special franchise tax and the franchise valuation for rate-making purposes as worthy of notice, if it had not been endorsed by Judge Lacombe and Judge Hough. We have dealt with it in the main brief, and shall consider it again in replying to the brief of Mr. Garver.

Mr. Beck's Brief.

I. JURISDICTION.

(Page 21:) We are not aware of any such practice as moving to dismiss a bill for want of jurisdiction, because there is an adequate remedy at law. There is no record, so far as we are aware, of the oral argument before Judge Lacombe, and we do not know what questions were selected to be pressed on that occasion; but whether or not the preliminary injunction had been granted, we presume that the complainant would have persisted, and the defendants would have had "to take their chances before a Master." It is difficult to guess how Mr. Beck thinks that the adequacy of remedy at law could have been disputed until after the Master's report.

(Pages 27-8:) Cleveland *v.* Cleveland Railway Co., 194 U. S., 517, 531, states cogent reasons for the exercise of jurisdiction by a court of equity, when it has jurisdiction; but the decision is expressly based upon, and states the case to be within, Detroit *v.* Detroit Railway Co., 184 U. S., 368, 381. The same considerations are fully set forth there, and are held as sufficient reason for exercising equitable jurisdiction when the defense that there is an adequate remedy at law was not seasonably taken; Mr. Justice Peckham saying that "we do not feel compelled, under the peculiar circumstances of the case, to ourselves take notice of it." The peculiar circumstances of these street railroad cases are that if the question cannot be tried out in court, the passengers will be refusing to pay the fare demanded, upon penalty of being ejected and keeping the car service in continual turmoil and confusion, with "probably frequent breaches of the peace" (184 U. S., 379). The relations between a gas company and its consumers are very different. There has been no confusion and no breach of the peace incident to the considerable litigation which has arisen in the State courts of New York, owing to the fact that this complainant saw fit not to join as defendants any representatives of the consumers, and that consequently Judge Lacombe did not enjoin the consumers from suing the company to protect their gas meters. Had Judge Lacombe not interposed with this suit, the question would have been immediately tried under the State procedure, although this complainant might have been a defendant.

(Page 29:) While the Public Service Commission Act provides for mandamus, it but transfers to the commission a function which previously belonged to the Attorney General. The remedy already existed (People *v.* N. Y. C. & H. R. R. Co., 28 Hun., 543). We have made no concession to the contrary.

(Page 30:) Section 962 of the New York Code of Civil Procedure has always been practically construed as directory, and we do not believe that any court in any State or country would construe such a clause as mandatory without much more positive language to that effect. No public prosecuting officer in any State, so far as we are aware, is obliged to sue for all penalties recoverable, when such action would be unreasonable. "Must" is very frequently interpreted as "may." Various New York cases to this effect are quoted at 28 Cyc., 780.

II. THE ELEVENTH AMENDMENT.

This point was not waived, but properly taken by answer (Illinois Central R. R. Co. *v.* Adams, 180 U. S., 28, 38-9). The Eleventh Amendment is not in term applicable to a suit against a State by one of its own citizens, but has always been held applicable by analogy, as in Hans *v.* Louisiana, 134 U. S., 1, 10. In view of the decision in *Ex parte* Young, 209 U. S., 123, we did not raise the point in our assignments of error, although a judgment for costs is granted against Mr. Jackson *as* Attorney General. This seems to concede that the suit is one against the State. It cannot be intended as a judgment against him personally, since the main costs were incurred during the administration of his predecessor in office. It must be therefore intended as a judgment against the State as such, and not upon the theory of the Young case. If it is a judgment against the State, the suit is a suit against the State. However, we have waived the point so far as we are concerned, while the Attorney General has raised it only by an assignment of error as to the judgment for costs.

III. Pressure.

(Page 35:) Complainant calls attention to the fact that the act of 1906 took effect within a month after its passage, thus probably allowing insufficient time for the alterations necessary in complainant's distributing system. The answer to this suggestion is that the provision as to pressure was copied from a statute of the previous year. Complainant had had a year within which to conform itself to the requirements of this law, and it does not appear that this was not sufficient time. On this page complainant quotes the language of one of its own requests to find, which was found by the Master (p. 255). Singularly enough, it selects for quotation a passage referring to the Edgerton proposition, upon which we stated in our brief that the State had never relied; its reliance is upon the system of district governors discussed in the cross-examination of Mr. Bradley by Mr. Page (App. Br., p. 150). This cross-examination is to be found at pages 565-576 of the record. The Master's discussion of the subject is to be found at pages 248-250, of which only seven words are quoted by Mr. Beck. The Master refers to Mr. Bradley's admission that it was practicable to put district governors at different points; that they were used in many cities; and that theoretically it was practicable to use them here; but that he had doubts of their reliability; and the Master summed up in the paragraph quoted by us at page 283 of our main brief. Mr. Bradley does not pretend to claim that the expense of the district governor system is prohibitory. He states that "in my opinion district governors do add to the dangers of interruption and difficulty with gas supply;" and, while admitting their use in other cities, says: "Perhaps where they have more nerve than I have."

The provision as to pressure is the provision in this gas legislation which was not based upon admissions by the complainant, but upon testimony of outside experts, like Professor Hallock (pp. 2846, 2863). It is the only point as to which it seems to us that there can be very serious question as to whether the legislation is wise; but the question, as Mr. Bradley admits, is one where experts differ, and where the practice of different cities differs. Does the Fourteenth Amendment require the court to review the legislative decision as to whether the engineers whose advice has been followed by the legislature have too much "nerve"? The case seems to us quite analogous to that of the Federal safety appliance laws. "It is scarcely necessary to say that courts do not sit in judgment on the wisdom of legislative or constitutional enactments. This is a general principle; but it is especially true of Federal courts when they are asked to interpose in a controversy between a State and its citizens" (Louisville & Nashville R. R. Co. *v.* Kentucky, 183 U. S., 503, 512).

(Page 43:) We are somewhat surprised to learn the names of the decisions upon which we "rely principally" (see App. Br., p. 282).

(Pages 46-7:) Mr. Beck's argument at this point assumes that the decree of the court below is correct in every particular apart from the question of pressure, that the district governors would involve an expense of many millions of dollars, and that Mr. Bradley is in error in admitting, and the Master in error in reporting, that their use is physically a possibility. If these assumptions be made, we concede the result which Mr. Beck reaches.

IV. Penalties.

(Page 48:) The order appointing the Master did not, as we construe it, authorize him to make any findings about this branch of the case. This is a question of law, and his business was with the facts. He so construed it (p. 152), and said nothing about the penalties in his draft report. Subsequently complainant submitted a request that he find that the penalties "so far as the evidence shows are unexampled in extent and severity." There having been no issue about it, there had been no evidence about it, unless something bearing on the point may have been slipped in, in connection with some other subject. The draft report had given no notice to the defendants that such a point would be raised. The request, and the granting of the request, seem to us to have been improprieties. In the first sentence of this point, Mr. Beck seems to endeavor to give the impression that the penalty question was discussed before the Master, and that no attempt was made to defend the statute in the court below. The briefs and stenographic minutes of the discussions below are not in the present record; but in view of this statement of the brief we may be permitted to say that the penalty provisions were defended in the court below with entire seriousness, and to the extent which the very limited time allowed for discussion permitted. That discussion is the basis of pages 165-175 of our main brief.

V. Discrimination.

(Pages 52-4:) Since so much stress is laid upon the Lake Shore case, 173 U. S., 684, we desire to say a few words more about that case. It was supposed by many, when first decided, to lay down a very drastic rule in favor of uniformity of rates. It is now settled that any reasonable classification may be adopted. The Lake Shore case was one of a very peculiar and ill-constructed statute, whose provisions seem to have been so severe that they were regarded by the majority of the judges in this court as capable of unconstitutionally reducing the net income of the appellant company. This court has since stated, in explanation of the case, that "there was no reasonable ground upon which the legislation could be rested, unless the simple decision of the legislature should be held to constitute such reason" (Wisconsin, etc., R. R. *v.* Jacobson, 179 U. S., 287, 302).

Our interpretation of this case seems to us to be necessary, since otherwise it would be difficult to explain how the railroad could be heard to complain of a discrimination by which it was not the sufferer. The later cases cited by us show that it cannot complain of special classifications, if on the whole it is permitted to earn a rate of return that protects its constitutional rights. Yet the point that the railroad itself was not discriminated against, and that the persons discriminated against did not complain, was not discussed by the court, or apparently even by counsel. It seems to be well-settled that a person will not be heard in court to argue that a statute is unconstitutional, unless his own constitutional rights were violated. The doctrine dates from as far back as Sinclair *v.* Jackson, 8 Cowen, 543, and is sustained by the cases cited in Brown *v.* Ohio Valley Railway Co., 79 Fed. Rep., 176, 178, and in 8 Cyc., 791.

There is a reason for this, which is at once obvious when suggested. It is well settled in this court, in those of the State of New York, and everywhere else, so far as we are aware, that a constitutional right of this kind can be waived (Pierce *v.* Somerset Railway, 171 U. S., 641, 648; People *ex rel.* McLaughlin *v.* Police Commissioners, 174 N. Y., 450, 456, and cases cited; cases cited in 8 Cyc., 791-3). Hence nobody can appeal to it who could not waive it.

The discrimination between the city as a whole and its inhabitants as individuals has existed ever since 1897. It is less since 1906 than at any time during that whole period (App. Br., p. 182). It is not claimed that any single individual has complained. Nobody before Mr. Beck has had the ingenuity to discover the discrimination in favor of proprietors of hotels who do not use gas at all.

(Page 57:) The Wilson case, which held that a railroad could not be forced to carry a policeman free of charge, did not turn upon any discrimination in favor of the public, but upon the ground that a railroad company could not be forced to carry any person without recompense.

VI. THE TECHNICAL POINTS.

(Page 62:) Counsel seems to misunderstand the passage which he quotes from our main brief. The misunderstanding would have been avoided if we had said "every other question *of fact* was evidential," etc. There are questions of law as well as of fact in the case, and this is an appeal, not a writ of error; wherefore all questions of fact are before this court, although we have submitted only certain questions, for the reasons stated at pages 159-161 of our main brief.

(Page 66:) None of the questions which we have assigned for error are "infinitely complicated," or as complicated as many which reach this court upon appeal. The complicated questions are imported by the appellee, although, anticipating the probability of some such action on the appellee's part, we devoted a part of the statement of facts in our brief thereto. Most of the facts which we state as bearing upon our own assignments of error are undisputed.

(Pages 67-9:) As to our alleged admissions, it would seem sufficient to refer the court to the pages cited by complainant from our main brief.

(Page 70:) Apparently complainant has been misled as to the Blackfeather case, to which the Attorney General intended to refer, by a mistake in the page reference. We understand the reference to be to United States *v.* Blackfeather, 155 U. S., 180, 186. Certain of the points urged by the appellee in that case seem to bear the same relation to the record as the points urged by the appellee in the present case. The complainant here also omits to notice Landram *v.* Jordan, 203 U. S., 62, referred to in the brief of the city of New York. In that case it would appear that the appellee was not only attacking a portion of the decree which was unfavorable to himself, but also was trying to sustain the decree so far as favorable by an argument as to which he had been overruled below. We have been unable to find any authority directly in point, as to whether under the practice of this court an appellee can sustain the decree below by specifying errors in matters altogether unconnected with those brought to the attention of the court by the appellants, requiring this court to open portions of the record that are not referred to by the appellants, and requiring it to make findings of its own upon matters not passed upon or matters adversely disposed of by the court below. If any such practice were permitted, it certainly seems as if there should be a rule requiring the appellee to assign errors. In this case, with so voluminous a record, the appellee has specified errors in a brief which did not reach the appellants until the day after the case had actually been called for argument, and it is only by a happy chance that the unusual length of the cases ahead of it has allowed several days' time for examination of the points thus raised. Certainly an affirmance under such circumstances would not be consonant with equity, even if the points were well taken. It seems to us that the only thing that the court could equitably do if (while sustaining the appellants' assignment of errors) it took jurisdiction of appellee's contentions, and considered that they were sustained to the extent of offsetting the errors on the other side, would be to remand the case for further proceedings.

In the present case, if our appeal is to be regarded as opening the whole record so that the case is to be heard *de novo*, there are many questions which we could bring up, although (on account of the fact that it would only be by adding a good many small items together, each involving more or less complication, that a large correction could be made either in the capitalization or in the net income as computed by the court below) we did not feel either that it was necessary for us to do so or that we would be justified in troubling this court with the matter. We have not had time since receiving the appellee's briefs to bring these matters before the court, and if the Master and court have (as for the purposes of appellee's argument at this point they must be assumed to have) committed flagrant errors prejudicial to the appellants, their findings on other points should not be assumed to be correct without remitting the case for a further hearing and report.

We are confident, however, that the independent points urged by the appellee will not be found to require serious consideration.

VII. Reviewability of Rates.

(Page 72:) We never made any such contention as is set forth here, and do not understand that there is any question about the correctness of appellee's proposition.

VIII. Rate of Return.

(Pages 76-9:) Mr. Beck uses a picturesque phrase, which he modestly admits having coined himself, to describe the margin that has been pointed out by Justices Gray, Miller, and Brewer (App. Br., pp. 253-4) between the rate which is merely so low that the State authorities ought to permit it to be raised and the rate which is so much lower that its enforcement would amount to confiscation. We do not understand whether Mr. Beck affixes to this zone the appellation "twilight" as indicating his own state of mind about it or because one reason for its existence is that the unreasonableness of the rates comprised within the zone is not clear enough to warrant interposition by a Federal court. The distinction seems to us a clear and necessary one, and it has been generally regarded as an established one. Our endeavor has been to obtain a more clear definition of its upper and nether limits.

Mr. Beck's whole treatment of this question seems to us to confuse two essentially different subjects, namely, the taking of property within the meaning of the Fourteenth Amendment and the allowance of a fair compensation with reference to the risks of a particular business. His reasoning is that if the complainant owns certain property, no matter where the property came from or how inequitable to the public the allowance of a return thereon would be, nevertheless the language of the Fourteenth Amendment requires that a full return should be allowed, just as much as in the case of a corporation which has an equity to a full return. He demands a return on the present value of the property, even if the property were a gift from the public,* accompanied by no understanding that any return should be permitted upon it; and he demands a return upon all increments of value, whether earned or unearned, and whether temporary or permanent. The rate of gas must go up and down according as the market for iron pipe varies, although the bulk of the pipe has been underground for a generation.

He finds some color for this position in language heretofore used by this court; language used in cases whose facts did not suggest the possible future appearance of a case like this. We have assumed that the language upon which he relies will be construed by this court in the light of the facts of the cases in which the language was used. If not, then the court will feel obliged to give to all the property of complainant, valued according to its present value, such rate of return as shall be non-confiscatory; in other words, as shall prevent the property from being taken (for we are unable to distinguish between "taking" and "confiscation").

---

* The illustration, so harped upon, of a gift from an individual, is no embarrassing. When the gift is from some individual interested in the enterprise, and not from the public, it stands like any other contribution of capital.

But such a result would not be equitable as between the complainant company and the persons whom these appellants are charged with the duty to protect, to wit, the consumers of gas. It would be the result, not of equitable considerations, but of the language used in a certain clause of the constitution. It will be within the power of our clients the Public Service Commission, and it may be their duty, to allow a rate of return which is much higher than that which according to our contention is enough to satisfy the Fourteenth Amendment; but on the other hand they will not be forced to allow more than a non-confiscatory return upon property as to which there is no equity to any returns at all.

Hence, in our motion to advance this cause, we joined with counsel for the city in laying down the proposition that the functions of the Federal and State tribunals were altogether different: that the function of the State tribunal was to allow a fair and liberal rate of return on that as to which the company had an equity to a return, namely, the *capital actually invested;* while the function of the Federal court, according to complainant's interpretation of the previous decisions of this court, is to see that at least the minimum non-confiscatory rate is earned upon the *present value* of all the property employed in the business.

If this position be taken by the court, and the cost of duplication by a plant equally effective be taken as the test of present value, then this court will be obliged to allow the full unearned increment on the mains and services, however inequitable that allowance may be as against the consumers; and it will be obliged to allow upon the cost of real estate something more than the original cost of the real estate. But they will not be obliged to allow more than 3½ per cent., whereas the Public Service Commission would never for a moment think of cutting a corporation down to any figure approaching that limit, as to any capital actually invested.

(Page 80:) The Fourteenth Amendment does not contain the provision of the Fifth Amendment that private property shall not be taken for public use "without just compensation." Mr. Beck seems to be under a misapprehension as to this. We do not understand the point to be material, as the "just compensation" provision is not applicable to a rate regulation case.

(Page 87:) We do not remember the remarks of the city's counsel as quoted here from the stenographic minutes. The position of the city at that time somewhat differed from our own as to the rate of return. Mr. Beck can hardly have been much surprised by our position, as it was fully argued before Judge Hough a year ago, and restated both by ourselves and by the counsel for the city in the motion to advance the case, filed in this court at the close of the last term.

IX. Rate of Return.

(Pages 88-90:) Mr. Beck takes what seems to us the singular position that because the New York usury law fixes a maximum rate of return of 6 per cent.—its justification, in Mr. Beck's words, being the "prevention of extortion"—therefore it would be unconstitutional to put the earnings of a public service corporation at a lower figure, while it might be unconstitutional not to permit it to earn more. His reason for the latter proposition is that the corporation adds "to the mere use of money all the resources of science, industry and business sagacity to serve the public interest." But the resources of science are represented by property which forms part of its capital, and the industry and business sagacity are hired and paid for, and charged to the consumer as part of the operating expenses.

Any argument drawn from the usury law is fatal to the complainant. The usury law fixes 6 per cent. as the very highest rate of interest that can be earned from the very riskiest kind of loan. It is admitted by everybody that the complainant's business is about as safe as any business can be; that its risks are risks inherent in all business enterprises. Hence by the reasoning underlying the usury law, a return of 6 per cent. upon the complainant's investment would be unreasonably high.

It seems to us that the court below was right in throwing the usury law out of consideration altogether. Usury laws are disapproved by the great mass of thinking people. The rates are changed only at long intervals. The rate in New York was lowered from 7 per cent. to 6 per cent. in 1879. Did the enactment of the statute of that year change the constitutional rights of public service corporations?

In our opinion it is quite possible that the State authorities will ultimately come to the conclusion that 6 per cent. is the minimum rate of return that should be allowed to a public service corporation under present conditions; that it should be allowed to declare at least 5 per cent. dividends and lay up at least 1 per cent. against contingencies.

On the other hand, it is altogether probable that a much larger return would be regarded as not extortionate in a large class of cases; to this extent disapproving the law which prevents an individual from risking his money in a business enterprise for a greater return than 6 per cent., unless he becomes a partner or stockholder.

Mr. Beck claims his proposition as to the usury law to be sustained by "the highest courts of some of the States." His use of the phrase "some of the States" is analogous to the royal "we"; for it means nothing but his own State of Pennsylvania. The rule laid down in the first Pennsylvania case which he cites was so unreasonable that it was confirmed in the later case by only a bare majority of the court.*

(Page 92:) The case here cited from the Appellate Division of the Supreme Court of New York is the Jamaica company case referred to at page 238 of our main brief. The referee in assessing the special franchise of the little water company which was appealing, estimated as the profits of the tangible property an amount equal to a 5 per cent. return on its value. This of course left a very large balance of income to be attributed to the intangible franchise. In fact, the computation was made upon the lines adopted by the referee whose opinion is quoted by the Master in his report in this case (p. 204). It seemed to the court, and seems to us, that this made the franchise assessment unduly high. If a 6 per cent. return is reasonable for a little company like the appellant in that case, certainly 5 per cent. is reasonable for this complainant; but for the purposes of the special franchise tax it is altogether probable that a uniform rule will be adopted for the whole State, and that the rate of return will be put at 6 per cent., irrespective of the particular circumstances of the particular company under consideration.

(Pages 93-4:) Mr. Beck's reasoning would not permit a State ever to conform its laws to a fall in the general rate of interest, or to reduce the rates of a corporation which had passed out of the stage of an "infant industry." His position is inconsistent with the ruling of this court in the Stanislaus County case.

In referring to the report of the Senate Committee of 1886, he forgets that the chairman of the committee (which had but three members) was considering a return upon tangible property alone; and that the report was never acted

---

*Pennsylvania R. R. Co *v.* Philadelphia County, 220 Pa. St., 100; Mitchell, C. J., Fell, Brown, and Elkin, JJ., concurring; Mestrezat, Potter, and Stewart, JJ., dissenting.

upon. The committee was doubtless affected by the fact that to limit the return to 10 per cent. would be a vast reduction from the rates prevalent up to that time. The New York Mutual company was chartered in 1866, when rates were particularly high. No contract was made by which it should be permitted for all time to earn 10 per cent. dividends, but the limit was put high for the benefit of an "infant industry" from which effective competition was hoped; a hope that was finally destroyed by the purchase of a majority of its stock by this complainant. The 8 per cent. rates assumed by the Stevens committee of 1905 and the Gas Commission of 1906 were assumed in connection with a theory of capitalization from which complainant dissents; nor was this rate assumed to be the lowest reasonable rate, but only to be the lowest rate to which it would be fair, all things considered, to reduce this complainant, in view of the much higher rates which it was then enjoying. We believe that if this case could be submitted to the court upon the report of a Master who did not believe that the burden of proof as to every item was upon the consumers as against the company, even on the present record it would appear that the complainant would be making far above 8 per cent. at the 80-cent rate.

The paragraph quoted from the railroad law merely incorporates in a revision of the statutes a provision adopted in the early period of railroad construction (New York Laws of 1850, Chapter 140, § 33). Its effect has been radically modified by subsequent legislation. At the 80-cent rate this company would earn over 20 per cent. per annum on the capital actually invested.

X. Basis of Calculation.

(Pages 98-9:) Our illustration referred to by Mr. Beck at this point was not drawn from a comparison of one "plant" with another, and assumed that the two companies compared were equally provident, equally prudent, equally wise, and equally thrifty.

(Pages 99-100:) In considering the next proposition in our main brief, Mr. Beck overlooks the fact that it is unnecessary for the complainant to continue the use of the $10,000 tract which has become worth $1,000,000; that another $10,000 tract would do just as well; that the very reason for complainant's continued use of the tract is that it only cost $10,000, so that complainant can afford to stay there until its plant wears out, without having to carry a heavy capital charge; that nobody would pay $1,000,000 for the land except for the purpose of applying it to entirely different uses, so that if we assumed that the land could only be used for the purposes of a manufacturing establishment, no expert would ever think of valuing it at $1,000,000. Many investors, waiting for a rise, keep cheap buildings on valuable land and collect only enough rents to pay the carrying charges; but no investor other than a public service corporation ever thought of collecting from anybody else an annual income on the probable value of the land, if it should be cleared off and sold at once.

(Page 100:) We fear that we shall never agree with Mr. Beck as to what is "socialistic." His use of the word at this page, as in most other places, seems to us to make it synonymous with "equitable." His proposition here is that a company which is understood by the public to be capitalized at say $10,000,000, and which is permitted by the public (in view of its conducting a valuable infant industry) to pay very high dividends on this capitalization, may "hide away"* further profits which the public does not know that it is making, by paying them out in what the public believes to be operating expenses, but which are really additional construction; the purpose of the whole thing being to prevent the public from knowing how much money the company is really making; and then capitalize this additional construction against the public, and collect tolls thereon for the rest of eternity. It seems to us that to permit permanent capitalization of an original fraud, and make it the basis of a monthly charge against every vote in the community, is the very way to spread the spirit of socialism in the community. We believe that it has already had that effect in the city of New York upon a considerable scale; and that no one thing has occurred in that city for a generation past which has so encouraged the spirit of socialism as the Master's report in this very case. We believe that a corporation which has led the public to believe that its earnings, over and above handsome dividends declared, have been absorbed in operating expenses is equitably estopped from asserting that the property thereby purchased is really additional capitalization. It is specious, but not more than specious, to say that the hiding away of earnings in this manner is equivalent to declaring dividends and investing the proceeds in a further issue of stock. It is not the equivalent, because the public might have regulated the rates and reduced the net earnings, if the latter had not been hidden away. In fact, the very reason for hiding away the profits was to prevent the public from regulating the rates.

---

* See Mr. Mathewson's brief at page 16.

We do not expect the court to reach this point in its investigation of the present case, because the rule of present value, when applied by the correct test of cost of duplication by another company, and by a plant sufficient to accomplish the same result with up-to-date methods, is far more than sufficient to decide the case. It would be manifestly improper for us to ask the court to decide questions whose decision is not necessary to a disposition of the controversy now before it; but in discussing the questions involved, we have felt that the subject should be discussed as a whole, and from all points of view; and we believe that the position which we have taken will ultimately be decided to be correct.

The passages quoted by Mr. Beck at pages 101-2 do not conflict with our argument, since they relate to the construction of the Fourteenth Amendment, while our argument was a consideration of the true basis for the liberal percentage of return which the State ought to allow, although the Fourteenth Amendment does not so require.

(Page 103:) We do not think that Mr. Beck would find that the doctrine of basing the return upon the capital actually invested would result in a destruction of railroad values comparable to the San Francisco earthquake. No case has as yet reached the Federal courts which would indicate such a state of affairs. So far as we remember the judicial precedents, they always disclose the case of a railroad whose original cost is greater than its present value. We believe, however, that a revaluation such as is here suggested would show (so far as a valuation based upon expert testimony can be said to show anything) that in many cases the present value approximates the original cost. This will be largely on account of the enormous present value of the terminals, and of the rights of way through cities. But there are few railroads, and few corporations of any kind, which approximate to the situation of the complainant.

XI. The Costs.

(Page 104:) This point, which indeed does not concern us except as taxpayers, we have already referred to in connection with Mr. Beck's point II.

XII. The Condition upon the Injunction.

(Page 108:) Probably the most extraordinary proposition laid down by Mr. Beck is that a Federal court may enjoin the enforcement of a State law, but cannot put a reasonable condition upon its injunction because this would be "to exercise a State function." We contend that the Federal court, which has entire discretion to leave the initial stages of the controversy to the State tribunals, may require, as a condition upon a complainant in a suit of this kind, that it reduce its charge to the minimum constitutional rate, and in that way conform to the orders of the State authorities so far as the orders are not in conflict with the Federal Constitution. We supposed that this proposition was one of comity as well as of equity. Yet Mr. Beck says that comity to the State authorities requires that they be unconditionally enjoined.

He now discloses the real motive of the complainant for applying to Judge Lacombe instead of suing or standing suit in the State court; for he says that "even if a judge of the State court had the undoubted power which the defendants asked the trial court to exercise, yet the mere fact that the court exists as part of the Federal Government deprived it of that power." In other words, assuming that the State court could have made an equitable disposition of the matter by an injunction conditioned on the reduction of the rate from 100 to 84 cents (to assume the correctness of Judge Hough's calculation), Mr. Beck thinks that it was proper for the Federal court to oust the State court of jurisdiction, and thus prevent the citizens of the State from saving the difference.

(Pages 110-12:) Mr. Beck's remarks about the Stevens committee and the Gas Commission are based upon the Carter affidavit, which we have already discussed in connection with the final pages of Mr. Mathewson's brief; and we have already expressed our surprise that counsel should indulge in reflections upon the officers of the State of New York, based upon nothing better than the insinuations of a professional affiant.

Nor is there any foundation for the reflections upon administrative tribunals, as to the impartiality of their judgments. Probably no case before an administrative tribunal puts it more distinctly in the position of being both court and prosecutor than a contempt case puts a judge; yet it is the opinion of the great majority of the bar that the powers of the court in contempt cases should be fully preserved. We believe it to be a fact that the rights of the public as against a public service corporation will be better protected when the public is represented by counsel and the administrative tribunal sits in a judicial capacity only, than when that tribunal is acting of its own motion, and the public is not otherwise represented.

(Pages 112-13:) If circumstances had not forced Mr. Beck to prepare his brief with extreme haste, he would hardly have set forth our seven propositions as indicating the rules of testimony which should govern an administrative commission. There is not a single one of the seven propositions which is stated by us to be tenable as a rule of evidence in the administrative tribunal.

On the other hand, the first rule stated is one well-settled and frequently referred to by this court, and the other rules are necessary corollaries of this court's opinion in the Jasper case.

Mr. Garver's Brief.

(Page 26:) We have submitted no such proposition as that special franchises should "now be absolutely ignored in the regulation of rates." They are to be given the weight which is attributed to them in New York cases (App. Br., pp. 221-2); and when they are what we have called compound franchises (*Id.*, p. 221) they must receive a still greater valuation. Within the past dozen years, following the precedent set by this complainant, there has been a great deal of improper over-capitalization, pretending to be based upon franchises; but the public has been in no way responsible unless the public becomes an accessory to every improper act that is committed, until the legislature expressly prohibits it.

(Page 28:) The Public Service Commissions Law of New York, in forbidding further capitalization of franchises, did so in order that there should be no further imposition by promoters upon investors, and no further excuse for keeping up rates on the ground that otherwise ignorant investors would lose expected profits. The primary object was to protect the investor. The object of this provision has been stated as follows: "Furthermore, the holding corporation is the most effective instrument of over-capitalization, with the consequent injury to the public interest. It is the favorite method of capitalizing the unearned increment coming to a public service company as a great city grows in population. As fast as the street railroad company's, or the gas company's, or the electrical company's earnings thus increase, its old stock is converted into bonds and new stock issued to represent that increment. The new stock is sold to the public, with fabulous profits for the syndicate managers. Legislative regulation of rates is then resisted on the ground that the unfortunate stockholders would lose their dividends. The State is put into a dilemma in which it ought not to be—a dilemma between doing justice to the public who have made the increment, and doing mercy to the ignorant stockholders who have invested their savings in the new stock. The profit of the promoters is unreachable."

Even if the main or only object of the statutory provision had been to prevent overcharges by way of rates, enacting the provision would not be an implied concession, as Mr. Garver argues. The statute was passed while this suit was pending, and after Judge Lacombe had decided that simple franchises could be capitalized and made the basis of rates. It is very common for a legislature under such circumstances to pass a law that will settle the question for the future, leaving the courts to decide what was the law in the past. One of the parties to the controversy always thereafter insists that the new legislature was a concession that he was right; and this court has frequently been called upon to listen to such an argument, particularly tariff cases; but the fallacy of the argument has, so far as we are aware, been always recognized.

(Pages 29-33:) Mr. Garver here sets forth more at length than anywhere else the complainant's contention that the legislatures of 1884 and 1886 authorized and approved its inclusion of special franchises at a certain rate as part of its capitalization. The facts upon which this curious claim is based are as follows: The statute of May 28, 1884 (c. 367) under which complainant was formed was the result of what is now commonly called a "sneak bill." It was entitled "An act to authorize the consolidation of manufacturing corporations" and referred at two places to the general act under which those corporations were generally organized, and which act did not authorize them to receive what are now called special franchises (App. Br., p. 309). It in terms authorized the consolidation of corporations "organized under any general or special law of this State for the purpose of carrying on any kind of manufacturing business of the same or of a similar nature," and provided that the "capital shall not be larger in amount than the fair aggregate value of the property, franchises and rights of the several companies thus to be consolidated." There was nothing in the act to call attention to the fact that these so-called special franchises could be capitalized thereunder; but the astute counsel who drew the bill undoubtedly had in mind the case of Nassau Gas Light Co. *v.* City of Brooklyn, 89 N. Y., 409, decided two years previously, which held that a company organized under the Gas Light Act was within the meaning of a certain tax law a manufacturing corporation.

The circumstances connected with the passage of the law were so suspicious, and the use to which it was put by this complainant was so contrary to what had been supposed by others to be its intent, that the means used to pass the law were investigated by the Gilbert Committee of 1885; but the counsel who obtained the passage of the bill absented himself until after the evidence was closed (pp 5365, 6214, 6225-8, 6516). Complainant's papers were filed in November, 1884. Immediate efforts were made to secure action from the legislature. The complainant took steps to accelerate public sentiment in country districts against the bill (pp. 6452-61). The Gilbert investigating committee, appointed at that session, filed its report on March 1, 1886 (p. 5325). The committee was appointed simply for the purpose of ascertaining what legislation should be adopted in the premises. The chairman reported that in his opinion the statute, strictly construed, did not permit the formation of this complainant, and also that it was unconstitutional (pp. 5351-5), and said that the company ought to be "annulled by the legislature" (p. 5355); but this was in the preliminary portion of his report, and when he came to make his recommendations, he recommended only legislation to prevent similar performances in the future (pp. 5381-2). It does not appear that the facts were ever brought to the attention of the Attorney General. The only thing that he could have done would have been to bring an action in the nature of a *quo warranto*, and have the corporation wound up. This would have been a drastic remedy. The members of the committee not being able to agree, and the Broadway railroad scandal then occupying the attention of the legislature and dominating the public mind, nothing was ever done about it. Since the legislature never did anything about a matter as to which it could not have done anything, complainant has during recent years insisted that its capitalization had some kind of legislative confirmation, which estopped the State from disregarding the appraisals which its promoters made of its tangible and intangible assets. We never heard of a similar claim in any other case, and no reason or authority was ever assigned for it. One of the reasons why the whole subject was dropped was undoubtedly because it was the general opinion of the bar that the nominal capitalization of the company could have no influence on the matter of rates. The recent case referred to by Mr. Garver (Matter of Attorney General, 124 N. Y. App. Div., 401), was a case where the Attorney General did not bring before the court any question relating to the original organization of the company. He questioned this right to purchase the stocks of the competing companies in 1900. The second paragraph of the syllabus contains a curious blunder. in stating that the case decided that the consolidation of 1884 did not violate a statute of 1892.

(Page 45:) There is no doubt that a special franchise, like any franchise, is property, and cannot be taken without compensation; but the cases cited do not consider the question what the compensation should be. If the State had undertaken to condemn the Broadway railroad franchise before a rail had been laid, instead of arbitrarily annulling it, interesting questions would have been raised, upon which the cases cited by us in our main brief at pages 217-23 and 228-9 throw what light we as yet have. We do not think that much of value is added to these cases by the utterances of any of the gentlemen quoted at pages 47-8 of Mr. Garver's brief.

(Page 52:) If the Attorney General is to be understood as stated here, we do not concur with him. The cases cited by us, as we construe them, do not permit the legislature to "ignore the special franchises in fixing a rate." These franchises are what entitle the various portions of the tangible property to be valued together as a going concern, instead of separately as second-hand material, as seems to have been done by the condemnation commissioners in the White Plains case. The franchises are not destroyed by giving them no further value than this.

(Page 53:) Mr. Garver maintains that there cannot have been an implied condition, in granting the special franchises of the constituent companies, that they were subject to the legislative right to regulate rates, because these franchises "were granted long before the days of universal rate regulation;" but twenty pages before he had pointed out that the right to regulate rates had "long been recognized at common law" and "been the subject of legislation from the earliest days of parliamentary history." It is impossible to tell whether the members of the legislature kept this primeval principle in mind while they were voting, but they must be presumed to have done so, as grants of this kind must be construed in favor of the people (App. Br., p. 292). Certainly nobody until long after the period of these old grants ever thought of making such items the basis of separate capitalization.

(Page 59:) Here again we cannot agree with the quotation from the Attorney General, if rightly to be understood as Mr. Garver understands it. Mr. Garver bases upon it the claim that special franchises must be valued according to the maximum rate permitted to be charged, using what seems to us the very extraordinary opinion in the Brooklyn Union Gas case, 188 N. Y., 334, which holds that a maximum limit, fixed for all gas companies in a general statute, is so conclusively presumed, until its repeal, to be reasonable, as to each particular company, that the question of reasonableness cannot be tried in an action on a *quantum valebat*. The logical result of Mr. Garver's argument would be that the legislature could never reduce a maximum rate once permitted; and this is confuted by the Stanislaus County case.

GOOD-WILL.

(Pages 69-78:) The questions of good-will and "going concern" are discussed in our main brief at pages 95-7, 139-40, and 196-7.

To what we have said in relation to the "going concern" element, we may add that a considerable "going concern" item is really included in the Master's valuations and is part of the basis of the decree of the court. These valuations are based upon the testimony of Messrs. Mayer and Simpson. Mayer's figures as to the manufacturing plant and holders included an allowance of 10 per cent. for expenses of supervision of, and 5 per cent. as average loss of interest on capital pending construction (pp. 1320-1). Simpson, as to the mains and services, also allowed for these items, together with all others which might be incidental to building up a "going concern." He "added for engineering expenses, clerical expenses, city inspection, interest, and wear and tear on tools and appliances, obstructions on the street which would delay the work, serious obstructions met with underground, suits for damages and other undistributed expenses" (p. 1747). This would be sufficient to duplicate the present plant of the complainant, if the city should undertake this work itself or authorize a rival company to do so; and as soon as that work was completed, the complainant would have to abandon all claim to a return on any fictitious item, or go out of business; as was recognized by everybody in the cases cited at page 230 of our main brief.

It is difficult to reconcile Mr. Garver's position at page 70 as to the permanence of the use of gas (which is indeed involved in the court's valuation of the manufacturing and distributing plant, practically without depreciation) with Mr. Beck's argument (at pages 89-90 of his brief) that we shall speedily be lighted by radio-activity.

The tax cases cited at page 74 do not help complainant. As long as a company is permitted to have a monopoly and charge high rates, it is proper to tax the company on that basis, and during the period of high rates the stock of the company will stand very high. The State is estopped from taxing it on this high valuation if it begins to regulate the rates and thereby reduce the market price of the stock, but it is not estopped from allowing high rates to an infant industry, taxing it proportionately, and then, when the industry has passed out of the period of infancy, reducing the rates and the taxes simultaneously. This is a manifest corollary from the Stanislaus County case, 192 U. S., 201. When the rate of return on the irrigation company which was then before the court was reduced from 18 per cent. to 6 per cent., the market value of the stock must have fallen, and under the California constitution the taxes must have been reduced, yet the reduction of rates was unhesitatingly sustained.

EXISTENCE OF THE SPECIAL FRANCHISES.

(Pages 79-80:) Mr. Garver attempts to save his client by statements of facts unproved; by claiming that consents are being given to open the streets, which amount to a renewal for perpetuity of franchises which had expired. We are dealing with the facts in the record, and if any such proof had been offered, it would have been dealt with at the time of its offer. It may be added, however, that the Metropolitan grant, under which we concede it to be lawfully in possession of the streets of the whole borough as a hold-over tenant from year to year (App. Br., pp. 292, 302-3), the company has a right to extend its system of mains through any street within the borough under the Deehan case, 153 N. Y., 528; and that it is the duty of the proper authorities under proper regulations to issue permits accordingly.

(Pages 80-1:) This passage, like many others in Mr. Garver's brief, is based on the theory that we have denied the present existence of special franchises. We simply deny that there are any franchises which could not be made to expire within one year after May 1, 1906, at the option of the city, and which therefore, in a suit against the city and its inhabitants, based upon them, should not be treated as then expiring (Kingsland *v.* The Mayor, 110 N. Y., 569, 583). The complainant had had no occasion, up to the time of the submission of this case to the Master, to ask for the continuance of any franchises, since the grant to the Municipal company did not expire until March 22, 1907 (pp. 5116-19), and the grant, although its validity was always doubted, had never been actually contested by the city.

(Page 83:) The first case cited here is explained in our main brief at page 299. The second case has no application. In Wakefield *v.* Village of Theresa, 125 App. Div., 38, the plaintiffs were hold-overs under an electric lighting franchise granted in 1895 and expiring in 1903. The village authorities had no power to grant such a franchise for more than five years under the statutes cited by the court. The franchise was given by a contract which provided for a purchase of the grantees' electric appliances in case it should not be renewed. The grantees held over "from year to year," as the court states. In the middle of one of the years the village suddenly demanded a removal of the poles and wires, without even offering to purchase the appliances. An injunction was of course granted.

(Page 85:) Mr. Garver, like his colleagues, brings up the special franchise tax as a proof that his client had special franchises. This fact needs no proof, for we have conceded it. The question between us is as to the duration of the franchises, as we have shown both in our main brief and in this reply, and the franchise tax is laid without any reference whatever to the question of duration, nor does the assessment for any one year have any bearing upon the rate of return or the assessment for the next year.

So far from the position of the State being a harsh one, we have called attention to the fact that it has been very mild indeed (App. Br., p. 239*n*). To test this, let us apply the computation approved in the Jamaica case to the assessment for 1906, based on the experience of 1905, as found by

Judge Hough. The assessment would be worked out as follows:

Total tangible property	$47,831,435
6% thereon	$2,869,886
Income at $1	5,891,597
Income from intangible special franchises	$3,021,711
Or 6% on	$50,361,850
Total tangible special franchises (mains and services)	14,630,000
Proper special franchise valuation for 1906 at $1 rate	$64,991,850

It should therefore have been considerably more than double what it actually was.

(Page 85:) There is no doctrine in New York of perpetuity of special franchises in general when granted to corporations. The question upon every special franchise grant is as to the intent of the grantor, with the presumption against the grantee. In the first two cases cited the grant under consideration was made to individuals, so that the question whether if a grant is made to a corporation it is intended to be for a time longer than the life of the corporation was not involved. The remarks to which Mr. Garver refers discussed the effect of granting such a franchise to individuals and their associates, accompanied by a provision "that the association should not be deemed dissolved by the death or an act of any associate, but his successor in interest should stand in his place" (27 N. Y. at p. 614). It is difficult to consider such a grant as anything but one in perpetuity, if it is so drawn as to be irrevocable. Both of these cases held the grant to be void. The next two cases cited by Mr. Garver are fully discussed in our main brief at pages 305-7. The Roby case, (142 N. Y., 176, 180) merely follows the case next before cited. Trustees of Southampton *v.* Jessup, 162 N. Y., 127, also turns upon the effect of a grant of a franchise to an individual. Being a grant to an individual it was held to be permanent, but was construed with extreme strictness (see S. C., 173 N. Y., 84; 195 U. S., 624). The case last cited is also of a grant to individuals, although the remark referred to scarcely amounts even to a *dictum.*

Replying at page 89 to our remarks upon the authorities concerning the nature of the New York Central & Hudson River Railroad Company's title to real estate, Mr. Garver says that to ascribe any less permanent character to the mains of his clients "is to make light of the facts." We need only refer to the testimony of Mr. Simpson that he had actually seen 95 per cent. of the complainant's mains, although some of them had been in the streets since 1824; that 27 miles of the mains were disused, 70 miles abandoned within the past year, and 222 abandoned in all, besides those replaced (pp. 668, 1681, 1746-7).

(Page 92:) There is nothing in the Deehan case authorizing the inference that the Harlem franchise, granted when the city limits were confined to the island of Manhattan, was extended northward by the large annexations of territory made long subsequent thereto. The Missouri case cited by Mr. Garver is doubted in New York (People *ex rel.* Brooklyn Union Gas Co. *v.* Littleton, 110 N. Y. App. Div., 720). Franchises are often sold for what is at the time their supposed value. If the city or village which has sold such a franchise subsequently absorbs all the neighboring counties, does the grantee get a franchise in those counties for nothing? And if this is not the case when the franchise has been sold for a consideration, is it the case when the franchise was given away?

(Page 95, top:) The complainant has never "been in undisputed enjoyment of" the franchise known as the State grant, in such a sense as to give it rights which that grant did not intend a corporation to have. The Harlem grant did not expire until 1905, and the Municipal grant did not expire until 1907; and under the Metropolitan grant the company has been a hold-over during the whole period.

(Pages 95-6:) The *dicta* in the Long Acre case, 188 N. Y., 361, 366, 368, did not overthrow the general principle that franchises are non-assignable unless the power to assign is expressly granted; a principle well recognized in New York as well as elsewhere (Troy & Boston R. R. Co. *v.* Boston, Hoosac Tunnel & Western Railway Co., 86 N. Y., 107, 117; Bath Gas Light Co. *v.* Claffy, 151 N. Y., 24, 34-6, 44; Central Transportation Co. *v.* Pullman Car Co., 139 U. S., 24, and cases cited; Snell *v.* Chicago, 152 U. S., 191, 199; Rochester Co. *v.* Rochester, 205 U. S., 236; 10 Cyc., 1091; 20 Cyc., 1158; 14 Am. & Eng. Encyc. of Law, 2d Ed., p. 921). The point decided was that an unauthorized assignment is at worst "voidable at the election of the State or city" (188 N. Y., 369). The point seems not very important here, because the Anthracite company never had a valid franchise (App. Br., pp. 308-10).

(Page 101:) We concur in Mr. Garver's proposition that "The right to lay mains necessarily includes the right to use them for conducting gas, when laid;" and this is precisely what we have argued as to the complainant's franchises (App. Br., pp. 298-9).

(Pages 103-6:) It is undoubtedly true that the local authorities cannot lawfully prescribe terms or conditions not authorized by statute, when granting franchises. If they were allowed to do so, they might easily impose such conditions that there would be only one competitor, when the legislature intended that there should be free competition. Such a case was Beekman *v.* Third Avenue Railroad, 153 N. Y., 144, cited by Mr. Garver. The court held such an attempt on the part of the public authorities to be illegal, and enjoined proceedings thereunder.

But it is a very different proposition to say that a corporation which has accepted a franchise offered under such conditions can claim to hold the franchise and at the same time repudiate the conditions. We quote from the Pennsylvania Supreme Court, a later case than Pittsburg's Appeal, so much relied upon by Mr. Garver. In Allegheny City *v.* Railway, 159 Pa. St., 411, 418-9, the court says: "The conditions in the present case being within the power of the city to prescribe, and therefore entirely valid, the other question raised becomes unimportant. It may be well to say, however, that the ordinance of consent was an entirety, to be accepted or refused just as it was, and acceptance was expressly made a condition precedent. Nothing therefore could make the ordinance a consent but the performance of the condition, the acceptance of the whole. Even if any part of the condition was impossible or *ultra vires,* the result would only be that the consent could never become effective. No amount of hardship, or impossibility, or illegality, will avoid the bar of a condition precedent unperformed. Co. Litt., 206; 2 Blackst., 157."

This ancient and very proper rule, dating from Coke and Blackstone, is not denied in New York, as we construe the authorities, although complainant endeavors to torture a contrary ruling out of some of them (Dusenbury *v.* Traction Co., 46 App. Div., 267, 272. See also Staten Island Railroad case, 34 App. Div., 180).

(Page 117:) Here Mr. Garver restates the remarkable proposition that the State is estopped by its preliminary and provisional assessment of special franchises, while complainant itself is not estopped by its solemn oath that the franchises are worth nothing above the value of the mains and services (see App. Br., pp. 81-3). But we have already shown that the assessment was far too low. The company's modest valuation of its franchises was correct, from the point of view of a person endeavoring to sell them; for they were revocable. The State's assessment was not half large enough, because until revoked they are taxable in proportion to the income which they permit the complainant to earn.

Respectfully submitted,

EDWARD B. WHITNEY,
GEORGE S. COLEMAN,
Of Counsel for Appellants.

No. 398.

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1908.

WILLIAM S. JACKSON, as Attorney-General of the State of New York,

Appellant,

against

CONSOLIDATED GAS COMPANY OF NEW YORK.

Office Supreme Court, U. S.
FILED.
NOV 5 1908
JAMES H. McKENNEY,
Clerk.

BRIEF FOR APPELLANT.

WILLIAM S. JACKSON,
Attorney-General for Appellant,
The Capitol,
Albany, New York.

New York:
MARTIN B. BROWN COMPANY, PRINTERS AND STATIONERS,
Nos. 49 to 57 Park Place.

Supreme Court of the United States.

OCTOBER TERM, 1908.

William S. Jackson, as Attorney-General of the State of New York,
Appellant,
vs.
Consolidated Gas Company of New York.

No. 398.

BRIEF FOR APPELLANT.

(*References are to pages of Printed Record.*)

PART I.

Statement.

This is one of three appeals from the final decree of the Circuit Court of the United States for the Southern District of New York, Hon. Charles M. Hough, District Judge, entered April 3, 1908, upon the report of the Special Master, Arthur H. Masten, Esq., to whom the case had theretofore been referred "to take all the testimony herein, make all needed computations and fully find the facts" by Hon. E. Henry Lacombe, United States Circuit Judge.

The cause was entitled below:

CONSOLIDATED GAS COMPANY OF NEW YORK,
Complainant,
against
WILLIAM S. JACKSON as Attorney-General of the State of New York; WILLIAM TRAVERS JEROME, as District Attorney of New York County; WILLIAM R. WILLCOX, WILLIAM McCARROLL, EDWARD M. BASSETT, MILO R. MALTBIE and JOHN E. EUSTIS, constituting the Public Service Commission of the State of New York for the First District, and The City of New York,
Defendants.

The parties are the same as originally, except that William S. Jackson, as Attorney-General, has been substituted in place of his predecessor in office, Julius M. Mayer, and the Public Service Commission of the State of New York for the First District has been substituted in place of Frederic E. Gunnison, John C. Davies and Lucian L. Shedden, constituting the New York State Commission of Gas and Electricity, the latter Commission having been abolished and the Public Service Commission having been created by chapter 429, Laws of New York, 1907.

The appeals were taken by William S. Jackson, as Attorney-General of the State of New York (No. 398, Assignments of Error, 481-484); William R. Willcox *et al.*, constituting the Public Service Commission of the

State of New York (No. 396, Assignments of Error, 435-439), and City of New York (No. 397, Assignments of Error, 444-477). The District Attorney of New York County took no appeal.

History of Litigation.

On May 1, 1906, the complainant, a corporation organized under the laws of the State of New York for the purpose of manufacturing and selling gas in the City and County of New York, filed a bill in equity against said defendants, asking:

> " 1. That it be adjudged and decreed that chapters 736 and 737 of the Laws of 1905, and chapter 125 of the Laws of 1906, and the order of the Commission of Gas and Electricity of the State of New York, of February 23, 1906, are illegal and void, because in contravention of the Fourteenth Amendment to the Constitution of the United States, as aforesaid, and of section 10 of article I., of the Constitution of the United States, in that it impairs the obligation of the contract rights of your orator hereinbefore referred to.
>
> 2. That it be adjudged and decreed that your orator has no adequate remedy at law from the injury which would result from the threatened enforcement of said acts and order, and that such injury would be irreparable.
>
> 3. That it be adjudged and decreed that your orator be granted writs, both temporary and permanent, of injunction, issuing out of and under the seal of this Honorable Court, against the defendants, restraining them and each of them, and each of their officers, agents, servants and employees, and any and every person acting under and by virtue of the authority of said acts and order from in

> any way enforcing or attempting to enforce said acts and order, or any of the provisions thereof against your orator, etc."

Chapter 736, Laws of 1905 (to take effect July 1, 1905) restricted the charge for gas sold to the municipality of New York to seventy-five cents per thousand cubic feet, and provided minimum candle power and pressure, and for violations of the act imposed a penalty of one thousand dollars "for each offense, to be sued for and recovered in the name of and by The City of New York for its benefit" (21).

Chapter 737, Laws of 1905, established the Commission of Gas and Electricity, with general powers of supervision over persons and corporations engaged in supplying gas and electricity to the public; to investigate and ascertain the quality and fix the standards of illuminating power, purity and pressure of gas, and require conformity to such standards; to examine the books and affairs of such persons and corporations and to compel the production before it of books and papers pertaining to the affairs under investigation, to subpoena witnesses, take testimony and administer oaths to witnesses upon such investigations, and upon complaint of municipal officers or consumers, and after hearing and investigation, to fix the maximum price of gas or electricity (22).

The Commission, Gunnison et al., appointed under this act, having been complained to and having held an investigation, issued its order dated February 23, 1906, and to take effect May 1, 1906, fixing the maximum price to be charged by the complainant for gas in the Borough of Manhattan at eighty cents per thousand cubic feet. The order provided for candle power and pressure, as in Chapter 736, Laws of 1905. (29 Opinion of Commission, 31.)

But the New York Court of Appeals recently has held that the provision of Chapter 737, Laws of 1905, to the effect that the rate fixed by the Commission should continue for three years and thereafter indefinitely until fixed anew *upon complaint made by municipal officers or consumers,* no authority to make complaint and no opportunity or right to apply for a new adjustment of rate having been given to the company, was in violation of the Fourteenth Amendment to the Federal Constitution, as denying equal protection of the laws. (Village of Saratoga Springs *vs.* Saratoga Gas Company, 191 N. Y., 123, 149.) Therefore, the question before this Court as to the validity of the order of the Commission of Gas and Electricity mentioned in the decree has been eliminated, although the facts as to the Commission's investigation and fixing a rate, etc., remain in the case.

Chapter 125, Laws of 1906 (the "Eighty-Cent Gas Law," to take effect May 1, 1906), restricted the price of gas to consumers in the Borough of Manhattan, other than the City, to eighty cents per thousand cubic feet. The provisions for candle power and pressure were the same as in Chapter 736, Laws of 1905 (30).

The "Eighty-Cent Gas Law" and the order of the Commission were to go into effect May 1, 1906. On that day the bill of complaint was filed.

On May 18, 1906, before the new law was in any respect operated under or sought to be enforced, Judge Lacombe, upon motion of complainant for an injunction *pendente lite,* issued a temporary injunction, restraining defendants "from in any way enforcing or attempting to enforce the said Acts and order or any provisions thereof, against the complainant." The order authorized the complainant to continue its former charge of one dollar per thousand cubic feet to consumers other than the City of New York, notwithstanding said Acts and order, provided it pay weekly into a designated bank, subject to the further order of the

Court, twenty per cent. of the amount received for gas so furnished (36).

June 4, 1906, the defendants filed their answers. (Attorney-General, District Attorney and Commission, 38-57. City of New York, 57-135.)

June 16, 1906, Judge Lacombe continued the injunction order during the litigation. (145 Opinion, 135.)

July 5, 1906, Judge Lacombe appointed the Special Master (148).

May 20, 1907, after taking 6,956 printed pages of testimony and 2,771 printed pages of exhibits, the Special Master submitted to counsel his so-called draft report (151-252), and after receiving and passing upon (252-291) or filing (291-320) written suggestions for amendment, filed his final report on June 24, 1907 (291). (Exceptions to report, 324-386.)

The argument of the motion to confirm the Special Master's report was had before Judge Hough, and his opinion was filed December 30, 1907 (388-422).

On application of all parties, additional findings were made (422-430) and the final decree was filed April 3, 1908 (430-434).

The Decree.

The Court decreed:

> "I.—The report of the Master herein is confirmed except in the following particulars, as to which the exceptions to said report are sustained and its findings modified:
>
> "(a) The real estate, valued by the Master at $13,461,000, included certain parcels held by complainant for future use, but not at the date of the beginning of this action actually in use by it in

its gas business; and omitting from the capitalization of complainant for the purposes of this suit such unused parcels, the valuation of the portion of such real estate actually and necessarily employed by it in its gas business at said date is hereby fixed at $11,985,435.

"(b) The valuation of the 'working capital' must be reduced from $3,616,000, at which it was fixed by the Master, to $1,616,000, at which amount it is hereby fixed.

"(c) The capitalization as fixed by the Master must be further reduced, by striking out therefrom the item 'Coal & Coke Co. $50,000'; and from the statement of net earnings for the year 1905, as contained in the Master's Report, there must be correspondingly deducted the 'National Coke & Coal dividend $5,000.'

"(d) The capitalization as fixed by the Master must be further reduced, by striking out therefrom the item, 'Astoria *i. e.,* capital invested in production of gas secured from other companies, $12,000,000.'

"(e) The capitalization as fixed by the Master must be further reduced, by striking out therefrom the item, 'Franchises and good will, $20,000,000'; and for said item there should be substituted the sum of $12,000,000, the Court finding that the valuation of the intangible special franchises of the complainant is at least that sum.

"(f) The following items allowed by the Master in his estimate of the complainant's operating cost must be disallowed:

Interest on taxes................	$94,506.29
Legislative investigation expense...	25,671.74
Franchise tax litigation expense....	63,401.65

"(g) The following items, amounting in all to $2,013,393.84, were allowed by the Master in his estimate of the complainant's operating cost, to wit:

Repairs to apparatus...........	$169,197.39
Repairs to buildings............	24,900.69
Repairs to tools and implements..	16,228.48
Repairs to gas stoves...........	55,954.35
Repairs to mains..............	126,110.31
Repairs to services.............	89,033.46
Repairs to meters..............	172,925.52
Repairs to buildings...........	15,116.68
Repairs to tools and implements..	15,610.59
Contingent expense (includes renewals)	1,328,316.37
Total	$2,013,393.84

"The fact and propriety of said expenditures for 'repairs' is not questioned, but the final item of $1,328,316.37 is believed to be larger than required; and in place of said aggregate sum of $2,013,393.84, there should be an allowance of eleven cents per thousand cubic feet on the actual production of complainant's own works to cover repairs, renewals and depreciation, mediate and ultimate, amounting to $1,172,359.10.

"(h) The Court finds the gross income, operating expense and net income of complainant's gas business for the calendar year 1905, upon the basis of the prices charged for gas during that year, to be as shown in the following tabulation, in lieu of the Master's tabulation of 'net earnings for the year 1905' result in the figure $4,983,928.31:

Income from complainant's own product, gross	$10,825,027.30
Expenses	6,809,552.28
Net	$4,015,475.02
Net from purchased gas	1,865,717.43
Total net income	$5,881,192.45

"The Court finds that said sum of $1,865,717.43 represents more than a normal profit upon the volume of purchased gas, in that the amount paid by complainant to other companies for the same ($997,039.80) was paid under temporary and expiring agreements, and did not include any reasonable recompense or return upon the value of the investment required to produce said gas.

"The Court estimates that owing to a probable increase in sales of gas and in cost of gas obtained from other companies, and probable change in the source of manufacture of some portions of such gas, while the total net income for the year beginning May 1, 1906 (being the date when chapter 125 of the Laws of 1906, of the State of New York, took effect, and when this action was begun) would remain the same upon the basis aforesaid, yet, if the price of gas were reduced as provided by chapter 736 of the Laws of 1905 and chapter 125 of the Laws of 1906, both of the State of New York, the net income of complainant for said year beginning May 1, 1906, would be reduced to the sum of $3,024,592.45.

"The Court deems it unnecessary to make express findings as to the present existence of the franchises claimed by complainant by derivation from the New York Gas Light Company, the Manhattan Gas Light Company, the Municipal Gas Light Company and the Metropolitan Gas Light Company, and therefore does not pass upon the Master's findings as to the same, but finds that those claimed by it by derivation from the Knickerbocker Gas Light Company (including the Anthracite Gas Lighting and Heating Company and the so-called State Grant) and the Harlem Gas Light Company exist and are owned by the complainant, and are sufficient to meet all its requirements.

"II.—The true valuation, as of the time of the beginning of this suit, of the complainant's property actually employed in its business of manufacturing and supplying gas is as follows:

Real estate	$11,985,435.00
Plants	15,500,000.00
Mains	12,636,000.00
Services	1,994,000.00
Meters and miscellaneous	4,100,000.00
Working capital	1,616,000.00
Total of tangible assets	$47,831,435.00
Special franchises	12,000,000.00
Total	$59,831,435.00

"The foregoing items do not include the amount of complainant's investment in the securities of other gas companies, from which companies it was obtaining a large part of the gas which it delivered to its customers, nor the value of the property of such other companies or any part thereof employed in the production and delivery to complainant of such gas.

"III.—The lowest rate of return which can be considered legislatively fair, just or reasonable upon the value of the property employed by complainant in the business of manufacturing and supplying gas, is six per cent., at which conclusion the Court has arrived in part by taking judicial notice of local conditions in the City of New York; and under the two acts and the order, copies of which are annexed to the bill of complaint as Exhibits 'A,' 'D' and 'C,' to wit, chapter 736 of the Laws of 1905 of the State of New York, chapter 125 of the Laws of 1906 of said State and the order of the Commission of Gas and Electricity of the State of New York, made on the 23d day of February, 1906, and directed to the complainant, the net annual income which the complainant can earn upon the property employed in its gas business as aforesaid is less than six per cent.

"IV.—The pressure required by said two acts and the order aforesaid is not physically impossible if the entire system of gas distribution in the City of New York be reconstructed; but compliance with such requirement is commercially impossible under the rates for gas prescribed by said two acts and order.

"V.—Complainant has no adequate remedy at law for the injury which would result from the threatened enforcement of either of the aforesaid acts or of the aforesaid order, and such injury would be irreparable; and, this suit is not a suit against the State of New York, either as against the defendant Attorney General or as against the defendant District Attorney, or as against the defendants the Public Service Commissioners aforesaid.

"VI.—The two said acts and the order mentioned in the bill of complaint: Chapter 736 of the Laws of 1905 of the State of New York, entitled, 'An Act in relation to the price of illuminating gas furnished or sold to The City of New York, and providing a penalty for violation'; chapter 125 of the Laws of 1906, of said State, entitled, 'An Act in relation to illuminating gas in the City of New York, and regulating the quality and pressure thereof and the price to consumers, other than said city, and providing a penalty for violation'; and an order of the Commission of Gas and Electricity of the State of New York, made on the 23d day of February, 1906, and directed to the Consolidated Gas Company of New York, copies of which were annexed to the bill of complaint herein, are each of them hereby declared and adjudged to be illegal and void, because in contravention of the Fourteenth Amendment to the Constitution of the United States, in that they take complainant's property without due process of law and without just compensation, and deny to complainant the equal protection of the law.

"VII.—The defendant The City of New York and each of its officers, agents, servants and employees are perpetually enjoined and restrained from suing for the penalty of forfeiture described in said chapter 736 of the Laws of 1905, or in any other way enforcing or attempting to enforce the said act against this complaint.

"VIII.—The defendants William S. Jackson, as Attorney General of the State of New York, and William Travers Jerome, as District Attorney of New York County, and each of them, and each of their agents, servants and employees, are perpetually enjoined and restrained from suing for the penalty or forfeiture described in said chapter 125 of the Laws of 1906 or in any other way enforcing or attempting to enforce the said act or the order of the Commission of Gas and Electricity aforesaid against this complainant.

"IX.—The defendants William R. Willcox, William McCarroll, Edward M. Bassett, Milo R. Maltbie and John E. Eustis, constituting the Public Service Commission of the State of New York for the First District, and each of them, and each of their agents, servants and employees, are perpetually enjoined and restrained from applying for a mandamus or injunction to compel compliance with said chapter 125 of the Laws of 1896, or with said order of the Commission of Gas and Electricity, or in any other way enforcing or attempting to enforce the said act or the order of the Commission of Gas and Electricity aforesaid against this complainant.

"X.—It is further adjudged that the complainant recover of the defendants its costs and disbursements, to be taxed by the Clerk, one-half thereof to be paid by The City of New York and one-half thereof to be paid by defendant William S. Jackson, as Attorney-General of the State of New York; and that said costs, so to be taxed, include the repayment to the complainant of the amount of fees and disbursements of the Special Master paid from a fund heretofore directed to be paid into Court by orders dated May 18, 1906, and June 16, 1906.

"XI.—Any party hereto may make application at the foot of this decree, making such application by supplemental bill or otherwise, as such party may be advised, for any relief to which such party feels lawfully entitled b[illegible]eason of change of circumstances since the beginning of this suit—C. M. Hough, *D. J.*

"The Public Service Commission is, so far as costs are concerned, but another name for the City.

> This suit has been defended in equal parts by representatives of the State and City, and the costs should be divided accordingly. If the Attorney-General can be sued as such, costs can be awarded against him also as such. This question had better be settled—C. M. Hough, *D.J.*"

March 31, 1908.

History of Complainant.

Organization.

The complainant was organized in 1884 (claiming authority under chapter 367, Laws of 1884) as a consolidation of six theretofore existing companies:

New York Gas Light Company, incorporated 1823.
Manhattan Gas Light Company, incorporated 1830.
Metropolitan Gas Light Company, incorporated 1848.
Harlem Gas Light Company, incorporated 1855.
Municipal Gas Light Company, incorporated 1874.
Knickerbocker Gas Light Company, incorporated 1876.

These, with the New York Mutual Gas Light Company, were the only companies manufacturing and selling gas in the then City of New York. The intention had been to include the Mutual in the consolidation, but it was prevented by its charter.

Other companies subsequently became engaged in the manufacture and sale of gas in the Boroughs of Manhattan and The Bronx of the Greater City of New York, and in time the complainant secured control of them all (with the unimportant exception of The Bronx Gas and Electric Company), as well as of all the companies engaged in those boroughs in the production and sale of electric current for light, heat and power purposes, to wit:

Gas Companies.

The New York Mutual Gas Light Company, incorporated 1866.

The Standard Gas Light Company, incorporated 1886.

New Amsterdam Gas Company, incorporated 1898.

Being a consolidation of:

Equitable Gas Light Company of New York, incorporated 1882.

New York and East River Gas Company, incorporated 1893 (controlling East River Gas Company of Long Island City, incorporated 1890).

New Amsterdam Gas Company, incorporated 1897.

Central Union Gas Company, incorporated 1897.

Northern Union Gas Company, incorporated 1897.

Electric Companies.

The New York Edison Company, incorporated 1901.

Being a consolidation of:

Edison Electric Illuminating Company (which included a merger of Harlem Lighting Company and Manhattan Electric Light Company).

New York Gas and Electric Light, Heat and Power Company (which included a merger of Mount Morris Electric Company, North River Electric Light and Power Company, Borough of Manhattan Electric Company, Block Lighting and Power Company No. 1 and Manhattan Lighting Company).

The United Electric Light and Power Company, so named in 1889.

(Formerly N. Y. Safety Electric Light and Power Company, including a merger of United States Illuminating Company.)

The Brush Electric Illuminating Company, incorporated 1881.

Gas and Electric Companies.

Westchester Lighting Company.

So, in the boroughs of Manhattan and The Bronx, to which the 80 cent rate applies, the complainant has a virtual lighting monopoly.

Capitalization.

Appraisers were employed by the constituent companies to appraise their respective properties and see that each company obtained its proportionate share in the new organization. The agreed appraisal of the aggregate tangible property was (153):

Real estate	$10,332,000
Plant	12,175,000
Mains	5,217,000
Services	1,005,000
Meters	1,195,000
Office furniture and fixtures	70,000
Total capitalization of tangible property	$29,994,000

Inflation by Capitalizing "Rights, Franchises, etc."

The consolidation agreement (4280) provided for a total capitalization of $45,000,000, but this contemplated the inclusion of the New York Mutual Gas Light Company, whose charter was found to prohibit its entering the consolidation. (Later it entered through another door,—the purchase of its stock by the Consolidated.) The Mutual had been assigned a share in the $45,000,000 amounting to $5,922,000, and upon its elimination left a balance of capitalization of $39,078,000 to be apportioned among the other companies as originally intended.

Of the $45,000,000, intended capitalization, $1,500,000 was to be retained as "a working capital," which was one-thirtieth of the total intended capitalization. When the Mutual was dropped, one-thirtieth of the $39,078,000 balance, or $1,303,000, was set aside for working capital, leaving $7,781,000 of the inflation, which was ascribed to "Rights, Franchises, etc.," and was divided among the companies in the proportion that their individual sales of gas bore to the gross amount of sales by all companies from October 14, 1882, to October 14, 1883. (Complainant's Exhibit 227, pp. 921 and 922.)

The total capitalization was :

Tangible property (as above)...........	$29,994,000
Working capital.......................	1,303,000
Rights, franchises, etc..................	7,781,000
Total capitalization...............	$39,078,000

Stock was immediately issued to the amount of $37,775,000, less $2,329,000 retained to retire obligations of constituent companies and $15,940 for sundry adjustments, a net amount of $35,430,060 (154). The obligations of the old companies were subsequently paid.

Inflation in Capitalizing Tangible Property.

A committee of the Senate of the State of New York of 1885-1886 ("Gilbert Committee") authorized to investigate the organization of the complainant by the consolidation of its constituent companies, caused an audit of its books to be made by Mr. Yalden, an expert accountant of high standing. He reported to the committee the cost of the properties of the constituent companies, as shown by their books, totaling $20,942,632.85. This would make a total inflation of excess over cost of tangible property and rights, franchises, etc., of upwards of $15,000,000.

Further Increases in Capital Stock and Holdings.

The capital stock was increased in April, 1900, to $54,595,200, and further increased in July, 1900, to $80,000,000 (5018, 5020). Authority for a further increase of capital stock to $100,000,000 was obtained in July, 1904. The additional shares have not been issued, but 6 per cent. debentures have been issued and taken by the stockholders to the amount of $19,857,600, which are convertible into the company's stock at par at the option of the holder (855). The proceeds of such increases and sale of debentures have been chiefly used in the purchase of securities of the other companies mentioned; also for all the capital stock of the National Coke and Coal Company, a corporation organized for the purpose of attending to complainant's cartage and sales of coke; also for all the capital stock of the Astoria Light, Heat and Power Company, a corporation organized to construct a generating gas plant at Astoria, Long Island, which when completed is intended to take the place of the complainant's generating stations in the borough of Manhattan, whereupon the latter stations will be abandoned or "scrapped."

In addition to the securities of the Astoria company, the complainant holds securities of other companies of the following actual cost:

Brush Electric Illuminationg Company, bonds	$275,000 00
New Amsterdam Gas Company, stock and bonds	4,814,608 03
New York Edison Company, stock	15,517,200 00
New York Mutual Gas Light Company, stock	5,703,290 65
Standard Gas Light Company, stock	14,587,495 23
United Electric Light and Power Company, stock, bonds and loans	9,452,063 48
Westchester Lighting Company, stock and bonds	5,707 50
National Coke and Coal Company, stock	50,000 00
	$50,405,364 89

Increase of Tangible Property and Business.

Since 1884 the company has expended for replacements $4,663,838.32, and a corresponding amount has been written off for depreciation. There have also been added for betterments $9,431,198.52, which represents the net increase of the plant account according to the books. The actual book cost of the present plant thus appears to be $30,373,831.37, as follows:

Original cost as shown by the books of the constituent companies (Senate document 86, 47, page 776).......	$20,942,632 85
Increase since 1884, as shown by company's books (Exhibit 387).......	9,431,198 52
Book cost of present plant....	$30,373,831 37

In 1885, sales, 3,942,433,000 cubic feet of gas.

In 1905, sales, 13,283,163,767 cubic feet of gas.

(Of which 10,419,461,426 feet were produced by complainant, and 2,863,702,341 feet purchased from other companies.)

Valuations of Court and Master.

The property upon which complainant is entitled to a fair return was found and valued by the Court below and Master as follows:

	Master.	Court.	Reduction by Court.
Real estate..............	$13,461,000	$11,985,435	$1,475,565

The Master found complainant's net annual income under the laws complained of would be $2,327,328, a return of 2.8 per cent. upon his valuations. The Court found an increase in the net income to $3,024,592, a return of 5.5 per cent. upon the Court's valuations, and held that a return less than 6 per cent. was confiscatory.

Specifications of the Errors Relied Upon.

The errors assigned upon which this defendant relies are as follows:

I.—That the record does not contain sufficient evidence to show that the rate of eighty cents per thousand cubic feet for gas sold in the City of New York does not afford a fair and reasonable return to the companies doing business in the said city, the evidence being limited to the valuation of property and operations of the complainant alone, and, further, that the record does not show but that the said rate would afford a fair and reasonable return upon the value of property employed in the making and distribution of gas by a company in same territory with the complainant, well located and equipped, and economically managed, but that the case was decided on the theory that if the statutory maximum price does not afford, in the opinion of the Court, a sufficient rate of return upon the value of the property employed in its business of making and distributing gas by the complainant, the statute is void as to that company, irrespective of its effect upon other companies doing business in the same territory (481).

II.—That the record does not contain sufficient evidence to show the reasonable and necessary operating expenses of the complainant. The evidence being limited to its actual receipts and disbursements during a period from November 1, 1904, to December 31, 1905, inclusive, supplemented in part only by experience of other periods and being entirely insufficient for that purpose (482.)

III.—That the valuation of the complainant's property upon which the Court's calculation is based is an estimate of present value, arrived at by a valuation of the reproduction cost of complainant's identical plant and each part thereof, without regard to whether the same was originally economically produced or commercially and economically worth reproducing, or as to obsolescence of type and the advancement of the art. And not either upon the cost thereof, or the reproduction of a plant that would produce the same kind, quantity and quality of gas in an economically constructed modern plant (482).

IV.—That in finding the valuation (paragraphs I. and II.) of complainant's real estate actually employed in its business of manufacturing and supplying gas at $11,985,435, is erroneous, as being

(a) In excess of the original cost of such real estate to the complainant and its predecessor companies.

(*b*) In excess of the true valuation thereof, having been valued as vacant lots and not in conjunction with the buildings thereon, and for the uses and purposes to which it was devoted.

(*c*) In excess of the value at which it was carried on complainant's books (482).

V.—That the valuation (paragraph II.) of the real estate, plants, mains and services and each of them are in excess of the valuation sworn to by the officers of the complainant in the return to the State Board of Tax Commissioners for the assessment of the franchise tax and the testimony of its officers before the joint committee of the Senate and Assembly of the State of New York, and are based entirely on the complainant's testimony and its experts (482).

VI.—That in finding (paragraphs Ic. and II.) that the valuation of the intangible special franchises of the complainant is at least the sum of $12,000,000; whereas

(*a*) The complainant owns no special franchises not terminable at the will of the State of New York or of the City of New York.

(*b*) The franchises claimed by it, if owned, are not proper subjects of valuation in ascertaining the value of the property upon which it is entitled to earn a return.

(*c*) The record does not sustain the valuation (482).

VII.—That in finding (paragraph Ih.) the sum of $1,865,717.43, therein stated, represented more than a normal profit upon the volume of purchased gas, and in finding that the amount paid by complainant was paid under temporary expiring agreements, and did not include any reasonable recompense or return upon the value of the investment required to produce said gas, which findings are not supported by the record (482).

POOR

VIII.—That in finding (paragraph Ih.) that while the total net income for the year beginning May 1, 1906, would remain the same upon the basis of the prices charged for gas during the calendar year 1905, yet if the prices for gas were reduced as provided by the statute of 1906 and by chapter 736 of the Laws of 1905 the net income of complainant for said year would be reduced to the sum of $3,024,592.45, on the ground that such finding is speculative and not supported by the record; and, in particular also

(*a*) In finding a probable increase in sales of gas tending to a reduction as aforesaid.

(*b*) In finding a probable increase in cost of gas obtained from other companies, leading to such reduction.

(*c*) In finding a probable change in the source of manufacture of some portion of such gas, leading to such reduction.

(*d*) In overlooking the decrease in "Expenses" due to the reduction in the complainant's special franchise tax, payable to the State of New York, which would result from the diminution of its net profits through reduction of its rate for gas, said special franchise tax item being included by the Court in the "Expenses" of 1905 to the amount of $406,909.23, as shown by the Master's report (483).

IX.—In failing to make an express finding as to the present existence of the franchises claimed by complainant by derivation from the following corporations, respectively (such failure in the case of each of such companies being separately assigned for error), whereas the Court should have found that as to each of said franchises the complainant is no more than a holdover occupant, whose right of occupancy is terminable at the will of the State of New York or of The City of New York.

(*a*) The New York Gas Light Company.

(*b*) The Manhattan Gas Light Company.

(*c*) The Municipal Gas Light Company; and this alleged franchise was at all times invalid on account of lack of authority in the Mayor, Comptroller and Commissioner of Public Works to grant it.

(*d*) The Metropolitan Gas Light Company (483).

X.—In finding (paragraph I.) that the following franchises claimed by complainant exist and are owned by it and are sufficient to meet all its requirements (such finding in the case of each of such companies being separately assigned for error), whereas,

(*a*) The alleged franchise claimed by derivation from the Anthracite Gas Lighting and Heating Company through the Knickerbocker Gas Light Company was invalid on account of lack of authority in the Board of Aldermen to grant it, and the alleged assignment thereof to the Union Gas Light Company was also invalid for lack of authority to assign it, and said alleged franchise in any case expires on September 17, 1913.

(*b*) The franchise claimed by derivation from the so-called State Grant through the Knickerbocker Gas Light Company was not assignable to, and did not even purport to be assigned to, complainant or either of its alleged predecessor corporations, and said franchise did not even cover any part of The City of New York, Borough of Manhattan, south of Seventy-ninth street.

(*c*) The franchise claimed by derivation from the Harlem Gas Light Company expired February 1, 1905, and as to that franchise complainant is but a holdover occupant, whose right of occupancy is terminable at the will of the State of New York or The City of New York, and said franchise did not cover any part of The City of

POOR

New York, Borough of Manhattan, south of Seventy-ninth street.

XI.—In finding (paragraph II.) the total value of complainant's tangible assets employed in its business of manufacturing and supplying gas to be $47,831,435 and of its total property so employed to be $59,831,435.

XII.—In finding (paragraph III.) that the lowest rate of return which can be considered legislatively fair, just or reasonable, upon the value of the property employed by complainant in the business of manufacturing and supplying gas, is six per cent. (484).

XIII.—In finding (paragraph III.) that the net annual income which the complainant can earn upon the property employed in its gas business as aforesaid is less than six per cent. (484).

XIV.—That in finding (paragraph VI.) that the statute of 1906 is void because in contravention of the Fourteenth Amendment to the Constitution of the United States, in that it takes the complainant's property without due process of law and without just compensation, and deny to the complainant the equal protection of the law (484).

POINTS.

I.

The evidence fails to show that it was impossible for the Legislature fair-mindedly to come to the results reached.

> "In a case like this we do not feel bound to re-examine and weigh all the evidence, although we have done so, or to proceed according to our independent opinion as to what were proper rates. It

OPY

> is enough if we cannot say that it was impossible for a fair minded Board to come to the result which was reached."

San Diego Land Co. *vs.* Jasper, 189 U. S., 439, 441, 442.

We believe that the errors of the Court below are manifest and that this Court will find no difficulty in applying the foregoing rule without the necessity of an examination of all the voluminous evidence.

We wish to show, briefly, the situation as it was presented to the Legislature.

Investigations Prior to Legislation.

The legislative acts and Commission's order complained of were designed to remedy a condition causing widespread complaint by the inhabitants of the City of New York as to the quality, pressure and price of gas being furnished them, and were not formulated until after long and complete investigations, at which the complainant was represented by counsel and produced evidence. The statutes and Commission's order were based upon information derived from examination of complainant's books and the testimony of its officers.

There were three separate investigations pursuant to legislative authority:

1. By a Committee of the State Senate appointed by resolution adopted May 15, 1885, called the "Gilbert Committee," from its Chairman.

2. By a Joint Committee of the State Senate and Assembly, appointed pursuant to joint resolution adopted March 16, 1905, called the "Stevens Committee," from its Chairman.

3. By the State Commission of Gas and Electricity in 1905-06.

"Gilbert Committee."

The Gilbert Committee employed the expert Mr. Yalden, who examined the books and evidence was offered upon behalf of the Company.

It appears from the evidence taken by this committee that the cost of the properties of the constituent companies as shown by their books, exclusive of franchises, was $20,942,632.85, as follows:

Cost of Property.

Manhattan	$4,872,999 49
New York	4,630,642 03
Metropolitan	5,292,175 35
Municipal	4,092,347 86
Knickerbocker	810,481 15
Harlem	1,243,986 97
	$20,942,632 85

But evidence was offered on behalf of the company to the effect that the fair cost of the real estate and plant necessary to produce and deliver gas in The City of New York was about $1,000,000 for every million of feet produced and distributed daily. Upon this basis, the majority of the committee concluded that a valuation of $29,994,300 was not too high. The majority report upon this point was as follows:

The question for your committee to examine was: Was this capitalization thus obtained more than the fair aggregate value of the property, franchises and rights of the constituent companies at the time of the consolidation. The street mains, valves, meters, services, plant, office building, office furniture, laboratories appear to have been appraised at the value of what it would cost to reproduce them at the time of the consolidation, and there is no evidence that any of these items were appraised too high except the evidence of the expert, Mr. Yalden, who finds that they were valued higher than they appear to have been charged as costing in the company's books. As to the value of the real estate, bulkheads, piers and water rights, there is a conflict of testimony. It is a difficult question to determine, owing to the various opinions of real estate dealers. It appears from the evidence given by the three presidents of the Equitable, Consolidated and Mutual companies that it costs for real estate and everything necessary for a capacity to produce and deliver gas in The City of New York about $1,000,000 for every million of feet produced and distributed daily.

'The Consolidated Gas Company can now produce and deliver 28,000,000 cubic feet daily, and having a large amount of plant not now in use by the additional expense of $1,000,000 it can produce and deliver thirty-three million feet per day. If the above basis is a correct one then the aggregate value of the real estate and plants of the several companies given at $29,994,000 is not too high'

(Senate Document (86) No. 47, page lxxvi).

From this conclusion Senator John I. Gilbert dissented vigorously, saying, after an examination of the evidence in detail:

'Thus, it is indisputable that upon the evidence the fair capital of the combined constituent companies, having regard to their actual and prospective capacities and present output of gas, should stand at less than twenty millions of dollars.' (*Ibid.*, page 48.)

To the valuation of $29,994,000 covering tangible properties there was added $7,781,000 for franchises and rights. As to this addition, the majority of the Committee said:

'There certainly seems to be a great injustice to the people in permitting the value of the franchise conferred by the State to form a basis of capitalization for the purpose of organization as a corporation and that the consumers of gas should be required to pay such a price for it as would pay a dividend upon the value of these franchises which are a gift to the people. But it is a fact that the Laws of 1884, under which these companies consolidated, expressly authorized this to be done. * * * Thus the question for your committee to decidewas this: Was $7,781,000 more than the fair aggregate value of the franchises and rights of these six companies? We are forced to the conclusion that it was not; that the franchises of the New York, Manhattan, Metropolitan and Municipal were worth more than that sum, and if these companies saw fit to give a part of the value of their franchises to the stockholders of the Harlem and Knickerbocker, it was matter that interested only the stockholders of those companies (*Ibid.* (77) LXXIX.).

"As to this Senator Gilbert, in his dissenting opinion, said:

" 'One fictitious item of $7,781,000.

" 'With no limitation by law on the price of gas, or regulation as to its quality or measurement, the effect of adding arbitrarily $7,781,000, the last scheduled item, to the capitalization of six companies already capitalized excessively for the business they are conducting, is to tax gas consumers for an unrestricted profit on an apparent investment of $7,781,000, when in honest truth that $7,781,000 does not represent one dollar.

" 'Seven per cent. on this sum is over half a million dollars per annum. More than four times that amount has already been distributed as dividends and collected by the consolidation from the gas-paying public of New York.

" 'This item alone of $7,781,000 is a significant badge. The public wrongs its approval would perpetuate justifies the Legislature in disintegrating the transaction of which it is an essential element (*Ibid.*, page 406).' "

" Stevens Committee."

The Joint Committee appointed pursuant to a joint resolution of March 16, 1905, immediately proceeded to investigate as directed and reported to the Senate and Assembly on April 29, 1905. (Report 66-135.)

The history of the gas companies was reviewed, schedules of properties, values, expenditures, costs, etc., were presented and the committee's conclusions and recommendations were submitted, in part as follows:

> ### *Conclusions.*
>
> Prices of gas, pressure and quality:
>
> From the evidence which has been presented we are satisfied that a price of seventy-five cents per thousand cubic feet will be fair to the consumer and will afford the companies, after allowing the proper costs for manufacture and distribution, taking into consideration all the elements of such cost, a reasonable return upon their capital investment in their gas-making business. This applies to the Borough of Manhattan, the Borough of Brooklyn and a large part of the Borough of The Bronx. In our opinion it would not be just to make such a rate applicable to the more sparsely settled sections of the City of New York, in which, owing to local conditions, the cost of manufacture and distribution is necessarily higher.
>
> The investigation has shown clearly that by increasing the pressure a quality of gas poorer than the standard required by law may be made to fur-

nish the required degree of illumination, thus entailing an increased consumption at an increased cost to the consumer. In order that the consumer may benefit by the reduction of the price of gas, it is important that the degree of pressure should be effectively regulated. The evidence has also shown that there is at present no official inspection in any Borough of the City except Manhattan, and that the inspection in the last named Borough is too infrequent to be adequate. Provision should be made for a system of inspection insuring a supply of pure gas in accordance with the legal standard and its accurate measurements at the meter. This inspection should be made by officials of the City at the City's expense.

* * * * * * * * * * *

Franchises.

As had been noted, serious questions are presented to the extent to which the companies are entitled to use the streets of the City. This is a matter peculiarly within the control of the City authorities, and the validity of the franchises that are claimed is a subject for judicial determination. No action by the Legislature is recommended, as the laws already in force, if properly invoked by the local authorities, are adequate to meet the demands of the situation.

Supervision of Public Service Corporations.

It is manifest that the conditions disclosed by the testimony make it necessary that the operations of the companies supplying gas and electricity, as well as those engaged in other public service, should be the subject of constant and effective supervision by a body paid by the State and clothed with power to execute its orders, subject to suitable review by the courts upon appeal. The gross abuse of legal privilege in over-capitalization and in the manipulation of securities, for the purpose of unifying control and eliminating all possible competition, shows clearly that there can be no effective remedy by general legislation or through ordinary legal proceedings, and that for the protection of the public there should be created a commission with inquisitorial authority, competent to make summary investigations of corporations, to supervise issues of securities and investment in the stocks or bonds of other companies, to regulate rates and secure adequate inspection, and otherwise to enforce the provisions of law. The history of the subway companies affords an apt illustration of the futility of carefully phrased contracts executed in pursuance of express legislation in the absence of an effective scheme for regulation. The failure of general provisions prohibiting the consolidation of corporations is conspicuously shown by the manner in which the provisions of the charter of the New York Mutual Gas Light Company and the Act of 1886 regarding the Standard Gas Light Company has been evaded. The investment of millions in securities earning no dividends and intrinsically worthless solely for the purpose of securing monopoly control points to the necessity of strict supervision in this regard. The plan of providing a commission paid by the State and invested with ample power has worked most satisfactorily in other States, and there is every reason to believe that a similar plan put in operation here will prevent a recurrence of the mischiefs revealed in this investigation.

Specific Recommendations.

We therefore recommend—

(1) That the price of gas sold in the Boroughs of Manhattan and Brooklyn and in that part of the

Borough of The Bronx west of the Bronx River should be fixed at a maximum of seventy-five cents per thousand cubic feet.

(2) That the pressure of gas in any of the street mains should not be permitted to exceed 2½ inches or to be less than 1 inch.

(3) That the standard of purity and of illuminating power of gas be fixed.

(4) That a proper system of inspection be provided to secure the enforcement of the law with reference to pressure, purity, illuminating power and accurate measurement of gas delivered. * * *

Bills to carry out these recommendations will be presented.

Respectfully submitted,

FREDERICK C. STEVENS,
Chairman.
ALFRED R. PAGE,
JAMES K. APGAR,
GEORGE B. AGNEW,
EDWIN A. MERRITT, JR.,
Committee.

At the same session the Legislature enacted chapter 736, fixing the maximum price of gas to the municipality of New York at seventy-five cents per one thousand cubic feet, and chapter 737, establishing a Commission of Gas and Electricity, both becoming laws June 3, 1905.

Investigation, Order and Opinion of the Commission of Gas and Electricity.

The Commission of Gas and Electricity, appointed pursuant to chapter 737, Laws of 1905, having been complained to in writing by not less than one hundred customers or purchasers of gas, as provided by the statute, held public hearings and took testimony, upon notice to and attended by counsel for complainant. The result was the order complained of (28), made on February 23, 1906, in part as follows:

> "And the said Commission having investigated as to the cause for such complaints, and inspected the works, system, plants and methods used by said Consolidated Gas Company in manufacturing and distributing such gas, and having examined the books and papers of said company pertaining thereto; and, pursuant to a further notice duly served upon the said Consolidated Gas Company of New York, the Commission at said hearing having inquired into, examined and investigated the illuminating power, purity and pressure of gas supplied by said company, and having examined the methods employed by it in the transaction of its business and inquired into the methods and means employed in manufacturing, distributing and supplying gas for light, heat and power; now, after such hearings and upon such investigations and upon the evidence and argument of counsel, and due deliberation having been had, it is
>
> Ordered, That on and after the first day of May, 1906, the maximum price of gas which shall be charged by the Consolidated Gas Company of New York, in the Borough of Manhattan, City of New York, State of New York, be and is hereby fixed at eighty cents per thousand cubic feet; and it is further
>
> Ordered, That the gas furnished, sold and delivered by the Consolidated Gas Company of New York shall have an illuminating power of not less than twenty-two sperm candles of six to a pound, burning at the rate of one hundred and twenty grains of spermaceit per hour, tested at a distance

> of not less than one mile from the distributing holder by a burner consuming five cubic feet of gas per hour, as is now provided by law. * * *
>
> As the gas supplied to all customers of the Consolidated Gas Company is delivered through the same service mains as gas supplied to The City of New York, and as the pressure of gas so supplied is fixed by law at not less than one inch nor more than two and one-half inches in any service mains in said city at any distance from the place of manufacture, said law fixes the pressure of gas at which all customers and consumers of the company must be furnished in said city—Frederick E. Gunnison, John C. Davies, Lucian L. Shedden, Commission of Gas and Electricity of the State of New York."

The opinion of the Commission (31) shows the extent of this investigation. It is in part:

> " The Consolidated Company is the largest company operating in New York and on October 31, 1905, had issued an outstanding $80,000,000 capital stock, and bonds and convertible debentures amounting to $21,245,000. During the nominal year ending October 31, 1905, it sold to consumers 13,037,164,550 cubic feet gas; street lamp use, 271,199,223 cubic feet gas; total, 13,308,363,773 cubic feet gas.
>
> " The company received an income from consumers, $13,012,206.09; street lamps, $559,823.11; total, $13,572,029.20.
>
> " The cost of manufacturing and distributing the gas sold to consumers amounts to $7,920,077.46, or 60.75 cents per thousand cubic feet, not including fixed charges of the company amounting to $936,883.24. This cost per thousand cubic feet includes not only the actual repairs and replacements for the

year ending October 31, 1905, but an additional sum sufficient to bring the expenditures for repairs and replacements to the average expenditure by the company for twenty years for these items.

"Upon the hearing the Consolidated Gas Company produced its contracts for the purchase of oil, coal and other materials used in the manufacture of gas, and also its contracts for the sale of its residuals.

"On the 1st day of July, 1905, a law passed by the Legislature of 1905 went into effect, which compelled the Consolidated Gas Company to furnish gas of an illuminating power of twenty-two candles, which was an increase of two candle-power over that formerly prescribed by law.

"The nominal year ending October 31, 1905, included four months only of operation under the higher candle-power requirement. As these months were during the warmer weather, when the cost of enrichment is least, the Commission found that 1.81 cents per thousand cubic feet should be added to the actual cost of gas as found for the nominal year to obtain the cost of manufacturing and distributing gas of twenty-two candle-power for twelve months.

"The value of the property of the Consolidated Gas Company actually employed in the manufacture and distribution of gas on October 31, 1905, did not exceed the sum of $30,000,000.

"Evidence taken before the Committee appointed by Senate by resolution adopted May 15, 1885, was introduced, showing the cost of the properties of the constituent companies, exclusive of franchises, as appeared on their books, to be in 1884, $20,942,632.88. The net additions for construction from 1884 to October 31, 1905, amounted to $9,693,-

565.90. To this should be added value of materials on hand October 31, 1905, $616,470.08, making a total of $31,252,668.83.

"Recently property at Eighteenth street, formerly used as a coal gas manufacturing plant by the Consoildated Gas Company, was condemned by the City of New York, and while an award has not yet been made by the Commissioners appointed to condemn said property, title has passed to the City and the amount of the award, when made, will carry interest at the rate of six per cent. from the date the City took title. The value of the property so taken is not actually used by the Consolidated Gas Company in the manufacture and distribution of gas. The value of said property, as testified to by the Consolidated Gas Company on the condemnation proceedings, was $2,655,000.

"The Commission also had before it the return of the Consolidated Gas Company made to the State Board of Tax Commissioners for the purpose of taxation, which return was duly verified. The value of the property of the company, as shown by the return to the State Tax Commissioners June 30, 1905, exclusive of franchise, allowing for depreciation of the real estate, plant, mains, services and material and also meters, supplies and other personal property, was $27,408,700.91. It was contended by the company that the amount so returned to the State Board of Tax Commissioners did not represent the true value. But all of this testimony, with other pertinent evidence, was considered by the Commission in arriving at the value of the property of the Consolidated Gas Company actually used in the manufacture and distribution of gas.

"In allowing a fair return upon the value of the property actually employed in the gas making business, account has been taken of the nature and hazard of the business and of the return allowed on similar investments.

"The Commission thinks that 8 per cent. is a reasonable return upon the actual value of the property owned by the company and used in the manufacture and distribution of gas. It will be remembered that this return is not based upon the capitalization of the company, but upon the actual capital engaged in the manufacture and distribution of gas.

"It was strenuously urged before the Commission on behalf of the company that the Commission should allow the capitalization of the company's franchise as it was assessed by the State Board of Tax Commissioners at $7,781,000. And upon this the company paid a yearly tax, which entitled the company as a matter of law to such capitalization. On the evidence before the Commission it is questionable whether the Consolidated Gas Company has franchises of any considerable value. The Commission believes that these franchises, granted by the people without compensation, should not be capitalized against the public, thereby compelling the public to pay a profit upon the value of the favor granted by it. The seeming injustice of requiring a corporation to pay taxes upon a franchise and at the same time refusing to allow the capitalization of that franchise is sophistical, not real. The franchise tax is paid by the corporation, but charged against the public as an expense of operation, and in reality is therefore paid by the consumer, not by the company.

"The Astoria Light, Heat and Power Company is building a plant at Astoria, Long Island, and proposes building a tunnel under the East River, connecting its works with the distributing system of the Consolidated Gas Company in Manhattan. The Consolidated Gas Company is the owner of all the capital stock of the Astoria Company. Large expenditures have already been made in the construction of its first unit, which unit will have a total capacity of 20,000,000 cubic feet per day, while the plant when completed will eventually produce an amount of gas equivalent to that now sold by the Consolidated Gas Company on the Island of Manhattan, including that purchased from other companies by it. Considerable evidence was taken in reference to the Astoria plant and the proposed removal of the Consolidated manufacturing plant thereto. The company claims that such removal from the Island of Manhattan is made in obedience to a public demand therefor. In any event the Commission believes that the prospective economies in the cost of manufacture and the increase in the sale of gas by reason of the reduction in price will enable the company to pay a reasonable return on any necessary investment in Astoria.

"This conclusion was arrived at by the Commission after a most exhaustive and painstaking hearing and investigation covering a period of nearly three months, in the course of which the plants of the company were examined and over 5,000 pages of testimony taken. * * *

"The Commission believes that the natural increase in gas sales will be greatly stimulated by the reduction in price, and is satisfied that the price fixed is fair to the consumer, the public and the company."

Then followed chapter 125, Laws of 1906 (became a law April 3, 1906), fixing the maximum price in the Borough of Manhattan at 80 cents.

II.

The legislative acts were upon evidence presented by com ant.

The Legislature had before it the complete history of complainant and the value of its property as shown by its books and by the oaths of its officers.

Upon those values the legislative acts were based.

Could a fair-minded board rely upon complainant's books and the oaths of complainant's officers?

And in addition the witnesses for the State and the City before the Master sustained the values upon which the Legislature acted.

Valuations in complainant's reports to State Board of Tax Commissioners.

Section 43 of the Tax Law (chap. 712, Laws 1899) provides that any person or corporation subject to taxation shall make a written report to the State Board of Tax Commissioners, containing a full description of any special franchise possessed or enjoyed by such person or corporation, "together with any other information relating to the value of such special franchise required by said board. The State Board of Tax Commissioners may from time to time require a further or supplemental report from any such person * * * or corporation, containing information and data upon such matters as it may specify. Every report required by this section shall have annexed thereto the affidavit of the president, vice-president, secretary or treasurer of the association or corporation * * * making the same to the effect that the statements contained therein are true." The act further provides that the State Board of Tax Commissioners shall prepare and furnish a blank form for the report.

Pursuant to this act the complainant, by its Secretary, Robert A. Carter, on the forms prescribed by the State Board of Tax Commissioners, made and filed in the [illegible] of December, 1904 and 1905, the report for the year ending June 30th in each year respectively (State's Exhibits C and D, Exhibits, pp. 5053, 5064).

Schedule D sets forth in detail the assets and liabilities of the company, in which it stated the value of the property used by it in the manufacture and distribution of gas as follows:

COMPARATIVE STATEMENT OF PROPERTY.

Values as per reports to State Tax Commissioners, 1904, 1905.

	June 30, 1904.	June 30, 1905.
Real estate and plant.	$19,673,075 42	$19,678,612 76
Mains and services..	4,261,156 39	4,398,160 82
Contracts, rights, etc.	7,781,000 00	7,781,000 00
Meters, stoves and other personal property.........	2,667,329 77	2,736,516 90
Materials and supplies............	697,014 92	595,410 39
	$35,079,576 50	$35,189,700 00

Schedule K in these reports is headed "Statement of cost to reproduce new property in streets, highways, etc., value less depreciation and same outside, with assessment in each tax district," and is as follows:

	Present value of property in streets, highways and public places, on basis of cost of reproduction (new).	Present value of property in streets, highways and public places (allowing depreciation).	Present value of property outside streets, highways and public places, on basis of cost of reproduction (new).
1904,	$5,613,221.12	$4,261,156.39	*$89,310,586.54
1905,	5,801,466.10	4,398,160.82	*106,065,283.38

* The details of this item appear in Schedule D.

Thus showing that the valuation of all the property of the complainant used in its gas making and distributing business was given on a basis of cost of reproduction (new).

These reports were verified as follows:

State of New York, } ss.:
County of New York, }

R. A. Carter, Secretary of the Consolidated Gas Company of New York, being duly sworn, deposes and says that the foregoing statements have been compiled from the books of the company, and after a careful examination of the same he declares them to be *a true, full and correct statement of the property of said company and the value thereof* at the close of the year ending June 30, 1904 (5), as well as of its financial condition and affairs on said date, to the best of my knowledge and belief.

R. A. Carter.

Sworn to before me this
day of November,
(seal.) Wallace Young,
Notary Public No. 5,
Kings County.

Certificate filed in New York County.

Deducting $7,781,000 for contracts, rights, etc., leaves a sworn valuation for the tangible property:

June 30, 1904	$27,298,576 50
June 30, 1905	27,408,700 00

Before the Legislative Investigating Committee of 1905 (Stevens Committee), Mr. Carter again swore to the truth of these valuations.

He testified as follows (859-61):

> "Q. Will you please take the item in that report, the first item of real estate and plant, $19,673,-

075.42; now, that is a statement of the value of the real estate and plant of the Consolidated Gas Company to June 30, 1904, is it not?

"A. That is exactly what it is.

"Q. That is exactly what it is?

"A. As near as we could determine.

"Q. That is what I am asking you.

"A. That was the value of the property at that time.

"Q. That's it exactly; in other words, when you came to make up the report to the State Commissioners for the year ending June 30, 1904, you sought to ascertain fairly what the value of the property of the company was?

"A. Precisely.

"Q. And you took the various properties of the companies with which you were familiar and you fixed what you decided to be the fair value of the properties and stated these values in your report?

"A. Precisely.

"Q. And under the head of real estate and plant you put down the figures $19,673,075.42 as the value of the real estate and plant of the company?

"A. Yes, sir.

"Q. Before you get to that as suggested, is that the value that was arrived at after consideration of the matter by others besides yourself?

"A. That is the case, Mr. Hughes.

"Q. And with whom did you advise in making the determination of value?

"A. The engineers of the company.

"Q. Who were they?

"A. Mr. Bradley and Mr. Woods.

"Q. And who else?

"A. The Assistant Secretary, who has charge of the distributing system of the company.

"Q. Who was that?

"A. Mr. Simpson, Mr. C. C. Simpson.

"Q. Anybody else?

"A. I think if we were in doubt I would have consulted with the President from time to time with regard to the figures that went into these reports.

"Q. Yes, sir, and probably with other counsel?

"A. Probably—always—always with counsel; reports are always submitted to counsel and fully approved before being filed.

"Q. You sought in this way to get from all persons connected with the company who had expert information as to the value of the property what would be a proper valuation thereof on that day?

"A. Yes, sir.

"*Q.* And the amounts which are stated in this Schedule D, that you have before you, and that report of 1904, were those arrived at as stated?

"*A.* Yes, sir.

"*Q.* And with the concurrent judgment of these various men familiar with the facts?

"*A.* Yes, sir.

"*Q.* Taking then the first item of real estate and plant, $19,673,075.42, and taking that as the value thus arrived at of the real estate and plant, state whether or not that covered all the real estate and plant of the company; that is to say, the land, the buildings thereon, and stoves, the holders and various apparatus which are connected with your business of gas making and apart from the items which are separately mentioned later on, such as mains and services and meters, stoves and personal property?

"*A.* That is correct (pages 859-861).

"*Q.* Then the amount that you have read of real estate plant which were carried in the books at $26,762,591.09 appear in the balance sheet of June 30, 1904, at that total, you decided were of the fair value of $19,663,075.42?

"*A.* Yes, sir (page 1008).

"*Q*. Will you give the total of those mains and services, please?

"*A*. $8,799,740.69.

"*Q*. And then mains and services which appeared in the balance sheet of June 30, 1904, at the book value of $8,799,740, you decided to be of the actual value of $4,261,159.39, and so entered them under the heading, 'Mains and Services,' in the report to the State Board of Tax Commissioners?

"*A*. Based upon the cost of reproduction, less depreciation.

"*Q*. Whatever it was based upon, you entered it as actual value?

"*A*. Yes, sir.

"*Q*. Of those mains and services?

"*A*. Yes, sir.

"*Q*. And as you stated a moment ago, in another part of your report, you set forth the extent in feet of the pipes of your company, which appears in the separate schedule verified by you under date of November 30, 1904, annexed to said report, in which the total feet are given as 4,605,681?

"*A*. Yes, sir.

"*Q*. And you would state the present value reproduced new would be $5,613,221.12, and the present value, allowing depreciation, was $4,261,156.39?

"*A*. Yes, sir.

"*Q*. In other words, you decided after your conference with the parties who were acquainted with the facts, with your own experience and knowledge of the facts, that it would cost on June 30, 1904, to reproduce new the mains and services of the company the sum of $4,261,156.39?

"*A*. That was the estimate; yes, sir (page 1009)."

In this case the company has made its statement, under the oath of one of its principal officers as to the actual present value of its property, and who has again testified that the valuation was the fair value of the property of the company at that time, arrived at after consultation with the engineers of the company, assistant secretary in charge of the distributing system, the president and counsel of the company, with all persons connected with the company who had expert information as to the value of the property, and that the amounts which are stated in Schedule D were those arrived at, with the concurrent judgment of these various men familiar with the facts.

This report was not for the purpose of fixing an assessment value on the complainant's tangible property but for the purpose of assessing the value of its franchises or intangible property.

The value of a franchise is based on the earning capacity of the plant over and above a fair return on the value of the tangible property. Therefore, it was not in the interest of the complainant to undervalue its tangible property, for the less amount of value assigned to tangible property the greater the return upon the intangible property, the larger the valuation of the franchises, and hence the greater tax.

In this case the complainants tried to overcome the effect of the testimony of Carter, given before the legislative committee. Mr. Carter testified (pp. 1239-1247) that after he had testified before the joint legislative investigating committee he had a talk with Mr. Bradley and that thereby his recollection was refreshed. That in preparing the statement for the State Tax Commissioners he had estimated the property at what it would sell for to some one who did not want to carry on the gas business, and also that they had in contemplation the removing of the manufacturing plant to Astoria, and therefore that they took half the book value of the plant and added something to it as salvage. That in making up the value of mains and services they took off 25 per cent. of the book value because "the company was constantly replacing its mains and its services with mains and services of a larger size, at a considerable loss. The value of the mains or services taken out of the ground or abandoned, as the case might be, being a total loss practically." On the meters, stoves and other personal property about 25 per cent. was taken off "the amount represents a portion of the book value of that property that was written off to reduce it to such an amount as that would probably realize from the sale of that property under ordinary circumstances * * *. I do not mean that it was written off the books, but in making up the figures for the tax report." (Complainant's Exhibit 223 was then put in evidence, from which the following extract is taken:

Complainant's Exhibit 223.

(Exhibits, p. 5276.)

CONSOLIDATED GAS CO. OF N. Y.

June 30, 1904.

	Investment as Shown by Ledger Accounts.	Values Stated in Franchise Tax Reports.	Difference.

Totals	$106,372,636 75	$93,571,742 93	$12,800,892 82

---

* Stated as a single item at $19,673,075.42 in Schedule "D" (volume 2 of Exhibits, page 751).

† Stated in the Tax Report under the heading "Present value allowing for depreciation." "Reproduction" value stated as $5,613,221.12 for mains and services.

Detail not asked for and not given in Tax Report to State Board:

For mains	$4,829,925 82
For services	783,295 30
Total	$5,613,221 12

Mr. Simpson, assistant secretary of the company in charge of distributing system, testified with respect to the data furnished to Mr. Carter for the preparation of the 1904 report, as follows: "Mr. Carter came to my office and told me that he had to report to the Tax Commission the value of our mains and services, and asked me to give him some figures as to the value" (pp. 678-679). "I did not give him any statement of values on which to base his calculations. I gave him a price per foot for each size of main, and he from his own books took the mileage of mains and multiplied the number of feet by the price per foot, and made his calculations from that" (pp. 679-680). "He had charge of the books of the company and he had the number of feet in his possession" (pp. 679-680). "I have a set of figures as to the number of feet of mains in use, and the company or the general bookkeeper of the company has a set of figures" (p. 683). "I am not familiar with the totals, as they appear in the Tax Reports, for I have never seen them" (pp. 678-679). And further, "I took the mileage of the various sizes of mains we had at that time, and computed the total amount, taking the cost of laying each size of pipe under the most favorable conditions. I did it for taxation purposes, and I thought those were the right kind of conditions to take. Q. Did you, in your unit figures, include anything but the bare cost of material and the labor for laying in soft dirt streets? A. No, sir, I did not" (pp. 719-720). (See also pages 1753-1756.)

W. H. Bradley, engineer for complainant, testified as follows (pp. 1701-1702):

> "Q. Mr. Bradley, it has been shown in evidence that by the reports of the company filed with the local tax assessors or with the State Board of Tax Assessors, the plant and real estate of the company had been inserted at something like $19,000,000 for several years past, which it is testified is made up of the land or real estate at the book value, and the

figure for the plant of the company, amounting in 1904 to $8,456,595.71, whereas the book was $15,775,462.88, or nearly twice as much; do you remember any conversation with Mr. Carter in the year 1902 in reference to the basis of placing the value of the plant for the purpose of the tax report?

"*A.* Mr. Carter applied to me for a figure, and I took advice with our general counsel on the subject and was informed as to what the law was in the case; acting upon that advice, I simply cut the book value in half, and added to that—the absolute figure I cannot give you; I have not got them—I added to that, if my recollection serves me, between $600,000 and $700,000 as the scrap value of the plants to be dismantled, understanding that we were going on with our Astoria business and that within a very short time practically the works would be dismantled and simply scrapped, as we had no market for them; the resulting figure from that, half of the book value and the six or seven hundred thousand dollars that I added, was the figure that Mr. Carter used in the tax report."

He further stated:

"I went into no detailed valuation, because I assumed that the book value was very nearly, if not practically correct.

"I assumed that one-half of the plant would remain in New York long enough to be subject to the payment of taxes; the other half would be simply thrown away; I took the scrap value of the other half, which would be a few hundred thousand dollars; this scrap value, plus one-half the full value, equalled the figure that I gave Mr. Carter at that time; the advice that counsel gave me was that the assessors were instructed that the value of the plant was the value of the land; that there was nothing to be added to the value of the land except such improvements as were valuable to the land, and the plant added no value to the land; if it was a detriment to the land it was not to be assessed" (pp. 1702-1703).

> "I am willing to stand by the statements that I made before the Gas Commission and that I have made here, that I took half the book value, about $15,000,000, and added to that between $600,000 and $700,000 for the figure that I gave to Mr. Carter.
>
> "We were then (in 1902) intending to remove the plant to Astoria; I understood that the figures I prepared for Mr. Carter were to be submitted by him to the State Board of Tax Commissioners to assist them in arriving at some tax for that year; the plans of the Astoria plant were then pretty well drawn, but little physical work had been done; I did not anticipate that we would be able to remove the plant during that year, or in any particular year" (pp. 1717-1718).
>
> "When I had arrived at this valuation I felt that I had valued the plant of the company for taxation purposes" (p. 1721).

The reports of complainant to the State Board of Tax Commissioners, in 1904 and 1905, were for the purpose of special franchise tax assessments. It was to the interest of complainant then to value its tangible property proportionately high in order that the franchise values might appear to be less. Under these specially favorable conditions the oaths of complainant's officers ought to be credible, but the Master thus comments upon the increased valuations sworn to before him:

> "It is a matter of common knowledge that reports, petitions and similar papers required in connection with matters of taxation are, in the case of

> large corporations, ordinarily prepared by counsel. To some extent they are in the nature of pleadings, and are so drawn as to support the theory on which it is hoped to secure the most favorable results either before the tax officials or the courts.
>
> "Under these circumstances, when, as in the present case, it appears that taxes are being constantly contested, it must very commonly occur that views are expressed on behalf of the corporation more or less inconsistent with the valuations it would put upon its property for purposes of sale, condemnation or such an action as the present."

A comparison of the valuations by the witnesses for the State and City, (as reported by the Master), the 1905 tax report valuations, and the Courts' valuations is as follows:

	Witnesses for State.	Witnesses for City.	1905 Tax Report.	1905 Court.
Real estate	$10,504,355 95	$10,587,685 00	$19,678,612 76	$11,985,435 00
Plant	9,318,692 00	9,348,692 00		15,500,000 00
				12,636,000 00
Mains and services	7,383,533 00	7,751,263 00	4,398,160 82	1,994,000 00
Meters and miscellaneous property	3,802,544 00	3,261,687 00	2,736,516 90	4,100,000 00
Materials and supplies	....	....	595,410 39	....
	$31,009,124 95	$30,949,327 00	$27,408,700 87	$46,215,435 00
Contracts, rights, etc.			7,781,000 00	12,000,000 00
Working capital			....	1,616,000 00
			$35,189,700 87	$59,831,435 00

III.

The legislative acts were invalidated by improper methods of valuation, involving property not entitled to a return, gross overvaluations and duplications.

FRANCHISE AND GOOD WILL.

An important question here is presented, whether the franchise and good-will of a public service are property upon which the owner is entitled to a return in a rate regulated by the State.

The Master valued the franchises and good-will of complainant at $20,000,000. The Court reduced the amount to $12,000,000 and assigned it to franchises alone, and included it in the determination of the property upon which complainant is entitled to a return.

Complainant claims by analogy to the decisions that franchises and good-will are property and proper subjects of valuation in condemnation cases.

Appellant contends there is no analogy in this respect between rate regulation and condemnation cases, and that the item should have been excluded, for the reasons:

1. Franchises and good-will are not property upon which the complainant is entitled to a return in its rates.

2. The franchises claimed by complainant amount only to a tenancy by sufferance or from year to year, and, therefore, only have a nominal value for any purpose.

Judge Lacombe, in his opinion upon granting the temporary injunction ( ) substantially ordered the Master to find large values for franchises and good-will, before any evidence was taken or the cause at issue or the Master appointed. When the evidence was submitted and defendants assumed the question to be open for argument, the Master said ( ):

> "The question is not open for discussion, however, as it is fully disposed of for the purposes of this report by the expressions of the Court in deciding the question for preliminary injunction in this cause."
>
> Citing Judge Lacombe's opinion, reported in Consolidated Gas Company *vs.* Mayer, 146 Fed. Rep., 150, 157.

The Master's report treated the subjects of franchises and good-will separately (186-211), but he confessed his inability to differentiate their values. He said (210):

> "It is clear that a new company, in addition to a substantial outlay for its franchises under existing laws (Greater New York Charter of 1897, as amended by Laws of 1901, chap. 466, and Laws of 1905, Chap. 629, sections 73-74) would be subjected to enormous expense before it could perfect its organization as to supplant a powerful competitor already in the field. The relative cost of its franchises and good-will might in such a case be to some extent apportioned. But in the present instance, their reproductive value is wholly in the realm of conjecture, and the two elements are so interwoven that there is no apparent basis for their separate appraisement. It is clear, however, that each is of substantial value and contributes very materially to complainant's earning capacity.
>
> As I do not find it practicable to differentiate in figures the value of complainant's franchises and good-will, I have concluded to consider all of the in-

> tangible assets together as a single item, the reasonable value of which I think may be fairly fixed at the sum of $20,000,000."

The Court below considered the good-will inseparable from the franchises and valued only the latter (410-419). He said (410):

> "From the testimony I might think it apparent that what is here meant by good-will is the organization of complainant, long established and doubtless well manned and equipped. Such organization is clearly of value, because without it neither its tangible nor intangible property can be profitably managed. Yet the organization itself is but a method of utilizing that which is invested. It is really dependent for its existence and continuance upon the franchise, without which there can be no useful organization.
>
> Tangible property has a certain value entirely apart from franchise, or right to continue business, or method of transacting business; but good-will in the sense of organization for the business of furnishing gas can have no existence whatever apart or detached from the franchise conferring the necessary privilege."

The Court included a valuation upon franchises against his judgment, but feeling impelled thereto by the "trend of decisions," although recognizing this as a "pioneer case." He said (412-414):

> "As an original proposition I believe this claim unsound. Return can be expected only from investment, and he that invests must part with something in the act of investing. He that hath not sown shall not reap; and can it be said that complainant here or any other corporation similarly situated has invested its franchises in its business? It did not invest *in* its franchise, because it did not pay for it; it

did not invest its franchise because it did not part with it in the same way that it parted with money or money's worth in acquiring or creating mains or plants. The investment of property was made not *in* the franchise, but *under* the franchise and on the faith thereof. The franchise is but a part of the power or privilege of sovereignty, allotted to a private person for the benefit of all and only incidentally given for private emolument. * * *.

" It is familiar doctrine that private citizens may acquire vested rights through a series of even erroneous decisions—rights so firmly vested that it becomes unconstitutional for the Court which persisted in error, suddenly to rectify its mistakes to the detriment of those who had securely rested upon the decisions sought to be invalidated. A Trial Court is in somewhat such a case when confronted with a proposition concerning which as *res nova* it entertains no doubt, but finds it impossible to enforce the opinion entertained, without doing violence to theories of law and habits of legal thought fairly discoverable in preceding decisions of superior jurisdictions. In this case I am compelled to the conclusion that it is necessary to allow the discoverable value of complainant's franchises as part of that capital upon which a fair return must be allowed, because to refuse would be to disregard views expressed by higher courts regarding the general nature of franchises and regulation proceedings. Instead of attempting to minimize and distinguish the decisions to which I have been referred and many others, it is my duty to follow the method of reasoning there clearly indicated, leaving it to the higher tribunals to make distinctions which, if drawn by the lower court, would in my opinion savor of presumption.

* * * * * *

" If franchises are to be reckoned with and paid for in condemnation proceedings, must they also be

> reckoned with and allowed for in cases of rate regulation? The rights of condemnation and regulation are both confessedly exercises of police power. If regulation is to be regarded as *pro tanto* condemnation, then the same train of reasoning which requires compensation for franchises when all the property protected by the franchise is taken away, requires that some compensation shall be left when the earning power only is reduced. This is the crucial point of inquiry, and the highest tribunal has not yet encountered the necessity of answering."

As to the method of valuing the franchises the Court said:

> " Again, as a method of valuation applied not to taxation, but to rate regulation, the system is reducible to an absurdity, for at what point of time is the inquiry to be made? Clearly before the reduced rate goes into effect. Yet by this method, since the fair rate of return upon tangible property is a constant figure, the capitalization of the residue at the same figure will always give a valuation for the franchise rendering reduction impossible. * * *
>
> " The Master reports that the record contains little direct evidence as to the value of the franchises, and he might have added that if by direct evidence is meant testimony of the same kind regarding their value, as has been offered regarding every item of tangible property, there is none at all.
>
> " I think it obvious as I have endeavored heretofore to point out, that either for the purpose of condemnation or regulation the value of a franchise depends wholly upon what is earned under it, and I believe the best way of finding out how much a franchise separately considered is worth is to ascertain what those persons desirous of continuing operation under it consider it to be worth. * * *

"These considerations applied to the testimony herein enable me to find that this complainant did at the beginning of its career measure the value of its franchises. It does not appear how it was done, nor why the figures selected were chosen, but it is true as matter of fact that when complainant was organized in 1884 under a statute which in terms permitted it to acquire the property and franchises of the older gas companies consolidating to form it, it then issued stock of the par value of $7,781,000, representing the franchises it then acquired and nothing else; and this stock is still outstanding and has since 1884 been in the hands of purchasers, who I am compelled to think have a right to rely upon legal protection for legally issued stock.

"There is no direct evidence that complainant's franchises in 1884 were worth $7,781,000, or are worth that much to-day. I do not see how such evidence can exist; but because complainant made an arbitrary valuation so long ago, issued stock on the faith thereof, did that lawfully, and has maintained dividends upon that stock ever since, I find it *presumptio juris* that complainant's franchises in 1884 were worth $7,781,000; and to that extent it is certainly entitled to protection against confiscatory legislation.

"No capital stock has since been issued upon the faith of franchises only. If, however, complainant's franchises were worth $7,781,000 in 1884, and its tangible property at the same time was appraised (as appears in evidence) at $30,000,000 (in round figures), then since complainant's business (in sales volume) has in twenty-three years almost quadrupled, and its tangible assets grown to $47,000,000, it appears to me that a fair method of fixing value of the franchises in 1905 is to assume the same growth in value for the franchise as is demonstrated by the evidence in the case of tangible property. If,

> therefore, the franchise valuation of 1884 was proportioned to personalty and realty of $30,000,000, a franchise valuation similarly proportioned to $47,000,000 in 1905 would be over $12,000,000. * * *
>
> "The overruling consideration is that in 1884 there were issued shares of stock of the par value of $7,781,000; and that stock is outstanding yet, and that it represents a certain fractional part of a business which has enormously increased. Inasmuch as everything in that business is accounted for except the franchises, I have taken that figure as indicating the nearest approach to franchise value, given by the evidence, and a proper starting point for computation."

After receiving the criticisms of counsel upon the method of valuation, the Court stated in an additional opinion (425):

> "It is not difficult to detect flaws in a finding opposed to the settled opinion of the Judge who happens to constitute the Court; and as to the history of the stock whose par value is $7,781,000, I think enough has been said in the opinion already filed, to give the higher Court a fair view of the way in which it was issued and the manner in which it was viewed by those who created it.
>
> "But it does not advance the discussion at all to elaborate the history of such creation and issue. For all that I can see the franchises of 1884 might as well have been valued at twice the amount of the stock then issued on the faith thereof. It was nothing but an attempt to capitalize expected profits; but the attempt now has twenty years' success to justify it."

So, must an arbitrary valuation, placed by complainant upon its fran-

POOR

chises as a stock inflation, be counted thereafter as an investment entitling a return in rates, not because it was right to do, but because it was done?

Future enterprises of this character should heed the lesson; for, if the valuation of $7,781,000 and the growth to $12,000,000 can be maintained, there is nothing to prevent an original valuation of $50,000,000 and corresponding growth.

All that is necessary is to keep off the hand of the law for a time—what length of time does not appear—and then the hand of the law will be used to pick the public pocket forever.

The complainant arbitrarily capitalized expected profits in 1884 at $7,781,000, and the Court now adds its own arbitrary capitalization of $4,219,000 in 1908.

Our concern is not as to the legality of capitalization of franchises or good will, but as to the right to receive a return in rates upon such capitalization.

In discussing the subject of good will the Master said (206):

> "It is not necessarily the ordinary commercial good will, such as attaches to an old firm name or place of business and is based in large degree upon the personal standing of the founder of the house. The modern decisions have recognized its proper scope as including that species of intangible value which comes of the gradually building up of a complete organization in the successful operation of a going concern."

And the Master quotes Justice Brewer, in National Water Work Company *vs.* Kansas City, 62 Fed. Rep., 853, as follows:

> "Nor would the mere cost of reproducing the water works plant be a fair test, because that does

not take into account the value which flows from the established connections between the pipes and buildings of the city. It is obvious that the mere cost of purchasing the land, constructing the buildings, putting in machinery and laying the pipes in the streets—in other words, the cost of reproduction—does not give the value of the property as it is to-day. A completed system of water works, such as the company has, without a single connection between the pipes in the streets and the buildings of the city, would be a property of much less value than that system connected, as it is, with so many buildings, and earning, in consequence thereof, the money which it does earn. The fact that it is a system in operation, not only with a capacity to supply the city, but actually supplying many buildings in the city—not only with a capacity to earn, but actually earning—makes it true that 'the fair and equitable value' is something in excess of the cost of reproduction. The fact that the company does not own the connections between the pipes in the streets and the buildings—such connections being the property of individual property owners—does not militate against the proposition last stated, for who would care to buy, or at least give a large price for, a water works system without a single connection between the pipes in the streets and the buildings adjacent? Such a system would be a dead structure rather than a living and going system. The additional value created by the fact of many connections with buildings, with actual supply and actual earnings, is not represented by the mere cost of making such connections. Such connections are not compulsory, but depend upon the will of the property owners, and are secured only by efforts on the part of the owners of the water works, and inducements held out therefor. The city, by this purchase, steps into possession of a water works plant—not

POOR

merely a completed system for bringing water to the city and distributing it through pipes placed in the streets, but a system already earning a large income by virtue of having secured connections between the pipes in the streets and a multitude of private buildings. It steps into possession of a property which not only has the ability to earn, but is in fact earning. It should pay, therefore, not merely the value of a system which might be made to earn, but that of a system which does earn."

For purposes of rate regulation, neither franchise nor good-will can be valued separately from tangible property.

The National Water Works Company case was a condemnation case and while, under the rule there stated, good-will is a proper factor for consideration in cases of condemnation or sale, the very description of the qualities of good-will shows that it canont be separately assessed in rate regulation.

We agree with the Court below that in rate regulation good-will is inseparable from franchise, and the same logic would lead to the further deduction that in rate regulation good-will cannot be valued apart from the tangible property.

Upon condemnation or sale there is a value to the tangible property which exists and can be valued apart from the good-will; the business can be considered and valued either as a " not going " business or as a " going " business.

But there can be no such thing as a rate regulation unless the business be a " going " business. The business must be " going " before a rate can be contemplated. The idea of fixing a rate necessarily assumes that the business is " going." **A rate for a " not**

OPY

going" business is impossible of ascertainment or of conception. If the quality of "going" must exist in tangible property before the property can be the subject of consideration for valuation in rate regulation, that quality cannot be separately valued, any more than the tangible property can be separately valued. **If good-will cannot be separately valued, it gives no additional value to the tangible property, but must be regarded merely as the prerequisite to any valuation whatever.**

In fact, the **rate is the earning,** and the **earning is the going.**

No more is good-will separable from franchise in rate regulation valuations. The franchise is merely the **permission to work** given by the public to the company. It is the contract between the State or the municipality and the company, which once having been entered into may become, as such, the subject of valuation upon breach, condemnation or sale, depending in amount upon the terms of the contract.

But, in the performance of a contract, for one party to charge the other party the price, as per contract, for doing the work and then add a bonus for the contractual relation itself—the opportunity to do the work—and then add another charge because the work is done, is so preposterous as not to be seriously contended outside a court of law.

[Of course, a franchise tax is not such an action upon the part of the State, but is an assessment for governmental purposes upon this property as upon any other property.]

POOR

The franchise or permission is the right or opportunity of the complainant to do a service—to put its tangible property to this particular use. **The fact that the company is operating or "going" necessarily presupposes (for purposes of rate regulation) the opportunity and right to operate.** It is doubtful if even the complainant would have the effrontery to invoke the powers of injunction as an *acknowledged* trespasser.

Judge Hough used the illustration of the personal service of the town crier or herald, thus (412):

> "Again, let it be supposed that a citizen be granted a franchise of being a town crier or herald, as an historical illustration. Such franchise is not different in kind from that here under consideration. Is there any value attached to that franchise beyond the right of working under its protection for a fair wage? And would the herald be justified in charging two prices for his proclamation—one for his service and the other as return or income on his franchise?"

The illustration might be amplified to show the difference in the valuation of good-will and franchise in condemnation or sale and in rate regulation.

The herald having been given permission by his sovereign to be a herald (and thereby becoming entitled to the wage of a herald) might choose and be permitted to transfer his occupation and sell his uniform to another. And, depending upon the other's views of the advantages of the position, the franchised herald might be able to collect a bonus for the permission—the right—the opportunity to this particular occupation, and perhaps another bonus to represent the good-will of the business, *i. e.,* the being a "going" herald instead of a dream. **But could the herald, holding his employment, turn about and charge his sovereign, in addition to a herald's wage, a bonus for his sovereign's permission, or a bonus for being a live herald instead of a dead one?**

The State Controls Price and the Public Shares Profits.

Two points especially must be borne in mind in distinguishing principles governing valuations upon rate regulation from other valuations:

1st. The control of the price or rate is not in the owner of the goods to be sold, but in the State.

2nd. Increased economies and increased profits are bases not for increased valuations, but for decrease in the price or rate.

The complainant took all its franchises subject to the State's right of rate regulation, with none but constitutional limitations and no other limitation should be implied to nullify that right.

The franchises, subject to that right, had a value as offering a field for investment,—the furnishing of a public necessity to an immense and congested population with greatly restricted or no competition,—which has readily attracted surplus wealth. The Constitution guaranteed against confiscation. The prodigality of the public and general inefficiency of public servants assured at least a fair return.

In addition to this value, as an investment with reasonably certain prospects of a fair return, which might command upon a sale more or less of a bonus according to the supply and demand of capital and all the circumstances, the franchises would have a further value in proportion to the ability of the investment to secure larger returns.

POO

But the value of the franchises depends entirely upon the earnings and in this respect differs from the value of tangible property.

If the company were allowed to fix its own price for its product, as in private enterprises, it might advance and maintain the price, and by larger profits enhance the value of its opportunity to operate the franchises. But, through the nature of the service, the control of the price having passed from the company to the State, the company has lost its power to place any actual valuation upon the franchises.

And the issuance of stock against an arbitrary franchise valuation cannot force the State to allow a return upon that valuation any more than the State would be forced to consider capitalized instead of actual valuations of tangible property.

The State is to determine the earnings. The franchise values are dependent upon the earnings. Manifestly a computation cannot be based upon quantities that it is the purpose of the computation to determine.

The value of a "going" business over a "not going" business consists simply in the greater assurance of profit. As the business progresses the "going value" increases simply because more extensive operations and more efficiency mean greater economy, and greater economy means greater profit. **The right reserved by the public to regulate the rate was meant to be exercised in behalf of the public, as well as in behalf of the company. That right meant nothing to the public if it did not mean that the public should share in the benefits of increased economies by reduced rates, instead of having the increased profits go to the company.**

COPY

The principle of valuation upon condemnation or sale is that the purchaser pays more as profits increase.

The principle of valuation for rate regulation is that the purchaser pays less as profits increase.

Surely the public with an unlimited supply of ungranted permits upon the shelf never expected by mere silence to have to pay eternal tribute for what it overgenerously gave away.

Franchise and Good Will Are Paid for in Operating Expenses.

Again, in valuations upon condemnation or sale, "operating expenses," are not charged as in rate regulation.

Every cent of the cost to the company of all those qualities which distinguish a "going business" from a "not going" business, has been paid for, is being paid for and will be paid for by the consumers in the rates, under the charge for operating expenses.

To a purchaser, including the municipality that purchases through condemnation, the company may say that the established, operating, earning business has an added value over the value of the bare tangible property,—the result of experience, knowledge, skill and accomplishment; but every one of these items of cost have been represented in the salary list, from the president to th office boy, and including the legal advice that seems so essential to a profitable gas business, especially at such crucial times as when the officers are called upon for a plain truthful statement from the books, upon the making of a tax report or upon a rate regulation inquiry.

And this salary list, together with repairs and replacements, the consumers have paid and will continue to pay in the charge for operating expenses. **And the**

POOR

charge for operating expenses is not for a "non-operating" business, or a business as it was operating, but for a business as it is operating NOW, with all the aggregated advantages of experience, knowledge, efficiency and accomplishment of the past and present included.

Once establish in the highest court of the land the right of a corporation to capitalize franchise and good-will against the public right to regulate rates and the resultant wrongs under protection of the law will be inestimable and irreparable.

This device of the valuation of franchises and good-will would serve effectually to prevent the public from ever sharing in increased economies, for the greater profit the greater value of the franchise and good will.

State's Power to Reduce Rates Would Be Nullified.

The valuation of franchises and good-will would nullify the State's power to reduce rates once established. But that power has been upheld by this Court in Stanislaus County *vs.* San Joaquin C. & I. Co., 192 U. S., 213, 214, where it held:

> "It is not confiscation nor a taking of property without due process of law, nor a denial of the equal protection of the laws, to fix water rates so as to give an income of six per cent. upon the then value of the property actually used, for the purpose of supplying water as provided by law, even though the company had prior thereto been allowed to fix rates that would secure it one and a half per cent. a month income upon the capital actually invested in the undertaking. If not hampered by an unalterable contract, providing that a certain compensation

should always be received, we think that a law which reduces the compensation theretofore allowed to six per cent. upon the present value of the property used for the public is not unconstitutional. There is nothing in the nature of confiscation about it.

"The original cost may have been too great; mistakes of construction, even though honest, may have been made, which necessarily enhanced the cost; more property may have been acquired than necessary or needful for the purpose intended. Other circumstances might exist which would show the original rates much too high for fair or reasonable compensation at the present time. Notwithstanding such facts, are the shareholders of the company to be forever entitled to eighteen per cent. upon this cost, and does a reduction in amount as provided for in the Act of 1885, take away property in violation of the provision of the Federal Constitution? We think not."

(As to ownership of franchises, Part II., 156-170.)

Real Estate.

The Court accepted the Master's report as to the value of complainant's land and the buildings thereon, which it held to be devoted to the public use. The experts who testified for complainant determined the value of the buildings on complainant's land upon the basis of the cost to reproduce them at the present time, less depreciation; they estimated the value of the land itself upon the basis of its market value, as vacant land, at the present time. We concede the method adopted for the valuation of buildings to have been the right method, but we contend that the land should have been valued subject to the servitude of its occupancy by a gas plant. It is reasonable to assume that if complainant's land, occupied by gas plant, were thrown upon the general market, were offered for sale to purchasers who did not want to operate the plant, complainant would either have to (1) scrape the plant, and hence practically lose its value, or (2) sell it at a greatly reduced figure for use elsewhere. We urge, therefore, that (there being no competent evidence of record of the value of complainant's land subject to the servitude of its present use, or of an available site suitable for complainant's purposes and capacity), complainant should be allowed the full return of its plant and disallowed the value of its land except so far as that value is represented in cost of the land.

The public cannot be charged for high class residential or congested business district property. Such property would not be selected as a site by a company that expected profits only from the gas business and such profits are all the public is to pay. The excess in value over an available suitable site cannot be realized upon until the gas business is discontinued and, therefore, such excess does not represent property invested in the gas business.

Inasmuch as our contention in this respect will be presented as a subject of special consideration in the brief of the Public Service Commission, we have contented ourselves with a bare statement of the principle which we think should govern the determination of the value of complainant's land and plant.

Plant.

The term plant includes all the machinery, tanks, everything which constituted the plant for the manufacture and transmission of gas except the mains, services, metres and personal property (1034, 1035).

Appellant contended that the method of valuation should be the actual cost less depreciation, or the present cost of a modern plant of like capacity.

The method employed was the present cost to reproduce the identical plant.

COPY

Upon this subject the learned Judge at Circuit said:

> "It appears by undisputed evidence that some of these last items of property cost more than new articles of the same kind would have cost at the time of inquiry; that some are of designs not now favored by the scientific and manufacturing world, so that no one now entering upon a similar business would consider it wise to erect such machines or obtain such apparatus. In every instance, however, the value assigned in the report is what it would cost presently to reproduce each item of property in its present condition and capable of giving service neither better nor worse than it does now. * * * Upon authority, I consider this method of valuation correct."

A corporation engaged in a public service is entitled to a return only upon property necessarily devoted by it to that service by the operation of a reasonably efficient plant, conducted with reasonable economy and ability.

Regan *vs.* The Farmers' Loan & Trust Co., 154 U. S., 362.
Smith *vs.* Ames, 169 U. S., 543.
San Diego Water Company *vs.* City of San Diego, 62 American State Reports, 275.
Covington, etc., Turnpike Co. *vs.* Sanford, 165 U. S., 478.

The question of whether or not a particular plant is reasonably efficient, or is being conducted with reasonable economy and ability, must necessarily depend upon the "state of the art" of gas manufacture and distribution. If a gas company's plant is to-day of an obsolete type, requiring twice as large an investment to manufacture and distribute gas as would be required if it were employing modern and efficient plant, which was used by other companies engaged in business in the same

POO

field, and which was accessible for its use, it obviously would not be entitled to charge a rate which would enable it to yield a return upon an investment much larger than would be required to produce the same output.

The test of reasonableness of a given rate, which includes the reasonableness of the investment and plant upon which it is predicated, must necessarily be—whether the company's investment in plant is reasonably necessary in consideration of the state of the art, for the production of its output, for rendition of its service to the public.

It would be obviously absurd to hold that a law was unconstitutional which did not yield to *every company affected by it* a return upon its investment, the return upon the cost of reproduction of the plant which it employed, however unreasonable the investment or however inefficient and obsolete the plant might be.

The evidence in this case was limited to the valuation of the plant of the complainant alone. It, therefore, will not sustain a finding that the rate fixed by the statute is an unreasonable and confiscatory rate because of its failure to yield a fair return on the company's plant, unless it be shown that the company's plant is an economical and efficient plant from the standpoint of the present state of the art, available for use in the field of the company's service.

The record shows what it would cost to reproduce the complainant's plant and every part thereof as it now stands. The record tends to show that a large part of such plant is obsolete, is grossly inefficient from the standpoint of the present state of the art, and that the cost of production thereby is greatly in excess of what it would be if the company employed modern methods and appliances available for its use in the field of its operation. The record does not show what it would cost

COPY

to construct a modern plant of the capacity of that now in use by complainant.

The State and the City produced before the Master Dr. Marks and Mr. Edgerton as experts. Dr. Marks made a personal examination of the plant and detail, including buildings, apparatus, holders and tanks, and appraised them at a total value of $9,348,692 (5058-5018). The valuations for each plant made by him on which this total is based appear on pages 5063-5013. The method used by Dr. Marks in arriving at the valuation was to have the total actual first cost of buildings and structures based upon original inventories, using actual cost for additions, less depreciation in proper amount; also to add first and subsequent costs in each case of yard and holder connections, less proper depreciation; also to add the actual cost of foundations for holders and steel tanks without depreciation where same has not appeared; also to add the actual cost of new buildings added without depreciation where same has not appeared; also to add actual cost of new buildings added without depreciation, and by the above method to arrive at the actual value of buildings and apparatus (5063).

Mr. Edgerton examined all the plant and apparatus and gave a total valuation of $10,023,057.25, the details of which will be found (5119-5238). He adopted the inventory furnished by Complainant's witness, Mr. Mayer, and used Mr. Mayer's measurements with the exception of a few where he made his own and checked them. He found that in same instances the measurements given by Mr. Mayer were not correct (5116). In his appraisal and preparation of same he took station by station and aggregated the buildings, then the apparatus, following the divisions adopted by Mr. Mayer; then calculated out the details and corrected by himself and had a typewritten copy made (5118). In certain instances he adopted Mr. Mayer's figures because he did not have an opportunity to make a calculation of him own as to

POC

certain machinery and various small items and some large ones (5118). He figured as to each item the depreciation by reason of physical deterioration.

There were also the sworn statements of Complainant's officers in the Tax Reports of 1904 and 1905.

However, the Master chose to disregard this evidence and he relied upon the appraisal of Mr. Mayer ($15,532,489, reduced to a round $15,500·000) as the basis for defeating the legislative act, and the Court has sustained his finding.

Yet complainant's witnesses admitted that the identical plants would not be reproduced at the present time. It is apparent that the separate scattered plants of the constituent companies would not have been so constructed for the consolidation even twenty years ago. They were constructed for six companies instead of for one, and since have become antiquated and of less efficiency than a modern plant of less cost.

The plants would not have been reproduced, even in 1884.

Mr. Bradley, the chief engineer of the company since 1886, testified:

> " *Q.* If you were going to reproduce to-day a gas plant to produce the entire amount of gas that is now manufactured by the Consolidated Gas Company, would you reproduce these plants? *A.* I think that question is answered by the very work I am engaged on now in the Astoria plant. It is not a reproduction " (995).

Mr. Mayer testified:

> " *Q.* If you were called upon to construct a plant for the use of the Consolidated Gas Company today, would you scatter the works around as they are here? *A.* I certainly would not. *Q.* The

COPY

> works divided in the five manufacturing stations require a much larger investment in plant, do they not, than it would to bring them together in one station? *A.* Decidedly. *Q.* And also the cost of operation is very much more in a scattered station than it would be in the one station? *A.* Yes, sir" (1570).

Some further detail upon this subject is given in Part II.

The decision of the Circuit Court thus squarely puts to this Court the question, whether a maximum rate of charge for gas fixed by the Legislature of the State is confiscatory because it does not allow to complainant a return upon unnecessary investment, upon a much greater investment than, in the light of the present state of the art of gas manufacture and distribution, would be required to produce its output; whether such a company is entitled to earn a fair return on obsolete machinery, the present reproductive value of which is greater than would be the cost of moden efficient machinery of the same productive capacity.

(Further details concerning plant valuation are given in Part II., 133-148.)

Cost of a Modern Plant.

Complainant offered no evidence upon the theory of the value of a modern plant capable of complainant's output and the valuations of the Master and Court below were not upon that basis.

We have presented an estimate, the argument of which is set forth in Part II. hereof, pp. , which shows that, upon the basis of the cost of the construction at Astoria, coal and water gas plants of complainant's present daily capacity of 51,000,000 cubic feet would cost $11,738,518, as against the Court's finding of $15,500,000, a saving of $3,761,482.

POOR

This would show:

Real estate (less deductions)..........	$10,422,106 30
Plants	11,738,518 00
Mains and services (book value)......	7,852,151 03
A total of....................	$30,012,775 33

Master's valuation, same items.......	$43,591,000 00
Court's valuation, same items........	42,415,435 00
Original cost, same items............	29,266,757 46
Carter swore to truth before Legislative Committee	27,408,700 00

Assuming a plant of 70,000,000 daily capacity on Astoria land, 20,000,000 coal gas and 50,000,000 water gas, and allowing the full value of land, tunnels, etc., designed for a plant twelve times the present unit, and we have:

Astoria land, tunnel and plant, including 15,000,000 holder and tank for a second one of same capacity, everything as per complainant's Exhibit 235	$13,250,739 60
Water gas plant, 50,000,000 capacity.	6,150,000 00
Holders and holder stations..........	4,109,048 00
Total plant value and Astoria real estate	$23,509,787 60

The total realized by srapping of Manhattan plants would be $5,869,770, which should be deducted from the Manhattan real estate, and we have:

Real estate, Manhattan..............	$4,533,336 30
Real estate and plant, Astoria, holders and holder stations, Manhattan...	23,509,787 60

Mains and services (book value)......	7,852,151 03
Meters and miscellaneous............	4,100,000 00
Working capital.....................	1,616,000 00
	$41,611,274 93

Astoria, *i. e.,* capital invested, etc., included above in plant, as against the Master's finding of $63,307,000.

On the Master's finding as to the net return for 1905, this would give a return of 5.33 per cent. But in addition to this we have the testimony of Mr. Bradley that he expected to manufacture gas five or six cents per thousand cheaper in Astoria than he could in Manhattan (1730-1731). If we allow five cents per thousand on the $13,283,163.767 we would add to the $2,327,328 the sum of $664,158.18, making a total of $2,991,486.18, or a return of 6.87 per cent.

And this on a plant that is capable of producing 14,000,000,000 cubic feet per annum, and has sufficient real estate to allow an extension of the plant to 48,000,000,000 cubic feet per annum, or twice as much as is to-day consumed in the Boroughs of Manhattan and The Bronx (577-578).

(Further details are given in Part II., 148-156.)

Mains and Services.

The method of valuation was an estimate of the present cost to reproduce the identical mains and services, without allowance for multiplicity by reason of being laid by six companies instead of one, and, notwithstanding the charges for current repairs and replacements already covered, the additional expense of laying under modern conditions of pavements and use of streets.

This method differed from the method employed for valuing the plant, which was cost of identical plant less depreciation. The methods of valuation shift according to the varying advantage to the complainant against the public, and this method adds $4,783,848.97 in excess of original cost, without allowance for depreciation from use.

There have been four valuations upon the mains and services by complainant:

1. The book value which is supposed to show the actual cost, and that is $7,852,151.03.

2. The value reproduced new, given to the State Board of Tax Commissioners, less depreciation, $4,398,-106.82. (Exhibits, p. 311.) This valuation was calculated upon the information furnished by Colin C. Simpson, assistant secretary of the company in charge of the mains.

3. The testimony of Colin C. Simpson given before the Gas Commission that there were 880 miles of mains valued at $11,687,466.41. (1751.) A value of $13,-281.21 per mile; and

4. The value given by Simpson in this case, that there were 822.2 miles of active mains at a value of $12,-636,150. (1747.) A value of $15,368 per mile. As a matter of fact, there are only 795.47 miles of active mains (1746), making a difference in favor of the company in the last valuation of $426,173.05.

The Master and Court found that the mains should be given the highest value testified to by Simpson, namely, $12,636,000, at the full cost of relaying all the mains under present conditions, assuming that it would cost the same price to relay the pavements on the entire work that they have to pay for repair jobs. For instance, the Master allows for granite block pavement $8 for the first square yard and $4 for each additional yard, while

Simpson testified: "I can contract for the same pavement for $1.90 per yard. We are permitted now this last year; if an opening is over 250 feet long we are permitted to contract with the contractor to replace the pavement for us, but we have only just started on that." (671.) Q. For any smaller jobs you are still—A. Paying $8 for the first yard and $4 for the additional yards; in small openings it is generally only one yard. (671.) Mr. Simpson further testifies: "The total mileage is a little over 880 miles. Of that 880 miles at least 90 per cent. are either brand new or put in condition to be as good as new. That is, they have been restripped, re-examined and recaulked. (1752.) That the mains stripped and new laid amounted to 95 per cent. of all (668), and that since he had been general superintendent he had seen practically all of such mains." (700.) Therefore, in the book value of the mains, or in the repairs and replacement account we find that the consumer has been charged with the expense of the laying of the mains and the expense of the repairing and the expense of repavement, and to now add $4,783,998.97 as the additional cost, because of pavements and other modern conditions, is to compel the consumer to pay twice on this item.

IV.

Only property necessary for the particular use may be valued.

The owner is entitled to a return only upon the fair value of the property necessary for the particular use.

Covington and Lexington Co. *vs.* Sanford, 164 U. S., 578.

POOR

For there may "have been extravagant and needless expenditure of money" in construction; it may have been invested in a plant "unwisely built" (Reagan *vs.* Farmers' Loan and Trust Company, 154 U. S., 362); "it may have been invested in property that cost more than it should have cost" (San Diego L. & T. Co. *vs.* National City, 174 U. S., 739). "Great mistakes of construction, even though honest, may have been made, which unnecessarily enhance the cost; more property may have been acquired than necessary and needful for the purpose intended" (Stanislaus County *vs.* San Joaquin C. & I. Co., 192 U. S., 201); and "reckless and unnecessary expenditures, not legitimately incurred in the acquisition, construction or preservation of so much of the plant as is necessary for the purpose, may have been made (San Diego City Co. *vs.* City of San Diego, 62 Am. St. Rep., 273).

The question of reasonableness of a rate involves the element of reasonableness, both as regards the company and as regards the public.

Chicago, etc., Railroad *vs.* Minnesota, 134 U. S., 450.
Turnpike Co. *vs.* Sanford.

V.

Rate Must Be Just to the Public.

"That the utmost that a corporation, operating a public highway can rightfully demand at the hands of the Legislature, when exercising its general powers is, that it receive what, under all circumstances, is such compensation for the use of its property as will be just to it and to the public."

San Diego Land Co. *vs.* National City, 174 U. S., 757.

OPY

"The company is entitled to a fair return upon the reasonable value of the property at the time it was being used for the public."

San Diego Land & Town Co. *vs.* Jasper, 189, U. S., 442.

"The owner is not entitled to earn a fair return upon the money invested in the property, *but only upon the amount necessarily invested in the enterprise upon the fair value of the property necessary for the particular use.*"

Covington & Lexington Turnpike Co. *vs.* Sanford, 164 U. S., 578.

"We hold, however, that the basis of all calculations as to the reasonableness of rates to be charged by a corporation maintaining a highway under legislative sanction must be the fair value of the property being used by it for the convenience of the public, and in order to ascertain that value, (a) the original cost of construction, (b) the amount expended in permanent improvements, (c) the amount and market value of the stocks and bonds, (d) the present as compared with the original cost of construction, (e) the probable earning capacity of the property under the particular rates prescribed by the statute and (f) the sums required to meet operating expenses, are all mattters of consideration and may be given such weight as may be right in each case."

Smyth *vs.* Ames, 169 U. S., 546.

"It is not confiscation or the taking of property without due process of law, nor the denial of the equal protection of the laws, to fix water rates so as to give an income of six (6%) per cent. *on the prop-*

erty actually used for the purpose of supplying water as provided by law."

San Diego Land & Town Co. *vs.* Jasper, 189 U. S., 442.
San Diego Co. *vs.* National City, 174 U. S., 739; Chicago, Mil. & St. P. Ry. *vs.* Smith, 176 U. S., 167; Stanislaus *vs.* San Joaquin, 192 U. S., 201.

VI.

The public has the right to the benefit of progress in the art.

The constitutionality of a law establishing a maximum rate for a public service within a field of operation where the same conditions with respect to cost prevail, does not depend upon the cost of gas to a particular company which challenges the law.

Complainant offered its own tabulation exhibits taken by its experts from its books of account for a single year (1905) as proof of the cost of the manufacture, distribution and sale of gas in the field of its operation. The Attorney General objected to such evidence upon the ground that proof of such cost to complainant for a single year was not proof of what it would reasonably cost to produce gas in that particular field of operation, and that such cost could only be shown by proving (1) that complainant was operating a reasonably modern, efficient plant with reasonable economy and ability, and (2) by so doing, what it had cost it to produce gas during a period of several years preceding the date when the laws challenged took effect.

It would seem clear that the single year selected might have been abnormal in respect of cost, because of violent fluctuations in the cost of labor and materials necessary for the manufacture and distribution of gas, or (stating the reason conversely) that proof of the average cost for the period of several years would be better evidence of normal cost than the proof of cost for a single year. There was just as much reason for the Court's taking evidence of the average cost of labor and material (subject to fluctuation in cost) for a period of several years, as for its taking evidence of the company's expenditures to cover repairs and renewals, or depreciation, for periods of eleven and twenty years; just as much reason for taking the average cost of labor and materials for a period of years and adopting it as a normal cost, as taking the average expenditures on account of depreciation for a period of years and adopting that average as normal annual depreciation.

Complainant's counsel, replying to defendants' contention that proof of cost should cover a period of several years, rather than a single year, urged that evidence of the cost of gas to complainant for the years 1903 and 1904 had been submitted to a legislative investigating committee of the State by an expert employed by it, and that such evidence was available to the defendants if they thought it material. The contention of counsel for complainant, which was accepted by the Master and approved by the Court, was based upon the assumption that the burden of proof was upon the defendants to show that the rate challenged was a reasonable rate, and not upon the complainant to show that it was an unreasonable rate.

The record fails to show that the several manufacturing plants of the Consolidated Gas Company were reasonably modern and efficient or that they were conducted with reasonable economy and ability; in other words, the record fails to show that what it cost the Consolidated Gas Company to manufacture gas in the year 1905 is what it would have cost a company operating a reasonably modern, efficient plant with reasonable economy and ability, to manufacture gas of the same quality and quantity in the same field and subject to the same conditions.

If the standard of efficiency in the year 1823 is to be used to defeat legislation based upon the state of the art in 1908, the public would be forever precluded from receiving the benefit of economies due to progress in this art.

The State has the right to secure to the public the benefits of the advancement in the particular science affected by the law, and its power so to do is not to be restricted by the employment of obsolete apparatus or the use of methods which that particular science has long since discarded.

The State has the right to require that gas be sold to the public by a public service corporation at a rate which would yield an owner employing plant and methods which are modern and efficient at the time of the enactment of the law, a fair return upon the property necessarily employed by the owner in the rendition of that service.

The idea is clearly expressed by this Court in the Gill case, 156 U. S., at page 657:

> "Given the case of a general law prescribing rates to all companies, can the courts inquire whether such rates are reasonable, and may they find that as to one company the prescribed rates permit it to do business at a profit, and as to another, whose facilities are inferior, or where expenditures are greater, the rates afford no profit? And will the fate of the law, as to its validity depend in each case on the result of such an inquiry?"

The complainant having failed to show that the cost of gas to it is what it would be to any well equipped and well managed company operating in the same field under the same conditions, there is not sufficient evidence to sustain a decree in its favor.

VII.

Complainant is not entitled to duplicate values.

Land is given enhanced value as vacant land, which would require scrapping of plant, yet the plant is given its full value.

Plant is allowed present cost of identical plant, with an allowance for current repairs and renewals, designed to keep it presently efficient, and in addition an allowance to periodically repay the present cost of the identical plant in the 11-cent item.

Mains and services are allowed an appreciation over cost due to added expense of relaying; they also are allowed the expense of present relaying in current repairs and renewals, designed to keep the mains and services presently effective, and an additional allowance to periodically repay the present enhanced valuation in the 11-cent item.

Operating expenses are allowed, which presume a "going" business and a "right" to go; yet an additional allowance has been made for the mere fact of operating.

Ultimate renewal allowance is made, including insurance against remote risks, inexperienced in over eighty years.

POOR

VIII.

The eighty-cent rate will be held to yield complainant a fair return unless it is plainly and palpably confiscatory.

This Court has held that it will not interfere with a rate of charge for a public service established by a statute unless it is so plainly and palpably unreasonable as to make its enforcement equivalent to taking complainant's property for public use without such compensation as, under all the circumstances, is just both to complainant and the public; that is, unless the case presents, *clearly and beyond all doubt,* such a flagrant attack upon complainant's right of property under the guise of regulation as will compel this Court to say that the rates prescribed will *necessarily* have the effect of denying complainant just compensation for the property taken for the public use.

Chicago, etc., *vs.* Wellman· 143 U. S., 339, 444.
Reagan *vs.* Farmers' Loan and Trust Co., 154 U. S., 362, 391.
Smyth *vs.* Ames, 169 U. S., 466, 529.
Henderson Bridge Co. *vs.* Henderson City, 173 U. S., 592, 614, 615.
San Diego Land Co. *vs.* National City, 174 U. S., 739, 754.
San Diego Land Co. *vs.* Jasper, 189 U. S., 439.
Ball *vs.* Rutland R. R. Co., 93 Fed., 19.
Palatka Waterworks *vs.* Palatka, 127 Fed., 161.

The rule declared justifies the deduction that this Court, in its use of the phrase "*so plainly and palpably* *unreasonable,"* intended to distinguish between a rate of charge that *may be* confiscatory and one that *is clearly and palpably confiscatory;* that this Court intended to declare the rule that where there was any doubt as to whether the rate fixed would yield a fair return on the property devoted to the public use, it will be presumed to yield such a return, and that such presumption will continue, notwithstanding uncertainty and doubt, until *it is clearly and palpably shown that the rate is confiscatory.*

The doctrine enunciated justifies the further deductions: (*a*) It will be presumed that every item of investment of gas cost which we here challenge (the elimination of which will tend to support the rate complained of) was determined by the Legislature, when it established the 80-cent rate, not to be a proper element of such investment or gas cost; and (*b*) it will be presumed, where there is doubt about the propriety and reasonableness of the allowance of *items* of investment or gas cost, that the Legislature held them to be improper and unreasonable allowances, where the constitutionality of the rate cannot be sustained upon any other rational hypothesis.

We have challenged in this case the propriety and reasonableness of the Master's allowing complainant a return upon the value of its alleged franchises, the value of the Astoria first unit, an unearned increment in the value of complainant's real estate, and upon the excess of the reproduction value over cost of complainant's mains and services, and we have opposed the allowance of certain items of cost heretofore stated.

Unless the eliminations for which we have contended are plainly and palpably so unreasonable as to be equivalent to taking complainant's property for public use without such compensation, as under all the circumstances is just both to the complainant and to the public, then our contention should be sustained, and these several items should be eliminated.

IX.

The maximum rate fixed by chapter 125 of the Laws of 1906, will permit complainant to earn a fair return upon the property employed by it in its gas business.

(1) If this Court should affirm the findings of fact contained in the decree, namely (*a*), that the value of the property of complainant devoted to the public use, inclusive of the value of its special franchises, is $59,831,435, and (*b*) that complainant's net income under the eighty-cent rate established by chapter 125 of the Laws of 1906 would be $3,024,592.45, then the finding of this Court will be that the complainant will earn, under the eighty-cent rate established by chapter 125 of the Laws of 1906, a return of five and five-tenth (5.5) per cent. per annum upon its investment, or upon the property devoted by it to the public use, inclusive of the value of the permission to devote that property to the public use.

We contend, upon the authorities and for the reasoning heretofore advanced, that such a per cent. of return constitutes a fair return on the property employed by defendant on its gas business. We contend, that a statute which permits a public service corporation to earn a return of five and five-tenth (5.5) per cent. per annum upon investment in constantly appreciating realty, in plant and property in the streets protected against depreciation, and upon intangible property, which is constantly appreciating in value, *does not constitute confiscation* of that property.

(2) If this Court should affirm the finding of fact contained in the decree that the value of the tangible property devoted by complainant to the public use was $47,831,435, and should hold that complainant's special

franchises were not property on which it was entitled to earn a return, and should affirm the finding of fact contained in the decree that complainant's net income, under the eighty-cent rate established by chapter 125 of the Laws of 1906, would be $3,024,592.45, then the finding of this Court will be, that complainant will be able to earn, at the rate established by chapter 125 of the Laws of 1906, a net income on such property of six and 3/100 (6.03) per cent. per annum.

We contend, upon the authorities and for the reasons heretofore advanced, that a six and 3/100 (6.03) per cent. return per annum upon such property would not only not be clearly and palpably confiscatory but would constitute more than a " fair return " thereon.

Under methods of property valuation adopted by the Court, the provisions for keeping the appreciated property intact and replacing same, and the advantages of monopoly in an unparalleled degree, we submit that complainant has failed to sustain its burden of proof of showing the legislative rates clearly and palpably confiscation.

X.

The provisions as to candle power, pressure and penalties do not invalidate the acts and they are separable.

Reagara *vs.* Farmers' Loan and Trust Co., 154 U. S., 362, 394-6.
Consolidated Gas Co. *vs.* Mayer, 146 Fed. Rep., 155.

These provisions are discussed more in detail in Part II.

POOR CO

XI.

The eleven cent allowance by the Court was excessive.

We submit that all this allowance in excess of 7.70 cents for current repairs and replacements is excessive. The 7.70-cent charge keeps the plant at all times presently efficient. The average for twenty years has been 10.89 cents, and the development of the capacity under that average shows that it was much more than necessary for the purpose now pretended.

"Even if the 'depreciation' which this item represents was 'depreciation proper,' or depreciation accrued, or definitely to accrue by reason of actual abandonment and substitution, it is not a proper charge against operation.

"In Cedar Rapids Water Company *vs.* Cedar Rapids, the Court said:

> "'So also, we may say, we see no reason why the plaintiff, in addition to operating expenses, repairs and other ordinary charges, should be allowed to reduce the apparent profits by deduction for a restoration or rebuilding fund. The setting aside of such a fund may be good business policy, and if the company sees fit to devote a portion of its profits to that purpose (*though, as we understand the record, no such fund has as yet been carried*), no one can complaint; but it is, in no just sense, a charge affecting the net earnings of the works. To hold otherwise is to say that the public must not only pay the reasonable and fair value of the service rendered, *but must in addition pay the company the full value of its works every forty years,* the average period estimated by plaintiff, for all time to come.'

"The same subject was considered by Garoatte, *J.*, concurring, in San Diego Water Company *vs.* San Diego, *supra,* where he said:

> " ' The theory of the plaintiff in this regard seems to be that the life of a plant of this character may be approximated at thirty years, and that a sinking fund of one-thirtieth of its value should be collected from the rate payers annually and be laid aside to be handed to the stockholders upon the sad occasion of its demise, as an alleviating salve to their sorrow. But such a thing is all wrong, for it results in the consumers of water buying the plant and paying for it in annual installments. Consumers of water cannot be charged with *the cost of construction.* They are only to pay a fair interest upon such cost, and as we look at this matter, if this 3½ per cent., is to be stowed away in the vaults as a sinking fund to make glad the hearts of the stockholders upon the expiration of thirty years, which theory cannot be tolerated for a moment, then it must go to the plant as cost of construction, and, therefore, not chargeable against the consumers.'

" Van Fleet, *J.*, who wrote the prevailing opinion in the same case said:

> " ' With regard to the question of the depreciation of the plant by use it is sufficient to say that *ordinary repairs* should be charged to current expense, that *substantial reconstruction,* or replacement, should be charged to the construction account, and that depreciation should not otherwise be considered. It is doubtless difficult, in many cases, to properly discriminate between current and ordinary repairs and such repairs as amount in effect to new construction. Such difficulties when they arise must be solved by the application of the principles on which ordinary business enterprises are conducted.'

"The true theory of the bookkeeping of the cost of operating is as stated in the excepts above. Operation should only be charged with ordinary repairs, and as such

POOR

should be reckoned as an element in the cost of product delivered, or of the public service. Substantial renewals, or replacements—a new building for an old—new apparatus for new and modern apparatus— new pipes for old—should be charged to construction, but should not be reckoned as affecting the cost of the delivered product, or the public service, the principle being that where anything unserviceable is replaced by a thing serviceable, it should be treated as *new* construction—the company simply saving, as another business enterprise would, the scrap value of the thing discarded to be reinvested in the thing replaced.

[Further consideration of this in Part II, 112-123.]

Correction.

We desire to correct a seeming misunderstanding among counsel as to the powers, etc., of the Attorney General. He is the constitutional law officer of the State and has the power and duty to represent the people of the State in all actions and proceedings wherein they are interested. The creation of the Public Service Commissions may have given them some co-ordinate functions, but in no wise as superseding the Attorney General.

Part II.

Being an argument of some subjects more in detail, as presented by our counsel in the court below, David B. Hill, Esq., Alfred R. Page, Esq., and William A. Deford, Esq.

The Penalties do not invalidate the acts.

Judge Hough said:

> "I am of the opinion that the penalty clauses in both statutes are clearly obnoxious to the remarks of Brewer *J.*, in *Cotting* vs. *Kansas City Stock Yards Co.,* 183 *U. S.,* 79."

In this he followed Judge Lacombe, who, upon granting the preliminary injunction herein, cited the same case, and said:

> "It is difficult to see in what respect the provisions of the two acts now under consideration differ from those passed upon in the Kansas City Stock Yards case, except that they are perhaps more drastic. On this branch of the case there is no controversy as to the facts, and, under the opinion last quoted, these provisions seem obnoxious to the Fourteenth Amendment to the Constitution of the United States."

We respectfully submit that this opinion does not accord with the construction the New York Court of Appeals has placed similar provisions in the statutes of that State, in Griffin *vs.* Interurban Street Ry. Co., 179 N. Y., 438; 180 N. Y., 538, and in Jones *vs.* Rochester Gas Co., 168 N. Y., 65, 68, and Cox *vs.* Paul, 175 N. Y., 328.

POOR C

In Cox *vs.* Paul, the opinion states: " That this Court is committed to the doctrine that a party suing for penalty can recover but for one violation and but one default prior to the commencement of the action."

The Griffin case arose under the so-called " Free Transfer Law " (N. Y. Railroad Law, sec. 104). That statute requires the street railroad company under certain circumstances to give a free transfer to each passenger at any point of intersection between two of its lines. The remedy is as follows:

> " For every refusal to comply with the requirements of this section, the corporation so refusing shall forfeit fifty dollars to the aggrieved party."

The Appellate Division held that cumulative penalties were recoverable under this provision, but the Court of Appeals reversed the ruling, and held that only a single penalty was recoverable, no matter how many separate violations may have occurred of the rights of the passenger suing.

There is even less ground of objection in this act than in the free transfer act. The free transfer act gives the penalty to the passenger whose rights are violated. This eighty-cent gas law, however, provides the penalty not as a remedy to the consumer (whose remedy is to refuse to pay the bill and resist the removal of his gas meter), but " for each offense to the people of the state." It belongs to the class of quasi-criminal as distinguished from that of remedial penalties.

If the penalty of the act challenged be construed in accordance with the doctrine of the New York cases cited, then the penalty provisions complained of are not excessive and are not calculated and could not have been intended to deter the complainant from litigating its rights, nor did they operate to deny to complainant the equal protection of the laws.

PY

We submit, therefore, that the penalty provisions of the statute are so definitely separable from the maximum rate provision that each can stand alone, and that it is clear that it is the intention of the Legislature that the maximum rate provision should stand and should be enforcible, even though the penalty provision should fail.

Pollock *vs.* Farmers' Loan Company, 158 U. S., 601.
Poindester *vs.* Greenhow, 114 U. S., 270.

PRESSURE.

The provisions of the laws as to pressure were not shown by complainant to be either physically or commercially impossible.

Chapter 736 of the Laws of 1905 and chapter 125 of the Laws of 1906 contain the following provision in regard to pressure:

> " The pressure of illuminating gas in any service " main in said city at any distance from the place of " manufacture, shall not be less than an inch nor " more than two and one-half inches."

The bill of complaint, at paragraph 23, avers:

> " It is an absolute physical impossibility for your " orator to comply with the provisions in regard to " pressure. The pressure must of necessity vary " beyond the limits prescribed thereby in the mains " of your orator, owing to differences of elevation " of the city mains and the consequent difference of " atmospheric pressure, and owing to the laws of " nature these differences of pressure cannot be obviated by your orator."

Thus it will be observed that the complainant rests its case solely upon the increase of pressure occasioned by higher altitudes.

POOR CO

Mr. Bradley showed that in so far as distance from the works was concerned the company could control the pressure by delivering gas through a trunk main at high pressure and by means of a district governor reducing it and delivering it into the service mains within the district at any given pressure (567, 568).

The complainant's claim as to altitude is that the pressure of gas in the mains increases one-tenth of an inch in every seventeen feet of altitude. But they fail to make allowance for the reduction in pressure by reason of the friction of the gas in the pipes, which is the reason that gas works are always placed at the lowest possible level; that by reason of the rise in the mains the levity of the gas will overcome the friction in the pipes. Mr. Bradley admitted this and stated that the loss in pressure was considerable; that he had tables that would show just what it was (570, 571), but he never produced them. That the loss in pressure by reason of friction in the pipes is considerable is shown by the fact that in delivering gas in a twenty-four inch main from Twenty-first street to Beaver street, starting with a pressure of four pounds, "it reduces itself; we do not get any more pressure there "than we require with that initial pressure at Twenty- "first street. That is the friction" (570, 571). Professor Humphreys gave an elaborate formula for obtaining the loss or absorption of pressure (1780, 1781), and stated that in a forty-eight inch main that an initial pressure of two and one-half inches would be reduced to one inch in forty-eight feet of pipe, but on carrying the subject to its legitimate conclusion he substantially changed his testimony (1781-1783), that in a forty-eight inch main you would lose an inch and a half of pressure in a mile of main (1783), and further that if the main had a gradual upward rise of ten feet to each 700 feet of pipe, that this would tend to offset the loss of pressure (1783, 1784). And, furthermore, that an automatic governor placed at any point would maintain an equal pressure in the mains by admitting more gas as the pressure fell and closing down to admit less gas as the pressure rose (2091), and also that pressure could in some respects be equalized by carrying a trunk main for a considerable distance and then connecting it with the distributing main in which the pressure had been reduced by friction and the drawing off of gas by consumers. We have, however, in the testimony of Mr. Edgerton two comparisons, one taken at Columbia University, which is 150 feet above the sea level, and the other taken at No. 386 West One Hundred and Twenty-fifth street, at the bottom of the hill, and we find by comparison of the charts of the two experiments, Exhibits JJ 1-16 with KK 1 and 2, that there is a difference in the pressure of three-quarters of an inch less at the bottom of the hill than at the top (2924). That Edgerton's experiments throughout the city show that it is entirely within the power of the gas company to regulate its pressure within the limits prescribed by law, and that with certain changes in the company's system of distribution a pressure in any service main at any moment of not less than one inch nor more than two and one-half inches could be complied with, with less care and attention and less risk of a momentary compliance, than under the present system (2928), a system of districting the city and placing higher altitudes in a district regulated and controlled by an automatic governor is a well-known device of gas engineering to regulate and control pressure, as is stated in Newbigging handbook for gas engineers and managers, which, Mr. Bradley stated to be a standard authority, as follows: "For the supply of gas "to varying levels, therefore, separate leading mains with "a station governor upon each are highly advantageous "and should be employed wherever practicable" (570). And at page 570 of the testimony Mr. Bradley stated that it was theoretically practicable to divide the city into districts, and place district regulators or governors at each district, and that in many cities this system is used, and that the reason that Mr. Bradley has not used them is that he is afraid to trust a machine to work automatically and that he supposes that in the other cities the managing engineers have more nerve than he has.

Therefore, it would appear that the difference in pressure occasioned by a difference in altitude may be entirely regulated and controlled by devices well known to gas engineering science and which are in practical operation in many cities of the United States, and, therefore, on the one ground stated by the complainant on which it attacks the pressure provision of the law, that because in difference of elevation it is impossible to comply, they have entirely failed to establish their case and that the contrary has been conclusively shown. As to the necessity for regulating the pressure at which gas may be delivered to consumers, it is only necessary for the Court to take into consideration the exhibits put in evidence by the complainant (Exhibits 345-366-b, inclusive), in which it will appear that in the instances of greatest variation the company has attached service pipes and are delivering gas to consumers upon pumping mains as shown by the rapid fluctuation in pressure upon the chart (see Exhibit 364), as compared with exhibit showing the corresponding fluctuations charted, and the testimony of Edgerton, Hallock and Humphreys as to the efficiency of gas delivered at a uniform pressure.

The evidence is very well summarized by the Master (Master's report, 248, 249). He, however, fails to draw a conclusion, but from his statement it is very clear that the question of pressure at which illuminating gas should be delivered is clearly within the police power of the State, and in order to set aside the regulation prescribed by the Legislature, it will be necessary for complainant to show that it was impossible to comply, and that by the application of no known device could the pressure be regulated. The complainant's witness admitted that the pressure could be regulated by the installation of district governors, which was a method recommended by Newbigging, an eminent English authority.

Upon the subject of pressure the Circuit Court said:

> "By the expenditure of about $4,000,000 for construction of mains and valves alone, exclusive of any pumping stations or other apparatus, it might be possible to establish and maintain the pressure called for by these acts. Such a thing is commercially impossible, and even if it were done (of course at complainant's expense) it remains commercially impossible, since the other parts of the statutes cut off the surplus income out of which alone complainant could be expected to perform the work. A change by means of new capital would be impossible, because when made it would not add a dollar to income."

The Court, therefore, found that (*a*) the compliance with pressure regulation was *physically possible,* but (*b*) that it was commercially impossible.

If compliance with the pressure regulation was *physically possible,* then the regulation is not obnoxious to the Constitution because of complainant's inability to comply with it.

If compliance with the pressure regulation is *commercially impossible;* that is to say, impossible except by the reconstruction of complainant's distributing system and by the investment of additional capital, it cannot be obnoxious to the Constitution, except upon the ground that the eighty-cent rate will not yield complainant a fair return on its investment, *i. e.,* its present investment plus the investment necessary to enable it to comply with the regulation; and complainant *cannot complain of its unconstitutionality on that ground until it has made the investment necessary to enable it to comply with the provision.*

The Circuit Court said in its opinion that "for changed circumstances, either of production or consumption, there must be new applications for relief; the business of the Court is to deal with circumstances discoverable in the present and by the evidence." Applying that doctrine here, we contend that when complainant has made the investment necessary to enable it to comply with the pressure regulation and has thereby devoted additional property of definite value to the public use, and it should find that the rate prescribed by the statute did not yield it a fair return on its total investment, then, under the "changed circumstances" brought about by its new investment, it might make a new application for relief.

If this Court should, however, find that compliance with such pressure provision is physically and commercially impossible, and is therefore obnoxious to the Constitution, as being legislatively unreasonable, then we contend that the provision is clearly independent and severable.

Candle Power.

The Master reported that, while by complainant's Exhibit No. 94 the cost of gas production in 1905 was fully shown, such cost only covered the expense of enrichment from twenty to twenty-two candle power for the last six months of that year, "while for a full year (there would be required) the addition of 1.83 cents per thousand feet to the cost as stated."

Complainant moved the Court below upon its application for a supplemental expression of opinion, that it might be allowed an additional cost allowance of 1.83 cents per thousand cubic feet to cover the expense of enrichment from twenty to twenty-two candle power for the other six months of the year, contending that 1.83 cents per thousand cubic feet would be necessary for that purpose.

The defendants resisted complainant's motion for the reasons set forth in their brief submitted to the Court, as follows:

The Master reports that the Gas Commission allowed 1.81 per thousand cubic feet "for cost of enrichment due to 22 candle-power law," but that Mr. Addicks claims 1.83. It appears at page 1821 of the testimony that the former figure was based upon Addicks' statement to the Gas Commission.

The complainant does not claim that the 22 candle power was not required by law during the first six months of 1905, just as much as during the last six months of that year. Its present motion refers to the year 1905 as one, "during only the last six months of which complainant was operating under the legislative acts in question *imposing penalties* for each failure to maintain at least 22 candle power"; and the complaint is that the year 1905 cannot therefore be regarded as affording a "basis of a full year's production under said 22 candle power provision as compared with the lower enrichment previously maintained by complainant."

The candle power requirement was just as clear before the legislation of 1905 as it has been since then. In fact, the words used were the same, except that the words "place of manufacture" were used instead of the words "distributing holder." The difference was in the fact that there was no penalty in the original act, whereas a penalty of $1,000 for each offence was inserted in the laws now complained of.

Act of 1897, c. 385, Exhibits, p. 5264.
Act of 1905, c. 736, Exhibits, p. 5262.
Act of 1906, c. 125, Exhibits, p. 5263.

The charter provision as to 20 candle power test and penalty dates also from 1897 (chap. 378, sec. 578), and of course did not repeal the 22 candle power provision in a subsequent statute of that year; nor did its re-enactment in 1901 in the revised charter so operate.

There appears from the evidence five plants (Testimony, pp. 535-540), where enrichment is necessary in order to reach a required candle power. For each failure at any station, the statute provided a penalty of $1,000 (the total number of customers, exclusive of the City, being 390,000); but the Court has held the penalty void at request of the complainant. If it is void, what ground have we for any inference that the complainant will furnish any better gas than it did before? Why then should the price of gas to the consumer be raised? If the rule by which street car conductors were made to ring up their fares had been held unconstitutional, would it have been necessary to raise their salaries?

It is respectively submitted that every presumption should be entertained against a complainant who puts forward such a ground for a motion to increase the cost of gas to the consumer; and that this is especially the case when it is a matter as to which it is very difficult to get at the truth, and the truth is best known to the company which avows its disobedience to the law.

The most reliable evidence that we can find assists the defendants' contention. It is to be found in the tabulation of actual candle power tests made by the City during the year 1905.

City's Ex., 47, Exhibits, p. 5540.

This exhibit shows that for the first six months, when there were no penalties, the average City test was 22, and that in the second six months, when there were supposed to be penalties, the test showed 24.19. The average for the year is estimated on the exhibit at 23.1. Indeed, the average as between the tests for the first six months and for the tests for the second six months is somewhat higher; but considearably more gas was sold during the first six months than during the last six months.

Exhibits, pp. 5753-5756.

Such reliable evidence as we have tends to confirm the deduction from the actual City tests. Complainant's Exhibit 93 gives the summary of operations for the year ending October 31, 1905. The manufacturing cost was 32.84. Its Exhibit 94 gives a similar summary for the year ending December 31, 1905. The manufacturing cost was but 32.77. In other words, the difference between November and December, 1904, on the one hand, and November and December, 1905, on the other, was trivial; and such difference as there was showed less cost of production under the 22 candle power penalty regime. If there was really an additional cost of 60 cents or so for enrichment, *it was masked by some new economy which complainant has not thought it wise to confess.*

It was entirely within the power of the complainant to give us a better basis of inferences than an Addicks hypothesis. It could, as was observed on the argument, have supplied the Court with a calculation of manufacturing cost for the year beginning July 1, 1905. It did not complete its direct testimony until September 14, 1906. It might have been inconvenient to make the calculation; but complainant has spared no inconvenience, either to itself or to the other parties, when it saw inconvenience joined with advantage to itself. It did not desire to show its figures for the first year of the 22-candle-power penalty, and it refused to allow its books for the last six months of that year to be looked over. Mr. Addicks' testimony need not be followed.

Chicago & Grand Trunk Ry. Co. *vs.* Wellman, 143 U. S., 339, 343.

The presumption against the party unwilling to show his books, and trying instead to help out his case with opinions of friendly experts, must be applied.

> Sturgus *vs.* Clough, v Wal., 269; quoted in The Conqueror, 166 U. S., 110, 128, 134.

It appearing that during 1905 the average candle power, as actually tested by the City (thus allowing for all loss of candle power in distribution), was more than one point above that required by law, the matter being one so obscure and subject to such difference of opinion, and the complainant being in so inequitable a position, it was respectfully submitted that the Court has properly disregarded the testimony of its experts and presumed that its experience in 1905 is a fair test of what it can do under the legal requirement.

The Court denied the complainant's motion for such an allowance for the reasons set forth in its supplemental opinion, as follows:

> "Complainant now urges that by the Court's treatment of the 'Ten-Cent Item' in the opinion, this cost of additional enrichment has been taken away from it, inasmuch as the Master did not specifically allow said 1.83 per thousand, but permitted it to be included in the ten-cent reserve for future contingencies.
>
> "It also appears that during the last six months of 1905 complainant's gas was maintained at a tested candle power of 24.19, and for the whole year the average was 23.1. Yet complainant declares that inasmuch as the status attacked in this litigation require that 22 candles be maintained not only at the testing stations so long used, but at any point on the line and at all times, it became necessary for it to maintain an initial strength of much more than

> 22 candles in order to meet the requirements of the law. Upon this, as upon all other points involved in this litigation, the burden of proof is upon it; and for the purposes of this application I must regard the penalty clauses regarding pressure of the acts in question as unconstitutional and void. The question therefore is whether complainant has shown, first, that 1.83 is the certain necessary expense of the required enrichment, and, second, whether remembering the unconstitutionality of the penalty clauses, an average of 23.1 candle power be not sufficient for its purposes and reasonably satisfactory to the law. On both of these points my opinion is adverse to the complainant. I do not think that complainant satisfactorily proved that 1.83 cents was the necessary cost of additional enrichment, and do not think that the average candle power of 1905 will be found sufficient to satisfy both the law and commercial requirements. The complainant's request for modification of the opinion in this regard is denied."

We contend that upon the grounds set forth, *supra,* including those stated in the Court's supplemental opinion, the application for such allowance was properly denied, and that the decision of the Court below, being a decision upon the question of fact purely, should stand.

The lesser rate to the City than to private consumers does not invalidate chapter 736, Laws of 1905.

The Legislature could not, as between private consumers, provide as to one particular class that the rate should be eighty cents and another particular class seventy-five cents per 1,000 cubic feet. But as to the City an entirely different question arises. The lighting of a private residence is for the private convenience of the owner. The lighting of the streets and public buildings is in the interest of all the public. The lighting of the streets makes for the safety and convenience of all and therefore is within the police power; it is a duty that the City would have to perform did it not permit the complainant to do it. Hence the Legislature could require the complainant to perform the duty on the same terms as the City itself might do it. The complainant uses the public streets to distribute gas to private consumers and earns a profit thereby. If there had been attached, to the right to exercise that privilege, the condition that gas should be sold to the City for its purposes five cents cheaper than to private consumers, it cannot be contended that such a requirement would have been unjust or an unequal condition for the use of public property. If the Legislature could have imposed that condition originally, it can now.

The right to impose burdens for the public good and in favor of the municipality, upon public service corporations, has been repeatedly held constitutional. The recent case in the New York Court of Appeals, Rochester *vs.* Railway Co., 182 N. Y., 99-112, affirmed in 205 U. S., 236, held that under the reserve power in regard to corporation, the police power and the taxing power, the Legislature could compel a street railroad company to keep in repair the pavement between its tracks and for two feet each side, although no obligation rested on other users of the street to do so.

In the case of L. S. & M. S. Ry. *vs.* Smith, 173 U. S., 684, held that the railroad company could not be required to issue one-thousand-mile tickets at a less rate per mile than its schedule, on the ground that it was justified by no public purpose. But the Court in L. S. & M. S. *vs.* Ohio, 173 U. S., 285, held that as public convenience was served by requiring a certain number of trains daily to stop to receive and deliver passengers at towns of a certain size that it was not an unconstitutional regulation.

The discrimination which is repugnant to the Constitution is for the same service to different individuals. A different charge for a different service is not discrimination.

For service to private consumers the complainant has to have meters and maintain a force of meter inspectors and collectors.

The service to the city is in great bulk—it is wholesale against retail delivery.

As far as street lighting is concerned, which is by far the larger item, no meters are used, and no inspectors required, and no collectors have to be employed to collect for the gas sold, and there is no risk of nonpayment; taking these differences between the private and public service it is submitted that an allowance of five cents per thousand is reasonable. (See cases under next subdivision.)

The Legislature having taken all the foregoing reasons into consideration:

" It suffices that it is practical, and is not reviewable, unless palpably arbitrary."

Orient Insurance Co. *vs.* Daggs, 172 U. S., 557, 562.

The failure to limit price in localities other than The City of New York, does not invalidate chapter 125, Laws of 1906.

> "The fourteenth amendment to the Constitution of the United States does not prohibit legislation which is limited either in the objects to which it is directed or by territory within which it is to operate. It merely requires that all persons subjected to such legislation shall be treated alike, under like circum-

stances and conditions, both in the privileges conferred and in the liabilities imposed."

Hayes *vs.* Missouri, 120 U. S., 68.

"Class legislation, discriminating against some and favoring others, is prohibited, but legislation which in carrying out a public purpose is limited in its application, if within the sphere of its operation it affects alike all persons similarly situated, is not within the amendment."

Barbier *vs.* Connolly, 113 U. S., 27.

"The clause in question means that no person or class of persons shall be denied the same protection of the laws which is enjoyed by other persons or classes in the same place and under like circumstances."

Missouri *vs.* Lewis, 101 U. S., 22.

"Certainly it cannot be claimed that this prevents the State from regulating the fares of hackmen and the charges of draymen in the City of Chicago, unles it does the same thing in every other place within its jurisdiction."

Munn *vs.* Illinois, 94 U. S., 126-135.

Cost Items Which the Court Should Have Rejected.

Item No. 66, Sub-Item, Tax on Special Franchises, $406,909.23.

The Court, in its computation of cost for the future, makes complainant an allowance of $406,909.23 on account of operating expenses due to the payment of a tax on its special franchise. It [illegible] apparent that if complainant's earnings be reduced by action of the State, an allowance on account of special franchise tax heretofore paid, predicated upon the old rate, must be proportionately reduced.

We adopt the argument of counsel for the Public Service Commission with respect thereto, which is as follows:

> " It must be assumed that the franchise tax will be assessed upon the basis which, as between the parties hereto, shall have been adjudicated and fixed by the decree in this suit. The tangible property, excluding the tangible property in the streets, is worth $33,500,000. An income of 6 per cent. on this would be $2,010,000 (see Chicago Union Traction case, 114 Fed. Rep., at p. 561). Subtract this from the 'net income under legislation here attacked' (Opinion,) and we get about $1,225,000 as the income which is the measure of the 'special franchise tax.' Assuming a capitalization of the special franchise at 6 per cent., then the rate of taxation in this city, being 1½ per cent. (Testimony, pp. 1002-1003), we have as the probable franchise tax one-quarter of this income, or $306,250. Correcting these figures to accord with complainant's allegation as to the equalization of assessments (Exhibits, p. 2734), we must reduce them 25 per cent. The special franchise tax will therefore be something below $230,000. (On the basis quoted by the Master, the tax would be about $308,570, but, as above remarked, the rule adopted by this Court would be an adjudication which would doubtless govern). The Court's figures, however, are based upon the assumption that the tax for 1907 will be $406,909.23" (Master's Report).

The method of reducing the franchise tax employed above is in harmony with the method of assessing special franchises for taxation employed by the State Board of Tax Commissioners. The effect of the reduction is simply to eliminate from complainant's capital account so much of the value of its franchises as is based on its earnings over and above so much thereof as would represent a fair return on its tangible property. it is obvious that if the reduction of rate results in the elimination of all profit except such as would constitute a fair return on complainant's tangible property, then there will be left for assessment and taxation no franchise value whatever predicated upon earnings over and above a fair return on the tangible property, and hence there will be no such value to tax.

It must be assumed by this Court that complainant's special franchise tax will be assessed upon a basis established by the decree in this suit, and hence will not be levied upon any value which shall be eliminated by a decree sustaining the constitutionality of the eighty cents rate fixed by the statute.

Alleged Inconsistency of Taxation of Franchises.

The complainant contends that it is unreasonable to tax this franchise as property, as they have been taxed since 1900 in this State, and refuse to allow complainant a return upon the value of the property so taxed.

It will be seen upon analysis that there is no unreasonableness in our contention in that respect.

In 1905, the year which has been adopted as the test year for the determination of cost (as per Exhibit 94), the company's special franchises were taxed as of the value of $27,300,000, inclusive of the value of certain personal property described in the act authorizing the imposition of the tax (202); and complainant paid thereon a tax of $406,909.23 (Ex. 94), which tax is computed by the Master as an item of cost and so allowed.

The Master assumes that the value of the franchises for that year were determined by the State Board by the method which he adopted; that is to say, by the capitalization of the complainant's capacity to earn a profit over and above a fair return upon property actually used in its business (204).

The tax was justly levied in that year, upon that principle, and under that law, for complainant's earning capacity under the dollar rate, which it was then permitted to charge, was 25 per cent. greater than it would be under the rate established by the law here challenged.

The tax was levied in a year when the franchise values taxed (predicated upon its *then* earning capacity) existed. The complainant could not be taxed in any sum on account of its special franchises, if the 80-cent gas rate be upheld and its effect be to reduce the earnings of complainant to the margin of a return *only* upon the tangible property used in its business.

The franchise values which existed in 1905 were taxed as of that year, and complainant, as a matter of bookkeeping, entered the tax as an item of gas cost for that year, and the Master and the Court in reviewing the cost of gas for that year, for the purpose of arriving at the probable cost of gas in the future, accepted the tax as a proper item of gas cost.

It should be noted that the inconsistency complained of could relate, in any event, only to the particular year when the franchises were assessed as property and the tax paid thereon, and could have no bearing whatever upon a future year when, if the 80-cent gas rate is upheld, there will be no franchise value to tax, and hence no tax (as an item of gas cost) to pay.

The Court below has neither criticised nor challenged our argument that the inevitable effect of the enactment of a law which fixed a rate of charge that would yield complainant a fair return on the value of its tangible property only, would be to destroy the franchise value based upon the earning capacity or franchise value determined by the capitalization of the excess profits eliminated. The Court, however, did criticise our contention that the value of complainant's franchises so determined, being so destroyed by regulation, the complainant would not in the future be put to the expense of paying tax thereon. The Court said:

> "As an illustration of the difficulty of the subject, the argument is admirable, but to ask the Court to remove from the operating expenses of the company a tax lawfully laid in pursuance of existing statute, on the ground that a subsequent statute extinguished that upon which the tax operated, notwithstanding that the only apparent effect of the 80-cent tax (gas?) law was to increase the franchise tax, is a considerable demand upon credulity."

The learned Judge refers to the 80-cent tax law when he doubtless intended to refer to the 80-cent gas law, the error being a typographical one.

How the 80-cent gas law can have the effect of increasing the complainant's franchise tax, we are unable to see, for certainly a law which reduces complainant's rate of charge, and hence its earnings, cannot have the effect of increasing the value of its franchises predicated upon the capitalization of those earnings. It may be that the learned Judge's observation is predicated upon an increase in the company's assessment on its franchises by the State Board of Tax Commissioners since the passage of the law, but such an increase could not be in any sense an effect flowing from the enactment of the 80-cent rate law. The franchise taxes assessed on complainant's franchises prior to the enactment of the 80-cent rate law, have been allowed both by the Master and the Court as operating expenses. The State Board of Tax Commissioners were doubtless influenced to increase the amount of their assessment on complainant's franchises in order to conserve the interests of the public pending the determination of this litigation and its decision by this Court.

We do not consider it a considerable tax upon credulity to urge upon this Court that the State Board of Tax Commissioners will not continue in the future to assess the company upon franchise values predicated on the earnings under a dollar rate after the State has established an 80-cent rate; that such Board will not continue to levy a tax on complainant's franchises based on the profits realized from the 20 cents per thousand cubic feet which the State has taken away from complainant by the enactment of the "regulating statute." It is reasonable to presume that the State Board will continue to do its duty and follow in the future the method which it has employed in the past for determining the value of complainant's franchises, and that if this Court shall uphold the constitutionality of the 80-cent rate law, and thus eliminate the profits upon which complainant's franchise values are predicated, it will cease to assess a tax on so much of the value of complainant's franchises as the regulatory statute upheld destroyed. If the Board should attempt to levy a tax upon franchise values that had been "eliminated" by a law of the State of New York upheld by this Court, the Court would afford complainant speedy and adequate relief.

Item No. 67—"Contingent Expenses (includes renewals), $1,328,316.37."

(Complainant's Exhibit 94, p. 217.)

The account which this item represents was first opened upon the books of the complainant in May, 1905 (224), during, or at the end of the Stevens legislative investigation into the cost of gas in New York City, which was had in that year (228), for the avowed purpose of determining whether the cost of gas therein, or to complainant, would justify the legislative reduction of the price of gas from the dollar rate then prevailing.

This item, however, was first entered by complainant at a time when it became apparent that it would be compelled to show (contesting the validity of the law reducing its rate of charge) that it could not sell gas at less than $1 per thousand cubic feet and earn a fair return upon its investment in the gas business.

Prior to the Stevens investigation a "depreciation account" was kept, in which "scrapped" articles were set down at book value. Excess in renewals over the "depreciation account" were treated as "additions" or "new construction." There was no distinction made between "current renewals" and "final renewals" (4506-8).

The item amounted to an allowance of ten cents per thousand cubic feet of sales, in addition to the actual expenditures for repairs during 1905, represented by items Nos. 34 and 47 to 52 of Exhibit 94 (which amounted to 5.58 cents per thousand cubic feet of sales), and inclusive of a current replacement charge of 2.12 cents per thousand cubic feet of sales.

The Court rejected the item as found by the Master and substituted a total allowance of 11 cents per thousand cubic feet of sales.

Complainant's Claim.

Mr. Carter, the secretary of complainant, was first questioned with respect to this item during the investigation by the State Commission of Gas and Electricity, held upon the complaint of certain consumers in the winter of 1905-1906, and was subsequently examined with respect to it in this case. He explained the nature of the item, and the reasons for the entry thereof as follows:

> "The account was established out of consideration of the possible contingencies that might at any time arise or would require the employment of such

> reserve as we undertook to acquire by that means. I might say that we put into the account such considerations as fluctuation in the cost of material, liability to serious and expensive accidents, having in mind the case of a very grave one which occurred in Boston not long ago, which cost the company there a great deal of money to settle in the way of damages; the possibility of variations in the volume of the business might render the presence of such a fund very serviceable to the company; and many considerations of that sort were canvassed very thoroughly in determining the amount that we should reserve (224-225). I would say, too, that one of the principal considerations, but not necessarily the primary one, that we foresaw the loss incidental to the removal of our plant to Astoria of something approximating $10,000,000, which had to be taken care of. It was one of the purposes for which a portion of that fund would ultimately be used (876).
>
> "Our intent, of course, was to cover by that ten cents such extraordinary loss as the company would sustain in the removal of the plant to Astoria, among other things, as well as to cover the cost of current replacements and renewals that would take place independently of any transfer of the plant to Astoria from New York" (224).

Mr. Addicks, vice-president of the complainant, justified the entry by the explanation that it was to cover

> "any minor extensions, renewals on account of extraordinary wear and tear, depreciation not covered by repairs, all supersession, accidents of larger moment than usual, fluctuations in the business, changes in the cost of all materials, and electrolysis and other contingencies" (224).

It became obvious to complainant that, for the purpose of maintaining its cause of action herein, or similar issues elsewhere, it would have to fortify its explanation of this allowance as an isolated entry, made under circumstances that rebutted its integrity, by expert proof as to the propriety of making the allowance for the reasons advanced by complainant's employees in explanation thereof.

Accordingly it produced Mr. Addicks and Dr. Humphreys, who testified as experts to the proper allowance to be made on account of depreciation and reserve, in order to compute the reasonable cost of the manufacture, distribution and sale of gas in the City of New York.

Definitions of "Final Renewals" and "Reserve."

Complainant's experts defined a "final renewal fund," which definition is adopted by the Master in his report (226), as "a fund in addition to current expenditures for 'repairs and renewals,' such as are embraced in Items 34 and 47 to 52 of Exhibit 94, and the current replacement charge of 2.12 cents per thousand cubic feet included in Item No. 67. It is intended: (a) To cover physical deterioration which has taken place and which has not been met, by current repairs and renewals, and (b) to provide for the loss or displacement of plant, in whole or in part, in the future from any cause" (224).

These experts define "reserve fund," which definition is adopted by the Master (228) "to cover such contingencies as increase in cost of labor and materials, hazards of strikes, damage from electrolysis or by reason of explosion and unforeseen events of any description which may tend to increase the cost of production."

The Allowance of the Experts on Account of "Depreciation" and "Reserve."

Dr. Humphreys deducted from total operating cost, as shown by Exhibit 94, complainant's actual expenditures, on account "of repairs, production and distribution" (5.2.1 cents), and Item 67 (10 cents)—a total of 15.21 cents—and substituted therefor the average of complainant's actual expenditures on account of repairs and renewals for a period of twenty years preceding 1905, which was 7.5858 cents, plus an allowance on account of estimated final renewals in manufacture and distribution of 6.5592 cents—a total of 14.14 cents.

Mr. Addicks, in place of the 10-cent item, added to the item of 5.58 cents, actual repairs and renewals for 1905, 2.12 cents actual replacement (included in 10-cent item), 4.62 cents (the difference between the sum of last two allowances—7.70 cents—and the average expenditure therefor from 1895 to 1899, exclusive—12.31 cents), an allowance for labor of .78 cents, and an allowance for "reserve fund" of 3 cents, making a total for depreciation and reserve of 16.10 cents (231, 232).

The Master's Reasoning.

The Master said (   ):

> "I am satisfied that the charge of 10 cents per thousand feet for 'contingent expenses,' including renewals and replacements, as shown by Item 67, is not excessive, but, on the other hand, rather conservative. I have not deemed it necessary to differentiate between the amount to be allowed for final renewals and for contingencies, nor to determine that any fixed amount should be added to the current expenditures for repairs and renewals to bring them up to the average of former years. It is sufficient to say on this subject that the annual expenses for repairs and renewals have been very considerably less per thousand feet since the year 1900 than during the period between 1884 and 1899, inclusive. The renewals for 1903 were $237,576.96, as against $282,219.67 for 1905. With this single exception, the renewal charges for the five years from 1900 to 1904, inclusive, were very considerably larger than for the year 1905. The testimony as to the amount of depreciation now observable in

the plants, or for which allowance should be made in appraising their value, indicates with reasonable certainty that the annual expense for renewals and replacements is likely to be over, rather than under, the 2.12 cents per thousand of the year 1905. This takes into account no extraordinary charge due to abandonment or 'scrapping' of plant, in consequence of anticipated removal at some later date to Astoria."

"As regards the elements to be taken into account in fixing a proper amount of reserve for contingencies, the direct testimony was confined chiefly to the matter of electrolysis. That this is a danger which may be reasonably apprehended is evident from the fact that it has received very considerable attention from electrical experts throughout the country and has been made the subject of special investigations on behalf of interests having capital invested in sub-surface construction. No special damage gas has been shown to have thus far resulted in this City, and the evidence indicates that all possible precautions are being taken to prevent it, and with a reasonable assurance of success. In view, however, of the increasing number of electrical installations now in progress in this city, with currents of unusual power, it canont be wholly disregarded. The danger of explosion is more immediate. Experience has shown that such catastrophies are not at all uncommon in the experience of this and other companies, and may occur without fault of the companies' servants. Under existing conditions, the chance of their occurrence is likely to increase rather than decrease. It is also apparent that, in view of the increasing number of sub-surface structures in New York City, the expenses to which complainant must be subject in the care and maintenance of its mains and connections are likely to increase, and this fact, in connection with the continued rise in the price of labor and materials, indicates strongly the necessity in prudent corporate management for maintaining a reserve in excess of the actual expenditures called for by known requirements."

The Court's Reasoning.

The Court below said ( ):

" This may be conveniently called the ' Ten Cent Item.'

" It is admitted that some allowance must be made for the accidents and contingencies of this, as of any other business; and complainant therefore demands that in addition to treating as permanent disbursements what it actually paid out during the period of inquiry for repairs and renewals to its plant, mains, services and meters, there should be allowed to it a reserve and contingent fund of ten cents per thousand feet of gas sold; or, at the existing price of a dollar a thousand, substantially ten per cent. of its gross income.

" This method of stating the ten per cent. reservation is misleading, and I think unjust to the State. The more gas complainant buys from other companies, the greater its volume of sale; but, as pointed out, the expense of maintenance does not increase *pari passu* with increased sales; and the allowances, if granted at all, should be upon the sale price of the maximum production of complainant's own works. This deduction alone would amount to more than $150,000.

" The nature of this ' ten cent item ' may be seen by observing that during 1905 there was actually expended for repairs and renewals, and included in station and distribution cost, the sum of $685,077.47; and this item is to be considered as a permanent allowance for repairs and renewals, amounting, according to the report, to 5.58 cents for every thousand feet of gas sold, including, of course, the gas purchased from other companies. Yet in addition to this allowance, there is demanded, in permanence, an additional ten cents per unit sold, amounting to $1,328,316.37, to cover the probability of annual repairs and renewals in excess of $685,077.47, and depreciation mediate and ultimate; by which is meant the final replacement of plant and apparatus owing to irreparable decay. This item has been the subject of bitter contest, and after much hesitation I am unable to concur in the report.

" It appears upon a review of sales of gas, and cost of repairs and renewals actually made, between 1885 and 1905, that the average expenditure for such purposes during that time was 10.89 cents per thousand feet of gas sold. Since 1899 the produce of complainant's factories has not been sufficient to satisfy its consumers, and the average, if computed only upon gas manufactured, is somewhat higher, but not over 11 cents per thousand. This average of repairs and renewals has for twenty years been sufficient, not only to maintain the plant in a condition of ordinary excellence, but to enable complainant to-day to make more and better gas than ever before, while owning a better plant than ever. The actual payments for these purposes, have often, as in 1905, fallen far below this average. This shows that the expenditure is not constant; while the retention of the large percentage demanded would be so under the plan urged on the Court.

" There are certainly legitimate and gainful purposes to which temporarily unexpended balances can be put; and if they are so used an 11 cent reservation on gas manufactured will mean, during the years, much more than 11 cents kept, pending larger demands from the works, without profit from its use.

"Again, the ten cent item may be thus analyzed: In 1905 there was charged to depreciation $282,219.67, while there was expended on new construction $261,264.36, a difference of $339,044.69. Construction represents actual outgo, is chargeable to principal, and must be provided for either by new capital, or—what is the same thing—a capitalization of earnings, or by borrowed money. It is not pretended that, as against a regulatory statute, new construction must be allowed for out of current earnings. Yet under the system of bookkeeping above outlined and shown in the evidence, what happened in 1905 was this: *The* $621,264.36 *was expended; then a year's depreciation was fixed by estimate at* $282,219.67; *and that amount of construction expenditure was charged to income as depreciation, and is sought to be covered in this ten cent. allowance.* (Italics ours.) The distinction between depreciation of that kind and new construction seems to me very shadowy.

"On considering the twenty-year average of repairs and renewals, it is observable that the consumption of gas has in that time nearly quadrupled, and the capacity of complainant's own works very largely increased. It follows that the 10.89 percentage, if computed upon the sales for 1885, represents a much smaller sum than does the same percentage on the product of 1905. Yet the number of plants has not increased with increased production. Neither, proportionately, have miles of mains and most other parts of distributing property. Each plant turns out more gas, through interior enlargement and improved methods of production, and there is nothing in the evidence to compel the belief that the same proportion of repair and renewal expenditures to value of product, existed in 1905 as did in 1885, or that the proportion of earlier years is legitimately to be required in the future. And this is true, although the amount of money lately expended, and to be expended, is much larger than twenty years ago.

"The actual result of this demand, as applied to the facts of 1905, is as follows:

"If the 10 per cent. reserve were computed only on gas manufactured, it amounted to $1,065,781.03 of cash in hand. Of this $282,219.67 passed to depreciation, and was actually used to lessen expenditure for new construction, and the balance of $783,561.36 should have been credited to reserve against future contingencies. This means that if repairs and renewals could be kept at the figure of 1905, and no more be called depreciation than was used to aid in construction in that year, there would be produced without the aid of investment at interest a fund sufficient to reconstruct complainant's entire plant in twenty years.

"No such thing will probably happen, and counsel have argued that this apparent surplus is propectively dissipated by future increased expenses, and losses of many kinds. The constant rise in the price of most materials and most kinds of labor is something of which even judicial cognizance may be taken, but this inquiry is solely into the reasonableness, and therefore the legality, of the regulatory action in 1906. It is not to be presumed that if circumstances change the regulation will remain unchanged. And if such a regulation does remain unchanged, there is nothing in the law as developed down to this time to prevent application to the Courts, years after the passage of the regulative statute, upon the ground that what was just when the statute was passed has become unjust by lapse of time and change of circumstances.

"As to future losses of a kind not known in the past, such may well be encountered; it is said, probably with truth, that the crowded condition of underground New York increases for the future the danger of explosion, and introduces a new peril in electrolysis resulting from the multiplication of underground electric currents. These are dangers possible; so, somewhat more remotely, are lightning and earthquake. *But it cannot be said, as matter of law, that a corporation, even as against its shareholders, has the right to horde income for the sake of maintaining dividends in years when extraordinary disasters may occur* (italics ours). If a prosperous private corporation chooses to set aside for such contingencies an annual fund of 10 per cent. of gross earnings, discontented minority stockholders might not be able to coerce the discretion of the directors by judicial proceedings, but their complaint would be entitled to a hearing, and the alleged abuse of discretion strictly inquired into. The case of the company or its directors is far weaker where the endeavor is *to capitalize a large proportion of yearly earnings against the undoubted regulatory power of the State* (italies ours).

"I am of the opinion that some such capitalization of income is proper, but can it be said in this case that a 10 per cent. reserve is so universally or even generally approved in manufacturing circles, so necessary for this corporation in the light of its past history, and so clearly shown to be all these things by the evidence herein, as to require the

Court to uphold the claim and accordingly seek to limit the regulatory power?

"In my view the statement of this proposition is a sufficient answer to it, and I find that complainant has not sustained the burden of showing the general acceptance and reasonable necessity, and therefore the legality, of the reserve demanded.

"An allowance of eleven cents per thousand feet on the maximum production of complainant's own works to cover repairs, renewals and depreciation mediate and ultimate is in my judgment sufficient."

"Astoria, etc., Capital Invested, Gas Purchased from Other Companies."

In the Master's statement, reporting the property upon which the company is entitled to a return, appears an item of $12,000,000, on account of "capital invested in the production of gas secured from other companies" (247).

It will be noted that the item does not represent capital invested in gas production by the complainant or property devoted to the public use by complainant, but purports to represent "capital invested in gas production by other companies." Such an allowance is *prima facie* not justified by the rule, and should not be confirmed except after close scrutiny of the reasons by which the Master seeks to justify it.

The defendant objected to the allowance of this item upon the grounds following:

First—That the property of the Astoria Company was not the property of the complainant; and,

Second—That the property of the Astoria Company has never been, and is not now, devoted to the public use.

To the first objection of defendants, that an investment in gas property by the Astoria Company was not an investment in gas property by complainant, the Master answered that "there would seem to be no ground, for the purposes of the present inquiry, for drawing any distinction between a plant built and operated directly by the complainant, and one built and operated by a subsidiary corporation of which it owned the entire capital stock; no reason is apparent why the capital invested in the plant of such subsidiary corporation is not to be treated precisely as if invested in any of the manufacturing stations of complainant on Manhattan Island" (183).

Apparently it did not occur to the Master that complainant was only a holder of, or investor in, the stock of the Astoria Company, entitled to such dividends upon its holdings as the Astoria Company might declare, and that complainant might, at any time, dispose of a part or all of its holdings; that, in contemplation of law, the Astoria Company was as much an independent corporate entity as the Consolidated Company, and as such entitled to earn a fair return upon the property devoted by it to the public use, whether in the manufacture or distribution of gas, or both.

The defendants objected to the allowance of the Astoria item upon the second ground, that, even if the investment of the Astoria Company in gas property was, in law, an investment of the Consolidated Company, the gas property itself has never been, and is not now, devoted to the public use; that is to say, never has, and does not now, manufacture or distribute gas (183).

The Master justified his overruling of this objection as follows:

> "The second objection suggests a question which requires a consideration of complainant's relations with other gas companies in The City of New York whose product forms a part of its annual output. The complainant owns about 99 per cent. of the

capital stock of the New Amsterdam Gas Company, about 51 per cent. of that of the New York Mutual Gas Light Company, and about 92 per cent. of that of the Standard Gas Light Company, which it carried upon its books at the respective valuations below stated:

"New Amsterdam Gas Company.	$4,814,608 03
"New York Mutual Gas Light Company	5,703,290 65
"Standard Gas Light Company..	14,587,495 23

"All of the above companies operate in the Borough of Manhattan. The Central Union Gas Company and Northern Union Gas Company, operating in the Borough of The Bronx, are owned or controlled by the New Amsterdam Gas Company, which holds the entire capital stock of the former and about 56 per cent. of the stock of the latter. These five corporations and complainant comprise all the companies engaged in the manufacture of gas in the Boroughs of Manhattan and The Bronx. For some time past it has been the custom of the complainant to obtain gas from certain of these corporations, which is delivered into the holders or mains of complainant in any part of the city as it may be required. The gas so delivered is measured as furnished, and paid for in due course under the terms of certain so-called agency agreements, generally similar in their terms, which have been placed in evidence. In the case of the New York Mutual Gas Light Company, for example, the agreement provides that the complainant employs the latter company as its agent 'to manufacture, purchase and deliver to it for the term of five years such illuminating gas and illuminating power required by the laws of the State of New York as it may require during each year for the said term of five years, estimated to be equal to at least 100,000,000 cubic feet per year, and to deliver the same to the gas holders, mains or meters of the Consolidated Gas Company of New York in such quantities and at such times as may be reasonably required by it.'

"The agreement further provides as follows:

"'II. The New York Mutual Gas Light Comshall, as agent for the Consolidated Gas Company of New York and at reasonable rates purchase all the constituent materials and furnish the labor necessary to such manufacture production and delivery, and employ in such manufacture, production and delivery its own plant and appliances.

"'III. At the expiration of each month, the New York Mutual Gas Light Company shall render to the Consolidated Gas Company of New York an account of all expenditures for constituent materials and labor made by it as aforesaid during such month, and the Consolidated Gas Company of New York agrees to pay to the New York Mutual Gas Light Company, within ten (10) days thereafter the amount due, according to such accounts, together with an additional ten per cent. (10%) thereof, which shall be in full for its services and the use of its plant and appliances during the said month.'

"The gas purchased under the above arrangement for the nominal year ending October 31, 1905, aggregated, approximately, 3,000,000,000 feet. The entire sales of complainant for the year 1905 aggregated 13,283,000,000 feet, so that the amount purchased constituted about 22 per cent. of complainant's entire output.

"In estimating the amount of capital invested in gas manufacture upon which complainant is entitled to a return, the capital required for the production of this 3,000,000,000 feet of gas has not been specifically appraised by any of the witnesses and manifestly is not susceptible of exact determination. *Obviously, however, it must be taken into account in some form, for the complainant is quite as much entitled to a return upon its capital employed in the purchase and distribution of gas made by some outside company as on capital employed in the manufacture of gas at its own works.* The relations of complainant with the companies in question are entirely different from its relations with the Astoria Company and National Coal and Coke Company, of which it owns the entire stock. While it holds the practical control, it does not own them in a legal sense, and, in the case of the New York Mutual Gas Light Company, there is a very substantial outstanding minority interest.

"The producing capacity of the first Astoria unit (20,000,000 feet per day), is equivalent to 4,000,000,000 feet per annum, or about 1,000,000,000 feet more than the gas actually purchased from these companies during 1905. The maximum daily output of complainant during 1905 was about 70,000,000 cubic feet, while the maximum capacity of its own plants was but 51,000,000 feet. Adding to this the maximum capacity of the first Astoria unit would give a maximum daily capacity of 71,000,000, or only 1,000,000 more than complainant's maximum daily output. This surplus, according to the testimony of Mr. Bradley, which was uncontradicted, is insufficient for purposes of a reserve. He stated that, in his opinion, it was not safe to operate gas plants for lighting large cities like New York with less than 20 per cent. reserve of their manufacturing capacity.

"Furthermore, with an output so closely approximating the maximum daily capacity, it is clear that no allowance is made for increased sales of gas consequent on the growth of population. That such increase is to be naturally expected is conceded by all parties. It appears, therefore, that the amount of gas to be produced by the first unit of the Astoria plant is under, rather than over, what was actually required in addition to complainant's own output to meet the reasonable demands of its business in 1905.

"In default of any better method of estimating the amount of capital employed in the production of the 3,000,000,000 feet of gas purchased by complainant in 1905, it seems entirely proper to measure it by the standard of the known cost of the Astoria first unit. Equipped as it is with the most modern machinery and located on a site much less expensive than could be procured on Manhattan Island, the cost of the first unit seems a perfectly fair and safe basis of valuation. Mr. Marks concedes the propriety of an allowance for the cost of producing the gas purchased in 1905, and admitted that it made no difference whether the source of the gas so purchased was located in other Manhattan plants or in Astoria. He computed its value at $5,096,000 on an assumed cost of only $1.78 per thousand cubic feet of annual capacity, but this would appear to be inadequate. The testimony of other witnesses indicates that a coal gas plant would cost more than double that amount to construct.

"I, therefore, allow Item No. 8 as claimed by complainant, although, as the Astoria plant was not in operation and delivering gas in 1905, such item should, for the sake of accuracy, be designated as "Property of other companies employed in the production of gas delivered by them to the complainant."

The learned Circuit Judge, passing upon defendants' objections to this allowance, said:

"Complainant therefore claims that * * * the Astoria Company will be no more than a gas plant capable of supplying it with what it has hitherto been obliged to buy from others, therefore both (it) should be here regarded as much a part of complainant's assets as any retort or holder of its plant.

" To me it is clear that this procedure is without warrant of law. Complainant does not employ in its gas manufacturing business a single tool of the coal and coke company, nor a single machine of the Astoria Company. Its investment in those companies is represented legally by so many certificates of stock; its relation to them is that of a stockholder only; each is bound by law to maintain a separate existence and conduct a separate business.

"The argument *ab inconvenienti* is often strong, and it has been inquired here, why should complainant be bound to go through the idle form of taking money out of one pocket merely to put it in another, and treating (for example) the Astoria Company as an independent organization, when it really is not. The sufficient answer to this argument is that the law does not permit this species of convenience, and while it still does permit the existence of many controlled corporations, it is highly necessary for the proper investigations and possible regulation of all corporations affected by a public use or engaged in interstate commerce, that the affairs of the controlling and controlled organizations shall be kept distinct. And just what complainant, doubtless, from very good business motives, is endeavoring here to have recognized by the Court is in my judgment plainly against public policy.

"In the case of the Astoria Company it is also, I think, a sufficient answer to the capitalization proposed that there was no such company actually doing

> any business during the period inquired into. It had a legal existence, and the complainant was in effect subscribing to its stock, but it had no manufacturing agreement with complainant, and was an enterprise incomplete and merely projected.
>
> "Further, there is no better reason for this suggested capitalization than there would have been had the Astoria plant never been planned, and complainant looked forward to permanent purchases from its other controlled corporations. In the New Amsterdam Gas Company complainant is almost the only shareholder, and from that corporation much of complainant's extra gas was obtained. It might just as well be asked that some portion of the plant of the New Amsterdam Company (*i. e.*, that part which by hypothesis was sufficient to manufacture the gas sold by it to complainant) should be capitalized, as representing something upon which complainant was entitled to a fair return from its gas manufacturing and distributing business.
>
> "Because, therefore, the proposed capitalization of the two items now under consideration is contrary to law, is not, in the case of the Astoria Company, based upon any actually existing investment at the time of the inquiry, and because it is misleading, in not truly stating the facts; these capital items are excluded."

The Court accordingly eliminated the item of $12,000,000 on account of "capital invested, gas purchased from other companies," but charged complainant, in computation of its gross and net earnings for the year 1905, with the profit that it had made from the sale of gas purchased from other companies, which the Court found amounted to $1,865,717.43.

The complainant contended, conceding that its profits from the sale of purchased gas in 1905 were in the amount stated, that such profit was not normal profit, *i. e.*, that it had no reasonable expectation of being able to continue in the future to purchase gas from the controlled companies under the terms of the agency agreements, and it asked the Court to charge it only such profits as it might *normally* expect to realize in the future.

The Court, conceding complainant's contention (see Decree), assented to its request, and eliminated *as such* the item of complainant's profit from the sale of purchased gas, or $1,865,717.43, as not being a *normal profit* which complainant expected or could reasonably expect to continue to make, but substituted therefor the same amount as a *normal* profit which complainant expected and could reasonably expect to make from the estimated increase in its sales of gas to be manufactured by its Astoria first unit.

The complainant urged, on the hearing of its application to the Court for a supplemental expression of opinion, that accepting the view of the Court that the Astoria enterprise must be regarded as an independent legal entity, the assumed cost of gas at Astoria is much too small, or, what is the same thing, the profits derivable from the Astoria investment are grossly overstated.

The learned Circuit Judge, discussing this contention in his supplemental opinion, said:

> "The inquiry is preliminary and important—if it was not expected that Astoria would furnish gas at lower rates than either complainant's own Manhattan factories or those of its controlled companies, why was Astoria built? For so far as the capacity of the first unit is concerned, it is also clear that the productive capacity of existing plants owned or controlled would have furnished the additional gas needed.
>
> "Yet it was deemed advisable, and could have only been advisable if profitable in expectation—to

borrow $12,000,000 at 6 per cent. in order to put up the Astoria plant.

" To restate the problem, adopting in part complainant's present figures: If the annual capacity (four billion feet) of Astoria first unit were sold at a dollar per thousand, gross sales would amount to $4,000,000. If the cost of production at holder be 32 cents per thousand, such cost annually would amount to $1,280,000.

" Interest on price of plant at 6 per cent. would amount to $720,000, leaving $2,000,000 for profit and general expenses.

" Repairs to apparatus, buildings, tools and implements are included in holder cost; if Astoria sold its entire produce to complainant, the expense of distributing three billion feet annually is already included in cost of gas to complainant as allowed by the Master and the Court, and there is no evidence requiring the belief that the distribution of a billion feet more would appreciably increase such distribution expense.

" It is asserted in the opinion (in effect) that whereas from the purchase at about 34 cents and sale at a dollar, of three billion feet of gas, complainant in 1905 reaped a net profit of $1,865,717.43, it is the Court's belief that the sale of four billion feet procured from the Astoria plant, would yield as large a net profit.

" As shown above, such net profit is $2,000,000, subject to deduction for general expenses and taxes.

" In other words, there is a difference between the probable profit charged against complainant in the opinion, and the $2,000,000 above stated of $134,282.57, and the real question raised by the application now made is whether this sum is sufficient to cover the taxes and general expenses of a controlled corporation which has but one customer, distributes no gas, and requires no actively employed officials other than those directly concerned with manufacturing.

"The estimated annual taxes of the Astoria Company are $90,000, and the question then remains whether some $44,000 be a sufficient annual reservation to pay general expenses. It is to be remembered that the plant is new, that the repair items already included in holder cost of gas ought not for some years to be as large as they normally are in older establishments; and that the Court is not required to decide what is legally fair for all time, but only for the present, and some reasonable period of the immediate future. I can only reiterate my belief, after a painstaking reading of complainant's able argument, that unless the expectation of the builders of Astoria be falsified, the sale of four billion feet derived from that plant will yield as large a profit as did the sale of three billion feet purchased in 1905. If such expectation be not realized under careful management, there must be a new application. The Court is bound to apply to the conditions of 1906 not only the facts of that time, but the reasonable expectations then entertained and expressed by men of business sagacity; and while it is impossible to assert that the fears expressed by complainant and reproduced in the figures submitted in argument may not come true, complainant cannot expect any Court to hold back the hand of the Legislature because of fears of what the future may bring forth."

Plant (Further Details).

Antiquated Apparatus.

An instance of antiquated apparatus is the benches in the coal gas plants which are of old type of six retorts to the bench, called "sixes," except in Forty-second street there are twenty benches of "sevens"; those of the Fourteenth street plant are "direct fire." That is, the retorts which hold the coal are heated by direct contact with the fire from the furnace, while some of the Fourteenth street are quarter depth, some are half depth and three are full depth. In these the furnace fire is farther removed from the retort and the retort is heated by the combustion of the gases from the furnace, while in Forty-second street there is one range of twenty benches of "sevens" and forty benches of "sixes," which are the modern type of full depth regenerative benches, that is have "recuperative flues to heat the secondary air required for the combustion in the benches * * * with the same amount of fuel you can carbonize a greater amount of coal" (1453). Mr. Mayer said: "If I were going to build a coal gas plant to-day of a capacity of 9,500,000 cubic feet per day I would not reproduce this identical plant" (1469). "I would not manufacture a bench without regenerative furnaces" (1472). "If I would build a plant for the total capacity at once I would put up larger benches. If a plant of this size I would put in benches of 9's." 1457.)

Another striking instance is the reproduction of the brick and brown-stone building used to enclose two gas holders at the Eighteenth street station. When gas plants were first built it was supposed that the holders had to be protected from the elements, but fifty or more years ago it was found that if a gas holder was kept painted it was not affected by exposure to weather, and they ceased to enclose the holders. One of these relics of antiquity was still in existence at the Eighteenth street station, and Mr. Mayer carries that into his appraisal as worth $169,328 without depreciation; $155,784 with depreciation. "It is an old construction that would not be carried out in these days," he says, but "the building is there and contains the holders, and the holders are distributing holders. Q. You say a holder will last forever if left exposed to the elements. Then what necessity is there for enclosing it in a brownstone front? A. I would not build it to-day, but it was built in the days when they considered it necessary to have a building around it to protect it" (1556-1557), and on redirect examination he testified: "Q. Is that form of construction, enclosing holders in a building, in use anywhere to-day? A. No, I believe it has been universally abandoned, even in severer climates." (1644.)

And this absolutely worthless building was given a value as of to-day of $155,784, and complainant's assets on which it was entitled to earn a return were increased thereby. This item is illuminating in another way, and has a direct bearing on the trustworthiness of Mayer's valuation. This building was taken over at the time of consolidation in 1884, and was then valued at $45,241. Mr. Mayer says that this building, which is absolutely worthless in a gas plant, is worth, after twenty-two years' use, $110,543 more than it was then. In other words, it should be charged against the consumer of to-day at an advance of 344 1-3 per cent.

This is characteristic of the entire appraisal.

Abandoned Plant and Apparatus.

The unfairness and unreliability of Mr. Mayer's appraisal is further shown in his treatment of abandoned plant and apparatus.

In regard to the One Hundred and Eleventh street station on direct examination he gave the values to be: Buildings, $107,981; apparatus, $103,446; holders, $704,737; connections, $27,068; 5 per cent. engineering charge on buildings, apparatus and connections, $11,924; 5 per cent. interest charge on same, $12,520; on holders 5 per cent. engineering charge, $35,236, and 5 per cent. interest $36,998, making a total of $1,039,910, and the Master allows this value.

On cross-examination he gave the generator house, $18,307 without depreciation; $9,154 with depreciation. "That house was in bad condition and it would have required just that amount to fix it up and put it in proper condition. I do not know when that generator house was erected, but it required an entire new roof to put it in good condition." Retort house, $50,499 without depreciation, $37,874. (1578), and he gave the contents of these two houses as follows: Retort house: one stack, sixteen benches, six retorts, $70,720 without depreciation, $53,040 with depreciation. One stack, five benches of five retorts, $20,000 without depreciation, $14,000 with depreciation. "Q. Are those retorts in use to-day. A. They were not when I examined the plant, no, sir. It is an old coal gas works near the river side. They were not being used when I examined the plant, but these benches were all new, had just been rebuilt. I don't know when. Q. Still you crossed 25 per cent. off for depreciation, A. The arches were old and the iron work was old. These benches can be operated at any time. Q. But they were not being operated? A. Not when I examined the plant. They were all ready to be fired, but I don't think they had a fire in them. Q. And you don't think they had a fire in them for a number of years, do you? A. I don't think that they did. Q. You know as a fact that this plant is not used as an operating plant by the Consolidated Gas Company? A. Yes, sir, it is used as an operating plant.

By Mr. Matthewson: Q. You mean as a manufacturing plant? A. I mean as a manufacturing plant, yes, sir.

By Mr. Page: Q. But it could be operated if necessary? A. Yes, sir, at any time. Q. What is the capacity of the plant? A. In these benches could be produced a total of 2,420,000 cubic feet of coal gas."

When questioned as to further apparatus he gave an atmospheric condenser, $5,926 without depreciation,

$4,444 with depreciation oil tank, $3,105 without depreciation, $1,652 with depreciation. "Q. Is there any further apparatus? A. No, sir, that is all. Q. There is no purifying apparatus is there for this plant? A. No, sir, nothing of any kind. The gas would have to be purified at some other station. Q. What else is there that would have to be cared for at some other station? A. Everything except one condenser, one atmospheric condenser. Q. Then this plant could not be operated, could it, as a manufacturing plant? A. Except with some other plant not by itself, no. Q. How could you operate it with some other plant? A. By pumping the gas to some other station and purifying and condensing it there. Q. That is pumping it as it comes from the benches? A. Yes, sir. Q. Would that be a practical operation? A. No; it would answer in a case of necessity only. Q. Then, as a matter of fact, these are abandoned works, aren't they, and dismantled, aren't they, partially? A. Practically, yes (1580-1582). Q. How about connections running from this old abandoned retort house? Are any of those included? A. There are none included because there are no exhausters to take the gas away from the retort house. There is no other plant to which there is any connection" (1583).

And he reluctantly admitted that if this was to be used as a distributing station you could do away with buildings and apparatus valued by him at $121,942, with depreciation (1582).

Mr. Mayer at first said the retorts were not in use when he examined them, they were all ready to be fired, but he didn't think they had a fire in them. It was used as a manufacturing plant, and can be operated at any time, and then when cornered, by it appearing that there was no condensing or purifying apparatus, he made the matter worse by saying that the gas would have to be pumped to some other station, and then had to admit that that was not a practical operation, and that there was no connection with any other station. And then was forced to admit that this manufacturing plant that could be operated at any time was a dismantled and abandoned plant.

As a matter of fact, and Mayer knew it from the first, the city had condemned a portion of this plant and rendered it useless as an operating station, and it had been abandoned.

The complainant petitioned for a reduction of taxation on this block in 1903 and 1905, and stated in the petitions: "This lot is occupied by works of the company which have been rendered useless, as the city has condemned the land in the block above, on which a part of the same system of works was located. Accordingly, this land no longer has a value as a gas plant and would not sell for more than the value of the land as vacant property." (2711, 2714.)

Bradley testified that this plant had been taken by the city and that no gas was produced there (1983), and yet the Master refused to reject the manufacturing portion of the One Hundred and Eleventh street plant, on the ground that it had not been shown to be abandoned, and included Mayer's total valuation of this plant, $1,039,910, whereas he should have eliminated therefrom, buildings, $61,923, 5 per cent. engineering, $3,096.15, 5 per cent. interest, $3,250.96; apparatus, $83,136, 5 per cent. engineering, $4,056.80, 5 per cent. interest, $4,164.64, making a total of $159,627.55.

The statements of counsel in the arguments that gas could be taken from the benches and condensed and purified at another station were equally disingenuous. The gas as it comes from the benches is hot, and it is cooled (condensed) for the purpose of precipitating the tar. If it were piped to any substantial distance it would cool in the pipes and they would become clogged with the tar.

The statement that these are reserve works is not founded in any testimony, and counsel's statement that Mr. Bradley testified that a 20 per cent. reserve should be maintained is an absolute perversion of the testimony. It is good gas engineering, when you build a plant, to allow in excess of the required capacity 20 per cent. in the generating apparatus, so that if there should be a breakdown in a portion of that apparatus you could draw on the reserve, but no one would think of carrying an entire plant idle as a reserve; the more rapid depreciation of a manufacturing plant, when it is idle, is a sufficient deterrent.

Mr. Matthewson forgot that he had himself stated in this argument that at the time of the consolidation the Knickerbocker plant was so large that the Harlem plant (One Hundred and Eleventh street) was closed down. If this plant was carried as a reserve, why had it not been operated instead of buying the gas; the capacity of this plant, 2,420,000 cubic feet, would have practically produced the gas they bought. If the court would view these premises, the absolute unfairness of any claim of the complainants to have this plant valued would appear. We request that the court do this in order that it may not be misled as was the Master by complainants' counsel's smooth and plausible misstatement of a patent fact.

Eighteenth street station. Mr. Mayer states that the Eighteenth street station is not now in use as an operating plant, and that building and apparatus that he testified to on his examination in chief, except the valve-house, several holders, the boiler-house and the exhauster-house, are the remnants of a manufacturing plant. (1555.) He gives a total value to buildings excluding engineering and interest charges, $218,907. (1560.) This includes the brick building for holder, heretofore discussed, valued at $155,784 (1556) and for coal storage, $18,357 (1558, 1559), making a total of

$174,141 which should be deducted. The other apparatus, he says, is all needed for the distributing plant. The Master has allowed the full value given by Mayer, with the addition of the engineering and interest charges at $588,873.

Objection was made and exceptions duly taken. There should be excluded on buildings, $174,141, engineering charge 10 per cent., $17,414.10, interest charge, $9,577.75, making a total of $201,132.85.

Forty-second street station. Mr. Mayer testified: "In retort house No. 4, four benches of sixes, I found that all the settings had been torn out, and on my second visit I found that new settings had been delivered at the grounds and they were going to put them in; they were getting the arches ready for repairs. I thought at first they had been abandoned." (1460-1461.) His first suspicion would seem to have been well founded. For when Mr. Edgerton visited the works six or eight months later, he testified: "I noticed that there had not been anything done there toward doing the setting, and I thought if they had not done it up to that time, they were possibly reconsidering it. I made no allowance in that case. I saw it was not done, and if they had the material when Mr. Mayer was there, it was still there, and what material I saw piled up in the empty arches has not anything to do with that setting at all." (5349, 5350.)

These benches were valued by Mayer at $3,325 per bench (1452), making $13,300, which should be excluded.

Forty-fourth street station. This station manufactures water gas, altered long ago from a coal gas station. There is a retort house with ten benches of sixes back to back, which makes twenty benches, $44,200, without depreciation $39,780. Mayer's testimony with reference to these benches is illuminating, showing his earnest desire to swell the total valuation, and is in part as follows: Q. Those are coal gas benches, are they not?. A. Yes, they were entirely reset in 1896. Q. But they are water gas stations; they don't manufacture any coal gas, do they? A. They can use these benches for the production of oil gas, the same as the Twenty-first street station. Q. Well do they? A. They did not do it at the time I examined the plant, but I presume they do it in the winter time to get up their candle power. Q. Candle power of what gas? A. Of their water gas. Q. Do you mean to say that you would enrich the water gas—A. (Interrupting) mixture of water gas and coal gas; this gas may be taken from the Forty-second street works. Q. Is it arranged now for use as an oil gas generator? A. Yes. Q. There is no difference in the retorts that would be used for the production of oil gas and those that would be used for the production of coal gas? A. It is absolutely the same retort. All you have to do is put a pipe inside of it, vaporize it, and turn it out in the shape of gas instead of coal. Q. Is there any evidence of this having been done for that purpose? A. I do not recall that exactly. It was not in use when I was there. (1527-1528.)

There is absolutely no evidence in this case that any oil gas is made or ever has been made at this station. If the court will refer to Mr. Bradley's testimony as to the method of the manufacture of water gas (150-154), the utter absurdity of Mr. Mayer's suggestion that they used these retorts to enrich their water gas in winter will become evident. If Mayer had dealt honestly with the court, he would have stated the fact as it was, that these twenty benches of retorts were a portion of the abandoned coal gas plant.

Therefore, there should be deducted from his valuation $39,780.

We also find a Pelouze & Andouin condenser, which can only be used for coal gas. Mr. Mayer says: "I presume it is only used in the winter time when they are making coal gas." (1523.) Since he had to admit that they didn't make coal gas and shifted to a possibility of oil gas, this old Pelouze & Audouin condenser is useful for only one purpose, to clearly demonstrate that these are the relics of an abandoned coal gas plant still remaining at this station. How much of the apparatus which is included in Mayer's appraisal belongs to this class he would not, and we cannot, say. But this type of condenser could not be dressed up by Mayer as water gas apparatus and should be excluded. Value, $1,260 without depreciation, $1,197 with depreciation. Therefore, at least the following should be deducted from the appraisal: Retort house, $58,408 (1516); 10 per cent. engineering, $5,840.80; 5 per cent. interest, $3,212.44 (1518); benches, $39,780; condenser, $1,197, 10 per cent. engineering, $4,097.70, 5 per cent. interest, $2,253.73, making a total of $114,789.67.

Ninety-ninth street station. This also is a water gas station, but we find Mr. Mayer giving a value of reproduction of eleven through benches of sixes back to back, making twenty-two benches, $43,758. These benches are just being rebuilt with all the new material on the ground. They are in a state of repair now, and will be finished before the fall. (1549.) Six months or more later Dr. Marks finds these eleven benches double length retorts not used, six vacant arches in this stack (5084). Coal gas benches are of no more use in a water gas station than is a steam whistle on a water wheel. There should be deducted from the appraisal $43,758. Unfortunately, the retort house is not appraised separately, but is given with a number of smaller buildings (1535), but as the number of benches are practically the same as in Forty-fourth street, there ten, here eleven, if we assume the same value here as for the Forty-fourth street retort house, it will certainly be fair to complainant, $58,408.

At this plant we find another attempt by Mayer to value old abandoned apparatus, which, when discovered, he fought valiantly to retain, although the amount was comparatively insignificant, $1,485 with depreciation. On his schedule were two hydrogen scrubbers marked "(out of commission)" which he explained to mean "They are not used at the present time." There are a great many apparatus which are not used at the present time because the production of the amount of gas at the present time does not require it.

Mr. Matthewson: Summer production; that has been gone all over." (1546.) First he admitted that the hydrogen scrubber was a part of the old Tessaè du Motay plant, in which the hydrogen gas was manufactured separately and enriched, like coal gas, with the oil gas, whereas now the hydrogen and oil gas are manufactured as one process (p. 1606) to make the carburetted water gas. But he says they could use it. He presumed they did when they make the full amount of gas. When asked to calculate the scrubbing surface of the scrubbers, leaving out those two hydrogen scrubbers, after making several erroneous calculations, he found that there was sufficient scrubbers without these to take care of the maximum output of the plant. (1606-1611.) He is still in doubt, but no one else is; these two scrubbers were a part of the old water gas plant which had been removed and were honestly entered on his schedules as out of commission. These should be $43,758, scrubbers, $1,485, 10 per cent. engineering, $5,840.80, 5 per cent. interest, $3,212.44; benches, $43,758, scrubbers, $1,485, 10 per cent. engineering, $4,524.20, 5 per cent. interest, $2,488.36, or a total of $119,716.90.

Inwood station. Mr. Mayer reproduces a little abandoned holder at Inwood of 60,000 cubic feet capacity. Valuation of entire station, $26,173. No gas is sent through this holder. Mr. Oscar H. Fogg who had charge of the regulation of pressure for the complainant, says: That no gas comes from the Inwood holder. "I have seen an old frame holder there; I don't know whether the holder is in the tank or not (6217). Prof. Marks states: "Holder not in use (boarded tank), counter weights taken off." (5103.) This station should be excluded; so small a holder would be of no service under the present condition, and then it has actually been abandoned. Therefore, the further sum of $26,173 should be deducted.

In Mayer's appraisal and in the Master's and the Court's allowance there should be deducted for abandoned plant as follows:

111th street	$159,627 55
18th street	201,132 85
42d street	13,300 00
44th street	114,789 00
99th street	119,716 00
Inwood	26,173 00
	$634,739 97

No Allowance for Obsolete Type.

Mr. Mayer testified:

Q. Now, as I understand you, in examining the Fourteenth and Forty-second street plants, for instance, you did not take into consideration whether they were commercially or economically worth replacing, did you? A. No, sir; I only figured on what I found there. Q. That is, what it would cost to reproduce that apparatus, whether or not it was commercially and economically an apparatus that would be built to-day? A. I paid no attention to that whatever. Q. And did you take into consideration whether gas could be produced at those particular plants at $1.50 or 50 cents per thousand cubic feet? A. I did not consider it at all, because it had no bearing whatever on the apparatus as I found them. Q. As you valued it? A. As I valued it. Q. Now, where a plant was of an old type, which, owing to the advance in the science of gas engineering, would not be built to-day, did you allow anything for depreciation by reason of that fact? A. No, sir. (1605.) Q. You stated that in going through these plants you observed that they were operating efficiently. What did you mean by that? That they were making gas? A. That they were making gas without any apparent difficulty, in the ordinary manner in which it should be produced * * * Q. You did not take into consideration the amount produced of gas per pound of fuel used, or anything of that sort that would go into the cost of operation, did you? A. I did not examine operating results at all. (1561.) When questioned about three Rowland engines at Twenty-first street station, he said: Q. Do you know how old those engines are? A. No, sir, but they are in perfect condition. Wherever I find a machine in perfect condition and up to date in operation—Q. No matter what its age is? A. No, I don't care what its age is. Q. Nor do you care what the type may be? A. No, not as far as the condition is concerned. Of course the type has a bearing upon valuation (1506-1507), and again—Q. Is it your idea that gas making machinery by use enhances in value? A. Some of them do. Q. What particular part of the gas machinery becomes more valuable by use? * * * We are talking about the coal gas stations? A. You want nothing but new engines, exhausters and apparatus of that kind. Those which have moving parts, they are better operated after they have been submitted to some wear and tear and have the proper bearings and do not heat and do not bind. * * * Q. But if it has run for a few weeks and has "found itself," as they express it, I believe, does it continue to increase in value? A. No, it does not increase in value, but it maintains its value (1468-1469). Q. If it should appear that this very apparatus cost the company very much less than these estimates which you have given, would you change your estimate or your appraisal at all? A. No, I would not. Q. Why not? A. My estimates are based upon my own personal knowledge of these matters for a good many years, and therefore I cannot be wrong. I am not attempting to find the capital of the company that was invested in the plant, but what some one would have to pay if they got me to build an exact duplicate of the plant as it exists to-day. If I were going to build a coal gas plant to-day of a capacity of 9,500,000 cubic feet per day, I would not reproduce this identical plant. I do not know how much of this plant came to the Consolidated Gas Company at the time of its consolidation in 1884. I do not know what particular portions of the plant have been added since that time. That is, I mean to say, I do not know at the present time. I have been figuring on the work myself for some years, but I cannot state just now what they are. In making this appraisal I did not state the actual amount received by me for making these additions. I can't tell whether I took a larger or smaller amount, because I did not refer to the figures which they received at all. (1469-1470.)

In the valuation of the One Hundred and Thirty-second street holder which was completed during the pendency of this suit, built by Bartlett, Hayward & Company under Mayer's supervision, yet he testified that he "did not give the figures from the estimate or contract price. My present figures came to more because at that time we had under consideration the construction of four holders of the same capacity, under which condition we gave a low price." (1598.)

In regard to buildings he stated: "In estimating the value of the buildings I took the buildings of the Kings County Gas & Illuminating Company in Brooklyn, which were constructed in 1899. The class and character of buildings are very similar to the buildings of these various works. That was a coal gas pant of a million and a half capacity; that is, originally a million and a half, laid out for three million; all the matters and principal details were arranged for three million, so it could be extended to that capacity. I took each building by itself and ascertained the cost of such building per cubic foot of contents, figured from the basement line to the eaves of the roof; these were my unit figures applied in the other buildings of the various gas works now under consideration. I did not measure the walls and compute the number of bricks that would be in those walls and the price of brick laid. I ascertained what was the cubic contents of the building; what is the cubic air space within that building. I divided the price by the number of cubic feet and that was the price per cubic foot * * * Q. If you were going to make figures to put in a bid to the Consolidated Gas Company for building a building, is that the way you would figure the original cost, the way you have testified here? A. No." (1398-1401.)

It will be noted that this does not purport to be an appraisal based upon what it would cost to produce the plant new to-day. The reason for failing to give such an appraisal is very evident. It would be necessary then to give the value of a modern, up-to-date plant that would produce the amount of gas that the plants of the Consolidated Gas Company do. Therefore, instead of doing this, Mayer guessed at what it would cost to reproduce this identical plant and then guessed what depreciation should be allowed.

We submit that the complainant was required to prove either what it would cost a competitor, having the right to sell gas to the city of New York, to build a plant that was capable of producing the same quantity and quality of gas that the complainant did, or that the actual cost of complainant's plant should have been proven and a proper allowance made for depreciation on account of age, obsolescence and wear and tear, but they failed to do either, and therefore we submit that, as far as the plant is concerned, the complainant failed to prove, under the rules laid down in the decisions upon this subject, the value of its property actually and necessarily used in the business of making and distributing gas.

Cost of a Modern Plant (Further Details).

We present an estimate from the evidence at hand:

The plants of the complainant have a daily capacity to produce 9,500,000 cubic feet of coal gas and 41,500,000 cubic feet of water gas.

Mr. Mayer testified that a 3,500,000 coal gas plant could be produced without holders for $340 per 1,000 of daily capacity, a 4,500,000 for $330, a 5,000,000 for $327, a 6,000,000 for $315. When pressed for this ratio in a 9,500,000 he said he could not give it, that the ratio changed as you advanced, but the rate of change alters when you get to small plants, and he does not believe any plant can be built for less than $300 per thousand (1454-1458).

These unit figures of Mayer's on the coal gas plant are derived from his figures on the value of the Fourteenth and Forty-second street plants.

Mr. Mayer testified (1457):

> "*Q.* It would cost less per unit of capacity to build one coal gas plant that would produce 9,500,000 cubic feet, wouldn't it, than it would to add together these two Fourteenth and Forty-second streets?
>
> "*A.* Oh, yes; you mean in one plant, yes, sir."

Unit from Astoria Plant.

We have better evidence derived from the actual cost of the construction of the most modern and up-to-date plant in America. There are two retort houses, one with inclined and the other with horizontal retorts; these are designed to produce 10,000,000 feet each day, a total of

20,000,000 for the two houses; the purifying houses for each retort house are complete. "I might say by way of explanation," said Mr. Bradley, "which will save a little time afterward, that each house is connected as an independent gas works; that is, there are two retort houses, and two purifying houses—duplicates of everything right through—so when I speak of two houses I mean one unit. It is all one plant. It is a duplicate manufacturing plant. I call it one unit, but it is divided into two parts, and each part is a complete gas works" (542-543).

Taking the various buildings and contents on cross-examination, he having on direct given the cost of the plant, Mr. Bradley was asked the cost of one of those gas plants with a 10,000,000 capacity, with the following result (1705-1713 to total on 1713 includes holders):

Retort house	$302,304 03
Apparatus	933,291 09
Purifier house	159,430 48
Apparatus	200,142 80
Condenser house	25,960 03
Apparatus	83,405 72
*Tar extractor house	41,965 24
*Apparatus	124,617 79
†Exhauster house and contents	40,000 00
†Meter house and contents	32,179 30
†Boiler house and contents	34,866 01
†Tar tanks	7,000 00
†Ammonia tanks	20,000 00
†General connections	43,500 00
Electric power house	77,000 00
Tools, implements, horses, office furniture, *boats, *scows, **pennant* fresh water fixtures	65,353 32
Coal and coke handling	250,000 00
Total	$2,441,015 81

---

*Not in Manhattan plants.

†Estimated for 10,000,000 capacity.

or a unit of $244.10, which would make a 9,500,000 plant cost $2,318,950, for a modern, up-to-date coal gas plant, as against Mr. Mayer's valuation of $3,121,241 for the Fourteenth and Forty-second street plants (1319-1320, 1370-1374).

Mr. Matthewson claimed on the argument that items were omitted from the above statement, and the Master found: "From the record as cited it appears that the witness expressly stated the figures regarding the Astoria cost, which he then gave at counsel's request, were not complete or accurate. They were supplemented later by a statement of items omitted, amounting in the aggregate to $4,327,930.67." To this refusal to find, as requested, these defendants duly excepted (83d exception).

The Court will find, referring to Mr. Bradley's testimony, that at the end he stated that he thought this was unfair, that we had taken certain things and divided them by two. His attention was then called to the fact that the only things that he had divided by two were the meter house, tar and ammonia tanks, boiler house and contents and general connections (1712). These amounted, out of a total of $2,191,015, to $137,545.31. Then he complained that there were other things omitted and he was asked:

> "*Q.* * * * Now you stated you thought this was unfair to you as an engineer to arrive at an estimate in this way; in what way would it be dealing unfairly with you?
>
> "*A.* You omitted all the grading, filling and the necessary work or real estate to produce this plant; you omitted the bridge that was necessary to prepare the docks for the receipt and discharge of coal; you omitted the wharves; you omitted the coke-handling plant; it is not anything like up to where it should be.
>
> "*Q.* Well, I think, your criticism on the whole, as to the coal storage and coke plant is probably well

founded, and we will take that; what would be the value of a coal storage and coke plant necessary to handle those articles in a 10,000,000 daily capacity plant? * * *

"A. The coke and coal handling business would be $500,000 or $250,000 for the half" (1712-1713).

The Court will observe that everything except the coal and coke handling plant would be referable to real estate and to the particular Astoria real estate, whereas what was sought was the value of the plant, exclusive of real estate and holders. If we turn to Complainant's Exhibit 235 (Exhibits, p. 5289), we find the coal and coke handling plant to be as follows:

Coal-handling machinery...............	$232,506 22
which, divided by two, equals.........	116,253 11
Coal-handling machinery, horizontal retort house	87,526 30
Coke-handling apparatus, horizontal retort house	71,260 72
	$275,040 13

—which makes Mr. Bradley's estimate of $250,000 appear too low by $25,040.13.

Also probably should be added:

Pumphouse building to tar tanks........	5,513 75
Pumphouse building to ammonia tanks...	6,149 07
One-half of electric power station contents (Mr. Bradley estimated one-half building)	74,904 37
	$111,608 32

And we submit that these are all the items that should be added to find the cost of a manufacturing plant to be erected on Manhattan Island on the present property of the company. The other matters in Complainant's Exhibit 235, Astoria tunnel, $2,650,000, railroads, railroad equipment, temporary structures, etc., all have reference to the Astoria plant, or to the other one-half of the unit, which would not be reproduced; therefore, we will take these corrected items and add to the former total:

	$2,441,015 81
Corrections as above—	
Cost of 10,000,000 daily capacity modern coal gas plant	$2,552,624 13
Cost of 9,500,000 daily capacity of present coal gas plants at the same unit value ($255.26 per thousand)	$2,424,970 00
Mr. Mayor testified (pp. 1517-1518), and the Master has found (VII. request, p. 175, Master's rēport) that the water gas plants could be reproduced, capacity 41,500,000, for	5,104,500 00
Total, coal and water gas plants present 51,000,000 daily capacity	$7,529,470 00

To this amount, holders, building, apparatus and connections at holder stations must be added as follows:

The present capacity of the complainant's holders are 43,600,000. Mr. Bradley testified that the 5,000,000 holders had been built for the past ten years. Steel tanks have been built within the past ten or fifteen years; it may be twenty years; due to the advance in the art of steel construction (pp. 657-659). He stated the reasons why a large holder is more economical to make than a small holder are: Take a small holder 100 feet in diameter and another of 200 feet in diameter, the holding capacity of the latter increases four times; if you take one holder of 100 feet in diameter the circumference of the tank of that holder will be 314 feet; four times 314 feet will be 1,256 feet; one holder of 200 feet diameter will be 628 feet; four small holders built in that way, that double the quantity of tank surface will hold about 2,000,000 feet; the large holder will hold 5,000,000 feet and occupy the same ground space; with a large holder there are five lifts and with a small holder it is impossible to put more than two or three on account of the disproportion between the diameter and the height (pp. 640-641). Therefore, in reproducing the holders to-day we would build eight 5,000,000 holders and one 3,600,000 instead of forty-five holders ranging in capacity from 205,000 to 5,000,000 feet. Complainant has three comparatively new 5,000,000 holders—two at One Hundred and Eleventh street, and one, just finished, at One Hundred and Thirty-second street. We find the two One Hundred and Eleventh street holders valued by Mr. Mayer, with interest and engineering charges added, at $776,971 (pp. 1399-1340), and the one at One Hundred and Thirty-second street valued at $434,346 (pp. 1340-1341). The latter Mr. Mayer says that he had valued at more than it cost the Consolidated; therefore, to allow for all possible contingencies it would be fair to complainant to take the average valuation of these three by Mr. Mayer, or $403,773, as the reproduction cost of these eight holders, which would amount to $3,229,184. As to the 3,600,000 holder; at Fourteenth street there is a 3,250,000 holder in a steel tank which Mr. Mayer valued at $314,248, or $96.69 per thousand of capacity; this unit cost would be larger than for the 3,600,000; therefore, if we should take that unit, complainants would not complain, 3,600 by 96.69—$348,084. We would have to provide, however, for the five distributing stations, taking Mr. Mayer's valuation of One Hundred and Thirty-second street for buildings, apparatus and pipe connections, $106,365 (pp. 1340-1341), it being the most modern and, likewise, the most expensive, we would add $531,780, and we have produced plants, modern and up-to-date in every particular, at the following cost:

Cost of Modern Plant.

Plant	$7,529,470 00
Holders	3,577,268 00
Building, apparatus and connections at holder stations	531,780 00
A total of	$11,738,518 00
As against the Court's	15,500,000 00
A saving of	$3,761,482 00

If we assume that they should be allowed for the land and they would use the land they use to-day, we would have the land, plant, mains and services valued as follows:

Real estate (less deductions)	$10,422,106 30
Plants	11,738,518 00
Mains and services (book value)	7,852,151 03
	$30,012,775 33

as compared with the Master's valuation of $43,591,000 and the Court's valuation of $42,415,435 for these same items; and that of capital investment of $29,978,060, and original cost $29,266,757.46, and the sworn value as given by Mr. Carter of $27,408,700.

We repeat that the allowance by the Legislature of $30,000,000 was a fair and reasonable allowance for the value of complainant's plant. And when we consider that in the above total valuation of $30,012,775.33 is included the real estate on which stands the five manufacturing stations, it is evident that real estate of a greater value than the difference between that figure and the $27,408,700 would be eliminated. The testimony of Mr. Carter before the legislative committee that that was the value of the plant reproduced new was the truth.

To escape the charge that the estimate on the Astoria plant is not fair, and considering that, for the purposes of this argument, the Master's contention that the Astoria investment is to be allowed, is well founded; and furthermore, to give the complainant an up-to-date plant, capable of producing all the gas which they manufacture and sell with a margin of surplus to take care of the normal growth in their business, we will consider the value of a plant 70,000,000 cubic feet daily capacity placed on the Astoria land—20,000,000 coal gas and 50,000,000 water gas—and to be liberal in every way we will allow the full value of the land and not consider that it was designed for a plant twelve times as large as the present unit, and that the tunnel and a great deal of the grading, filling in, docks, water supply and other matters are referable to the larger plant, and we have the following result:

Astoria land, tunnel and plant, including 15,000,000 holder and tank for a second one of same capacity, everything as per complainant's Exhibit 235...	$13,250,739 60
Water gas plant, 50,000,000 capacity..	6,150,000 00
Holders and holder stations as above...	4,109,048 00
Total plant value and Astoria real estate	$23,509,787 60

The complainant would then scrap the works on Manhattan Island. If they reserve at each works sufficient land for the erection of two 5,000,000 holders, of the same size as that occupied by the One Hundred and Eleventh street distributing plant, 475 feet by 200 feet, at the valuations given by the Master for the real estate, they could on a sale realize as follows:

Fourteenth street blocks 988, 989, 991	$1,156,000 00
Forty-second Street, 325 feet of block 1089	507,812 00
Twenty-first street, blocks 951, 953, 978, 979, 987	1,912,000 00
Forty-fourth street, block 1092	645,000 00
Ninety-ninth street, 175 feet of block 1670 and block 1692	448,958 00
	$4,669,770 00
Scrap (estimated by Bradley at 600,000 or 700,000 for one-half plant)	1,200,000 00
Total realized scrapping Manhattan plants	$5,869,770 00

This amount should be deducted from the Manhattan real estate of the company and we have the following:

Real estate, Manhattan	$4,533,336 30
Real estate and plant, Astoria, holders and holder stations, Manhattan	23,509,787 60
Mains and services (book value)	7,852,151 03
Meters and miscellaneous	4,100,000 00
Working capital	1,616,000 00
	$41,611,274 93

As to Complainant's Ownership of Franchises.

The New York Gas Light Company was incorporated by chapter 85 of the Laws of 1823, and was endowed with perpetual succession and with

> "full power and authority to manufacture, make and sell gas, to be made of coal, oil, tar, peat, pitch or turpentine, or other materials, and to be used for

> the purpose of lighting the said city, or the streets thereof, and any buildings, manufactories or houses therein contained and situate, and to enter into, make and execute any contracts, agreements or covenants in relation to the objects of this incorporation, and of enforcing the same, and be capable of purchasing, taking and holding any estate or property, real or personal, as shall be necessary to give effect to the purposes of this incorporation, or for the accommodation of their business and concerns: *Provided,* the value of such real estate shall not exceed $100,000. *And provided also,* that no public street, lane or highway in the City of New York shall be dug into or in anywise injured or defaced, without the permission of the corporation of said city first had and obtained."

The permission—constituting its Municipal Franchise—was obtained from the Common Council on May 12, 1823, but by its very terms it expired on May 12, 1853, and there is no evidence or claim that it was exer extended, renewed or any other permission obtained.

We have then a gas company possessing only a franchise to be a corporation, but without any existing Municipal Franchise whatever, and its occupancy of the streets being merely on sufferance and liable to be divested or terminated at any moment at the pleasure of the City.

It is preposterous to assert that such an uncertain and unsubstantial municipal privilege—a mere occupancy based upon acquiesence—possesses any definite or ascertainable value as an existing or valid franchise.

The Manhattan Gas Light Company was incorporated for no definite period by chapter 59 of the Laws of 1830, to manufacture gas and to lay pipes for that purpose, but without authority to disturb the streets without permission from the City first had and obtained. By an agreement with the City of May 8, 1833, the company was authorized to lay underground pipes in the streets, which agreement by its terms expired on May 13, 1853; on May 3, 1848, a similar agreement was entered into, which by its terms expired on *May* 5, 1868, and which has never been renewed or extended. The legal and practical status of this company is therefore the same as that of the New York Gas Light Company as stated above.

The Metropolitan Gas Light Company was incorporated by chapter 545 of the Laws of 1855, wherein it was permitted to manufacture gas and to lay pipes in any of the streets *when authorized to do so by the Common Council,* and in 1858 such authority was given by the Common Council for thirty years, which period expired in December, 1888.

The Municipal Gas Light Company was incorporated on May 29, 1874, under the provisions of an act entitled " An Act to authorize the formation of Gas Light Companies," passed February 16, 1848, and its term of corporate existence was fifty years.

No municipal franchise was ever directly conferred upon it *by name.*

On December 21, 1876, the Common Council passed a resolution giving general permission " to *all* incorporated gas companies to lay gas mains and pipes in the streets, avenues and public places " in said City upon such *conditions* as might be prescribed by the Mayor, Comptroller and Commissioner of Public Works, and on March 22, 1877, the said Commission of officials prescribed the conditions of said general permission. The permission aforesaid given by the Common Council was limited to a period of thirty years, which term expired on *March* 22, 1907.

There can be no question but that such franchise was invalid in its inception because of the attempted delegation of the authority of the Common Council to a commission of City officials to determine the conditions thereof.

It was a power which could not be delegated. The conditions which accompany a grant must be regarded as a part of the grant itself.

This has been the settled law of the State for many years.

> Anderson *vs.* Equitable Gas Light Co., 12 Daly, 462.
>
> Matter of Pet. of Emigrant Ind. Savings Bank, 75 N. Y., 388.

The general statute of 1848 which provided for the organization of gas light companies was framed upon the theory for which we contend. It declared that the corporations created thereunder should have *power* to manufacture and sell gas and "to lay conductors for conducting gas through the streets, lanes, alleys and squares in a city, village or town, *with the consent of the municipal authorities thereof,* and under such regulations as they may prescribe."

Upon the repeal of the 1848 Act in 1890, and the substitution of the Transportation Corporations Act (chap. 566 of the Laws of 1890), substantially the same provisions were enacted whereby a gas company may lay conductors in the streets, squares and highways in any city, village or town "with the consent of the municipal authorities thereof and under such reasonable regulations as *they* may prescribe."

The "municipal authorities" mean the Common Council and not subordinate officials.

> The People *ex rel.* W. S. El. Co., *vs.* C. T. & E. S. Co., 187 N. Y., 58.

The franchise was incomplete and could not vest in the grantee in the absence of the "conditions" or "regulations" on which it was granted. The power to fix the conditions could not be delegated because they must necessarily accompany the grant before it could become vested.

Realizing, or at least fearing, the invalidity of any franchise which had been granted by or through the said Municipal Commission, the "franchise-grabbers," (so-called) induced the Legislature to pass chapter 530 of the Laws of 1885, whereby all grants made by said Commission were declared ratified and confirmed; but as this act was simply an *amendment,* and the title of which amended act being only as follows, viz.: "An Act to amend chapter 410 of the Laws of 1882, entitled 'An Act to consolidate into one act and to declare the special and local laws affecting public interests in The City of New York,'" and as the amendatory act was local in its character and embraced more than one subject which was not expressed in its title, it was invalid and void because in violation of section 16 of article III. of the Constitution.

Cahill vs. Hogan, 180 N. Y., 304.

The Master at page of his report, says that,

> "Although this statute is claimed to be unconstitutional, its validity *must* be assumed *for the purposes* of the present proceeding."

We answer that no such *"assumption"* is permissible or can it be justified. When the complainant asserts that it owns existing franchises of great value and relies upon a statute recognizing, "ratifying and confirming" their legality, it is a perfect answer to the complainant's claim to show in this proceeding that the statute relied upon is unconstitutional. No better answer could be made; and besides the Master cites no authorities to sustain his unwarranted assumption.

But irrespective of the question whether the municipal franchise of this Municipal Gas Light Company was void in its inception, it expired by its terms on March 22, 1907, and therefore in December, 1905, it had only about one year and four months to run, which fact unquestionably deprived it of any substantial value in December, 1905.

The Knickerbocker Gas Light Company was incorporated on June 24, 1876, and its term of existence was limited to fifty years, which corporate existence will not expire until June 24, 1926.

No municipal franchise was ever *directly* conferred upon it. The Master in his report (pages) states the further *claims* of this company as follows, viz.:

> "The company *claims* to have become vested through *mesne* assignments with all the rights and privileges conferred by chapter 944 of the Laws of 1871, passed June 12, 1871, whereby there was granted to certain individuals therein named, and their assigns, authority to make and sell gas to be used for the purpose of lighting all that portion of The City of New York lying north of the centre line of Seventy-eighth street, including all of the Central Park, and to lay pipes for the purpose of conducting the gas in any streets, avenues, lanes, alleys, squares and parks of the said City and of the said Central Park; * * *
>
> "It was further provided therein that nothing therein contained should be construed to authorize the laying of gas pipes within the Central Park or any of the parks or other territory within the control of the Department of Public Works, without the consent of the Department of Public Works first had and obtained."

It does not appear that any consents were ever given by the Department of Public Works or by the Common Council of The City of New York for the laying of gas pipes in any of the parks of said City or in any of the streets of said City; and therefore the said Knicker-

bocker Gas Light Company acquired no municipal franchise whatever *via* the 1871 legislative act.

The Master in his report (p.   ) states the further *claims* of the said Knickerbocker Company as follows:

> "The Knickerbocker Gas Light Company also *claims* to have succeeded to the rights of the Anthracite Gas Lighting and Heating Company of New York, a corporation organized under the *General Manufacturing Act* of 1848. Its certificate of incorporation was filed on May 28, 1863, and provided that the corporate existence should continue for the period of fifty years. By resolution of the Boards of Councilmen and Aldermen, adopted respectively on June 18 and 22, 1863, said corporation was granted the right to lay pipes and mains for conducting gas through the streets, etc., in The City of New York for a period of fifty years."

The Harlem Gas Light Company was incorporated on February 1, 1855, for a period of fifty years. Its State franchise to be a corporation therefore expired on February 1, 1905, before the passage of the Act of 1905, reducing the price of gas. The Boards of Aldermen and Councilmen, respectively, on March 26, 1855, and April 23, 1855, granted to said company the privilege to lay pipes in all the streets north of Seventy-ninth street in The City of New York (unlimited as to period of use) and reserved the right to purchase at any time from the said company all its property by paying to the said company therefor the cost of the same and ten per cent. additional.

Its municipal franchise was worthless in 1905, at the time of the passage of the Gas Reduction Act, because that franchise had necessarily expired with the termination of the company's corporate existence on February 1, 1905.

The learned Master in his report (pages   ) has confused or conglomerated the mere State franchise or authorization to be a corporation with the municipal franchises, which were granted by the local authorities for the use of the streets.

The reasoning of the learned Master in his report (pages) is clearly unsound wherein he assumes that the mere fact that the complainant has not been prevented or disturbed by the City in the use of its pipes in the streets, and had not prior to the commencement of this action, brought any action or proceeding to oust it from such streets or otherwise directly attacked, cancelled or revoked the privileges theretofore granted, therefore the City is estopped from insisting that the said franchises have expired and lapsed, and that they have no substantial value, being dependent upon the acquiescence or supineness of the City authorities.

Such facts do not constitute any legal estoppel to prevent the City from *now* assuming its rights. The Legislature has the conceded right to reduce existing rates for the sale of gas, provided such reduction is not unreasonable, and the presumption being that the legislative price *is* reasonable, the complainant when it comes into Court and asserts that it owns valuable franchises upon which it must earn large profits, the City has a perfect legal as well as moral right to insist that the franchises in question have expired and therefore they are now of no substantial value and cannot now be taken into consideration in securing a higher price for gas than that permitted by the act of the Legislature—a rate fixed after a thorough, careful and painstaking legislative investigation in which the complainant was fully and patiently heard.

If the fact that the whole or a majority of the complainant's municipal franchises have lapsed or expired would actually reduce or destroy their value, then it follows that the City had a right to avail itself of that fact in reduction of the valuation claimed by the complainant herein, and neither the circumstance that the City did not promptly oust the complainant from the use of such franchises upon the expiration thereof, or did not otherwise diligently proceed to assert the rights of the municipality, does not constitute an estoppel either in law or in equity. The Master asserts that the mere omission of the municipal authorities to institute legal proceedings to oust the complainant from the streets, which he terms an " acquiescence " in such use, present considerations which " would appear to be sufficient *for the purposes of the case,* and render necessary a discussion of the elaborate arguments presented by counsel " (Master's Report, page).

We deny the correctness of the Master's conclusion. The ascertainment of the value of franchises " for the purposes of the present case " requires no different application of legal rules than in any other case where values are involved. If a lease for a term of years has existed, but the lessee is still in possession, holding over after the expiration of his term with the mere acquiescence of the lessor, the lease itself cannot be deemed to have any real value capable of estimation, as the lessee may be ousted at any time, and there is no fixed or definite unexpired term of tenure to which a substantial value can attach.

The situation, then, thus far presented is briefly this:

(1) The municipal franchise of the *New York Gas Light Company* expired in 1853.

(2) The municipal franchise of the *Manhattan Gas Light Company* expired in 1868.

(3) The municipal franchise of the *Metropolitan Gas Light Company* expired in 1888.

(4) The municipal franchise of the *Municipal Gas Light Company* expired on March 22, 1907, having only a term of about sixteen months of permission left after the Gas Reduction Act of 1905 went into operation.

(5) The *charter* of the *Harlem Gas Light Company* expired in February, 1905, and therefore its municipal franchise (which was limited to the streets and squares of the City above the centre line of Seventy-ninth street) *necessarily* expired with the expiration of its charter.

(6) The status of the Knickerbocker Company will be stated later.

This, then, is the precise situation summarized—that the municipal franchise of three out of six of the constituent companies had absolutely expired before the enactment of the gas legislation of 1905, and that before such legislation the *charter* of the fourth one had already expired, which necessarily deprived the municipal franchise of any value; and that in 1905 the municipal franchise of a fifth company had only about sixteen months of corporate life remaining, so that it may again be safely asserted that the said five franchises in 1905 were practically valueless.

AS TO THE KNICKERBOCKER CHARTER.

The sixth and remaining company (the Knickerbocker Gas Light Company) has only a franchise to be a corporation which will not expire until 1926, but as no municipal franchise has ever been directly bestowed upon it, it is sought by the complainant, in the first place, to establish such a franchise through various assignments from the individuals named in chapter 944 of the Laws of 1871.

The Master, while admitting that numerous objections have been made to the title of the Knickerbocker Company to the rights, if any, conferred by that act, then declares that they "need not be stated in detail," and that "they are for the most part highly technical and many of them could obviously be cured" (Master's Report, page).

We deny either their technical character or that they can be cured at all.

The Master further observes that:

> "Irrespective of this, however, the complainant has such broad powers derived *from other sources* as to render the technical validity of the Knickerbocker charter a matter of slight moment for the practical purposes of its operations (Id.).

We deny that the Knickerbocker Company has any such "broad powers derived from other sources" as conferred upon it by any substantial municipal franchise.

The "broad powers" to which the Master refers must indeed be looked for from "other sources," as they certainly are not discernible in the Knickerbocker charter itself.

There is no satisfactory evidence that the Knickerbocker Company ever acquired the privileges which were conferred by the Act of 1871 (chap. 944) upon the grantees therein named "and their assigns." Those grantees were forty individuals in number, consisting of Isaac P. Morton and thirty-nine others, mostly connected directly or indirectly with the City government, while under "ring rule," so-called.

The powers conferred upon them were to manufacture and sell gas for the purpose of lighting streets and public places in the City (including Central Park) north of Seventy-ninth street, and to lay pipes therefor in such streets and parks; the control and management of the said business was to be by an Executive Committee consisting of not less than seven nor more than thirteen of their number; but it appears that instead of conducting said business themselves as contemplated by the act aforesaid, seven of their number, under date of February 25, 1874, styling themselves the "Executive Committee" as well as "the owners as joint tenants of the franchise granted by said act, purported to assign to the Union Gas Company" the right to do, exercise and perform *as the agents and attorneys of the Executive Committee* and their successors all the rights, privileges and franchises granted or created by the said act of 1871 in the same manner as the grantors themselves might do (Exhibit 188, pages); and this contract or assignment was subsequently assigned by the Receiver of the Union Gas Light Company to one Clark Bell (Exhibit 197, page), and by Clark Bell to the Knickerbocker Gas Light Company (Exhibit 116, page).

It further appears that afterwards and on December 11, 1876, seven other gentlemen styling themselves the "Executive Committee," and also "the owners as joint tenants" of said franchise, made a similar assignment, as in Exhibit 199, to the Knickerbocker Company the right to exercise the franchise as agent or attorney (Exhibit 198, page).

Without going into the details of other assignments, it is sufficient that the evidence shows that the Knickerbocker Company did not possess at any time either the State or municipal franchise as direct assignee or owner, but if anything merely possessed the right to use the franchise as agent or attorney of the Executive Committee of the owners.

We insist that the individual owners of the franchise of 1871 had no right to delegate to any other body than an Executive Committee of their own number the actual "control and management of the business," and especially no right to delegate the same to any corporation, and that the Executive Committee had no right to delegate the control and management vested in them by the owners.

Besides it is respectfully submitted that the numerous and various assignments relied upon by the complainant to show its title to the franchises claimed to have been conferred under the Act of 1871 were not satisfactorily proved by the evidence produced before the Master.

Without going much into detail, it is sufficient to state that the record shows that there was no competent or sufficient evidence of the following material and essential matters:

First—That the persons who assumed to act as an Executive Committee were ever legally chosen as such.

Second—That the persons named in the first section of the Act of 1871 ever met within ninety days after the passage of the act, or at any other time, and by ballot selected by a majority vote an Executive Committee consisting of not less than seven nor more than thirteen of their number, or that due notice of the time and place of such meeting was ever published in two daily newspapers of that city, as was required by section 3 of the Act of 1871 (page).

Third—That there were ever any minutes of the meetings, if any, of the persons named in the first section of the Act of 1871, or any legal evidence that any such meetings were ever held.

Fourth—Of the authenticity, execution or delivery of the instrument (Exhibit No. 103, page) purporting to be a grant to the Manhattan Gas Company (No. 109, page), and of the instruments purporting to be resignations of various persons describing themselves as an Executive Committee (No. 201, page) purporting to be a general release from Walter Osborn and others to the Knickerbocker Gas Light Company.

Fifth—Of many other material matters essential to show a complete chain of title to the alleged franchises claimed by the complainant to have been acquired by the Knickerbocker Gas Light Company by assignments and transfers through various persons and corporations under the Act of 1871, and through, from and under the charter of the Anthracite Gas Lighting and Heating Company.

Facts which were improperly or insufficiently proved before the Master must be regarded before the Court as not having been proved at all.

Neither did the Knickerbocker Company derive any municipal franchises from the Anthracite Gas Light and Heating Company, for the simple reason that the latter company had none to confer. The latter company was incorporated in 1863 for fifty years, and a municipal franchise was granted to it in 1863 for fifty years, and in 1905 it had only eight years more of life. It was not incorporated under the Gas Light Companies Act of 1848, but under the Manufacturing Companies Act of that year (Exhibit 107, page), and was invested with no power to perform any public function nor any power to lay pipes in the public streets, even with the consent of the municipal authorities.

Hence the action of the municipal authorities in attempting to confer upon a strictly manufacturing company a grant which it could not lawfully use rendered such franchise void in its inception.

The attempted transfer or assignment of the Anthracite Company's alleged municipal franchise in 1865 to the Citizens Mutual Gas Company (Exhibit 109, page) and by that company to the Union Gas Light Company in 1871 (Exhibit 11, page) and by the receiver of the latter company to Clark Bell in 1876 (Exhibit 115, page), and by Clark Bell in the same year to the Knickerbocker Gas Light Company (Exhibit 116, page), was each legally ineffectual to confer upon said assignees a valid title to said franchise because the original recipient of such franchise had no power to receive or to use or to assign it, not being itself a public service corporation. But even if the said franchise should be deemed valid if subsequently assigned to a public service corporation, such a corporation had not at that period any power to abrogate its public functions and delegate the performance thereof to an individual, and an individual receiving such a franchise could not assign it to any other person or corporation, not even to a public service corporation. Such a contract was *ultra vires* as well as against public policy. The Supreme Court of the United States has so decided.

> Thomas *vs.* Railroad Company, 101 U. S., 71.

It therefore seems clear that as the Knickerbocker Company never directly received from the municipal authorities any franchise whatever, and as the attempts to confer franchises upon it through various assignments from individuals *via* the Anthracite Lighting and Heating Company, a corporation created under the General Manufacturing Act of 1848, have proved futile to confer any valid and existing franchises in the said Knickerbocker Company, it was in 1905 and is to-day without any municipal franchises whatever.

We ask this Court to reverse the judgment of the Circuit Court and dismiss the bill of complaint, with costs.

Respectfully submitted,

William S. Jackson,

Attorney General.

Brief for The City of New York, Appellant.

Appeals from the Circuit Court for the Southern District of New York. In Equity.

Statement.

These three appeals are brought to this Court on a single transcript by stipulation among the solicitors for the respective parties (see Record 487), and are to be heard together on the several Assignments of Error of the respective appellants.

This is a suit in equity. The bill of complaint (Rec. pp. 1-20), was exhibited by the Appellee in the Circuit Court, May 1, 1906. Its object is a decree declaring that certain enactments of the Legislature of New York are in contravention of Amendment XIV. and of section 10 of Article I. of the Constitution of the United States, and also to have declared null and void a certain order made by the Commission of Gas and Electricity created by chapter 737, Laws of 1905, hereinafter mentioned.

The enactments in question are printed in full as exhibits to the bill of complaint (pp. 21 to 31, Rec.). They are chapter 736, Laws of 1905, entitled "An Act in relation to the price of illuminating gas furnished or sold to the City of New York, and providing a penalty for violation," chapter 737, entitled "An Act to establish a Commission of Gas and Electricity, with power to regulate the price of gas and electric light and certain other electric service, and to provide for the control and supervision of gas, electric light and other electric corporations, and making an appropriation therefor," and chapter 125, Laws of 1906, entitled "An Act in relation to illuminating gas in the City of New York, and regulating the quality and pressure thereof and the price to consumers other than the said City, and providing a penalty for violation."

Chapter 736 was approved June 3, 1905, and became effective by its terms July 1, 1905. Chapter 737 was approved June 3, 1905, and became effective immediately. Chapter 125 was approved April 3, 1906, and became effective by its terms the first day of May thereafter. The order made by the Commission of Gas and Electricity became effective by its terms the first of May, 1906.

Section 1, chapter 736 (Rec., p. 21) provides as follows:

> "A corporation, association, copartnership or person engaged in the business of furnishing or selling illuminating gas in the City of New York shall not charge said City or receive therefrom for such gas a sum in excess of 75c. per thousand cubic feet."

Section 2 prescribes the quality and illuminating power of the gas to be manufactured, and regulates the pressure in the service mains.

Section 3 prescribes a penalty of $1,000 for each offense in violating any provisions of the Act.

Chapter 737 creates a Commission of Gas and Electricity, to consist of three commissioners, to be appointed by the Governor, and prescribes their terms of office, mode of conducting business and other general powers.

Among these powers is the power (Section 15, p. 26, Rec.):

> "Upon the complaint in writing of the Mayor of the City, the Trustee of the village or the Town Board of the town in which a person or corporation is authorized to manufacture, sell or supply gas or electricity for heat, light or power, or upon the complaint in writing of not less than one hundred customers, and after (Section 17) a public hearing shall be had upon such complaint at which the complainants and the person or corporation complained of shall have an opportunity to be heard and may be represented by counsel * * * the commission * * * may fix the maximum price of gas or electricity * * *. The price so fixed shall be

to 75c., the provisions with reference to illuminating power and standard of purity, the pressure of the gas and the penalties therein prescribed, and also the provision of chapter 737, creating the Commission of Gas and Electricity, the order of the Commission, made February 23, 1906 (copy of which is annexed as Exhibit C—p. 29), limiting the maximum price of gas to customers other than the City of New York to 80c. and prescribing the standard of illuminating power, and making provision in regard to the pressure of gas, and also the provision of chapter 125, limiting the price of gas to 80c., and prescribing a standard of illuminating power, and fixing the pressure and providing penalties for any violation of its provisions.

It is claimed in the complaint that the said acts and the said order are unconstitutional and in violation of the Fourteenth Amendment to the Constitution of the United States, because they deprive the appellee of its property without due process of law and take its property for public and private use without just compensation, and deprive it of the equal protection of the law. It is further claimed that it is an absolute physical impossibility to comply with the provisions in the said statutes and orders in regard to pressure, that there is an unjust discrimination in favor of The City of New York, that the penalty clauses in both statutes are so oppressive as to be unconstitutional, and that the creation of the Commission of Gas and Electricity is a delegation of legislative power.

The answer of the defendant, City of New York (Rec., p. 57) puts in issue every material allegation of the bill of complaint, and by way of separate defense sets up an investigation made by the Commission of Gas and Electricity, avers that full and ample opportunity was afforded to present all the facts, that all the facts were duly considered, and that the actions taken by the Legislature and the said Commission were just and reasonable; that a full and complete investigation into the affairs of the company (appellee) was made under an act of the Legislature passed in 1885, another in 1886 and another in 1905, and by the said Commission of Gas and Electricity in the years 1905 and 1906, and annexes (Rec., pp. 66-135) to and makes part of its answer a copy of the report of the joint committee of the Senate and Assembly of New York, dated April 29, 1905; alleges that it is the largest consumer of gas supplied by the appellee and that the price of gas to it of 75 cents is more than sufficient to repay the appellee a fair and reasonable profit; that the appellee owns and controls every corporation with one unimportant exception (to wit, Bronx Gas and Electricity Company), engaged in manufacturing and supplying gas or electricity for illuminating purposes or distributing the same in the Boroughs of Manhattan and The Bronx in The City of New York, and regulates and controls as a monopoly the price of gas and electricity in the said boroughs.

The answer denies that the appellee is or ever has been a corporation duly incorporated, and denies that the several constituent companies were corporations duly organized and existing, with powers, property and franchises, as claimed by the appellee, at, prior to, or since the time of the consolidation, and denies that the appellee became the owner of the franchises or consents of its predecessor companies; denies that it has become the owner or entitled to maintain and operate the mains, pipes, etc., of its said predecessor companies; denies that it laid additional main, pipes and conductors in The City of New York with the consent of the municipal authorities of said City; avers that the appellee has not made out any title to the relief prayed.

On the coming in of the report of the Master and after the hearing of exceptions to the report, the final decree (pp. 430 to 434) was entered, confirming the report of the Master except in certain particulars as to which the exceptions to the report are sustained and its findings modified, and adjudging that chapter 736 of the Laws of 1905 and chapter 125 of the Laws of 1906 and the order of the Commission of Gas and Electricity, made the 23d day of February, 1906, are each of them illegal and void because in contravention of the Fourteenth Amendment to the Constitution of the United States, in that they take complainant's property without due process of law and without just compensation and deny the complainant the equal protection of the law.

History of the Consolidated Gas Company.

Report of Senate Committee 1885 (p. 5325, Record).
Yaldens Report (p. 5591, pp. 5726-5728, Record).
Pooling agreement (p. 5541, Record).
Masters' Report (Record, p. 152).

The Consolidated Gas Company has a monopoly of the gas and electric lighting business in the Boroughs of Manhattan and The Bronx, in the City of New York.

It sells more gas per capita and per mile of main than any other gas company in the world. The sales per capita in London, the next largest consumer, are between 8,000 and 9,000 cubic feet per capita annually. The Consolidated Gas Company sold dur-

ing the year 1905 about 9,250 cubic feet per capita (Record, p. 1591).

It supplies over 400,000 customers.

These appeals present for final and definite settlement by the supreme arbiter under our system important questions in the *science of economics* and in the realm of constitutional limitations upon the exercise of the police power possessed by the several sovereignties that compose the greater Commonwealth. And these questions vitally concern the people of the whole country, both the humblest person of the most limited means, and the greatest aggregations of wealth and power in exceptional enterprises especially authorized by these sovereignties, for the public convenience; aptly described as *public utility* or *public service* corporations. We hope, as we believe, that the counsel engaged are animated by the spirit of faithful adjutants to this supreme tribunal, not less than by the spirit of upright advocates for the client that called them into the particular service. We are sure that we are actuated by no sentiment of hostility to that combination of money, intelligence, experience, ability, high character and zeal for the public good and regard for the law of the land which is not altogether wanting in every corporate body organized to promote the public convenience. Many—many more than is commonly supposed—of the executives of these bodies recognize duty to the public as well as to the corporation whose affairs they are called to manage, and execute their several functions under a high sense of mutual obligation. Our learned associates as well as the distinguished lawyers and accomplished gentlemen who represent the appellee are, we have no doubt at all, animated by the like spirit, while the record bears ample testimony to the learning, patience, industry and fidelity of His Honor, from whose conclusions we appeal, and of the Master to whose findings we except.

And so, we felicitate ourselves and we congratulate the whole people that we are now come under such auspicious circumstances to perhaps the last important stage in the evolution of the law regulating the reciprocal rights and obligations, on the one hand of the people for whose service and convenience public utility corporations are created, and, on the other, of the rights and duties, with their limitations and conditions, granted to and imposed upon these useful bodies.

It is not claimed that chapter 736, fixing the rate for the City at 75 cents, would operate to deprive the appellee of its property without due process of law, but that such would be the effect of the two statutes operating together; so we treat them as though they were contemporaneous enactments.

Upon a review of the adjudications which have had to do with rate regulations we find none which undertakes to point out every element that may be considered as comprising the investment on which the corporation is entitled to demand a fair return, nor any precise rule by which the value of each is to be ascertained. None of the decisions of this Court from *Munn* vs. *Illinois* (94 U. S., in 1876), down to and including the latest deliverances has undertaken to formulate such a rule. We are all familiar with what was said in *Smyth* vs. *Ames*, A. D. 1897), 169 U. S., on p. 547:

> "What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it. * * * than the services rendered by it are reasonably worth. And (p. 546) in order to ascertain that value, the original cost of construction, the amount expended in permanent improvement, the amount and market value of its

> bonds and stock as compared with original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses are all matters for consideration and are to be given such weight as may be just and right in each case. We do not say there may not be other matters to be regarded in estimating the value of the property."

That was said in reference to a railroad corporation maintaining a highway, but later cases relating to rates of water companies and of gas companies have not formulated any rule more definite, each case having been disposed of according to its own peculiar facts and circumstances.

One rule clearly established by this Court is that no return can be exacted from the public on palpably unwise expenditures; but IF THE COURT REFUSES TO ALLOW A RETURN ON MONEY ACTUALLY BUT IMPROPERLY SPENT, HOW CAN IT BY ANY DISTORTION OF REASON DECREE (AS WAS DONE IN THE CASE AT BAR) SUCH A RETURN ON MONEY NEVER EXPENDED?

The cases seem to justify the following propositions:

> *To take the actual investment less depreciation as the basis for present value, can work no injustice to the Company in any event, and may only work injustice to the consumer where such cost exceeds the duplication value basis;*

Where the actual investment is *less,* to take the duplication value, *must* work an injustice on the consumer by requiring him to pay a return on money never expended.

The rule is that *the investment shall be taken.*

The exception or limitation is that the investment shall be disregarded only where *equity to the consumer* requires it.

It would serve no useful purpose to review all the cases here. In none of them is the valuation of real estate, as a separate and distinctive element, nor of franchise, involved.

But in the cases now before the Court two of the principal factors included by the Court below in the computation of value as a basis of return, are real estate, mains and services, and, as described in the final decree (p. 432), "special franchises."

The constitutionality of the legislation involved in these appeals depends, so far as the reasonableness of rates and pressure in the gas mains of the appellee are concerned, upon extraneous facts which had to be ascertained. Hence the reference to a Special Master "to take all the testimony herein, make all needed computations, and fully find the facts." So far as affects the question of rates, all the findings of the Court below embodied in its final decree are in accord with the findings of the Master, excepting the item of *good will* and that of *franchises,* but not all the findings of the Master as to what should be allowed to the appellee as part of its capital employed in the public service are approved by the Court. Some items are disallowed as not being part of such capital, and the item of *franchise* is valued at $12,000,000 in lieu of $20,000,000 assigned by the Master to good will *and* franchise, and the item of $3,616,000 working capital allowed by the Master is reduced from $3,616,000 to $1,616,000; and thus the capital employed, according to the report of the Master, $83,357,000 (Record, p. 247), is by the decree reduced to $59,831,435 (Rec., 432, tangible assets, $47,831,435; and special franchise, $12,000,000).

The Master and the Court concur also in the finding that a return of 6 per cent. on the capital employed is a fair return; and the Court finds (p. 408) that, if only the tangible "property is to be considered, this return is sufficient to satisfy the law," that is—to protect the statutes from the charge of unconstitutionality in so far as they regulate rates.

But adding (p. 418, Rec.) $12,000,000 for the intangible asset described as "special franchises" to the $47,831,435, the Court finds, as the capital on which the appellee is entitled to a return, $59,000,000 (in round figures), upon which the probable return is $3,024,592 (Rec., p. 432), or "very considerably less than 6 per cent.," (*it is $565,295 less than 6 per cent.* and is *a little more than 5 per cent.*) and that "this return is neither fair nor reasonable" (Rec., p. 418). Upon this finding of fact—*and solely upon this finding*—the sentence of condemnation of the statutes in question is based, in so far as they fix rates.

The appellee acquiesces in these findings of the Court—the valuation of the tangibles and the intangible and the rate of return. Only the appellants complain thereof. Hence, the appellee cannot now be heard to question either of them.

> "Appellee cannot go beyond supporting the decree and opposing every assignment of error (*Landram* vs. *Jordan,* 203 U. S., October Term, 1905, on p. 62).

It follows, therefore, that if the finding as to any of the items entering into the sum of $47,831,435, or the item of $12,000,000, or the rate of return is, according to the evidence, palpably erroneous, and that the reduction of either or all to such sum as is plainly required by the evidence, or the disallowance thereof, would enable the appellee to earn a fair return, or the return of 6 per cent. found by the Court to be fair, the decree must be reversed. And the decree must be reversed if it is not *made clear by the record* what this item of value and this rate, or either, should be, *the burden of proof being on the appellee.*

Passing, for the present, the valuation of tangibles, and conceding, only for the sake of the argument on this point, that 6 per cent. is a reasonable rate of return, we submit:

Brief of the Argument.

Under Specification I. (p. 17) and the Assignments of Error there mentioned, it is contended (a) that the Court below erred in assigning to the franchises acquired by the appellee under the consolidation agreement a money value as part of the *investment* on which it is entitled to a return. It was *solely* on the finding by the Court of a value of $12,000,000 for these franchises that the Court decreed the enactments to be unconstitutional in respect of the rates fixed. We contend in the argument that whatever monetary value might, for any purpose, be assigned to these franchises, it disappears when the rate of charge for service is so reduced as to yield no more than a fair and reasonable return on the investment in the means employed in rendering the service; (b) that the Court having found $47,831,435 (Record, p. 432) as the value of the tangible assets employed by the appellee, and six per cent. to be a reasonable return, and that the return the appellee would probably realize at the reduced rate would be $3,024,592.45, which is *more* than six per cent. on the valuation so found—the Court erred in adding to that valuation $12,000,000 for *franchises,* thus increasing the *investment* to $59,831,435 (p. 432 Record), on which the probable return would be *less* than six per cent.—though the return would even then be reasonable as is urged under Specification III.

Under Specification II. (pp. 33 to 40) and the Assignments therein mentioned, we maintain that the Court below erred in assigning to the tangible assets any value *in excess of their original cost to the constituent corporations of the appellee and the cost of any additions thereto since* 1884, *the time of consolidation.* We point out in the argument that the entire cost of the real estate employed in its business by the appellee was only $4,118,267.38 as against $11,985,435 allowed by the decree

(Record, p. 432), being a difference of $7,867,167.62, which, being deducted from the total valuation of $47,831,435 (Rec., p. 432), would reduce that total to $39,964,268.38, on which the return of $3,024,592.45 (Rec., p. 432) would be more than *seven* per cent. We point out further that, if the valuation for franchises be excluded, whether we take original cost to constituent corporations, or appraised valuation by the constituent corporations in 1884 for the purposes of consolidation and additions thereto since then, or *even present values* as found by the Master and approved by the Court, the result is the same; the net return of $3,024,592.45 exceeds six per centum; when the item *franchises,* valued by the corporations in 1884 at $7,781,000, and not separately valued by the Master, but increased by the Court, *through a process of reasoning,* to $12,000,000 is added that even then the return is over five per centum. And we show, further, that $5,555,761.63 has been unwarrantably added for *reproductive cost of mains and services* and that deducting this sum and the excessive allowance for real estate from the total found by the Court, the return to the appellee on its investment would be more than eight per cent.

Under Specification III. (p. 60), we endeavor to show that the return of six per cent. adopted by the Court, is more than a fair return to the appellee, that is more than is usually obtained or expected from equally safe investments.

Under Specification IV. (p. 66), it is pointed out that the finding of the Court as to the impossibility of the appellee fulfilling the requirement as to pressure in its mains is predicated of the erroneous valuations of the property of the appellee, and that these being corrected the appellee would be able to make the requisite changes and still have a fair return; and that the requirement is separable from the other provisions.

Under Specification V. (p. 67), we show that the legislation complained of is not unjustly discriminatory, that the discrimination is just and reasonable, the City standing in the relation of a wholesale consumer or buyer; that the cost of supplying the City is greatly less than the cost of supplying other consumers; and that the difference of five cents per thousand feet in favor of the City when spread over the entire sales of the appellee results in a difference of only fifteen one-hundredths of a cent per thousand feet in favor of the City.

Under Specifications VI. (p. 69), it is submitted that the appellee has an adequate defence at law against proceedings to enforce performance of any of the provisions of the statute, if they are not enforcible, and, by injunction, against the separable provisions for penalties.

Under Assignments of Error First, Second, Third and Fourth (Record, pp. 444-446), and *Thirteenth* (Record, p. 450), and *Sixty-third* (Record, p. 465), we submit:

SPECIFICATION I.

For the reasons stated in Assignments of Error Sixty-second to Sixty-fifth, both inclusive, the Court below erred in assigning to the franchises of the appellee a valuation of $12,000-000 (Record, p. 432), and in assigning thereto any valuation, and adding such valuation to its investment in the means of manufacturing and supplying gas to consumers, and in overruling in this respect this appellant's second exception (Record, p. 340) to the Master's report.

The first, second, third and fourth assignments (Record, p. 445) assign as error the decree of the Court in Paragraph 6, page 433, adjudging and decreeing that the several acts of the Legislature of New York complained of are unconstitutional upon the ground that the rates fixed by these several statutes do not allow to the appellee a just and proper return upon its properties employed in the production and distribution of gas and therefore deprive the appellee of its property without due process of law and without just compensation and deny to it the equal protection of the law.

The Thirteenth Assignment of Error (Record, p. 450) is: "In sustaining the report of the Master in Chancery, refusing to find in accordance with the written request of this appellant, as follows:

> "'That the cost to the constituent companies of its several classes of property, without appreciation or depreciation, was as shown by the books of the constituent companies, $20,942,632.85, and that the

> item of $7,781,000 did not represent anything of value, but was an arbitrary figure used for the purpose of equalizing stock values, as shown by the market prices between the constituent companies';

and in overruling in this respect this appellant's second exception to the Master's report."

The Sixty-third Assignment of Error (Record, p. 465) is: "In adjudging and decreeing in Paragraph II. of said decree that the value of the franchises of the complainant employed by it in the manufacture and distribution of gas was the sum of $12,000,000."

The Master, in his report (Record, p. 247), found a valuation of $20,000,000 for franchises *and* good will, "being unable (he says) to *differentiate in figures* the complainant's franchises and good will." The Court (Record, pp. 411, 412) disallowed good will, and, instead of $20,000,000 for franchises *and* good will, allowed $12,000,000 for franchises alone (Opinion, Record, p. 418, and Decree, p. 432).

There can in this case be no franchise value included in the means employed by the appellee in its business except such as is predicated of a return in excess of a fair and reasonable return upon its investment. When the rate of charges yields no more than a fair and reasonable return, there is no franchise to be valued. But the Court finds (Record, p. 408) that the return upon the property or investment of the appellee, excluding the franchise, would be, at the rates fixed by the statute, a fair and reasonable return—that is, the Court finds as total of tangible assets $47,831,435 (Record, 432), and that the net income at the reduced rate would be $3,024,592.45, and more than (p. 433) 6 per cent., which is $2,869,886. The very claim of a return upon franchise value involves an admission that the appellee has been receiving more than a fair return upon its investment for the public. The claim in effect is that there has been an *accretion to the investment* of the appellee by reason of the omission of the State during so long a time to exercise in behalf of the public the right to regulate the return; that because the appellee was able, through the inaction of the Legislature, for so long a time to exact an excessive return, that *permission* has matured into *a right,* of which it cannot now be deprived unless its value be ascertained and that value converted into capital on which it shall have a permanent return; that when the State deprives it of that to which, against the will of the State, it has not and never had the right; which it had only so long as the State—it may be—was in ignorance of it, or for some reason chose to permit it, the appellee is then deprived of its property without due process of law; a mere toleration, at best, by the State, subject at any time to be abated by the State, has matured into a right, and it can only be taken away by condemnation of the property being used under its protection, and it must then be paid for; or if not taken away, but only the excessive charge of which it is predicated is reduced or regulated, then what was the value to it of that excess must be ascertained, and then added as a permanent *investment.* Through such a process of reasoning, if sanctioned by this Court, a principle would be evolved whereby an intangible asset representing no investment whatever, may be, against the policy of the law, created by courts and imposed on consumers and a return exacted from them on millions of dollars not one of which was ever invested by any one in anything; a burden built up, perhaps—possibly—by the cleverness of officials in concealing the truth, or possibly on the legislative policy to foster for a time a particular enterprise of public moment, until it should become sufficiently profitable to be subjected to regulation.

In the opinion of the Court below (Rec., p. 412) "this claim as an original proposition is unsound." "Return," says the Court, "can be expected only from investment, and he that invests must part with something in the act of investing. Can it be said that complainant or any other corporation similarly situated has invested its franchises in its business? It did not invest in its franchise because it did not pay for it. It did not invest its franchise because it did not part with it in the same way that it parted with money or money's worth in acquiring or creating mains or plants. The investment of property was made not in the franchise but under the franchise and on the faith thereof."

This quotation is made, not for the mere sake of arraying the presiding Judge against the decree of the Court, but because of its inherent manifest soundness.

His Honor therefore believes that "*on principle*" a franchise should be held to have no money value as against consumers, and should not be treated as an *investment* or as any part of the *capital employed for the public convenience*. He reaches the conclusion, however (Rec., 413), that it must be so treated because of "the trend of decisions and methods of reasoning pursued in well-considered cases dealing with kindred topics, and even by the dicta of courts of approved authority where such dicta indicate, as they often do, a train of thought necessarily suggested by the exact matter in hand."

But we submit that none of the cases referred to in the opinion (Rec., 414, 415)—and we will not trouble the Court with a discussion of them—involves the thought that the franchise of a public utility corporation can ever be considered in the regulating of rates as an item of *investment*. One of the controlling considerations of the Court below in assigning a value to the franchises of the appellee seems to be based on a supposed identity between regulation and condemnation proceedings (Rec., 414, 415). But regulation is not condemnation nor "*pro tanto*" condemnation. It is not condemnation at all. It is only, simply, and cannot otherwise be described than *regulation* of rates for service rendered. The franchise is not taken away. The franchise is not impaired. The corporation is left in the exercise of its full rights under the franchise. *Nothing* is taken away *to which the company had a right.* It never had a *right* to earn any more than a reasonable return on its investment. If the rate allowed will yield that return, it is deprived of no right whatever.

The vice of His Honor's view of the trend of decisions is in the impression received by him that franchise is always regarded as synonymous with property; property and franchise reciprocally enhance each other through this association. We are so accustomed to the collocation of property and franchise in speaking of corporations that we unconsciously come to treat the words as synonymous. As all property is held on the implied condition that it may at any time be taken for public use by condemnation proceedings, so every franchise of a public utility corporation is held and exercised on the implied condition that its rate of earning may at any time in the discretion of the Legislature be regulated down to a fair and reasonable return upon the actual investment without the slightest reference to its earning power or capacity, or to what it may be actually receiving, though its earning capacity and *the exercise thereof* may be the very provoking cause of the regulation.

The Court in its opinion says that the question is *res nova,* and so it is, in the sense that it has never been directly adjudicated by any of the courts, so far as we know. "How novel it is," says His Honor, "exactly as presented, is shown by the silence of most of the textbooks concerning regulatory rates, and the summary and insufficient treatment accorded the question in the valuable treatise of Messrs. Beale & Wyman."

So far from being "summary and insufficient," they, we beg to say, in one paragraph treat the subject *fully and exhaustively*. We quote section 362:

> "It must be clear that in estimating the capital upon which a public service company is entitled to a fair return, the value of a franchise enjoyed by the company cannot be considered. The value of the franchise is itself based on the capacity of the company to earn profits and it becomes greater when the earnings of the company are increased. If therefore a high rate of income could be justified on account of the great value of the franchise, this fact would in turn enhance the value of the franchise itself and so justify a still higher charge, and there would be no limit to the legal charge of the company until the limit of charge which was possible as a matter of business had been reached. In one case there is a dictum that the value of the franchise may be considered in arriving at the proper basis for just compensation, but it is submitted that the suggestion is unsound."

It seems to us, as we have indicated, that this statement by these learned authors, who had evidently carefully reviewed all the decisions then extant on the subject, furnishes an unanswerable reason why there can be no such thing as a capitalization of the franchise by the appellee so as to enable it to exact a return thereon from its customers. The method by which the Court below ascertained a valuation of $12,000,000 for this item furnishes in itself striking evidence that no value as *invested capital* can be assigned to the franchise. Surely, if it has a value, there must be some standard of valuation; there must be some means of ascertaining the value. Surely it is not to be left to be guessed at by the Court which is called upon to determine it, or to be determined *in some arbitrary and unascertainable way by the corporation itself* and then *built upon by the Court* on account of the increase of business. The latter method is the one adopted by the Court in this case. The Court says of the foundation of this item of $12,000,000, *the allowance of which has alone resulted in the condemnation of the statutes:*

> "That the complainant (p. 417) did at the beginning of its career measure the value of its franchises. It does not appear *how it was done nor how the figures selected were chosen*, but it is proven as a matter of fact that when complainant was organized in 1884 under a statute which permitted it to acquire the property and franchises of the older gas companies consolidated to form it, it then issued stock of the par value of $7,781,000, representing the franchises it then acquired and nothing else; and this stock is still outstanding, and has since 1884 been in the hands of purchasers who, I am compelled to think, have a right to rely upon legal protection for legally issued stock" (by which is only meant that chapter 367 of 1884 provides that the capital of a consolidated company shall not be larger than the fair aggregate value of the property, franchises and rights of the several companies to be consolidated. But that is a *general law* and applies to franchises that *have* a value as part of capital). "There is no direct evidence that complainant's franchises in 1884 were worth $7,781,000 or are worth that much to-day. I do not see how such evidence can exist, but because complainant made an arbitrary valuation so long ago, issued stock on the faith thereof, did that lawfully and has maintained dividends upon that stock ever since, I find it *presumptio juris* that complainant's franchises in 1884 were worth $7,781,000; and to that extent *it* is certainly entitled to protection against *confiscatory* regulation."

We beg to analyze this remarkable deliverance, which, as we have said, is the foundation upon which is built an *investment* by the appellee of $12,000,000 for the public convenience, on which therefore the public must pay interest.

In the first place, these large figures—$7,781,000—are adopted by the Court as a basis of franchise value, without knowing how or by what means they were ascertained, only and simply because they *were* ascertained *by this appellee* or by its constituent corporations, and *stock issued therefor.* "No evidence," he says, "exists that they were *worth that much then or are worth that much to-day,*" but somebody holds certificates issued on account of that valuation, and therefore the consumer must pay an annual return of 6 per cent. interest on it; and this, be it observed, in order to "prevent confiscatory regulation." Regulation confiscatory of what? Of something for which the appellee never paid anything nor parted with anything, for something which represents no value ever *invested* by it in anything for the public convenience, but simply and only stock which the appellee saw fit to issue for reasons satisfactory to itself, and which is now held by "innocent" persons. Yet there can be no innocent holder of any such stock any more than there can be—of course, we speak legal language—an innocent holder of a forged promissory note which has passed through many successive hands, each believing it to be genuine. The original issue was purely fictitious, every share of it and every share outstanding to-day that represents a certificate of that issue is equally tainted, however innocent of the taint the holder may be.

We take occasion to observe here that *there are no rights of stockholders, as such,* involved in this litigation or any aspect of it. If stockholders have suffered injury in any way at the hands of the corporation they must seek through proper means for their redress. No wrong done to them by this appellee can justify an additional wrong on its part to its consumers. In no conceivable aspect can this $7,781,000, which this appellee added to its capital upon its organization, be made the basis for a return from its consumers, and yet the Court below not only charges the consumers in behalf of "innocent" shareholders with a return upon this $7,781,000, but adds to it the further sum of $4,219,000, making $12,000,000 in all, by this singular process:

> "If," (?) says he (Rec., p. 418), "plaintiff's franchises were worth $7,781,000 in 1884, and its tangible property at the same time was appraised, as appears in the evidence, at $30,000,000 in round figures, then since complainant's business (in sales volume) has in twenty-three years almost quadrupled and its tangible assets grown to $47,000,000, it appears to me that a fair method of fixing the value of the franchises in 1905 is to assume the same growth in value for a franchise as is demonstrated by the evidence in the case of tangible property. If therefore the franchise valuation of 1884 was proportioned to personalty and realty of $30,000,000, a franchise valuation similarly proportioned to $47,000,000 in 1905 would be over $12,000,000."

(As we have heretofore indicated, this is a mutual or reciprocal, progressive method of valuing franchise—if it could be valued at all—which would preclude any limit of return below that which as a matter of business is possible.)

He therefore finds that the value of complainant's franchises at the date of inquiry was not *less* than $12,000,000, making the total valuation $59,000,000, upon which the probable return is $3,030,000, or "very considerably less than 6 per cent." (It is a little over 5 per cent.) "This return," says his Honor (Rec., 418), "is neither fair nor reasonable," and therefore this legislation under consideration is unconstitutional.

We cannot refrain from remarking upon the extraordinary proposition that a statute of a sovereign State is to be condemned as violative of the Constitution of the United States by means of a manufactured item of investment, manufactured in a way unknown to the Court which adopted it, by persons acting solely in their own interest, without the cost to them of a single dollar, and then increased nearly two-fold by a process of reasoning that assigns to it no possible use or value in the business of manfacturing for and supplying to the public an article of necessity. Some light, however, is shed upon the *origin* of this *item,* now *grown* to this dimension, by testimony to be found in the record. The president of the company, a witness for appellee, explains it before the State Board of Tax Commissioners as "representing the *good will* of the consolidated companies, the right *to exist as a corporation, contracts with the City, etc., the right to make and sell gas,* and the *right to occupy the streets*" (Rec., 3107).

In the report of the Senate Committee, March 1, 1886, the minority report explains this item as follows (Rec., 5340):

> "Having determined upon the aggregate amount of share capital (that is, $39,078,000, p. 5325), the next and most difficult matter was to distribute it.
>
> "* * * Finding that the predetermined amount of share capital could not be reached by a liberal appraisal of some of the property and by nothing deserving the name of appraisal as to other properties, a further sum of $7,781,000 was added for franchises, that being the difference between the proposed sum and that which had been reached without it."

In short, according to Senator Gilbert, one of the three members of the committee, $7,781,000 was the difference between what was determined upon, *at the consolidation,* for the *capital stock* of the company, and the valuation which the committee appointed for the purpose had assigned to the assets of the constituent companies. The report of the majority of the committee (p. 5384) furnishes practically the same explanation.

> "The value of this property finally agreed upon by the six constituent companies comprising the consolidation was $29,994,000, but as the value of the stock of the same six companies had been agreed to be $39,078,000, after setting apart $1,303,000 for working capital, it left $7,781,000, which they called the value of the franchises and rights of the several constituent companies."

The presiding Judge in the Court below says (p. 416):

> "The Master reports that the record contains little direct evidence as to the value of the franchises, and he might have added that if by direct evidence is meant testimony of the same kind regarding their value as has been offered regarding every item of tangible property, there is none at all."

And so it is, that notwithstanding the inability of the Senate Committee, either the minority or the majority, or of the Special Master, or his Honor, upon considering the report of the Special Master, and the exceptions thereto, to assign any certain value whatever to the special franchise, and notwithstanding the inability of the Court with all the evidence before it to ascertain why $7,781,000 was chosen to represent this franchise value, it was adopted by the Court merely as a basis upon which, through the extraordinary process of reasoning which we have quoted, there has been built a capital of $12,000,000 upon which the consumers of the gas of the appellee are to be taxed, and by virtue of which, enactments of the Legislature are to be denounced as unconstitutional and the enforcement of their provisions inhibited; and which, according to the logic of His Honor, must continue to increase with increasing value of tangibles and increasing sales—a perennial plant of constantly increasing growth, without seed or root.

With reference to the argument based on the taxation of franchises, it seems to be quite enough to say that this tax only exists where, and to the extent that, a public service corporation is earning more than a fair and reasonable return upon the values employed by it for the public convenience, and that whenever, either by the voluntary action of the company, or by legislative regulation, this excess disappears, there is nothing to be taxed and nothing is taxed in such case.

Recurring in conclusion to the argument derived from a comparison of or from the supposed analogy between condemnation proceedings and regulation rate proceedings, we quote, because of the conciseness and intrinsic force of the statement, " Beale & Wyman on Rate Regulations," section 364:

> " Whether when the plant of a public service company is taken by a city, by eminent domain or by contract compensation is to be made for the franchises of the company, is not entirely clear on the authorities. The question, of course, should be determined according to whether, in view of the purchase or taking, any value remains in the franchise. Although the company may be compelled to submit to statutory rates, which make no account of the existence of the franchise, the franchise may nevertheless be of some value. Even when the rates are so limited, the company is still permitted to receive a return on its capital which is greater than on a government bond; the ownership of the plant may therefore have a certain value which the fran-

chise gives. And if the franchise actually has a value, compensation for it should be made."

But, we repeat, the fixing of a rate—a fair and reasonable rate—takes nothing to which there is a legal right.

A final analysis of this item of $12,000,000 for special franchises will disclose that it is a charge against the consumers *to the credit of Investment,* merely—*solely*—to secure a *dividend on shares of capital stock* of the par value of $7,781,000 which, by the process discovered and used by the Court below, has appreciated to $12,000,000 or a little more than 54 per cent. To this extent and only to this extent, in this case, has share capital been considered in estimating the investment. But the Court said it *had to be done* in order to *protect "innocent" shareholders;* and these "innocent" shareholders have been specially favored over all other shareholders by more than 54 per cent. There seems to be no reason why the other shares should not be equally favored. They were issued at the same time as part of the same share capital. But if they were so favored the *investment* would be swollen to nearly $86,000,000 as against $47,831,435, *present* value of tangibles as found by the Court. Not only so, but according to the process of the Court, the value of the share capital would continue to increase, *pari passu,* with increasing sales and increasing market value of neighboring lands and, with the added increment of realty, would be aded to the *investment,* and so the only limit to *investment* would be, *not investment,* but market value of real estate, capacity of production and consumers to take it. Such is the monstrous and intolerable result of the theory and reasoning on which *alone* is based the verdict of the Court that, palpably and beyond all doubt, these statutes will deprive the appellee of its property without due process of law.

It seems perfectly clear, therefore, that there is no basis whatever for the value assigned to franchise or franchises in this case, or for any value at all. But if it is not allowed, then, according to the opinion of the court, and to the finding of the court, which is acquiesced in by the appellee, it must follow that the enforcement and operation of the statutes in question will not inevitably deprive the appellee of a fair return upon its investment, as the same was ascertained in the court below, *and the decree must be reversed.*

Now, what say our adversaries?

(1) The appellee is "securely and *perpetually* in possession of the streets by virtue of the charters of one or more of its constituents;" (2) "the provision of the present charter of the City of New York, under which charters may now be granted for only twenty-five years and imposing onerous conditions for their procurement, enhances the value of appellee's franchises by eliminating the possibility of a competitor procuring a perpetual or unburdened franchise." This was their argument in the Court below.

Now, we ask, in all simplicity, how such conditions *add anything to the investment* by complainant for the public convenience? But it is only on investment that it is entitled to demand a return. Fortuitous circumstances, pre-existing conditions and later legislation which it is absolutely certain was not by the legislative department designed to that end, and a consolidation of substantially all the corporations thus *securely possessed of the streets,* have resulted in a monopoly, "in eliminating," say the learned counsel, "*the possibility of a competitor procuring a perpetual or unburdened franchise*" ("Brief for Complainant before the Special Master," p. 100). Shall the inherent value to the appellee of this impregnable fortification against any invader of its field, the unintended issue in part of legislation by the people *in the interest of the people,* be made the means of *oppressing the people* and enabling the appellee to exact a return on something which represents no investment whatever by it? Surely not, unless by a return on investment is meant a return not only on money and property employed by the Corporation, but on all the incidental advantages, no matter how inimical to the public convenience or the public service; a money value for which is to be guessed at or arbitrarily fixed. Counsel for the appellee invoked in their support the action of the State Board of Tax Commissioners in 1906, fixing the value of appellee's special franchises for the purpose of taxation under Chapter 712 of the Laws of 1899, and cited the opinion of the Court of Appeals of New York in *People ex rel. Met. Street Ry. Co.* vs. *Tax Commissioners,* 174 N. Y., 417. But that opinion affords not a remote intimation that what is there defined as a special franchise is to be treated as a part of the *investment* of a corporation. It was not so regarded in that case. Beyond disposing of the question of home rule—the principal question—involved in the assessment by the State Board instead of by local assessors, it only decides that a franchise, whether general or special, is taxable the same as other property, overruled the contentions that the act is incapable of execution, that *the special franchises should have been separately assessed,* that the State Tax Commissioners adopted no rule in making the assessments, that the relators did not have a proper hearing, and that due process of law was not observed in the taxation of relator's property. But all this is very far from deciding that special franchises have ascertainable value as part of the *capital on which a return can be demanded from the customers of a public utility corporation.* As the opinion declares, the Legislature simply creates a new chara of property, hitherto unknown, viz., the privilege of using the public highway in constructing, maintaining and operating structures intended for the public use, which property includes such tangible as are " in, upon, under or above any street, highway, public place or public waters * * * and excludes all power houses, depots and structures without the line of the streets."

It is apparent that only part of this "new character of property" thus "created for purposes of revenue" *represents any investment* by the corporation for which it may levy a tax on the consumer. But it is sought to show by the method of assessment used in that case, through the testimony of the Chairman of the Board of Tax Commissioners (Rec., pp. 1848-1850) that the State Board of Tax Commissioners did, in its assessment *of the appellee,* affix a value "for intangible rights **alone of over $17,000,000."** The testimony referred to does not sustain that statement. It is, however, immaterial for the reasons already stated, as well as because if appellee had shown, or if it had appeared, that its returns from its investment were not *in excess of what was fair,* there would have been no assessment at all of the franchise, or on account of the franchise; and in any view simply adds to *expenses of the business which are charged to the consumer and not to investment.*

And so, we repeat that this item of $12,000,000 should be rejected because (1) the Master and the Court agree that it is not supported by the evidence; (2) it is built up on a figure ascertained by means unknown to the Court—which the Court was unable to discover—in the language of the Court "arbitrarily selected" by the appellee at its consolidation, and it was accepted by the Court against the consumers in the interest of stockholders whose rights are not involved in this suit; (3) whatever tax the State may impose by any method of valuation the State may adopt for that purpose, is borne by the consumer and adds nothing to the investment of the appellee for the public convenience, nor (4) does the circumstance that in case of a condemnation of the property employed by the appellee under the protection of the franchise, a value would be assigned to the franchise, *add anything to the investment;* because finally the allowance would establish a principle that would effectually preclude regulation in the case of every corporation that might get the start of or steal a march on the Legislature.

The decree should be reversed because of the error in allowing this item for franchise, or franchises, or special franchises.

SPECIFICATION II.

It is submitted under the Assignments of Error First, Second, Third and Fourth (pp. 445 and 446) that the Court below erred in assigning a valuation of $47,831,435 (Record, p. 432) to the tangible assets of the appellee, and that such valuation was erroneous for the reasons stated in Assignments of Error Fifth to Fifty-fourth, both inclusive, and in sustaining to that extent the Master's report and overruling this appellant's exceptions thereto in said several assignments stated.

We think the following rule may be deduced from the opinions and decisions of this Court: **The Company is entitled to a fair return upon all the money expended by it for the means employed in the service of the public (outside of what is included in operating expenses) and obligations incurred for such means; unless it plainly appears that such expenditure and obligations are in excess of**

what they should have been under all the circumstances, in which case they should be reduced.

Assignments of Error.

Under Specification I., p. 17, was stated Assignments First, Second, Third and Fourth. While we respectfully invite the Court to consider each of the Assignments from Fifth to Fifty-fourth, we trust it will be held to be a sufficient compliance with the rule of the Court if we repeat here only the following as being essential to the argument we offer under this specification.

The Sixth Assignment of Error (Record, p. 450) is: "In assigning to the properties of the complainant employed by it in the production and distribution of gas, in reaching the valuations set forth in paragraph II. of said decree, upon which a return is to be allowed, their present values based on the cost of duplication, less depreciation, instead of their present values based on their actual cost, less depreciation, the former admittedly exceeding the latter, and such excess representing money never actually expended; and in sustaining the report of the Master in Chancery in this respect and to this extent in overruling in like respects and extent the exceptions of this defendant to the report of said Master in Chancery."

The Fourteenth Assignment of Error (Record, p. 450) is: "In sustaining the report of the Master in Chancery finding that the complainant is entitled to a return on the present value of its real estate, as distinguished from its original cost, that although

> 'By far the greater part of the real estate belonged to the constitutent companies before the con-

> solidation and was purchased many years ago at prices much below its present value,'

still complainant was entitled to a fair return upon the amount of the increase in value of its real estate holdings or of the unearned increment thereof.

Whereas he should have found that the value on which the complainant was entitled to a return was such cost value to the six constituent companies up to consolidation and to the complainant since then for such land acquired since, less the amount received for sales of any real estate; that the difference between such cost and such present value represents the appreciation thereon, due to local conditions in Manhattan, and not to any increase in investment by the complainant, and amounts to an unliquidated surplus, which can be determined as soon as the property is sold, and both before and after such sale cannot be treated as other than a surplus, and it is not proper to allow a return thereon as against the consumer; and in overruling in this respect and to this extent this defendant's Fourth Exception to said Master's report."

The Fifteenth Assignment of Error (Record, p. 450) is: "In sustaining the report of said Master in Chancery finding that there was no competent proof showing that the original cost of the real estate owned by the complainant was as stated, only the sum of $4,118,267.38, and that so far as the record discloses it is quite evident that the actual cost was in excess of that sum.

Whereas he should have found that said sum did represent substantially the cost of such real estate as carried on the books of the constituent companies; and in overruling in this respect the Fifth Exception of this defendant to said Master's Report."

The Sixteenth Assignment of Error (p. 450) is: "In sustaining the report of said Master in Chancery finding:

> 'In the second place, if the question of original cost is to be considered, it should be the cost to the complainant, the Consolidated Gas Company, and not the cost shown on the books of its constituent companies, some of which had acquired their property fifty years and more before the complainant was organized. The cost to the Consolidated Company was represented by the amount of stock it issued to the constituent companies for their real estate, which, as already stated, was $10,332,000. It may possibly be that this amount was in excess of the fair market value of the property at that time, but the record indicates that the discrepancy, if any, was by no means as large as the defendants have argued.'

whereas he should have found that such value did not represent the true cost of the real estate on which, if at all, the complainant was entitled to a return, but that such true cost was the original cost to the constituent companies of the real estate acquired before consolidation; and as to real estate acquired since consolidation the cost to the complainant. That by the mere act of consolidation in 1884 the complainant was not entitled to increase its real estate investment on which a return is demanded, without any additional outlay of cash; and in overruling this defendant's Sixth Exception to the Report of said Master in Chancery."

The Seventeenth Assignment of Error (p. 450) is: "In sustaining the Report of the Master in Chancery finding:

> 'Whatever enhancement there may have been in its value since the date of purchase was the result of no efforts on the part of consumers of gas, and they are not equitably entitled to a return thereon. Whether it was the result of mere good fortune or was due to the shrewdness and foresight

> of the management of the company is immaterial; in either case, the justice of permitting the general public to share its benefits at the expense of complainant's stockholders is not apparent.'

whereas he should have found that whatever enhancement there may have been in its value since the date of purchase was the result of no effort on the part of the complainant, but, according to complainant was due to "Divine providence and the growth of The City of New York," for the reason that the complainant is not entitled to include such enhancement in the gas investment on which the consumer must provide a return, but may get the benefit of such enhanced value upon the sale of such property when it will be treated as a surplus and it must be so treated prior to liquidation, that to do so imposes no burden upon the complainant, as the taxes are paid by the consumer during the time the property is held, and that to do otherwise would be to impose a greater burden upon the consumer, which would in time enable even a dollar rate to be held confiscatory, since the investment on which the return is figured would be continually enhancing; and in overruling this defendant's Thirteenth Exception to said Master's report."

The Nineteenth Assignment of Error (Record, p. 452) is: "In sustaining the report of said Master in Chancery finding that the complainant is entitled to a return on the present value of the plant, based on the cost of reproduction, and not on the original cost less depreciation, whereas he should have found that where such present value based on the original cost less depreciation, is less than the present value based on the reproduction cost, that the complainant is entitled to a return as against the consumer only on the smaller amount. Otherwise the consumer is burdened with paying a return on money never spent, and deprived of benefits accruing from duplication by an ideal plant, while no injustice can accrue to complainant in allowing a return on its actual investment in its present condition; and in overruling this defendant's Fifteenth Exception to said report of said Master in Chancery."

The Twentieth Assignment of Error (Record, p. 453) is: "In sustaining the report of said Master in Chancery finding the value of the mains of the complainant on which it is entitled to a return as against the consumer, to be the replacement value based on the cost of reproduction of the same. Whereas, said Master should have found said value of the mains to be the actual cost of investment therein by the complainant, less the depreciation, as the only fair basis between the complainant and the consumer, otherwise the consumer is charged with the burden of providing a return on an amount in excess of the actual investment of the complainant due to increased cost resulting from modern conditions, pavements, etc., without the consumer receiving the benefits which replacements, at the present time, under the present conditions, would give. That in no sense can the mains of the complainant, many of which have been in the ground for fifty years, be said to be at the present time of a greater value than the actual cost merely because modern conditions would not permit duplication of such identical mains at the same cost at the present time; and in overruling this defendant's Eighteenth Exception to the said report of said Master in Chancery."

The Twenty-first Assignment of Error (Record, p. 453) is: "In sustaining the report of said Master in Chancery refusing to find that the appraisal value of both mains and services at the time of consolidation in 1884, was far in excess of their cost; and that the value of mains and services devoted by complainant to the public use was as of December 31, 1905, $6,359,324.46, which represents the original cost of mains and services transferred by the constituent companies to the complainant plus the expenditures of the complainant since 1884 on account of new construction thereof. Whereas, he should have found that such figures represented the then value of such mains and services on the basis of cost less depreciation, as carried on the books of the constituent companies, and that any figure in excess of such amount which the complainant claimed therefor at that time was in excess of the real value of such mains and services and such excess should not be included in the investment on which a return is to be allowed, for the reason that it does not represent a cash outlay by the complainant, and any capital stock issued for such excess by complainant was unwisely and wastefully issued; and in overruling the Twentieth Exception of this defendant's report of said Master in Chancery.

The Twenty-second Assignment of Error (Record, p. 454) is: "In sustaining the report of said Master in Chancery finding that the complainant is entitled to a return from the consumer on an amount for services based on the cost of reproduction at present prices; whereas he should have found that if the basis of present values is to be taken, no amount at all could be charged by the complainant, as such services are no longer owned by such complainant, inasmuch as so much thereof as are in the public streets are considered as separate from the franchises, and the balance thereof are on private property and belong to the owners of said property, and that it is only when the basis of actual cost, less depreciation, is adopted that any amount for services can be included by the complainant in the amount on which a return is to be provided by the consumer; and in overruling this defendant's Twenty-second Exception to said report of said Master in Chancery."

The Thirtieth Assignment of Error (Record, p. 457) is: "In sustaining the report of said Master in Chancery disallowing and refusing to find:

> 'That the properties of the constituent companies, so as aforesaid transferred to complainant

> as of the value of $29,994,000, cost the constitutent companies new, without allowance for either appreciation or depreciation of its several classes of property, the sum of $20,942,632.85, as shown by the books of account of the several companies.'

Whereas the same should have been allowed, and in overruling this defendant's Seventy-fifth Exception to said report of said Master in Chancery."

The Thirty-first Assignment of Error (Record, p. 457) is: "In sustaining the report of said Master in Chancery disallowing and refusing to find the Sixth Special Finding of Fact requested by the Attorney General of the State of New York and adopted by this defendant, as follows:

> 'That the constituent companies, for the purposes of consolidation aforesaid, by appraisers selected by them, appraised their land in excess of the then market value thereof and appraised their buildings, plants, mains, services and other tangible property at what it would then cost to produce the same new, as a part of a going concern; and that if the Master should find the facts to be otherwise, he find and state the basis and method of such appraisal.'

Whereas, the same should have been allowed; and in overruling this defendant's Seventy-sixth Exception to said report of said Master in Chancery."

To point out the error under Specification II. it is not necessary, in our judgment, to take up any of the items other than that of real estate ($11,155,845, p. 398), —though we shall advert to others—nor is it necessary to perform the labor ourselves of reviewing, nor weary the Court with a review of the evidence to show that this valuation is not sustained by the evidence. It is not necessary, because of what we conceive to be a fundamental error in the basis of computation. The valuations of the real estate assigned by the Master in his report are concurred in by the Court below, but his valuation is reduced to the amount mentioned, by the elimination of certain portions of that real estate as not being used or employed by the appellee in its gas business. The valuation is according to the *market* value of other properties similarly situated and *adaptable* to *such use* as the owners thereof may *see fit to apply them.* In short, the valuation is according to what would be the market value of these lands if they were on the market. It would seem to be unnecessary to say more than that these lands are not marketable. They were not in the market. They could not be put upon the market in the condition they were in at the time of this reference to the Master, and are still; so that it is simply impossible to assign to them a market value. They have no conceivable money value to the appellee upon which to base a charge against the consumer except their cost to the appellee as an investment in the business of manufacturing and supplying gas for the public. Indeed, were the appellee to seek a purchaser, and were it to find a willing purchaser, that purchaser would be unwilling to pay any more for the real estate than what he would be allowed to charge for it as capital invested in the business upon which he might have a return from the consumer, and this could not be more than the original cost to the appellee, or its *present value as used* in the business. No matter how it is turned around, it comes to the same thing. No other value can be assigned to this real estate than its cost value so long as it is covered by gas holders and gas apparatus and devoted exclusively to the purpose of manufacturing and supplying gas. If any additional value is to be realized out of it, it cannot be at the expense of the consumers of gas. It cannot be realized even by the appellee as an entity except by disposing of it, converting it into money and distributing the surplus among the stockholders, or investing it again in other property for their benefit. It cannot be said that there was any such sale and conversion when these lands became the property of the Consolidated Gas Company by means of the merger of the six companies, for there was an entire absence from that transaction of the antagonizing elements of sale and purchase, *the only purpose being to ascertain a capital for the new company upon which stock might be issued to the several constituents in proportions satisfactory to them severally.* The transaction was by and amongst the several companies. It was not a purchase from or a sale by them or either of them. It was, as it purported to be, a *consolidation,* or *pooling, of the several investments already made, only that and nothing more.* Nobody, human or corporate, added as much as one dollar or the value of a dollar to what had been already invested. True, the several properties were appraised, but they were appraised presumably at what would have been their market value if marketable. This we have endeavored to show, though entirely unobjectionable as among the constituent companies, was absolutely unjust to consumers.

To do otherwise than to take the cost, is to capitalize against the consumer all the appreciation, that is unearned increment of the real estate, which advance bears no relation to the gas business.

All this appreciation is no more than surplus capital, which at some time must be realized upon, and which meanwhile the consumer carries by paying the taxes, and a return on the cost. Suppose, for instance, a parcel were sold at a greatly advanced price, would not the excess over the cost of that parcel be surplus not engaged in the gas business just as logically as if it were invested in electric light or other stocks, or in unnecessary real estate? Why not, then, before it is realized—when it is tied up in real estate in use?

We submit therefore that there is no justification for an assignment of any value to the real estate of the appellee beyond that of its actual cost. But the testimony found at page 3635 and pages 5871 and 5872 of the record shows that the original cost to the six merged companies was $3,377,971.10 *and the additional cost to the Consolidated Company was* $740,296.28, *making a total of* $4,118,267.38, which represents *every dollar which has ever gone out of the pockets of the stockholders or of any body or from the treasury of any company for any land that is being used by the appellee for the public convenience.* If at the very time of the purchase of this land by the original companies and as each company acquired it, a rate had been fixed based upon the then cost, obviously the rate could not have been questioned on that ground. The proposition, however, by the appellee, is that the rate of return must increase by adding to the cost value of that land used in that business, not by reason of any *additional investment* on the part of the company, but from time to time as the values of land *in the vicinity, adaptable to and used for other purposes,* shall increase; thus making the consumer pay interest not only on the investment, but on the silently accruing uninvested *profit* of the investment (profit on profit), until the corporation shall see fit to convert the real estate and re-invest the surplus or distribute it among the shareholders. It would not be easy, however, to find a safer or more remunerative investment of this accretion. There would be no incentive for seeking less costly land if the corporation could exact interest on the increased and increasing value.

It seems to us that the statement of the proposition exposes—as fully and effectually as any process of argument could do—its sheer injustice to the consumer. If our contention under this point be just, then as a matter of law the valuation assigned to the real estate should be reduced by the difference between $11,155,845 and $4,118,267; that is, $7,037,578, making tangibles $40,793,857 and the income of $3,024,592 over 7 per cent., which, however, as we have seen, is unnecessary to rescue the statutes.

The Master says in his report (Record, p. 167):

> “There was no competent proof showing that the original cost of the real estate was only $4,118,267.38.”

We think that we have shown there is, but if the Master is correct, then the appellee has *failed to show the cost and must fail on that account.*

As we have already indicated, this sum is shown in the report of Marwick, Mitchel & Co., the defendants' accountants, to be made up as follows (p. 5872):

“Purchase price, including additions and improvements to November 11, 1884	$3,377,971 10
“Purchase price, including additions and improvements from November 11, 1884, to December 31, 1905	740,296 28
	$4,118,267 38”

The Master disallows this figure on the grounds that the cost to the constituent companies was much in excess of $3,377,971.10, because (pp. 268-269):

> “These figures do not include the real estate of the Knickerbocker Company nor a considerable expenditure made on real estate account by the Harlem Company, and the proof shows that certain real estate of the Manhattan Company was carried on the books at less than cost.”

As to the Knickerbocker Company, there is no precise figure in the record. It was taken over in 1884 at $595,000 consisting of real estate $480,000, and bulkhead, piers and water rights $115,000. This figure, however, contained all the appreciation prior to November 11, 1884, and all the appreciation given on the transfer at that time. From the table of accountants (p. 5871) it appears that the total of such appreciation in the case of the other constituent companies averaged over 100%. It is then a safe inference that the Knickerbocker real estate did not cost over $300,000.

To offset this, however, it should be remembered that the figure $4,118,087.38 *covers the cost of all the real estate excluded by the Court.*

As to the expenditures made by the Harlem Company which it is claimed do not appear in the cost figure, the only evidence in the record is at pages 6303-4-9-12, where Mr. Moss, manager and director of the Harlem Company, testifying before the Committee of 1885, testified that he was *informed* that at some time prior to his incumbency in 1879, the plot east of First avenue was filled in by the Gas Company and that the expense thereof so far as it was contained in payrolls, and in the purchase of animals, carts and implements was contained in the expense account, not in the contingency account. But that did not apply to the building of the docks.

For all we know, this may have been regarded, and properly so, as the expense of removing ashes, rubbish, etc., rather than a construction item. But the fact remains that the figure of Marwick, Mitchell & Co., for the cost of the Harlem real estate is $313,211.62 (p. 5871) purporting to be "Original cost, buildings and *improvements*" as against Yalden's $158,899.81 (p. 5709) and Marwick, Mitchell & Co.'s appreciated figure of $754,000 (p. 5877), includes a valuation for this block (140 on Avenue A, now Pleasant avenue) and a valuation for the bulkheads. It is not to be assumed, then, that the figure of $313,211.62 omitted anything.

As to the claim that certain of the Manhattan Co.'s real estate was carried on the books at less than cost, an examination of Mr. Yalden's report (p. 5624) shows that the only item of "depreciation written off" was $21,706 on an item of "Buildings and Improvements" *not cost*. It will also be noted that Marwick, Mitchell & Co. allow for buildings and improvements on the Manhattan real estate an amount of $513,022.94 over Yalden's figures (p. 5625).

As to the item of $740,296.28 for real estate including additions and improvements from November 11, 1884, to December 31, 1905, the Master says (p. 296):

> "The sum of $740,296.28 is *less* than the *entire* amount paid by complainant for real estate, including improvements and additions thereto, for the reason that it represents a net sum, the receipts from real estate sold having been deducted from real estate expenditures, as previously stated."

This statement is not borne out by the accountant's report (pp. 5871-3); the only deduction made from the book values taken from complainant's exhibits is the item of $142,378 representing *profit* on real estate sold. Surely that is no part of the cost.

It is submitted that under no conditions can the figure $4,118,267.38 be considered unfair to appellee.

What we have said of real estate is equally true of all other tangibles, and especially it is true of the item, *mains;* for which an allowance of $12,636,000 was made by the Master (Record, p. 247) approved by the Court (Record, p. 432). That was allowed as "the *present* value of the mains based on what would be, according to the testimony of witnesses for complainant (the appellee) (Record, p. 177), the cost of *reproduction.*" The Master, however, says in his report (Record, p. 176): "They are carried on the complainant's books at the sum of $7,852,000." Therefore, $4,784,000, *never expended* or *invested* by the corporation, is charged against the consumer, for no other reason than this: *If the corporation shall have to reproduce the mains*, or *if it had now to purchase and lay them*, it would then cost that additional sum. So also, as to the services: "The capital *invested* in the services, says the Master (Record, p. 178), as shown by the books as of December 31, 1905, is $1,222,228.37," but "the cost of *reproducing* these services at *present prices*, according to complainant's witnesses, would be $1,994,000, and the record discloses no testimony to the contrary" (Record, p. 178). That amount is accordingly allowed by the Master and (Record, p. 432) approved by the Court; which is $771,771.63 in excess of any *cost to* or *investment* by the company on that account. These two allowances in excess of cost aggregate $5,555,771.63. Add that to $7,037,558 excess allowed (*ante*, p. 43) over cost of real estate and we have consumers charged with $12,593,329.63. Add this $12,593,329.63 to the $12,000,000 charged up by the Court for franchises and we have $24,593,329.63 charged to consumers, *not one dollar of which* was ever *expended* or in *any wise invested.* Deducting this total from the "total of tangible assets, $47,831,435" and $12,000,000 for franchises, or $59,831,435 *charged up in the decree* (p. 432) and we have $35,238,106 on which the probable return at the rates fixed by the statutes would be, as found by the Court (Record, p. 432) $3,024,592.45, and that return would be more than eight (8) per cent. on the *entire cost* to the appellee of, and its *whole investment* in the means employed by it and its constituent corporations for the convenience of the public.

But in this allowance for mains and services, an important factor in the reasoning and conclusions of the Master (last par.) (Record, pp. 177, 178) is the changed conditions, since the laying of these mains and services, in the streets of the City. Says the Master (p. 177, last paragraph):

"The fact that reproduction cost is so greatly in excess of the cost of original construction is due largely to changes in the character of the City's pavements. Formerly, when the gas companies had occasion to open the streets for the purpose of laying new mains or repairing old mains or services, it was their custom to replace the pavement at a cost of from 15 to 25 cents per square yard. Now about 88 per cent. of the streets are covered with new styles of pavement, chiefly asphalt. The gas companies are permitted to open the streets only on condition that the pavements shall be relaid by the contractors for asphalt paving. The expense of this work is paid by the gas companies and amounts to from $2.70 to $7 per yard, the latter price being for pavement on Broadway. Pavements consisting of granite blocks on concrete are replaced by the City's employees and for this work the complainant is charged $8 for the first square yard and $4 for each additional yard. Another source of additional cost is the congested condition of the subsurface of the streets, in view of the multiplication in recent years of various forms of underground construction. In addition to sewer and water mains, there are now conduits for electric light, telephone and telegraph wires, underground trolley ducts, and salt water mains, besides, in certain streets, the elevated railroad columns and structures of the rapid transit railway. The result is that in many streets the entire subsurface is so filled with these structures that the replacement or repairing of existing mains is attended with great difficulty and consequent expense.

Taking the testimony on this subject as a whole, the preponderance of evidence is very clearly with the complainant, and its estimate of the replacement value of the mains may be taken as reasonable."

We submit it will be time enough to make this charge for replacement, when the replacement shall have been made; especially as the very conditions of which it is predicated may render the replacement unnecessary; or, if ever necessary, only so, at some indefinite and remote period. This is a fair specimen of the reasons for the striking down by a Federal Court of the deliberate enactment of a Sovereign State in respect of an article of necessity to its people; for which they are totally dependent on a monopoly; statutes enacted only after investigations, most painstaking and impartial, extending over a period of nearly twenty-five years.

But the conclusive answer to this charge against consumers, of increased cost of replacement of mains and services is that it would be charged under Expense Account, or some subdivision thereof, to the consumer, and, so, be deducted from gross income in ascertaining the net return. By the decision of the Court, the consumer is charged with $5,551,771.63 *never expended,* and which, *if ever expended,* the company will get back because the consumer will be charged with it *again* as part of the operating expenses.

His Honor says (p. 391 Rec.):

> "As to all of the items from real estate to meters, the complainant demands a fair return upon the reproductive value thereof, which is the same thing properly considered as present value. Upon authority I consider this method of valuation correct."

But we dare say, with deliberation, that no such general rule has ever been declared by this Court, nor can any other than the one we have stated be deducted from the decisions. There is not to be found, we believe, an opinion of this Court which authorizes *a debit to the consumer of one dollar beyond actual expenditure on the consumer's* account for property used in the business, and a reasonable working capital, and a reasonable reserve for repairs and replacements—not one. In every instance where cost was not adopted, and where reproductive value was, the reason has been that only reproductive value would be just *to the consumer.* No doubt had it appeared that the outlay was justified under all the circumstances, it would have been allowed, notwithstanding through later advances in the art of construction, improvement on appliances, decline in cost of materials and of labor, etc., all might be reproduced at less (Field, *J.*, in Railroad Commission cases, 116 U. S., 307, 344). The rule would be otherwise, however, if it should appear that there had been extravagance, waste, unwise construction, etc. (*Chicago Grand Trunk Railway Company* vs. *Wellman*, 143 U. S., [illegible]).

The rule limiting the return to actual cost, where it is not apparent that there was improvident purchase, injudicious location, extravagance, waste, unwise construction, etc., has the merit of definiteness, of being a workable rule, and the only workable rule. By no other can justice be done to the corporation and to the consumer alike. We repeat: To take the cost of the investment *can work no injustice to the company in any event,* and may only work injustice to the consumer where such cost exceeds the present value or duplication value. Where the cost is *less* to take the present value *must* work an injustice to the consumer by requiring the consumer to pay profit on profit to the company. But according to the evidence in the record the cost (by appraisement—not in money—of the constituent companies) to *appellee* of its plant and all property used for the public as nearly as can be ascertained from its own books did not exceed $30,656,198.75 ($20,942,632.85, Rec., p. 5737, and $9,693,565.90, Appellee's Ex., 79, p. 5032). The net income of the appellee, as found by the Court below, $3,030,000, is more than nine per cent. on this investment.

If appellee is entitled to return on "market" values of the tangible properties of its constituents at time of consolidation, that value *fixed by the companies themselves was only* $30,656,198.75, as we have seen (Rec., pp. 5726-32), on which the return of $3,024,592.45 would be more than nine per centum. In fine, whether we take, as to the property which the Court finds is employed by appellee, original cost to constituent companies or appraised valuation of all tangibles in 1884, *for purposes of consolidation* and addition thereto since then, or *even present* values *as found by the Master* and *approved by the Court*, the result is the same; the net return of $3,024,592.45 exceeds six per cent., and it only becomes less than six per cent. when the item, "franchises," valued by the corporations in 1884 at $7,781,000, and not separately valued by the Master, but increased *by the Court* to $12,000,000, is added, and even then the return is *over five per cent.*

The conclusion of the whole matter of investment is this: Franchise can never find a place in the bookkeeping of a public service corporation, unless on the opening of the books of the corporation there can be written down Investment to Cash, or to Bills Payable and against it an amount actually paid for franchise, or incurred, and the truthful explanation: *This amount paid out for franchise,* or our note, etc., executed for this. There are absolutely but five accounts that concern the consumer or the public, viz.: Investment, Expense, Cash and Bills Receivable, and Bills Payable; and, as against the consumer or the public, no item is to be entered in either except money actually paid or payable for property employed in the business, or expended or payable, and money taken in or receivable, on account of the business, and the items for money paid out or payable can be allowed only to the extent that they accord with fairly good business sagacity, all the circumstances being considered and duly weighed.

There must be an investment of money in the franchise, or franchise can never become an item of investment on which a return is to be had. If in the course of the company's business it shall have to pay money on acount of the franchise, as, for instance, *on account of a tax imposed,* the amount expended goes into *Expense Account* or some other subdivision and is repaid by the public or consumers, just as salaries and wages are, in ascertaining the net return or percentage on the investment. How for an original entry would this do; Investment to Profit and Loss—it couldn't be credited to any other account—$12,000,000: *Estimated value of franchise taken from us by the State through an act of the Legislature reducing our net earnings to a fair and reasonable rate.* That is precisely what has been done by the Court. How would it impress the Court to find this original entry in the appropriate book of accounts of the appellee: *Investment to Profit and Loss.* $7,781,000; *being estimated value of special franchises of our several constituent companies, being the difference between the amount of capital stock agreed upon for this company and the appraised value of the assets of the several constituents;* or the same explanation found in the stock ledger, and, later, the other entry.

Yet, in some form or other, the substance of these entries must appear, if that item is a proper charge against the public.

As we have endeavored to illustrate in respect of the item, Franchise, so in regard to real estate and all tangibles. As against the consumer there can be no entry except for money paid or obligation incurred in its acquisition. Every other expense in respect of real estate as, for instance, taxes, goes into Expense Account, or into some other subdivision and comes back from the consumers in the striking of the balance of expenses and income. If this be not true, then from time to time as there is a reasonable increase of market value in neighboring real estate adaptable to such purpose as may suit investors generally, such increase may be written into Investment Account to Profit and Loss; "this account being for increase in market value of real estate."

That is, in effect, what has been done by the Court. Yet if the real estate were disused by the company, put on the market and sold, the surplus would not be credited in any of the accounts representing income, so as to increase the net returns and lessen the rate to the public. It would be distributed among the stockholders or reinvested for their exclusive benefit, or put out for the improvement of the service; in which last case only could it be charged to the consumers.

REPRODUCTIVE VALUE.

Let us suppose this entry under some one of the accounts—we scarcely know to what one it could be assigned, but let us say, *Investment Account to Profit and Loss, $* , "being estimated excess over cost, of reproducing plant." That is what was done by the Court, though the company has not parted with or incurred an obligation to part with a dollar on that account.

And, so, there has in effect been, by the Court below, written into the Investment Account to the credit of Profit and Loss three items agregating $24,593,329.63. This deducted from the totals, tangible and intangible, found by the Court, $59,831,435, would leave as total investment, $35,238,105.37, on which the net income found by the Court would be more than nine per cent.

If valuation of its property based on cost of reproduction is allowed the company it should be the cost of reproduction of a modern up-to-date plant. Such a plant would reduce the cost of gas and thus inure to the benefit of the consumer.

Thirty years ago the gas companies engaged in the manufacture and sale of gas in the Borough of Manhattan (old City of New York) were keen rivals and competitors for the business. They sought to invade each others territory. They laid their mains and services in the same streets. The new companies, with their new plants, outbid the old companies for the public service. This competition cut down profits and resulted in the Secret Pooling Agreement (Record, p. 5541). Speaking of the condition which existed in 1879, the Senate Report of 1885 (Record, p. 5362) says:

> "Gas was then furnished as low as one dollar per thousand cubic feet; new capital was seeking to supply it, and the old companies sought to defeat the endeavor by destroying the new companies and by impairing the confidence of capitalists in them. But the expensive methods of the old companies and low candle power of the gas produced by them threatened their business and profits in competition with the new rivals. So a truce was agreed upon * * *.
>
> "The truce agreed upon (Record, p. 5363) when the price of gas was restored and the gas pool established was the organization of consolidation. An agreement was made April 5, 1880, between all the companies at that time supplying gas in New York City, fixing the price of gas at $2.25 per thousand cubic feet, providing that there should be 'no canvassing or soliciting of customers.' That no new mains should be laid in streets where mains were already laid, 'it being the intention that no competing mains be laid'; that all sales shall be pooled

> and the proceeds distributed in established proportions, and that the agreement should continue for five years 'unless sooner terminated by consolidation' * * *. The immense profits immediately enjoyed by the combination, and the fact that within less than six months from its perfection the quoted value of the shares of the companies participating had more than doubled intensified the possibilities of the future (Record, p. 5363).
>
> * * * * * * *
>
> "Four years and a half of successful operations under the pooling agreement, assisted by friendly legislation, culminated in the consolidation of November, 1885, formally announced to the public with a reduction in the nominal price of gas per thousand cubic feet" (Record, p. 5369).

This consolidation took over the five plants of the constituent companies and their mains and services. Some of the plants even then being old and obsolete, and the mains of some of the companies being in the same street, an unnecessary duplication, triplication and quadruplication of mains, which still exists (see Record, p. 5997-6007, and City's Exhibit 102, p. 5919).

These plants were valued at the time of consolidation in 1884 on the basis of reproduction (Record, p. 2359, and Report of 1885).

All this property has now been valued for the purpose of exacting a return on the basis of the cost of reproduction new.

The consumers of gas have all these years paid for renewals and repairs to these plants an average of over ten (10) cents for every 1,000 cubic feet of gas manufactured and sold since 1884 (Record, State's Exhibit "L," p. 5078, Report of Marwick & Mitchell, p. 5771; Comp. Ex. 85, p. 5039).

Frederick J. Meyer, the expert for the gas company, who appraised the plants for the company, and was familiar with them to the minutest detail (Record, p. 4649) testified on cross-examination (see Record, p. 1394):

Q. Now, as I understand, you did not make your appraisal by finding out how much this property actually cost the company and then making an allowance for depreciation?

A. No, sir; I never saw any figures of that kind.

Q. Then, if it should appear that this very apparatus cost the company very much less than these estimates which you have given, would you change your estimate or your appraisal at all?

A. No, sir; I would not.

Q. Why not?

A. My estimates are based upon my own personal knowledge of these matters for a good many years, and therefore I cannot be wrong.

Q. And therefore, if the company actually paid less you think the company must have been wrong?

A. Well, I don't know how they established their selling prices, but my values are based upon actual facts as they exist to-day.

Q. Then, as I understand it, you are not attempting to find the capital of the company that was invested in the plant, but what someone would have to pay if they got you to build them a plant somewhat similar to this to-day. Is that it?

A. That is the idea exactly, with the exception that it would be *an exact duplicate of the plant as it exists to-day.*

Q. If, however, you were going to build a coal gas plant to-day of a capacity of 9,500,000 cubic feet per day, would you reproduce this identical plant?

A. I would not (Record, p. 1394).

Q. Would you not say that the more improved a plant is in construction, the better the gas and the lower it cost to manufacture?

A. As to the quality of the gas I should say no. There is no reason why the quality of the gas should not be as good in a plant that was constructed some time ago as compared with construction to-day. *As to cost of production I should say it would be less when you consider the application of machinery to replace manual labor in connection with improved apparatus* (Record, p. 1514).

He made no allowance for depreciation on account of the fact that a more economical or efficient apparatus was in use (Record, p. 1513).

I think that all the plants that are operated to-day for the manufacture of gas are as perfect as (they) can be made under the conditions under which they were built and developed (Record, p. 1510).

"A great many apparatus cost less to-day than in 1884" (Record, p. 1506).

Q. Now as I understand you, in examining the Fourteenth and Forty-second street plants, for instance, you did not take into consideration whether they were commercially worth replacing, did you?

A. No, sir, I only figured on what I found there.

Q. That is what it would cost to reproduce that apparatus, whether or not it was commercially and economically an apparatus that would be built to-day?

A. I paid no attention to that whatever.

Q. And did you take into consideration whether gas could be reproduced at these particular plants at $1.50 *or 50c. per thousand cubic feet?*

A. I did not consider it at all because it had no bearing whatever on the apparatus as I found them.

Q. As you valued it?

A. As I valued it.

Q. Now, where a plant was of an old type which owing to the advance in the science of gas engineering would not be built to-day did you allow anything for depreciation by reason of that fact?

A. No, sir.

See also Record, p. 1460.

Yet the Fourteenth and Forty-second street plants are capitalized at $4,000,000.

Yet Meyer added to his cost of reproduction of these plants 10 per cent. for engineering and 5 per cent. for interest (see Record, pp. 1323-1326, 1329).

See testimony of Simpson, the company's superintendent of mains (Record, pp. 669, 698, 700, 703). At page 698 he says: "Each of the constituent companies has a different system of mains, * * *. It is unquestionably preferable to have a uniform system."

Yet he added to his valuation of the mains 10 per cent. for engineering supervision, "wear and tear of tools," etc., as the basis of reproducing the different systems of mains of the constituent companies, which no one would think of doing to-day.

This item of 10 per cent. alone amounted to $417,318.85 (Record, p. 3927).

Bradley, the chief engineer of the company, testified (Record, p. 1732):

> "*Q.* What are the circumstances which enable you to figure on reduced cost at Astoria?
>
> "*A. Better equipment; modern equipment,* an endeavor to use all the modern appliances in the shape of labor-saving and recovery of some by-products that have never been recovered by any gas company in this country, and little economies of that character; I do not know that I can enumerate all of them" (see Record, pp. 641, 642, 1731-1733).

And Dr. Humphreys, the company's expert-in-chief, admitted regarding the reproduction cost of real estate (see Record, p. 4740):

> "Increase and appreciation in value of real estate would not pay for anything until that real estate

was sold and the real estate could not be sold until the property was vacated. It would add to the value of the assets of the company, but would not add to its earning capacity as long as it was occupied by a manufacturing plant."

The company's attitude with regard to the appreciation in the value of the land is stated by counsel (Record, p. 2833) as follows:

> "We accept the gifts the gods provide as they provide them, without protest.
>
> "Mr. Burr—At the expense of the consumer?
>
> "Mr. Matthewson—No, because nothing comes out of the consumer in increasing the value of our land. It is due to Divine Providence and the growth of the City of New York."

Query. If this gift of God is capitalized and a return paid on such capitalization, why is it not at the expense of the consumer?

Even in the case of supplies the consolidation has resulted in increased cost.

Because of the enormous amount of oil required—255,000,000 gallons—the company claims it is required to pay more per gallon to the Standard Oil Company than other companies in Greater New York (see Record, pp. 1564, 3574, 4284, 4289, State Exhibit LLL, p. 3574), and this increases unnecessarily the apparent cost of gas by about five cents per 1,000 cubic feet (Record, Exhibit 94, pp. 2312 and 3574).

It was by the valuation so made by the paid experts and employees of the gas company the law of the State is overthrown and rendered void. See appendix at end of brief, showing 1884 valuation and Complainant's Exhibit 79.

SPECIFICATION III.

Under Assignments of Error First, Second, Third and Fourth, for the reasons set forth in Assignments One Hundred and Third to One Hundred and Fifth, both inclusive, we maintain that the return of six per cent. adopted by the Court is more than a fair return to the appellee.

The one hundred and third assignment of error (Record, p. 473) is:

"In adjusting and decreeing in Paragraph III. of said decree that the lowest rate of return which can be considered legislatively fair, just or reasonable, upon the value of the property employed by complainant in the business of manufacturing and supplying gas, is six per cent., at which conclusion the Court has arrived in part by taking judicial notice of local conditions in The City of New York; and under the two acts and the order, copies of which are annexed to the bill of complainant as Exhibits A, D and C, to wit, chapter 736 of the Laws of 1905 of the State of New York, chapter 125 of the Laws of 1906 of said State, and the order of the Commission of Gas and Electricity of the State of New York, made on the 23d day of February, 1906, and directed to the complainant, the net annual income which the complainant can earn upon the property employed in its gas business as aforesaid is less than six per cent."

Every expenditure, on every account, as it has been borne in the past, so it will be borne in all time to come by the consumer and come back, in short periods, from the consumer to the company. Every conceivable expenditure is charged to us and the other consumers.

without a shadow of risk—as to the City, the wholesale buyer, and practically none as to the retail buyers; and, so, is almost as secure as loans to The City of New York. And the same is true of all its investment. All is money put out, we may correctly say, on absolutely safe security, "as nearly a conservative investment," says the Court below (p. 409), "as any manufacturing enterprise can furnish." At the valuation found by the Court, *including the* $12,000,000 allowed for special franchises, viz., $59,831,435, the net return of $3,024,592.45 is a *little over 5 per cent.*, while, as we have seen, it would be over 6 per cent. if the $12,000,000 be excluded, as we are confident it must be.

The courts have established no definite rule, but this Court has declared in *Covington vs. Sanford*, 164 U. S., 578, 597:

> "It cannot be said that a corporation is entitled as of right and without reference to the interest of the public to realize a given per cent. upon its capital stock."

Of course the same is true of its investment.

> "The question in each case is," as said the Court in that case, "whether the Legislature, under the guise of regulating rates, exceeded its constitutional authority, and practically *deprived the owner of property without due process of law.*"

We suppose this Court judicially knows that a return of 4 to 5 per cent. on investments not better secured than is the return to appellee are regarded as eminently satisfactory by the investing public. It certainly would seem to be a fair return for "the most favorably situated gas business in America." The business of this appellee is so characterized in the opinion of the Court below. Says Peckham, *J.*, in *Stanislaus Co. vs. San Joaquin C. & I. Co.*, 192 U. S., p. 216:

> "Much of the capital was invested between twenty and thirty years ago, and to be still able to realize 6 per cent. upon the money originally invested is more than most people are able to accomplish in any ordinary investment, and *more than is necessary* (italics ours) in order to give just compensation for property at the time it is used for the public purpose originally intended";

which observation is peculiarly applicable to the appellee.

The net return to the investor in those stocks and bonds in all the large cities of the United States is less than 6 per cent. (Bemis, pp. 2672-3). This means that one who buys a share of stock or a bond of almost any of these large companies must pay so much above par, if the dividends or interest exceed 6 per cent. as to make the real return less than 6 per cent. on the market price which the investor must pay.

The complaint has not attempted to dispute the accuracy of this statement, fortified as it was by an exhaustive survey of the securities of all the large gas companies in North America east of the Mississippi River. Thirty-seven companies were analyzed (pp. 2672-3).

It is no reply to assert, as some witnesses for the complainants have done, that a person could not organize a new gas company on a 6 per cent basis. We are not dealing with new gas companies just starting out in a small city, or endeavoring to compete in a large city. We are dealing with a company that has had a virtual monopoly since 1884, *and which to-day controls even the electric lighting on Manhattan Island.*

When the city of Holyoke was endeavoring to purchase the electric lighting company of that city eight years ago Dr. Humphreys, the Consolidated Gas Company's chief expert witness in this case, a man who acts as adviser to over fifty gas companies and whose business it is to put money in their pockets (see his testimony, pp. 4759-4761), called as a witness by the company, capitalized the net earnings at 5 per cent. He says now that he did this because he believed that any gas property was worth twenty times its net earnings (Humphreys, p. 4762). Unfortunately for his contention, he did not give this as his reason when testifying at Holyoke, but there gave quite a different reason, viz., *that from the standpoint of the investor in gas securities, 5 per cent. was a good return.* Let us quote his exact words:

> "*Q. Why do you take 5 per cent. as the sum of which you capitalize the new earnings of the company?*
>
> "*A. In my judgment that was a fair return on that kind of an investment.*
>
> "*Q. By that do you mean annual return to the persons who put their money into it?*
>
> "*A. Yes.*
>
> "*Q. And if the investment were represented by stock, you would mean that dividends should be paid at the rate of 5 per cent.?*
>
> "*A. Yes, sir.*
>
> "*Q. And I understand you to say that you valued this plant on the same basis that you valued the plants which you were employed to appraise in New York and New Jersey and other States?*
>
> "*A. The same conditions generally*" (Testimony, p. 2353).

Dr. Humphreys subsequently attempted to lessen the effect of this statement, saying he was testifying regarding "small works in a cheap town" (p. 4734), but later on we find him stating "In these days of low interest bearing securities five per cent. seems hardly attainable" (Record, p. 4761).

Mr. Emerson McMillen has testified for the appellee that when he buys a gas works he expects to realize 9 per cent., or 10 per cent. net earnings, not necessarily dividends, on the price he pays. A few others have given somewhat similar testimony with respect to new gas works just started, but the experience of the Consolidated completely answers this testimony.

It is interesting to note in this connection that Mr. McMillan, who is President of the American Light and Traction Company, which controls the gas companies of Milwaukee, Detroit and Grand Rapids, testified that in all three cases his companies, which had been selling gas for less than 90 cents, had just made reductions to 77 cents in Milwaukee (p. 3267), to 79 cents in Detroit (pp. 3268-9) and to 80 cents in Grand Rapids (p. 3269). He further testified:

> " *Q.* Where you have reduced your prices it has been your experience, has it not, that the amount of gas sold would increase, owing to this reduction?
>
> " *A.* Nearly universally; yes.
>
> " *Q.* If it did not increase you would consider that an exception to the general rule, would you not?
>
> " A. Yes" (p. 3269).

Mr. Carter has testified (p. 543), that the average price of the stock during the five years ending December 31, 1905, was 204⅛, and the dividends during the same time were 8 per cent., with the exception of 1904 and 1905, when they were 8.5 per cent. (Complainants' Exhibit 84, pp. 356-7). This means an average dividend of 8.2 per cent. Now 8.2 per cent. on stock costing the investor 204⅛ is only 4 PER CENT. on the purchase price of the stock.

Again, Mr. Carter testifies (p. 581), that the Consolidated has issued $20,731,200 of stock since 1900, in order to purchase stocks of other gas and electric light companies in Greater New York, and that this stock was sold at $150 cash. Stock costing $150 and paying 8.2 per cent. dividends nets the investor only 5.47 PER CENT. on the price he pays.

Finally, Mr. Carter states that between 1884 and 1900 the company sold $3,647,940 of stock at an average price of $192.40 (p. 583), while he tells us that the average dividends from 1884 to December, 1905, were 6½ per cent. (p. 532).

An examination of Complainants' Exhibit 84 (pp. 356-7), shows that prior to 1900 the average price was not over 6 per cent. Yet the stock sold at $192.40, thus netting the investor *less than* 3¼ *per cent.*

The appellee itself in its dealings with the New Amsterdam Company allows a return of but 5 per cent. (See Agency Agreement, p. 5049.]

And for the vast sum of over $50,000,00 invested by appellee in other companies it receives a return of less than 2 per cent. (See State's Exhibit "B," facing p. 5052.)

Finally, the $1,500,000 of 5 per cent. bonds issued in 1888 were sold at a premium of $75,000, *or* 5 *per cent.* (p. 585).

THE EVIDENCE, INDEED, WOULD SHOW THAT ALL THE CAPITAL IT LEGITIMATELY NEEDS CAN BE SECURED ON A 5 PER CENT. BASIS, EVEN THOUGH THE COMPANY IS NOW TREMENDOUSLY WATERLOGGED BY THE INCREASE OF ITS CAPITAL STOCK, MOSTLY FOR OTHER PURPOSES THAN THE GAS BUSINESS, DURING THE LAST FIVE YEARS FROM $39,077,900 MARCH 15, 1900, TO $80,000,000 OF STOCK AND $19,857,600 OF DEBENTURES OCTOBER 31, 1905 (COMPLAINANTS' EXHIBIT 84, PP. 356-7, AND 80, P. 348).

There is, in the Record *testimony* as to what is a fair rate of interest on investments of the sort under consideration. It has not seemed to us needful to quote it, but if your Honors should look into the testimony on that subject we beg to refer to that found on pages of the Record, 2347-2354, 2530-2540, 2658, and, especially, the *Tables on* pages 2672 and 2673.

SPECIFICATION IV.

Under Assignment of Error 107th.

The Court decreed in Paragraph IV., page 433, that the pressure required is not physically impossible if the entire system of distribution be reconstructed, but compliance with such requirement is commercially impossible under the rates prescribed by the two acts and order; which, we say, for the reasons stated in Assignment 107, constitutes error.

The counsel for the Public Service Commission will take care of this point. But we beg to observe that in the opinion of the presiding Judge (p. 420) he says:

> "By the expenditure of about $4,000,000 for construction of mains and valves alone, exclusive of any pumping stations or other apparatus, it might be possible to establish and maintain the pressure called for by these Acts. * * * It remains commercially impossible, since the other parts of the statutes cut off the surplus income out of which alone complainant could be expected to perform the work. A change by means of new capital would be impossible, because when made it would not add a dollar to income."

That leaves the question an unsettled one, the item of $12,000,000 for franchise being eliminated and the real estate valuations to say nothing of other items being reduced to cost; and therefore the complainant has not made it appear by evidence, nor does the evidence in the Record show, that the appellee cannot comply with this requirement in regard to pressure. If with the reduction claimed it should appear that under the rate allowed the income would not be sufficient to permit of the necessary change, relief from that requirement could be had, and impossibility of compliance, if shown, would be a complete defence to any proceeding under that provision. In any view of this provision—it being separable from, and the other provisions of the statute not being necessarily dependent thereon—it may be rejected without invalidating the remaining portions of the statute.

Reagan vs. *Farmers' Loan & Trust Co.*, 154 U. S., 362, 395.

SPECIFICATION V.

While the Court below does not pass upon the appellee's objection to the legislation as discriminatory, and therefore there is no assignment of error in this regard, it may be that the Court will nevertheless consider the question.

It is not necessary to argue the proposition that all differences are not discriminatory.

> "Of course," says the Court (*W. U. T. Co.* vs. *Call Pub. Co.*, 181 U. S., 92) "the quality of right does not prevent differences in the modes and kinds of service and different charges based thereon. There is no cast-iron rule of uniformity which prevents a

> charge from being above or below a particular sum, or requires that the service shall be exactly along the same lines."

All that is required is that rates must not discriminate without a just and reasonable ground for discrimination. This is a proposition so universally recognized as not to require the citation of authorities. By the provisions of the Interstate Commerce Act "it was not intended to ignore the principle that one can sell at wholesale cheaper than at retail" (*Interstate Com. Commission* vs. *B. & O. R. R. Co.,* 145 U. S. (1891), 263, 276). "* * * Any fact which produces an inequality of condition and a change of circumstances justifies an inequality of charge" (*Id.,* bot. pp. 283, 284).

The judicious authors on Railroad Rate Regulations, referring to the subject, and citing numerous authorities in support of the propostion, say (Beale & Wyman, sec. 735):

> "But it is not unjust discrimiation—it is not contrary to the common law, and it is not contrary to our statute—to make a difference in rates where the expense or difficulty of performing the services renders such discrimination fair and reasonable."
>
> (Sec. 736): "It follows from what has been said that the differences may be made proportionate to the cost of service without the making of any illegal discrimination; indeed, in such cases it would be unreasonable not to make such differences upon that basis."

Applying this principle to the case under consideration, the classification is a reasonable one, because obviously the City is the largest consumer of the plaintiff, though the proportion of the whole supply is so small as to be almost negligible; and secondly the expense of furnishing gas to the City is far less in proportion to the cost than in the case of the individual consumer, with no risk whatever, and therefore the price should be less. "Of the 13,283,163,767 cubic feet of gas sold and delivered by complainant, 398,525,978 were delivered and charged to The City of New York and 12,884,637,789 to private consumers" (Rec., p. 248). The difference of five cents per thousand feet is only $20,000, which, spread over the 13,283,163,367 feet of sales to all consumers, means only 0.15 per thousand feet, in favor of the City, which is so small that it may be properly ignored.

SPECIFICATION VI.

We submit, under Assignment One Hundred and Eighth, that against proceedings by mandamus to enforce any of the provisions in either of the acts of the Legislature of New York which are under consideration, the defense available in such proceedings affords appellee adequate protection, and that as to the penalties imposed, the provisions in regard thereto being separable, it has an adequate remedy by injunction.

(*Reagan* vs. *Farmers' Loan & Trust Co.*,
154 U. S., 362, 395.)

SPECIFICATION VII.

In conclusion, we confidently affirm that the appellee has not shown, nor does all the evidence in this immense record prove clearly and beyond all doubt, that the enforcement of the legislation involved in these appeals would inevitably deprive the appellee of its property without due process of law or just compensation; or deny to it the equal protection of the law; or impair the obligation of its contract rights.

In passing the sentence of condemnation recorded in the Court below, the presiding Judge resolved *his doubt against the Legislature of the State of New York, and in favor of the appellee.* The proceedings before the Master seem, on the face of the record, to have been conducted from start to finish on the theory that the burden of sustaining the constitutionality of the statutes beyond a reasonable doubt was on the appellants. The period to which the Master limited the investigation of the business transactions of the appellee was selected by the appellee, and adopted over the protest of the appellants as being too short a period within which to ascertain the truth; the testimony of the witnesses for the appellee when conflicting with that of the appellants was preferred without any apparent good reason (Opinion, Rec., p. 422); the appellants were denied access to material evidence in the exclusive possession of the appellants; *twenty million of dollars* of capital for good will and franchise were allowed by the Master without even an effort to assign a specific value to either, and without any evidence of the specific value of either, and there are many other indications in the record, some of which are pointed out in our Assignments of Error, of the burden which the appellants had to carry. We are not impugning the motives of the Master. On the contrary, we entertain no doubt whatever of his uprightness. We simply, under a sense of duty, state facts tending to show that, as the main issue was decided by resolving doubt against the statutes, so the case was tried on a wrong theory, to the manifest disadvantage of the defendant. For that reason, if there were no other, the decree, we think, should be reversed. We bespeak for the Assignment of Errors (pp. 444-477) a careful consideration, because they present concisely, in our judgment, unanswerable reasons why this Court should issue its mandate for the dismissal of the complaint with costs to appellants.

As already intimated, we have not deemed it worth while to analyze kindred cases that have been before this Court, because the underlying and general principles by which the decisions were governed are now well understood, and each case has depended on its own peculiar facts. But beneath and above all the difficulties of applying the underlying principle to legislation enacted under the police power, there stands the presumption in favor of the enactment. The violation of the organic law must be made to appear so plainly as to leave no room for doubt.

These laws were not enacted in an arbitrary or capricious spirit. They are the outcome of patient, exhaustive, conscientious investigation, beginning nearly a quarter of a century ago, soon after the organization of the appellee. At the session of the Legislature of New York of 1885 three Senators were appointed under a resolution of the Senate and directed to investigate the organization and capitalization of the appellee and to report at the next session of the Legislature. On March 1, 1886, the committee, having completed its labors, made report to the Senate. How patient, exhausting and discriminating were its labors is attested by the minority and majority reports found in the record now here (pp. 5325-5388). We respectfully commend it, and the exhaustive report of Public Accountant Yalden (p. 5591), and the other report herein mentioned to the consideration of this Court for luminous and helpful information pertinent to these appeals.

Again during the year 1905 there was general and widespread complaint in The City of New York against the prices charged by the gas and electric lighting companies operating therein and of the quality of the service supplied by them, in consequence of which action was taken thereon by the Legislature, and a resolution was introduced in the Senate and concurred in by the Assembly, providing for an investigation into the organization and operation of the gas and electric light companies.

This resolution is as follows:

> "Whereas, There is general and widespread complaint in The City of New York of the prices maintained by the gas and electric lighting companies operating therein, and of the quality of the service, and
>
> "Whereas, The Board of Estimate and Apportionment in December, 1902, adopted a report declaring the prices of said companies for public lighting to be unreasonable and excessive, and that the interests of the companies had been so combined as to eliminate competition, and rejected their bids for public lighting; and
>
> "Whereas, The same prices for electric lighting in all the Boroughs and for gas lighting in all the Boroughs, except Manhattan and The Bronx, having been again bid for 1904, and the Commission

of Water Supply, Gas and Electricity having, notwithstanding a report of the Engineer of Surface Construction that said bids were exorbitant and should be rejected, entered into contracts with said companies for services between March, 1904, and March, 1905, at the prices named in said bids; and

"Whereas, An excessive price for lighting service in said city involves a great waste of city funds, and imposes a wrongful burden upon the taxpayers and inhabitants of the city;

"Resolved (if the Assembly concur), That a joint committee be appointed, consisting of three members of the Senate and four members of the Assembly, which committee shall as speedily as may be proceed to investigate and examine into the organization and operation of the gas and electric lighting companies; the reasonableness of the charges maintained by the gas and electric lighting companies operating in the City of New York for services rendered the city and its inhabitants with reference to the cost of the service and the capital actually employed therein; the conditions under which the business of the companies is conducted with reference to competition; the quality of the service; the circumstances connected with the negotiation and execution of the city light contracts of 1904; and any other phase of the gas and electric lighting business as conducted in the City of New York deemed by the company to be germane to the purpose of such investigation; that the committee report to the Legislature as soon as possible the results of their investigation, with such remedial measures as it may deem proper.

"Further Resolved, That the said committee be, and it hereby is authorized and empowered to re-

> quire and enforce the attendance of witnesses, and the production of books and papers, to administer oaths, and to employ counsel, stenographers, clerks and such other employees as may be necessary for the purposes of the investigation. And a sum not exceeding twenty-five thousand dollars is hereby appropriated out of any moneys in the treasury not otherwise appropriated, for the purposes of said committee."

Accordingly, on March 30, 1905, an investigaton of said companies by a joint committee of the Senate and Assembly of the State of New York, under said resolution, was begun in the City of New York, and continued until April 29, 1905, when a report was made by said joint committee.

A copy of this report is annexed to and made part of the answer of the defendant, The City of New York, and the special attention of the Court is called thereto Record, p. 66) for a concise statement of the facts relating to the appellee deemed by the committee to have been established by the evidence.

In consequence of this report, and after an extended debate in the Legislature, the acts, chapter 736, Laws of 1905, and chapter 737, Laws of 1905, were passed.

Thereafter, and on or about the 20th day of November, 1905, the Commission of Gas and Electricity, established by chapter 737, Laws of 1905, on complaint of a hundred or more customers of the Consolidated Gas Company, began an investigation into the affairs of said company, and on the 23d day of February, 1906, said Commission made an order that "on and after the 1st day of May, 1906, the maximum price for gas which shall be charged by the Consolidated Gas Company of New York, in the Borough of Manhattan, City of New York, State of New York, be and is hereby fixed at eighty cents per thousand cubic feet."

This was followed in April, 1906, by the passage of chapter 125, Laws of 1906, by the Legislature.

A great mass of testimony was taken, and a large number of witnesses were examined by the joint committee of the Senate and Assembly in 1905. The Consolidated Gas Company was represented by the same counsel who appeared on its behalf in the trial of this action.

Again, before the Gas and Electric Light Commission, voluminous testimony was taken, many witnesses were examined, and the interests of the complainant company were again looked after by the same counsel.

The subject of the reduction in the charges of the complainant company by law was discussed at great length in the Legislature both at the sessions of 1905 and 1906.

Everything that could be said or done for or against the proposition was apparently said or done. The company put forward its protest and its reasons against such reduction to the best of the ability of the eminent counsel by whom it was represented.

The passage of these laws was not a capricious arbitrary act. It was the result of long and patient investigation after thorough consideration and discussion.

The record of both these investigations shows the most painstaking effort on the part of the Joint Committee in 1905, and on the part of the Commission in 1906 to ascertain what is the actual cost of the manufacture and supply of gas in The City of New York and what would be a fair and reasonable profit to the companies carrying on that business in that locality.

If, therefore, this high Court, in the discharge of the grave responsibility and delicate function involved in the arraignment at the bar of a Federal Court of a co-ordinate department of one of the confederated sovereignties, shall be constrained to declare that the evidence in the record makes it clear—palpable—beyond all doubt—that the inevitable result of the enforcement of these enactments would be to deprive citizens of their property—if this shall become the inexorable duty of this high Court—the Legislature of New York must nevertheless be acquitted of heedlessness, capriciousness or factionalism in its action. On the tomb of its legislation should be inscribed "*Humanum est errare.*"

VIII.

Assignments of Error Nos. One Hundred and Nineteenth and One Hundred and Twentieth (Record, p. 476).

> "In sustaining the report of the Master in Chancery denying the motion of this defendant at the end of complainant's case to dismiss the Bill of Complaint and overruling the exception of this defendant to such denial."
>
> "In sustaining the report of the Master in Chancery denying the motion of this defendant at the end of the whole case to dismiss the Bill of Complaint and overruling the exception of this defendant to such denial."

The appellee wholly failed to prove the rates fixed confiscatory as alleged in its Bill of Complaint and the motion to dismiss the Bill of Complaint should have been granted and failure to do so was error.

See Corporation Counsel's motion to dismiss (Record, pp. 1868, 4815).

IX.

The final decree made and entered herein in favor of the appellee should be reversed and jugdment rendered in favor of the appellants, with costs.

FRANCIS K. PENDLETON,
Corporation Counsel,
Solicitor for City of New York,
Appellant.

ALTON B. PARKER,
WILLIAM P. BURR,
Of Counsel.

(Record, page 5731.)

The Consolidated Company having assumed the liabilities of the several companies, the issue of stock to the various stockholders of the old companies was further reduced by the amount of such debts, and finally adjusted at $35,430,060, as follows:

Companies.	Gross Value of Properties.	Deduction of Debts.	Amount of Stock to be Issued.	Amended Amount of Stock Issued Per Journal, Fol. 21.
New York	$7,560,000 00	$6,000 00	$7,554,000 00	$7,560,000 00
Manhattan	11,940,000 00	....	11,940,000 00	11,940,000 00
Metropolitan	7,175,000 00	688,000 00	6,487,000 00	6,500,000 00
Municipal	5,100,000 00	328,000 00	4,772,000 00	6,600,000 00
Knickerbocker	3,000,000 00	1,137,000 00	1,863,000 00	
Harlem	3,000,000 00	170,000 00	2,830,000 00	2,830,860 00
Totals	$37,775,000 00	$2,329,000 00	$35,446,000 00	$35,430,060 00

The following statement will show the capital stock of the old companies, and the value of the stock in the Consolidated Company given in exchange therefor:

Companies.	Capital Stock.	Capital Stock in the Consolidated Company.	Proportion of New Stock to Old Stock.
New York	$4,000,000 00	$7,560,000 00	189
Manhattan	4,000,000 00	11,940,000 00	298½
Harlem	2,000,000 00	2,840,000 00	142
Metropolitan	2,500,000 00	6,500,000 00	260
Municipal	3,000,000 00	4,750,000 00	158 1/3
Knickerbocker	1,500,000 00	1,850,000 00	123 1/3
	$17,000,000 00	$35,440,000 00	

Complainant's Exhibit 79.

FILED.
NOV 4 1908
JAMES H. McKENNEY,
CLERK.

Supreme Court of the United States.

OCTOBER TERM, 1908.

Nos. 366, 367, 368.

WILLIAM R. WILLCOX ET AL., constituting the Public Service Commission of the State of New York for the First District, THE CITY OF NEW YORK and WILLIAM S. JACKSON, as Attorney General of the State of New York,
Appellants,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

BRIEF FOR APPELLEE

UPON THE FACTS.

SHEARMAN & STERLING,
Solicitors for Appellee,
44 WALL STREET,
New York.

CHARLES F. MATHEWSON,
Of Counsel.

C. G. BURGOYNE, 72 to 78 Spring Street, New York.

TABLE OF CONTENTS.

PAGE

ORGANIZATION AND HISTORY OF APPELLEE 2
  Original Assets and Capitalization 2
  Increase of Capital Stock 3
  Growth of gas business and assets 4
    A. The Assignments of Error 5
      Affirmative contentions of Appellee 5
    B. Conclusions of the Court and Master 6
      Important, to be noted 6
    C. Synopsis of Brief 8
      "Conclusions of the Court and Master" 8

PART FIRST.—Valuation of Assets of Appellee, Employed in the Production and Distribution of Gas, and allowed by the Court at $59,831,435. 13

POINT I.—"Original Cost" not controlling or fully ascertainable 13
  1. Such "Cost" not true criterion 13
  2. Such "Cost" too remote 14
  3. Entire "Cost" not ascertainable 14
      Special findings by Master 14
  4. Evidence of Cost to "Predecessor Companies" 15
      Findings of the Master 18
      Amount contributed "by Stockholders" 19
  5. Total "Original Cost" so far as computable 19
  6. Appellants' fallacious estimate 20

PAGE

Point II.—"Book Value" or "Cost to Appellee" 22
- 1. Erroneous Computation of Appellee's "Gas Capitalization" 22
- 2. Master's finding of "Cost to Complainant" of property employed in its gas business 24

Point III.—Valuation of Real Estate 25
- 1. Method of valuation 25
  - Land covered by plant 26
- 2. Method of valuation approved 28
- 3. Less than reproduction value of land 29
- 4. Valuation not duplication of plant value 30
- 5. Real Estate not in excess of requirements 31
- 6. Acceptance of valuations of Appellee's witnesses 32
  - *(a)* Appellants' explanations 33
  - *(b)* Conclusion 34

Point IV.—Valuation of Plants 35
- 1. Not of "Identical plant and each part" 36
  - *(a)* Much higher valuation sustainable 36
  - *(b)* Insignificant value of items criticised 37
- 2. No evidence that plants were not "Economically Produced" 37
- 3. No evidence that plants are not worth reproducing 38
  - *(a)* Inconsistency of Appellants 38
  - *(b)* The actual situation 39
  - *(c)* Evidence of efficiency from cost of gas production 40
- 4. Assumed reproduction of the most "Modern" Plants of same individual capacity 41
- 5. Assumed reproduction of Appellee's present capacity in larger units 42
  - *(a)* The proposition unsustainable in law 43
  - *(b)* Great size of Appellee's present plants 43
  - *(c)* No economy in gas production in larger plants 44

PAGE

(d) Cost of larger plant in place of present plants 44

Water-Gas 44

Coal-Gas 45

(e) Reproduction of holders 48

(f) Other items of assets 48

6. Assumption of transfer of capacity to Astoria 49

POINT V.—Valuation of Mains 50

1. "Original Cost" of Installation 51
2. No ground for exception of Mains from "Present Value" rule 52
3. Assumed allowance for future "Restoration" 53
4. Present system of Mains normal 54

POINT VI.—Valuation of "Services", "Meters and Miscellaneous", "Working Capital" and "Special Franchises", as allowed by the Court 55

1. "Services" and "Meters and Miscellaneous" 55
2. "Working Capital" and "Special Franchises" 55

POINT VII.—Corroborative evidence of conservatism of valuation of Appellee's property, taken as a whole 56

1. Market value of Appellee's Stock 56
2. Comparison with assets of other Gas Companies 57

POINT VIII.—Appellee's Tax Reports, and testimony before the Legislative Committee in that connection 59

1. The "Tax Reports" 59

(a) As to Plant 61

(b) As to Mains 62

(c) As to Services 62

(d) As to Meters and Miscellaneous 63

(e) In General 63

2. Testimony before Legislative Committee 64

Basis of "Tax Valuations" promptly explained 65

3. Appellants' witnesses on the "Tax" valuations 65

An Inconsistency 66

PAGE

PART SECOND.—Items of Property of Appellee, aggregating $11,361,565, included by the Master but excluded by the Court, which Appellee contends should as a matter of law be reckoned in its gas assets, thereby increasing the $59,831,435 allowed by the Court to $71,193,000 67

POINT IX.—Items of property included by the Master but excluded by the Court, which Appellee contends should, as a matter of law, be reckoned in its gas assets 67
- A. Additional Real Estate, $1,311,565 68
  - 1. "Land Leased" 70
  - 2. So-called "Land Vacant" 71
  - 3. So-called "Land Unimproved" 72
    - Use of said Lots 73
  - 4. Necessity of seasonable acquisition of lands 74
  - 5. No appreciable burden on consumers 74
  - 6. Admission by Appellants 75
  - 7. The Court's exclusion based on a misconception 75
- B. Additional Working Capital, $2,000,000 77
  - 1. Mr. Carter's Testimony 77
  - 2. The other evidence 79
  - 3. Summary 81
- C. National Coke & Coal Company, $50,000 81
- D. Good Will, $8,000,000 82
- E. The Astoria Plant (*i. e.*, Capital invested in production of gas secured from other Companies) 83

PART THIRD.—Gas Purchased from Subsidiary Companies, and Valuation of the Property of Subsidiary Companies Employed in the Production thereof 84

POINT X.—The Astoria Investment of $12,000,000 84
- 1. Construction and capacity of Astoria Plant 85

PAGE

2. Necessity of present construction 87
No ability in Appellee's Manhattan plants to meet deficit 88
3. Form of Appellee's ownership 89
4. Legislative acts look to future 90
POINT XI.—Property of Subsidiary Companies actually employed in producing gas, received by Appellee from them in 1905 91
1. Value by comparison with accepted units 91
2. Estimate and Admission of Appellants' Engineer 95
3. Conclusion 95

PART FOURTH.—Cost of Gas and "Net Income" to Appellee under the Statutes in question 96

POINT XII.—Period and Scope of Examination as to Operating Results 96
1. Period covered for "Operating Cost" 96
2. Particularity of Examination 98
3. Cost of Gas in other years available 99
4. Conduct of the Case before the Master 100
POINT XIII.—Computation by which Court reached "Net Income", $3,024,592.45 for year beginning May 1, 1906 103
1. Preliminary computation, based on sales of 1905 103
Introductory 105*a*
2. Final computation, for year beginning May 1, 1906, based on assumed increase of sales over 1905 106
3. Assignments of Error respecting said final computation 107
(*a*) Future source and cost of "Purchased" gas 108
(*b*) The suggested reduction in franchise tax 108
POINT XIV.—Such "Net Income", $3,024,592.45 for the year beginning May 1, 1906, much higher than legally justifiable 109
1. Initial error in tabulation 110

PAGE

2. Omission of "General" and "Distribution Expense" 110
   (a) Rate of increase of general and distribution expense with increased sales 111
   (b) A demonstration from Appellee's experience.. 112
   (c) Conclusion 114
3. Omission of return upon additional plant required.. 115
   Ratio of distributing plant increase 115
4. If the Court excludes expenditures of 1905 as not recurring in 1906, it must consistently include items of 1906 not occurring in 1905 116
5. Summary 118

POINT XV.—Normal Profit of Appellee, on the Basis of Known Sales and Expense of year 1905, favored by Public Service Commission, also much less than said $3,024,592 found by the Court for the latter year 119
1. Based on return on value of the Astoria Unit 119
2. Based on value of plants actually producing acquired gas in 1905 121
3. Based on a smaller capacity than 20,000,000 feet per maximum day 121
   Admission of Appellants' witness Marks 122

POINT XVI.—Basis of Appellants' Opposition to inclusion in Cost of Gas, of a Return on the Property of the Subsidiary Companies, Employed in Production of Gas delivered to Appellee 123
1. The "Agency Agreements" 123
2. No "Return on Investment" to Subsidiary Companies 124
3. No "profit" to Subsidiary Companies 125
4. Contention of Appellants 126

POINT XVII.—Property "Employed" in the Public Service, the true basis for return 126
1. Value, not amount paid, controlling 127

PAGE
2. The fair rule 128
3. The Theory of a "Surplus Product" 129
A remarkable argument 130
POINT XVIII.—Appellee's investment in Subsidiary Companies from which it received gas in 1905 at "bare station-cost" 132
1. Appellee's control of producing Companies 132
2. "Bookkeeping" treatment not controlling 133
3. The Circuit Court's reservation 134
4. Conclusion 135
POINT XIX.—Item "Contingent Expense (includes Renewals)", $1,328,316.37—being Item 67 of Exhibit 94—allowed in whole by the Master, but only in part by the Court, as an operating charge in 1905.—No fund for "ultimate disintegration" allowed 136
A. Nature of 10c. item, and finding of Master 137
(a) Actual renewals and replacements 138
(b) Amount to be added to "Average" 1905, with Appellee's experience 138
(c) "Contingencies" met in 1906 139
B. Summary 140
C. Allowance by the Court less than admission of Appellants 141
D. The ground of the action of the Court 143
Dr. Humphrey's testimony 146
E. Appellee's total expenditures for "Repairs and Renewals", since organization 146
Erroneous basis for estimating "Repair and Renewal" requirements 146
F. The expressions of this Court on "Depreciation" charges 147
G. The institution of the Account not an "afterthought" 148
H. Erroneous assertion as to increase of property from earnings, and as to cost of increase in capacity 149

PAGE

PART FIFTH.—The Rate of Eighty Cents per thousand as related to Other Companies in the City of New York; Comparison of gas charges, or operating expense, as between different Companies; the Question of Pressure; and the Investigations of the Legislative Committee in 1905 and Gas Commission in 1905-6 151

POINT XX.—The rate of Eighty Cents per thousand feet, as related to Other Companies in the City of New York .. 151
- 1. Coal or Water-Gas? 152
- 2. Uniformity within what area? 152
- 3. The London Companies 153
- 4. Appellee's five plants 153
- 5. Location, equipment and management 154
  - Finding of the Master 154
- 6. General principles applicable 155

POINT XXI.—Comparison of gas charges of different Companies or elements of operating expense, valueless without adequate data and analysis 157
- A. Charge for Gas 157
  - 1. Detroit, Milwaukee and Grand Rapids 157
    - Cost to consumers per candle power 158
  - 2. Boston 159
  - 3. Conclusion 160
- B. Price paid by Appellee for Oil, compared with Other Companies 160

POINT XXII.—The Question of Pressure 162
- 1. Evidence as to possibility of compliance 163
  - *(a)* Appellants' present position 168
  - *(b)* Important to be noted 170
    - In illustration 171
  - *(c)* Conditions in which "High Pressure" Mains are used 172

PAGE
2. Expense of reconstruction 173
3. Period required for reconstruction 174
4. A unique law 175
POINT XXIII.—The "Legislative Committee" of 1905, and the Gas Commission of 1905-6.—The Facts as to their "Investigations" 175
1. The Legislative Committee 176
2. The Gas Commission 177
3. General Observations 178

Supreme Court of the United States,

OCTOBER TERM, 1908.

No. 396.

WILLIAM R. WILLCOX ET AL, Constituting the Public Service Commission of the State of New York for the First District,

Appellant,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK,

No. 397.

THE CITY OF NEW YORK,

Appellant,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 398.

WILLIAM S. JACKSON, as Attorney General of the State of New York,

Appellant,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

Brief for Appellee upon the Facts.

APPEALS FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK.

This Brief will deal with the questions of Fact, suggested by the Assignments of Error.

The general legal propositions involved in the appeals, and also the subject of Franchises and Good Will, will be considered in separate Briefs.

ORGANIZATION AND HISTORY OF APPELLEE.

The Appellee, the Consolidated Gas Company of New York, came into existence on November 10, 1884, pursuant to Chapter 367 of the Laws of 1884 of the State of New York, through the consolidation of six Companies then operating on the Island of Manhattan (*Record*, pp. 152, 4819).

Said six Companies, The New York Gas Light Company, The Municipal Gas Light Company, The Metropolitan Gas Light Company of the City of New York, The Manhattan Gas Light Company, The Knickerbocker Gas Light Company, and The Harlem Gas Company, had been organized at different dates from 1823 down (*Record*, pp. 153, 4826, 4829, 4830, 4852, 4857, 4862, 4863, 4867).

Original Assets and Capitalization.

Said Act of 1884 authorized the capitalization of the Consolidated Company at an amount not exceeding "*the fair aggregate value of the property, franchises and rights of the several Companies thus to be consolidated.*"* The authorized capital was fixed in the Consolidation Agreement (exclusive of the New York Mutual Gas Light Company, which was named therein but did not enter) at $39,078,000, being the market value of the Capital Stock and securities of the six constituent Companies at the time of consolidation (*Record*, pp. 153, 5384). This amount was apportioned (*Record*, pp. 153, 5018) as follows:

Value of tangible property, to wit: Real Estate, Plants, Mains, Services, Meters and Office Furniture, as appraised in the summer of 1884, *exclusive of working capital*	$29,994,000
Franchises and Rights	7,781,000
	$37,775,000
Leaving for acquisition of working capital	1,303,000
Total authorized capital	$39,078,000

---

* *All italics* in this Brief are ours.

Said appraisal of the tangible property at $29,994,000 was made by an expert contractor of high character and experience (*Record*, p. 796), was painstaking and in great detail (*Complainant's Ex. 70*, *Record*, pp. 4925-5017), and was affirmed by a Committee of the New York Senate appointed to investigate the subject and reporting in 1886 (*Record*, pp. 5325, 5384, 5387); while said Committee found that the franchises of *four* of the six constituent Companies were "worth much more than" said sum of $7,781,000 (*Complainant's Ex. 227*, *Record*, p. 5386).

Capital Stock to the amount of $37,775,000 was immediately issued by Appellee in acquisition of said assets,—less $2,329,000 thereof retained by Appellee to retire outstanding obligations of the constituent Companies to a like amount and $15,940 for sundry adjustments,—or to a net amount $35,430,060 (*Record*, pp. 153, 4496, 5731).

Increase of Capital Stock.

In the year 1900, Appellee's Capital Stock was increased to $54,595,200, and then to $80,000,000, the greater part of such increase being employed in the acquisition of securities of other gas and electric lighting Companies in the City of New York. The entire $80,000,000 were issued and outstanding at the time of the beginning of this action (*Record*, p. 154).

It is impossible to measure the cost to Appellee, and much less the present value, of Appellee's assets, whether property employed in its gas business or securities of other Companies, by the par value of its Stock issued to acquire the same; for all of its Stock, except that issued as aforesaid at consolidation in 1884, has been issued at $150 or above—some of it as high as $232—per share (*Record*, pp. 154, 849, 854).

In 1904, Appellee's authorized capital was further increased to $100,000,000, for the purpose of taking up about $20,000,000 in Debentures issued by it in 1904, and convertible on and after July 1st, 1907 into its Stock at par at the option of the holder. None of this additional $20,000,000 of Stock was outstanding at the date of the trial (*Record*, pp. 154, 5047).

Growth of Gas Business and Assets.

The sales of Appellee for the first year of its operation (1885) were 3,942,433,000 cubic feet; and for the year 1905 were 13,283,163,767 cubic feet, of which the Appellee produced in its own plants on the Island of Manhattan 10,419,461,426 feet, and acquired from subsidiary Companies 2,863,702,341 feet (*Record*, pp. 217-20, 5039).

The record shows, as would be expected, that the assets of Appellee, employed in its gas business, have likewise increased largely, but not in the same proportion, since Appellee's plants in 1885 considerably exceeded in capacity the amount of its sales for that year (*Record*, pp. 1714, 4580, 6079, 6086, 6115, 5039, *post*, p. 116), while at present its sales have far surpassed their capacity.

Estimates of the value of the property employed in Appellee's gas business were presented in behalf of both the Appellee and the Appellants, but differed widely in the aggregate, since Appellants wholly excluded various large items (such as "franchises") which were included by Appellee (*Record*, pp. 155, 199). These estimates were the subject of most careful consideration by the Master and the Court (*Record*, p. 155),—with the result that they each reached a total valuation considerably less than claimed by Appellee, but much above that urged by Appellants.

The claims of Appellee, and each of the Appellants, as to the property employed in Appellee's gas business, and as to the value thereof, are set forth in an "Appendix" to this Brief.

A.

THE ASSIGNMENTS OF ERROR.

The questions of fact raised in the Assignments of Error will be discussed in what seems to be a natural and logical order.

It is impossible to consider them in numerical order, since Assignments of the various Appellants relating to the same subject matter are not arranged in like order. The important Assignments of The City of New York, and all the Assignments of the other Appellants, so far as they deal with the *Special Facts* in this case, as distinguished from general legal principles, are—however—believed to be covered in this Brief.

We do not understand any Assignment to question the finding that the "*present value*" of Appellee's existing "Real Estate", "Plants", "Mains", "Services" and "Meters and Miscellaneous", *on the basis of cost of reproduction*, are as found by the Court and stated in the Decree.

Affirmative Contention of Appellee.

It is the contention of Appellee that not only are the Assignments in relation to the findings of the Court, as incorporated in the Decree, unsustainable, *but that such findings as to the value of Property, Net Income and Return earned are much less favorable to Appellee, than the established facts upon approved legal principles justify.*

It will be submitted that, in important particulars, *the Master and not the Court reached the true conclusion ;* and that, accordingly, the return in reality earned by Appellee, under the legislative Acts in question *is much less than the 5 per cent. computed by the Court.*

B.

CONCLUSIONS OF THE COURT AND MASTER.

Both the Court and Master held that the "present value" of the property employed in production and distribution of the volume of gas sold by Appellee was the true criterion, and on the subject of such value, the Net Income of Appellee from its gas business, and the Rate of Return earned and required, they found respectively as follows (*Record*, pp. 247, 432):

	Court.	Master.	Difference.
Real Estate	$11,985,435.	13,461,000	1,475,565
Plants	15,500,000	15,500,000	
Mains	12,636,000	12,636,000	
Services	1,994,000	1,994,000	
Meters & Miscellaneous	4,100,000	4,100,000	
Working Capital	1,616,000	3,616,000	2,000,000
National Coke & Coal Co.	----------	50,000	50,000
Astoria, *i. e.* Capital employed in production of gas secured from other Companies	----------	12,000,000	12,000,000
Special Franchises	12,000,000	----------	8,000,000
Special Franchises & Good Will	----------	20,000,000	
Total	$59,831,435.	$83,357,000	$23,525,565
Net Income	$3,024,592.	$2,327,328.	$697,264.
Return earned	5%	2.8%	2.2%
Return legally required	*At least* 6%	*At least* 6%	

Important To Be Noted.

The Court does not, in reality reject the "Astoria" item, $12,000,000, using that term generally to represent the value of "property of other Companies" employed in producing the gas acquired by Appellee from them; but instead of including the same with the assets of Appellee, the Court has preferred to include a return thereon in the cost of such gas, as will hereinafter appear. The ultimate effect, in computing the proper charge per thousand for the volume of gas distributed by Appellee to cover cost and return on capital, is identical by either method.

Thus the value of investment upon which the Court holds that *a return must in some form be computed*, is in reality $71,831,435 instead of $59,831,435; and the actual difference between the Court and the Master is reduced from $23,525,565 to $11,525,565,—of which $8,000,000 represents the exclusion by the Court of Good Will, which was included by the Master.

C.

SYNOPSIS OF BRIEF.

The chief elements considered, in passing upon the validity of the Statutes in question, were :

(a) The Value of the Assets employed in the production and distribution of the gas sold by Appellee, including the assets of subsidiary Companies producing a large portion of such gas ;

(b) The normal cost to Appellee of the gas so sold by it, and the resulting "Net Income."

(c) Whether such "Net Income" produced a reasonable return upon the value of the assets, so employed in the production and distribution of said gas ;

(d) The possibility of maintaining the pressure at every point and at all times in Appellee's mains, within the limit prescribed by the Statutes, and especially in view of the lowering of the charge for gas to 80 cents.

For the convenience of the Court, we have inserted a comparative statement, in tabular form (*ante*, p. 6) of the

"Conclusions of the Court and Master"

on the subjects of "Value of Assets," "Net Income" of Appellee, and "Rate of Return" earned and required.

In discussing the questions at issue, it has seemed preferable—to promote simplicity—to number "Points" in this Brief consecutively ; but the Brief will be divided into the following parts, the paging therein referring to the pages of this Brief* :

---

*Note.—See "Table of Contents" for *full sub-headings* under Points. Only the most important sub-headings are given in this synopsis.

PAGES

PART FIRST.—Valuation of Assets of Appellee, employed in the production and distribution of gas, and allowed by the Court at $59,831,435 13

POINT I. "Original Cost" not Controlling or fully Ascertainable 13
  Such cost not true criterion 13
  Total "Original Cost" so far as computable 19
  Appellants' fallacious estimates 20

POINT II. "Book Value," or "Cost to Appellee" 22

POINT III. Valuation of Real Estate 25
  Method of Valuation 25
  Less than Reproduction Value of land 29
  Valuation not Duplication of Plant Value 30
  Acceptance of Valuations of Appellee's Witnesses 32

POINT IV. Valuation of Plants 35
  Not of "Identical Plants and each part" 36
  No evidence that plants were not "economically produced" 37
  No evidence that plants were not worth reproducing 38
  Assumed reproduction of the most "modern" plants of same individual capacity 41
  Assumed reproduction of Appellee's present capacity in larger units 42

POINT V. Valuation of Mains 50
  Original Cost of Installation 51
  No ground for exception of Mains from "Present Value" rule 52
  Assumed allowance for future "Restoration" 53
  Present system of Mains normal 54

POINT VI. Valuation of "Services," "Meters and Miscellaneous," "Working Capital" and "Special Franchises," as allowed by the Court 55

PAGES

Point VII. Corroborative Evidence of Conservatism of Valuation of Appellee's Property, taken as a whole 56
  Market Value of Appellee's Stock 56
  Comparison with assets of other Companies 57

Point VIII. Appellee's Tax Reports and testimony before the Legislative Committee in that connection 59

PART SECOND.—Items of Property of Appellee, aggregating $11,361,565, included by the Master but excluded by the Court, which Appellee contends should, as a matter of law, be reckoned in its gas assets, thereby increasing the $59,831,435 allowed by the Court to $71,193,000 67

Point IX. Items of property included by the Master, but excluded by the Court, which Appellee contends should, as a matter of law, be reckoned in its gas assets 67
  Additional Real Estate, $1,311,565 68
  Additional Working Capital, $2,000,000 77
  National Coke and Coal Company, $50,000 81
  Good Will, $8,000,000 82
  The Astoria Plant (*i. e.*, capital invested in production of Gas secured from other Companies) 83

PART THIRD.—Gas Purchased from Subsidiary Companies, and Valuation of the Property of Subsidiary Companies Employed in the Production Thereof 84

Point X. The Astoria Investment of $12,000,000 84
  Construction and capacity 85
  Necessity of present construction 87
  Form of Appellee's ownership 89

Point XI. Property of Subsidiary Companies, Actually Employed in Producing Gas Received by Appellee from them in 1905 91
  Value by comparison with accepted Units 91
  Estimate and admission of Appellants' Engineer 95

PAGES

PART FOURTH.—Cost of Gas and "Net Income" to Appellee, under the Statutes in question 96

POINT XII. Period and scope of examination as to operating results 96
  Period covered for "Operating Cost" 96
  Particularity of examination 98
  Cost of Gas in other years available to Appellants 99

POINT XIII. Computation by which the Court reached "Net Income," $3,024,592.45, for the year beginning May 1st, 1906 103
  Preliminary computation based on sales of 1905 103
  Final computation for year beginning May 1, 1906, based on assumed increase of sales over 1905 106

POINT XIV. Such "Net Income," $3,024,592.45, for year beginning May 1, 1906, much higher than legally justifiable 109
  Initial error in tabulation 110
  Omission of "General" and "Distribution" expense 110
  Omission of return on additional plant required 115
  If the Court excludes expenditures of 1905, as not recurring in 1906, it must consistently include items of 1906 not occurring in 1905 116

POINT XV. Normal profit of Appellee, on basis of known Sales and Expenses of year 1905, favored by Public Service Commission, also much less than said $3,024,592 found by the Court for the later year 119

POINT XVI. Basis of Appellants' opposition to inclusion in Cost of Gas, of a return on the property of Subsidiary Companies employed in production of gas delivered to Appellee 123
  The "Agency Agreements" 123
  No "Return on investment" to Subsidiary Companies 124

POINT XVII. Property employed in the Public Service, the true basis for return 126
  The theory of a "surplus product" 129

PAGES

POINT XVIII. Appellee's Investment in Subsidiary Companies, from which it received gas in 1905 at "bare station cost" .. 132

POINT XIX. The item "Contingent Expense (includes renewals)", $1,328,316.37, being Item 67 of Exhibit 94—allowed in whole by the Master but only in part by the Court, as an operating charge in 1905 136

Nature of 10c. item 137
Allowance by the Court less than admission of Appellants 141
The ground of action of the Court 143
Appellee's total expenditures for repairs and renewals since organization 146
The expressions of this Court on Depreciation Charges ... 147
Institution of the account not an afterthought 148
Erroneous assertion as to increase of property from earnings 149

PART FIFTH.—The Rate of Eighty Cents per thousand, as related to other Companies in the City of New York; Comparison of gas charges, or operating expense, as between different Companies; the Question of Pressure; and the Investigations of the Legislative Committee in 1905 and Gas Commission in 1905-6 151

POINT XX. The rate of Eighty Cents per thousand feet as "related to other Companies in the City of New York" 151

POINT XXI. Comparison of gas charges of different Companies; or elements of operating expense, valueless without adequate data and analysis 157

Charge for Gas 157
Detroit, Milwaukee and Grand Rapids, Boston 157
Price paid by Appellee for oil compared with other Companies 160

POINT XXII. The Question of Pressure 162

Evidence as to possibility of compliance 163
Expense of reconstruction 173
A unique law 175

POINT XXIII. The Legislative Committee of 1905 and the Gas Commission of 1905-6 175

PART FIRST.

Valuation of Assets of Appellee, Employed in the Production and Distribution of Gas, and allowed by the Court at $59,831,435 (*ante*, p. 6).

POINT I.

"Original Cost" not Controlling or Fully Ascertainable.

Appellants have assigned error in that the Court was not governed by the "original cost to the Complainant and its predecessor Companies" of such items as "Real Estate," "Mains" and "Services", rather than by their "present value." It is submitted that no error was committed.

1. Such "Cost" Not True Criterion.

The "original cost" of property now devoted to the public use is, as argued by Appellee in another Brief, not the true criterion.

As was said by Mr. Justice Brewer in *National Water Works Co. vs. Kansas City* (62 Fed., 853, 865):

> "The original cost of the construction cannot control, for 'original cost' and 'present value' are not equivalent terms."

It is submitted that there is no inherent right in certain individuals, because they happen to be consumers of gas, to the use of a parcel of real estate (for example), at less than the fair value at which it might now be sold or leased to other members of the community.

2. Such " Cost " Too Remote.

The "original cost" of the property to the six constituent Companies in the present case, is too remote to be of advantage in fixing "present value".

The first of the six Companies was incorporated in 1823, the second in 1830, and the other four at different dates from that time down (*Record*, pp. 152, 4826-4867). On this subject the Court said (*Record*, pp. 398-9) :

> "I do not find that the original cost (where ascertainable) of Complainant's tangible property affords any assistance. The time of acquisition is too long ago, and conditions have so wholly changed, as to render comparisons useless."

3. Entire " Cost " Not Ascertainable.

If a finding of "original cost" were desirable, it is impossible; for it clearly appeared that no data existed from which it may be accurately computed, *so far as relates to the property acquired by Appellee, from the six constituent Companies in 1884* (*Record*, pp. 269, 270).

The only information available on this subject was the record of the New York Senate Committee of 1886 (*Senate Document 47 of 1886*) as presented before the Master (*Record*, p. 5325), and the books of *five* of the six constituent Companies—the books of the Knickerbocker Company, which had been leased years before to the Municipal Company, not being then or now discoverable (*Record*, pp. 3184, 5870).

Special Findings by Master

The Appellants offered from said Document a certain table made by accountant Yalden of said Committee, totaling $20,942,632.85, which sum the Master was requested to find to have been the "cost to the constituent Companies" of the *tangible* property taken over from them by Appellee in 1884 at $29,994,000; but the Master declined, saying—

> "The evidence clearly shows that the actual cost to them, of property of the constituent Companies was in excess of the $20,942,632.85 shown in their books" *(Record*, p. 256).

And thereupon refers to a preceding portion of his Report *(Record*, p. 178) where he said:

> "It clearly appears that the term "cost of property" as used by the expert accountant, whose tabulations form part of the Report of the Senate Committee of 1886, did not represent the actual cost, but the amount at which the properties were carried on the books of the constituent Companies, *so far as they were before him.* In many instances the figures thus appearing on the books were reached after charging down as depreciation very large sums which represented the actual cost. Such charging down was in addition to and exclusive of expenditures for current repairs and renewals necessary to keep the plants of the Companies in efficient condition."

The Master likewise, for conclusive reasons stated by him, declined to find that the "original cost" to Appellee and the six constituent Companies, of Appellee's "real estate," was $4,118,267.38, as requested by Appellants *(Record*, pp. 167, 268).

4. Evidence of Cost to "Predecessor Companies."

In support of these findings of the Master, which have been approved by the Court *(Record*, p. 430), it is pointed out that—

(a) The books of the Knickerbocker Company were not before Mr. Yalden at all, and the sum of $810,000, specified for the Knickerbocker in his schedule, merely represented the amount expended by the Municipal Company on the Knickerbocker system after the former had leased the latter *(Record*, pp. 4478, 4479). In fact, Mr. Yalden testified (*Record*, pp. 6410, 6204) that while this sum was spent by the Municipal on the Knickerbocker property—

> "*The works, the value of which is not brought into the books*, were appraised to the Consolidated at $3,000,000—

the works, of course, including the buildings, machinery and land, which are the most expensive part of a gas property, and which were so extensive that for years after the consolidation of 1884 they supplied the entire upper part of the City of New York *(Record*, p. 4580).

And at a later page, Mr. Yalden repeated that the $810,000 " is not really the cost of the property ", and that, in addition to that amount and its Capital Stock, it was " subject to Mortgage Bonds of the Knickerbocker Company to the amount of $1,137,000 " *(Complainant's Ex. 369, Record*, p. 6411), substantially all of which were outstanding and assumed by Appellee in 1884 *(Record*, p. 4480).

Indeed, the $20,942,000 in question excluded at least $2,400,000 of " cost " so far as the Knickerbocker property was concerned *(Record*, p. 4480).

(**b**) In addition to this, the New York Gas Light Company had arbitrarily written off $2,929,357.97, which it was necessary to write back at consolidation in 1884 to

> " reinstate the property at something like what it cost " *(Yalden, Complainant's Ex. 369, Record*, p. 6394);

(**c**) Likewise the Manhattan Company had charged off, in ten years, at least $2,030,000 on a plant which originally cost only $2,400,000, in addition to expenditures keeping the property " as good as new " *(Yalden, Record*, pp. 6315, 6338). The sum of $768,517.96 was charged off for " Mains ", which left the " book value " of Mains over $600,000 less than at the beginning of the period *(Record*, p. 5633).

(**d**) And the Municipal Company had also written off $804,107.74,—it having been the practice of all the Companies in their prosperous days " to hide away some of the profits " by writing down the value of their property *(Yalden, Record*, pp. 4490, 6396).

Thus by correction in only the four items mentioned—and we do not know how many other like

items there may be—the $20,942,632.85, relied on by Appellants as " cost," was raised to over $29,000,000 (*Record*, p. 4490). Thus :

Figures at which property transferred to Appellee in 1884, was carried on books of constituent Companies (excluding those of Knickerbocker), as per Yalden		$20,942,632.85
Knickerbocker Company—Cost	$3,210,000	
On books of Municipal Company	810,000	
		2,400,000.00
N. Y. Gas Light Company—Amount property was written down below cost, and written back at Consolidation, as per Yalden's statement, to bring it back to "something like what it cost"		2,929,357.97
Manhattan Company—Amount likewise written off, although plant was " as good as new," as Yalden states		2,030,000.00
Municipal Company—Amount likewise written off but written back at Consolidation, as Yalden states, as in the case of the New York Company		804,107.74
Total		$29,106,098.56

But in addition to these, it appears that the Harlem Company had practically doubled its plant capacity, including the filling in of its water front and construction of its bulkheads,—all at a charge to operating " expense ", without appearance in the property account at all (*Record*, pp. 4490, 6302-6304, 6308); while the New York Company carried nothing in property account for " Services, Meters, Gas Stoves and Furniture and Fixtures " (*Record*, pp. 5659, 5660), the cost of all which it had obviously charged to " operating expense ".

(e) It is undoubtedly true that " original cost " of real estate to the constituent Companies was less than the value at which it was appraised and taken by Appellee in 1884, and less than its value today,—although just what such cost was, is not known, in the absence of the Knickerbocker books ; but on the other hand, it is undoubted, —as indicated by the evidence and found by the Master (*Record*, pp. 269, 270, 4480, 4481, 4482)—that the plant stood *even on the books* of the constituent Companies at an amount greater than their appraised value in 1884, in spite of the arbitrary and enormous "charging down" to "hide away profits" as above pointed out.

And doubtless the same is true of Mains and Services, since they were appraised in 1884 on the basis of the then value of $25 per ton for pipe (*Record*, p. 691), whereas pipe actually cost during the period in which a large part of the systems were laid, cost as high as $76 a ton (*Marks, Record*, p. 2046 ; *Edgerton, Record*, p. 2991).

Findings of the Master.

While, therefore, it is the finding of the Master that :

> "It is not possible from the evidence to state the *total* cost to the constituent Companies of their plants, mains or similar tangible assets" (*Record*, p. 270)—

and while such total cost could not be ascertained in the absence of the Knickerbocker books,—and even with those books could not be ascertained without going over the entire construction and expenditure vouchers (if in existence) of the Companies, back to 1823, to see what other "capital expenditures," in addition to those above enumerated, had been charged to "operating expense,"—sufficient appeared so that the Master was able additionally to find that :

> "As regards Mains and Services, therefore, as well as Real Estate, Plants and other tangible property, *it does not appear that any sufficient ground exists for the suggestion that the appraised value of 1884 was materially, if at all, in excess of the aggregate cost* of the tangible property to the constituent Companies" (*Record*, p. 252)—

and such "appraised value" was $29,994,000 (*ante*, p. 2).

Indeed, Vice-President Carter, who has been connected with Appellee since its creation (*Record* p. 767), after a careful investigation emphatically asserted that the "original cost" of the tangible properties of the six Companies *was undoubtedly and very largely in excess of the $29,994,000 at which it was appraised and taken by Appellee, in 1884* (*Record*, p. 4487).

Amount Contributed "by Stockholders."

The Public Service Commission suggests (*Brief*, pp. 24-5) that the "Capital invested" by stockholders of the "original companies" was only $14,564,571.82,—$4,275,000 of which represented "earnings" which went into the plant and were capitalized by the issue of stock. For all that appears, Stock of constituent Companies—in view of the high dividends being paid—may have been issued at substantial premiums.

But in our view, it makes no legal difference from what source the funds producing the property were received,—whether from stockholders for Stock, or borrowed on notes or bonds from stockholders or outsiders, or paid from earnings which belonged to stockholders and might have been paid to them in dividends and thereupon returned to the property for further issues of Stock, or *whether the property was a gift* to the Companies. It is undoubtedly true that, earning heavy dividends from a useful business, many of the Companies did enlarge their property very heavily from earnings, without going through the form of paying dividends to stockholders and then receiving the money back for investment.

5. Total "Original Cost" So Far as Computable.

The expenditures of Appellee, on capital account, in extension of its system since 1884 ,are accurate and available ; and this is as far as it is possible to secure exact *data* on the subject of "original cost" of production of the property which it now owns. But we can rely on *at least* the following "cost" :

Cost of *tangible* property to "constituent Companies" *at least (ante,* p. 18) ----------------	$29,994,000.00
Added by Appellee to November 11, 1884 *(Record,* p. 5018)-------------------------------	196,419.01
Added by Appellee since November 11, 1884 *(Original Record,* p. 7303)-------------------------	9,693,565.90
Workin g Capital, at amount allowed by Court *(Ante,* p. 6)------------------------------------	1,616,000.00
Total *known* cost of production---------	$41,499,984.91

And this is exclusive of " Franchises " and " Good Will," and assumes for " Working Capital " 2,000,000 less than allowed by the Master and claimed here by Appellee (*post*, p. 77).

6. Appellants' Fallacious Estimates.

A.

Appellant The City of New York endeavors to find " original cost " by deducting from the Court's total valuation of property, $59,831,045 (*ante*, p. 6), what counsel considers " appreciation " in the items of Real Estate, Mains and Services which enter into said total, above the " *cost* " of said items respectively; and obtains $35,238,106.

Without consideration of minor errors, it is sufficient to say that said method is fundamentally wrong and incapable of reaching a just result.

> (**a**) In the first place, counsel takes as the " original cost " of installation, Appellee's " book value " of mains ($7,852,000) and services ($1,212,000); but these valuations were, as above pointed out, based in large part on the *low price of pipe and inexpensive pavement in 1884*, and undoubtedly much less than the original cost of installation of said mains, when pipe ran as high as $76 per ton (*ante*, p. 18).
>
> (**b**) Counsel also, while making such unsound assumption as to difference between cost of installation and present value of Mains, Services and Real Estate, makes no note of other items entering into said total of $59,831,045, whose " present value " is certainly *less* than the original cost of construction.
>
> Thus, it has appeared, that the valuation at which the plants of the six constituent Companies were taken over by Appellee in 1884, was less than the figure at which they were carried on the books of said Companies, *even after said Companies had charged them down millions of dollars* to conceal profits, as previously indicated (*ante*, p. 16).
>
> The same conditions which made iron pipe for mains expensive, likewise made all other iron and steel construction, machinery and apparatus expensive at the same time.

B.

Appellants, the Public Service Commission, give an estimate of "original cost" at $33,779,472 (*Brief*, p. 239), Pursuing the same method as the City, they reach an equally inaccurate result; indeed, a result somewhat wider of the mark.

What counsel for the Public Service Commission has in mind in suggesting that "Complainant made no attempt to supply the information as to original cost," we cannot conceive; for Appellee expressly consented to the examination by Appellants' Accountants of Books and Records of the original Companies, back to the formation of the New York Gas Light Company in 1823, and they availed themselves of the opportunity (*post*, p. 97).

Counsel excludes a parcel of land included by Marwick, Mitchell & Company covered by "New Shop, 66th Street" on the ground that no such item appears in the testimony, and that the "Shop" has probably been torn down (*Brief*, p. 41). He is in error. Mr. Mayer inadvertently omitted in his valuation two buildings and contents (*Record*, p. 1422), and this "New Shop" was one of them (*Record*, p. 4604).

C.

It is not at all apparent that, if total original expenditure in constructing Appellee's system as now in use were available, it might not equal or even exceed the "present value" found by the Court for Appellee's tangible property taken as a whole, $47,831,435 (*ante*, p. 6; *Record*, p. 423).

POINT II.

" Book Value " or " Cost to Appellee."

Appellants have also assigned error in that the Court was not governed by the " book value " of Appellee's property.

Such " book value " merely represents the *cost to Appellee* of such property; that is to say, the cost to it of the property acquired in 1884 from the six constituent Companies (*Record*, p. 153), plus its capital additions since that time (*Record*, p. 254).

It is not clear on what theory Appellants assert that such " book value " is to be conclusively taken as present value—for it is well understood that " book values " frequently and inevitably differ —sometimes very largely—from actual values. In the matter of " Real Estate," for example, it would be strange if present values did not exceed the " cost to Appellee " in 1884, since real estate values have largely increased in recent years in the City of New York, even 25 to 30 per cent. in some parts *within the past five or six years*, as all witnesses concede (*Record*, pp. 1177, 1180, 1288, 2183, 2253, 3132, 3137).

1. Erroneous Computation of Appellee's " Gas Capitalization."

The Public Service Commission computes what it denominates Appellee's present " Nominal Gas Capitalization," to be $43,007,372.82 (*Brief*, p. 22–3). It reaches this sum by taking the aggregate of Appellee's " present Stock, par value," " premiums on Bonds and Stocks " and " Debenture Bonds of 1888 " (less Bonds paid off), to wit $93,412,736.71; and deducting therefrom what Counsel computes to be the amount of capital invested in securities of other Companies (exclusive of the Astoria Company), to wit: $50,405,364,89 (*Brief*, pp. 22–3); and as a second step, deduces Appellee's " New capital since 1884," to be only $3,929,271.82.

The whole process is fundamentally unsound. Appellee's actual "gas capitalization" is as follows :

"Capital" cost of tangible property and franchises acquired in 1884 (*ante*, p. 3)	$37,775,000
Other property acquired to November 11, 1884 (*ante*, p. 19)	196,419.01
Acquisition of permanent plant since consolidation, (*ante*, p. 19)	9,693,565.90
Total *permanent* plant (*Record*, p. 5032)	$47,664,984.91
Working Capital allowed by Court (*ante*, p. 6)	1,616.000.00
Total "Gas Capitalization"	$49,280,984.91

This is the true amount in place of the $43,007,371.82 assumed by Counsel, and shows "New Capital since 1884" far beyond the $3,929,371.82 asserted by him.

The fallacy of Counsel's computation arises from his assumption that "*capitalization*" can be represented by nothing but *Stock, Bonds and the premiums thereon.* It may be represented in many forms. Thus Appellee is employing in its gas business nearly One Million Dollars of capital representing "consumer's deposits" upon which it pays 6 per cent. interest (*Record*, pp. 809–10) ; and this interest was excluded in operating expense (*Record*, pp. 222, 248), for the very reason that the principal was so used by Appellee. So, too, its "surplus" of $1,547,697.38 has gone into its gas business, as well as part of the proceeds of the $20,000,000 of "Astoria" Debentures of 1904—so called by Counsel. All this appears in the Record (*Complainant's Exhibit* 80, *Record*, p. 5033).

In this connection it may be noted that while the amount of Stock issued by the Appellee in 1884 was only $35,430,060 (*ante*, p. 3), its capital assets are now represented in part by "Stock" to a *par* value of $41,356,409.86 (*Complainant's Exhibit* 80, *Record* p. 5033),—an addition of $5,926,349.86 in Stock, $3,647,940 of which was sold at $192.40 per share *and realized $7,019,811.73*, to say nothing of the balance which was sold at *not less than $150 per share* (*Record*, pp. 849–50).

It will be noted, that the amount of "gas capitalization" on the previous page, $49,280,984.91, is the sum of the following items in Exhibit 80 (*Record*, p. 5033)—to wit: "Plant and Property, Manhattan" ($47,664,984.91), and Working Capital, composed of $1,000,000 cash, and $616,000 (round amount) of "Materials and Supplies."

It will also be observed from Exhibit 80, that *no part of such assets were derived from earnings*, other than the divisible Surplus Earnings which belonged to the Stockholders.

2. Master's Finding of "Cost to Complainant" of Property Employed in its Gas Business.

The Master, deducting from Real Estate and Plant held by Appellee in its Gas Capital, such portions as he conceived not to be at the moment legally "employed" in its gas business, made the following finding for the information of the Court:

> "the *actual cost to Complainant* of the *tangible property and Franchises* employed in its gas business (including the amount found by me to be the capital invested in production of gas for Complainant outside Complainant's Manhattan works) is at least $60,214,000"

—classified as thereupon indicated by the Master (*Record*, p. 254).

It will be observed that the "cost to Complainant" of some of these items is less, and of some is greater, than the amount fixed by the Court as "present value" thereof respectively, as employed by Appellee in its gas business.

Excluding the item "Astoria," or Capital invested in the production of gas by subsidiary Companies for Appellee, there still remains on the Master's estimate a valuation of $48,214,000 of gas capital at "*Cost to Appellee*,"—although the amount would be somewhat reduced in the items "Real Estate" and "Working Capital," if the Court's view be accepted in lieu of the Master's, which Appellee argues should not be the case (*post*, pp. 68, 77).

POINT III.

Valuation of Real Estate.

A schedule of Appellee's holdings appears in the Master's Report *(Record,* p. 159), totaling in value $14,161,000.

Appellants charge error in the valuation of the items of real estate allowed by the Court (*ante*, p. 6) at $11,985,435 (aside from any controlling effect of "original cost," "book value" and "tax valuation," elsewhere discussed), in that:

> *(a)* It is in excess of the true valuation thereof, land having been valued as "vacant lots," and not in conjunction with the buildings thereon and for the uses and purposes to which it was devoted.
>
> *(b)* It duplicates in part the valuation given by the Court to the plants, since it could not be realized until the plants are removed.
>
> *(c)* It is in excess of the amount required for Appellee's gas business, upon the basis of the cost of reproduction.
>
> *(d)* In estimating value, the Court adopted the valuation given in testimony for Appellee, whereas the valuations testified to by unimpeached expert witnesses for the Appellants were lower.

The term "Real Estate" as employed in the evidence and findings comprises:

> "Land and water rights, including only such appurtenances as offices, stables and the like, and excluding all buildings and structures which are a part of the manufacturing or distributing plant of the Company. The structures included being of slight value as compared with the value of the land, the term 'Real Estate' as thus used is practically synonymous with 'Land.'" *(Record,* p. 156).

1. Method of Valuation.

The suggestion that such "Real Estate" was in any proper sense valued as "vacant" land, is misleading.

(**a**) Certain plots employed for storage of coal and street department supplies, and for other purposes not requiring a roof against the weather, were "vacant" in that there were no buildings thereon (*Record*, pp. 534, 554, 1232, 1233). They were valued, of course, by all witnesses as "land only."

(**b**) Certain other plots were covered by buildings of ordinary character and common usefulness, such as offices, dwelling houses and stables. All witnesses for all parties, as to each of these plots, stated the market value of the land with the buildings thereon; and also a separate valuation for land and for buildings, which together, in each instance, exactly equalled such market value of the two combined.

Land Covered by Plant.

(**c**) This leaves to be considered only those plots covered by manufacturing and distributing stations.

These "plants" consist of apparatus and machinery, holders with their brick or steel tanks, pipe connections, and "buildings" (*post*, p. 35).

The "buildings" are of unusual and extraordinary design, wholly incidental to and designed for the support and protection of said apparatus and machinery, and include special elaborate and expensive "foundations" for such apparatus and machinery (*Record*, pp. 3770-3772). They are concededly useless and valueless, except in conjunction with such apparatus and machinery. They are an integral part of the "plants" as much as the "apparatus" itself, and were so valued and treated by *all witnesses for all parties.*

The *real estate* experts for all parties stated the market value of the land covered by these "plants"; but not one attempted to state the value of the apparatus and machinery, holders and tanks, pipe connections, and buildings aforesaid. No real estate dealer (and only a practical gas-plant constructor) was competent to do so.

Accordingly, *engineers and contractors experienced in such matters* were introduced by the Appellee and Appellants to testify as to the present value, based on cost of reproduction (less depreciation observed) of the "plants"; and these men would have been as incompetent to testify to the value of the land in the City of New York upon which the "plants" rested, as were the real estate witnesses to testify to the cost of reproduction of the "plants" in operation upon such land.

The combination of the land values and plant values thus obtained would give the correct value of *the land in conjunction with the plants thereon*, as part of an operating concern; for if Appellee were in any way (as by condemnation) to lose them, it could not replace them for a less expenditure.

Certainly the special value of the land covered by "plant" (whether located on the Island of Manhattan or in a small town) is to be considered in fixing the total value of a gas property in use; and it is more than doubtful whether any one person could be found so versed in values of both New York City realty and gas machinery and construction, as to be able to state an aggregate value for Appellee's gas plants with the blocks of land covered thereby,—even if they would be of any value or sell for anything beyond the bare value of the *land alone*, except in conjunction with the Mains, Franchises and other assets constituting the operating system.

> NOTE. It is suggested in the Brief of the Public Service Commission (p. 58) that Appellee's "theory of plottage," in valuation of the large parcels of real estate was disapproved in *Matter of the City of New York*, 56 Misc. (N. Y.) 306–310.
>
> This is a mistake. The Court in that case merely held that the Report of Commissioners would not be sent back, because they did not include a "plottage" value for the land in bulk, beyond its value if sold in individual lots; but the Court, however, pointed out that in that case the Commissioners *found no such additional value to exist*, while in the present case an added value for "plottage" was admitted and included, not only by Appellee's witnesses but *by both of Appellant's witnesses* as well (*Record*, pp. 1193, 3136, 2245, 2177).

2. Method of Valuation Approved.

In important and leading rate cases considered in this Court and in the New York Court of Appeals, witnesses have primarily testified to the value of land employed, as distinct from value of plant thereon, in reaching present or reproductive value.

Smyth v. Ames, 169 U.S., 466 :
Trustees of Saratoga Springs v. Saratoga Gas Company, 191 N. Y. 123 :

In *Smyth v. Ames* (Union Pacific Company) the Complainant's witness gave separately exact statements of value of land occupied by Omaha terminals, the value of buildings thereon, and value of the track, ballasting, bridges, etc. forming part of the terminals. He then gave a general estimate of the value altogether, which was considerably in excess of the three items *(Record of that case, pp. 1379–82).*

The expert of the defendants, the Nebraska Board of Transportation, gave separately the cost of reproduction of the track and sidings, the land, the general buildings, the shop buildings including machinery and furniture, the expense of engineering and contingencies ; and gave the exact total of these individual valuations as " the cost of reproducing " the terminal properties *(Record of that case, pp. 1642–3).*

In reference to the *Chicago, Burlington & Quincy Company* and the *Chicago and Northwestern Company,* Complainants also gave separately the valuation of lands and buildings ; and the total valuations were merely the sum of these individual valuations *(Record of that case, pp. 1266–7, 1563–4, 1573–8).*

In *Trustees of Saratoga Springs* v. *Saratoga Gas Company,* in which an important section of the New York Gas Commission Act was recently declared unconstitutional, the land, the buildings thereon belonging to the " plant ", and the machinery and apparatus constituting the balance of the "plant", were each valued *separately and by separate witnesses* on behalf of the defendant Company; and the same is true of the witnesses for the plaintiffs, except that (as in the case at bar) the same witnesses testified to the value of the buildings with apparatus and machinery, constituting the plant *(Record of that case, fols. 220-41, 495-505, 760-778, 790-833, 858-863, 1207-1220).*

We do not observe that the manner or value of such proof has been heretofore questioned. Indeed, by no other method than that pursued can the reproductive cost, which is presented as the true test of value in such a case as the present, be reached. As the Master well said *(Record*, p. 176):

> "While the real estate has a substantial value irrespective of the purposes for which it is now held, *the plants, mains, etc.* are of value only when used by a going concern. For any other purpose they are merely scrap, or second-hand machinery, and their intrinsic worth is inappreciable. As to their *market* value, there is no means of judging."

3. Less than Reproduction Value of Land.

The value of "real estate" as computed and found in this case, is, in reality, considerably less than the cost of reproduction, and therefore less favorable to Appellee than should have been.

All the real estate witnesses valued the land at its depreciated selling price, due to the presence of the gas plants. They all conceded that, if the plants were to be removed, their estimates of market value of land covered would be increased from 10 to 25 per cent. *(Record,* pp. 1180, 1296, 1298, 2250, 3156),—that is to say, if the land were really "*vacant*".

To reach the actual "reproduction" value of the land, it would be necessary to estimate the cost of acquirement of equivalent land, similarly situated, by a new Company, under ordinary circumstances and it was undisputed that such land could not thus be procured for "anything like" the valuation placed upon the land under present conditions (*Record*, pp. 1180, 1193).

It is, accordingly, Appellee's contention that the valuation of "real estate", as returned by the Master and Court, is by several million dollars too low.

4. Valuation not Duplication of Plant Value.

It is not perceived how the valuation of the land as made, duplicates the valuation given by the Court to the plants.

It is not true that the valuation of the land could not be realized until the plants thereon were removed; for the property, both land and plants together, might be acquired by another Company desiring to continue the same business,—in the same manner as Appellee, in 1884, acquired the plants and property of six then existing companies at a value based on the *cost of their reproduction at that time*, to wit: the market value of the *land* as then appraised, plus the cost of reproducing the *plants* thereon, as separately estimated. (*Record*, pp. 4925, 4939, 4941, 4942, 4955).

Nor do we understand, and much less accept, the theory that value may not exist independent of a sale consummated, or that a piece of real estate or other property purchased years ago cannot now be considered as worth more than cost, if and while unsold, although its market "value" may now be twice such cost.

Would such a proposition be entertained in a proceeding to take the property for a public use under the power of eminent domain? Would not a gas Company in such case be entitled to an award sufficient to represent the market value of the land, plus an amount sufficient to reproduce thereon a plant of the character and capacity taken? Would anything less be "just compensation," or make the Company whole? Would the State be heard to say that such an award was a "duplication" of value, or that no value beyond "original cost" (and the land may have been donated *gratis*) could be allowed, because the increment of value had not been realized by a sale, or that the Company must be limited to what the land and plant together would bring at a forced sale to a purchaser designing the plot for *ordinary* improvement, for which the "plant" would be unfitted and worthless? And would not such a proposition, if put in practice, amount to confiscation of a large part of the investment of the Company?

As said by Mr. Justice BREWER in *Ames v. Union Pacific Railway Company* (64 Fed., 165, 176; affirmed in *Smyth v. Ames*, 169 U. S. 466), after declaring the safeguards of the Constitution in the appropriation of private property by "condemnation proceedings":

> "The same general ideas must enter into and control legislation of the kind before us."

5. Real Estate Not in Excess of Requirements.

The valuation of the Court covers only land "actually in use" by Appellee "in its gas business"; all other land was excluded (*Record*, pp. 393, 423, 430).

There is nothing which can be called evidence, much less any finding, that this is "in excess of the amount required by Complainant in its gas business, upon the basis of the cost of reproduction".

On the contrary, it was affirmatively proven that there was uch an overcrowding of apparatus at some stations (21st Street, or instance), that a greater area would be properly required f a plant of like capacity were now to be constructed (*Record*, pp. 290, 1507); while additional holders in the distribution system re being constantly required, with growth of sales (*Record*, p. 587).

The Court considered, and expressly declined to find as a fact, he proposition here advanced by Appellants (*Record*, p. 423).

Appellant, The City of New York, presented to the Master a equest for a finding based on a theory as to the amount of land equired for a large water-gas plant, deduced from the land used er unit of production at the crowded 21st Street plant (*Record*, p. 288, 289); but it will be observed that this land is simply that covered by *buildings* and nothing more. The computation assumed that a gas plant could be built with no space for general connections; no space between buildings, either for the purpose of gangways, or to afford such prudent segregation as to prevent the entire plant from being destroyed if one building should get on fire; no space for contiguous yards for loading and unloading supplies, making repairs or providing shops, or for storage of coal or coke which must be immediately at hand; no space for tar tanks, ammonia tanks or oil tanks, none of which can be located under the buildings.

And furthermore the request made no allowance for a *pro rata* of lands used for general holder purposes, and not located immediately at the 21st Street station, but employed and necessary for handling the output of that plant with other works (*Record*, p. 290).

6. Acceptance of Valuations of Appellee's Witnesses.

Nor is it believed to be good ground of objection that the Master and Court accepted the valuations of Appellee's witnesses, rather than the estimates of Appellants' experts which "were lower."

It is suggested that the Appellants' witnesses were "unimpeached". If it is meant that their character for veracity was not attacked, it is true; but if the term relates to their demonstrated knowledge, competency and reliability in their estimates, they were thoroughly "impeached."

Referring to the exhibition of Appellants' witnesses on the stand, the Master said (*Record*, p. 158):

> "Their cross-examination disclosed numerous instances in which they disclaimed knowledge of actual sales in the immediate vicinity of the parcel under consideration, notwithstanding such sales were matters of public record.
>
> "In a dozen or more instances, their valuations approximated or were substantially below the assessed valuation of the land. It is, of course, true that the assessed valuation of real property is often equal to or higher than its actual value, but it is generally understood and *was in fact admitted on the record* that as a rule, tax values are substantially lower

than the prices that can be realized for property sold under ordinary conditions. When, therefore, in so many instances defendants' witnesses made their valuations approximate closely the assessed valuations, some question is suggested as to the weight to be given to their judgment.

"Mr. Wells * * * like the other witnesses called by defendants, * * * was not familiar in many instances with recent sales of property in the immediate neighborhood of the parcel under consideration. *Taken as a whole, the testimony of these defendants does not show that they gave to their appraisals the amount of care and study that characterizes the work of Complainant's witnesses.* For example, one witness in valuing the property occupied by the Company at 42nd Street and 44th Street, excluded that portion of it comprised within the lines of 12th Avenue, on the ground that the Company had no title thereto. He failed, however, to make any allowance for the fact that on this theory certain of the lots remaining would have an enhanced value as corner lots, which, according to well known rules, make them worth often 50 or 60 per cent. more than interior lots in the same block. In another instance no allowance was made for the circumstance that the parcel in question had a frontage both on an avenue and a side street. * * *

"In repeated instances, defendants' witnesses were unable to specify any transactions in the neighborhood at unit figures so low as those given in their valuations, *whereas Complainant's in the great majority of cases were able to substantiate, or at least to some extent support their estimates by reference to actual transactions.*"

(a) Appellants' Explanations.

Counsel for the Public Service Commission endeavors (*Brief*, pp. 47-58) to minimize the want of knowledge and of reliability exhibited by Appellants' witnesses, as compared with Appellee's, pointing out what he claims to be explanations of the fact that they were not posted as to well known sales in the section under appraisal. A re-reading of the Master's report will indicate whether the attempt has been successful. How does one account for the failure of a witness to value a corner lot at an increase over the interior lot, after he has established it as a corner lot by his own theory? Moreover, since Counsel, who was not present at the trial, goes without the record to state what he conceives to have been the practice as to bringing to the hearing slips recording contiguous and contemporaneous sales, it may be proper for Counsel, who was present throughout, to say in reply that (with the exception of few parcels) witnesses for Appellants did have present with them all the *data* which they claimed to possess respecting such sales; their ignorance of recent sales, recorded in what were conceded to be the recognized real estate guides, and with which Appellee's witnesses were entirely familiar from those records, could hardly have been more complete, as the testimony shows.

We suppose there can be no better evidence of the value of parcels of real estate, than actual recent transactions therein,—the very *data* with which it would seem that Appellants' witnesses, if competent and painstaking, would have taken measures to acquaint themselves; and it appeared that such transactions—with which Appellants' witnesses were rarely familiar—almost invariably confirmed the valuation of Appellee's witnesses, and condemned those of Appellants' as insufficient.

Moreover, Messrs. Thompson and McHale *gave identically the same valuation for virtually every parcel*,—a most unusual circumstance where witnesses were supposed to be exercising an independent judgment.

And finally, their evidence showed a present valuation of only 11 to 13% over the valuation of 1884,—an incredible figure in view of the heavy increase in the values of real estate in the City of New York within the last twenty-five years, often amounting to from twenty-five to thirty-five per cent. even within the past five or six years. (*Record*, pp. 1177, 1288, 2183, 3132, 3137).

(b) Conclusion.

If Appellants' Assignments intend to suggest that, in a rate case, the Court is bound to accept the valuations of a defendant's witnesses if they be honest, no matter how incompetent or uninformed they may be demonstrated to be, we are content to leave the proposition with the Court without argument.

POINT IV.

Valuation of Plants.

The term "plant" as employed in the evidence and findings includes (*Record*, p. 169):

> "*(a)* Buildings and foundations of apparatus, forming part of the manufacturing and distributing stations;
> *(b)* Apparatus;
> *(c)* Holders; and
> *(d)* General connections at the stations."

The valuation of Engineer Mayer is summarized by the Master as follows (*Record*, p. 175):

21st Street Plant including all Holders----	$4,162,021	
44th " " " " " ----	2,000,205	
99th " " " " " ----	963,011	
14th " " " " " ----	2,549,545	
42d " " " " " ----	1,744,660	
18th " " " " " ----	588,873	
Totals for all plants --------------------		$12,008,315
63rd Street Holder Station Complete ----	$490,072	
65th " " " " ----	1,427,317	
111th " " " " ----	1,039,910	
132nd " " " " ----	540,702	
Inwood " " " " ----	26,173	
Total for all Holder Stations------------		3,524,174
Total for Plants and Holders now in use--		$15,532,489

Appellants charge error in the valuation of this item by the Court (*ante*, p. 6)-at $15,500,000 (aside from any controlling effect of "original cost", "book value" and "tax valuation", elsewhere discussed), in that it assumes the reproduction,—

> *(a)* Of Appellee's "identical plant and each part thereof"
>
> *(b)* "Without regard to whether the same was originally, economically produced," "or economically and commercially

worth producing," "or as to the obsolescence of type and the advancement of the art;"

(c) And not "of a plant that would produce the same kind, quantity and quality of gas in an economically constructed, modern plant."

1. Not of "Identical Plant and Each Part."

The sum of $15,500,000 found by the Master and Court as the value of the plants *(ante,* p. 6), does not represent the value of the "identical plant and each part thereof," but is a less sum.

The Master took the valuation of the witness Mayer as a general guide *(Record,* p. 171); but Mr. Mayer's total valuation was $16,137,477, and deducting depreciation to the amount of over $604,988, for which sum the plants could be made in all respects as good as new *(Record,* p. 174), his net was $15,532,489. This sum was further reduced by the Master to $15,500,000 "to allow for possible over-valuation in some details" *(Record,* p. 175); and besides, Mr. Mayer had inadvertently omitted two entire buildings with their contents, in his estimate *(Record,* pp. 4604–5).

The Court finds that the valuation of the Master was based "upon competent and persuasive evidence" *(Record,* p. 391).

(a) A Much Higher Valuation Sustainable.

Indeed, there was ample evidence to sustain a much higher valuation. The estimates of Chief Engineer Bradley, of Vice-President Addicks and of Dr. Alexander C. Humphreys, President of the Stevens Institute of Technology, who has been "continuously engaged in the gas business for 35 years, both as a Consulting Engineer and in construction, * * * concededly a leading authority on the subject" *(Record,* pp. 170, 2575),—all men of the highest competency and thoroughly familiar with the plants,—ran substantially above Mr. Mayer's, Mr. Bradley's being $16,812,915, or more than $1,300,000 higher than the finding of the Master *(Record,* p. 169).

(c) Insignificant value of items criticised.

Indeed, all the items of plant (and they are few and not relatively important) specifically criticised below by Appellants,—chiefly (*a*) certain *generating* apparatus at Complainant's 111th Street holder station, practically new and now properly held as a reserve apparatus *(Matter of Mayor, 39 Appellate Division Reports, N. Y., 589, 592), and only valued at $140,853, according to Appellants' Brief below;* (*b*) housing for holders at 18th Street, which was approved construction when erected and which now reduces operating expense by eliminating painting and repairs required on exposed holders, while adding on the other hand to investment; and (*c*) a few "benches" at water-gas plants, which the defendants erroneously and without proof assumed to be abandoned "coal-gas benches", instead of water-gas benches, as they are ;—*might be excluded from the computation and a valuation much higher than $15,500,000 for the balance be still sustained upon ample evidence.*

Appellants' contentions as to those items were, moreover, thoroughly presented below and overruled by the Court and Master (*Record*, p. 258, 423).

2. No Evidence that Plants were not "Economically Produced."

There is no evidence that the plants, or any part of them, were not "originally economically produced." On the contrary, the testimony so far as it touches that point, is directly the reverse, and thereon the Master made the following finding:

> "There is no satisfactory evidence that the cost to Complainant of said property was unreasonable or excessive; or that the cost of production of said property was enhanced through faulty construction or waste; or that the various sums expended from time to time by Complainant or its predecessor Companies in permanent improvements and betterments were not intelligently and properly expended; or that any such expenditure was made otherwise than providently and honestly." (*Record*, p. 254).

Moreover, as the present value of the property as it is being devoted to the public service, is conceived to be the proper factor, the question of economy in original production does not seem important.

3. No Evidence that Plants are Not Worth Reproducing.

Nor does the evidence show that the existing plants are not "commercially and economically worth reproducing". On the contrary, again the evidence shows, and the Master has found *at the request of the Attorney General and other Appellants,*—

> "That several of the coal-gas plants which were transferred to Complainant by its constituent Companies in 1884, have been replaced with water and oil gas plants of the *latest and most improved methods;* that the maximum daily capacity of the water and oil plants of the Complainant is 41,500,000 cubic feet, out of a total capacity of the Complainant's plants in operation, amounting to 51,000,000, which does not include the 18th Street plant; that *all of the manufacturing plants of the Complainant are in good and efficient condition and that four-fifths of the present generating capacity thereof are in the shape of modern-up-to-date water gas plants which could not be improved upon anywhere;* and that one-fifth of the generating capacity thereof, or the coal gas plants, while possessed of some apparatus which is not of the latest pattern, *are efficient and in shape to operate for an indefinite period without impairment;* that the plants of Complainant were in good condition, operating continuously and successfully when they were taken over by Complainant in 1884, and are in good condition now,—better than they were at that time,—and are producing about twice as much gas, at a lower rate." (*Record*, p. 276).

(a) Inconsistency of Appellants.

We present in this connection the following remarkable statement in the *Brief* of the Attorney General (p. 87):

> "The record tends to show that a large part of such plant is obsolete, is grossly inefficient from the standpoint of the

> present state of the art, and that the cost of production thereby is greatly in excess of what it would be if the Company employed modern methods and appliances available for its use in the field of its operation."

The attitude of the Appellants respecting the quality of the plants, seems to vary with the angle at which they approach them. When opposing, and successfully, the allowance of a sum for "upkeep", in addition to average actual expenditures for twenty years, the plants are, in their view, of approved type, "efficient", "in good condition" and producing gas at a "lower rate than ever" as stated in the above finding; but when it comes to the valuation of the same plants to determine the amount of the investment upon which a return is to be computed, they are "inefficient", "obsolete" and altogether of no account.

(b) The Actual Situation.

The matter reduces itself to this:—that in Appellee's coal-gas plants, constituting less than one-fifth of its total capacity, there is "*some* apparatus which is not of the *latest* pattern," although "*efficient* and in shape to operate for an indefinite period without impairment;" that is to say, there is found (as would be the case in any plant long in operation) a set of benches or other apparatus smaller or different in type from that which might be installed as an original proposition if the plants were to be now constructed of their present great capacity.

Thus, Appellee (**a**) has some retorts in "benches of sixes," while "benches of nines" might now be installed in so large a plant if newly built, but "benches of sixes" are perfectly good construction and are now being installed in new plants (*Mayer, Record*, pp. 1513, 1514), and it would be economically indefensible to discard them, while operating efficiently, for "benches of nines" (*Humphreys, Record*, p. 1844; *Mayer, Record*, p. 1505); (**b**) there are also some ordinary furnaces, which have not been replaced by the new "regenerative" furnaces which require two stories and a more expensive "building" construction in operation (*Record*, p.

1738); and (c) finally, there is in use, at the Forty-second Street plant, "hand charging" apparatus for retorts, instead of the more expensive "charging machine", which requires a larger building and adds to the requirement of "return on capital" on the one hand while saving certain pay-roll labor on the other.

Practically every new device means additional capital investment; it is obvious that it would raise the cost of gas production to an extravagant figure, involving substantial charges to operating expense to make good the value lost, as well as additions to capital account to an amount equal to the excess value of the new apparatus over the old, if a Company were recklessly to scrap and charge off apparatus—no matter if still operating unimpaired—every time some improvement was designed; and whether in any particular case immediate substitution thereof is justifiable, is a matter which must be left to the discretion of the operating staff of a Company, with the presumption that they will exercise (and in Appellee's case have exercised) such discretion competently and wisely.

Of course, the valuation of the Court and of the Master *is of the existing apparatus*, and not of the more expensive "latest pattern" as to the items noted.

(c) Evidence of Efficiency From Cost of Gas Production.

The cost of production in Appellee's water gas plants, constituting over four-fifths of its capacity, is shown to be several cents less than the cost to the New York Mutual Gas Light Company which alone compares in age with Appellee (*Record*, pp. 4584-5); and to be substantially identical with the cost to the other and newest water-gas Companies operating in the City of New York,—and where there is any difference against Appellee, it is but slight and such as would naturally occur between Companies operating in the same district (*Record*, pp. 241, 3360), and is due to circumstances (such as the fact that Appellee's plants have been cut off from the water front by marginal streets) having no relation to efficiency in operation (*Record*, pp. 241, 647, 2406, 2413, 4436, 4437, 4472, 5287).

And while there is no other coal-gas, of 22 candle power or otherwise, produced on the Island of Manhattan with which to compare Appellee's, it is seen to be but a fraction of a cent beyond the cost of water gas to the Mutual Gas Light Company operating the same territory. Furthermore, as subsequently appears (*post*, p. 42) any small increase in cost of production is offset by lesser return required on the less expensive coal-gas apparatus employed.

The only Company in or about the City of New York, claimed by Appellants to be producing gas at less than Appellee and its subsidiary Companies above mentioned, was the Central Union Gas Company, which operates in the Bronx; and the reason of its apparent divergence is set forth by the Master and has no relation to operating efficiency (*Record*, p. 241). Among other things, it was not maintaining the candle power required by Appellee and other Manhattan Companies; and as soon as it was compelled to do so, the cost of its gas immediately rose "to substantially the same figures as the gas delivered by all other Companies" (*Record*, p. 241).

Counsel for the Public Service Commission quotes Mr. Bradley as saying of the 14th Street Coal Gas Works—"Nobody else would want to buy it for a gas manufacturing plant" (*Brief*, p. 66). The quotation might mislead. The context clearly shows that Mr. Bradley merely meant that, if the Manhattan plants were removed to Astoria, the sites would be sold to some outsider for "ordinary" improvement and not for use as "gas plants." *He did not refer to 14th Street alone.*

4. Assumed Reproduction of the Most "Modern" Plants of Same Individual Capacity.

Nor is there merit in the suggestion that the valuation of plant would have been more favorable to Appellants, if based on (*a*) the cost of "reproduction of a plant that would produce the same kind, quantity and quality of gas in an economically constructed modern plant" (*Record*, p. 482), (*b*) or, as the Public Service Commission puts it, the "lesser *(sic)* cost of replacement with plants of more modern character, which would produce equal service" *(Record*, p. 438).

(**a**) So far as concerns Appellee's **water-gas capacity,** representing more than four-fifths of the total capacity, no question can be raised that it is not now in the shape "of modern, up-to-date water-gas plants which could not be improved upon anywhere" (*ante*, p. 38; *Record*, p. 276).

(**b**) As to Appellee's **coal-gas plants,** it will be observed that the valuation of Mr. Mayer is $327 for the 14th Street and $330 for the 42nd Street plant, per thousand feet of maximum daily capacity (*Record*, p. 1454), while the cost of a new coal-gas plant (such as "Astoria") equipped throughout with the latest type of machinery, will easily run to $400 or more per thousand *(Mayer, Record*, pp. 1456, 1721, 1724, 1727; *Master's Report*, *Record*, pp. 181-3); and the additional capitalization of $70 or more per thousand feet, would require an additional amount on each thousand feet of gas produced, to pay a reasonable return thereon,—to say nothing of the "replacement" charge which such gas must also carry to cover the value of the old plant scrapped, or the "depreciation" on the $70 additional plant value.

This is a circumstance which Appellants seem wholly to have overlooked.

5. Assumed Reproduction of Appellee's Present Capacity, in Larger Units.

The Assignments do not directly suggest, as a proper basis of valuation, the cost of the replacement of Appellee's three water-gas plants by a single larger water-gas plant, or its two coal-gas plants by a single larger coal-gas plant.

Such a proposition was, however, presented below and is now advanced in the Brief for the Attorney General.

It is submitted to be without merit.

(a) The Proposition Unsustainable in Law.

A Company which has been built up to meet the needs of a community as they have developed, with plants in many instances supplying distinct sections, should not be despoiled of its property, even if a single larger plant might now be produced at less cost per unit of capacity.

(b) Great Size of Appellee's Present Plants.

If, however, we examine the proposition on its merits, it is important not to overlook the immense size of each of Appellee's present plants. Their maximum day's capacity, and annual capacity based upon the recognized formula (*post*, p. 122), are as follows:

	Cu. Ft. Maximum Daily	Cu. Ft. Annual Capacity
21st Street	27,500,000	5,500,000,000
44th Street	8,500,000	1,700,000,000
99th Street	5,500,000	1,100,000,000
14th Street	5,000,000	1,000,000,000
42nd Street	4,500,000	900,000,000

It will be observed that the capacity of the 21st Street plant alone (probably the largest water gas plant in the United States with the exception of the New Amsterdam, which exceeds it but slightly) has an annual capacity equal to nearly twice the entire sales of the City of Boston in the year 1905 *(Daily capacity of 21st St. Plant, Record, p. 1326 ;— Boston yearly sales, Record, p. 212).*

And even the smallest, the 42nd Street plant, has a capacity equal to nearly one-third the requirements of the same city in that year.

(c) No Economy in Gas Production in Larger Plants.

Mr. Cowdrey, who was invited by the Committee of the Chicago Council upon the recent investigation in that City, to advise them as a practical gas engineer, there said :

> " I doubt if one could distinguish between the cost of operating a plant of 20,000,000 capacity and the operation of four plants of 5,000,000 capacity each " ((*Record*, p. 2589).

And Appellants' witness, Professor Bemis, in substantiation of this view, which does not seem anywhere to be questioned, testified that when a plant had reached so large a capacity as 700,000,000 cubic feet per annum, there was little, if any, economy in production in a larger plant (*Record*, pp. 1509, 2417).

It will be observed (*ante*, p. 43) that Appellee's smallest plant has a capacity substantially in excess of the capacity stated by Professor Bemis.

(d) Cost of Larger Plant in Place of Present Plants.

In point of fact, it does not appear that a larger manufacturing plant (excluding holders, separately considered below), could be produced at less cost per unit of capacity than the present ones.

Water-Gas.

As to water-gas capacity, the Master has found, *upon the request of Appellants*, that the valuation, per thousand of capacity, placed upon Appellee's water-gas plants, in Mr. Mayer's valuation, which the Master generally followed, is " a fair unit to assume " as the value of a water-gas plant, *no matter what the capacity might be* " ; and, accordingly, that the cost of a collossal water-gas plant equal to Appellee's total water-gas capacity of 41,500,000 per day, would be $5,104,500 (*Record*, p. 264).

Indeed, Mr. Mayer's valuation of the three water-gas plants (at 21st, 44th and 99th Sts.) aggregated $5,112,000, exclusive of holders (*Record*, pp. 1326, 1329, 1331), as compared with the Attorney-General's figure of $5,104,500 (*Attorney-General's Brief, p. 92*), or substantially identical.

Coal-Gas.

But in his computation as to a single coal-gas plant (*Attorney General's Brief*, pp. 88-92) the Attorney General is completely in error.

(**a**) As to Appellee's existing coal-gas plants, Mr. Mayer's valuation was for the 14th and 42nd Street plants, $327 and $330 respectively per thousand feet of maximum daily capacity (*Record*, p. 1454); while for a plant of the combined capacity of the two, 9,500,000 feet per maximum day, he declined to make an offhand estimate, but declared that he did not believe "that any plant can be built *for less* than $300 per thousand" (*Record*, p. 1457). At even $300 per thousand feet this would mean an average difference in value between Appellee's existing plants and the proposed plants, of less than $30 per thousand feet, or of less than $285,000 in the aggregate.

But Chief Engineer Bradley testified that in his judgment a coal-gas plant would cost $400 per thousand feet of capacity (*Record*, pp. 1721, 1724, 1727), which in any aspect would give a valuation for a coal-gas plant of 9,500,000 feet maximum daily capacity, much beyond the aggregate valuation of Mr. Mayer even for the two existing plants.

(**b**) Realizing, perhaps, the insufficiency of his argument in this aspect, the Attorney General proposes to measure the cost of the 9,500,000 plant by the cost of the Astoria plant, with which method we are quite content; but for this purpose he suggests Chief Engineer Bradley as estimating, *on the basis of the unit cost at Astoria*, the cost of a plant of 10,000,000 feet capacity to be $2,441,015.81, or $244.10 per thousand feet of capacity,—upon which ratio a plant of 9,500,000 feet would cost $2,318,950, as against Mr. Mayer's valuation of $3,124,241 for Appellee's Fourteenth Street and Forty-second Street coal gas plants together.

The evidence not only fails to sustain, but clearly contradicts, such assumption. The Master expressly refused to find that a plant of 10,000,000 cubic feet could be constructed at the aggregate or unit cost thus advanced by the Attorney General (*Record*, p. 264), calling attention to the fact that Mr. Bradley " expressly stated that the figures regarding the Astoria cost, which he then gave at counsel's request, were not complete or accurate." (*Master's Report*, p. 264–5).

Mr. Bradley had testified that a coal gas plant would cost $400 per thousand cubic feet (*Record*, pp. 1721, 1724, 1727); Mr. Mayer had testified that the Astoria plant would run up to $400 easily (*Record*, p. 1456); and the final cost of the Astoria plant had already been presented and, even exclusive of land and tunnel, was much beyond $400 per thousand cubic feet (*Master's Report*, *Record*, pp. 181–3).

The facts are that counsel for the Attorney General himself prepared a blank upon which were indicated various items of coal-gas apparatus (State's Ex. V, *Record*, p. 5278), and requested Mr. Bradley to state the cost of such apparatus at Astoria, which was done (*Record*, p. 1705). Thereupon, he asked Mr. Bradley to estimate, offhand, the cost of similar apparatus for a plant of one-half the Astoria capacity, or 10,000,000 cubic feet. The total thus reached was $3,360,021.93, but one has only to read the Record (pp. 1711–13) to note the worthlessness of this figure as an accurate statement of the cost, even of the apparatus which it covered,—Mr. Bradley repeatedly indicating that it was impossible without consideration to give an accurate estimate, and that the cost of the smaller capacity could not necessarily be *pro rated* from the larger.

Mr. Bradley also protested that the figures in State's Ex. V were only a part of the total Astoria cost (*Record*, p. 1711), that it lacked many items of apparatus constructed at Astoria (*Record*, pp. 1711, 1712, 1736–7); and subsequently (*Record*, p. 1741–2), he presented a schedule (Ex. 235, *Record*, p. 5289) showing a list of items omitted from State's Ex. V, aggregating (as the Master states) $4,327,930.67 (*Record*, p. 264).

The Attorney General now suggests (*his Brief*, p. 91) that only $111,000 out of Exhibit 235, is to be added to the items of Exhibit V; and adds that the Court will observe that, of the list given by Mr. Bradley (Ex. 235), "everything except the coal and coke handling plant would be *referable to real estate* and to the particular Astoria real estate, whereas what was sought was the value of the plant exclusive of real estate and holders." Nothing could be more erroneous.

The cost of production of a plant, includes any number of items which are "referable to real estate" in the sense that they ultimately become part of the real estate, even buildings and the foundations of apparatus; and in Exhibit 235 we find such items as "fences," "land drainage system," "engineering department," "temporary structures," "repairs," "handling cement," storeroom, sundry and general "expense," "insurance," "legal expense," "taxes," and doubtless many others, which analysis will show to be equally inevitable in the construction of a plant—to say nothing of interest on investment in plant during construction, which item, for Astoria, amounted at the time of the trial to upwards of $1,000,000 (*Record*, p. 1560), and many other items included in "grading, filling and the *necessary work on real estate to produce this plant*" (*Record*, p. 1712).

Moreover there are conditions on the Island of Manhattan, which make plant construction there in many respects more expensive per unit than at Astoria, such as the presence of marginal streets between the docks and the property to be improved, the necessity of heavy masonry walls about the gas plant instead of lighter fences, the general congestion of traffic and restrictions upon building in the midst of a great City, and the fact that the plants must be cut up by intersecting streets only 200 feet apart, which are certain to increase the expense of construction, *ceteris paribus*, beyond expense at Astoria.

It follows from the foregoing that the estimate in the Attorney General's Brief for coal-gas plant, $2,424,970 (p. 92), cannot possibly be accepted.

(e) Reproduction of Holders.

As to holders,—no fair valuation could be based except upon them as they exist. They have been constructed to meet the requirements of the growing business and vary in capacity from two hundred thousand cubic feet to five million cubic feet *(Record*, pp. 624, 1319, 1323, 1325, 1329, 1333).

The larger holders cost less to construct per unit of capacity than the smaller ones; but it is only within the last few years that the progress of the art has made it possible to construct the largest holders *(Record*, p. 658); and it would be plainly confiscation to value Appellee's holders constructed prior to that date, upon the cost of reproducing its entire holder capacity in five million foot Units.

Moreover, the sizes of holders are adjusted to the requirements of special districts; and it would obviously be uneconomical to establish an immense distribution holder in a section representing a relatively small consumption of gas, even though such a holder might cost less per unit of capacity than the smaller one which would meet the requirements of the community.

The Attorney General, however, not only takes as his unit the largest holders now in existence on Manhattan Island, but his value of his single 3,600,000 foot holder includes no engineering or interest charge, which together amounted to 15% and were added by Mr. Mayer in lump, as a final item of his computation *(Record*, pp. 1320-1).

(f) Other Items of Assets.

The valuation of real estate is reduced by the Attorney General to $10,422,106.30 (*his Brief*, p. 94), upon the theory that the immense holders assumed in place of Appellee's present holders, will release some land; and of course it falls with the objection to that method of valuing such holders.

Moreover, in his tabulation (p. 94) the Attorney General includes $7,852,151.03 as the value (book value or cost to Appellee) of "mains and services"; whereas, this sum is the book value of "*mains*" *alone* (*Record*, p. 5034),—the present value of services being $1,994,000 additional, and even their book value $1,212,000 (*Record*, pp. 432, 5034).

6. Assumption of Transfer of Capacity to Astoria.

It is not considered necessary to enter upon a criticism of the Attorney General's estimate of the expense of the construction at Astoria of a water-gas plant of 50,000,000 cubic feet of daily capacity, which, with the first Unit at Astoria already constructed, would meet Appellee's maximum day's sales of 70,000,000 cubic feet *in 1905*.

The construction of such a capacity at Astoria would take so many years, and the cost would be subject to so many considerations, that it is not seen how any aspect of such a speculative discussion can be of interest in the present action.

It will be observed, however, that this would involve the abandonment of all Appellee's Manhattan plants, with a loss of $10,400,000 in efficient apparatus, as shown by Vice-President Addicks (*Record*, p. 1588); and to make good such enormous depreciation would require charges in the operating cost of gas, which it would be impossible to consider with gas at 80 cents (*Record*, p. 1587).

As to the propriety of such a summary and wholesale slaughter of existing plant, we quote from the Attorney General's Brief (p. 115), on another point, as follows:

> "*Neither the Consolidated Gas Company nor any other company has the legal right to abandon efficient and modern plants for the purpose of substituting therefor modern and efficient plant of greater capacity, at the expense of the public under the cover of the charge 'on account of depreciation.' * * * Abandonment, as here, is the arbitrary scrapping of plant that could serve the public for years to come. It is in a sense willful destruction of plant.*"

And so far, too, as concerns more than four-fifths of Appellee's capacity, now in water-gas, it can hardly be claimed that Appellee could realize any economies in production by a transfer to any other site.

It may be observed in closing, that in his computation of cost of reproduction at Astoria, the Attorney General has again (p. 95) included, under the heading "Mains and Services", the book value (and not even the present value) of "mains" alone.

POINT V.

Valuation of Mains.

That the present value of Appellee's 822 miles of mains based on cost of reproduction is at least $12,636,000 (*ante*, p. 6), was found by the Master and Court upon overwhelming testimony (*Record*, pp. 176–8, 390, 398, 432). It did not rest upon the testimony of Superintendent of Mains Simpson, but was corroborated by Dr. Humphreys and admitted by Appellants' witness Marks to be "moderate and fair" (*Record*, pp. 177, 2786).

Appellants object to this valuation and argue for the substitution of " original cost ", which they place at $7,852,000.

> Note: Referring to the 822 miles of mains valued, counsel for the Public Service Commission (*Brief*, p. 78) refers to 27 miles thereof, valued at $103,207.01, as "disused mains." They were merely temporarily cut out but still a part of Appellee's useful gas property. Some mileage of mains will, at any time, be found cut out for the purpose of putting in new joints, or on account of interruption of their operation by City construction of water pipes, or of some other contingency. All "*abandoned*" mains had been charged off on Appellee's books, leaving the 822 miles remaining (*Record*, p. 1681).

1. " Original Cost " of Installation.

At the outset it may be noted that the *cost of installation* of the mains " in the first instance," is not shown to have been only $7,852,000. It was certainly in excess of said sum, which is the " Cost to Complainant " thereof (*Record*, p. 254).

(**a**) Said $7,852,000 represents, in large part, mains taken over by Appellee in 1884, at an appraised value based on the then price of $25 a ton for pipe (*Record*, p. 691), laid under the inexpensive pavements then existing. The balance represents mains laid since, under similar inexpensive conditions for pipe, and largely so for pavements.

Indeed, the $12,636,000 representing present value, was based on a valuation of pipe of only $28.90 per ton (*Record*, pp. 691, 2994).

(**b**) But the six constituent Companies began business at various times from 1823 to 1876, and installed their main systems in large part while pipe was $60 or even $76 per ton (*Record*, pp. 2046, 2991).

The books of the constituent Companies gave no line on the cost of the Mains. Referring to the subject of Mains with other tangible property, and the amount at which they were carried on the books of said Companies, the Master said (*Record*, pp. 178-9) :

> " In many instances the figures thus appearing on the books were reached after charging down as depreciation *very large sums which represented the actual cost.* Such charging down was in addition to and exclusive of expenditures for current repairs and renewals necessary to keep the plants of the Companies in efficient condition. For example, in the case of the Manhattan Company, it appears that during a period of 10 years there was written off on account of mains, meters and services alone the sum of $768,517.96, while during that period the additions to those accounts amounted to but $147,630.70."

(**c**) In summary, it may be said that the mains were in large part originally laid under conditions of *expensive pipe* and *cheap* *pavement;* while the present valuation of $12,636,000 is based upon *cheap pipe* and *expensive pavement.* It is impossible to say with certainty, at this time, which basis would result in the higher valuation.

2. No Ground for Exception of Mains from "Present Value" Rule.

If, as both reason and authority indicate, "present value" based on cost of reproduction generally governs, no reason is perceived why Mains should be excepted. The valuation must be consistent throughout. "Cost of installation" can not be accepted as to one item, and "present value" as to another. And if "cost of installation" were found to be the true rule, it would appear that Appellee's "plants" cost more than the Master's valuation, which is practically the same as Appellee's "book value" therefor; for the appraised (Appellee's "book") value, at which Appellee took over the plants of the constituent Companies in 1884, *was less than they were carried on the books of the constituent Companies, even after the latter had charged them down by millions of dollars to "conceal earnings"* (*ante*, pp. 17-18).

If the "present value" of Appellee's entire property becomes, from what may be called "natural developments," less than original cost of creation,—*and there is no clear evidence that, taken as a whole, the present valuation may not be so,*—the loss is Appellee's, and consumers of its gas can not be required to make up such loss; and, conversely, if from like "developments" it has become more valuable than such original cost, that is Appellee's gain, and such consumers can not demand free enjoyment of the increment.

Nor, is this proposition original with Appellee. It has been asserted in this Court, in cases of the highest importance, by State authorities in defense of rate legislation. Thus, in *Smyth v. Ames,* the Nebraska Board of Transportation and Attorney General, strenuously maintained that the only proper basis of valuation of the Union Pacific Railway System was the *cost of reproduction*, and *not the higher cost of construction*, of the same.

And a good rule does not become a bad one if, in some other case, cost of reproduction exceed original cost.

3. Assumed Allowance for Future "Restoration."

It is suggested as one of the chief grounds of Appellants' contention that cost should prevail over present value, as to Mains, that—

> "Complainant has demanded, and the Court has allowed, a large amount on account of depreciation of Complainant's property, including mains, out of which they *are to be restored* (to wit: 11c. per thousand cubic feet), and it would be absurd to charge the public with a *fund to restore the mains*, and at the same time make the public pay Complainant a return upon the value predicated upon the additional expense that will be incurred thereby." (*Attorney General's Brief*, p. 101).

This statement would convey the impression that Appellee, in addition to actual current expenditures to repair and replace mains as use requires, had been allowed to lay up a reserve or other out "*fund*" of which the mains at some time in the future "are to be restored."

(a) As will be hereinafter noted, *no such accumulating fund has been allowed.* Indeed, not even enough to meet the *average* of Appellee's *current expenditures for repairs and renewals* in the up-keep of its property, including mains, for the last twenty years, *which the Attorney General concedes (post*, p. 141); although such expenditure, as to Mains, was based chiefly upon the old and inexpensive pavement which could be replaced at from 15c. to 25c. per square yard, whereas the expense of replacing the new pavement is from $2.70 to $8 per yard (*Record*, p. 178).

(b) Nor is it true that 11c. per thousand cubic feet was allowed, on Appellee's sales. This allowance was made *only on the gas made by Appellee*, and not on all the gas which it sold and which went through its mains and general distribution system.

(c) And if a "fund" had been allowed, of the formidable character imagined by Counsel, it might have furnished grounds for the reduction of the "fund," but not for a lower valuation of investment or a reduction in the reasonable rate of return thereon.

4. Present System of Mains Normal.

It is said that the six constituent Companies, by whose consolidation Appellee was formed in 1884, had independent systems of mains. This of course is true, but in general they covered *independent territory.*

We do not find in the Record the statement of Mr. Simpson quoted by the City (*Brief*, p. 58) as to be found at page 698 of the Record. But Mr. Simpson does in substance say (*Record*, p. 698) that it is possible, but he "*does not think it is practicable*" on account of the vast expense involved, to make all the mains of Appellee "uniform." That would be true of any Company, anywhere.

The mains of no Company in business for nearly a hundred years, or much less period, will be found "uniform" in size at every point. Mains might now be installed 30 inches in diameter where seventy-five years ago a diameter of 8 inches would have been ample; and no Company would have been justified in installing 30 inch mains for the consumption of that day.

Appellee's system of mains has grown up naturally to meet increasing consumption; over 56% of the City blocks have only one main and over 86% have two mains or less (*City's Exhibit* 102, p. 1653 of Exhibits); duplications "beyond a line on each side of the street "occur " mostly on the avenues and on Broadway" or on the " crosstown streets in the lower end of town * * * particularly large and important streets like Canal", where there is heavy consumption (*Record*, p. 3330); a "*single pipe*" system of mains would involve services of great length, often diving under subway obstructions, and *involving greatly increased cost of maintenance* (*Record*, pp. 673, 3914, 3972, 4182), *the City not permitting Appellee to lay its mains in the middle of the street*, even if the centre of most avenues and many cross streets were not already occupied by street railway and other construction (*Record*, pp. 719, 3953); and in short, in New York City above all places, such a single pipe system, involving one big main in place of two smaller ones, would even *de novo* be unwise and uneconomical, *and cost more than the present system* (*Record*, p. 3972).

That all present mains are required is indicated by the City's "One hundred and Seventh" Assignment, where it declares that the Court "should have found that the distribution system as now existing is *inadequate for the output of Complainant*" (*Record*, p. 475).

POINT VI.

Valuation of "Services," "Meters and Miscellaneous," "Working Capital" and "Special Franchises," as allowed by the Court.

1. "Services" and "Meters and Miscellaneous."

The same observations apply to present valuation of "Services," $1,994,000, as to the allowance of mains at present value.

As to "Meters and Miscellaneous," $4,100,000, we understand no objection to be raised by the Assignments.

2. "Working Capital" and "Special Franchises."

We understand no objection to be raised by the Assignments to the allowance by the Court of $1,616,000, for "Working Capital." *The Appellee, however, believes that as a matter of law the finding of the Master for "Working Capital," $3,616,000, should be accepted*; and that phase is considered hereafter (*post*, p. 77).

The subject of "Special Franchises," $12,000,000, as allowed by the the Court, is considered in a separate Brief.

POINT VII.

Corroborative Evidence of Conservatism of Valuation of Appellee's Property, taken as a whole.

At the conclusion of his review of the valuations of the Master, the Court said that the method of estimate adopted by itself and the Master it believed to be—

> "The only method of valuation practicable in this case." (*Record*, p. 399).

But, while it was the judgment of the Court that exact figures could not be reached by any other method, it was able to say that Appellee's—

> "entire capitalization does not seem disproportionate to its entire business." (*Record*, p. 399).

The Court draws attention to the fact that the Stock has apparently been "at times the subject of speculation," so that "recorded prices have varied so widely as to render any safe conclusion impossible;" and that, furthermore, its capitalization involves the ownership of electric lighting Company and other securities, so that the capitalization devoted to the gas business cannot be segregated. (*Record*, p. 399).

1. Market Value of Appellee's Stock.

If, however, it is considered by this Court that the market value of Appellee's capital securities is, nevertheless, of some significance, it will be noted that the market value of Appellee's Stock at the time of the trial was found, *on request of Appellants*, to be $192.33 per share (*Record*, p. 277); at which rate the amount of capital stock alone, invested in Appellee's gas business, $41,356,000 (*Record*, p. 260), would show a total market value of $79,539,994.

And if, to eliminate the effect of investments in other Companies, e go back to the year 1899, before Appellee had made such inestments and while its capital had not been increased beyond the 39,078,000 authorized in 1884 *(Record*, pp. 153, 211), the Master nds an average market value in that year of $193 per share, at which rice Appellee's share capital *at only $39,078,000,* represented a aluation of $75,420,540; while, at the average price between 1885 nd 1899, $155.80 per share, the Master finds that said share apital of $39,078.000 would represent a value of $60,883,000 *Record*, p. 211).

Each one of said valuations, exceeds the "present valuation" of ppellee's property, under the Decree (*Record*, p. 432).

. Comparison with Assets of Other Gas Companies.

The Master also finds that the valuation found by him (and uch more would it be true of the lower valuation reached by he Circuit Court) is most conservative when compared with the alue of property of other Companies furnishing a similar service in ther large Cities; and this is the case in spite of the fact that, as he Master finds,—

> "There is no City, not even Chicago or Boston, where land is so expensive as in New York, nor, as it would appear, is the cost of construction elsewhere so high" *(Record*, p. 212).

The valuation of Appellee's "permanent plant and property" excluding franchises and good will) as found by the Court, represents only a trifle over $3.60 per thousand feet of Appellee's sales; nd only $4.60 of sales of Appellee's *own production alone*, although hat divisor is clearly inadequate and unfair so far as its distributing system is concerned.

(**a**) The Master finds that the capitalization of the Boston Company, under an Act which expressly provided that the acceptance of such capitalization should not be an admission on the part of the Company—

> "for any purpose that the par value of such capitalization is equal to the value of its property or to the value of the property necessary for the conduct of its business"—

was "a little over $5.00 per thousand feet" of sales; while the value of the assets of the Boston Company as then appraised approximated "$8.00 per thousand feet" (*Record*, pp. 212, 2084).

(**b**) The capital of the Chicago Companies was found to be over $6.00 per thousand feet, upon the testimony of the Appellants' witness Professor Bemis (*Record*, p. 2569); and the Chicago Committee, in charge of the recent investigation—

> "found $5.00 per M. of sales to be a fair valuation for 'structural value and working capital only'" (*Record*, p. 213).

(**c**) So, too, in Baltimore, the same witness testified that the value of the entire property of the company there could be fairly computed at twenty times the net profits of the company from its gas business (*Record*, p. 2571)—the charge in Baltimore then being $1.00 per thousand (*Record*, p. 213); at which rate, taking even the net profit of Appellee as found by the Court, $4,015,475.02 from Appellee's own product only (*Record*, p. 432), Appellee's assets would be valued at upwards of $80,000,000.

(**d**) And the Laclede Gas Company, supplying the City of St. Louis, has a capital of $8 per thousand feet of production (*Record*, pp. 2532–3).

(**e**) While according to the statistics of the United States census for 1900, respecting the value of property employed in the gas industry, the "average structural value per thousand feet sold" throughout the United States, was "$7.23" per thousand feet (*Record*, p. 214).

POINT VIII.

Appellee's Tax Reports, and Testimony before the Legislative Committee in that Connection.

This subject was thoroughly considered by the Master (*Record*, pp. 214–216). It was also exhaustively presented by the Appellants, in the Court below, but does not seem to have been considered by the Court of sufficient importance to require comment.

So much stress seems, however, to be laid by Appellants upon it, that a brief reference thereto is thought proper.

1. The "Tax Reports."

The first Tax Report incorporating the items criticized, was made to the *local Assessors* of The City of New York in 1902; and subsequent ones to the local Assessors, and to the State Board of Tax Commissioners under the "Franchise Tax" law, followed the same form—adjustment being made in each case for additional property meanwhile acquired (*Record*, pp. 1245, 1246).

As illustrating all, the Master quoted as typical the Report to the State Board for the year ending June 30, 1904 (*Record*, pp. 214, 5276), as follows:

	Investment as shown by Ledger.	Value stated in Franchise Tax Report.	Difference.
Real Estate	$11,216,479.71	$11,216,479.71	
Plant	15,755,462.88	8,456,595.71	$7,298,867.17
Mains	7,571,808.83	*3,666,531.38	3,905,277.45
Services	1,227,931.86	*594,625.01	633,306.85
Franchises and Rights	7,781,000.00	7,781,000.00	
Stocks of other Companies	46,674,034.27	46,674,034.27	
Bonds and obligations of other Companies	8,686,744.70	8,686,744.70	
Material and Supplies	697,014.92	697,014.92	
Accounts and Bills Receivable	1,944,968.09	1,944,968.09	
Cash on hand	1,146,866.87	1,146,866.87	
Unclaimed dividends	39,052.50	39,052.50	
Metropolitan Fund	500.00	500.00	
Meters, Stoves and other personal property	3,630,772.12	2,667,329.77	963,442.35
Totals	$106,372,636.75	$93,571,742.93	$12,800,893.82

*Stated in the Tax Report under the heading "Present Value allowing for depreciation." "Reproduction" value stated as $5,613,221.12 for Mains and Services, detail of which (not asked for and not given in Tax Report to State Board) is as follows :

For Mains	$4,829,925.82
" Services	783,295.30
Total	$5,613,221.12

It will be observed, that the figures in the tax report differ from their "book value" *in only four items; (a)* "Plant," *(b)* "Mains," *(c)* "Services" and *(d)* "Meters, Stoves and other personal property."

The first two items in the second column, $11,216,479.71 and $8,456,595.71, appear in said Tax Report at one point or another as a single item, $19,673,075.42, for "Real Estate and Plant."

(a) As to Plant.

Referring to "Plant," which is the principal item of difference, the Charter of The City of New York *(Chapter 466, Laws of 1901, § 889)* provides in relation to assessments for taxation, that there shall be reported to the Commissioners of Taxes and Assessments by their deputies, a description of real estate with the sum for which in their judgment said property "under *ordinary* circumstances would sell".

A gas plant cannot be transported to another point; and upon sale of the land for "ordinary" improvement would be of value simply as "scrap", no matter how great its original cost or value as an operating concern, except for the salvage of a small amount of water gas apparatus *(Record*, p. 1702). Hence, as Appellee knew by experience *(Record*, p. 1703) and Appellants' witnesses admitted *(Record*, pp. 2451, 2822), if the land on which a gas plant is located be sold for "ordinary" use, it will bring only *the value of the land with an insignificant addition for the plant thereon.*

The Tax Reports, made up in view of this statute, under advice of counsel *(Record*, pp. 1702-3), assumed that sooner or later one-half of the land with the plant thereon might be sold upon Appellee's removal of its generating plants to Astoria, which was then contemplated for some time in the future; and the total valuation of land and plant for the Tax Report was accordingly computed on the following basis: *The full value of the land as appearing on the books*, plus the book value of *one-half the plant*, plus a few hundred thousand dollars to represent the possible *scrap* value of the other half of the plant when the land on which it stood should be sold *(Record*, pp. 1702, 1703).

These figures as to "Plant" were made up by Chief Engineer Bradley, for the use of Vice-President, then Secretary, Carter, who executed the Report *(Record*, p. 1702), and were based *solely* on the special provisions of said § 889 of the Charter as construed by counsel *(Record*, p. 1246).

The result, as pointed out by the Master (*Record*, p. 215), was the figure for "Plant" shown in the Tax Report.

(b) As to Mains.

The amount of $4,829,925.82, or rather the unit rates upon which it was computed, were prepared by Superintendent of Mains Simpson for the use of Mr. Carter (*Record*, pp. 689, 1755). This amount represented *bare cost of laborand material in laying the mains in soft earth* (*Record*, p. 720), excluding all allowance for rock excavation, sub-surface obstructions, asphalt or new block pavement, engineering expenses, wear and tear on apparatus, and various other items which go to make up the total cost and value of the mains as actually laid and existing under the pavements of the City of New York to-day (*Record*, pp. 690, 1753–1755).

Mr. Simpson knew that the figures were desired for a tax report, and believed that the most favorable basis of installation might be assumed in that connection (*Record*, p. 1754); for the extra cost of Mains, due to obstructions and expensive conditions, adds nothing to their *earning power*, beyond what would exist if they were all laid under the least expensive conditions.

It appears that 25 per cent. was taken by *Mr. Carter* from the total of Mr. Simpson's figures, to produce the amount of $3,666,531.38 shown in the Tax Report; but this was not based on any assumption of a physical deterioration of the property, but on Mr. Carter's theory that the smaller sizes of mains would from time to time in the future be replaced by larger ones (*Record*, p. 1242).

(c) As to Services.

The figures for "Services" were not made up by Mr. Simpson or the Engineering Department *(Record*, pp. 1241, 1242). They were prepared by some one before Mr. Carter had anything to do with the Tax Reports, and he continued to use them without question; but they are now conceded to be incorrect "even for the purposes of taxation" (*Record*, pp. 1241, 1242).

(d) As to Meters and Miscellaneous.

The tax figures represent in this case the "book value" (cost to Appellee), less 25 per cent. deducted by Mr. Carter as an estimate of what might be obtained for them at a "forced sale," and not as an estimate of value to a going concern (*Record*, p. 1241).

(e) In General.

It is obvious from the facts before the Master that the valuations in the tax reports *did not and were not intended to show the structural value of the property as an operating concern, or the cost of its reproduction* (*Record*, p. 1243).

As the Master has said (*Record*, p. 216).

> "It is a matter of common knowledge that reports, petitions and similar papers required in connection with matters of taxation are, in the case of large corporations, ordinarily prepared by counsel. To some extent they are in the nature of pleadings, and are so drawn as to support the theory on which it is hoped to secure the most favorable results, either before the tax officials or the Courts. Under these circumstances, when, as in the present case, it appears that taxes are being constantly contested, it must very commonly occur that views are expressed on behalf of the corporation more or less inconsistent with the valuations it would put upon its property for purposes of sale, condemnation, or such an action as the present. This has been recognized to a certain extent by the Courts."

It has been in terms held, in the lower Federal Courts, that such reports constitute no estoppel, when the question in controversy is "actual value or cost of reproduction"; and that, when explained by credible testimony, they may be disregarded.

Louisville R. R. Co. vs. Brown, 123 Fed. Rep., 946, 949;
Southern Pacific R. R. Co. vs. Board of Railroad Commissioners, 87 Fed. Rep., 22.

2. Testimony Before Legislative Committee.

The only officer examined before The New York Legislative Committee of 1905 (Stevens Committee) respecting the tax reports, was Vice-President, then Secretary, Carter who executed them; and only *a part* of his testimony before that Committee was read into this record by Appellants.

It appears that Mr. Carter was called before the Committee from a sick bed (*Record*, pp. 1239, 1240), without any notification of the subject upon which he was to be examined, or opportunity to refresh his memory, or ascertain the exact method of making up the data in the Tax Reports (*Record*, pp. 1240, 1247); that he is not an engineer, and that the figures therein as to "Plant," "Mains," and "Services" were made up and handed to him by other individuals as above stated (*Record*, pp. 1239, 1702, 1703, 1753-1755); and that, with the meagre information derived from them, he did assume the figures in the tax reports to be the true "value" for the purposes therein stated (*Record*, pp. 859-861, 1008-1010).

But he made it quite clear to the Committee before leaving the stand, that the valuations of plant given in such reports represented neither "cost" nor "reproduction value" thereof (*Record*, p. 1243), but were figures which "took into consideration the removal to Astoria and abandonment of the generating plant" in Manhattan (*Record*, pp. 1243), which was the fact (*ante*, p. 61).

It is to be borne in mind that the investigation of the Stevens Committee was *ex parte*, hasty and incomplete (*Record*, pp. 952, 953; *post*, p. 176); and that the Company neither had opportunity to go into the subject later before the Committee, nor did it occur to the Company that any one could assume that the tax figures represented the structural value of the property as an operating concern (*Record*, pp. 1246-1247).

Basis of "Tax Valuations" Promptly Explained.

It also appears that, at the first opportunity, which developed before the Gas Commission a few months later, and in view of the weight which had been laid by the Stevens Committee on the tax reports (*N. Y. Senate Doc. 30 of 1905*), Messrs. Bradley, Simpson and Carter explained in detail the basis on which the reports had been made up, being then able, after investigation and reference to proper data, to testify with exactness on that subject (*Record*, pp. 720, 721).

This was, of course, before the Order of the Gas Commission, which was made February 23d, 1906, and also long before the passage of the "80 cent gas Act" here in question. *Hence, neither the Legislature nor the Commission could have been in any manner misled as to the basis of the "tax report" figures.*

3. Appellants' Witnesses on the "Tax" Valuations.

It is unnecessary to argue here whether the methods of computation employed in making up the tax reports were legally sound; it is sufficient to show that they did not indicate the value of the Appellee's property as an operating concern devoted to the public service,—*and this is shown and conceded by Appellant's own witnesses.*

Thus, after deducting theoretical and impossible depreciation,—

> (**a**) as to "Plants," the valuation of both Appellants' witnesses was much above the figures of the Tax Report (*Record*, p. 175);
>
> (**b**) as to "Mains," witness Marks declares that $12,636,150 is a "moderate and fair" estimate of present value (*Record*, p. 2786), and Edgerton's estimate, when supplemented by items of cost omitted by him, amounted to $13,510,299.86 (*Record*, pp. 3926, 3927);

(**c**) as to "Services," Marks admits that a "book value" of $1,212,000 is "moderate and correct", even for original "cost of installation" (*Record*, p. 2786);

(**d**) and as to "Meters and Miscellaneous," no one contradicts Mr. Carter's statement of present value at $4,100,000 (*Record*, p. 748).

It is difficult to see on what theory Appellants can hope to advance as controlling in this action, these "tax report" figures, *which are repudiated by their own witnesses as less than the true valuation of the items in question on any basis.*

Appellants' Further Inconsistency.

It will be observed, too, that while Counsel for the Public Service Commission strenuously asserts that the valuation of Appellee's Plant should be reduced by the "depreciation," which he says, Appellee itself has "continued to claim in its tax reports, based upon an intended early removal to Astoria and consequent scrapping of the Plant" (*Brief*, p. 65), he also contends with equal vigor against the inclusion in Appellee's assets of a *corresponding part of the Astoria Plant, which would in such event take the place of this Manhattan property scrapped*, or the inclusion in the computation of cost of gas to be derived by Appellee therefrom, of any return on said Astoria investment.

PART SECOND.

Items of Property of Appellee, aggregating $11,361,565, included by the Master but excluded by the Court, which Appellee contends should as a matter of law be reckoned in its gas assets, thereby increasing the $59,831,435 allowed by the Court *(ante,* p. 6) **to $71,193,000.**

POINT IX.

Items of Property Included by the Master but Excluded by the Court, which Appellee Contends should, as a matter of law, be reckoned in its Gas Assets.

The Appellee submits that the following deductions by the Court, from the Master's statement of property properly held by Appellee in its gas business (*ante*, p. 6), were not legally justifiable and should be restored to the computation :

Real Estate (Land)	$1,311,565
Working Capital	2,000,000
National Coke & Coal Company	50,000
Franchises and Good Will ($20,000,000), in place of Franchises alone ($12,000,000)	8,000,000
Total additions	$11,361,565
Valuation of Property already allowed by the Court (*ante*, p. 6)	59,831,435
Total valuation here claimed by Appellee	$71,193,000

In addition to which it is contended that the value of the "Astoria plant" (or "Property of other Companies" producing gas sold by Appellee), $12,000,000, must be directly included in the capital upon which a return is to be earned, *unless* such return be included in the computation of cost to Appellee of the gas derived by it from subsidiary Companies.

The foregoing items represent *the entire difference between* the allowance by the Master and the allowance by the Court, as indicated in the table hereinbefore set forth (*ante*, p. 6); except that the additional item of "Real Estate" as above claimed, $1,311,565, is less than the difference between the Court and the Master ($1,475,565), by the sum of $164,000 explained below, on this page.

A. Additional Real Estate $1,311,565.

The Master found the entire real estate of Appellee to be of the value of $14,161,000. (*Record*, p. 160); from which he excluded a piece of water front property at Shadyside ($300,000), and a block formerly of the 18th Street plant ($400,000), finding that Appellee was entitled to include as real estate held in its gas business the balance of $13,461,000 (*Record*, pp. 165-166, 247).

A few parcels included by the Master were not actually covered by apparatus, though in most cases acquired for a distinct purpose in connection with Appellee's business,—some of them for immediate use; *and these the Court excluded as not "actually in use"* (*Record*, pp. 395-396, 423), the Decree (*Record*, p. 430) reading as follows:

> "The real estate valued by the Master at $13,461,000, included certain parcels held by Complainant for future use, but not at the date of the beginning of this action actually in use by it, in its gas business; and omitting from the capitalization of Complainant for the purposes of this suit such unused parcels, the valuation of the portion of such real estate actually and necessarily employed by it in its gas business at said date is hereby fixed at $11,985,435.00."

The difference between the Court and Master amounts to $1,475,565; but of this $160,000 represents a piece of land under water (*Record*, p. 396), and $4,000 a clerical error in substraction (*Record*, p. 396). Without waiving its claim as to said land under water, Appellee contends here that at least the net balance of $1,311,565, represents land reasonably acquired and held by Appellee and either in use or prudently held for subsequent use, and should be allowed as a proper investment in its gas business.

The items constituting said $1,311,565 consist of certain parcels designated in Appellants' Briefs below as " Land Leased," " Land Vacant " and " Land Unimproved," and deducted by the Court originally at a value of $2,141,155 (*Record*, p. 394); but it was subsequently pointed out that $829,590 thereof had not been included by the Master in his total of $13,461,000 (*Record*, p. 423), which left a corrected balance thereof deducted by the Court of $1,311,565, constituted of the following parcels :

Lots in Block	Master's Valuation.	Referred to as
985	$42,500	" Land Leased."
690	55,000	" "
978	59,500	" "
1092	30,500	" "
1156	14,500	" "
1692	7,500	" "
952	31,000	" "
1683	18,000	" "
1643	85,000	" Land Vacant."
1455	220,000	" "
1156	25,600	" "
1999	261,800	" "
2175	65,415	" "
972	22,000	" "
1474	25,000	" "
690	55,000	" Land Unimproved."
715	12,250	" "
952	10,000	" "
987	114,000	" "
1071	57,000	" "
1683	100,000	" "
	$1,311,565	

It is respectfully submitted that the important question is : **Has the Company acquired, and does it hold, land beyond the requirement of fair business prudence, considering the character of its business and the probabilities of its expansion?**

The plots in question were, as the evidence shows and the Master notes, almost without exception small fractions of a large block, the remainder of which was actually covered by the Company's operating plant (*Record*, p. 1232).

1. "Land Leased."

Of the so-called "*Land Leased,*" the lots in block 985 adjoin two gas holders and property used for storage (*Record,* pp. 161, 1232); in 690 form part of Appellee's Eighteenth Street works, part of which had been taken in condemnation by the City (*Record,* pp. 161, 539–540, 1232, 1579); in 978 form a part of a large parcel, the balance of which is used for gas works (*Record,* pp. 161, 1231); in 1092 and 952, are fractions of large plots the balance of which is used for gas-making (*Record,* pp. 161, 1231), and are occupied in part by workmen of the Company (*Record,* pp. 161, 1234–1235); in 1156, are part of a plot intended for a valve house (*Record,* pp. 161–162, 1232); in 1692, are part of the Ninety-ninth Street works and are occupied by a foreman of Appellee's Street Department (*Record,* pp. 162, 1232); and in 1683, are lots contiguous to Appellee's stable and intended for the enlargement thereof, a part being now used to turn out horses in (*Record,* pp. 162, 531, 1233).

Referring to said "*Land Leased*" the Master says (*Record,* pp. 162–3):

> "The leases of the foregoing parcels are, as a rule, terminable on 30 or 60 days' notice. In almost every case the lots in question are *fractions of a large plot, the remainder of which is actually covered by the Company's operating plant, or they are immediately adjacent to portions of such plant.* They are available at any time for purposes of extension by reason of the termination clause in these leases.
>
> "The tenement houses are to a considerable extent occupied by employees of the Complainant, *whose advantage it manifestly is to have its employees near at hand in case of emergency.* The proper conduct of Complainant's business requires a large land area and when the property was originally acquired by Complainant or its constituent Companies, it can hardly be doubted that it was sound business policy to purchase these entire tracts, notwithstanding the whole area of each block purchased might not be immediately required. Ordinary business prudence required the Company to anticipate the growth of the Company and the requirements of increased business. If odd lots occupied at the time by tenement houses, for instance, had been cut out, they would detract from the value of the balance of the block and hamper

the Company in making such necessary extensions or additions as might from time to time be required. In plants as large as those of Complainant it is inevitable that there should be here and there a small lot not covered at the moment with material or apparatus, but which, *in view of the requirements of the business* it would be extremely poor policy to sell. Its use may at any time be required. The Company would not, of course, be justified in buying and holding real estate merely because of the fact that it was likely to enhance in value and irrespective of any necessity therefor in the business of gas making. On the other hand, *it seems clearly unreasonable to require that every plot of land owned by the Company should be occupied to its utmost capacity and in constant use, in order that such property should be considered as part of the Company's gas making investment. In my judgment, none of the property in question can properly be regarded as unnecessary, under the circumstances.*"

2. So-Called "Land Vacant."

As to the so-called "*Land Vacant,*" the lots in 1643 were bought and intended for an office building (*Record*, pp. 163, 531, 532, 534, 554); in 1455, are held for building holders (*Record*, pp. 163, 552–553, 1232, 1580); in 1156, for a valve house (*Record*, pp. 163, 531, 534, 554, 579), *plans for which were already filed* (*Record*, p. 556); in 1999, were bought for holders, one already of which has been built, there being room for two more (*Record*, pp. 163, 535, 553–554); in 2175, are part of a plot where there is already a small holder and valve house, and only "portions of that property are unoccupied" (*Record*, pp. 163, 531–532); in 972, contain a pump house and well, although they were not "used much of late" (*Record*, pp. 163, 532); in 1474, were "unoccupied and unimproved" (*Record*, pp. 163, 531), and not yet appointed to any specific use (*Record*, p. 553).

It will be noted that as to one of these parcels plans for a "valve house" had already been filed, and that practically all of the balance had been acquired and held for some definite purpose.

As to said "*Land Vacant,*" the Master says (*Record*, p. 164):

> "Of the seven plots above described *only two are* wholly vacant. In view of their proximity to other property of the

> Company, and in default of further evidence of unavailability than is shown by the record, I find that they may reasonably be considered as a proper part of its operating plant. In the single instance where the evidence gives no indication that the property is not used or intended to be used in some way in connection with the gas business, namely, the parcel on the south side of 15th Street, Block 972, the amount involved is not large. Its value, according to the witnesses for the City, is about $12,000. Under the circumstances and in view of the numerous uses to which the property of this sort can properly be put for storage and other purposes by Complainant, I am not disposed to exclude it."

3. So-Called "Land Unimproved."

As to the so-called "land unimproved," the lots in block 690, five in number, are used for "storing gas material" (*Record*, pp. 1232–1233); in 715, a single lot, is occupied as a wagon shed and paint shop (*Record*, pp. 1332, 1451), and was accepted and valued by Appellants' own witnesses as part of Appellee's gas property (*Record*, p. 3722); in 952, a small lot, is temporarily rented (*Record*, p. 1232); in 987, are adjacent to the Twenty-first Street works and are "used for storing coal" (*Record*, p. 533); in 1071, four lots, are used for storing coke (*Record*, p. 534); and in 1683, are occupied by Appellee's "stable and wagon yard" (*Record*, pp. 534, 535, 1233–34), being exclusive of the two "leased lots" above mentioned in that block.

It will be observed that all but one of these so-called "unimproved" parcels *were actually in use.*

As to said "*Land Unimproved*," the Master, after excluding the 18th Street Block to the value of $400,000 as aforesaid, continues (*Record*, p. 165):

> "As to the remainder of the property in respect of which a deduction is claimed, part of which has already been considered under Land Leased, the only proof introduced by the City consisted of a statement showing its assessment for purposes of taxation for the year 1906 as vacant land. The mere description of a particular parcel as 'unimproved' or 'vacant' in an assessment roll is not sufficient foundation for

the conclusion that the property is not used by Complainant in its gas making business. It may very well be, and the *proof in many instances showed that the parcels assessed as vacant land were used for purposes necessary in connection with Complainant's business, as, for example, the storage of coal, coke, pipe fittings, tools, and castings.*"

Use of Said Lots.

The necessity of the "unimproved" blocks for storage of material was questioned below by one of the Appellants, on the ground that Appellee's coal contracts called for delivery *as required ;* but in such a vast business it would be indefensible conduct, for Appellee to live by hand to mouth delivery, and take the risk of blizzards, coal strikes and other contingencies which might result in the complete closing down of its works. No "damages" could mend such a situation.

Nor do we overlook the observation of the Court (*Record*, p. 423), upon Appellee's Supplemental Application to include $338,500 of the "unimproved" land as "actually used" (*Record*, p. 423), that the $11,985,435 of real estate allowed by it was intended to cover all real estate *used* by Appellee and could not be "translated into an exactly accurate statement by metes and and bounds", making reference in this regard to contentions advanced by Appellants as to the necessity of the use of the land occupied by the 111th Street plant (*Record*, pp. 423–424). But the *distributing* station there was in full operation, and the Court apparently overlooked the fact that there is at said station only $140,853 of *manufacturing* apparatus (we quote the figure from the Brief of one of the Appellants below), and that the land there—except so far as covered by that small amount of apparatus—is actually in use for Appellee's Street Department (*Record*, pp. 534–535).

And, of course, the observation of the Court does not touch the balance of said $1,311,565 of land, which is not "in use," but *purchased and held for use and some of it actually at the point of improvement*, which the Court does not purport in any way to include.

4. Necessity of Seasonable Acquisition of Lands.

To construct a common holder of even three million feet capacity will take a year at a minimum, and probably longer *(Record*, p. 553); and if Appellee were to wait until the moment when it must begin the construction of such apparatus, and then rush into the market to procure a large plot for the purpose under compulsion of paying whatever price might then be exacted from its necessities, instead of exercising ordinary prudence and taking advantage of a favorable opportunity to purchase at a lower price in good season, *Appellants and all consumers of gas might well complain of the Company's action, and assert that it should not be entitled to a return upon the exorbitant cost of real estate, which—by the exercise of common foresight—might have been seasonably acquired at a lower figure*

5. No Appreciable Burden on Consumers.

There is no appreciable burden on present consumers, by reason of these parcels. The Master said *(Record*, p. 163):

> " It may be pointed out further that the fact that these properties are rented as above described does not necessarily impose any additional burden upon the consumers of gas, notwithstanding their value is included with the assets of the Company on which it is entitled to a return. The real estate rents appear as part of the miscellaneous income of the Company and as will hereinafter appear, they are taken into account in determining the net profits of the Company applicable to dividends."

Thus such rentals, amounting to $37,000 per annum *(Record*, pp. 1922, 2341, 2759*)*, were credited by all witnesses, to reduce the cost of gas *(Record*, pp. 1575, 1691, 1910, 2341); and to return 6% on the entire value of the excluded land, would require an additional sum equalling only a small fraction (less than 4/10) of one cent per thousand feet of gas sold.

6. Admission by Appellants.

Appellant, *The City of New York, in effect concedes* Appellee's *entire position*, when it asserts *("Third Exception" to Master's Report, sub-division II.—Record*, p. 346), that Appellee is entitled to include only "such real estate as required by the present state of manufacture," with a "*reasonable margin for growth.*"

And all Appellants' witnesses *(Bemis, Record*, p. 2341, *and Marks, Record*, p. 2341) deduct the rentals derived from such excluded parcels (as part of Appellee's Miscellaneous Income) in their computations of the operating cost of gas—*thus, by necessary corollary, conceding the propriety of the inclusion of said real estate in the gas capital of the Company.*

7. The Court's Exclusion Based on a Misconception.

The Court, while recognizing that "many of the pieces of land just considered are adjacent to portions of the plants of Complainant" and "that as to some a definite purpose of utilization is testified to", excludes them because (among other things) of—

> "Recent actual occurrences in respect of the Astoria plant; which consideration convinces me that there is no intention on Complainant's part to extend or enlarge its gas business on Manhattan Island in such manner as to require any substantial addition to the lands already *actually applied* to the necessities of that business *(Record*, p. 394),"—

and the Court further intimates that the fact that the present value of Appellee's real estate now employed in its gas business exceeds the value, at one dollar per thousand feet, of the entire annual production of its Manhattan plants, is evidence that any increase in the use of Manhattan Island land would be "a business misfortune."

It is respectfully submitted that these assumptions and deductions upon which the Court apparently acted, are supported by no evidence whatsoever and are wholly erroneous.

(**a**) The fact that the land is worth more than the gross annual product therefrom, is not shown to differentiate the gas business from many other businesses conducted on the Island of Manhattan, which require land in their operation. Indeed, dividing the valuation of Complainant's land in Manhattan as found by the Court (a little less than $12,000,000) by its total sales (a little less than 13,300,000,000 cubic feet), the land valuation adopted by the Court will be found to represent only 90 cents per thousand cubic feet,—six per cent. return upon which amounts to only $5\frac{4}{10}$ cents per thousand feet of sales, to be paid by the consumer of gas as return on capital represented by land.

The amount permitted to be earned by Massachusetts Gas Companies, as return on their total gas investment, averages in the vicinity of 30 cents per thousand (*Record*, p. 6620), at which rate $5\frac{4}{10}$ cents for so important an item as "land," looks very small.

(**b**) And again, the theory that there will be no extension of Appellee's Manhattan plants because it is erecting a generating plant at Astoria, is based upon a complete misapprehension of the situation.

It is in evidence, as will be hereinafter indicated, that Appellee's Manhattan plants are unable to produce all the gas which it sells, and that its Astoria Unit, as just completed, is barely sufficient to *make up the deficit* in Appellee's own *manufacturing* capacity in Manhattan.

But the greater part of the land excluded by the Court has been acquired for extension of its *distributing system*, which must always be maintained on the Island of Manhattan under any circumstances, that is to say, for holders, valve houses, stables for its horses and the like. It is common knowledge that to accomplish a properly uniform distribution of gas, pressure holders must be located within the area of distribution ; and they and similar appliances will necessarily be increased in the Island of Manhattan as Appellee's sales increase. Additional holders have been constantly required (pp. 587–8, 1719). It would be impossible, *and has been suggested by no witness as possible*, that such distribution could or should be efficiently effected by holders located on Long Island, sending gas through miles of tunnel under the East River before reaching the distribution area.

It is submitted that the excluded parcels should be restored to the computation, and the allowance by the Court for "Real Estate," $11,985,435 (*ante*, p. 6), *should be increased by the value of the above described parcels, $1,311,565* (*ante*, p. 67).

B. Additional Working Capital, $2,000,000.

"Working Capital", or "active capital" to use the term of Appellants' witness Marks (*Record*, p. 1942), exists in the form of current supplies, cash and accounts.

It is submitted that the finding of the Master ($3,616,000) as to Working Capital required (*Record*, pp. 179, 180), should be accepted in place of the conclusion of the Court ($1,616,000).

In making the deduction of $2,000,000, the Court again, from unfamiliarity with a great record, apparently acted under a misapprehension as to the evidence. Its conclusion was not only not based upon a preponderance of evidence, but (it may be fairly said) is supported by no evidence whatever.

1. Mr. Carter's Testimony.

It rests, it would appear, upon the supposed testimony of Vice-President (formerly Comptroller) Carter (*Record*, p. 396), whose actual testimony was *directly to the contrary of that assumed by the Court.*

On amount of "working capital" required, the Court says that Appellee's

> "own Comptroller should * * * be the best judge of its own necessities; and his measure of working capital *in the sense of cash* is $1,000,000. $616,000 is taken as a *fair average of outstanding bills payable;* and the aggregate of these two sums is as much as the Comptroller claimed, until on suggestion he added $2,000,000 thereto, to represent the average amount of outstanding bills receivable."

We agree that the Comptroller is the best judge of Appellee's necessities, and that his measure of working capital "in the shape of *cash*" is $1,000,000; but in the balance of the statement the Court is completely in error.

The $616,000 is not "a fair average of outstanding bills payable," *nor is it "bills payable" at all!* That sum was the value of current *gas material* on hand (*Record*, p. 179); so that the Court allowed nothing for accounts, although evidently thinking it had done so.

Nor did the Comptroller advance the $2,000,000 of accounts as an afterthought, or "on suggestion," to quote the words of the Court. *It has been Appellee's claim throughout*, that, in addition to $616,000 of material on hand, it requires $3,000,000 of working capital in the shape of cash and accounts,—about $1,000,000 in cash and $2,000,000 in accounts.

Exactly this was claimed in the Bill of Complaint herein (*Bill of Complaint, Record*, p. 7); and the Record shows that Mr. Carter, before going upon the stand, had prepared an Exhibit showing in convenient form the "book-value" of working and other capital, employed by Appellee in its gas business (*Record*, pp. 942, 946), that this Exhibit showed current supplies of $616,470.08, an amount of $1,000,000 in cash *and $2,000,000 in accounts* (*Record*, pp. 748-50, 5033, 5034), that said exhibit had been offered and received in evidence (*Record*, p. 744), and that he was *testifying in support of this very Exhibit prepared by himself* at the point at which he said (as quoted by the Court) that $1,000,000 *in cash* was required (*Record*, pp. 749, 750). The inquiry as to whether the $2,000,000 in accounts shown on said Exhibit, was also required, was merely to spread upon the record his statement as to the necessity of that item of his Exhibit and on that point Mr. Carter testified (*Record*, pp. 750-751):

> Q. Do you consider Two million dollars as a fair amount of accounts which may be outstanding in your business, and in that shape as capital? * * * A. I think that would be the fair amount, or would be the usual amount, I might say, due to the company from various parties for that kind of service.

Q. Capital that is tied up? A. Permanently tied up.
Q. Or included in the accounts? A. Yes.
Q. Continuously tied up? A. Yes, continuously would be better.
Q. It is always there; can never be paid out, can it? A. No, sir.
Q. You have to have that margin? A. Exactly.

These amounts were a fair average; the amount of working capital actually tied up in cash and accounts at that time *greatly exceeded* the $1,000,000 and $2,000,000 respectively (*Record*, pp. 749-750, 5034).

2. The Other Evidence.

(**a**) Dr. Humphreys, from vast experience, testified that 30 cents per thousand feet was a fair requirement for working capital (*Record*, pp. 1684, 1685), and on this basis Appellee, for 1905, would require $3,974,000.

(**b**) Appellants' expert Marks advanced *no independent opinion*, but selected four Massachusetts Companies, whose requirements he declared to be entirely comparable with those of Appellee as to active capital (*Record*, pp. 179-180, 1941-1942). The active capital of these four Companies he first testified to be 13 cents per thousand feet, equivalent to $1,726,000 for Appellee (*Record*, pp. 180, 1942); but in his later examination he admitted that he had inadvertently omitted a considerable part of the capital of those Companies evidenced by "notes payable" (*Record*, p. 2078), and thereupon corrected his computations and *upon his own theory* computed that such Companies were employing about 48 cents per thousand cubic feet for active capital, and that Appellee upon that basis would require a working capital of $6,375,000 (*Record*, pp. 180, 2077-2078). *This was his final expression on the subject.*

NOTE.—Mr. Marks' method was to take the entire assets employed, and to deduct therefrom the value of *permanent* plant as shown by the Companies' reports—the balance being necessarily "active" or working capital (*Record*, pp. 1941, 2078).

Appellants' Counsel sought below to parry Mr. Marks' blow, by the suggestion that the proceeds of said "notes payable" were invested in "permanent" plant. That feature is, of course, wholly immaterial, and has no bearing on the result.

Having found the active capital to be $852,246, or 52c. per M. of sales *(Record*, pp. 1941–2), he proceeded to deduct therefrom all sums which appeared to have been contributed by *others than stockholders;* whereas, the *source* of derivation of working capital is a matter of no importance whatever.

(c) Dr. Humphreys, analyzing five Massachusetts Companies mentioned in another connection by Professor Bemis (which included the four cited by Mr. Marks), ascertained that they were employing as working capital 43 cents per thousand feet of sales, equivalent to $5,961,690 for Appellee *(Complainant's Ex. 385, Record*, p. 6624).

(d) Professor Bemis, who had no experience in the gas business, in his computation allowed the current supplies, $616,000, and also cash to the amount of $1,000,000 (*Record*, p. 2394) for working capital—a total of $1,616,000 ; and stated as his only reason for not allowing the additional $2,000,000 in accounts, that accounts due to Appellee might be considered in the "nature of a surplus" (*Record*, p. 2394). *He did not deny that the $2,000,000 was required*, but excluded it because of its supposed *source*, which was no reason at all. But even this was exploded, for it was subsequently shown that such $2,000,000 was in no sense a "surplus," but that the resources of the Company had been employed and were bound up in the delivery of the product for which these accounts were due (*Record*, p. 4449).

(e) It may also be noted that the Company reserved $1,303,000 of working capital at its creation in 1884 *(City's Ex. 48, Record*, pp. 5729-5730) ; although its sales of gas at that time for the following year (1885) were only 3,942,433,000 cubic feet *(Complainant's Ex. 85, Record*, p. 5039). The $3,616,000 of working capital allowed by the Master is substantially less per unit of sales than provided in 1884.

3. Summary.

The foregoing summarizing the entire evidence on the subject, it is obvious that the Court's reduction of working capital to $1,616,000 was not only unsustained by any evidence, but was in direct conflict with all the evidence, both individual opinion and experience of Companies in other cities.

It is respectfully suggested that the amount required for Working Capital in the gas business is best known by those experienced therein ; and that the Court was not justified in disregarding their evidence and experience, as it did in lopping off more than one-half the Working Capital of $3,616,000, found by the Master to be required.

The Court to be sure suggests, as one reason for the reduction, " that Complainant's credit is of the highest," but this has no relation whatever to the amount of working capital required. It merely renders more easy to Appellee the acquirement of " working ", or any other, capital which its necessities demand.

Moreover, it is submitted that Appellee is not legally bound to travel on " credit " ; it is entitled to capital sufficient to pay its way as it goes.

It is submitted, therefore, that the Court's allowance for " Working Capital," $1,616,000 (ante, p. 6), should be increased by the sum of $2,000,000, as above claimed (ante, p. 67), making a total of $3,616,000 as found and included by the Master (ante, p. 6).

C. National Coke & Coal Company, $50,000.

Until recent years, Appellee directly sold and delivered its surplus coke, arising from its production of coal-gas.

Some years ago, however, for its convenience it incorporated the National Coke & Coal Company, with a capital of $50,000, which amount Appellee paid in, receiving the entire Stock of that Company in return (*Record*, pp. 753, 814). It is in fact the " Cartage Department " of Appellee.

The method pursued has resulted in higher receipts from its coke residual (*Record*, pp. 2341, 2409); and while the investment of $50,000 was included by the Master in Appellee's capital, the earnings of the National Coke & Coal Company, paid back to Appellee in dividends ($5,000, amounting to 10% on the capital, in 1905) were credited by it to reduce by so much the operating cost of gas (*Record*, pp. 2341, 2552).

Counsel acting for some of the Appellants expressly conceded on the Record that this $50,000 investment must be included in Appellee's gas capital (*Record*, pp. 753, 754, 813-814); and the experts representing the City (Marks and Bemis), in their computations *deducted the dividends received by Appellee from the National Coke & Coal Company*, in reaching their cost of gas (*Record*, p. 2341),—which could only be on the theory that the investment was part of Appellee's gas capital.

It is submitted that the Master was right in including this item of $50,000 in Appellee's capital, and crediting the income therefrom in computing Appellee's profit from its gas business; and that the amount should be added to the items allowed by the Court, as above claimed (ante, p. 67).

D. Good Will, $8,000,000.

It is also Appellee's contention that there should be included in its gas assets, the value of the "Good Will" of its business; and that, accordingly, there should appear in the schedule thereof (*Record*, p. 432), $20,000,000 representing "Special Franchises and Good Will" as found by the Master, instead of $12,000,000 representing Special Franchises alone.

This subject is treated in a separate Brief; and will not be pursued here beyond the foregoing statement of position.

If Appellee's contention be sustained, it will add to the Court's allowance (ante, p. 6), the sum of $8,000,000.

E. The Astoria Plant (i. e. Capital Invested in Production of Gas Secured from other Companies).

The Court, as hereinbefore noted, while excluding this item ($12,000,000) at this point, conceded that a return thereon should come into the cost of gas by another route,—to wit: by inclusion in the cost of gas to be derived by Appellee from other Companies (*Record*, pp. 406, 407, 425, 426).

To avoid misapprehension, the Decree—following the valuation of Appellee's assets at $59,831,435 (*Record*, p. 432)—continued (*Record*, p. 433):

> "The foregoing items do not include the amount of Complainant's *investment in the securities of other gas Companies*, from which Companies it was obtaining a large part of the gas which it delivered to its customers, nor the *value of the property of such other Companies* or any part thereof employed in the production and delivery to Complainant of such gas."

The subject will be considered at length below. Nothing need be added here to the statement of Appellee's contention that its investment in its Astoria plant should be included in *some form* in its capital, upon the same principle that it claimed (and Appellants admitted before the Master) that its investment in The National Coke and Coal Company should be so included.

PART THIRD.

Gas Purchased from Subsidiary Companies, and Valuation of the Property of Subsidiary Companies Employed in the Production Thereof.

POINT X.

The Astoria Investment of $12,000,000.

In approaching this subject, it will be instructive to review the situation existing at the time of the passage of the Acts in question, and of the beginning of this action in May, 1906.

Appellee's sales for the year 1905 amounted to 13,283,163,767 feet, representing a production of 13,587,020,322 feet before deduction of leakage or "unaccounted for" gas (*Record*, p. 220); and such sales were expected to increase, and Appellants' experts believed they would largely increase, from the growth of population alone.

But Appellee's 18th Street *manufacturing* plant had recently been taken by The City of New York for public improvements (*Record*, pp. 511, 1703), a part of its 111th Street manufacturing plant had been in part taken even earlier by the same authority (*Record*, pp. 516, 4578, 5561), and the possibility of extension of its other plants on Manhattan Island had been curtailed by the laying out of marginal streets, cutting them off from the water front (*Record*, p. 511); so that Appellee had been able to manufacture at its own plants only 10,419,461,426 feet of such sales of 1905, or nearly 3,000,000,000 cubic feet less than its total requirements,—which balance it procured from certain controlled Companies under temporary arrangements hereinafter defined.

It is apparent, therefore, that Appellee's property alone did not represent the entire investment required to produce and distribute the said 13,283,163,767 feet of gas.

1. Construction and Capacity of Astoria Plant.

The conditions which it saw advancing, although it could not then foresee the condemnation of its 18th Street plant or the great increase in consumption consequent upon the "coal-strike" of 1902-3, induced Appellee, about 1900, to begin the construction of the first Unit of a coal-gas plant at Astoria on Long Island, which should be capable of a maximum day's production of 20,000,000 feet of gas, representing (under a well-recognized formula—*Record*, p. 1511) a capacity of about 4,000,000,000 cubic feet per annum. This Unit was intended to supplement Appellee's manufacturing capacity on the Island of Manhattan; and subsequent Units, if and when constructed (except so far as they also might be required to provide for increased sales), were to replace an equal capacity in Appellee's Manhattan plants,—although such replacement, involving an abandonment of Manhattan plants at a loss of over $10,000,000 for good apparatus discarded (*Record*, pp. 876, 1239, 1588), is not to be thought of with gas at 80 cents (*Record*, p. 1587).

Referring to this situation as existing in 1905, the Master says (*Record*, p. 185):

> "The producing capacity of the first Astoria Unit (20,000,000 feet per day) is equivalent to 4,000,000,000 feet per annum, or about 1,000,000,000 feet more than the gas actually purchased from these Companies during 1905. **The maximum daily output of Complainant during 1905 was about 70,000,000 cubic feet, while the maximum capacity of its own plant was but 51,000,000 feet.** Adding to this the maximum capacity of the first Astoria Unit, would give a maximum daily capacity of 71,000,000, or nearly 1,000,000 more than Complainant's maximum daily output. This surplus, according to the testimony of Mr. Bradley, which was uncontradicted, is insufficient for purposes of a reserve. He stated that, in his opinion, it was not safe to operate gas plants for lighting large Cities like New York with less than 20 per cent. reserve of their manufacturing capacity.
>
> "Furthermore, with an output so closely approximating the maximum daily capacity, it is clear that no allowance is made for increased sales of gas consequent on the growth of population. That such increase is to be naturally expected, is conceded by all parties. *It appears, therefore, that the*

> *amount of gas to be produced by the first Unit of the Astoria plant is under, rather than over, what was actually required in addition to Complainant's own output to meet the reasonable demands of its business in 1905."*

And so, too, the Court, in reviewing the situation, says (*Record*, p. 407).

> "The 3,000,000,000 feet purchased in 1905 *was not enough for Complainant's wants.* The Astoria plant was calculated for 4,000,000,000 feet, without any reference to a decrease in the price of gas. The increase in consumption during the years when prices were steady at a dollar per thousand, was such as *reasonably to justify this provision ;* entirely apart from the necessity for a reserve, which the demands of the consumer have lately made impossible."

The Astoria plant was not completed and in operation in 1905, although it was so far completed in December, 1906, while this action was on trial, that it then began operation and delivery of gas to Appellee (*Record*, pp. 4226, 4292) ; and it is now in position to furnish to Appellee the gas which in 1905 the latter acquired from other sources.

Its total cost and value is found, without contradiction, to be $12,000,000 (*Record*, pp. 183, 254, 390),—all of which has been advanced by Appellee, and largely raised by sale of Appellee's 6 per cent. Debentures, convertible into Appellee's Stock (*Record*, p. 742) at the option of the holder.

> NOTE—Counsel for the Public Service Commission seeks to throw doubt on the finding that Appellee's sales amounted to about 70,000,000 per maximum day, and suggests that Appellee had " daily station records " showing the facts, but did not produce them *(Brief*, p. 103). He is entirely in error. All " station records " requested for the period in question were presented. Indeed, *the entire operating records of Appellee were put in evidence* for the period from November 1st, 1904, to December 31st, 1905, so that all the information Appellee had was available to the Appellants *(Post*, p. 97). The " daily station records " of Appellee show the daily *production of Appellee's plants*, but not Appellee's maximum day's *sales*, since such sales include a large additional amount of gas received from subsidiary Companies which is not recorded at Appellee's stations. The statements of subsidiary Com-

panies show the amount delivered by them *monthly*, and not daily; but, presumably, Acting President Addicks would be able to approximate very closely the amount of the maximum day's demand. The Master so concluded, and so did the Court below, as the above expressions indicate. Appellee's Chief Executive certainly ought to be in a position to make as reliable an estimate as any Counsel in this case.

2. Necessity for Present Construction.

Objection was made below, to consideration of the Astoria plant, on the ground that its construction was unnecessary, *in view of the capacity of other subsidiary Companies.*

In point of fact, the capacity of Appellee and its subsidiary Companies combined, was inadequate without Astoria. The maximum day's capacity, assuming that each Company could reach its *full theoretical capacity on the same day*, is as follows:

Appellee (*Record*, pp. 616, 636)	51,000,000
All other Companies combined (*Record*, pp. 616, 636)	60,200,000
Total	111,200,000

The maximum output of all Companies in 1905, according to the testimony of Chief Engineer Bradley, was about 100,000,000 cubic feet (*Record*, p. 636), which left a reserve on basis of sales *of three years ago* of only 11%, or a trifle over one-half of the 20% reserve without which Mr. Bradley testified that it would not be "safe to operate" (*Record*, p. 1708).

Indeed, had the New Amsterdam plant, with its capacity of 30,000,000 cubic feet, been incapacitated by any accident shutting down the works or blocking the East River tunnel, or even been reduced in output one-half, the combined production of all other Companies would not have been sufficient to meet the requirements of consumers on the maximum day.

Moreover, a coal strike or other mishap which would compel the use of coke instead of coal in Appellee's water-gas plants, would reduce their capacity 20% (*Record*, p. 1655), and likewise leave a deficit.

No Ability in Appellee's Manhattan Plants to Meet Deficit.

(a) As to Appellee's own plants in Manhattan, it has already been shown that in 1905 they produced 10,419,461,426 cubic feet of gas, or more than their rated annual capacity (*ante*, p. 84); and the only manufacturing capacity unused was the *generating apparatus* at 111th Street, of a value of only $140,853 (*ante*, p. 73), and of a capacity of only 2,420,000 cubic feet per day (*Record*, p. 1467), or only about one-eighth of the deficit between the theoretical maximum day's capacity of Appellee's other plants (51,000,000 feet—*Record*, p. 616) and its maximum day's sales of about 70,000,000 feet (*Record*, p. 1654). Indeed, it would make up but a small part of the difference between the actual maximum day's *production* of Appellee in 1905, which was 42,459,000 cubic feet (*Record*, p. 1586), and such theoretical capacity of 51,000,000 cubic feet. It, therefore, in any circumstances would be of insignificant importance in dealing with the deficit in question.

But this 111th Street apparatus consists of *generating apparatus only* (*Record*, p. 1468), the nearest purifiers, condensers, scrubbers and other auxiliary apparatus, which would be used to refine the gas made at 111th Street,being located and in use at the 99th Street station; and the value of such 111th Street apparatus is as a "reserve" against a breakdown of *manufacturing* apparatus at 99th Street, in which event the production of the 99th Street generators would be cut out and would offset the 111th Street generators which would come in.

(b) The point was also made that when one of the experts of Appellants viewed the plants in 1906, a considerable number of coal gas retorts at 14th and 42nd Streets were not in use; and Appellants proceeded to argue that they were available for any deficiency.

If they had been so available, they would only at the utmost have raised the production to the theoretical maximum capacity of 51,000,000 cubic feet; but they were out of action at the time of the visit in question, because Appellee—on account of the coal famine—*was unable to secure coal to operate them* (*Record*, p. 4227). Appellants overlook the facts that these contingencies are *incidents of the gas business;* that shut-downs from one reason and another are constantly occurring in such a vast enterprise; and that if these retorts had been in action, on the doctrine of averages some other retorts or apparatus somewhere else would have been out of service, on account of repairs or other contingencies.

(c) In short, the suggestion that there was any surplus "capacity" in Appellee's Manhattan plants, which would have rendered unnecessary the construction of the Astoria plant or made it possible to produce in its own plants more than the 10,419,461,426 feet of sales which it did manufacture, is fanciful, based upon strained deductions, takes no account of the character of the business, and is fully disposed of by the findings of the Master and the observations of the Circuit Court in relation to capacity, to which attention has already been drawn.

3. Form of Appellee's Ownership.

Instead, however, of building said plant in its own name, Appellee, for convenience, constructed it through the medium of a subsidiary corporation formed by it under the name of The Astoria Light, Heat & Power Company, Appellee receiving from said Company all its Stock, Bonds and other obligations, representing and as evidence of Appellee's investment and ownership (*Record*, pp. 183, 752).

As the Court says (*Record*, p. 397):

> "Such projected addition to the gas-making equipment of New York and vicinity was to be, and was while in process of construction, the property of The Astoria Light, Heat & Power Company, all of whose Stock was and is owned by the Complainant, and whose works will, when completed, *be as completely identified with Complainant's enterprises, as is the comparatively insignificant Coke & Coal Company.*"

Indeed, so completely was said Astoria plant created, owned and controlled by Appellee that the Master, regarding the rule that "the abstraction of the corporate entity should never be allowed to bar out and pervert the real and obvious truth" (*Seymour* v. *S. F. C. Association et al.*, 144 N. Y., 333, 340; *Anthony* v. *American Glucose Company*, 146 N. Y., 407, 413), said (*Record*, p. 183):

> "There would seem to be no ground for the purposes of the present inquiry, for drawing any distinction between a plant built and operated directly by Complainant and one built and operated by a subsidiary corporation, of which it owned the entire Capital Stock. No reason is apparent why the capital invested in the plant of such subsidiary corporation is not to be treated precisely as if invested in any of the manufacturing stations of Complainant on Manhattan Island."

4. Legislative Acts Look to Future.

The Court held in substance that the Acts of 1905 and 1906, here in question, necessarily look to the future; that in testing their validity, the value of the plants which will produce and distribute the gas sold by Appellee (whether made by itself or by others for it) should be considered in determining the value of assets employed; and that consequently the *Astoria plant*, whose cost and value are exactly ascertained,—rather than the plants of other Companies, which supplied the excess requirement in 1905,—should be considered in fixing the value of the plant which, under the Acts in question, will produce the gas to be acquired by Appellee outside its own Manhattan plants (*Record*, pp. 400, 407, 432).

POINT XI.

Property of Subsidiary Companies Actually Employed in Producing Gas, Received by Appellee from them in 1905.

But if it is desired to consider the value of the plants in reality employed in 1905, for the production of the 3,000,000,000 cubic feet (more or less) in that year delivered to Appellee by other Companies, this also is covered by the findings of the Master (*Record*, pp. 185–186) :

> " In default of any better method of estimating the amount of capital employed in the production of the 3,000,000,000 feet of gas purchased by Complainant in 1905, it seems entirely proper to measure it by the standard of the known cost of the Astoria first Unit. Equipped, as it is, with the most modern machinery, and located on a site much less expensive than could be procured on Manhattan Island, the cost of the first Unit *seems a fair and safe basis of valuation.*"

And he therefore finds and allows Item No. 8 ($12,000,000—*Record*, p. 155), not as the Astoria plant, but explicitly as the value of " *Property of other Companies employed in the production of gas delivered by them to the Complainant" in 1905* (*Record*, pp. 186, 253–4).

The Master had before him ample data upon which to reach this conclusion.

1. Value by Comparison With Accepted Units.

It appeared that all the Companies from which Appellee was obtaining gas (New Amsterdam, Standard, Central Union and Mutual) were manufacturing in the City of New York under generally similar conditions, and producing the like kind of gas at practically the same holder cost (*Record*, p. 241); but the land of the other Companies was likely to be more valuable on the average than Appellee's, since they were operating chiefly in the more congested part of Manhattan, while Appellee was operating also in the outlying districts (*Record*, p. 4471).

(a) That the value of Appellee's plants would be a fair index to the value of the plants of such other Companies, per unit of capacty, would be a fair assumption; and it is also testified that the cost of any standard gas plant of a given capacity may be closely estimated by comparison with similar plants, and the use of cost units well established and understood (*Mayer*, *Record*, p. 1457).

Thus water-gas *apparatus* (with necessary buildings) costs (depreciation deducted) to produce, from $120 to $124 per thousand feet of capacity (*Mayer*, *Record*, pp. 1424, 1458); and the Master, *at the request of Appellants*, has found that—holders excluded—"$123 per thousand feet of capacity * * * is a fair unit to assume as the value of the water-gas plant, *no matter what the capacity might be*" (*Record*, p. 264).

As to *holders*, they run in cost from about $100 for a few enormous holders, to $250 or more for smaller holders, per thousand feet of capacity (*Record*, p. 1727). Taking all the holders of Appellee, an average assortment, we find their value with accompanying apparatus to have been (depreciation deducted) $7,046,074.00 (*Record*, pp. 1320, 1323, 1326, 1329, 1331, 1333, 1334, 1336, 1337, 1340-2, 1473-5), with an aggregate capacity of 45,142,500 cubic feet (*Record*, pp. 540-1, 1319, 1323, 1324, 1326, 1329, 1331, 1333, 1336, 1337, 1339-41), showing an average value of $156.10 per thousand cubic feet of capacity.

This valuation for standard holders rests not only upon Mr. Mayer's testimony, but upon the testimony of Appellants' only witness (Logan) who had any practical experience in building holders in the City of New York, whose valuations virtually concurred with Mr. Mayer's (*Record*, p. 173), and of their expert Marks, who likewise confirmed Mr. Mayer's (*Record*, p. 3753), and finally upon the admission of counsel who, when Appellee proposed to introduce further evidence on the subject, conceded that Mr. Mayer's valuation of holders was acceptable (*Record*, p. 4602).

The holder capacity should at least equal the maximum day's output (*Addicks*, *Record*, p. 1644; *Bradley*, *Record*, p. 1707), and it is advisable to have it 50% larger (*Bradley*, *Record*, p. 1707). It will be observed that Appellee's total holder capacity as above recited exceeds the maximum day's *production* of its works in 1905 (*Record*, p. 1587).

As to *land*, even upon the valuation of the Court ($11,985,435), which excludes all land not now *actually used* in manufacture and distribution, we find the same to amount to about $237 per thousand cubic feet of Appellee's maximum day's theoretical capacity, which, as elsewhere said, is more than any actual or possible day's output,—although Appellee's land is overcrowded with apparatus in some plants (*Record*, p. 1507).

(**b**) Assuming an outside plant capacity of 20,000,000 cubic feet per maximum day as found by the Master and Court to be required (*ante*, pp. 85–6), although the hiatus between Appellee's maximum day's sales as found by the Master and the amount of its own actual day's maximum output was much greater, the computation of the value of such a plant on the foregoing basis is as follows:

Water-Gas Apparatus and Appurtenances at $123.18 per M. of capacity	$2,463,600.00
Holders equal only to a single day's capacity of the works at $156.10 per M. of capacity	3,122,000.00
Land at $237 per M. of capacity	4,740,000.00
Total	$10,325,600.00

But this is not the entire valuation, for it includes—

(*a*) No valuation of *Mains* and *General Distribution System* of the outside Companies necessarily employed in delivering gas to Appellee's Mains and Holders;

(*b*) No amount for *Working Capital* necessarily employed in producing and delivering this gas;

(*c*) No allowance for the expensive tunnel of the New Amsterdam Company, through which it delivers its gas from its Long Island plant to Appellee (*Record*, pp. 181-3, 3981)—the cost of Appellee's similar tunnel being shown to be $2,650,000, including lining (*Record*, pp. 182, 1642, 1645-6);

(*d*) No holder capacity beyond the capacity of a single day, although Mr. Bradley says that it should be 50% greater (*Record*, p. 1707);

(*e*) No allowance for the fact that a part (though small) of the gas obtained by Appellee from other Companies was coal-gas. Appellee buys from the Central Union Gas Company (*Record*, p. 5287). That Company makes coal and water-gas (*Record*, p. 2328). A coal-gas plant costs much more per unit of capacity than a water-gas plant (*Record*, p. 1728).

(**c**) Moreover, as above suggested, a plant of 20,000,000 cubic feet per day is *much below the capacity actually required to be maintained in subsidiary Companies* for Appellee's account in 1905, as was clearly indicated by both the Master and Court in discussing the like capacity of the Astoria plant (*ante*, pp. 85-6).

Thus, Appellee's actual maximum day's production did not exceed 42,459,000 cubic feet (*Record*, p. 1587), which meant a deficit of over *27,500,000* feet in relation to the maximum day's sales of 70,000,000 feet,—*excluding all "reserve" capacity which safe operation requires.*

The 51,000,000 feet mentioned by the Master is the theoretical day's maximum, *taken separately for each of Appellee's five plants*, and added together (*Record*, p. 1586); and it is utterly impossible in practice to rely upon all said plants being at the same moment in operation at their maximum. Hence *on no single* day can Appellee be expected to produce 51,000,000 feet of gas. Something is always happening in such enormous plants. In 1905 some retorts were shut down because the western coal famine prevented delivery of the usual quantities of gas-coal in the East (*Record*, pp. 4059-4076); and it is impossible to foresee when, to what extent, or how long a particular plant must be shut down or limited in production for one cause or another (*Record*, p. 643).

Nor should it be overlooked that said subsidiary Companies in 1905 carried in behalf of Appellee all the "reserve capacity", required by Appellee above its actual sales. Such reserve is at least 20% for safe operation, as the Master points out upon undisputed testimony *(Record*, p. 185), and this means 14,000,000 feet more of plant capacity maintained by subsidiary Companies for the benefit and safety of Appellee and its consumers.

Doubtless the Master had these considerations in mind in his finding that "the amount of gas to be produced by the first Unit of the Astoria plant" (20,000,000 feet per day), was "*under, rather than over, what was actually required in addition to Complainant's own output, to meet the reasonable demand of its business in 1905.*"

2. Estimate and Admission of Appellants' Engineer.

Mr. Marks, Appellants' Engineer and expert witness, computed the value of the plants producing said 3,000,000,000 feet, at $5,097,389, which he added to his valuation of Appellee's own property, upon which a return must be earned *(Record*, pp. 1940, 2787).

He reached these figures by employing a unit value of $1.78 per cubic foot of annual capacity, deduced from four Massachusetts Companies which he declared to be entirely comparable with Appellee *(Record*, p. 1940) ; but this unit was shown to have been based on an erroneous assumption as to the capacity and assets of the Companies examined, and far too low *(Record*, pp. 186, 6623-8).

3. Conclusion.

The Master's findings as to the daily capacity required outside of Complainant's plants in 1905, and the value of the property employed in meeting it, $12,000,000 (*Record*, pp. 186, 155), were based on substantial *data*. They were confirmed by the Court by the general clause at the opening of the Decree *(Record*, p. 430).

PART FOURTH.

Cost of Gas and "Net Income" to Appellee under the Statutes in question.

POINT XII.

Period and Scope of Examination as to Operating Results.

The calendar year 1905 was selected for special study, with the concurrence of all parties.

As this action was brought on May 1, 1906, the year 1905 was the last calendar year available for examination; and it was also Appellee's last fiscal year (*Record*, p. 840).

Moreover, *the year 1905 was the first and only year available, which would in any degree give a definite line upon the effect of the Statutes in question on the cost of production.* Chapter 736 of the Laws of 1905 took effect July 1, 1905. That Act penalized Appellee for each failure to maintain 22 candle power in its gas (the penalty had before applied only to failure to maintain 20 candle power,—*City Charter, Chap. 466 of the Laws of 1901, § 522)*, and also imposed additional burdens in the line of "pressure" restriction as well as in the elimination of sulphur and ammonia.

The showing of previous years would, therefore, be of much less value than had the candle power, purity and pressure standards in those years been the same as provided in the Acts under examination.

1. Period Covered for "Operating Cost."

For convenience, however, detailed expenditures of Appellee were presented for examination, not only for the calendar year 1905 (*Complainant's Ex. 94, Record, Original page* 7337), but also for the year November 1, 1904 to October 31, 1905 as presented to the Gas Commission (*Complainant's Ex. 93, Record, Original page* 7336), in order that the mass of detail in the Gas Commission record might be available in testing and checking, as suggested by Judge LACOMBE in his memorandum (*Record*, p. 144).

Thus the Master had before him complete results of the period November 1, 1904 to December 31, 1905; and in concluding its direct case Appellee placed in evidence all its original " operating ledgers " and other books of account, covering every detail of its operation for that period (Record, pp. 1861–1864, 5298).

But Appellants were not limited to this period in their examination. They were permitted in numerous instances and fields to go long distances back for the purpose of checking or pertinent information. In illustration:

(a) The Master required the production of balance sheets of Appellee for the years 1903 and 1904 as well as 1905 (*Record*, pp. 930, 931; original, pp. 7688, 7689, 7690).

(b) The great items in the cost of gas are the expenditures for coal and oil, and receipts from residuals; and the coal contracts were produced as far back as 1903 (*City's Ex. 16*, *Record*, p. 1066; also pp. 1057–1079); the oil contracts as far back as April, 1904 (*City's Ex. 10; Record*, p. 1055*)*; and the coal tar and ammonia contracts as far back as June, 1898, June, 1899, and July, 1901 (*City's Exs. 29-a, b & c; Record*, p. 1080*)*: and *these were all the contracts which Appellants then requested or expressed any wish to see,* as an examination of the Record will disclose.

(c) Moreover, Appellee produced for examination the book containing the oil and coal accounts, with detailed records of shipment and deliveries, covering a period as far back as 1903 (*Record*, pp. 1103–1114),—the price paid for such oil and coal being also shown in this record (*Record*, pp. 1103–1115).

(d) Furthermore, Appellants offered in evidence the monthly station-cost sheets of Appellee's manufacturing plants for the years 1903 and 1904 (*Record*, pp. 1530, 5298).

(e) One of Appellants' experts went over records of oil consumption and candle power as far back as 1902, and offered in evidence the figures and his deductions for that period (*Record*, pp. 5922, 5924).

(f) Appellee consented to the examination of its construction account (including its real estate transactions) *as far back as 1884*, and all of the books of the original six Companies in its possession in a similar manner *back to 1823* (*Record*, p. 2286); and the report of Appellants' accountant shows that they made such examination so far as they desired (*Record*, p. 5870).

(g) Appellee also consented to the examination of its records of repairs and renewals (including its depreciation charges) as far back as the Company's incorporation in 1884; and so well satisfied were Appellants on this score, that the annual record of "repairs and renewals" for the entire period was offered *by Appellants (State's Ex. L, Record,* p. 5078); and the Master, *at the request of Appellants,* found that 10.89 cents per thousand of sales were expended annually on the average by Appellee for current repairs and renewals for the twenty years prior to 1905 covered thereby *(Record,* p. 276*)*.

2. Particularity of Examination.

(a) Messrs. Marwick, Mitchell & Company, expert accountants selected by the Appellants, were in Appellee's offices for five or six weeks, with 25 to 35 men, engaged in the work of examination of Appellee's books and papers (*Record,* p. 4425). Every voucher, record and document of the Company relating to the subject was examined by these accountants (*Record,* p. 4424), and the thoroughness of their work is apparent from an examination of their report, abstracting and summarizing their labors *(City's Ex. 87, Record,* p. 5769*)*. The last named Exhibit shows that in some important lines of investigation they went far back of 1905 (*Record,* p. 5794).

(b) The mass of vouchers, and the time and labor involved in the examination of the items of Appellee's expenditures for a single year *(Record,* pp. 2286-2287*)*,—not to speak of the volume of the Record in this case,—indicate the impossibility (independent of the non-necessity) of the examination in equal detail of Appellee's operations for previous years, within any reasonable limit of time in the trial of this action. This was recognized by counsel for Appellants *(Burr, Record,* p. 1044*)*.

The learned Justice who appointed the Special Master, expressed in his memorandum on that occasion the expectation that the case could be tried so that the Master's Report could come up before the Court as early as the fall of 1906 (*Record,* p. 148);

while, in fact, with the utmost diligence, the case was not tried and the Master's Report submitted until the end of June, 1907, and argument was not had thereon until November following.

(c) It will be noted that as a further check upon the "operating expense" of Appellee, the station cost of its gas was carefully compared with that of other Companies operating in New York City and elsewhere (*Record*, pp. 241–242).

The Court, on full consideration of the Appellants' arguments, expresses the Opinion that the "*Court has been furnished with sufficient facts*" (*Record*, p. 399).

3. Cost of Gas in other years available.

Had Appellants been desirous to cite the results of Appellee's operations prior to 1905, or had they found such results in any way modifying deductions drawn from the periods specially examined here, they had the information at hand in the testimony and report of Arthur W. Teele, expert accountant for the Stevens Legislative Committee of 1905, who tabulated such operating cost in detail as found by him for the years 1901, 1902, 1903 and 1904 (*New York Senate Document 30 of 1905*, pp. 2555, 3027-3038).

The cost as found for the years mentioned, was as follows (*Record*, p. 84) *per thousand feet of sales :*

1901	61.55c.
1902	60.86c.
1903	61.71c.
1904	61.01c.

During no part of this period was the 22-candle power penalty provision, or were the present requirements as to purity and pressure, in operation ; nor did the figures include any allowance for "depreciation" or "contingencies" beyond *actual expenditure.*

The Gas Commission, for the year November 1, 1904 to October 31, 1905, found the cost of gas to be 60.75c per thousand feet of sales, in addition to which they allowed 1.81c. per thousand for additional enrichment required by the new law, or a total of 62.56c. per thousand (*Record*, p. 32).

It will be observed that all these costs were substantially above the cost per thousand of Appellee's sales as found by the Court for 1905, to wit, practically 58 cents. This result is reached by deducting from the cost as found by the Master 65.84c. (*Record*, p. 237) the amount of items *ultimately* disallowed by the Court, $1,043,280.42 (*post*, p. 104), equal to 7.85c. per thousand feet sold.

4. Conduct of the Case before the Master.

Counsel for the Public Service Commission, who came into the case long after the trial of the action, and consequently had not the advantage of personal observation and touch, complains of the method in which the case was conducted before the Master, suggesting in substance that Appellee presented or withheld information at will.

The facts above recited, with the disposition made by the Circuit Court of a similar plea, might stand alone as a reply; but it may not be inappropriate to call attention to a few features.

(**a**) When Appellee, at the outset, for convenience of all concerned, presented summaries in much detail, of its receipts and operating expenses, it was always under the ruling of the Master, assented to by Appellee, that such summaries were received *subject to verification, either by examination of Appellee's books before the Master, or out of Court*, as might be arranged between the parties.

That this was understood, accepted and acted upon by the Master and all counsel, appears by reference to the Record (pp. 633, 735, 736, 778, 803, 866, 871, 875, 892, 893, 932, 1046, 1048, 1058-64, 3248 and many others). And before the conclusion of its case, Appellee (as above said) offered in evidence all its *original* books and records relating thereto.

(**b**) As the action was brought and the statute took effect on May 1, 1906, and the trial of the cause began on July 16, 1906, pursuant to Judge LACOMBE's order, it was not a matter of inconvenience to select July 1, 1906, as a basis of examination,--it was *simply an impossibility* to have Appellee's voluminous records, in detail required for examination, brought up and tabulated as of July 1, 1906. Only one who has gone through such an experience, and knows the days and nights and weeks required to get such accounts and tabulations condensed, verified and in shape,—even when the ledgers are *written up* to a given date,—can fully appreciate the situation.

As Mr. Carter shows, considerably later than the beginning of the trial, Appellee's books had not yet been brought up to June 30, 1906 (*Record*, p. 905); and the very labor and strain under which all the office of Appellee were laboring, in preparation of data for presentation on the trial of this cause,—*much of it prepared (as the record shows) at the request of the Appellants and as an accommodation to them*,—made it doubly impossible to do so.

(**c**) Moreover, if it had been possible, it would not have given an equally intelligent and accurate result, to have taken a year which does not coincide with Appellee's fiscal year. The result instead of being absolute, is only approximate in such a case, since taxes for different years have to be apportioned and many items divided on a mere estimate,—as appeared before the Gas Commission,—instead of being exact figures which are worked out upon settled methods of entry for the fiscal year.

In fact, nothing would have been more satisfactory to Appellee than to have taken the year 1906, had it been feasible; for, it was in evidence that the assets of the Company *were increasing*, and its assets on July 1st, 1906, would have been greater than on December 31st, 1905,—thereby entitling Appellee to a larger allowance for return on capital.

(**d**) It is not the fact, as was intimated below, that examination of Appellee's books to July 1st, 1906, was demanded or refused. Moreover, the Master was in charge of the trial, and if Appellants had made any proper demand, he would no doubt have made a proper order, no matter what Appellee's attitude might have been. Certain requests were made of Mr. Carter to *prepare a lot of tabulations for Appellants for use on cross-examination* running down to July 31st, 1906, and he stated that the books had not been even written up to June 30 yet. We declined to undertake the labor of such *tabulations*, and the Master properly ruled that the presentation of such matter was a part of *Appellant's* and not of Appellee's case (*Record*, pp. 777–80).

(e) Counsel suggests that Appellee was allowed to prove the cost of additional items of "enrichment," "taxes" and "labor" occurring or foreseen in 1906. These items were not shown for the purpose of having them included *per se* in the operating cost of 1905. They were presented only as an illustration of the character of items *which Appellee had been claiming were and should be covered by the "reserve" or "contingent" fund* already included in its operating charges for 1905; and that the Master fully understood this and so treated it is entirely clear from the language of his Report (*Record*. p. 228).

The items were suggested as "illustrations" only, the same as samples of pipe were presented showing the effect of electrolysis.

(f) An examination of the Record will demonstrate that the Appellants were treated with the greatest liberality by the Master in relation to the introduction of evidence, and cross-examination of witnesses, the Master repeatedly stating in substance that as this was an equitable cause he would give great latitude to Appellants in the nature of evidence produced; and he accepted many items offered by them, against Appellee's objections, on the ground that they might throw some light on the issue although not strictly competent by ordinary rules of evidence (*Record*, pp. 1100, 1900, 1924, 1925, 1926, 1955–6, 2975, 3193–5).

(g) The suggestion that during the period specially examined, Appellee might have been getting its house in order by reason of the Stevens Committee Investigation, or in any way "padding" its accounts, is wholly gratuitous, and is supported by not a shred of evidence. *It could not be so.* The Stevens Committee did not begin its investigation until April, 1905,—six months after the beginning of the period which the above statements of operation covered; and absolutely the only change, in 1905, from previous years was the segregation of the ten cent "Contingent and Renewal" fund from the general Profit and Loss account of Appellee, Appellee's books showing precisely its exact receipts and expenditures as before (*Record*, pp. 4503–4); and when Appellee presented its statement of operations for 1905 (Exhibit 94), it *stated at the outset, through Mr. Carter, the nature, reason and analysis of this particular item* (*Record*, p. 840).

POINT XIII.

Computation by which Court reached "Net Income," $3,024,592.45 *(ante*, p. 6), for year beginning May 1, 1906.

In determining the operating cost of gas as a factor in such profit, both the Court and the Master took as their basis Exhibit 94 (printed in full in *Master's Report*, *Record*, p. 217), showing Appellee's complete expenditure in its gas business for the year 1905,

totaling	$9,936,910.42
From which the Master deducted Fixed Charges and other items (*Record*, p. 248)	1,190,645.23
Leaving Operating Expenses as found by the Master (*Record*, p. 248)	$8,746,265.19

1. Preliminary Computation based on Sales of 1905.

The Receipts and Expenditures, and the Profit to Appellee, *according to the computations of the Court*, **the method of which we do not accept,** may accordingly be summarized as follows:

Receipts as found by Master (*Record*, pp. 248, 5052)	-----------	-----------	$13,730,193.50
Deductions by the Court from Income (*Record*, p. 405):			
Dividend from National Coke & Coal Company	$5,000.00		
Rental from Lands Leased, but excluded from Complainant's assets by the Court	37,408.88		
Receipts from gas acquired from other Companies	2,862,757.32	-----------	2,905,166.20
Income from sales of gas of Appellee's manufacture (*Record*, p. 405)	-----------	-----------	10,852,027.30
Operating expense, as found by the Master (*Record*, p. 248)	-----------	8,746,265.19	
Deductions by the Court from Expense (*Record*, pp. 404-5):			
Taxes on land excluded by Court from capital (*Record*, p. 423)	18,666.00		
Interest on Taxes for the year 1905	94,506.29		
Legislative Investigation Expense	25,671.74		
Franchise Tax Legislation Expense	63,401.65		
Contingent expense, including renewals	841,034.74		
	$1,043,280.42		
Net Cost of gas received from other Companies	893,432.40	1,936,712.91*	
Operating expense found by Court in production and distribution of gas			

---

* This is the $1,947,117.91 found by the Court (*Record*, p. 405), less subsequen correction for taxes, $10,405 (*Record*, p. 423).

of Appellee's own manufacture (*Record*, p. 423)			$6,809,552.28
Net profit on sale of gas of Appellee's manufacture (*Record*, p. 423)			4,015,475.02
Receipts from sale of gas secured from other Companies, as above	2,862,757.32		
Payments to other Companies for such gas (Item, 43 of Ex. 94—*Record*, p. 219)	997,039.89		
Apparent profit on acquired gas (*Record*, p. 405)			1,865,717.43
Apparent profit of Appellee at $1 rate, on all gas sold by it in 1905 (*Record*, p. 432)			5,881,192.45
Loss at 20 cents per thousand under the 80 cent rate, (*Record*, p. 248)			2,656,600.00
Apparent profit on Appellee's total gas sales in 1905, under the Acts in question			$3,224,592.45*

But the Court does not find that $3,224,592.45 is the fair or normal profit upon Appellee's sales for the year 1905. On the contrary *(Record*, p. 432) :

> " The Court finds that **said sum of $1,865,717.43 represents more than a normal profit** upon the volume of purchased gas, in that the amount paid by Complainant to other Companies for the same ($997,039.80) was paid under temporary and expiring agreements, and *did not include any reasonable recompense or return upon the value of the investment required to produce said gas.*"

Hence Appellee's *normal profit* on its total business, if computed on the basis of the sales for 1905, must *(under the Court's view)* be reduced from $3,224,592.45, by the amount of the " reasonable

---

*This is the $3,234,997.45 first found by the Court (*Record*, p. 407) less subsequent correction for taxes $10.405 (*Record*, p. 423).

recompense or return" upon the value of the investment required to produce nearly 3,000,000,000 of such gas, as hereinafter computed.

Introductory.

(a) *It should be clearly noted at the outset,* that the Court made an error, most important in principle, in designating the sum of $1,865,717.43, obtained by deducting from Appellee's *income* from sales of gas received from other Companies ($2,862,757.32) the amount *paid* by it to such Companies ($997,039.89), as "*profit on purchased gas*" *(Record,* p. 432). The Court should also have deducted, *at least* a *pro rata* proportion of the distributing and general expense attendant upon Appellee's total sales,—to wit, 25.25c. per thousand *(post,* 113); which upon the sales derived from such Companies (2,863,702,341 feet), amounts to $723,084.84,—reducing said apparent "profit on purchased gas" to not exceeding **$1,142,632.39,** in place of $1,865,717.43. *This is clearly demonstrated (post,* pp. 112–114).

The erroneous theory which induced the Court to attribute no part of the distribution and general expenses of Appellee to such "purchased gas" *of 1905,* was also responsible for its failure to allow for *any additional distributing expense on assumed additional sales of 1,131,298,000 feet in 1906,* while charging Appellee with the receipts from such additional sales, as hereinafter pointed out *(post,* pp. 110–4).

The Court, it is true, included Appellee's *entire* general and distribution expenses, for 1905, in operating cost of gas of Appellee's manufacture only; but it is none the less important to note the error in principle.

(b) As to "**candle power,**" the Master recognized that 1.83c., in addition to Appellee's "operating expense" for 1905, would be required for a full year to maintain "candle power" consistently above 22 candles (*Record,* p. 228); and even the Gas Commission allowed 1.81c. for that purpose (*Record,* p. 32). The Court concluded otherwise (*Record*, p. 424); and while Appellee believes that injustice is done, it will not take the time of this Court to present the subject here.

2. Final Computation, for Year Beginning May 1, 1906, Based on Assumed Increase of Sales Over 1905.

But in estimating the real profit in Appellee's gas business, the Court, instead of proceeding upon the sales of 1905, assumes a year beginning May 1, 1906, assumes that the output and profits of Appellee's plants in Manhattan will remain the same as in 1905 ($4,015,475.02), and further assumes an increase in gas acquired from other Companies from the 2,863,702,341 feet of 1905 to 4,000,000,000 cubic feet *(increase 1,131,298,000)*—all to be obtained from the new Astoria plant whose value is fixed at $12,000,000 and whose total capacity would be consumed by said 4,000,000,000 cubic feet. The Court estimated that said 4,000,000,000 feet could be delivered to Complainant at 50 cents per thousand, including "station-cost" of manufacture and a fair return on said investment of $12,000,000, 6 per cent. on that valuation ($720,000) representing 18 cents per thousand on said capacity, and the "station-cost" being reckoned at about 32 cents *(Record*, p. 426).

The computation of the Court on this basis may be summarized as follows:

Receipts from 4,000,000,000 feet at $1 per M. *(Record*, p. 426)		$4,000,000.00
Holder Cost and Return on Capital at 50 cents per M. *(Record*, p. 426)	$2,000,000.00	
Taxes on Astoria Plant, as estimated by the Court *(Record*, p. 426)	90,000.00	
General Expenses, including officers and staff of Astoria Company, Insurance, and other items (*Record*, p. 426), say,	44,282.57	
Total payments to Astoria Company		2,134,282.57
"Apparent" Profit to Appellee *(Record*, p. 432)		$1,865,717.43

Profit on sales of gas of Appellee's own manufacture, as above computed *(ante*, p. 105)		$4,015,475.02
Appellee's total profit on all gas sold by it, at $1 per M. *(ante*, p. 105)		$5,881,192.45
Loss at 20 cents per M. under 80 cent rate, on amount of Appellee's sales for 1905, as above (*ante*, p. 105)	$2,656,600.00	
Loss at 20 cents per M. under 80 cent rate on 1,000,000,000 feet of such assumed increase in sales of gas acquired from other Companies over such sales in 1905 *(Record*, pp. 408, 428	200,000.00	
Total loss under 80 cent rate		2,856,600.00
Net profit on total sales of Appellee as stated in Decree *(Record*, p. 430)		$3,024,592.45

3. Assignments of Error Respecting said Final Computation.

Appellants assign error in substantially every element of this computation, to wit: to the assumption of such increase in sales, of the increase in cost of gas acquired from other Companies, of change of source of manufacture of some portion of such gas, and in the overlooking of an assumed decrease in expense due to a conjectural reduction in Appellee's "special franchise" tax.

In short, Appellants take the ground that the assumptions of the Court, as to increase of sales and otherwise for the assumed year beginning May 1, 1906, are speculative and legally inadmissible; and that the fixed results for the year 1905 form the proper basis of computation *(Assignment V of Willcox et al. and X of Jackson,—Record*, pp. 437, 482).

We reply that, *if the Court pursued a proper course in adopting the year May 1, 1906 and in assuming said increase of sales therein,* the other Assignments are certainly not well based.

(a) Future Source and Cost of "Purchased" Gas.

Thus, no part of this "purchased" gas, 4,000,000,000 feet, could be expected to come from Appellee's Manhattan plants, since the amount there produced in 1905 (10,419,000,000 feet) substantially exceeded their rated "annual" capacity, which all witnesses stated should be about 200 times their maximum day's capacity of 51,000,000 feet (*Record*, pp. 546, 642, 1511, 1655, 1708, 3792, 4783).

It is in evidence, too (*Record*, pp. 461, 426, 4226, 4292), that the Astoria plant was delivering gas to Appellee in December, 1906—a source from which no gas was received in 1905; and after this plant has been constructed by Appellee at a cost of $12,000,000 to supplement its Manhattan capacity, it would be a violent assumption that it will be allowed to remain idle.

It is likewise inconceivable that the Astoria plant will, in effect, (bookkeeping forms disregarded), deliver its gas to Appellee at the "bare station-cost" of 34.04 cents per thousand (*Record*, pp. 400, 405), at which Appellee apparently received its outside gas in 1905, and thus waive all "return" on the $12,000,000 investment.

Moreover, it is of course true, that upon the view that the price of gas must include a return on the value of the *property employed to produce it*, it is immaterial whether the 4,000,000,000 feet assumed comes from the $12,000,000 plant at Astoria, or from other outside plants in Manhattan of like value.

(b) The Suggested Reduction in Franchise Tax.

Nor is there merit in the suggestion of a possible reduction of the Franchise Tax for 1906 and subsequent years, below the $406,909.23 of 1905 (*Record*, p. 223). Both the Court and Master declined to indulge in such speculation,—the probabilities being directly contrary.

The assessment of Special Franchises for 1905 was $27,300,000. The tentative assessment for 1906, made as of the second Monday of January, *but to cover the entire year*, was $31,900,000—an increase of $4,600,000 (*Record*, p. 202). The amount is not finally determined until after March 31, prior to which date complaints are heard by the Commissioners.

Under the New York practice, a notice was sent to Appellee in March, 1906—*after the Order of the Gas Commission here in question, reducing the rate for gas to 80 cents had been made* (February 23, 1906), and before this action was begun (May 1, 1906), in order that Appellee might be heard on said assessment before the amount was finally fixed. Appellee appeared and was heard, but said assessment was nevertheless—in spite of the 80 cent rate—permanently fixed by the Tax Board " under Appellee's objection and protest " at $31,900,000 (*Record*, p. 1850); and there is no doubt that it was considered in fixing the assessment.

This experience, coupled with the fact that the assessments of the *identical* Franchises have been raised from $13,950,000 in 1900 (*Record*, p. 6691) to $31,900,000 in 1906 (*Record*, pp. 1848), while the charge for gas has remained stationary at $1, certainly presents no ground upon which a Court might judicially determine that the assessment will be in future reduced in any circumstances.

POINT XIV.

Such " Net Income," $3,024,592.45 (*ante*, p. 6), **for the year beginning May 1, 1906, much higher than legally justifiable.**

In fixing that figure, the Court overlooked various items which must go to reduce it.

1. Initial Error in Tabulation.

The assumed increase in "purchased" gas to 4,000,000,000 feet, involves an increase of 1,136,298,000 feet over 1905 *(Record,* p. 220), but, while including receipts from *sales* of the entire 4,000,000,000 at the $1 rate, the Court deducts the 20 cents per thousand loss due to the 80 cent rate on only 1,000,000,000 feet in excess of the sales of 1905 *(ante, p.* 106–7)—or 136,298,000 feet too little.

The loss on this amount, at 20 cents per M., amounts to $26,259, thereby reducing the "profits" computed by the Court to *$2,997,996* (*See Tabulation, post,* p. 118).

2. Omission of "General" and "Distribution" Expense.

While assuming this enormous increase of 1,136,298,000 feet beyond the experience of 1905,—an additional output equal to *more than one-third the entire sales of the City of Boston for that year* (*Record,* pp. 2083–4), and greater than the *entire sales* of all except a very few of the largest Cities in America,—the Court computes no additional expense whatsoever for the handling and distribution thereof. We assert that this cannot be; that if such a vast increase of sales is assumed, the Court must estimate and allow for the increased expense surely attendant.

No witness on either side claimed that such an increase could take place without additional expense; and the action of the Court in omitting any allowance therefor is accordingly not only unsupported by any evidence, but directly in conflict with the evidence of every witness who testified on the subject, as well (we respectfully submit) as with common knowledge on the subject. The only question is as to the *amount* of such additional expense.

(a) Rate of Increase of General and Distribution Expense with Increased Sales.

It was pointed out that an increase in sales usually means the procuring of many smaller consumers, whose patronage is less profitable relatively than the larger customers already on the books (*Record*, p. 4361).

Appellee's experience in this regard is in evidence. It appears that while the consumption of gas *per meter*, in 1885, was 36,000 feet on total sales of less than 4,000,000,000 cubic feet, at a charge of $1.70 per thousand, the consumption per meter in 1905, with sales of 13,283,164,000 feet, at a price of only $1 per thousand, was only 34,000 cubic feet (*Record*, p. 5040).

Vice-President Carter testified respecting the existing situation:

> "The Company is losing large units of business, and taking on a number of small units of business, which cannot fail to increase the cost per thousand of distribution, as well as decrease the average sales per meter in use" (*Record*, p. 4426).

Mr. Forstall showed that this was the common experience; that after a "certain point" is reached, the increase in sales is bound to come from smaller consumers who are relatively more expensive than the larger ones (*Record*, pp. 4361–2).

Mr. Cowdrey, head of the Laclede Gas Light Company of St. Louis, said in Chicago, in speaking of cost of gas production:

> "Increasing the number of consumers to each mile of mains does not materially cheapen the cost of gas. This is especially true after reaching a certain point (*Record*, p. 2589).

And Dr. Humphreys showed that in the City of London, whose *per capita* consumption is highest next to New York of any City in the world (*Record*, p. 4728), the distribution and general expenses of the three metropolitan Companies are showing constant increase *per unit* of increased output. Indeed, from 1901 to 1905, while sales had increased 3.79 per cent., the items of "distribution" and "management" had increased 18.8 per cent., or nearly five times as fast (*Record*, pp. 4728–9).

It is obvious that substantial additional output requires the installation of more appliances, the reading of more recording dials, the indexing and repair of many more meters, the maintenance of more services, the increase of bookkeeping due to the accounts of additional consumers, the employment of additional collectors, an increase in the taxes which are laid upon the "gross earnings" of the Company (*"Tax Law" of New York*, § 186)—in short a *very general* increased activity with necessary attendant expense. Appellee's force in 1905 was presumably sufficient only to meet its requirements at that time; none of Appellants' witnesses indicate any point at which it had idle employees, or its pay-roll could be cut.

(b) A Demonstration From Appellee's Experience.

The data accumulated by the Stevens Committee of the New York Legislature (*Senate Document 30 of 1905*), to which we have above referred, shows Appellee's sales, with distribution and general expenses for the year 1901, which is as far back as its examination extended; and a comparison with the like items for 1905, *strikingly confirms the foregoing conclusions as to rate of increase in such expenses with increased sales.*

Arthur W. Teele, expert accountant of that Committee, found Appellee's "Distributing" and "General Expense", and sales, for the year 1901 (*New York Senate Document 30 of 1905*, pp. 2560–2), which were as follows (*Record*, p. 83):

Distributing	$1,408,258.38
General expense	950,032.28
Total	$2,358,290.66

Sales, 10,296,955,761 cubic feet.

The similar items, with sales, for 1905, appear as follows:

Distributing and General Expense, as found by the Court, in two items aggregating (*Record*, p. 400)		$4,396,741.33
Deductions by the Court, items from $94,506.29 to $841,034.74 inclusive (*Record*, 404–5), aggregating	$1,053,685.42	

Less item restored by Court (*Record*, p. 423)	$10,405.00	$1,043,280.42
Allowed by the Court (25.25c. per M.)		$3,353,460.91
Allowed by Court ("Eleven Cent Fund") for "Repairs and Renewals" (*Record*, p. 405)	$1,172,359.10	
Actual Expenditures for "Repairs and Renewals" (*Record*, p. 5080)	$974,289.65	
Allowed by Court beyond actual expenditure for 1905		198,069.45
Actual expenditures for "Distributing" and "General Expense" in 1905		$3,155,391.46

Sales 13,283,163,000 cubic feet. (*Record*, p. 220).

The above amount of $198,069.45 is deducted from the "Distributing" and "General Expense" allowed for 1905 by the Court, since an examination of Mr. Teele's testimony discloses that his figures deal only with actual expenditures, and include *no allowance to bring the average of repairs and renewals for any one year up to the average for a period, or other "reserve" margin which is commonly conceded to be necessary;* so that a fair comparison requires the reduction of the Court's computation for 1905 to the same basis.

Comparing the foregoing results, for the years 1901 and 1905 (*Record*, p. 5039), we have:

	Sales in feet	Distributing and General Expense	Cost per Thousand
1905	13,283,163,000	$3,155,391	23.75c.
1901	10,296,955,000	2,358,290	22.41c.
	2,986,208,000	$ 797,101	26.69c.

It appears, therefore, that the increase of sales from 1901 to 1905, 2,986,208,000 feet, which closely approximates the amount (2,863,702,341 feet) of sales derived by Appellee in 1905 from subsidiary Companies (*Record, p. 220*), was accompanied by an increased expense of $797,101, which is equal to 26.69 cents per thousand feet of such increased sales. This strikingly illustrates the proposition that an increase in volume of sales *beyond "a certain point"* is attended by a *disproportionately* large increase in such expense. This is the more convincing since, *during the entire period in question* (1901–1905), the "Agency Agreements" were in operation under which Appellee was receiving from outside Companies a large portion of the gas which it sold *(Record*, pp. 5047, 5049, 5050).

This covers the period of an extraordinary increase in sales due to the great coal strike of 1902–3, which compelled the substitution of gas for other fuel to a large extent *(Record*, pp. 1991–2), and should accordingly be an extreme test on the point under discussion.

It is idle for Appellants, in the face of such evidence, to point to this item and that item in "Distribution" and "General Expense," and argue that *it* will not increase on account of increased sales. While some items do not increase proportionately, others increase more than proportionately, so that the net result according to experience, is that when a Company pushes its sales beyond a "certain point," which Appellee has obviously reached, the *entire* expense beyond the holder *increases—as it is now doing in New York and as it has done in London—at a more rapid ratio than sales.*

And certainly the added receipts resulting from the assumption of such a vast increase in sales cannot be charged against Appellee, with no deduction for the expense which will inevitably accompany their distribution.

(c) Conclusion.

The Court below should, therefore, have reduced its estimate of Appellee's probable profit, by the amount of "General" and "Distribution" Expense attendant on the assumed increased output of 1,136,298,000 feet, at a rate not less than that found by the Court for 1905 (25.25 cents per M.). This would amount to $*286,915 (See Tabulation, post*, p. 118).

3. Omission of Return on Additional Plant Required.

Nor did the Court compute or make any allowance for a return on such increased investment in distributing system and apparatus, as will inevitably accompany the handling and delivery of such an enormous volume of gas as 1,136,298,000 feet.

Again, no witness questions that such increase must occur; it is only a question of amount of increase.

Not only are meters, meter cocks and connections, services and similar property bound to increase, but as consumption per meter decreases on the whole with increased output (*Record*, p. 5040), they must increase more than proportionately with sales. Additional or larger mains, too, may be required; and additional holders will certainly be needed to handle such a vast increase in volume of gas, and this will require the use of *additional real estate as well.*

We know of no better basis of estimating the increase of distributing plant required, than a *pro rata* basis. Appellee's investment in distributing system and apparatus, as found by the Court, *excluding real estate, plants and half of working capital* (*ante*, p. 6), is computed to be $19,538,000 for the distribution of 13,283,000,000 feet; and on this basis, the investment required in distributing plant to handle the additional output of 1,136,298,000 feet would be $1,670,358,—6 per cent. upon which would amount to *$100,221.* This looks small, and undoubtedly is too small, especially as no increase in land for holders is reckoned; but it is not a negligible sum (*See Tabulation, post*, p. 118).

Ratio of Distributing Plant Increase.

Prof. Bemis, for the Appellants, advanced certain theories as to profits from increased sales, and illustrated his point by statistics of certain Massachusetts Cities; but it was shown on rebuttal that in those very Cities the "*gas assets increased more rapidly than the gas profits*" (*Record*, pp. 4722–3).

So, too, it was suggested that many classes of Appellee's assets have not increased since 1884 in proportion to increase of output; but this is due largely to the fact that, in 1884, the plants of the six consolidating Companies were, in the aggregate, of a much greater capacity than the output at that time, there being land enough on hand for a maximum daily capacity of about 50,000,000 cubic feet per day (*Record*, p. 6464), almost the present capacity of Appellee's plants (51,000,000 cubic feet); while, with the addition in 1884 of only $1,000,000, the entire system could have been brought to a capacity of 33,000,000 feet per day (*Record*, p. 6464),—far beyond any demand at that time (*Record*, pp. 1714, 6364, 6464).

But when a Company's output is straining the capacity of its distributing system,—and the Appellant, The City of New York, assigns error in that the Court below "*did not find that the distributing system as now existing is inadequate for the output of Complainant*" (*City's* "*One Hundred and Seventh*" *Assignment, Record*, p. 475)—the situation is distinctly different.

Counsel for the Public Service Commission computed, in his Brief below, that the increase in Appellee's distributing assets in 1905 over 1904 "would not exceed $200,000," accompanying an increase in output of only 112,404,000 feet within the same period (*Record*, p. 5039). With an increase of 1,136,298,000 cubic feet as assumed by the Court, Appellee's estimate of additional investment in "Distributing Plant" at $1,670,358 appears conservative by comparison.

4. If the Court Excludes Expenditures of 1905 As Not Recurring in 1906, it Must Consistently Include Items of 1906 Not Occurring in 1905.

Appellee's operating expense of 1905, was reduced by the Court by the following items, among others (*ante*, p. 104):

"Interest on taxes for the year 1905" ----------	$94,506.29
"Legislative Investigation Expense" ----------	25,671.74
"Franchise Tax Litigation Expense" ----------	63,401.65
Amounting in the aggregate to --------------	$183,579.68

The propriety of these charges in the 1905 account is conceded by the Court (*Record*, p. 401). They were excluded as *temporary and not likely to recur in subsequent years.*

As a matter of fact, the investigation of the Gas Commission was not completed and its Order entered until February 23d, 1906; this suit has been in progress since May, 1906; and while the validity of the Franchise Tax of 1899 has been settled by this Court, taxes since are in litigation in view of the fact that the State has progressively increased the assessment of the identical Franchises from $13,950,000 in 1899 to $31,900,000 for the year 1906,—all of which appears in the Record *(Record*, pp. 6691–6718), but was apparently overlooked by the Court.

It is suggested, therefore, that the Court *was not justified* in *excluding* these, or equivalent, items as a probable expense in 1906 when the last Act attacked took effect; for every evidence indicates that such items of expense are continuing, and are likely to continue, for a considerable time to come.

But if the Court is to exclude these items on the ground that they will not recur in 1906, it must consistently include items which are shown to have occurred in 1906 but did not appear in 1905.

The rule must work both ways; otherwise the computation is one sided and could not fail to work injustice.

Thus it was shown that in the year *1906*, additional taxes were laid over those of 1905 to the extent of 1.13 cents per thousand feet *(Record*, pp. 1667–8), and that wages increased to extent of 1.40 cents per thousand feet, of Appellee's *total sales (Record*, p. 4224), and the Master has so found *(Record*, p. 228). This would amount to *$336,059;* and must be included, we submit, if the Court looks to the year 1906 to exclude the items first mentioned.

5. Summary.

It is submitted, therefore, that the computation of the Court, for the year May 1, 1906, should be substantially readjusted and corrected, and the following basis is suggested as a legitimate and fair one:

Net Profits as computed by the Court (*ante*, p. 107)		$3,024,592.45
Deduct:		
Loss, at 80 cent rate, on 136,298,000 feet (*ante*, p. 114)	$ 26,259	
General and Distribution Expenses on 1,136,298,000 feet (*ante*, p. 110)	286,915	
Return on additional distributing plant required (*ante*, p. 115)	100,221	
Additional Taxes and Wages in 1906 over 1905 (*ante*, p. 117)	336,059	
		749,454.00
Actual Net Profits for year in question		$2,275,138.45

Deductions of the foregoing character, we contend, must *as a matter of law be made*, if the Court assumes an increase of 1,136,298,000 feet of sales over 1905; and the amount of such deductions is based upon Appellee's own experience, than which no better criterion can be found.

If, however, Appellee's experience were not considered conclusive, then it is submitted that the Court, by some other method, should have determined the amount of the additional expense to be allowed.

POINT XV.

Normal Profit of Appellee, on the Basis of Known Sales and Expense of year 1905, favored by Public Service Commission, also much less than said $3,024-592 found by the Court for the later year.

The Appellants, objecting to the Court's computation based on the year beginning May 1, 1906 on the ground that it is "speculative", assert that the results of 1905,—for which sales, income and operating expenses are fixed and certain,—are the proper basis for deduction.

The Court, as seen *(ante, p.* 105), has found $3,224,592.45 to be the apparent profit for 1905, with the statement (in effect) that **this was not a "normal profit,"** since in that computation there has not been deducted a "*reasonable recompense or return upon the value of the investment required to produce the gas*" received in that year from other Companies *(Record*, p. 432).

It was not difficult to compute a "reasonable recompense or return," and thereupon to determine a "normal profit" for Appellee.

1. Based on Return on Value of the Astoria Unit.

(a) If, looking to the future source, as the Court has done, we regard the amount of 3,000,000,000 feet of gas acquired by Appellee from other Companies, as normally to be produced at the Astoria plant, we have a recognized valuation of $12,000,000,—a 6 per cent. return upon which calls for $720,000.

It is proper and necessary to include the entire valuation; for the Master has found that the maximum day's capacity at Astoria is only 20,000,000 feet, that the maximum day's sales of Appellee, in 1905, exceeded its own producing capacity by 19,000,000 feet, exclusive of any reserve capacity which should be at least 20% in excess of its sales for safe operation, and accordingly that—

> "The amount of gas to be produced by the first Unit of the Astoria plant is *under*, rather than over, what was actually required in addition to Complainant's own output to meet the reasonable demands of its business *in 1905*" (*Record*, p. 185).

Judge Hough, referring to the construction of the Astoria plant, remarked that the situation existing was "such as reasonably to justify this provision, entirely apart from the necessity of a reserve" (*Record*, p. 407).

Indeed, as before shown, Appellee's deficiency in actual producing capacity at any one time (as distinguished from the aggregate theoretical capacity of all its plants) below maximum day's sales, was much more than 20,000,000 (*ante*, pp. 85, 94).

(**b**) Moreover, to make the computation just, we must either include in Appellee's operating expense the items of "interest on taxes," "legislative investigation expense" and "franchise tax litigation expense," aggregating. in 1905, $183,579.68, excluded by the Court as not likely to recur, or in lieu thereof the items of additional taxes and wages in 1906, which did not occur in 1905, amounting to $336,059, as hereinbefore set forth (*ante*, p. 117). Perhaps it is fairer in this connection to include the smaller amount, because it has been suggested that the Court's reason for excluding it was not well founded (*ante*, pp. 116-7), and also because we are at this point specially considering Appellee's operating expense in 1905.

(**c**) The computation of "normal profit" for 1905 may, therefore be stated, as follows :

Apparent profit, as stated by the Court (*ante*, p. 105)--		$3,224,592.45
Deduct : Return on value of Astoria property to produce acquired gas (*Record*, p. 426) -----------------	$720,000.00	
Items of Tax Interest and Legislative and Franchise Tax Expense excluded for 1905 on the assumption that they would not recur in 1906 (*ante*, p. 107)-	$183,579.68	903,579.68
"Normal" profit for 1905-------		$2,321,012.77

2. Based on Value of Plants Actually Producin Acquired Gas in 1905.

If we consider the plants of other Companies actually employe to produce the 3,000,000,000 feet of sales manufactured in 1905 outside Appellee's own plants, the computation is not changed.

For the evidence indicates, and the Master has distinctly an repeatedly found (*ante*, p. 91), that the value of the Astoria plan ($12,000,000) is also a fair valuation of the " property of other Com panies employed in the production of gas delivered by them to Com plainant" in 1905 (*Record*, pp. 186, 254), and this finding is con firmed by the Decree (*Record*, p. 430).

3. Based on a Smaller Capacity than 20,000,00 Feet per Maximum Day.

While the Master and Court thus found, upon undisputed fact that an outside capacity equal to that of the Astoria Unit (20,000,00 feet) was required, on the basis of Appellee's sales in 1905, th valuation of that Unit, or of the equivalent " property of othe Companies " actually delivering gas to Appellee in 1905,—could b *pro rated*, were it believed that Appellee's output of 1905 did n require so great a capacity outside its own plants.

(**a**) Thus if, *allowing for no reserve*, we were to take the pr portion of the entire plant (19/20), which Appellee's maximum day requirements from outside Companies (19,000,000 feet according the Master—*Record*, p. 290), bore to the *maximum day's* capacity the Astoria plant (20,000,000 feet), the return at 6 per cent. there would be reduced from $720,000 to $684,000, and " the norm profit" for 1905, as above computed (*ante*, p. 120), would be increas to $2,357,012.77.

(**b**) And even if, still allowing for no reserve, we were to take t proportion (practically ¾), which Appellee's actual sales of gas quired from other Companies in 1905 (about 3,000,000,000 feet) b to the entire *annual* capacity of Astoria plant, the interest at 6 per cent. thereon would be reduced from $720,000 to $540,000, and said "normal profit" for 1905 (*ante*, p. 120) would be increased to $2,501,012.77.

NOTE. The so-called "annual" capacity of a plant is merely an estimated annual output, based on the consideration that a plant cannot and will not be run at its maximum "daily" capacity throughout the entire year; but that during some part of the year it will be shut down in whole or in part for repairs and other contingencies, and during the summer months the daily call upon it will be far short of its maximum daily capacity. This "annual" capacity is estimated, according to all the engineers who testified, at 200 times the maximum daily capacity of the plant (*Record*, pp. 546, 642, 1511, 1655, 1708).

The fact that the "annual" capacity of the Astoria plant as thus computed is 4,000,000,000 cubic feet, while Appellee required only 3,000,000,000 cubic feet outside its own works in 1905, will not mislead; for it is the *maximum day's* capacity as compared with *maximum day's sales* which governs. If Appellee's maximum day's sales in 1905 had been 72,000,000 feet instead of 70,000,000 feet, so that its requirement above the maximum daily capacity of its own plants had been 21,000,000 feet instead of 19,000,000 feet, the Astoria Unit would have been *insufficient* to meet the demand, although Appellee's *annual* "aggregate" requirements outside its works might have proven to be less than 4,000,000,000 or even 3,000,000,000 cubic feet.

Admission of Appellants' Witness Marks.

Appellants' expert witness on this subject, Mr. Marks, *flatly accepted and asserted the principle for which Appellee here contends.* He admitted that a return on the value of the property of other Companies employed in producing the gas delivered by them must be included in the cost of gas sold by Appellee, and that it made no difference whether such capacity was located at Astoria or at other plants in Manhattan (*Record*, p. 2787); he computed the value of such a plant at $5,097,000; and *he added this amount to Appellee's own assets* to find the total upon which a return must be computed (*Record*, p. 1940).

As before noted *(ante,* p. 95), this computation was "inadequate" as the Master found (*Record*, p. 186), but **a return at 6% on even this valuation would amount to more than $300,000.**

POINT XVI.

Basis of Appellants' Opposition to Inclusion in Cost of Gas, of a Return on the Property of Subsidiary Companies, Employed in Production of Gas Delivered to Appellee.

Appellants, in spite of their original position as evidenced by the testimony and admissions of their witness Marks, now object to the inclusion in Appellee's charge for gas of any return upon the value of either the Astoria plant, or of the plants of other Companies producing the gas actually delivered to Appellee in 1905.

In effect, they would *compel* delivery of gas by Appellee to its customers, at a rate which would include a return on property producing only 10,419,461,426 feet, out of the 13,283,000,000 feet actually sold by Appellee in that year; and they rest their entire contention upon the terms and effect of certain "Agency Agreements" under which, *in the emergency existing pending the completion of the Astoria plant,* the New Amsterdam, Standard, Mutual and Central Union Companies delivered to Appellee said 3,000,000,000 feet.

1. The "Agency Agreements."

Such "Agency Agreements," a sample of which is quoted by the Master *(Record,* p. 184), provided for the delivery by said subsidiary Companies to Appellee of said gas at *bare cost of labor and materials employed by the producing Company, plus about 10 per* *cent.*; and the amount paid to the subsidiary Companies by the Appellee thereunder, in 1905, was $997,039.89, of which $893,432.49 represented cost of labor and materials, and the balance of $103,607.40 was said 10 per cent. (*Record*, pp. 184, 400, 407).

It will be noted at the outset that Appellee owned practically all of the Stock of the New Amsterdam Company (over 99 per cent.), which delivered *more than 70 per cent.* of the entire 3,000,000,000 feet (*City's Ex. 36*, *Original paging*, 7756), while the New Amsterdam in turn owned all the Stock of the Central Union Company (*p. 453*); and that Appellee also owned about *92* per cent. of the Stock of the Standard Company, and a majority of the Stock of the Mutual Company.

> NOTE—It is stated by Counsel for the Public Service Commission (p. 109), that the New Amsterdam Plant had by the expenditure of over One Million Dollars been enabled to supply Appellee with 2,173,196,400 feet per annum; but, of course, this is not all the expenditure necessary for the production of such gas. It was merely an additional expenditure, supplementing the extensive plant already existing. It has, moreover, been pointed out that the aggregate *sales* of Appellee and its subsidiary Companies were so close to their full *capacity*, that the immediate construction of the Astoria Plant was imperative (*ante*, pp. 94–5).

2. No "Return on Investment" to Subsidiary Companies.

If said $103,000 had been "profit" to the producing Companies in any sense, and available for application as "return on capital," it would have represented only about *8/10 of one per cent. on the value of the Astoria plant*, or (in the alternative) on the value found by the Master for the "property of other Companies" producing the 3,000,000,000 feet of gas for Appellee in 1905 (*Master's Report*, *Record*, pp. 185–6, 254); while even upon the sum of $5,097,000 *which Appellants' expert Marks concedes to be the value of such "property* of the other Companies," it would mean only 2 per cent.!

The Court was, therefore, fully justified in its conclusion stated in the Decree that said sum

> "did not include any reasonable recompense or return upon the value of the investment required to produce said gas" (*Record*, p. 432).

3. No "Profit" to Subsidiary Companies.

But said $103,000 was not "profit" to the producing Companies; *it was obviously more than consumed by items of expense outside labor and material*, such as Taxes, Insurance, Depreciation and Administrative Expenses necessarily attendant on a plant necessary to produce and deliver such an immense volume of gas—a volume substantially as great as the entire sales of gas in the City of Boston in 1905 (*Record*, pp. 2083–4), and approaching the *aggregate output* of the six constituent Companies at the time of their consolidation to form Appellee in 1884 (*Record*, p. 5039).

Thus, *depreciation* beyond "ordinary repairs" was fixed by Appellants' expert, Professor Bemis, at a minimum of 2% (*Record*, pp. 2485–6) on depreciable plant and this, upon depreciable property of only $8,000,000, which is less than the value of such property in the Astoria plant (*Master's Report, Record*, p. 182), would amount to $160,000; while, applied even to the inadequate estimate of Appellants' other expert (Marks) of the value of the "property of other Companies" producing said 3,000,000,000 feet in 1905 ($5,097,000), it *would consume practically the entire $103,000*, without considering Taxes and Insurance and Administrative Expenses in general.

The Court concluded that *Taxes* alone on the Astoria plant would amount to $90,000, and plus Administrative Expenses would amount to $134,000, on the Astoria plant (*Record*, p. 426); and, at that, the Court assumed a tax assessment of only $6,000,000 on Astoria, since the tax rate was about 1.50 (*Record*, p. 1002).

It is obvious, therefore, that not a dollar of real "profit" was included in said $997,000 paid by Appellee to the subsidiary Companies in 1905.

And the Court, recognizing this, characterized the payment as "bare station-cost" *(Record*, p. 400).

4. Contention of Appellants.

Notwithstanding this situation, clear and indisputable upon the Record, Appellants contend that the charge of Appellee for gas, in the present and future, is irrevocably bound by the amount paid to the subsidiary Companies under these temporary (and now expired) emergency agreements; which in effect, would compel Appellee to continue to sell at a price which will afford no return on its $12,000,000 investment in the Astoria plant, or any equivalent plant, from which it is now procuring gas.

POINT XVII.

Property "Employed" in the Public Service, the True Basis for Return.

Appellants overlook what we conceive to be the true principle, sanctioned by this Court in many cases. "The basis of all calculations as to the reasonableness of rates" is, as we construe the decisions, the fair value of the property being "*used*" for the "convenience of the public" *(Smyth v. Ames, 169 U. S. 466, 546; San Diego Land Co. v. National City, 174 U. S. 739, 757; Cotting v. Kansas City Stock Yards, 183 U. S. 79, 89).*

The basis of calculation is not the value of the property "owned" by the corporation delivering the service or the product, but the property which is "employed" for the public convenience; and this includes all the property which the corporation, by *direct ownership or lease or other arrangement, necessarily and reasonably* *employs or procures to be employed,* in performing the service or procuring or delivering the product.

> NOTE. It will be observed that the "Agency Agreements" in this case, provide as to each subsidiary Company that it shall "*employ* in such manufacture, production and delivery its own plant and appliances," (*Record,* p. 5049).

1. Value, Not Amount Paid, Controlling.

(a) If Appellee holds a piece of real estate under lease, the reasonable return upon the *value* of such real estate is allowed to Appellee in its operating cost of gas. It may be called "rental", but it is "return" upon the value of the land; and if Appellee pay an exorbitant rental, the fair rental and *not the rental paid,* will be the measure of the allowance for the use of such land, in computing a proper charge for gas.

On the other hand, if Appellee be in possession of lands leased fifty years ago, at a fair rental on the then value thereof, it—as the owner of an estate in lands—would be entitled to include the leasehold in its assets employed in the gas business, and receive a return upon it based upon the *present value* of the land.

(b) No more is Appellee or the State, concluded by the amount which Appellee pays or agrees to pay to subsidiary Companies for gas acquired,—than they (or either of them) are concluded as to value of land owned by the cost thereof, or of land leased by the amount of rental paid therefor.

Had the amount agreed to be paid by Appellee for the gas delivered to it by other Companies been excessive, as representing more than the cost of the production thereof *plus* a proper return on the property employed in producing and delivering it, *the amount would certainly be subject to reduction by the Court;* and if it be too little, computed on the same basis, Appellee is as surely entitled to the benefit of a computation which shall include such fair return, and the consumer is in no wise injured by that procedure.

(c) The question as to gas purchased by Appellee, as well as land used by it, is (in such legislation as now involved) not what it *costs*

Appellee, but what it is *worth ;* and that means the expense of production plus a fair return on the property producing it. If the manufacturer takes payment therefor in any other way than by acceptance of such amount, or chooses as a temporary and accommodatory measure to let Appellee have gas at "bare station-cost" or *gratis*, that is no concern to the consumer and is not controlling in the determination of the "*reasonable* price" for gas delivered to or by Appellee.

2. The Fair Rule.

In short, we take it to be axiomatic that a fair return upon the value of all the property required and employed to produce the gas delivered by a public service corporation to its consumers, *must be paid by such consumers ;* and *how this profit is distributed among the various parties or agencies who own or employ such property, is a matter wholly between them, with which neither the consumer nor the general public has any concern.*

The consumer cannot evade this proper payment by seizing upon a peculiar and special situation such as prevailed temporarily between Appellee and its subsidiary Companies pending the completion of the Astoria plant, any more than he could take advantage of the situation if he found such Companies temporarily delivering to Appellee gas gratuitously. **One may voluntarily sacrifice his property, but no legislature can compel him to do so by rate fixing or otherwise.**

If this were not the true principle, it would have been possible for the Legislature to seize the situation existing when Appellee and other Companies in New York were engaged in the "gas war" eight or ten years ago, and were selling gas to consumers at 50 or 60 cents per thousand,—less than enough to cover cost of production, to say nothing of return on capital,—and to enact a valid Statute compelling the continuance of that low rate, on the ground that the actual selling price of gas, and not the "reasonable price" as above defined, was controlling as to the power of the Legislature, to fix future rates.

The only rule surely working justice to the consumer and to the producer alike, is that including in the cost of gas a fair return upon the value of all the property reasonably and necessarily employed in the production and distribution of the product; and that, we submit, is the true rule in construing such Acts as are here in question.

3. The Theory of a "Surplus Product."

Thus falls the suggestion that the "Agency Agreements" may have given to the subsidiary Companies an opportunity to dispose of their "*surplus product*" *at a* "*profit.*"

(a) But it seems to have been overlooked that said Companies have no "surplus product" unless they make it; and that they cannot make it without proportionate manufacturing plant and land for that purpose.

For every hundred million feet of additional output, a Company is obliged to establish so many additional units of producing apparatus in the shape of generators, purifiers, condensers and scrubbers, which cover just so much more ground, and are *in exact proportion per thousand of capacity to the same apparatus thus supplemented.*

And again it requires just so much more material (oil and coal, as illustration) and labor *pro rata*, to produce each extra million feet of gas from this additional apparatus. Thus, it takes about one ton of gas-coal to produce each 10,000 feet of coal-gas, and about five gallons of oil to produce each 1,000 feet of water-gas, whether we produce in the aggregate a *million* or a *billion* feet (*Record*, pp. 1734, 4301).

In fact, as elsewhere said, it is conceded by Appellants' witness that after plants have reached a maximum annual capacity of say 700,000,000 cubic feet (and all the subsidiary Companies delivering gas to Appellee have surpassed that), there is substantially no economy in greater production (*Record*, pp. 1509, 2417).

If a gas Company were like a mineral spring, from which the product runs continuously without expense or effort, the theory of a "surplus product" might be more plausibly advanced.

(**b**) If the New Amsterdam Company has a maximum daily demand for 15,000,000 cubic feet of gas from its own customers, and also delivers 15,000,000 cubic feet to Appellee, thus employing its total capacity of 30,000,000 cubic feet, it is clearly using one-half its plant for the benefit of Appellee and its consumers. It would be idle to speak of its delivering such 15,000,000 cubic feet to Appellee to get rid of a "surplus product, which it would not possess unless it made it *for that very purpose.*

The very thought that, *as a business proposition*, Companies are delivering to Appellee 3,000,000,000 feet of gas at "*bare station cost*,"—with no "profit" or return on capital included,—is too repugnant to ordinary experience to justify discussion.

A Remarkable Argument.

Realizing, perhaps, the weakness of the argument as to "surplus product," Counsel for the Public Service Commission advanced in the Circuit Court a proposition so remarkable that (to avoid chance of inaccuracy) we quote his Brief :

> "It must be remembered that this eighty-cent gas litigation includes a suit against the State by *each one* of the sub-companies, as well as the present suit. Profits which the Complainant makes on the purchased gas by reason of the agency agreements, are profits which the sub-companies fail to make. **If their appropriation by Complainant makes it harder for Complainant to escape the eighty-cent gas law, by just so much that appropriation makes it easier for the sub-companies to escape."**

This suggestion well illustrates the situation into which the acceptance of the theory would lead. If, in the case above assumed, the New Amsterdam Gas Company's total manufacturing plant be of the value of $18,000,000, one-half of which is employed in producing the gas delivered to Appellee at "station cost" with no return on capital, and the other half is employed in producing the gas delivered by the New Amsterdam to its own consumers, the New Amsterdam Company (on Counsel's theory) will be entitled to charge *to the consumers of its own gas* a return on the *entire $18,000,000 of plant value,* which might raise the selling price to them to $1.20 per thousand; and on the other hand, *Appellee's* customers are to get their gas at a figure which includes a return on *Appellee's own* plants, but no return on the $9,000,000 of New Amsterdam property which produced a great part of it, thereby reducing the price of gas to Appellee's customers (at the expense of the New Amsterdam's customers, of course) to perhaps 90 cents!

How would such a proposition be received by the Circuit Court, upon the trial of the New Amsterdam case? Would the proposition be seriously advanced by Counsel in that case? Would not Counsel object to saddling upon the consumers of the New Amsterdam gas, a return upon one-half the plant used exclusively for the benefit of Appellee and its consumers; and strenuously claim that the New Amsterdam should be allowed to compute the return which it may charge against its own consumers, only upon the reasonable capacity (including reserve) which *their* requirements justified it in maintaining?

We submit that these questions answer themselves; and if they do answer themselves, it is obvious that *no consumers of any gas will pay a return on the value of that portion of the New Amsterdam plant* (as typical) *producing the gas delivered by it to Appellee, unless it be the customers of Appellee who consumed that gas.* And if such return is ever to be allowed, *it must be allowed now and in this suit.*

POINT XVIII.

Appellee's Investment In Subsidiary Companies, from which it received Gas in 1905 at "Bare Station-Cost."

While, therefore, it is Appellee's contention that, if, as an emergency accommodation, gas had been delivered to it as a pure gratuity, such a condition could not be presumed to be permanent, and a compulsory rate for gas could not be sustained which would exclude a fair and normal return on the capital producing it; nevertheless, *in view of the theory of Appellants* that the legal price of gas should include only amounts which Appellee was actually "out of pocket" in procuring gas in 1905 from subsidiary Companies, it may be appropriate to point out the fallacy of their assumption that Appellee and its stockholders were actually "out of pocket" no other or greater amounts than the $997,000 *paid directly to producing Companies.*

1. Appellee's Control of Producing Companies.

Appellee, as above noted, owns a majority of the Stock of each of the four subsidiary Companies (New Amsterdam, Standard, Central Union and Mutual), which delivered to it gas at "station-cost" in 1905; and of two (New Amsterdam and Central Union) it owns over 99%, and of one (Standard) above 92%.

It may also be noted that the Stock of these Companies was acquired by the issue of Appellee's own Stock in and after July, 1900; and all thereof was issued at $150 and upwards per share (*Record*, pp. 154, 848-9).

1. The Court says, referring to the acquisition of gas by Appellee from said Companies (*Record*, p. 406):

> "The three billion feet purchased in 1905, were obtained from Companies all but one of which are almost as completely dominated by Complainant as is The Astoria Light,

> Heat & Power Company; and in that one, it owns a majority of the Stock. *It has used that control or ownership to obtain gas at about holder cost plus ten per cent*".

It is impossible to suppose that these Companies would have delivered to Appellee such an amount of gas with no return on the investment employed, *had not Appellee so controlled them that any payment to said Companies representing a return on the value of the plant producing such gas, would have come (practically all) back to Appellee as the owner of their Stock.* The conclusion is so legitimate and inevitable, that it requires no argument to emphasize it.

2. "Bookkeeping" Treatment Not Controlling.

Had Appellee paid to such subsidiary Companies station-cost, *plus* a return on the investment producing the 3,000,000,000 feet, and thereupon received back in dividends the whole or any part of the amount paid as such "return", Appellants would not have questioned the propriety of including such "return" in computing the proper charge for gas sold by Appellee; and exactly the same point is reached if Appellee pays to the subsidiary Companies "*station-cost*" *alone*, neither paying such "return" to them nor receiving it back in dividends.

Again, if Appellee as the owner of all the Stock and obligations of the Astoria Company, which it received in exchange for $12,000,000 in cash raised by issue of Appellee's obligations, were to receive gas from the Astoria plant as a matter of bookkeeping at "bare station-cost", would it not be necessary in fixing the charge which Appellee might legally make to consumers, either to include said $12,000,000 of Debentures in Appellee's capital upon which it might earn a return, or to add to the station-cost of the Astoria gas a return (say at least 6%) on the value of the Astoria plant? And would it make any difference in law (**a**) whether Appellee paid to the Astoria Company the return ($720,000) on the value of the Astoria plant in addition to the station-cost of said gas, this amount being thereupon paid back by the Astoria Company to Appellee as dividends or interest and applied by Appellee to pay the 6% due on the $12,000,000 of its own obligations outstanding, or (**b**) whether the $720,000 was not thus sent about the circle, and Appellee paid for said gas only station-cost and then paid directly the interest on its Debentures ?

Is the principle in any way different where Appellee owns somewhat short of the entire capital of a Company, as in the case of the four subsidiary Companies above named, which delivered to it gas in 1905 ? And is its right to a return on its investment therein, by virtue of which it obtained this gas (as the Court repeatedly recognizes) at "bare station-cost" (*Record*, pp. 400, 406), to be governed by a method of "bookkeeping" instead of by the substance and effect of the transaction ?

3. The Circuit Court's Reservation.

It was pointed out by the Court in the Decree (*Record*, p. 432) that the $59,831,435 of assets found by the Court as the valuation of "Complainant's property actually employed in its business of manufacturing and supplying gas" did not include—

> "*the amount of Complainant's investment in the securities of other gas Companies*, from which Companies it was obtaining a large part of the gas which it delivered to its customers, *nor the value of the property of such other Companies* or any part thereof employed in the production and delivery to Complainant of such gas."

That the Court, as well as the Master, considered Appellee to be entitled to a return upon one or the other, to be computed either as return on its own capital or in the cost of gas delivered to it, is quite clear from the Court's action in including in such cost a return on the value of the Astoria plant, which it considered to be the proper source of supply hereafter.

Appellants, however, utterly ignore Appellee's investment and decline to admit that Appellee is entitled "in a charge for gas" to include a return, either on its investment in such other Companies or on the value of the plants producing the acquired gas.

4. Conclusion.

And unless the Court either (**a**) adds, *in some form*, to Appellee's own assets the value of the plant of outside Companies employed in producing gas for Appellee in 1905, representing the value of the property employed in the public service, as was done by the Master, or (**b**) includes in *cost to Appellee* of such gas a return upon the value of such plant, as was done by the Court, Appellee and its stockholders are denied any return on the entire investment (whether at Astoria or in other Companies in Manhattan from which gas is procured), which, as the Circuit Court clearly indicates (*Record*, p. 406), alone made it possible for Appellee to obtain gas from them at a bookkeeping charge covering only "station-cost".

There is, of course, no difference in principle whether the money for such investment was advanced by Appellee's *stockholders* or was financed by Appellee's Debentures, or whether Appellee's ownership of such plant be direct or indirect, or whether the dividends on Appellee's Stock or interest on its Debentures be derived (in so far as this investment is concerned) from net operating earnings, or from income from securities owned. It all comes to the same point,—that Appellee's *stockholders* would be in either case *out of pocket* the interest on the investment which made possible the procuring of gas from other Companies at station-cost.

POINT XIX.

Item "Contingent Expense (Includes Renewals)" $1,328,316.37—being Item 67 of Exhibit 94—allowed in whole by the Master, but only in part by the Court, as an operating charge in 1905.—No Fund for "ultimate disintegration" allowed.

The Attorney General, as bearing upon the propriety of adopting the present valuation of mains as distinguished from original cost, and also upon the proper rate of return on investment, asserts *(Brief, p. 101)* that—

> "Complainant has demanded and the Court has allowed, a large amount on account of depreciation of Complainant's depreciated property including mains, out of which they *are to be restored* (to wit, 11c. per thousand cubic feet)"—

and again, under the heading "Depreciation Should Have Estimated on the Whole Property" *(Brief, p. 176-7)*, suggests that there has been allowed to Appellee by the Court—

> "as an operating charge, a sum to provide for the *final* renewal of its plant—to conserve its plant against *ultimate* disintegration through natural wear and tear."

The Attorney General's assumptions in this regard are wholly erroneous. Instead of an allowance having been made to Appellee sufficient to provide for "*final*" (in the sense of *future*) renewal or "*ultimate disintegration*" of its plant, or any fund out of which mains (or any other property) "*are to be*" restored, the allowance actually made is insufficient to cover the *average actual expenditure* of Appellee for *current* "*upkeep*," as an examination of the Record will show.

A. Nature of 10c. Item, and Finding of Master.

Appellee's operating expenses for the year 1905, as shown by its books of accounts, and Exhibit 94 abstracted therefrom, include an item called "*Contingent Expense* (*includes Renewals*)," computed at 10c. per thousand cubic feet of Appellee's sales, amounting to $1,328,000.

This item of expense was thus intended to provide (**a**) for "*renewals*" of apparatus lost or worn out in any year (it will be observed that in the operating cost of gas—Exhibit 94—"*repairs*" are covered in various other items, but *no* "*renewals or replacements*," as the Decree recognizes—*Record*, p. 431); and it was also to cover, as the Master states, (**b**) an

> "allowance sufficient to bring the amount chargeable for *current repairs and renewals* for the year 1905, *up to the average of the Company's past experience*, and also of (**c**) a sufficient reserve fund to cover *final renewals and contingencies*" (*Record*, p. 253).

The cost of gas to Appellee as found by the Master, 65.84c. per thousand feet, included the "Contingent Expense" item referred to *without deduction;* the Master saying, after a most painstaking and careful consideration of the subject, to which we specially invite the attention of the Court (*Record*, pp. 224-238):

> "*I am satisfied* that the charge of 10 cents per thousand feet for "contingent expenses" *including renewals and replacements*, as shown by Item 67, is not excessive but, on the other hand *rather conservative*" (*Record*, p. 238).

Indeed, the testimony clearly established the fact, as Appellee believes, that this amount was required to meet (1) Appellee's *expenditures* for renewals during the year 1905, (2) to make up the *difference* between its expenditures for "Repairs and renewals" in 1905 and the average expenditures for the preceding twenty years, and (3) for *additional expenses* which *actually accrued in the year 1906* before the completion of the hearing. Thus—

(a) Actual Renewals and Replacements.

It was shown that the actual "Renewals" of property for the year 1905 were $282,219.67, or **2.12c. per thousand** cubic feet of gas sold (*Record*, p. 224).

This sum represented property actually worn out, lost and gone from Appellee's property account. It merely recorded what *had already happened in the year 1905*,—loss that had occurred "during the year" (*Master's Report, Record* p. 226). *It was in no way an allowance for future loss or abandonment.*

> In the case of "Plant," "Mains," "Services" and "Meters," which are the most important classes of Appellee's property, the individual items lost from them respectively, in 1905, appeared in Appellee's books and the amount was exactly stated (*Master's Report, Record*, p. 225). Thus, in "Mains" each item of pipe abandoned or removed, with its length, size and location, is entered in Appellee's books (*Record*, pp. 3861–3863).
>
> The other property items (*Record*, p. 226) are largely composed of many small individual parts or pieces; and accordingly the loss is stated in a percentage established by the experience of the Company, which is *none the less a practically exact amount and represents property value actually lost during the year in question.* It would be useless bookkeeping to attempt to define each piece of harness and each tool or implement disappearing from use.

(b) Amount to be Added, to "Average" 1905 with Appellee's Experience.

It also appeared that the amount *spent* by Appellee for "Repairs and Renewals" combined, in 1905, was only $974,289.65, or 7.34c. per thousand cubic feet sold (*State's Ex. L, Record*, p. 5080).

But the average expenditure for "Repairs and Renewals" for the twenty years preceding 1905, was 10.89c. per thousand feet sold (*Record*, p. 5079)—the amount spent in different years varying from 7 to 16 cents or over (*Record*, pp. 5078–80); and the difference, required to bring Appellee's allowance for "Repairs and renewals" in 1905 up to said average, was **3.55c. per thousand feet** sold (*Record*, p. 253).

The necessity of adopting an "average" amount for "Repairs and renewals", in computing normal operating cost in any one year, was—in view of the wide fluctuations of those items—universally recognized and conceded.

As the Master says—

> " A Company may in one year abandon, or suffer damage to, considerable quantities of apparatus with the result of placing the repairs and renewals for that year at a very high figure, whereas in the following year there may be a minimum of loss and the repairs and renewals be much less" (*Record*, p. 229),

and at a later page (*Record*, p. 253)—

> " *It is * * * the fact that the propriety of an allowance sufficient to bring the amount expended for current repairs and renewals for any one year up to the average covering a period of years, is fully established by the evidence.*"

(c) "Contingencies" Met in 1906.

Moreover, before the year 1906 had passed, three more items of expense materialized as found by the Master (*Record*, p. 228), the first estimated and the other two certain, as follows:

Additional cost of enrichment in order to maintain for a full year the standard of candle power provided by the statutes in question, the 22-candle power penalty having applied to only half the year 1905, whose operating cost was before the Master	1.83c.	
Increased taxes over the year 1906	1.13c.	
Increased cost of labor over the year 1906	1.40c.	
		4.36c.

B. Summary.

(**a**) Summarized, the situation, which in the view of Appellee justified the inclusion by the Master of the contingent expense item to the full amount of 10c., was as follows:

Actual cost of Renewals and Replacements in 1905		2.12c.
The difference between the average cost of *Current* "Repairs and Renewals" for twenty years	10.89c.	
and the cost of "Repairs and Renewals" in the year 1905	7.34c.	3.55c.
Allowance for Current Expenditures		5.67c.
Additional cost of Enrichment for 1906	1.83c.	
Increase in Taxes—for 1906	1.13c.	
Increase in Labor— " "	1.40c.	4.36c.
Total		10.03c.

Thus is consumed the entire 10 cents and a trifle over.

(**b**) Or, presented possibly in a clearer way, the computation appears as follows:

Expended for "Repairs" as shown in State's Exhibit L (*Record*, p. 5080), $692,069.98, equalling, on Appellee's total sales	5.22c.
Ten-cent item "Contingent expense (includes renewals)"	10.00c.
Total of said two items	15.22c.
Average for "Repairs and Renewals" (*ante*, p. 138)	10.89c.
Balance	4.33c.

(**c**) Thus it appears that after allowing for repairs and renewals in operating cost of 1905, and an amount equal *only to average annual expenditures for repairs and renewals* for the Company's experience, there was left but 4.33c. of said 10-cent item; which, as above seen, was more than consumed by the three items of enrichment, taxes and labor, 4.36c., *all occurring as early as 1906*, as found by the *Master* (*Record*, p. 228); and all of which, *except 1.8c.* would be consumed, even if we exclude from consideration the enrichment item (1.83c.), which the Court thought not sufficiently sustained by the evidence (*Record*, p. 424).

And this leaves nothing (or at most only 1.8c.) for " future" renewals or " contingencies."

C. Allowance by the Court less than Admission of Appellants.

Not only did Counsel for the Attorney General and the State Gas Commission introduce State's Exhibit L (*Record*, pp. 5078-80) showing in detail Appellee's expenditure for repairs and renewals from the beginning of business in 1884, and the average to be 10.89c. per thousand sold; and request the Master to find—as the Master did find—

> " That the Complainant *has expended* on account of repairs and renewals for the twenty years preceding 1905, an average of *10.89 cents per 1,000 cubic feet* " (*Record*, p. 276)—

but we find the following concession in the Attorney General's Brief (p. 194) in this Court:

> **" We concede to Complainant for the purpose of this memorandum an allowance of 10.89c. per thousand cubic feet to cover repairs and cover renewals, current and final."**

1. Indeed, the findings of the Master, and the concession of the Attorney General to that effect, are supported by overwhelming, if not unanimous, testimony—even excluding Appellee's witnesses who all supported them.

(**a**) The New York State Gas Commission, in the investigation resulting in the Order of February 23rd, 1906, which is here in issue, included in said computation not only the amount actually spent in repairs and renewals for the year examined by them, but also—in their own words—

> "*an additional sum sufficient to bring the expenditures for repairs and replacements to the average expenditure by the Company for twenty years for those items*" (*Record*, p. 32).

(**b**) Appellants' own expert, Professor Bemis, likewise allowed in his computation of Appellee's operating cost for 1905, *both before the Gas Commission and in this suit*, an additional amount sufficient to bring the repairs and renewals for the year under consideration up to the twenty year average of 10.89c. per thousand feet of gas sold (*Record*, pp. 2346, 2496).

(**c**) The Chicago Committee, in their recent investigation of gas operations there, likewise added about 4c. to the expenditures for renewals for the year which they examined, to bring the "repairs and renewals" for the year up to a normal figure which they found to be the fair average there—10 cents (*Record*, p. 2573).

And Professor Bemis, after *there* accepting 10.16c. for "Renewals and Repairs", *and allowing 3c. per thousand feet as a "reserve" fund* in addition, said (*Record*, p. 2706)—

> "It must be remembered that exclusively water-gas plants like that of Chicago *do not require as large repairs and renewals as do the mixed coal-and water-gas plants of New York.*"

2. The following computation shows the amount thus conceded by Appellants as compared with the amount allowed by the Court:

Average annual expenditure for "Repairs and renewals" conceded by Appellants as properly chargeable, to wit: 10.89c. on 13,283,000,000 feet of gas sold in 1905 (our multiplication)	$1,446,536.45
Allowance by the Court on account of "Repairs and Renewals" (*Record*, p. 405)	1,172,359.10
Allowed by the Court, below amount conceded by Appellants	$ 274,177.35

That is to say, the allowance by the Court for "Repairs and Renewals" was nearly $275,000 less than conceded by said Appellant; and a simple computation shows that the allowance by the Court was only *8.88c. per thousand*, although the actual average expenditure by Appellee for repairs and renewals even in the last eleven years of its experience, *during a great part of which there appeared in its operating cost no allowance for renewals attendant upon the production of the billions of feet of gas obtained from subsidiary Companies*, was *9.73c. per thousand* feet of total sales (*Master's Report*, *Record*, p. 229).

D. The Ground of Action of the Court.

This result came about, from the Court's mistakenly applying the accepted unit of 10.89c. (the Court took the round figure of 11c.) to the gas *of Appellee's make only*, 10,657,810,000 feet, on the theory that the distribution of the 2,929,210,000 feet of gas derived from other Companies (*Exhibit 94*, *Record*, p. 220), *had contributed nothing to the requirement for repairs and renewals* in Appellee's distributing system.

This may be gathered from the following statement of the Court below (*Record*, p. 400):

> "It appears, however, that it would have cost substantially as much to distribute the ten and one-half billion feet which Complainant made as it did to distribute the thirteen and a half billion feet sold during the period of inquiry; it entailed no measureable expense to pass the additional three million feet through holders, mains and services."

—in other words, that Appellee's *gross expenses* ought to be no greater under sales of 13,500,000,000 feet, than when its business amounted to only 10,500,000,000—a theory so startling as to command attention, but elsewhere shown to be wholly unsound (*ante*, pp. 110-4).

But it seems to have been overlooked that, even if the theory were sound, the fact would remain that the expenditure for "Repairs and renewals", as shown in State's Exhibit L, *averaged, 10.89c. on Appellee's total sales;* and a computation of the requirement for "repairs and renewals" for any one year on *any other basis* could not possibly bring a just result or provide the amount required for average expenditures of this character.

3. In short it is most respectfully suggested that the learned Court below failed—in the limited time at its disposal and with such a great record to consider,—to grasp clearly the facts and the principles applicable in the situation.

> (**a**) Thus it speaks of the repair items of Exhibit 94, aggregating $685,077.47 (*Record*, p. 402) as "Repairs *and Renewals* of 1905, stated in Station and Distribution Cost" (*Record*, p. 405); whereas examination of Exhibit 94 shows that they are "*Repairs*" *alone*, no renewals being covered except in the "10 cent item" in question.
>
> (**b**) Again, it refers to the item "Contingent expense (includes renewals)" as a "*ten per cent. reserve*" (*Record*, p. 403); whereas, as above pointed out, over $282,219 thereof represents actual losses in 1905, and all but 4.33 cents thereof was consumed by *average actual expenditure* from year to year, without laying aside any "reserve" or "ultimate disintegration fund";—and the Court did not allow even such *average expenditure.* And, moreover, said 4.33c. would have been all or substantially all consumed within the next year by actual additional expenses (*ante*, p. 139).
>
> (**c**) And again referring to the expenditure in "construction" account of the sum of $282,219, to offset and make good said property loss of $282,219 in 1905, it said (*Record*, p. 403):
>
> > "The distinction between depreciation of that kind and new construction seems to me very shadowy"—
>
> apparently overlooking the fact that every expenditure in "upkeep" of property—*whether it represents a new bolt and*

is classed as a repair, or a new boiler in place of a worn out one and is called a "renewal" or "replacement"—is "new construction" in the sense that it is new material; but is nevertheless chargeable to operating expense *to the extent of the loss which it makes good.* The Master was entirely clear on this point *(Master's Report, Record,* pp. 224–7).

(**d**) And also, referring to the sum of $783,561.36, unexpended in 1905, the Court remarks *(Record,* p. 403) that such sum repeated for twenty years would "produce a fund sufficient to reconstruct Appellee's entire plant", apparently overlooking the fact that the depreciable property of Appellee as found by the Court represents about $35,000,000 of value (*Record,* p. 432), so that instead of "twenty years" the period for the reconstruction of Appellee's entire plant affected by "depreciation" would be over 45 years; and also the fact that the greater part of said $783,561.36 is consumed by the 3.55c. above conceded to equalize Appellee's expenditures for "Repairs and renewals" for 1905 with the Company's average current expenditures for these purposes, and therefore could not represent a "*reserve*" fund for "ultimate disintegration," or scrapping.

(**e**) Nor can it be said that "the business of selling gas purchased was proportionately far more profitable than that of selling gas of the vendor's own manufacture" *(Record,* p. 400), *except as this may be made to appear by denial of any return on the property of subsidiary Companies manufacturing such gas,* and the attributing of the *entire distribution* and *general expense* to Appellee's own gas, as was done on the erroneous theory above pointed out *(ante,* p. 105*a*).

Dr. Humphreys' Testimony.

Counsel for the Public Service Commission devotes much space to an analysis of the views of Dr. Humphreys on the subject of "depreciation," and to a computation as to what would have resulted if the Doctor's theory had been accepted by the Court (*Brief*, pp. 113–123). It is not necessary to traverse Counsel's argument, in view of the fact that the point is academic. Dr. Humphreys favored a fund amounting to 14.145c. per thousand feet "for repairs, renewals and depreciation," and in addition "a reserve to cover contingencies" of 5c. (*Master's Report*, p. 233); but the Court allowed only 8.88c. to cover everything (*ante*, p. 143).

E. Appellee's Total Expenditures for "Repairs and Renewals," since Organization.

Appellants refer to the total amount expended by Appellee for "Repairs and Renewals" from its organization to 1905 *inclusive*, $17,392,512.68, as a very large sum; but they overlook the fact that it had relation to **sales reaching the enormous amount of about one hundred and sixty-four billion cubic feet** (*Record*, p. 5039); and that in proportion to sales such expenditures are only a fraction over 10 cents per thousand,—a rate considered by Appellant's own witnesses as moderate.

Erroneous Basis for Estimating "Repair and Renewal" Requirements.

It is suggested that the true method for calculation in determining the amount required for "Repairs and Renewals," is by taking, not the percentage per M. of sales, but the proportion which repairs and replacements for each of several five year periods, bore to the total property of the Company which is subject to repair and replacement (*Brief for Public Service Commission*, p. 251). And Counsel points out that the proportion is nearly constant at three and a fraction per cent. for each five year period examined, beginning with 1890–1894.

This is plausible, but not sound in practice. The amount of "repairs and renewals" required, depends not alone on the amount of depreciable property, *but very largely upon the amount and severity of use of the property.*

Hence, during the last five year period taken, 1900–1904, when Appellee was making and distributing more gas than ever before and working its plants to the utmost, the percentage of wear and tear should have *exceeded* the earlier period, 1890–4. That it apparently did not, requires an explanation; and it is found in the fact that Appellee's accounts do not include any expenditure for replacements in *the property of the subsidiary Companies, which were employed in the production of nearly twenty-five per cent. of the gas which Appellee had been in the last period distributing.*

The best criterion as to the amount of "*use*" of a gas system, is the amount of gas that it puts out; and hence a certain number of "cents per M." on each thousand, as determined by average experience, is the most safe and accurate guide for "repairs and renewals."

Counsel for the Appellant is not, we assume, experienced in the gas business, and it might fairly be presumed, that *when all the practical witnesses on both sides of this case* unite in estimating in "cents per M."—they are following a rule which experience has taught to be the most reliable.

F. The Expressions of this Court on "Depreciation" Charges.

As we understand the expressions of this Court, they have recognised the value to the public, as well as to the Company concerned, of a not too constricted allowance for maintenance, depreciation and contingencies,—even in the case of a Public Service Corporation.

The position is thus stated by this Court in *Union Pacific Railway Company vs. U. S.* (99 U. S., 35, 421–2):

> "We think that the true interest of the government in this case is the same as that of the stockholders; and will be subserved by *encouraging a liberal application of the earnings to the improvement of the works.*"

And in this connection attention may be called to the fact that the Interstate Commerce Commission, and other Public Service Commissions, doubtless following what they understand to be sound policy approved by the courts, *require* the corporations under their jurisdictions to set up an appropriate "liability depreciation account" for each of their several classes of depreciable property, including an amount for "accrued depreciation"; and to charge into said account *monthly* the amount of such depreciation, which thereby becomes an item in "operating expense."

In the present case Mr. Mayer found depreciation in Appellee's plants of over $604,000, which amount he deducted in his valuation; but this $604,000 is nowhere covered unless a "depreciation" or "reserve" account be allowed to Appellee (*Master's Report*, p. 227).

G. The Institution of the Account not an "After-Thought."

It has been suggested in this Court, as it was suggested to the Master, that the institution of this special 10c. account to cover contingencies and "renewals," was an afterthought, due to the investigation of the Stevens Committee in April and May, 1905.

As the Master says (*Master's Report*, *Record*, p. 228):

> "If the account in question is in itself a proper one, the fact that it was not opened until 1905 has little bearing upon the issues now to be determined."

But the Record clearly shows that the suggestion is wholly baseless.

(**a**) The opening of such an account was discussed by the officers *in 1904* (*Record*, pp. 1665-6), the Vice-President of the Company *testified in Boston* that such an allowance of 10 cents was required (*Record*, p. 1656), and it had been *agreed among the officers* of the Company that an account of this general character should be opened *(Record*, pp. 1665–6),—**all before the appointment of the Stevens Committee,** which was not made until March, 1905 *(Record*, p. 1673).

Indeed, the only detail which was left undecided before the appointment of said Committee, was the amount to be required by this account, *it being argued by some officers that 10 cents would prove to be inadequate* to cover actual expenditures for renewals and other items above enumerated (*Record*, p. 1666), as it has in fact proved to be. It was finally decided in May, 1905, to limit it to 10c., and it was entered in the books for *each month*,—dating back to January, 1905, so as to cover the fiscal year.

(**b**) The opening of this definite "10-cent" account did not in fact alter the practice of the Company at all. Theretofore it charged the cost of property *actually and currently lost*, to a "depreciation" account, and *carried unexpended allowances* (whether to make good such *current* loss or provide for *future* loss, *in its general "profit and loss" surplus account.* There was just as much money on hand, and just as much protection afforded by that method; and the present method was introduced merely for greater definiteness, transferring to the special 10-cent account items and allowances which had been theretofore carried *for the very same purposes* in profit and loss "surplus."

(**c**) Appellee, in its segregation of said "10 cent item," from its "profit and loss," account, adopted the practice *required* by the Interstate Commerce Commission, and New York Public Service Commission, above pointed out *(ante*, p. 148).

H. Erroneous Assertion as to Increase of Property From Earnings, and as to Cost of Increase in Capacity.

Counsel for the Public Service Commission, in discussing depreciation (*Brief*, p. 119), says:

> "The total of the new construction, together with all additions to real and personal property up to October 31st, 1906, amounted to $9,693,595.90 (Complainant's Exhibit 79, p. 5032). The amount contributed towards this expense by

> *new capital cannot have been more than $3,929,371.82* (p. 23, *supra*). Hence *current net earnings must have contributed at least $5,764,224.08*, over and above all current and final renewals found necessary for the first 21 years of the Company's existence. *The $9,693,595.50 increased the manufacturing output to two and a half times that of 1884 and increased the distributing capacity to an extent enabling Complainant to more than quadruple its sales.*"

Nothing could be farther from the facts.

(**a**) We have already pointed out (*ante*, p. 23) the complete inaccuracy of the assertion that the entire amount of " New capital " of Appellee introduced in its gas business since 1884 was $3,929,371.82. Consequently the argument that " current net earnings must have contributed at least $5,764,224.08 " to said sum of $9,693,595.90 falls with it (*ante*, p. 23) ; and all computations involving the erroneous figures are valueless.

Nor did any part of the said sum of $17,392,512.68, charged for " repairs and renewals " since 1884, go for anything but " upkeep " of property ; not a dollar thereof was spent to increase the investment. The line was rigidly drawn, as explicitly testified (*Record*, pp. 4446–7).

(**b**) Nor is there any better foundation for the suggestion that said $9,693,565.90 " increased the manufacturing output to two and one half times that of 1884 " ; and " increased the distributing capacity to the extent of enabling the Appellee to more than quadruple its sales."

As elsewhere said, Appellee's system, in 1884, had in every direction *a capacity far beyond its sales* (*Record*, pp. 1714, 5039). It had land sufficient for a capacity of 50,000,000 cubic feet per day, or practically equal to its present capacity of 51,000,000 feet ; while by the expenditure of only a million dollars, its manufacturing plant could have been brought up to a capacity of 33,000,000 feet (*Record*, p. 6464), many items being already up to that capacity.

The $9,693,565.90 by no means, therefore, increased capacity, either at works or in distribution system, as assumed.

PART FIFTH.

The Rate of Eighty Cents per thousand as related to Other Companies in the City of New York; Comparison of gas charges, or operating expense, as between different Companies; the Question of Pressure; and the Investigations of the Legislative Committee in 1905 and Gas Commission in 1905-6.

POINT XX.

The Rate of Eighty Cents per Thousand Feet, as Related to other Companies in the City of New York.

Appellants complain that the Record does not contain sufficient evidence

> "to show that the rate of eighty cents per thousand cubic feet * * * does not afford a fair and reasonable return to the [*other*] *Companies* doing business in the said City," the evidence being limited to the valuation of property and operations of the Complainant alone; and further that the record does not show but that the said rate would afford a fair and reasonable return upon the value of property employed in the making and distribution of gas by a Company in same territory with the Complainant, well located and equipped and economically managed, but that the case was decided on the theory that if the statutory maximum price does not afford * * * a sufficient rate of return upon the value of the property employed in its business of making and distributing gas * * * the statute is void as to that Company irrespective of its effect upon other Companies doing business in the same territory" (*Record*, pp. 481, 436).

Why Appellee should be obliged to try in this action, the cases also of the three or four other gas Companies operating in the Borough of Manhattan, to say nothing of the many others operating in the other Boroughs of the City of New York, is not apparent. It might very well be in many cases (although there is nothing in the present record to indicate it to be true here), that a rate which would permit a just and reasonable return to one gas Company, would under sound legal principles not afford such return to another, even in the same territory; and the theory that all Companies must be fitted to one "Procrustean Bed" (to employ the term of the Court below on the argument), is a novel one.

1. Coal or Water-Gas?

Of the two best known kinds of gas, coal-gas and water-gas, one is manufactured largely from gas-*coal* and the other from gas-*oil* When coal is high, coal-gas may cost the more; and when oil is high, water-gas may be more expensive.

Moreover, the initial cost of a coal-gas plant is much greater than that of a water-gas plant *(Record*, pp. 3747–8), and the amount required to pay a return thereon per unit of capacity, correspondingly greater.

Is it seriously contended that the assets of a coal-gas plant are to be valued on the basis of cost of a water-gas plant of the same capacity, or *vice versa?* And is the ideal "station-cost" of gas to be computed upon the basis of a water-gas production, or a coal-gas production, or a mixed water and coal-gas production such as Appellee's?

2. Uniformity Within What Area?

Again, within what territory must all Companies conform their assets and charges to the "ideal" Company? The City of New York, even the Island of Manhattan alone, comprises a territory greater than that occupied by Troy and Albany, with the territory between the two. Would it be claimed that the capital or expenses of the Troy Company should be irrevocably governed by those of the Albany Company?

Moreover, in the Island of Manhattan, it appears that the Standard and New Amsterdam Companies (whose organization was comparatively recent), and The Mutual Company which is an old one

(*Record*, pp. 527, 4318, 817, 5292), do business wholly in the more congested part of the Island of Manhattan (*Record*, p. 4499), while Appellee has its mains in every opened street in the City, having extended its service to the outlying and sparsely settled sections where consumption per mile of main is the least (*Record*, p. 4499). Must Appellee, thus operating a service of different character, be arbitrarily conformed as to assets and operating expense to the other three Companies, if their assets or cost per thousand should be found to be less than Appellee's?

3. The London Companies.

In London there are three great Companies,—the London Gas Light & Coke, the South Metropolitan, and the Commercial,—and no two of these charge or are required to charge the same rate for gas (*Record*, p. 4741).

The land of one may be more valuable than another, for one reason or another; no two Companies in the nature of things can exactly duplicate each other's advantages, disadvantages and personal equations.

Indeed, it was conceded in this case by the witnesses of both Appellee and Appellants, that no two Companies, even in the same City and under similar conditions, can produce gas at exactly the same cost, a difference of a cent or two between them being not at all unusual or significant (*Record*, p. 4470).

4. Appellee's Five Plants.

It was said below that Appellee had five "scattered plants" instead of one colossal plant; but if that were a disadvantage, it would be a circumstance directly related to the natural and necessary growth of Appellee and its predecessors, in meeting the requirements of the community as pioneer Companies, and would afford no legal ground for confiscation of any part of its properties.

But individual plants of the size of Appellee's, are equally economical with larger plants in production of gas. Professor

Bemis, Appellants' expert, testified that when a plant has an annual capacity of 700,000,000 cubic feet per annum, there is practically no economy in greater production in a single plant (*Record*, p. 2417); and the *smallest* one of Appellee's plants (42nd Street) has a capacity of 4,500,000 cubic feet per maximum day (*Record*, p. 1393), equivalent to an annual capacity far beyond 700,000,000 feet.

Indeed, examining the figures of all Companies operating on the Island of Manhattan, it appears that Appellee's station-cost (about 31 cents per M. for water-gas) is substantially less than that of the old Mutual Company, for the same kind of gas (*Record*, p. 4472); and but a trifle in excess of station-cost to the more recent Standard and New Amsterdam Companies, due to advantages possessed by them which have no relation to efficiency of plant or operation (*Record*, pp. 4472, 4469).

5. Location, Equipment and Management.

There is no finding, nor is there any evidence to support the suggestion, that Appellee was not well located and equipped, or not "economically managed."

(**a**) Substantially the only criticism on Appellee's operating account, related to the price paid for oil, and the price received for coke and other residuals; and the Master has fuly considered and found directly against Appellants' contentions in that regard (*Record*, pp. 239-40).

The matter of "oil" is briefly discussed under another Point (*post*, p. 160).

Finding of the Master.

The general question of "management" is fully met by the following finding of the Master (*Record*, p. 255):

> "Nor is there any satisfactory evidence that any of the expenditures of Complainant for material, labor, or otherwise, in the manufacture and distribution of gas, have been improper, unnecessary, or unreasonable."

(**b**) The character of Appellee's "equipment" has been fully discussed, at another point (*ante*, pp. 38–50).

It may be generally observed, however, that the fact that it produced gas at less than the Mutual, and at substantially the same rate as the New Amsterdam and Standard Companies, is of itself significant evidence on the subject; and the finding of the Master *at the request of Appellants (Record*, pp. 276–7), that more than 4/5 of Appellee's capacity is in the shape of "*modern, up-to-date water-gas plants, which could not be improved upon anywhere*," and that the balance of the capacity (coal-gas) is "*efficient and in shape to operate for an indefinite period without impairment*" (*Record*, p. 277), covers the whole ground.

6. General Principles Applicable.

It is respectfully urged that a lighting Company which has made its investment *reasonably and prudently*, cannot be deprived of its property by being compelled to sell its product at a rate which will not allow a "just and reasonable" return upon that property.

If several Companies are allowed to charge a price for gas which will return to each 8 per cent. upon the value of its investment, *reasonably acquired and devoted to the public service*, they have the "equal protection of the law"; whereas if one Company were allowed to charge $1.00 and make 6 per cent. return, while all other Companies were limited to $1.00 but could only make 3 per cent. return, in each case on the *reasonable value of their respective properties prudently produced*, they would be clearly denied such "equal protection".

A Company may be compelled, in self defence, to reduce the return earned on its property to less than a "reasonable one", or may be put entirely out of business, by the discovery of a new process which may result in a great reduction in the cost at which the product can be made and marketed, as compared with the cost to the former Company; but this affords no authority to the *State* to take the property of such original Company *vi et armis* without "just compensation".

If it had been shown that Appellee's property was in excess of the requirements of its business, instead of being insufficient therefor, or that such property had been extravagantly or imprudently acquired or established, or that the present value thereof was less than the valuation actually placed thereon by the Master, a different situation might arise; but the Master has found *(Record,* p. 254):

> "There is no satisfactory evidence that the cost to Complainant of said property was unreasonable or excessive; or that the cost of production of said property was enhanced through faulty construction or waste; or that the various sums expended from time to time by Complainant or its predecessor Companies in permanent improvements and betterments were not intelligently and properly expended or that any such expenditure was made otherwise than providently and honestly."

Therefore the authorities cited by Appellants, holding that the public may not be compelled to pay a return upon property extravagantly or unreasonably produced or valued, or held in excess of the fair requirements of the business, have no application whatever to the present situation, and it is not considered necessary to distinguish them individually.

Economic laws may do that which the State has no power to do. It may be that a process will be devised by which, in an inexpensive plant and by a newly discovered method, gas may be sold at 25 cents per thousand feet and produce a reasonable return on the value of the investment; but certainly no Legislature would in that event have the power to *compel* every coal- and water-gas plant now operating to sell its product at that rate. The *situation* might force an old Company out of business, but the *State* could not do so by legislative Act directing it to sell its product at less than cost; and if it still found the community, from "love and affection" or other motive, willing to purchase its product at a rate which would produce a reasonable return on its investment, it would be entitled (if possessing continuing franchises) to continue its business and to sell at that rate,—regardless of the fact that the new Company might be profitably selling *its* product at one-fourth the charge, or of any Act of the Legislature attempting to establish that as the maximum price for gas.

POINT XXI.

Comparison of gas charges of different Companies, or elements of operating expense, valueless without adequate data and analysis.

A.

Charge for Gas.

As Mr. Cowdrey, of the Laclede Gas Light Company of St. Louis, said, in the Chicago investigation (*Record*, pp. 2512-16) :

> " There are *no two places probably in the United States* where the conditions are the same. * * * The only way that one can get at the proper cost in any particular place is by making a *careful investigation in that particular place*, and by taking *all the conditions* into consideration that exist *there*."

And yet Appellant, The City of New York, calls attention to the " McMillan Companies " operating in—

1. Detroit, Milwaukee and Grand Rapids—

with the remark that they were selling gas at the time of the trial at considerably less than the $1.00 rate charged in New York (*Brief*, p. 64).

Dr. Humphreys, referring to these very Cities, declared that as a general proposition he would not—

> " consider it possible to achieve the same results in New York City as to the cost of gas as can be achieved in the Lake region * * * in which those Cities are located " (*Record*, p. 4704),

continuing—

> " Q. I will ask you whether you think it possible to make any comparison or to draw any deductions as to the price in New York, or the prices charged in those Cities, without a complete analysis of accounts and costs of other items?

> "A. It would have to be made with an expert analysis, and when I say 'expert' I mean expert both from the operating standpoint and the accountant's standpoint; an analysis other than that would not be of any special value. We would have to know as to the exact classification of all the items" (*Record*, p. 4704).

If, however, we consider these Cities, upon what pertinent data appears in the *Record*, we find that at the time of the trial their average selling price was 84.95 cents per M. (*Record*, p. 4494):

(a) But these are "Lake Cities", where *coal* is *cheaper* and *residuals* are *higher* than in the City of New York (*Record*, p. 4702). A ton of gas-coal produces about ten thousand feet of gas; so that if gas-coal be *even one dollar per ton* cheaper in those Cities than in New York, it would make 10 cents difference in the cost per 1,000 feet of coal-gas (*Marks*, *Record*, p. 2030).

(b) Oil also is cheaper in the Lake Cities, being only 2¾ cents at Cleveland (*Record*, p. 2437), as against an average cost to Appellee of 4.52 cents (*Record*, p. 4205), or about 1.77 cents less. As it requires about five gallons of oil to produce 1,000 feet of water-gas (*Record*, p. 2030), *this item alone* would mean a difference of 8.88 cents in cost of water-gas, on the assumption (which is a fair one) that oil costs the McMillan Companies approximately the same as the Cleveland Company.

(c) Moreover it appears that the candle power at the works in those Cities was only 18, as compared with 24 for Complainant (*Record*, pp. 3267, 4583), representing a difference of about 5 cents additional for *candle power alone*.

Cost to Consumers Per Candle Power.

As to consumers of the gas, a simple computation makes it appear that (cost of production ignored), consumers in those Cities were paying *$1.23 per thousand feet* to procure the same illumination (24+ candles) which the New York consumer obtains at $1.00 (*Record*, pp. 4538–9),—in other words, illumination *per unit* was costing those consumers nearly 25% more than consumers in Manhattan.

2. Boston.

Professor Bemis stated that, at the time of the trial, Boston was the *only City in the East* (*i. e.* east of Ohio) where a rate of less than $1.00 was established *by law* (p. 3418).

That City, as is well known, is operating under a recent "sliding scale" Act, which starts with a 7% return on capital with gas at 90 cents, allowing the Company to increase its dividends 1% for each 5 cents reduction in the price per M of gas.

The Company, in trying out this plan, had reduced the price to 85c. at the time of the trial, and possibly has reduced further since; but *it may increase to 90c. at any time* (*Record*, p. 2712).

The situation in Boston, as to cost of production, is, however, peculiarly favorable for the East, and its selling price is no criterion for other Cities.

(**a**) In the first place, the legal candle power in Massachusetts is *16 candles*, as against Appellee's 22. Thus 85 cents in Boston, would therefore mean at least *90 cents*, if adjusted to 22 candle power.

(**b**) Further than this, the Boston Company received over one-half its gas from the New England Gas and Coke Company (a *coke* and not a *gas* Company), *as a by-product*, at *23 cents per thousand feet* (*Record*, p. 2654),—such price being made possible by the fact that said Coke Company was formerly controlled by the same interests which owned the Dominion Coal Company, and had received an exclusive contract for its gas-coal at about *$1.95 alongside in Boston* (*Record*, p. 2509), as against $3.18 per ton paid by Complainant (*Record*, p. 217).

And Professor Bemis necessarily concedes (as is clear enough anyhow), that the cost of the gas sent out by the Boston Company would be higher "*if it did not buy so much in bulk from the New England Gas and Coke Company*" (*Record*, p. 2711).

(**c**) Moreover, it appeared that the earnings of the Boston Company included profits from its electrical and outside gas operations;

and even including these, there was no evidence that the Company was able to earn even five per cent. upon the appraised value of its property, which is greatly in excess of its share capital (*Record*, p. 12).

3. Conclusion.

Without taking space for reference to other Cities mentioned in the Record, it may be generally stated:

> (**a**) That in *every one* of the few cases where gas was being sold for less than $1.00, there appeared a difference in the cost of oil or of gas-coal due to the local conditions, or of candle-power maintained, or of both together, which accounted for the lower price.
>
> (**b**) That in *every case* consumers in those Cities were paying more, *per candle-power*, for illumination than consumers pay in Manhattan at $1.00.
>
> (**c**) That no price for gas, prevailing in any City cited justifies a rate in New York of *eighty cents for twenty-two candle-power gas or anything approaching it*; but, on the contrary so far as the prices in other Cities quoted were in anyway of value, *they condemn an eighty cent rate for a 22 candle-power gas as without precedent.*

B.

Price Paid by Appellee for Oil, Compared with Other Companies.

It was stated by Appellant, the City of New York (*Brief*, p. 59), that the Appellee "claims it is required to pay more per gallon to the Standard Oil Company than other Companies in Greater New York," * * * and this increases unnecessarily the apparent cost of gas by about five cents per 1,000 cubic foot.

It should be said at the outset that the citations "(*Record*, *Exhibit* 94, pp. 2312 and 3674)" *in no way bear out the statement that the "cost of gas"* ("apparent" or otherwise) to Appellee is about "five cents" per thousand more than to other Companies in the City of New York. On the contrary, as hereinbefore pointed out, its station cost *is substantially the same as that of all other Companies operating in Manhattan Island* (*ante*, pp. 40–1).

1. The oil used by Appellee costs from 4.29c. to 4.875c. per gallon (*Record*, p. 239). In their discussion of the subject, Appellants apparently fail to recognize, that "*gas-oil*" is a generic term, including *many grades and qualities;* so that for one "gas oil" a Company may better afford to pay 5 cents, than to pay 3 cents for some inferior grade.

2. Appellants' witness, Marks, quoted from "Brown's Directory" *data* indicating that certain Companies in New York State outside the City paid in 1905, an average of 3.65c. for oil (*Record*, p. 1916). It is obvious that in the absence of *data* as to *quality* these figures convey no argument; and Appellee's Vice-President, from the same authority, showed that the Companies in New York State omitted by Mr. Marks paid from 4.12c. to 7c. per gallon, and a mean of 5.035c. (*Record*, p. 4212).

3. As to the Companies cited by Appellants within the City of New York, as procuring oil at a cheaper price than Appellee, it appears at the outset that each of them consumes an amount of oil which is insignificant as compared with Appellee's requirements (*Record*, p. 4203), and might probably be supplied by any number of individual producers. Thus—

Brooklyn Borough..........	670,760	gallons per annum:
Kings County..............	1,395,408	" " "
New York & Richmond.....	832,405	" " "
Queens Borough............	421,346	" " "

while Appellee's contract calls for the delivery of *255,000,000 gallons in two years and eight months (Master's Report, Record*, p. 239).

It is true that the immense requirements of Appellee can be met only from one source. Even Appellants' "independent" oil witness from Ohio was unable to name any other producer which had ever undertaken to fill such an order (*Record*, p. 3263).

And moreover, it was shown that the small outlying Companies cited by Appellants *were using oils of cheaper grade, and in several instances not of a quality able to maintain the minimum of 22-candle power* required by law (*Record*, pp. 4212–44).

4. All the Companies operating on Manhattan Island receive the same grade of oil at the same price as Appellee, except the Mutual; and it appeared that the Mutual, which used a lower grade and paid a less price, had *a higher cost per candle* than Appellee and the other Companies, which used more expensive oil (*Record*, p. 4495).

5. The contentions of Appellants below on the subject of oil were fully met in behalf of Appellee (*Record*, pp. 4203-4215); and the Master, after a review of the evidence, concluded (*Record*, p. 1240) :—

> "It would appear further that from the standpoint of economy, the greater efficiency of the higher grade oil more than offsets the difference in its cost per gallon."
>
> "* * * Nor, making due allowance for varying local conditions and differences in grade, is there any satisfactory evidence that the price paid by Complainant is on the whole excessive as compared with that paid by various other Companies to which reference was made."

POINT XXII.

The Question of Pressure.

The Acts in question provide that Appellee shall maintain a pressure in its "service mains" at every point, and at all times, of not less than one inch or more than two and one-half inches; and impose a penalty of $1,000 for each failure in this regard. Service mains obviously mean distribution mains, through which gas is delivered to the "service" pipes of consumers (*Record*, pp. 666, 1619, 1696, 1791); indeed, the te[illegible] "service mains" is employed by witnesses for the Appellants as synonymous with "distribution mains" (*Record*, p. 2915), and could mean nothing else.

The finding of the Decree on this subject is as follows (*Record*, p. 433):

> "The pressure required by said two Acts and the Order aforesaid, is not physically impossible, *if the entire system of gas distribution in the City of New York be reconstructed;* but compliance with such requirement is *commercially impossible under the rates for gas prescribed by said two Acts and Order.*"

1. Evidence as to Possibility of Compliance.

(a) It appeared that differences in elevation alone on Manhattan Island, would account for the entire variation (1.5 inches) allowed (*Record*, pp. 1784, 1623, 1810); but the demands of consumption are so varied and unaccountable, from many different causes, that it was testified that Appellee could not comply with the requirement, even if there were no variations in level to deal with (*Record*, pp. 650, 1779, 4373, 4414).

It was also testified that such modern appliances as Welsbach burners, gas logs and gas ranges required a minimum pressure of at least 2 inches at the burner, which means about 2½ inches at the main, for efficient operation, and that the efficiency is increased by a pressure substantially beyond that (*Record*, pp. 1840, 4020, 4025).

(a) **Chief Engineer Bradley** testified as follows (*Record*, pp. 549–51):

> "Q. Is it in your judgment as an expert, physically possible for the Company to comply with this requirement of the Statute? A. *It is absolutely impossible.*
>
> Q. Why do you say that? A. Because of the physical conditions and the action of the gas in the mains over which the Company has no control, the variations of pressure caused by the consumers, opening up and shutting off gas; all this we cannot control.
>
> Q. Do atmospheric conditions affect it? A. Atmospheric conditions affect it, they are apt to interfere with it, and I say further that we cannot control it because I have tried faithfully for over a year to do it and have not succeeded.
>
> Q. Did you mention variations in elevation? A. Variations in elevation, of course they have their effect (p. 549). * * *

Q. At the intersections of the streets, how are the mains arranged for the purpose of equalizing pressure? A. *The mains are connected together at the cross-streets by running through what is technically termed a cross into the main.* That is, with four openings, and the gas mains are simply common; they are all commonly connected.

Q. Does the effect of that tend to equalize the pressure? A. Yes, only for that we could not supply the gas.

Q. You have had charge of the pressure of the gas have you not? A. Yes.

Q. Ever since you became Chief Engineer? A. Yes, ever since I became Chief Engineer.

Q. And have you maintained any greater pressure than has been necessary to supply the demands of consumers? A. No, sir.

Q. Has not the complaint been the other way, that the pressure has not been sufficiently great to supply the demands? * * * A. I have known of complaints, hundreds of complaints, from consumers that they did *not get gas enough*, and we always try to supply them (p. 550). * * *

Q. Suppose you should never exceed the pressure of two and a half inches; what would be the effect of that? A. I would not like to say what the effect would be. There would be an absolute loss of business; we would get out of business.

Q. I mean would there be sufficient pressure in that case to supply the consumer? A. *No, sir; we could not supply the consumer; absolutely no.*

Q. Would there be any danger to life from that cause? A. Yes, if we should reduce the pressure to that point, at no point in the mains to more than two and a half inches, there would be a great many other points where there would be absolutely no pressure at all, and, *the burners being opened, the supply would come on again, and it would probably result in the death of a great many people*" (p. 551).

(b) Vice-President Addicks (Acting President), a graduate of the United States Naval Academy at Annapolis and Chief Engineer for a considerable time of the Boston Companies (*Record*, pp. 1561–2) testified as follows (*Record*, p. 1563):

> "Q. I will ask you, based on your knowledge as an engineer, and particularly in the gas business, whether it is possible in your judgment to observe those requirements and furnish your customers with gas in the City of New York? * * * A. My judgment is that it is *practically impossible to conform to the requirements of that law as to pressure.*"

(c) **Dr. Alexander C. Humphreys,** President of Stevens Institute of Technology, whose experience as a gas engineer is undoubtedly unequalled in this country (*Record*, p. 1681–3), on having his attention called to the pressure requirement of the Statutes, testified (*Record*, p. 1683–4):

> "Q. What is your view as to the possibility of complying with that provision? A. *Practically impossible.*"

The foregoing opinions denied the ability of the Company to comply with the law, *as a general proposition and without limitation to the present condition of the system.*

(d) **Mr. Marks,** Appellants' original witness on the subject, admitted that, under the existing conditions and connections of the mains of the Consolidated Gas Company, it was impossible to comply with the law, and testified additionally (*Record*, pp. 1985, 2786–7):

> "Q. Now, did you also say that it is to the interest of gas Companies to keep their pressures in their mains just as low as possible, in order to avoid a great loss by breakage [obviously error for "leakage"—Ed.] and excessive use of gas in street lighting? A. I did.
>
> Q. That is true, isn't it? A. It is true. (*Record*, p. 1985).
>
> * * * * * *
>
> Q. And in connection with the cost of gas as well as pressure did you state that while you considered it mechanically possible by isolating the gas mains of the Island of Manhattan according to their levels, *and feeding each level by means of a separate feed main or mains,* with the use of governors to come within the limitations of the law of June 3, 1905, *it did not appear to you to be*

> *necessary, and that any such attempt as this would be found to be commercially expensive and technically very troublesome in operation, without giving any return in real advantage or economical results to consumers* (page 48 of affidavit)? A. I did.
>
> "Q. And of course if it is commercially expensive and fully possible to be done, the expense, so far as return on capital necessary to accomplish it is concerned, or the expense of operation of the system when installed, would be a charge against the consumers of gas to be reckoned with in fixing the price at which that gas could be sold? That is a fair proposition, isn't it? A. It is so" (*Record*, pp. 2786–7).

(e) And **Mr. Edgerton**, Appellants' own witness on the general subject, while not pretending that compliance with the requirements of the statute was possible in the existing situation, advanced the following plan as a remedy (*Record*, pp. 3461–2):

> "Q. In what way should the gas be delivered to the mains from which services are taken off at a more uniform pressure than it is now? A. The system would involve a few **high pressure mains** running up to 15 or 20 pounds or to such a pressure as would not impoverish the gas to any appreciable extent, and *govern the pressure of the gas* into the *service* mains of the Company by means of a **governor** or by means of valves, regulated by hand or a workman if preferred, although the **governor** would be the most equal method and its action could be watched by a watchman at the important points.
>
> Q. Taking into consideration the New York condition, where would you place those high pressure mains? A. **The high pressure mains run on each side of the City,** being made of the largest diameter near the most important and congested districts, and running parallel with the shore, running from the Battery to the Ship Canal. I have estimated on the delivery of 8,000,000 cubic feet per hour under a pressure of 15 pounds in two mains of 24 inches diameter. The mains could be reduced from 24 inches to 20 inches, 16 and 12 inches towards the ends. And from these mains deliver by the **governors** into the larger mains and also into the service mains. There would be no need in this provision of which I speak to lay pipes *across* the City

> having any considerable pressure at all. The present piping being so nearly adequate to delivering an equal supply, that governing them into the large cross-mains would be all that is required.
>
> Q. And do you think that those *pressure mains* could be connected with the present system of pipes without great changes in their distributing system? A. It would not require any change at all in the distributing system, only a due regard to the points of introduction of the gas by means of the **governor** and the selecting of a governor of a reliable character to handle the gas."

And Mr. Edgerton subsequently admitted that his proposed pressure of 20 pounds in his "high pressure mains" would, if the "**governor**" at the entrance of the service mains failed to work and allowed the pressure to get through, be sufficient to "blow the meters out," which "would be a pretty serious situation * * * if anything of the kind could happen" (*Record*, p. 3471); and he was unable to name any City where so high a pressure as 20 pounds was used, his most definite suggestion being "New Orleans", where the pressure main runs "**around**" the City (*Record*, p. 3471-2),—not through the congested portions.

(f) Superintendent of Mains Simpson testified on that point (*Record*, pp. 3927-8, 3931):

> "Q. Have you been dealing with pressure in mains and seen the effect of the pressure, and of gas escaping from mains under pressure, during the last twenty-five or thirty years? A. I have, yes sir.
>
> Q. What have you to say as to the feasibility of distributing or putting gas through the City of New York under a pressure of twenty or thirty pounds as suggested by Mr. Edgerton? A. *I should be very sorry to have charge of the mains when we had such pressure as that, as he is dealing with.*
>
> Q. Have there been accidents to the mains of the Company which have allowed the escape of gas within recent times? A. A great many accidents to the mains *with the present pressure* we are carrying. * * * The most recent one I recall was on October 13th at Forty-third Street and First Avenue. In that case the Consolidated Telegraph and Electric Subway Company

> were laying a subway along one side of our twenty-inch gas mains. They fired an unusually heavy blast, it broke the mains and the gas immediately caught fire and *blazed to the very top of the tenement houses* alongside, and except for the promptness of our men—the watchman we had there was seriously burned and had to be taken away in an ambulance—and we had some men working around the corner a block away, and the Superintendent of the district happened to be crossing First Avenue and saw the blaze from a mile away, and drove right down.
>
> So by a combination of circumstances, being ready, we were able to put the fire out nine minutes after it happened. * * * The pressure on the gas in that main was *two inches or* $\frac{1}{14}$ *part of a pound* Now, the only reason that the block was not put on fire was on account of the prompt work of our men who happened to be there. By the time we had the stoppers in and the gas turned off, the windows of the tenement house alongside and a saloon—the glass was all cracked and ready to break in. In another two minutes the windows would have gone, and the whole place also, and you wouldn't have been able to get near the place. * * * I know in this case here with a pressure of two inches, the matter would have been very serious indeed if our men had not been on the spot and put it out. **If the pressure was twenty pounds, or 560 inches, I don't know what would have happened. * * * I don't believe the firemen themselves could have got within 300 feet of the place, and nothing in the world could have possibly saved that block** " (p. 3927-8).

For Mr. Simpson's further testimony on this point, see *Record*, p. 3931.

We have quoted at considerable length the testimony of the various witnesses, in order that the arrangement of the proposed system, **and the office of the automatic "governors" involved,** might be clear in considering

(a) Appellants' Present Position.

This proposition of Mr. Edgerton, which was advanced and elaborated with so great pains below by Appellants, has been abandoned by them in this court

(*Brief of Attorney General*, pp. 201–7; *Brief of Public Service Commission*, p. 283); and they now apparently rely upon certain testimony of Mr. Bradley, assuming that he therein admits a plan by which the pressure requirements can be met *without the great and prohibitive expense attendant on the Edgerton proposition*. A brief consideration of that assumption shows its utter fallacy. The vital part of Mr. Bradley's testimony is as follows (*Record*, p. 571):

> Q. Now, it is perfectly practicable, is it not, to divide your City *into districts* and place district regulators or **governors** at different places throughout the City? A. Theoretically it is practicable. Practically there are serious objections to it.
>
> Q. Well, what are they practically? A. The defendants are forcing the consumers in a great City like New York to depend upon the automatic action of an **automatic governor** buried somewhere in the street, or an automatic governor situated in the basement or on the first floor of a building. If the City was *districted off* in that way and *each district supplied through a governor*, it would be a matter of very grave doubt whether at times this governor would not fail to operate, like all automatic machinery, and with an important, and I might state a dangerous element, as gas is, it is not wise to introduce any element that adds to the danger. And in my opinion district governors do add to the dangers of interruption and difficulty with gas supply.
>
> Q. Well, are they used in many Cities? A. They are used in many cases. Perhaps where they have more nerve than I have."

This clearly involves the proposition that the City be "districted off," and "each district" be supplied through a "governor," which would separate the distribution mains from the "high pressure mains." It contemplates and requires *a system of precisely the character advocated by Mr. Edgerton*, to wit, a system of "trunk mains," with the City divided into "districts" and a "governor" from such trunk mains, at the point where the gas under such pressure is admitted into each "district." Indeed, the **Attorney General** in his Brief (p. 202) states that Mr. Bradley shows that "the Company could control the pressure" by delivering gas—

> "through a trunk main at **high pressure** and by means of a district **governor,** reducing it and delivering it into the service mains within the **district** at any given pressure."

Mr. Edgerton chose to run such "pressure mains" up and down the sides of the City, as *obviously the simplest* and *most economical mode of construction to reach the "districts" which must be established,* instead of running such "mains" through the heart of the City.

Any form of "district" regulation by means of governors involves the installation of independent "trunk mains" from the point of supply, to the point of control. Of course the ordinary "distribution" mains, could not be used as "trunk mains" for this purpose, for the pressure at the entrance to the first district can not exceed 2½ inches.

Any departure from the lines of Edgerton's "high pressure" plan, would simply involve more mileage of "trunk mains," through the more congested parts of the City, and consequently an even greater expenditure.

(b) Important to Be Noted.

It will be observed that Mr. Bradley *in no wise, by statement or implication, modifies his emphatic testimony above quoted (ante,* p. 163) *as to the "absolute impossibility of compliance* with the pressure requirements of the Statute, even if he were assumed to have "nerve" (to use his own word) to install such "high pressure mains" with the "automatic governors" in the City of New York.

It is apparent that such "automatic governors" are employed merely to fix the *initial* pressure at which the gas enters the distribution mains, from the "high pressure" mains; and they have no relation to what happens in the "distribution" mains after the gas has entered them. It has been the contention of Appellee throughout, that the varying demands of consumption within the "district" from moment to moment and hour to hour, from causes beyond Appellee's control, are such that with an initial pressure of only 2½ inches at the entrance to the district it would be impossible to prevent the pressure at the extremity or some other point in the district from falling at some time below one inch ; and Mr. Bradley has stated it as his distinct opinion (*ante*, p. 164), that with an initial pressure of no "more than 2½ inches," the supply of gas might be, at some point in a district, completely exhausted so that lighted burners would expire, and probably "*result in the death of a great many people.*"

In Illustration.

Thus pressure charts were presented by Appellee, showing pressure at different points as related to the pressure at the distributing stations at the same moment (*Complainant's Exs.* 345–8, *Record*, pp. 6043–6046). Such charts proved that, while at *one* point in the district the pressure was *rising*, at *other* points the pressure was at the same moment *falling ;* so that any man or governor would be unable to adjust the pressure to follow both.

And in further illustration it appears that, during the trial, the City Engineer having complained that the pressure at the City Water Station was insufficient, pressure gauges were, on December 14th, 1906, placed in said City Station and on a lamp post just outside, and the results of the pressure observations there and at Appellee's 132nd Street Station supplying that point were as follows:

			Inches.	
	Page of Record.	Hour.	Minimum.	Maximum.
In City Station	(*Record*, p. 6059)	6 P.M.	.85 inches	2.35 in. 1 A.M.
On Lamp Post	(*Record*, p. 6054)	6 "	1.3 "	2.9, 12:38 P.M.
Appellee's 132nd Street Station	(*Record*, p. 6055)	5.15 A.M.	1.95 "	6.5 in. 6 P.M.

And it appeared that at 6 o'clock P. M., when the pressure was *lowest* at the City Station (.85 in. inside and 1.3 in. on lamp-post), it was highest at Appellee's station (6.5 inches) (*Complainant's Exs.* 356 and 357, *Record*, pp. 6054–5).

(c) Conditions in Which "High Pressure" Mains are Used.

It should also be noted that the "cases" in which such "high pressure" system is employed are distinctly different from a congested City like New York.

The distinction as to New Orleans has already been pointed out, and the purposes and circumstances existing there and elsewhere for the employment of such a system are defined more at length in other parts of the *Record* (pp. 3930-1; 4704-5). Its common use is well known to be to "deliver gas to *small country towns* through *small* high pressure mains," the pressure being then "*reduced* inside the towns" (*Record*, pp. 3930-1).

And that the system is not in use for the purpose of maintaining any such extraordinary pressure requirements as provided in the present Statute, is apparent from the fact that *in no other City in the world* are such limitations of pressure required (*post*, p. 175), nor have Appellants attempted to show that in any City in the world the pressure is in fact maintained within the limits prescribed in the Statute under consideration.

It is the view of the Appellee that the Court went to an extreme not justified by the evidence, in finding compliance with such pressure regulations to be possible even by a reconstruction of Appellee's "entire system of gas distribution in the City of New York."

This was further than the Master went, whose statement was that it might be possible "to remedy this condition, *at least to some degree*," by establishing districts, with a "district governor" for each,—the Master obviously recognizing that this meant a "high pressure" system, since he states that there is some doubt as to the "*safety* of such governors."

2. Expense of Reconstruction.

The Master, after full consideration of the subject, having found that—

> " Under the distributing system as now existing and in operation it is not possible to fulfill the statutory requirements as to pressure " *(Record*, p. 250)

further finds that the installation of Mr. Edgerton's high-pressure mains would at the outset cost—

> " 4,000,000 *for main and valve construction alone*, in addition to which would be required pumping stations and apparatus, the annual charges and operating expense in connection with which Mr. Addicks testified would amount to several cents per thousand feet of gas sold, and would involve a corresponding increase in operating cost or proper selling price of such gas " *(Record*, p. 255).

(**a**) Mr. Edgerton himself stated the proper location for his high pressure mains (*Record*, pp. 3461, 3473, 3931), and Mr. Simpson showed without contradiction that the cost for main and valve construction alone would be $4,198,425 (*Record*, p. 3930). The streets of New York are now so congested with pipes and other sub-surface structures that laying large mains is a matter of immense expense, and sometimes an impossibility without going to great depths to avoid structures already there (*Record*, pp. 418 9, 4174–6, 6025–32); and " high pressure " mains must additionally be of special and powerful construction (*Record*, pp. 3930, 4320).

(**b**) In addition, Mr. Addicks, after declaring that it would be neither " safe or wise or economical " to instal such a system in the City of New York, stated that there would be other expenditure, to wit *(Record*, p. 4229) :

> " Installation of the power plant and pumping machinery necessary to supply the gas to the high pressure main system that Mr. Edgerton has testified to, and unless many of our stations should be wiped out entirely, I don't know whether Mr. Edgerton had any idea of concentrating them at one or two points or not, I do not think it is feasible, and I presume he

> did not,—but it would require such plants at our various distributing stations, the larger ones, that would cost a very large fixed charge annually which would run up into *the hundreds of thousands of dollars.* I am in the midst of that investigation now.
>
> "Q. It would amount then to several cents a thousand on the present output of gas? A. Yes, I think so."

In other words, in addition to the return on the $4,198,000 cost for "high pressure main and valve construction," there would be imposed a fixed charge of several "hundreds of thousands of dollars," amounting to "several cents a thousand" feet of sales, on account of the property specified by Mr. Addicks.

(**c**) *And in addition to this*, it is obvious that in order to establish the independent "districts," it would be necessary to go down under the present expensive pavement at the corner of every street marking the border of each district, *in order to "seal" or cut off the mains at that point* so that the "district" should have no communication with other sections; for, as above noted (*ante*, p. 164), *all the mains are now interlocked at every street intersection.* The expense of this work would, of itself, obviously be enormous, would add a further large sum to capital account, calling for corresponding increase in annual fixed charges therefor.

On the evidence it is difficult to conceive how the Court could have reached any other conclusion than that the aggregate expense would be so great, that compliance with the pressure requirements was—

> "Commercially impossible under the rates for gas prescribed in the two acts and order."

3. Period Required for Reconstruction.

Moreover it would be a matter of common knowledge that the reconstruction of the entire system of gas distribution in the City of New York, would not only involve an enormous capital expenditure, but would require so great a time for the work that it would be physically impossible between the date of the passage and taking effect of the respective Acts requiring it. The first Act was approved June 3, 1905, and took effect July 1, 1905; and the second Act was approved April 3, 1905, and took effect July 1st, 1906.

Indeed, it appeared that it would take "a very considerable time" to instal even the "high pressure" mains (*Record*, p. 1658); and, for a long time, compliance with the Act in question would be impossible in any event.

4. A Unique Law.

No witness was able to name any other City in the world, where a maximum pressure for gas had been established, to say nothing of a maximum pressure so low as 2½ inches (*Record, pp. 1658, 1843*).

It appears that in some English Cities a *minimum* pressure of .6 of an inch to one inch is established, but no maximum (*Record*, p. 1840).

POINT XXIII.

The "Legislative Committee" of 1905, and the Gas Commission of 1905-6—The Facts as to their "Investigations."

In view of the contentions of the Appellants in the Circuit Court, which will probably be here repeated, as to the presumptions and weight which should be given to the Statutes and Order in question, in view of the investigations of the Legislative Committee of 1905 (the "Stevens Committee") and of the Gas Commission in 1905–6, it is thought proper to point out the facts in reference to such investigations.

Especially is it pertinent in view of the suggestion in the Brief for the City of New York, that the Statutes in question are "the outcome *of patient, exhaustive, conscientious investigation*" (p. 71); and that the "record of both these investigations shows the most painstaking effort on the part of the Joint Committee in 1905, and on the part of the Commission in 1906" (p. 75).

1. The Legislative Committee.

Vice-President Carter, who made an affidavit respecting the investigations of the Stevens Committee, upon the motion for preliminary injunction in this case, was asked in substance by *Counsel for Appellant, The City of New York*, as to the making of such affidavit and the truth of substantial statements therein, to which he replied in the affirmative (*Record*, pp. 952–3). Mr. Carter's statement of the facts, *uncontradicted*, is as follows (*Record*, p. 5281):

> "The Senate Committee of 1886, Senate Document 47 of that year, completely sustained the valuation of the Company's assets at the time of consolidation, as above appears. They had before them on their investigation, lasting nearly a year, substantially every person connected with the consolidation and were able to learn, at first hand and on the spot, all the facts in regard to amount and character of property and its value. The same data is not accessible to-day with the same fullness.
>
> As to the Legislative Committee of *1905 (known as the Stevens Committee)*, the resolution appointing it contained no provision, authorizing the Companies interested to be heard or to produce evidence or examine witnesses or participate in any way. Said Committee did not recognize at any stage the right of the Companies to participate by counsel, this Company's participation being confined to such brief additional questioning or data, as the *courtesy* of the Committee permitted. The investigation covered such a vast field and was conducted in such haste, limited in taking its testimony to *less than three weeks altogether*, that the elements entering into the question could be neither fully presented nor deliberately considered by said Committee, several members of which were absent from illness or other cause during a great part of the Committee's sittings. This Company was not permitted to address the Committee at the conclusion of the investigation, nor did the Committee have time or opportunity to consider written memoranda sub-

> mitted, prior to preparation of its report to the Legislature.
>
> "We hazard nothing in saying, that the *members of the Committee themselves* will concede the insufficiency of the time at their disposal, thoroughly and in detail to investigate, weigh and determine such important matters. The result was that, upon some most material points, *no evidence at all* was before the Committee; upon other points evidence was in such *incomplete* shape that the situation was gravely misapprehended or misconstrued by the Committee. Said Committee fell into the error of taking the figures of the *tax* report of the Company, as representing the actual value of the Company's assets as a going concern or as the Company's investment therein; and furthermore, said tax report, as summarized by said Committee, included *none of the cash working capital* of the Company, none of the *accounts receivable* which formed part of its capital, *no part of Astoria investment*, and took no note of *other assets of great value.*
>
> "The Gas Commission of the State of Massachusetts consumed more than a year in 1904-5 in consideration of the capitalization and cost of making gas as to the Boston Companies alone."

2. The Gas Commission.

In like manner Mr. Carter had, in said affidavit, set forth the facts respecting the investigation of the Gas Commission which led to their Order here under review; and he was also asked by *Counsel for Appellant, the City of New York*, as to the truth of substantial statements therein relating to such investigation, to which he replied in the affirmative (*Record*, pp. 952-3). Mr. Carter's statement of the facts, *uncontradicted*, is as follows (*Record*, p. 5282):

> "As to the action and report of the Gas Commission, filed February 23rd, last, in favor of 80 cent gas, it will be observed, that said Commission in their estimate of the value of the Company's property *wholly excluded its working capital* of $1,000,000 and its accounts receivable of $2,000,000 to say nothing of *its investment at Astoria*, then amounting to nearly $6,000,000, *its franchises capitalized under express authority* of the Act of 1884 and *other items* of great value.
>
> "No sooner had said Commission began its investigation than certain journals of the City of New York declared and reiterated in caustic terms, that said Commission had no other duty to perform than to report in favor of 80 cent gas,

> as recommended by the Stevens Committee, and criticised said Commission in unmeasured terms for not at once so reporting. Before the petitioners in favor of the reduction of the charge for gas had completed their case, and *before this Complainant in defense had had an opportunity to present a word of evidence*, the Governor of the State of New York (whose appointees the members of said Commission are) *recommended in his message* the passage of an Act, reducing the price of gas to eighty cents; promptly thereafter the Senator from New York, who was then *chief counsel for said petitioners* before said Commission, introduced a bill to reduce said rate to eighty cents, being substantially the bill which finally passed. And finally, *when it was rumored*, that the Commission did not see its way clear to reduce the rate to eighty cents, a bill was introduced in the Legislature *by Senator Stevens*, Chairman of the Legislative Committee of 1905, *to abolish the Commission.*
>
> "Thus the minds of the Commission from the very outset, instead of being left free to flow to a natural and unbiased conclusion upon the evidence, were at every step and by every influence pressed toward a finding, which would justify the report of the Stevens Committee; and thus the Complainant, instead of receiving that fair and unprejudiced hearing, to which it was entitled, suffered grave prejudice and has never received that judicial consideration of its property rights, in behalf of which it has sought the interposition of this honorable Court."

3. General Observations.

The foregoing statements are quoted as a convenient and fair statement of undoubted facts, and as an illustration of the position which Appellee has maintained from the outset on the subject of said Investigations; but the record and circumstances of the Investigations are so far a matter of general knowledge and public record, and so clearly a part of the history of the enactment of the Statutes and Order in question, that they are regarded—independent of testimony—as subject to judicial notice.

The contention of Appellee as summarized in the evidence, through its Vice-President and Secretary, was as follows (*Record*, p. 953):

> "So that you conclude that at neither of these hearings did you receive that fair and unprejudiced hearing that your

> Company was entitled to? A. That was my belief as e
> pressed in that affidavit.
>
> " Q. And in consequence you suffered grave injustice an
> grave prejudice ? A. Yes, sir.
>
> " Q. *And that your Company has never received th
> judicial consideration of its property rights in behalf of whic
> it has sought the interposition of this honorable Court ?
> We were very sure of it."*

It need only be pointed out, in conclusion, that said Committe
reported that they found that the entire value of Appellee's "ga
making plants, *including whatever franchises it may own,* does n
exceed the sum of $30,000,000" *(Record,* p. 80), and that the Com
mission found that the value of Appellee's tangible property "di
not exceed the sum of $30,000,000" *(Record,* p. 32), while the
doubted whether its franchises were "of any considerable value"
although Appellee's *tangible property alone,* when it began busines
in November, 1884, was valued at $30,190,419.01 *(Record,* p. 501
and its "special franchises" for the year 1905 (including tangib
rights plus mains and services in the streets) stood assessed by th
State authorities, for taxation, at a value of $27,300,000 (*Recor*
p. 202).

Supreme Court of the United States.

WILLIAM R. WILLCOX ET AL, constituting the Public Service Commission of the State of New York for the First District, Appellants, AGAINST CONSOLIDATED GAS COMPANY OF NEW YORK.	October Term, 1908. No. 396.
THE CITY OF NEW YORK, Appellant, AGAINST CONSOLIDATED GAS COMPANY OF NEW YORK.	No. 397.
WILLIAM S. JACKSON, as Attorney-General of the State of New York, Appellant, AGAINST CONSOLIDATED GAS COMPANY OF NEW YORK.	No. 398.

APPEALS FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK, SITTING IN EQUITY.

BRIEF FOR THE APPELLEE ON THE LAW.

This brief will discuss the legal questions involved in the present appeals, with the exception of the

inclusion of franchises and good will as a property right, which will be the subject of a separate brief.

The disputed findings of fact, and the evidence which supports the contention of the Consolidated Gas Company, will also for the convenience of the Court be the subject of a separate brief.

PART I.

STATEMENT OF FACTS.

I.

The Nature of the Proceedings.

This is an appeal by the Public Service Commission of the State of New York, The City of New York and the Attorney General of New York (each appealing separately) from a decree of the Circuit Court of the United States for the Southern District of New York, entered April 3, 1908, and fully reprinted in Vol. I, page 430 of the Record.

The decree was entered pursuant to the prayers of a bill in equity, filed on May 1, 1906, which sought to declare unconstitutional the following laws of the State of New York:

(1) Chapter 736 of the Laws of 1905.

(2) Chapter 737 of the Laws of 1905.

(3) Chapter 125 of the Laws of 1906.

The pertinent provisions of the said Acts, which were adjudged unconstitutional by the Circuit Court, are as follows:

Chap. 736 of the Laws of 1905, provides as follows:

> "Section 1. A corporation, association, copartnership or person engaged in the business of furnishing or selling illuminating gas in the city of New York, *shall not charge said city or receive therefrom for such gas a sum in excess of seventy-five cents per one thousand cubic feet.*
>
> "§ 2. The illuminating gas furnished or sold by any such corporation, association, copartnership or person to said city shall have an illuminating power of not less than twenty-two sperm candles of six to a pound burning at the rate of one hundred and twenty grains of spermaceti per hour tested at a distance of not less than one mile from the distributing holder by a burner consuming five cubic feet of gas per hour

> and each one hundred cubic feet of gas shall not contain more than five grains of ammonia nor more than twenty grains of sulphur nor more than a trace of sulphuretted hydrogen. *The pressure of said illuminating gas in any service mains in the said city at any distance from the place of manufacture shall not be less than one inch nor more than two and one-half inches.*
>
> "§ 3. Any corporation, association, copartnership or person violating any provision of this act shall forfeit the sum of one thousand dollars *for each offense* to be sued for and recovered in the name of and by the city of New York for its benefit."

Chap. 737 of the Laws of 1905, after providing that upon formal complaint by persons therein specified, the Commission created by the Act shall investigate the price of gas and the manner of its supply by public hearing, further provides (Sec. 17)

> "After such hearing and upon such investigation as may have been made by the commission or its officers, agents or inspectors, the commission, within the limits prescribed by law, may fix the maximum price of gas or electricity which shall be charged by such corporation or person in such municipality, or may order such improvement in the manufacture or supply of such gas or in the manufacture, transmission or supply of such electricity, or in the methods employed by such person or corporation, as will in its judgment improve the service. *The price so fixed by the commission shall be the maximum price to be charged by such person or corporation for gas or electricity in such municipality for a term of three years and until, after the expiration of such term such commission shall upon complaint as provided in this section again fix the price of such gas or electricity.*"

The portion of the Act, above quoted, under which as subsequently stated the Gas Commission created thereby made an order that the complainant sell its gas to customers other than the City of New York at a maximum rate of 80 cents per thousand feet, has since the filing of this bill and the decision of the Circuit Court,

been adjudged unconstitutional by the Court of Appeals of New York in Saratoga Trustees vs. Saratoga Gas Company, 191 N. Y., 123, as operating to deny to all gas companies the "equal protection of the laws" (see *post*, p. 17).

Further discussion, therefore, of this last quoted Act, and the order made by the Commission of Gas and Electricity thereunder, is unnecessary, for the Supreme Court will accept under its uniform rulings this decision by the highest Court of New York upon the constitutionality of a statute of the State of New York.

Chapter 125 of the Laws of 1906 provides:

> "SECTION 1. A corporation, association, copartnership or person engaged in the business of manufacturing, furnishing or selling, illuminating gas in the city of New York, except in the fifth ward of the borough of Queens and in that portion of the borough of the Bronx formerly contained in the towns of Eastchester and Pelham, *shall not charge or receive for gas manufactured, furnished or sold in said city a sum per one thousand cubic feet in excess of the following rates:*
>
> "1. *In the borough of Manhattan*, in the first ward of the borough of Queens, in the borough of Brooklyn, except the thirtieth and thirty-first wards thereof, and in the borough of the Bronx, except that portion of it formerly contained in the town of Westchester outside of the villages of Wakefield and Williamsbridge, *eighty cents.*
>
> * * * * * * *
>
> "§ 2. The illuminating gas furnished by any such corporation, association, copartnership or person shall have an illuminating power of not less than twenty-two sperm candles of six to a pound, burning at the rate of one hundred and twenty grains of spermaceti per hour tested at a distance of not less than one mile from the distributing holder by a burner consuming five cubic feet of gas per hour and each one hundred cubic feet of gas shall not contain more than five grains of ammonia nor more than twenty grains of sulphur nor more than a trace of sulphuretted hydrogen. *The pressure of illuminating gas in any service mains in the*

said city at any distance from the place of manufacture shall not be less than one inch, nor more than two and one-half inches.

"§ 3. Any corporation, association, copartnership or person violating any provision of this act shall forfeit the sum of one thousand dollars *for each offense* to the people of the State.

"§ 4. This act shall not apply to gas furnished or sold to the City of New York."

The Acts in question are printed in full in the Record (Vol. I., pp. 21–31).

The bill in equity prayed that these Acts be adjudged in contravention of the Constitution of the State of New York and of the Constitution of the United States, in that they—

(1) Deprived the complainant of its property without due process of law.

(2) Took its property for public and private use, without just compensation.

(3) Deprived it of the equal protection of the law.

(4) Impaired the obligation of the contract rights of the complainant, under the terms of Chapter 367 of the Laws of 1884, pursuant to which the complainant acquired its assets and in reliance upon which its shares were issued and are now held.

The averments of the bill are too lengthy for adequate summary. The main averment was that the complainant possessed property, invested and used in the sale of gas, aggregating $86,000,000, upon which it is reasonably entitled to a return of 10% and that the inforcement of the legislation above referred to would yield the complainant less than 1½ per cent. profit on its actual investment. It was further alleged that compliance with the pressure provisions was "physically impossible" and that the statutes being unduly discriminating, and containing oppressive penalties, operated to deny the complainant the "equal protection of the law."

The defendants made no formal appearance, but filed answers, in which they denied the main averments of the bill.

Replication having been filed, the Court thereupon entered an order, which referred the cause to ARTHUR H. MASTEN, ESQ.,

> "one of the Standing Masters of this Court, to take all the testimony herein, make all needed computations and fully find the facts."

Before the Master the hearings extended from July 17, 1906 to June 12, 1907. The voluminous testimony will be found in Vol. II. to VI. inclusive of the Record and comprise with the Exhibits over 6000 printed pages.

Julius M. Mayer, the Attorney of the State of New York, having been succeeded in office by Willam S. Jackson, the latter was duly substituted as a party defendant in his place, and the suit was revived as to him by an order entered herein on June 15, 1907.

On June 6, 1907, the State of New York enacted a new and comprehensive Public Service Commissions Law, which became operative July 1, 1907. It repealed Chap. 737 of the Laws of 1905, constituting the Commission of Gas and Electricity, and substituted for that body the new Public Service Commission. Under Section 85 of the new Act it was further provided:

> "This Act shall not affect pending actions or proceedings, civil or criminal, brought by or against the Board of Railroad Commissioners or the Commission of Gas and Electricity or the Board of Rapid Transit Railroad Commissioners, but the same may be prosecuted or defended in the name of the Public Service Commission, provided the subject matter thereof is within the statutory jurisdiction of such Commission."

Pursuant to the new law the Public Service Commission was on October 1, 1907 substituted as defendants for the former "Commission of Gas and Electricity" and the suit

> "continued against them as parties defendant herein without prejudice to the proceedings already had herein, the answer

> of said last named defendants heretofore filed herein to stand as the answer of "

the new Public Service Commission.

The Master's Report, which was filed on June 24, 1907, after full opportunity had been given to all counsel to correct his findings of fact and law, is also too lengthy for adequate summary. It will be found in the Record (Vol. 1, pp. 151-291). Further detailed reference will be made to the respective findings of the Master and the Circuit Court in a separate brief upon the facts. For the purposes of this argument on the law, it will suffice to state very briefly the main findings of the Master and those of the Circuit Court.

1. The value of complainant's property.

The Master found that the real value of the complainant's property, upon which under the Fourteenth Amendment a reasonable return should be allowed was $83,357,000. The Circuit Court found such value to be $59,831,435.

Upon this property as thus valued the Master found (Record, Vol. 1, p. 255) that

> " in view of the character of complainant's business and other features, which are to be taken into consideration, a just and reasonable rate of return upon the value of the investment in complainant's gas business is not less than the legal rate of six per cent. per annum."

2. The rate of return under the legislative rates.

The Master further found that the net earnings of the Company were $4,983.928.31 and that if the statutory rate of 80 cents per cubic thousand were enforced, the net earnings would be only $2,327,328.31, which, upon the Master's valuation of the property invested, would return 2.8%. This return the Master found was not " a fair or reasonable return on the value of the property."

The Circuit Court, while differing with the Master in some of the details of the calculation and while reducing the aggregate valuation of complainant's property more than $23,000,000, sustained the finding of the Master that the complainant was entitled, upon its invested property, to *at least* 6%, and that the enforcement of the statutory rate would result, even upon the reduced valuation of the Circuit Court, in a return to the complainant company of less than 6%. It held that the complainant Company would in the event of the enforcement of the rate receive about 5% upon its investment, and this the Circuit Court held to be legislatively unfa and unreasonable.

The Court said (Record, Vol. 1, p. 428):

> "Defendant's urge that under Milwaukee etc. Co. vs. Milwaukee, 87 Fed. Rep., 577, and Spring Valley Water Works vs. San Francisco, 124 Fed. Rep., 574, the rate of return should be fixed at 5 per cent. instead of 6 per cent. Beyond stating my belief that such is not the necessary result of these cases, nothing need be added to the discussion of this subject in the opinion already filed, wherein I believe the reasons for the conclusion arrived at are plainly set forth. It is, however, fair to add, as suggested by some counsel, that the 6 per cent. rate has been arrived at in part by taking judicial cognizance of local business conditions.
>
> It has not been asserted, and is not believed, that 6 per cent. is a profitable, satisfactory or attractive rate for the investment of capital in a gas business. In my opinion it is none of these things, *but it is the lowest rate which in the City of New York can be considered legislatively fair to those who are already engaged therein and cannot readily escape.*"

In its final decree, the Circuit Court found (Record, Vol. 1, p. 433):

> "The *lowest* rate of return, which can be considered legislatively fair, just or reasonable, upon the value of the property employed by Complainant in the business of manufacturing and supplying gas, is six per cent., at which conclusion the Court has arrived in part by taking judicial notice of local conditions in the City of New York; and under the two Acts and the order, copies of which are annexed to the bill

of complaint as Exhibits A, D and C, to wit, Chapter 736 of the Laws of 1905 of the State of New York, Chapter 125 of the Laws of 1906 of said State and the order of the Commission of Gas and Electricity of the State of New York, made on the 23rd day of February, 1906, and directed to the Complainant, the net annual income which the Complainant can earn upon the property employed in its gas business as aforesaid *is less than six per cent.*"

3. The Question of Pressure.

As to the question of pressure, the complainant contended that, owing to the variations of pressure, caused by differences in elevation and by atmospheric and barometric conditions in connection with the varying consumption by consumers, it is necessary at times to exceed a maximum pressure of two and a half inches at certain points; that some of the mains are at an altitude of 250 feet above tide level, and that a difference in altitude results in a difference of pressure (owing to the levity of gas), and it is therefore impossible to maintain the pressure required by the statute "at every point and at every time."

The Master found (Record, Vol. I., p. 250):

> "*Under the distributing system as now existing and in operation, it is not possible to fulfill the statutory requirements as to pressure.* It would, however, apparently be possible to remedy this condition, at least to some degree, by dividing the city into different districts according to the varying levels and by regulating the pressure in each by district governors. The efficacy and safety of such governors is not free from doubt and the evidence affords no sufficient basis for an estimate of the cost of their installation or the expense of making the necessary changes in the system of mains."

The Court sustained this finding as follows (Record, Vol. I., p. 420):

> "On this point I think the testimony amply supports the Master's finding, which is in substance that the pressure

required by law is not physically impossible, *if the entire system of gas distribution in this City be reconstructed.* It is a scientific fact, incapable of change even by legislation, that pressure in a gas pipe varies with altitude. By the expenditure of about $4,000,000 for construction of mains and valves *alone*, exclusive of any pumping stations or other apparatus, it might be possible to establish and maintain the pressure called for by these Acts. *Such a thing is commercially impossible, and even if it were done (of course at complainant's expense) it remains commercially impossible, since the other parts of the statutes cut off the surplus income out of which alone complainant could be expected to perform the work. A change by means of new capital would be impossible because, when made, it would not add a dollar to income.*"

4. The Effect of the Penalty Provisions.

As to the oppressive character of the penalties, the Master found (Record, Vol. I., p. 255) :

> " I find that the complainant has about 390,000 customers in the City of New York, to whom bills are sent monthly ; that the penalty imposed by Chapter 125 of the Laws of 1906 is $1,000 for each charge for gas in excess of eighty cents per thousand feet to customers other than the City of New York, and that the penalties accruing against complainant, if it charged more than eighty cents, would amount in the aggregate to about $390,000,000 per month, and over $4,680,000,000 per year, or fifty times as much as the value of the entire assets, employed in complainant's gas business, as found by me.
>
> " I also find that by Chapter 737 of the Laws of 1905 it is provided that where a price in excess of the statutory rate is demanded, that fact shall constitute a complete defense to an action for a recovery for the amount of gas delivered, and that no recovery shall be had therein.
>
> " I also find that the penalty of $1,000 for each offense, violating Chapter 736 of the Laws of 1905 and Chapter 125 of the Laws of 1906, which provide that the pressure of illuminating gas in any service main in the City of New York

> at any distance from the place of manufacture shall not be less than one inch nor more than two and one-half inches, would aggregate $5,000 per diem upon evidence recorded at each of the five city testing stations of only a single violation per diem of said laws, or at the rate of $1,800,000 per year, under complainant's distributing system as now existing and in operation, which amounts are liable to be increased by additional or more frequent tests.
>
> "*I also find that said penalties, so far as the evidence shows, are unexampled in extent and severity.*"

The Circuit Court thus sustained this finding (Record, fol. 1, p. 420):

> "The Master enters upon a computation of the effect of these penalty clauses in the case of a corporation having about 390,000 customers and concludes that 'said penalties so far as the evidence shows are unexampled in extent and severity'. This is but confirmation of the finding based on affidavits made when the preliminary injunction herein was granted. I think there is nothing to add to the statements of facts and law set forth at 146 Fed. Rep., p. 154. I am of the opinion that the penalty clauses in both the statutes are clearly obnoxious to the remarks of BREWER, J., *in Cotting vs. Kansas City Stock Yards Co.*, 183 U. S., 79."

The final decree of the Court will be found in the Record, Vol. 1, p. 430. Its ultimate findings are:

5. The Ultimate Findings of the Court.

> "IV. The pressure required by said two Acts and the order aforesaid is not physically impossible, if the entire system of gas distribution in the City of New York be reconstructed; *but compliance with such requirement is commercially impossible under the rates for gas prescribed by said two Acts and order.*
>
> "VI. The two said Acts and the order mentioned in the bill of complaint, viz: Chapter 736 of the Laws of 1905 of the State of New York, entitled, 'An Act in relation to the price of illuminating gas furnished or sold to The City of

> New York, and providing a penalty for violation'; Chapter 125 of the Laws of 1906 of said State, entitled, 'An Act in relation to illuminating gas in the City of New York and regulating the quality and pressure thereof and the price to consumers, other than said City, and providing a penalty for violation'; and an order of the Commission of Gas and Electricity of the State of New York, made on the 23rd day of February, 1906, and directed to the Consolidated Gas Company of New York, copies of which were annexed to the bill of complaint herein, are each of them hereby declared and adjudged to be illegal and void, because in contravention of the Fourteenth Amendment to the Constitution of the United States, in that they take Complainant's property without due process of law and without just compensation. and deny to Complainant the equal protection of the law."

Permanent injunctions were therefore decreed to restrain the defendants from enforcing or attempting to enforce these unconstitutional statutes, and from this decree the present appeals are taken.

II.

History of Gas Legislation.

Before discussing the questions of law, it may be important to review very briefly the history of the legislation, which, by successive stages, has threatened to destroy complainant's earning power.

The complainant company was organized in November, 1884, under the provisions of Chapter 367 of the Laws of 1884, by which authority was given (p. 17)

> " to form a single corporation, which might be capitalized and issue its shares to an amount not exceeding the fair aggregate value of the property, franchises and rights of the several companies thus to be consolidated."

It was formed by a consolidation of six existing gas companies. By an appraisal made during the summer of 1884, the tangible property of these six companies was found to aggregate $29,994,000, and the intangible property, consisting of franchises and rights, was then estimated at $7,781,000. Upon these assets, aggregating $37,775,000, the complainant company fixed its capital stock at $39,078,000, that being "the actual market value of the shares of the constituent companies at that time," leaving a balance of $1,303,000 to provide working capital. Stock to the aggregate of $37,775,000 was thereupon issued to the six constituent companies in purchase of the shares of the constituent companies.

Subsequently, by successive increases, the complainant's capital was with the expansion of its business increased by authority of law to $80,000,000, all of it representing either the retirement of existing obligations or new cash capital.

In July, 1904, authority was obtained for a further increase of the capital stock to $100,000,000. The additional shares have not been issued, but six per cent. debentures have been issued, which are convertible into stock of the company at par.

Hardly had the complainant been incorporated than the Senate of New York appointed in 1886 a Committee to investigate the "consolidation and capitalization" of the six constituent companies. The Committee held that the valuation given to the franchises of $7,780,000 was not more than their "fair aggregate value" and that "any attempt to upset such value would be futile." It also concluded :

> "The stock has been issued and circulated and by virtue of law ; about one-sixth of it is held by innocent holders and nothing but the clearest proof of fraud and violation of the law, by virtue of which it was issued, would justify any attempt to render such stock worthless."

The Committee further recommended that the Company should receive a return

> **"not exceeding 10% with a reserve fund of 10% of the capital in addition."**

These conclusions were apparently accepted by the Legislature and the public as sane and reasonable, and no attempt was made until 1897 to interfere with the complainant's business as to rates, which, responsive to public needs, rapidly grew in facilities until to-day it is probably the greatest gas plant in the world.

The Company had already anticipated the demand for cheaper gas, and, although at the time of its formation, the cost of gas was $2.25 per thousand cubic feet, it voluntarily reduced its charges for gas to $1.75 per thousand, and subsequently to $1.50 and later to $1.25, the latter being fixed as a maximum by Statutes of 1886 (Ch. 322) and 1890 (Ch. 566, § 70) in all Cities of over 800,000 inhabitants.

In 1897 the Legislature, by chapter 385 of the Laws of 1897, provided that gas should be sold " for the remainder of that year at $1.20, for 1898 at $1.15, for 1899 at $1.10, for 1900 at $1.05 and during each year thereafter at $1.00." It was thus evidently contemplated that no further reduction was possible and that $1 was an " irreducible minimum."

As these changes were not confiscatory (although with the increased cost of labor and materials the Company's earnings were substantially reduced), the complainant accepted the legislation and reduced its price accordingly.

On March 6, 1905 the Legislature appointed a joint Committee to investigate all of the gas and electric companies of the City of New York. Said Committee proceeded to investigate, with the fairness characteristic of such inquisitorial bodies and which strongly reminds the student of history of the Court of the Star Chamber. Although the Companies were virtually all on trial, the Committee *refused* to recognize their right to participate by counsel, and their right to defend themselves was confined " to such brief additional questioning or data as the *courtesy* of the Committee permitted."

Although it took the present experienced Master *nearly one year* to take the testimony and make his findings as to the complainant's gas lighting business alone, this Committee finished its investigation *of all the gas and electric lighting companies* of New York *in less than* *three weeks!* The complainant was not permitted to make any argument before the Committee at the conclusion of the investigation.

In its report the Committee made recommendations as to the price of gas and the maximum pressure, which were substantially embodied in Chapters 736 and 737 of the Laws of 1905.

The Gas Commission, created by the latter Act, next proceeded to investigate the complainant company, and on February 23, 1906, made an order directing the complainant to sell its gas to the City of New York for public lighting at 75 cents and to all individual consumers at 80 cents.

As this order has been adjudged void by the Court of Appeals of New York in the Saratoga gas case *(post*, p. 17), it seems unnecessary to show from that testimony how little real opportunity was given this complainant to safeguard its great property rights.

Under the Act, creating the Gas Commission, any Gas Company, aggrieved at the action of the Gas Commission in reducing the price of gas, was permitted an appeal to the Appellate Division of the Supreme Court.

This complainant appealed to the Appellate Division of the First Department to review said Order, and, although the Legislature had expressly provided for such a review, it promptly destroyed *as to the complainant* the right of appeal by passing on April 3, 1906, Chapter 125, which converted the appealable order of the Commission into an arbitrary legislative fiat. As this only applied to New York City, the complainant was thus denied an appeal, to which every other Gas Company in New York State was entitled as of right.

The Commission of Gas and Electricity did not long survive its action, for the Legislature repealed Chap. 737 of the Laws of 1905, and constituted by chapter 439 of the Laws of 1907, the Public Service Commission, with the proviso that the orders and decisions of the previous Commission should be unaffected by the repeal. These orders were, as previously stated, nullified when the Court of Appeals of the State of New York, on February 18, 1908, decided that so much of Chap. 737 of the Laws of 1905, as conferred power upon the Commission of Gas and Electricity to fix the maximum price of gas was unconstitutional in having denied to the Gas Companies the "equal protection of the laws." (See Trustees of Saratoga v. Saratoga Gas Co., 191 N. Y., 123).

The Court of Appeals said:

> "What we do hold is that a statute of the character of the one before us to be valid must confer equal rights on both parties, the consumers and the companies. It was said on the argument that the omission in the statute to give the companies an equal right with the consumers occurred through inadvertence. If so the inadvertence is to be regretted, for it constrains us to declare invalid the portion of the statute before us which we would otherwise uphold. It, however, is an objection that can be readily remedied by legislation giving all parties in interest an equal right to appeal to the commission for a readjustment of rates.
>
> The order of the Appellate Division should be reversed *and the order of the commission vacated* and set aside, with costs in both courts."

The only questions, therefore, which are longer open on this appeal are whether Chap. 736 of the Laws of 1905, which required us to sell gas to the City of New York at 75 cents per thousand feet, and Chap. 125 of the Laws of 1906, which required us to sell gas to other consumers at 80 cents per thousand feet, are constitutional.

Apart from the findings of fact of the Master and the Court, as to the unremunerative character of the return if these Statutes should be enforced, the complainant below has at all times contended and still contends that these statutes *are void upon their face and without respect to any evidence taken in the case.* So far as the penalties are concerned, the Circuit Court, both in the preliminary opinion of Judge LACOMBE and the final opinion of Judge HOUGH, sustained this contention. Unless the penalty provisions are separable, the Acts in question must be declared void, but if separable, there yet remain legal objections to the constitutionality of these Statutes *upon their face* upon which the Court below did not find it necessary to pass and which will be discussed later in this brief.

III.

The Assignments of Error.

Having thus briefly reviewed the facts of the case, we pass to a discussion of the legal questions involved in the many assignments of error, and here we are impressed, as the Court is likely to be impressed, by the unnecessary duplication of such assignments in the three appeals. In this case, the Public Service Commission has filed 17 assignments of error, the Attorney General 20 and the City of New York 122. Many of these are not assigned in conformity with Rule 21 of the Supreme Court and to all the assignments collectively may well be applied the criticism of the Supreme Court in Phillips Construction Co. v. Seymour, 91 U. S., 648, where this court said of only fifty-two assignments :

> "The object of the rule requiring an assignment of errors is to enable the court and opposing counsel to see on what points the plaintiff's counsel intend to ask a reversal of the judgment, and to limit the discussion to those points. *This practice of unlimited assignments is a perversion of the rule, defeating all its purposes, bewildering the counsel of the other side, and leaving the court to gather from a brief, often as prolix as the assignments of error, which of the latter are really relied on. We can only try to respond to such points made by counsel as seem to be material to the judgment, which we must render.*"

For us to treat the assignments of error *seriatim* would unduly expand this brief and would be more confusing than illuminating.

Many of them relate to questions of fact, which will be discussed in a separate brief. As to the questions of law, we prefer to follow the example of the Supreme Court in the case last cited and "respond to such points made by counsel as seem to be material to the judgment." We shall therefore submit and discuss affirmative points and we believe that these will fully answer all of the questions of law involved in the many assignments of error.

In this brief, therefore, we shall discuss the following points:

I. The complainant was without adequate remedy at law and a Court of equity had jurisdiction.

II. The Eleventh Amendment does not forbid the institution of this suit.

III. The provisions in the said statutes as to pressure are unconstitutional and invalidate both statutes.

IV. The provisions in the statute as to penalties are unconstitutional on their face and invalidate both statutes.

V. Both statutes are unduly discriminatory and therefore unconstitutional upon their face.

VI. The finding of the Circuit Court that the rates prescribed would yield this complainant less than a just and reasonable rate of return is a finding of fact and not a conclusion of law, and this Court therefore should give to such finding the controlling weight of a special verdict of a jury and not reverse such finding except for clear and indubitable error.

VII. Where the rate is prescribed by the Legislature and not by an administrative body, it is equally subject to judicial review as to its confiscatory character.

VIII. The Fourteenth Amendment invalidates a rate, if it yield less than just "remuneration," even though it yield some return.

IX. The rule that the fair return must not be less than the legal rate of interest is justified on reason and authority.

X. The basis of the calculation is the present value of the property and not its original cost.

XI. The costs were properly imposed upon the respondents, including one-half thereof upon William S. Jackson, as Attorney General of the State of New York.

XII. The Circuit Court was without power to make relief from an unconstitutional statute conditional upon the acceptance by complainant of a new rate to be fixed by the Court.

XIII. The Circuit Court properly assumed jurisdiction of the controversy.

PART II.

THE ARGUMENT ON THE LAW.

POINTS.

I.

The complainant was without adequate remedy at law and a Court of Equity had jurisdiction.

Until the Master decided against appellants upon the facts, the respondents below did not attempt to question the jurisdiction of the Court, except in a very formal and perfunctory way. They did not file any special appearance or motion to dismiss the bill for want of jurisdiction, but appeared generally and *joined issue with complainant on the merits.* They did incidentally raise the jurisdictional questions by their answers, but on the oral argument before Judge Lacombe as to whether a preliminary injunction should issue, the jurisdictional questions were not pressed and the respondents apparently preferred to take their chances before a Master of disproving the allegations of complainant's bill. It was not until the Master found in favor of the complainant that the jurisdiction of the Court was vigorously questioned.

Primarily that jurisdiction is assailed on the ground that the complainant had an adequate remedy at law and that therefore a Court of equity was without jurisdiction. The suggested adequate remedy at law is that the Company shall charge the price of gas which existed before the legislation in question was enacted and shall then await the suits by the State and the consumers and then asserts its Constitutional rights by way of defense. Both the bill and the proofs disclose the undisputed fact that the complainant has 390,000 customers in the City of New York, to whom it renders monthly bills, and that if it followed the remedy suggested by the respondents, it would then become the *imperative duty* of the Attorney General of New York and the District Attorney of

New York County, under Section 1962 of the Civil Code, to commence actions against the complainant for the sum of $1,000 *for each charge in excess of the statutory rate.* The institution of these suits for penalties is not discretionary with the officials named. Section 1962 of the Civil Code provides:

> " Where real or personal property has been forfeited, *or a penalty incurred* to the people of the State, or to an officer for their use, pursuant to a provision of law, the Attorney-general, or the District Attorney of the county in which the action is triable, **must** bring an action to recover the property or penalty in a court having jurisdiction thereof."

Had this course been followed, moreover, it is not unreasonable to assume that the consumers would have refused to pay in excess of the statutory rate and as monthly collections are essential to the Company's operations, it would have been under the necessity, either of bringing separate suits against 390,000 customers or of threatening to remove their meters unless they paid the price demanded by the Company, in which event many of the customers would in turn have instituted suits against the Company to enjoin it from such removal.

Thus interminable litigation, clogging the Courts, and burdening both the company, its customers and the public with wasteful court expenditures, would have resulted, with confusing and contradictory results, for in each case this complainant could have asserted and sought to prove anew its contention that the statutes were unconstitutional because of their oppressive operation. Moreover, no course would have been more prejudicial to the consumers than the one indicated. If the Company had threatened to take the meters out of the houses unless its bills were paid, many would have paid to avoid expensive litigation and immediate inconvenience. Thus, if the statutes are sustained as constitutional, many would have paid the excess without any protection as to repayment. Under the present suit, the whole controversy is litigated without expense to the consumer, whose interests are fully protected by the impounding in the registry of the Court of the disputed excess. WHAT COULD BE MORE EQUITABLE?

The Appellants, however, without questioning that the avoidance of a multiplicity of actions is a ground for equitable jurisdiction contend that in the case at bar the possible multiplicity of actions is more imaginary than real.

As to the suits for penalties, which, as previously stated, the Attorney General and District Attorney "*must*" bring to enforce the statutory rate, Appellants claim that although this Company should charge the excess rate in 390,000 separate instances, the State could only bring a single action to recover a single penalty of $1,000.

In support of this contention they cite

Jones v. Rochester Gas Co., 168 N. Y., 65, 68;
Cox v. Paul, 175 N. Y., 328;
Griffin v. Inter-Urban St. Ry. Co., 179 N. Y., 438; 180 N. Y., 538.

These cases do not sustain Appellant's contention. They arose under other Statutes with very different provisions.

Jones v. Rochester Gas Co., *supra,* was an action to recover penalties under Section 65 of the Transportation Corporation Law (L. 1890, Ch. 566), which provided that if upon application of the owner or occupant of a building to a Gas Company, for the use of gas or electricity,

> "the corporation shall refuse or neglect to supply gas or electric light, as required, such corporation shall forfeit and pay to the applicant the sum of ten dollars and the further sum of five dollars for every day thereafter during which such refusal or neglect shall continue."

The Court simply held that while the plaintiff was "entitled to recover *for the whole period up to the time when the defendant supplied the premises with gas*", yet the cause of action, being single, was indivisible and but one recovery therefor could be had.

In Cox v. Paul, 175 N. Y., 328, plaintiff sued under Section 53 of the Stock Corporation Law, providing for the inspection by the stockholder of the stock book of the corporation, under a penalty of $250 "upon each officer who refuses to exhibit the stock book, and also a like penalty on the corporation". Plaintiff brought three separate actions for the penalties against the Secretary, the President and the corporation.

The language of the statute is:

> "For any refusal to allow such book to be inspected, such corporation and the officer or agent so refusing shall each forfeit the sum of $250, to be recovered by the person to whom such refusal was made".

Under the Statute, the plaintiff recovered one penalty against the Secretary, two against the President and three against the corporation, on the ground that he had made *continuing* demands on several consecutive days. The Court held, however, that

> "there was really but *one* demand, *one* refusal, *one* occasion and *one* transaction, though continuous as to time."

The distinction between these cases and the case at bar is clearly shown in Griffin and Scudder v. Inter-Urban St. Ry. Co., 179 N. Y., 438, s. c. 180 N. Y,, 539, upon which the Appellants chiefly rely. In that case, two separate plaintiffs sued for penalties, under Section 104 of the Railroad Law, providing for free transfers on street railways, which *inter alia* provided that

> "*for every refusal* to comply with the requirements of this section, the corporation so refusing shall forfeit fifty dollars to the aggrieved party". * * *

The two plaintiffs in question sued for cumulative penalties, Griffin for four penalties of $50 each for four refusals, and Scudder for five such penalties. The Court of Appeals held:

> "It is no doubt the rule to be deduced from the decisions of this Court that no action for cumulative penalties is

> permissible unless it is clear from the language of the Act inflicting the penalty that it was the intention of the Legislature to provide a penalty *for each and every violation of the Statute*".

It will be noted that both plaintiffs recovered penalties. To make this decision applicable to the case at bar, the learned counsel for Appellants must logically contend that when Griffin recovered his penalty for a refusal of the Street Railway to give him a transfer, this operated as a waiver of the right of every other passenger in the City of New York, who was similarly refused a tranfer, to sue for a penalty. As both Griffin and Scudder were each allowed to recover penalties, it is obvious that the Court of Appeals did not intend, where penalties might accrue to several millions of passengers, that the recovery of one was a waiver of the rights of all the others.

Indeed the Court of Appeals expressly distinguished between the words "for *every* refusal" and the words "for *each* refusal", and cited Suydam v. Smith, 52 N. Y., 383, where the Statute contained the words "for each offense", and *cumulative penalties were permitted.*

On re-argument of the Griffin case, the Court said (180 N. Y., 539):

> "In Suydam v. Smith, 52 N. Y., 383, where the recovery of cumulative penalties was upheld, the statutory words imposing the penalty were "for each offense". We think that "every" is not always necessarily the synonym of "each".

Both Chap. 736 of the Laws of 1905 and Chap, 125 of the Laws of 1906 provide that any person or corporation violating any provision of this Act

> "shall forfeit the sum of $1,000 **for each offense** to the people of the State."

This language is unequivocal and admits of no other construction. It was obviously designed, not simply to prevent a uniform overcharge to all the customers, but to prevent an overcharge as against *any one of them* and, however drastic, it admits of but one interpretation and that is that the State could recover a penalty of $1,000 *on each occasion* that the Consolidated Gas Company charged *any* of its customers a sum in excess of the statutory rate. The Statute was punitive in character and designed to compel the Company to adhere to the provisions of the Act. It therefore borders on the ridiculous to assume that the Act meant that if the Consolidated Gas Company violated its provisions in 390,000 different instances, each of which constituted by the words of the Act a separate offense, the State could only recover one penalty of $1,000.

Moreover, decisions affecting penalties due *individuals* can hardly apply to a penal Statute, where *the State* seeks to enforce a measure of public policy. The provisions in the gas Statutes were undoubtedly passed to compel the Gas Companies, *as to each of their customers*, to comply with the legislative provisions as to price, pressure and illuminating power. The Consolidated Gas Company might violate these as to all of its 390,000 customers or as to any number thereof. Is it credible that the Legislature intended only one penalty of $1,000, irrespective of the number of violations of the Statutes, or did it not intend that "for each offense", as it plainly said, the Gas Company should pay the penalty?

The clear purpose of the State to make these penalties cumulative is further shown by Section 21 of the Gas Commission (Chap. 737 of the Laws of 1905), which provides:

> "*Defense in cases of excessive charges.* If it be alleged and established in an action brought in any court for the collection of any charge for gas or electricity, that a price has been demanded in excess of that fixed by the Commission or by statute in the municipality wherein the action arose, no recovery shall be had therein, but the fact that such excessive charges have been made shall be a complete defense to such action."

The purpose was thus shown to individuate each overcharge as to each of the Appellee's 390,000 customers. If, therefore, under the terms of these two Statutes, complainant charged more than 80 cents, it forfeited as to each of its customers the right to make any charge whatever, and it further forfeited to the State the sum of one thousand dollars. If, as contended by Mr. Whitney, this Company can violate the Acts 390,000 times and only pay one penalty of $1,000, such insignificant penalty would not in itself have any deterring effect and the effort of the Legislature to compel the Gas Companies to comply with its mandate by punitive penalties of a drastic character is too clear to be gainsaid. The legislation may be ridiculous in its severity. It however does not stand alone in this respect, as is readily seen by reference to the Stock Yards Case (183 U. S., 79), and *Ex parte* Young (209 U. S., 123), where similar drastic penalties were construed in accordance with the fair import of the language used by the Legislature.

Even were the penalties due the State non-cumulative, there still remain—unaffected by the question of cumulative penalties—the interminable litigation and possible stupendous losses, to which the Company would be subjected if it had to sue its 390,000 customers to recover a rate in excess of the statutory rate. It is true that Mr. Whitney in his brief for the Public Service Commission (p. 164) suggests that we could sue a few of our consumers as the representatives of all, but as there is no legal joinder of interest, such suits would only have concluded the actual defendants therein. Of necessity, each would have to be a separate suit, and if the Company failed in such a suit, under the very terms of the Act, it forfeited even the amount which the Statute allowed as the price of gas. If, on the contrary, it asserted its right to remove the meters unless it received the sum it claimed, interminable litigation would necessarily result, for the householder would not do without gas but would either assert the statutory charge by an injunction suit or submit to the Company's demands.

For this reason the jurisdiction of a Court of equity can be justified upon the broader ground of the "public interests". This was done in City of Cleveland v. Cleveland St. Ry. Co., 194 U. S., 531, in which Mr. Justice White said:

> "Respecting the contention that the case presented by the record was not within the jurisdiction of a court of equity, it suffices to say that, in view of the controversies, confusion, risks and multiplicity of suits which would necessarily have been occasioned by the resistance of the complainant to the enforcement of the ordinance, **and in view of the public interests and the vast number of people to be affected, the case was one within the jurisdiction of a court of equity.**"

We confess we did not think this question of equitable jurisdiction even debatable in view of the repeated and uniform rulings of this Court, until we find it again raised by counsel of unquestioned ability and sincerity.

We content ourselves with quoting the language of this Court in Smyth vs. Ames, 169 U. S., 466:

> "The transactions of a single week would expose any company questioning the validity of the statute to a vast number of suits by shippers, to say nothing of the heavy penalties named in the statute. *Only a court of equity is competent to meet such an emergency and determine, once for all, and without a multiplicity of suits, matters that affect not simply individuals, but the interests of the entire community as involved in the use of a public highway and in the administration of the affairs of the quasi-public corporation, by which such highway is maintained.*"

To this leading case may be added a reference to the most recent case in this Court (*Ex parte* Young, 209 U. S., 123, 153, decided March 23, 1908, where Mr. Justice PECKHAM, speaking for the Court, said:

> "It is further objected that there is a plain and adequate remedy at law open to the complainants and that a court of equity, therefore, has no jurisdiction in such case. It has been suggested that the proper way to test the constitutionality of the act is to disobey it, at least once, after which the company might obey the Act pending subsequent proceed-

> ings to test its validity. But in the event of a single violation the prosecutor might not avail himself of the opportunity to make the test, as obedience to the law was thereafter continued, and he might think it unnecessary to start an inquiry. If, however, he should do so while the company was thereafter obeying the law, several years might elapse before there was a final determination of the question, and if it should be determined that the law was invalid the property of the company would have been taken during that time without due process of law, and there would be no possibility of its recovery. * * * From all these considerations it is plain that this is not a proper suit for investigation by a jury. Suits for penalties, or indictment or other criminal proceedings for a violation of the act, would therefore furnish no reasonable or adequate opportunity for the presentation of a defense founded upon the assertion that the rates were too low and therefore the Act invalid. * * *
>
> All the objections to a remedy at law as being plainly inadequate are obviated by a suit in equity, making all, who are directly interested, parties to the suit and enjoining the enforcement of the Act until the decision of the Court upon the legal question."

Mr. Whitney's brief for the Public Service Commission (p. 162) suggests that as the Public Service Commission Act provides for an institution by that body of an action for mandamus to enforce the provisions of the legislation, the Complainant's true remedy was to await such action and defend therein. The answer to this argument is that the Public Service Commission Act was passed on June 6, 1907, and became operative July 1, 1907, while this bill was filed on May 1, 1906. Assuredly the jurisdiction of the Court cannot be ousted by an event which took place more than a year after the filing of the bill. It is true that the Gas and Electric Commission Act of 1905 also contained a provision for mandamus, but Mr. Whitney concedes (p. 4) that this only referred to rates prescribed by the Gas and Electric Commission and their power to prescribe any rate was annulled by the Court of Appeals in the Saratoga Gas Case (*supra*, p. 17). It is therefore true, as conceded by Mr. Whitney, that no power to try this case in a mandamus proceeding existed at the time the bill was filed, but even i it had, the Commission might never have invoked the remedy o mandamus and in the meantime the Gas Company, if it stood on it constitutional rights, was threatened not only with stupendous penalties in suits by the State but interminable litigation by its customers.

Mr. Whitney further suggests (p. 169) that jurisdiction is als lacking because there was

> " no allegation or proof indicating that the Attorney Genera or the District Attorney threatened to bring an unreasonabl number of penalty actions or that there was any reason t suppose that either of them would do so."

The answer to this is that under Section 1962 of the Civil Cod *(ante*, p. 22), the Attorney General and District Attorney have n discretion whatever but " MUST BRING " such an action where a penalty has been incurred.

II.

The Eleventh Amendment does not forbid th institution of this suit.

(a) The Eleventh Amendment does not apply to a suit against State official, who is seeking to enforce an unconstitutional statute.

In the Court below, counsel for Appellants contended that thi suit was one against the State within the meaning of the Elevent Amendment. This contention was made, however, before th Supreme Court, in *Ex parte* Young, 209 U. S., 123, definitely settl the question and closed it to further forensic controversy. W infer from the Appellant's briefs that they have now practicall abandoned the assignments of error which raised this question, and we content ourselves with simply quoting the language of this Court in Smyth vs. Ames, 169 U. S., 466:

> "But to prevent misapprehension, we add that within the meaning of the Eleventh Amendment of the Constitution the suits are not against the State, but against certain individuals charged with the administration of a State enactment which, it is alleged, cannot be enforced without violating the constitutional rights of the plaintiffs. **It is the settled doctrine of this Court that a suit against individuals for the purpose of preventing them, as officers of a State, from enforcing an unconstitutional enactment to the injury of the rights of the plaintiff, is not a suit against the State within the meaning of that amendment."**

Prout v. Starr, 188 U. S., 537.
Miss. Ry. Com. v. Illinois R. R. Co., 203 U. S., 335.
Ex parte Young, 209 U. S., 123.
Scully v. Bird, *id.*, 481.

In Fitts vs. McGhee (172 U. S., 516), upon which defendants relied in the Court below, there was nothing in the Act in controversy or any other law of Alabama, which made it the special duty of the defendants to enforce the statute, the penalty for which was, as stated, recoverable by the party overcharged as a penal debt due him. Mr. Justice HARLAN, speaking for the Court, said (p. 530):

> *"In the present case, as we have said, neither of the State officers named held any special relation to the particular statute alleged to be unconstitutional. They were not expressly directed to see to its enforcement."*

The case at bar is thus plainly distinguishable from Fitts v. McGhee, for in each of the Acts, which we claim to be unconstitutional, penalties are provided, for which, under Section 1962 of the Code the Attorney General and District Attorney "**must**" **bring civil actions** (see *ante*, p. 22).

In *Ex parte* Young, this Court, distinguishing Fitts vs. McGhee, said :

> "It is objected, however, that *Fitts v. McGhee*, 172 U. S., 516, has somewhat limited this principle, and that, upon the authority of that case, it must be held that the State was a party to the suit in the United States Circuit Court, and the bill should have been dismissed as to the Attorney General on that ground.
>
> We do not think such contention is well founded. The doctrine of Smyth v. Ames was neither overruled nor doubted in the Fitts case. In that case the Alabama legislature, by the act of 1895, fixed the tolls to be charged for crossing the bridge. The penalties for disobeying that Act, by demanding and receiving higher tolls, were to be collected by the persons paying them. *No officer of the State had any official connection with the recovery of such penalties.* * * * As no State officer who was made a party bore any close official connection with the Act fixing the tolls, the making of such officer a party defendant was a simple effort to test the constitutionality of such Act in that way, and there is no principle upon which it could be done. * * *
>
> In making an officer of the State a party defendant in a suit to enjoin the enforcement of an Act alleged to be unconstitutional it is plain that such officer must have some connection with the enforcement of the Act, or else it is merely making him a party as a representative of the State, and thereby attempting to make the State a party.
>
> *It has not, however, been held that it was necessary that such duty should be declared in the same Act which is to be enforced.* In some cases, it is true, the duty of enforcement has been so imposed. (154 U. S. 362, 366, section 19 of the Act) but that may possibly make the duty more clear ; if it otherwise exist it is equally efficacious. The fact that the State officer by virtue of his office has some connection with the enforcement of the Act is the important and material fact, and whether it arises out of the general law, or is specially created by the Act itself is not material so long as it exists."

It is obvious that the case at bar is on all fours with the decision f *Ex parte* Young and the preceding cases, and is plainly disinguishable from Fitts v. McGhee.

(b) Even if this suit be, within the meaning of the Eleventh Amendment, against the State, it has waived its immunity.

The Attorney-General did not appear specially to question the urisdiction of the court; on the contrary, he joined with the other lefendants as "Attorney-General of the State of New York" in iling an answer, which took issue with the complainant on the nerits and only incidentally suggested, not by way of demurrer, hat the suit was in effect a suit against the State of New York.

That such an appearance is in effect a waiver was expressly ruled in the very recent case of Gunter, Attorney-General v. Atlantic Coast Line (decided January 15, 1906), 200 U. S. 273, in which it appeared that the State of South Carolina passed a law for the assessment and taxation of property, and under it the C. & D. Railroad was assessed in the counties of Darlington and Chesterfield. It became the duty of the respective treasurers of those counties to collect *the state* and county taxes. A stockholder of the road filed a bill to enjoin the railroad and the treasurers of the two counties from collecting both taxes. An answer was filed for the two County Treasurers, signed by "the Attorney-General of the State of South Carolina for defendants." The Supreme Court held

> "*although a State may not be sued without its consent, such immunity is a privilege which may be waived, and hence where a State voluntarily becomes a party to a cause, and submits its rights for judicial determination, it will be bound thereby and cannot escape the results of its own voluntary act by invoking the prohibitions of the Eleventh Amendment.*" (Citing Clark v. Bernard, 108 U. S., 436, 447).

In Gunter v. Atlantic Coast Line, as in the case at bar, the State was not a party *eo nomine*, but as the proceeding was to enjoin the collection of State taxes, the appearance of the Attorney-

General, as "Attorney-general of the State," if in effect an appearance for the State, was a waiver of its immunity. Similarly, if a suit against the Attorney-General to restrain him from enforcing an unconstitutional statute is a suit against the State, *which we do not concede*, yet his general appearance "as Attorney-General" in that case, and his taking issue with the complainant upon the merits of the case, is a waiver by him of any possible immunity, which the State enjoys under the Eleventh Amendment. If it had a right to assert immunity, it was necessary to assert it in accordance with equity procedure, which was to appear specially and moved to dismiss the suit, before great expense had occurred in its prosecution. Instead, the Attorney-General joins issue with the complainant on the merits of the cause, participates in all the proceedings before the Master, and it is too late for him now to assert, after the Master has found the facts against him, that the State can shield itself behind the Eleventh Amendment.

III.

The provisions of said statutes as to pressure are unconstitutional and invalidate both statutes.

Having discussed the jurisdiction of the Court, we now pass to the first objection to the constitutionality of the legislation in question.

Each of the Statutes, in specifying the price and candle power of the gas to be manufactured and delivered to the consumer, further require as an essential part of the same "legal standard" that it be delivered to the consumer under a certain pressure. Such pressure is described in each Statute by the following provision:

> "The pressure of illuminating gas in any service main in the said city, at any distance from the place of manufacture, shall not be less than one inch nor more than two inches and a half."

It will be noted that in the Act of 1906 (the eighty cent statute), the provisions as to candle-power and pressure are both contained in second section, fully quoted on page 5 of this brief.

Each of these Acts became operative the first day of the month next succeeding its passage, a period in each case of about twenty-seven days.

The testimony before the Master disclosed two views as to the practicability of complying with this pressure provision.

All the witnesses for the complainant and some of those for the defendant agreed that it was a physical impossibility to comply with these provisions, owing not merely to natural laws which could not be overcome by any appliances, but also to the fact that the amount of pressure was somewhat dependent upon the action of the consumers themselves. One of the defendants' experts, however, testified that compliance with these provisions was possible, provided that the "entire system of gas distribution in this city be reconstructed", and new and larger mains be laid with new pumping stations and other special apparatus.

Both the Master and the Circuit Court accepted the theory of defendants' experts that compliance was physically possible, if radical changes were made in the method of distribution. The complainant had 800 miles of mains which were valued on the basis of cost of duplication at over $12,000,000. The Master concluded that to install the new pressure mains would involve a cost

> "in the neighborhood of $4,000,000 for main and valve construction alone, in addition to which would be required pumping stations and apparatus, the annual charges and operating expenses in connection with which Mr. Addicks testified would amount to several cents per thousand feet of gas and which would involve a corresponding increase in operating cost or *proper selling price of gas.*"

The Circuit Court in its opinion fully sustained this conclusion. It said:

> "On this point I think the testimony amply supports the Master's finding, which is in substance that the pressure re-

> quired by law is not physically impossible if the entire system of gas distribution in this City be reconstructed. It is a scientific fact incapable of change even by legislation, that pressure in a gas pipe varies with altitude. By the expenditure of about $4,000,000 for construction of mains and valves alone, exclusive of any pumping stations or other apparatus, it might be possible to establish and maintain the pressure called for by these Acts. Such a thing is commercially impossible, and even if it were done (of course at complainant's expense) it remains commercially impossible since the other parts of the statutes cut off the surplus income out of which alone complainant could be expected to perform the work. A change by means of new capital would be impossible because when made it would not add a dollar to income."

In its final decree the Circuit Court said (Record, Vol. I., p. 433):

> "IV. The pressure required by said two Acts and the order aforesaid is not physically impossible if the **entire system** of gas distribution in the City of New York **be reconstructed; but compliance with such requirement is commercially impossible under the rates for gas prescribed by said two Acts and order."**

The testimony upon this question of pressure is fully reviewed in Mr. Matthewson's separate brief on the facts. It suffices for the present discussion to say that four conclusions from the testimony were undisputed and indeed indisputable.

1. Assuming that compliance with the pressure provisions was practicable at any time or by any method, it would involve the expenditure of at least $4,000,000, a substantial increase in operating charges and a reconstruction of the Company's distributing system throughout the city.

2. That such compliance was physically impossible before the Act became operative and the penalties for non-compliance accrued.

3. That such increased fixed charges and operating expenses

could not be incurred under the Eighty Cent gas rate, and leave a fair return.

4. The penalties for failure to comply

> " would aggregate $5,000 per diem upon evidence recorded at each of the five city testing stations, of only a single violation per diem of said laws, or at the rate of $1,800,000 per year under complainant's distributing system as now existing and in operation which amounts are liable to be increased by additional or more frequent tests". (See Findings of the Master, *ante*, pp. 11 and 12).

In the Court below no attempt was made by counsel to dispute these conclusions of the Master and the Circuit Court. The unconstitutionality of the pressure provisions was virtually conceded. In the present briefs, only a perfunctory attempt is made to question these findings, and the Appellants rely upon the contention that, if unconstitutional, the pressure provisions are severable from the maximum rate provision.

Mr. Whitney, it is true, attempts to evade the whole question by a suggestion (p. 150) that he is " informed " that " the State " (which he does not represent) " never relied upon the testimony of Edgerton ", (who testified as to the practicability of larger mains for the purpose indicated,) but upon the testimony of Mr. Bradley, the Chief Engineer of the Consolidated Gas Company. Mr. Bradley, however, testified that compliance with the pressure provisions by any method was a physical and scientific impossibility. (Vol. I., p. 549 of the Record).

The only question, therefore, open to discussion is whether this pressure provision is so severable from the maximum rate provision that the Court can eliminate it as invalid, without nullifying the maximum rate provision.

To show how interwoven the subject of price, quality and pressure are, we first call attention to the statutes themselves, the pertinent provisions of which we have already quoted (*supra*, pp. 3-5). Each statute presents a *single* "standard" of gas, whose three interdependent elements are price, candle power and pressure.

It is obvious that the price, the candle power and the pressure were interdependent. As to candle power, this could not possibly be denied, for the higher the candle power necessarily the greater the cost, and the Legislature necessarily in fixing the maximum price of gas inseparably connected with it the quality of gas that was to be delivered. Equally interwoven with the price of gas and candle power was the requirement as to pressure, about which latter there had been some public complaint. The reports of the legislative committees clearly show, and the statutes themselves corroborate, that the Legislature was at least as much concerned in compelling the Company to observe a certain minimum and maximum pressure in its mains as it was to furnish gas of a certain candle power, and it presumably but erroneously believed that both could be furnished without injustice to the complainant at the maximum price which it prescribed. The brief for the Public Service Commission admits (p. 281)

> " That the pressure provision was intended for an additional guarantee to the consumer in order that the candle power provision should not be evaded by increasing the pressure."

It was therefore an integral part of the candle power provision and of the *standard* of gas which the Company should sell for 80 cents.

In fixing the price of gas of a special quality and pressure the Legislature must have considered, as integral factors in the problem, the burdens of expense thereby imposed upon the Company.

It now appears that even if 80 cent gas were otherwise compensatory, it would be confiscatory, if complainant has the added burdens of new fixed charges and increased operating expenses, necessary to comply with the pressure provisions. As the Circuit Court pointed out in its opinion, the great additional expenditure, due to a radical reconstruction of the mains and pumping stations, would yield no additional income, as no additional charge for gas to compensate for vastly increased fixed charges is permissible under the present Statutes.

While the Courts may hold portions of a Statute valid, while invalidating others, the portions must be clearly separable, and upon the face of the Statute it must be reasonably clear that the legislature would have separately enacted the valid portions. The burden is upon him, who seeks to disentangle the valid from the invalid portion of an unconstitutional statute, to satisfy the Court that the Legislature would have enacted the valid portion as a separate law. The presumption is otherwise. (See cases cited and quoted, *post*, pp. 43–45.)

We fail to see how this Court can hold that the Legislature would have prescribed the maximum rate, even though the pressure provisions were eliminated. It would be as reasonable to claim that if gas of the required candle power could not be furnished at 80 c., that such standard of candle power would be treated as separable and the 80 c. rate held valid, without any legislative conditions as to the quality of the gas to be sold. The Gas Commission showed how interwoven candle power was with price by allowing an increase of 1.81 to the operating cost as compensation for raising the candle power from 20 to 22. (Whitney's Brief, p. 180.) The Court below has found that gas of twenty-two candle power cannot be sold at 80 cents and yield a "fair return." There is and can be no contention that the Court could emasculate from the Act the provision as to candle power to save the maximum charge. *If it cannot do so as to candle power, how can it do so as to pressure, which also was an element of the quality of the gas to be delivered to the consumer.*

If the Legislature should provide that hereafter the Consolidated Gas Company should furnish acetylene gas to the public at a given price and to do this it was necessary to reconstruct its whole plant, the Court, if it reached the conclusion that such an Act was confiscatory, would be unable to determine whether the Legislature would have preferred to drop the provision requiring the acetylene and retain the maximum price or whether it would have preferred to drop the maximum price and insist upon the acetylene. Of necessity the entire Statute would fall. Similarly, if the Legislature should provide that a railroad should run trains from given points, at not less than fifty miles an hour and that the maximum charge for such express service should be so much per mile, if it were shown that such a speed requirement imposed a burden that was confiscatory, the Judiciary could not determine whether the Legislature would drop the minimum rate of speed or the maximum price.

We earnestly submit that it is equally true that as the Legislature has required by Section 2 of the Act of 1906 (*supra*, p. 4) the complainant to sell and deliver gas of a certain candle power and with a certain pressure at the price specified in Section 1, and as it is substantially conceded that this is at the present time a physical impossibility and that it would be at any time a commercial impossibility with the maximum price prescribed for the sale of gas, this Court cannot safely determine whether the Legislature would have retained the pressure provision and to that end increased the maximum price of gas, to make compliance possible, or whether it would have retained the maximum price of gas and eliminated the inconsistent pressure provisions. Even if the Court could separate the question of price from pressure, yet how can it separate from Section 2 of the Act of 1906 the provisions as to candle power and pressure? *Non constat*, that the Legislature would have preferred to reduce the candle power (as in Boston) to 16 and have retained the pressure provisions. The only safe course for the Judiciary is to leave to the Legislature the task of reconstructing its unconstitutional legislation and determining for itself which of several incompatible provisions it will re-enact as the public policy of the State.

The legislative history of the statutes clearly shows the interdependence of the provisions as to pressure and price and the importance attached by the Legislature to the question of pressure.

The relation of pressure to the cost of gas had been the subject of investigation as early as 1885, and the legislative investigating Committee of that year investigated the subject, as did the later Legislative Committee of 1905, whose recommendations were embodied in the legislation now under attack. Its report clearly shows that the Committee of 1905 believed that the price of gas was necessarily interwoven with the question of candle power and pressure in the mains, by each of which it was believed that the cost to the consumer would be increased or lessened. The Committee recommended as follows:

> "From the evidence which has been presented we are satisfied that a price of seventy-five cents per thousand cubic feet will be fair to the consumer, and will afford to the Companies *after allowing the proper costs for manufacture and distribution taking into consideration all the elements of such cost,* a reasonable return upon their capital investment in their gas making business. This applies to the Borough of Manhattan, the Borough of Brooklyn and a large part of the Borough of the Bronx. In our opinion, it would not be just to make such a rate applicable to the more sparsely settled sections of the City of New York, in, which owing to local conditions, the cost of manufacture and distribution is necessarily higher.
>
> *The investigation has shown clearly that by increasing the pressure a quality of gas poorer than the standard required by law may be made to furnish a required degree of illumination, thus entailing an increased consumption at the increased cost to the consumer. In order that the consumer may benefit by the reduction of the price of gas, it is important that the degree of pressure should be effectively regulated.* The evidence has also shown that there is at present no official inspection in any borough of the city except Manhattan and that the inspection in the last named borough is too infrequent to be adequate. Provision should be made for a system of inspection insuring a supply of pure gas in accordance *with the legal standard* and its accurate measurement at the meter. This inspection should be made by officials of the city at the City's expense."

As a result of and *pursuant to these recommendations* the Acts of 1905 and 1906, whose constitutionality is now assailed, were passed by the Legislature. When chap. 737 of the Laws of 1905 was passed, which created the Gas Commission and which was intended to legislate comprehensively for the gas situation, it gave the Commission, *inter alia*, the following power :

> " 3. Fix the standard of illuminating power and purity of gas manufactured and sold by persons, corporations and municipalities for lighting purposes, not less than that prescribed by law, and require the gas so manufactured and sold to equal the standard established by law or by it, *and establish a standard of pressure at which gas shall be delivered*, where such standard is not otherwise prescribed by law."

It is clear, therefore, why the Legislature were so careful in prescribing the price of gas also to prescribe *as integral parts of the same " legal standard,"* the candle power and the minimum and maximum pressure.

For the purposes of this argument, it is, however, not important whether the Stevens Committee or the Legislature regarded the two factors as interdependent with the price of gas, *if in point of fact they were thus interdependent*, and it is the undisputed evidence in this case that compliance with the Statute will involve the expenditure of many millions of dollars, which, as found by the Court, is rendered impossible by the very " *rates for gas prescribed by said two Acts and Order* ". The Legislature therefore has, under the findings of the Court, required the Company to do simultaneously two things which it is impossible to do concurrently.

The Company is directed, simultaneously, to reduce its revenues by a stupendous sum and increase its fixed charges to a very considerable extent. This the Court finds to be, with the statutory rates now prescribed, " commercially impossible ", which fairly implies that to observe the Statute would not merely

confiscate the earning power of the corporation but involve it in almost immediate bankruptcy and financial ruin.

This Court is under no obligation to determine for the Legislature which of two impossible alternatives is to be eliminated. *Non constat* that the Legislature may not prefer to retain the old maximum price of $1 to enable the complainant to reconstruct its plant; *non constat* that it may not prefer to repeal the provisions as to pressure in order that the price of gas may be reduced. How can this Court, without embarking upon a sea of conjecture, without chart, compass or rudder, determine what the Legislature will do in view of conditions which it is apparent it did not forsee?

We fully accept the decisions cited by the learned counsel for the Appellants, but they do not sustain the severability of the provisions in question. They rely principally upon the following decisions of this Court:

Pollock v. Loan Co., 158 U. S., 601;
Employee's Liability Cases, 207 U. S., 463, 501;
Field v. Clark, 143 U. S., 649;
McPherson v. Blacker, 146 U. S., 1;
Baldwin v. Franks, 120 U. S., 685;
Huntington v. Worthing, *id.*, 97;
Allen v. Louisiana, 103 U. S., 80.

In Pollock vs. Farmers Loan Co., 158 U. S., 601, the Court, quoting with approval Poindexter vs. Greenhow, 114 U. S. 270, said:

> " 'It is undoubtedly true that there may be cases where one part of a statute may be enforced as constitutional, and another be declared inoperative and void, because unconstitutional; **but these are cases where the parts are so distinctly separable that each can stand alone, and where the Court is able to see, and to declare, that the intention of the Legislature was that the part pronounced valid should be enforceable, even though the other part should fail.** To hold otherwise would be to substitute for the law intended by the Legislature one they may never have been willing by itself to enact.' "

In the more recent Employers' Liability Cases, 207 U. S., 463, 501 (1908), where a Statute provided a rule of liability in case of negligence for all carriers who are engaged in interstate commerce, but did not confine its operation to accidents happening in the course of interstate commerce, the Court thus stated the rule :

> " Moreover, even in a case where legal provisions may be severed from those which are illegal, in order to save **the rule applies only where it is plain that Congress would have enacted the legislation with the unconstitutional provisions eliminated.** All these principles are so clearly settled as not to be open to controversy."

In Field v. Clark, *supra*, the Court said :

> " It is an elementary principle that the same Statute may be in part constitutional and in part unconstitutional *and that if the parts are wholly independent of each other*, that which is constitutional may stand and that which is unconstitutional will be rejected."

And again :

> " It is only when different clauses of an Act are so dependent on each other that it is evident the Legislature would not have enacted one of them without the other—*as when the two things provided are necessary parts of one system*—that the whole Act will fall with the invalidity of one clause. When there is no such connection and independency, the Act will stand though different parts of it are rejected."

As it has been shown that the Legislature had in mind that the question of price to the consumer was interwoven with the question of pressure and candle power, how can it be said, in the language of Field v. Clark, that " *the parts are wholly independent of each other*," and is it not clear that pressure, candle power and price are " *necessary parts of one system*," by which the reasonable cost of gas is determined ?

In Allen v. Louisiana, *supra*, this Court quoted with approval the following language of Chief Justice SHAW, in Warren v. Mayor, 2 Gray (Mass.), 84:

The severability of different portions of a Statute is a question of construction, and as in this case a New York Statute is being construed, the New York decisions should be controlling. These decisions strongly support our contention that the pressure provision is not severable from the body of the Statute. See

People v. Porter, 90 N. Y., 68;
Trustees Saratoga Springs v. Gas Co., 191 N. Y., 123.

In the last named case, the full power of the Gas Commission to fix maximum rates for gas was nullified because the Legislature had made the rate permanent as to the Gas Company and subject to revision at the instance of the consumer (*ante*, p. 17). Although the permanence of the rate was a mere incident to the general scheme of rate regulation, and could have been eliminated without destroying the machinery of such regulation, yet the Court of Appeals declined to speculate as to whether the Legislature would have retained any power to fix rates by a Gas Commission, if it had known that it could not constitutionally make the rate permanent as to one class and not permanent as to the other.

attempts to answer our contention by the following remarkable suggestion:

> "When complainant has made the investment necessary to enable it to comply with the pressure regulation and has thereby devoted additional property of definite value to the

> public use, and it should find that the rate prescribed by the Statute did not yield it a fair return on its total investment, then, under the 'changed circumstances' brought about by its new investment, it might make a new application for relief.'

To this objection there are two obvious replies.

The first is that the Legislature has not given the complainant time to reconstruct its entire distributing system and then comply with the pressure provisions. It required that there should be compliance with each of the Acts on the first of the month following its passage, and this gave the complainant twenty-seven days to reconstruct its entire system of mains and to introduce other complicated and expensive machinery. Had this mandatory provision been unaccompanied by drastic penalties, its immediate enforcement would not have been serious, but, as previously stated *(supra,* pp. 11–12), the Act provides that each time, obedient to the laws of gravitation, the complainant exceeds the pressure, it becomes indebted to the State in the sum of $1,000 and, as found by the Master and not disputed by the Appellants, this would mean, if the Company only exceeded the maximum one time each day, a daily fine of $5,000 and an annual loss of $1,800,000. Can it be said, therefore, that the complainant is *premature* in asking relief, when the Legislature has been premature in punishing the complainant for its inability to do that which is, for the time being and for a long time to come impossible?

Even if the complainant has an abstract legal right to apply for relief, after it has made the necessary expenditure to reconstruct its entire system, yet the legislation has made it impossible to make such expenditure. The present rate for gas is a legislative rate without any limitation of time. It yields a return which, after paying expenses, returns less than 6% upon the value of the property. To destroy its present distributing system and build a new one, it would be necessary to incur new debts or increase its capital stock. It can do neither without he consent of the Public Service Commission, and if it obtained such consent, it would, under the circumstances, be unable to find the means to meet the additional fixed charges thereby occasioned without destroying entirely the small return. As its income cannot grow any larger under the legislative rates, how can it increase its expenses, without destroying the little that remains, for when reconstructed, the Company would receive no additional income whatever from its great additional expenditure. The Company is thus invited by the Attorney General to destroy the little earning power it still has, and then "apply for relief" either to the Legislature or the Courts. It may be safely said that while the Legislature progressively reduces maximum charges for gas, it never increases them, and the abstract right of an appeal to it "for relief" would be too hazardous to finance the new undertaking. The Court was therefore right in finding that such a suggestion was commercially impossible *and made so by the very maximum charges now under consideration.* Maximum rate charges are never retroactive. The Company is therefore under no obligation to bankrupt itself first and then ask either the Legislature or the Court to make good the loss.

The further and complete answer to the Attorney General's suggestion, however, is that the mandate of the Legislature, fortified by drastic penalties, is not that the complainant shall at some future time and under a different scale of rates reconstruct its entire distributing system, but that it shall *with the rates now prescribed and with the system as now constructed immediately to do that which, by reason of the system of distribution and the maximum rates of gas permitted the Company, is both physically and commercially an impossibility.*

While, for purposes of argument, we have assumed that compliance with the pressure provisions was abstractly a physical possibility, yet the Appellee's contention was and is that compliance with these provisions, now or at any future time, with or without the expenditure of many millions of dollars, is by reason of natural laws, which cannot be wholly overcome, a physical impossibility.

IV.

The provisions of said acts as to penalties are unconstitutional on their face and invalidate both statutes.

No serious attempt was made in the Court below, and we believe none will be made in this Court, to justify these penalties, which the Master, with ample justification found to be " UNEXAMPLED IN EXTENT AND SEVERITY." The effect upon this Company of an enforcement of these penalties, if it charges in excess of the statutory rates, is clearly stated in the supplemental findings of the Master, and has been already quoted (*supra*, pp. 10, 11).

In Cotting v. Stock Yards Co., 183 U. S., 79, Mr. Justice BREWER expressed his conviction that such penalties operate as a denial of the "equal protection of the laws" and what was merely *dictum* in that case became the SETTLED DOCTRINE of this Court in *Ex parte* Young, 209 U. S., 123. In that case, Mr. Justice PECKHAM said:

> " *A law which indirectly accomplishes a like result by imposing such conditions upon the right to appeal for judicial relief as works an abandonment of the right rather than face the conditions upon which it is offered or may be obtained, is also unconstitutional. It may therefore be said that when the penalties for disobedience are by fines so enormous and imprisonment so severe as to intimidate the company and its officers from resorting to the courts to test the validity of the legislation, the result is the same as if the law in terms prohibited the company from seeking judicial construction of laws which deeply affect its rights.*
>
> It is urged that there is no principle upon which to base the claim that a person is entitled to disobey a statute at least once, for the purpose of testing its validity without subjecting himself to the penalties for disobedience provided by the statute in case it is valid. This is not an accurate statement of the case. Ordinarily a law creating offenses in the nature of misdemeanors or felonies relates to a subject over which the jurisdiction of the legislature is complete in any event.

> In the case, however, of the establishment of certain rates without any hearing, the validity of such rates necessarily depends upon whether they are high enough to permit at least some return upon the investment (how much it is not now necessary to state), and an inquiry as to that fact is a proper subject of judicial investigation. If it turns out that the rates are too low for that purpose, then they are illegal. Now, to impose upon a party interested the burden of obtaining a judicial decision of such a question (no prior hearing having ever been given) only upon the condition that if unsuccessful he must suffer imprisonment and pay fines as provided in these acts, is, in effect, to close up all approaches to the courts, and thus prevent any hearing upon the question whether the rates as provided by the acts are not too low, and therefore invalid. The distinction is obvious between a case where the validity of the act depends upon the existence of a fact which can be determined only after investigation of a very complicated and technical character, and the ordinary case of a statute upon a subject requiring no such investigation and over which the jurisdiction of the legislature is complete in any event."

In the Court below, the Appellants attempted to sustain the constitutionality of these penalties upon two grounds:

1. That they were not cumulative.
2. That they were not more severe than penalties provided in other Statutes.

We have already discussed the first ground and shown that by the plain letter of the Statutes and under the accepted decisions of the Courts of New York these penalties are unquestionably cumulative. No other conclusion is reasonably possible (*supra*, pp. 23–27).

As to the second objection, we are referred to instances of higher penalties for acts, which in their very nature could be committed on comparatively few occasions. Thus we are referred to the penalty for usurious interest, the failure of an insurance company to file a report, the failure of a tax-payer to pay his taxes, the failure of a corporation to submit its stock books to the inspection of stockholders, and similar cases. It is plain that in those cases the aggregate of the penalties could only be small; whereas, in the very nature of maximum rates, as applied to public utility corporations, the penalties for charging in excess of the maximum rates must of necessity be oppressive in amount and must inevitably deter the corporation from asserting its constitutional rights unless it can have the Federal Courts as a "city of refuge" and the Fourteenth Amendment as a rock of defense.

The only question which seems to us open to discussion is as to the effect of such oppressive penalties upon the Statute, whose provisions they seek to enforce. We admit that the severability of the penalty provisions from the maximum rate is more debatable than the question already discussed of the interdependence of the maximum pressure provisions and prices; nevertheless, we believe it to be a logical conclusion that where a Legislature enacts a scale of rates and as to such rates denies the corporation equal access to the Courts by holding stupendous penalties over it *in terrorem*, the Statute *as a whole* denies the equal protection of the laws and not merely the penalty provisions. We so understand this Court in *Ex parte* Young, *supra*. Referring to the italicized portion of Mr. Justice PECKHAM's opinion, which we have already quoted (*supra*, (p. 48), it would seem that the Court spoke of the law as a whole and not merely of the penalty provisions, although in a subsequent part of the opinion this conclusion is not so clear.

In previous cases, the Court had already held that where maximum rates were provided and no opportunity was granted for a judicial review of the reasonableness of those rates, the law as a whole was unconstitutional.

Thus, in Chicago Ry. Co. vs. Minnesota, 134 U. S., 418, the Legislature of Minnesota passed a law which provided that for certain railroad rates, which should be "final and conclusive as to what are equal and reasonable charges." The State Court granted a writ of mandamus against the appellant railroad to compel it to comply with the law, and the railroad company set up as its answer that the rates were unreasonable. Testimony to support this defense was excluded by the State Court, and on appeal the Supreme Court held that the mandamus granted by the Court below should be dismissed " if the Court should

We repeat our contention (*ante*, p. 17) that in determining the severability of the penalty provisions, the decisions of the New York Courts will be controlling upon this Court, and these decisions leave no doubt that the New York Courts would hold that the penalty provisions were not separable from the maximum rate provisions (See cases cited, *ante*, p. 17).

In People v. Porter, 90 N. Y., 68, the Act created inferior magistrates and also contained provisions which provided penalties as to punishment for crime. It was held that the invalidity of the provisions for the appointment of the inferior magistrates invalidated the penalty provisions. Said Chief Justice ANDREWS:

> " We cannot assume under these circumstances that the Legislature would have passed the Act except as a whole, and if the part relating to the appointment and jurisdiction of the police justices are invalid, the whole Act fails."

See Saratoga Gas Case (*ante*, p. 17).

the sale of gas in New York City, was $1.00 per thousand, and this rate had been acquiesced in by the gas companies (including the complainant). Thereupon the Legislature, by the Act of 1905, above referred to, provided that all gas sold by the complainant and other New York companies to the City of New York should be at a rate not greater than 75 cents per thousand. Since the passage of that Act it has provided, by order of the Gas Commission, passed in pursuance of the Act of Chapter 737 of the Laws of 1905, and by the direct mandate of Chapter 125 of the Laws of 1906, that the price of gas to the individual consumer shall be 80 cents per thousand. Whether, therefore, consideration is had to the conditions that preceded the passage of Chapter 737 of the Laws of 1905, or those that succeeded, it appears that by law the complainant is compelled to sell its gas to the city of New York at a less rate than it is permitted to charge to other consumers, notwithstanding that the ordinary rate is presumptively reasonable. (See Lake Shore R. R. Co. vs. Smith, 173 U. S., 684, quoted *post*, p. 53).

It has, as every corporation and individual, the liberty of contract guaranteed by the Fourteenth Amendment (Lochner v. N. Y., 198 U. S., 53 ; Allgeyer v. Louisiana, 165 U. S., 589). The State, therefore, has no general and *unlimited* right to interfere between the producer and the consumer as to the price upon which they would otherwise mutually agree, and while, as to public utility corporations the supervisory power of the State, subject to the guarantees of the Constitution, has been recognized since Munn v. Illinois, yet the State, when it seeks to interfere with the rights of property and the liberty of the citizen to contract for the sale of the products of his labor, **only has power to prevent extortion by maximum charges of general and uniform application.**

It has been expressly held by this Court that under the police power to regulate rates, the State is without power to direct a public utility corporation to sell to one customer at a less price than to another. Its power to step between the public service corporation and its customers is exhausted when it fixes a **general and uniform** maximum price for the public service. It is as powerless to distribute unequally the burdens of such service as it is to direct a corporation to exempt one class of the community from any burden and to impose the entire expense upon another class.

Such is the undoubted doctrine of this Court, as declared in the case of Lake Shore R. R. Co. v. Smith, 173 U. S., 684. In that case it was contended that the power to discriminate was incident to the power to regulate. This Court denied this contention and said:

> "It does not seem to us that this claim is well founded. We cannot regard this exceptional legislation as the exercise of the lesser right which is included in the greater one, to fix by Statute maximum rates for railroad companies. The latter is a power to make a general rule applicable in all cases and **without discrimination** in favor of or against any individual; it is the power to declare a **general law** on the subject of rates, beyond which the company cannot go, but within which it is at liberty to conduct its work in such a manner as may seem to it best suited for its prosperity and success."

In that case, the Legislature of Michigan passed a law that one thousand mile tickets should be sold by the railroad company, for the benefit of the purchaser and his wife and children, and this was held to be a violation of the Fourteenth Amendment, on the ground that such discrimination between different classes of consumers was not within the police powers of the State. The Court further said:

> The power of the Legislature to enact general laws regarding a company and its affairs does not include the power to *compel it to make an exception in favor of some particular class in the community and to carry the members of that class at a less sum than it has the right to charge for those who are not fortunate enough to be members thereof. This is not reasonable regulation.* * * *
>
> If the maximum rates are too high in the judgment of the legislature, it may lower them, provided they do not make them unreasonably low as that term is understood in the law; but it cannot enact a law, making maximum rates, and then proceed to make exceptions to it in favor of such persons or classes as in the legislative judgment or caprice may seem proper. * * * *The legislature, having fixed a maximum rate at what must be presumed, prima facie, to be also a reasonable rate,* we think the company then has the right to insist that all persons shall be compelled to pay alike,

> *that no discrimination against it in favor of certain classes of married men or families, excursionists or others, shall be made by the legislature.* If otherwise, then the company is compelled at the caprice or whim of the legislature to make such exceptions as it may think proper **and to carry the excepted persons at less than the usual and legal rates, and thus to part in their favor with its property without that compensation to which it is entitled from all others, and therefore to part with its property without due process of law."**

The doctrine of Lake Shore v. Smith (*supra*) is in no respect modified by the Interstate Street Ry. v. Massachusetts (207 U. S., 79), where a street railway company was chartered subject to all existing laws relating to street railway companies, and among such *pre-existing* laws was one that required the conveyance of school children at half price. Mr. Justice HOLMES, in his opinion, says:

> "A majority of the Court considers that the case is disposed of by the fact that the Statute in question was in force when the plaintiff in error took its charter and confines itself to that ground."

The case having thus been decided, Mr. Justice HOLMES, "speaking for myself alone," discusses the possible application of the amendment and "hesitatingly" agrees with the Massachusetts Court that the legislation was not necessarily invalid. It is apparent from the opinion, therefore, that a majority of the Court declined to affirm the validity of the Statute on that ground; and we further believe that the *dictum* of Mr. Justice HOLMES was not intended to express his personal dissent to the doctrine of Lake Shore v. Smith, as he does not even refer to it.

That a municipality is no exception to this rule of equality in rates is decided by the case of Wilson v. United Traction Co., 72 App. Div., 233, where a New York statute was under consideration, which required any city railway to transport a policeman or fireman in the employ of the municipality, free of charge, *while such em-*

ployee is travelling in the performance of his duties. In this case, the Court, while conceding that under the police powers a service railway might be required to *carry* such public officers, held that it was no part of the police powers to carry them *free of charge.* The Court said :

> " Such an advantage may be a public convenience, but the right to take the property of the individual citizen or of a class for the sole reason that the proceeds of it would be convenient to aid the municipality in defraying its general expenses, has not been yet conceded as a legitimate exercise of the police power, and we are not disposed to concede it now."

By analogy, we submit that while the State is competent to compel the complainant to furnish gas to the municipality, it cannot be compelled to furnish it free or at any less rate than to other consumers.

In Beardsley v. R. R. Co., 162 N. Y., 230, the Court of Appeals of this State considered the constitutionality of Chapter 1027 of the Laws of 1895, which required the issuance of mileage books, and the Court, on the authority of Lake Shore R. R. Co. v. Smith *(supra)* held that the statue was invalid.

The city is no exception to the rule as thus laid down, which forbids excepted classes in maximum rate laws. It cannot claim, as matter of right, that it should receive its gas at a less rate than any other consumer. In giving assent to the use of its streets, it might have stipulated with the corporation for gas for municipal purposes at any price. Having given such use, it cannot afterwards insist that it should have gas more cheaply than any other consumer. In tbe brief of the Attorney General for the Appellants it is suggested that because either the Legislature or the City could, in granting their respective franchises or permits, have made a contract with the Gas Companies as to a special rate of gas for the City, therefore it has equally the power to do so now. This is an obvious *non sequitur.* If the Legislature or a municipality can impair its contract with a public service corporation by subsequently injecting new conditions, then such contracts are unilateral arrangements and of no value or protection. *Indeed, the City has made no such claim by any legislation.* The enforced reduction is an act of the State legislature, which has arbitrarily intervened between the complainant and its consumer.

A city, in contracting for a supply of gas for corporate purposes, acts as a private corporation.

Smith v. Brooklyn, 160 N. Y., 357;
People v. Coler, 166 N. Y., 120;
Western Fund Co. v. Phila., 31 Pa., 175, 183.
Bailey v. New York, 3 Hill, 531;
Byrns v. Cohoes, 67 N. Y., 204;
Lynch v. Springfield, 174 Mass., 430.

It has been broadly held that, where powers are given to a municipal corporation for merely corporate purposes and not for strictly governmental purposes, the city acts as a private corporation.

Missano v. New York, 160 N. Y., 123;
Walsh v. New York, 41 Hun, 299;
Scott v. New York, 27 App. Div., 240.

The rate fixing power is one of prohibition. In strictness, it does not fix rates, but simply provides that any sum beyond a given maximum is unreasonable. In so doing, it in effect declares that the maximum is a reasonable price.

Brooklyn Union Gas Co. v. N. Y., 188 N. Y., 334;
Lake Shore Ry. Co. v. Smith, 173 U. S., 684, 695.

When, therefore, the State provides that as to all other consumers, 80 cents per thousand feet is a reasonable charge, and provides that, as to one consumer, no greater charge than 75 cents shall be made, **it in effect declares that to the favored consumer gas must be sold at less than a reasonable rate. This the State cannot do.**

The appellants may attempt to avoid the controlling effect of these decisions by two suggestions.

The first is that exceptional rates for the city is not a discrimination, for it is the representative of all the citizens.

The second is that as the city consumes gas in larger quantities than the individual, it is entitled to a better rate.

To the first suggestion, the answer is that, while citizens presumably get an equal share of the benefit of public lighting, they do not share *equally* the benefits and burdens which attend the use of gas by both the city and the citizens as individuals. Many citizens of New York, as, for example, the proprietors of hotels, do not use gas at all. The citizens who do use gas and who presumably pay more for its use because the city pays less, are in this way the subject of unfair discrimination.

Mr. Whitney, in his brief for the Public Service Commission (p. 183) suggests in this connection the following justification of this palpable discrimination :

> " If the price of the gas paid by the municipality were raised, the taxpayers would have to pay the difference and theoretically the consumers, who were not taxpayers, would pay their share by way of rent."

This suggestion is too fanciful to be of value. It still fails to distribute equally the cost of gas between the taxpayer and the non-taxpayer, the man who rents his property and the man who owns it, the man who uses no gas and the man who does.

In any event, the case of Wilson v. Traction Co., *supra*, answers this suggestion, because in that case the policeman, whose free carriage on the passenger railway was directed by legislation, was also a servant of the city and his free carriage relieved the public, as a whole, of burdens, and therefore enured to the collective benefit of all the citizens ; nevertheless, the Appellate Division held that an ordinance compelling the passenger railways to carry him free " had not yet been conceded as a legitimate exercise of police power," and the Court refused to concede that it was. If the servant of the city, in one of its purely political or governmental functions, like the keeping of the peace, cannot be the subject of an unfair discrimination, it is true *a fortiori* that the city, in purchasing gas for the lighting of its streets (in which, as stated, it acts as a private corporation) cannot claim any immunity from the rule of "equal rates for all, special privileges to none."

As to the second suggestion, assuming that the State could prescribe a scale of rates graduated by the quantity consumed. As this would be of general application, it would be less objectionable. The discrimination in favor of the city, *as such*, is not based upon the amount it consumes, but because it is the City. Indeed the Lake Shore case, *supra*, squarely rules that there can be no legislative discrimination based upon quantity, for in that case the purchaser sought to buy transportation in "wholesale" quantities and this Court declined to recognize that the party who bought the thousand mile ticket was entitled to any special favor by fiat of the Legislature as against the man who purchased a single ticket for a few miles. It said:

> "The Legislature, having established such maximum as a general law, now assumes to interfere with the management of the Company while conducting its affairs pursuant to and obeying the Statute regulating the rates and charges, and notwithstanding such rates it assumes to provide for a discrimination, an exception in favor of those who may desire and are able to purchase tickets at what might be called *wholesale* rates, a discrimination which operates in favor of the *wholesale* buyer and leaves the others subject to the general rule."

This the Court held to be unconstitutional.

Mr. Whitney, in his brief for the Public Service Commission (p. 183), attempts to justify the discrimination on the ground that "the character of the service is also different". But he simply relies upon the fact that the city consumes more than the individual consumer, and we have shown that a legislative rate cannot discriminate between "wholesale" and retail consumers. If so, the Legislature could discriminate between all of the citizens who purchase gas, for all consume it in infinitely varying quantities. If this be so, why was not the twenty dollar mileage ticket justified as a rate regulation in the Lake Shore Case *(supra*, p. 58)?

Mr. Whitney, however, suggests that some of the gas furnished to the city is "unmetered" (referring to the street lamps), but it is nevertheless paid for per cubic thousand, and the mere method of its measurement is wholly unimportant. The fact is that far from being any ground for discrimination because of any difference in service, in favor of the city, the reverse, if anything, is true, for the Gas Company furnished its gas to the consumer in one place, while the service to the city requires the distribution of gas not only to widely scattered public buildings but to every street lamp throughout the length and breadth of the many thousand miles of streets which compose the City of New York.

The question, however, is not one as to the equitable distribution of the cost of gas, but it is a question of *power* on the part of the Legislature to interfere with the management of the Company in such distribution, and the Lake Shore Case is conclusive that while the Legislature has power to establish a "maximum as a general law," it is powerless to further interfere with the management of the Company by unequally distributing the fair return among the various consumers *(ante*, p. 53).

Unless it can be shown that the Lake Shore case has been reversed, the unconstitutionality of the 75c. rate necessarily follows, and the only question open for discussion is as to the effect which such invalid rate has upon the general maximum charge of 80 cents.

In this connection it will be noticed that in enacting the 80 cent law, the Act of 1906 contained a direct exception of the city of New York, which should still have the 75 cent rate, and thus the two rates were made a part of the same scheme of rate regulation. The two rates are thus interdependent. Each must be presumed to have been enacted in view of and with respect to the other. Both form a system of maximum charges and the invalidity of the one is fatal to the validity of the other.

This Court cannot say that the Legislature of New York would have made the rate 80 cents to the individual consumer if it had known that it could not make an exception in favor of the City. The two charges are inseparable parts of the same Act, and one cannot be eliminated and the balance of the law sustained, without compelling the Court to guess at what would have been the intention of the Legislature, if this want of constitutional power had been recognized. The two charges are parts of a *single system of charges*, and when one is eliminated, the Court is left to float without rudder or compass upon a wide sea of conjecture as to what the Legislature would have done with the other charge. To quote again the language of the Supreme Court, in Pollock v. Farmers' Loan (158 U. S., 601) (*ante*, p. 43), an unconstitutional statute cannot be sustained *in a mutilated form*, unless it clearly appears that

> **" the parts are so distinctly separable that each can stand alone and where the Court is able to see and to declare that the intention of the Legislature was that the part pronounced valid should be enforcible, even though the other part should fail."**

In many cases where a single act deals with many clearly separable matters, such separation is free from difficulty; but in the matter of fixing rates, the ways of a Legislature are like those of Providence " mysterious and past finding out ", and the relation of one rate to another is beyond the wisdom of the Judiciary to fathom. Its only safe course is to pronounce an unequal system of rates void as an entirety, leaving the Legislature to reenact it in such form, as will show at least a passing respect for constitutional limitations.

The cases cited by Mr. Whitney in his brief (pp. 185, 186) were all different charges for services which differed in *kind* as well as extent.

VI.

The finding of the Circuit Court that the rates prescribed would yield the complainant less than a just and reasonable rate of return is a finding of fact and not a conclusion of law, and this Court should therefore give to such finding the controlling weight of a special verdict of a jury and not reverse such finding except for clear and indubitable error.

The learned Master, after full consideration of all the testimony, found that the rates would not yield a " fair or reasonable return on the value of the property." In so doing it incidentally found that

> " a just and reasonable rate of return upon the value of the investment in complainant's gas business is **not less** than the legal rate of six per cent. per annum."

The Circuit Court found that six per cent. was

> " the **lowest rate** which, in the City of New York, can be considered legislatively fair to those who are already engaged therein and cannot readily escape."

This conclusion was thus embodied in its final decree :

> " The **lowest rate** of return which can be considered legislatively fair, just or reasonable upon the value of the property employed by complainant in the business of manufacturing and supplying gas is six per cent., at which conclusion the Court has arrived in part by taking judicial notice of local conditions in the City of New York."

It is of primary importance to determine whether this be a question of fact or of law. We contend that it is a finding of fact. Undoubtedly it is a question of law whether, under this finding of fact, the Fourteenth Amendment invalidates the legislation, but the ascertainment of what is a just and reasonable return upon a given investment is of necessity a question of fact.

In his brief for the appellants, the Attorney General frankly admits (p. 22) that the question whether the legislative rates are reasonable presents "*issues of fact.*"

Mr. Whitney, in his brief for the Public Service Commission, (p. 160) also admits that the question was one of fact by the following concession:

> "Here there was but one *ultimate question of fact* before him, namely 'under the conditions existing on May 1, 1906, what rate of return can be earned at the rate of 80 cents for gas by a Company reasonably capitalized and properly equipped and managed.' Every other question was *evidential, not ultimate.*"

The recognition by this Court that the reasonablenesss of return is a question of fact is shown by the statement of this Court in Covington Turnpike Road Company v. Kentucky (164 U. S., 578), when it said that an Act could not be declared unconstitutional (p. 596),

> "merely because the Company (as was alleged and as the demurrer admitted) could not earn more than four per cent. on its *capital stock*. It cannot be said that a corporation is entitled, as of right and without reference to the interests of the public, to realize a given per cent. upon its capital stock".

It is significant that the Court thus concluded its reasoning (p. 597):

> **"Each case must depend upon its special facts."**

The Court thus declined to lay down any rigid uniform rule and recognized that the capital stock and the real value of the Company's assets might not be identical in amount. It has never decided that any given percentage is required as matter of law, even upon real value, for obviously the rate of return in a settled community would hardly be just in a Nevada mining camp, and thus of necessity the question remains one of fact.

The same conclusion is fairly deducible from the pointed analogy which the Supreme Court has drawn between rate regulation cases and cases which involve the actual taking of property under the right of eminent domain. It held that the principles governing compensation were similar in both cases and it is obvious that in a given case the amount to be awarded by the State for property, which it physically takes under the right of eminent domain, is always a question of fact.

It has further recognized that the problem is largely a mathematical one, when it ruled in Chic., M. & St. P. R. R. Co. v. Tompkins, 176 U. S., 167 that the proper practice was to refer the matter to a Master to "make all needed computations and fully find the facts". As was once said of the tariff, the reasonableness of return is of necessity **"a local issue"**, for the compensation for the hazard of capital must necessarily shift from State to State and community to community, in accordance with the economic conditions which there prevail. Many questions of fact further enter into the complex problem—the original cost, the structural value, the reproduction value, the favorable location, the length of the franchises, the possibility of competition, the duration of the business, its good will as a going concern and the rate of similar investments in the same community. These and other purely economic factors enter into the composite result which is, for want of a better term, denominated a "fair return". It must therefore conform not merely to statutory laws but to those laws of business, whose operation, owing to irresistible economic forces, is often independent of Statutes. When, therefore, after a careful examination of these and other factors entering into the problem, a Court of first instance has determined that a given rate in a given case would not yield a fair return, an appellate tribunal is not reviewing a question of law but one which in its last analysis must necessarily be a question of fact.

As such a finding of fact, we respectfully submit that this Court should accord to it all the controlling effect which would be given to a verdict of a jury in a case at law. In the latter case, an appellate tribunal would not consider whether upon the testimony they would necessarily have reached the same conclusion, nor would it consider whether every detail of the reasoning, through which the ultimate finding was reached, commended itself. It would only reverse the finding if upon the entire testimony it was clearly erroneous.

As previously stated, these findings, reached after so much patient labor and after the fullest opportunity had been given to all counsel to present their evidence or views to the contrary, should be given, under the accepted doctrine of the federal equity courts, *all the force and effect that the verdict of a jury would be given at common law, where there is more than a scintilla of testimony.* Theoretically, the matter should be treated as though all the disputable questions of fact had been framed into specific issues and upon competent testimony a jury had impartially reached certain conclusions. Indeed, the findings of the present Master should be given far greater weight than the verdict of a jury, for the latter would only be the result of the average intelligence of twelve men, drawn at random from the community, who would doubtless have been confused by the intricate and complex facts and possibly swayed by prejudices or interest. (See *Ex parte* Young, 209 U. S. 123.)

In this case, however, the findings are those of a distinguished member of the bar, enjoying, as a Standing Master in Chancery, the special confidence of the Court, and who brought to a discussion of these questions the trained mind of an experienced and very capable lawyer. He was not a mere examiner to take testimony perfunctorily, but in accordance with the practice indicated in C. M. & R. Ry. Co. v. Tompkins, 176 U. S., 180, he had been selected "*to make all needed computations and fully find the facts*".

In Davis v. Schwartz, 155 U. S., 631, 636, an equity suit, the case was referred by consent of parties to a Master "to hear said causes and to report to this court his findings of fact and conclusions of law."

The Supreme Court thus stated the general rule:

> "1. As the case was referred by the Court to a Master to report, not the evidence merely, but the facts of the case, and his conclusions of law thereon, we think that his finding, so far as it involves questions of fact, is attended by a presumption of correctness similar to that in the case of a finding by a referee, the special verdict of a jury, the findings of a Circuit Court in a case tried by the Court under Rev. Stat., Sect. 649, or in an admiralty cause appealed to this court. In neither of these cases is the finding absolutely conclusive, as if there be no testimony tending to support it; but so far as it depends upon conflicting testimony, or upon the credibility of witnesses, **or so far as there is any testimony consistent with the finding, it must be treated as unassailable."**

1 Foster's Fed. Prac., Sec. 315, p. 690;
Green v. Bishop, 1 Cliff., 186, 194;
Mason v. Crosby, 3 Woodb. & Minn., 258, 269;
Donnell v. Columbia Ins. Co., 2 Sumn., 366, 371;
Welling v. La Bau, 34 Fed., 40;
Moline Plow. Co. v. Carson, 72 Fed., 387, 388;
Fidelity, etc., Co., v. St. Matthew's Savings Bank, 104 Fed., 858, 860;
Paddock v. Commercial Ins. Co., 104 Mass., 521, 531;
Richards v. Todd, 127 Mass., 167, 172.

The weight to be given by the Supreme Court to these findings of the Master is strengthened by the affirmance of the Circuit Court of the substance *and final result* of these findings. While the Master and the Court differed in some details of the calculation, yet in the ultimate finding they agree that the complainant cannot receive, if the statutory rates are enforced, a just and remunerative return.

We submit that this Court should not disturb, except for the clearest error, these careful conclusions of the learned Master, as re-examined and in substance affirmed by the Circuit Court. The Fourteenth Amendment has put a stupendous burden upon the Federal Judiciary in the matter of these rate-making cases, and, so far as the Supreme Court is concerned, the burden will be intolerable, if it must re-examine as an appellate tribunal the infinitely complicated questions of fact, which are necessarily involved in such cases. We do not claim that there should be no re-examination, but we do claim for the finding of the Court below as to questions of fact the controlling weight in a complicated matter, which would be given to the verdict of a jury in one of extreme simplicity. Possibly Mr. Justice HOLMES, speaking for this Court, had this in mind when he said, in San Diego Land & Town Co. v. Jasper, 189 U. S., 439, 446:

> "We do not sit as a general appellate board of revision for all rates and taxes in the United States. We stop with considering whether it clearly appears that the Constitution of the United States has been infringed, together with such collateral questions as may be incidental to our jurisdiction over that one."

In Chicago, M. & St. P. R. R. Co. v. Tompkins, 176 U. S., 167, this Court indicated that the labor of determining the complicated facts in this class of cases should at least primarily devolve upon a Master, and with the enormous growth of this class of litigation, the Supreme Court may sooner or later be compelled, from necessity if not from choice, to apply the law to the facts *as ascertained by the trial Court*, and, as previously stated, this involves no departure from accepted legal principles as to the weight to be given to the findings of a trial Court.

In a very recent and important rate case (Pennsylvania R. R. v. Philadelphia County, 220 Penn., 114), which determined the validity of the two-cent railroad rate law of Pennsylvania, the highest Court of that State took this view of the subject and held that the findings of the lower Court were those of fact and of controlling weight in an appellate court. The Court said:

> "The court below after receiving much evidence and giving it a most painstaking and elaborate consideration found that the Act does injustice to the corporators in that it reduces the returns from the property to such an extent

> as to render it unremunerative. *As this is a question of fact the findings of the court cannot be disturbed unless shown to be clearly erroneous*, and as this has not been shown we might well abide by the general rule and rest the case on this finding, but as the method of reaching the fact in a case of such complicated elements is complained of, it is proper to discuss some special objections."

Mr. Whitney in his brief gives a substantial reason why this controlling weight should be given by this appellate Court and indeed by the Circuit Court below, to the findings of the Master. He freely concedes (pp. 57 and 178) that the Master, who saw the witnesses, was in a better position to judge of the weight of their testimony than either the Circuit Court or this tribunal.

On page 57, he disputes the power of a Court to declare a Statute unconstitutional on the impression which witnesses made upon a Master appointed to find the facts. If the question of demeanor be thus important, and in determining credibility and weight of testimony demeanor is, as Mr. Whitney says, of importance, it follows that the very greatest respect should be given to the Master's findings, who had an advantage which neither the Circuit Court nor this appellate Court can possibly have.

Again, on p. 178, Mr. Whitney says in his general attack upon the ability of the judiciary—and especially the Federal judiciary—to dispose of this class of cases:

> " The Judge then finds the voluminous papers piled up among a mass of other papers equally pressing, and he has to decide without the knowledge and experience which aided the Commissioners. Upon questions of fact and discretion he is especially at a disadvantage. He is less likely to know which witness is lying and is more or less misled by a false assertion of impracticability."

If this be true, it follows that this Court has not the same advantage, in weighing the credibility of the testimony in this case, as the Master. If, as Mr. Whitney says, any of the witnesses were "lying," the Master could determine that better than this Court can, which reads the testimony in cold type.

These practical demonstrations, freely conceded by Mr. Whitney, demonstrate the wisdom of the rule that where the testimony is conflicting, the findings of fact of a Master or jury are virtually "unassailable."

In this case, both the Master and the Circuit Court reached the same conclusion, but not always with the same reasoning as to all the factors of the problem. As previously stated, the Master valued the complainant's property at $83,357,000, while the Court, by eliminating many important property holdings of the complainant and reducing others, reduced the value of its property to $59,831,435. Both valuations were, we think, unjust to the complainant, for we claimed below and claim now that complainant's property as used in the gas business, was reasonably worth over $96,000,000. The Supreme Court, therefore, could not justly overturn the special verdict in this case, because some of the reasoning might not commend itself, unless it was prepared to hold that neither the complainant's claim nor the Master's finding nor the Circuit Court's decree was reasonably justified by any testimony in the case.

In this connection we challenge the soundness of the contention in the Attorney General's brief (p. 23), that as the Appellee did not take an appeal from the decree entered,

> "it will not be heard to challenge the correctness of any of the findings contained therein".

The present decree consists in part of the remedial relief, to which the Court held the complainant entitled, and in part of the findings of fact, which justified such relief, and these findings of fact are themselves divisible into the *ultimate* findings of fact and to those subordinate findings upon which the former were based. Mr. Whitney, in his brief for the Public Service Commissions, admits (p. 160) that the remunerative character of the return is the "ultimate question of fact," to which the other questions were merely "evidential." He further agrees (p. 245) that the whole question is before the Court on his XII Assignment of Error. So far as the remedial relief is concerned, the Appellee is unquestionably bound by the decree and, in the absence of a cross-appeal, cannot be heard to ask for further and different relief. The Appellee took no cross-appeal because it received all the remedial relief which it sought.

As to the findings of fact, which are contained in the decree, whether subordinate or final, we submit that the Appellee has a right to sustain the decree in its favor by any argument that can be legitimately drawn from the testimony, even though such argument may be negatived by one or more of the subordinate findings of fact. The Appellee's position is precisely that of a litigant who claims that a verdict in his favor, and the resultant judgment, is sustained by the testimony in the case. Such Appellee may not agree with all the reasoning of the jury. He may believe that the same result could have been reached by a different process of reasoning; nevertheless, when the sufficiency of the evidence to support the verdict is the question, the Appellee is at liberty to sustain the verdict from the entire testimony in the cause. For example, the present Appellee has the right to show that the Court was in error in eliminating many elements of value, such as the Astoria plant, which, had they been included, would have materially strengthened its right to the present remedial relief.

The cases which the Attorney General cites to the contrary are not in point.

In Chittenden v. Brewster (2 Wallace, 191) the complainant in an equity suit was dissatisfied with the *relief* granted him, and appealed. The defendant took no appeal from the relief granted, but on the argument claimed that no relief should have been granted. The Court held that such failure to appeal from an adverse decree was a waiver of any right to attack its propriety.

The "Stephen Morgan" (94 U. S., 599) was an admiralty case, where the decree divided the loss resulting from a collision at sea between the libellant and the respondents. Only the respondents appealed. The Court simply held that the libellant, who did not appeal, "cannot be heard in opposition to the decree" but "may be heard in support of the decree *and in opposition to every assignment of error filed by the appellees*".

In Clark v. Killen (103 U. S., 766), Clark filed a bill to declare null and void conveyances of six separate lots of ground. The Court adjudged that *three* of said conveyances were invalid. The complainant appealed because of the insufficiency of the relief as to the remaining parcels and on the argument the Appellee, who had not appealed, attacked the sufficiency of the decree as to the three lots first mentioned. This Court therefore held that he could not attack the decree, from which he had not appealed.

In Cherokee Nation v. Blackfeather (155 U. S., 218), the appellee sought "for a modification of the decree increasing" the award. This the Court denied.

Appellants also cite New Orleans Mail Co. v. Fernandez (94 U. S., 597), but we find no such case reported.

The cases referred to are plainly distinguishable from the case at bar. The Appellee is not questioning the sufficiency of the decree as to remedial relief. It simply contends that such decree is amply sustained not only by the findings of fact, upon which the Court and the Master expressly based it, but upon other facts disclosed by the testimony.

The propriety of that decree must be determined from the whole record and the Attorney General's contention that every reasonable conclusion, which might have been drawn from the evidence in favor of the decree or any part thereof, is to be ignored, finds no warrant in any ruling of this Court.

The unreasonableness of such contention is shown by the fact that the Appellee could not have appealed from this decree. Had it done so, and assigned for error the failure of the Court to find all the facts, which would have *cumulatively* supported the decree, it would have been met by the answer that, as it obtained the only *ultimate* finding which it desired and *full* remedial relief, that the errors assigned were academic. *Indeed, who ever heard of a litigant appealing from a decree, which granted him full relief on the ground that the Court could have reached the same result by different reasoning?*

It has been expressly ruled that a litigant who has obtained

> " a judgment or decree which is so favorable to him that it secured him all the relief he seeks,"

cannot bring a writ of error or take an appeal to review such judgment or decree.

> Guarantee Co. v. Ins. Co., 124 Fed., 170, 173;
> Rogers v. Mining Co., 154 Fed., 606, 609.

Because the Appellee in this case could not have taken a cross-appeal, having secured full relief, it does not follow that he may not fully sustain his decree from the entire record.

The true rule is that an appeal in equity brings the entire case before the Court of review and while the appellant is entitled to his assignments of error, the appellee may defend the decree upon any reason which the record justifies.

In Hendryx v. Perkins, 123 Fed. Rep., 268, 270, Putnam, J. said:

> " This is in substance ' that the finding and statement of facts by the Circuit Court ' in the case before us is conclusive on us, notwithstanding this is an appeal in a cause in equity and not a writ of error to a common law judgment. * * * For us to admit his proposition * * * would clearly reverse the rules of procedure in the federal courts from the time of Judiciary Act of 1789; and this could not possibly be permitted. It may be well to state here that the law is thoroughly settled that a mere opinion of a judge in the Circuit Court in an equity case is not a ' finding and statement of facts.' "

Both in equity and at common law the true rule therefore is that a judgment or decree will not be reversed unless the appellate court is satisfied upon a review of the entire case that the judgment or decree was erroneous.

> McLemore v. Louisiana State Bk., 91 U. S., 27, 28.
> Mobile, etc. R. Co. v. Jurey, 111 U. S., 584, 593.
> Chic. &c. R. Co. v. Ross, 112 U. S., 377, 395.
> Lancaster v. Collins, 115 U. S., 222, 227.
> Tua v. Carriere, 117 U. S., 201, 210.
> Fulkerson v. Holmes, 117 U. S., 389, 401.

In Blythe Co. v. Hinckley, 111 Fed., 827, 837, the rule was thus stated by Ross, J.:

> " In equity an appeal brings up the whole case, and any matter of law apparent upon the face of the bill of review is upon such an appeal open to the consideration of the Court. If the decree dismissing the bill of review was right, it should be affirmed, regardless of the reasons assigned by the Court for its judgment. Many a right judgment is given for a wrong reason."

VII.

Where the rate is prescribed by the Legislature and not by an administrative body, it is equally subject to a judicial review as to its confiscatory character.

Had this question not been raised by capable and eminent counsel in the Court below, we would have assumed that the proposition was so clearly established by the decisions of this Court that any discussion would be an idle superfluity. In the Court below, however, Appellants contended that

> " the reasonableness of a rate regulation is a judicial question only when prescribed by a subordinate body by virtue of delegated authority."

Subsequently they so far modified their position as to claim that while a legislative rate was subject to review, *if no return whatever were allowed*, it was not the subject of judicial review, if any return, however inadequate and unjust, were allowed.

The logical effect of such contention is that while the Fourteenth Amendment is effective to prevent total confiscation of property by a State Legislature, it is wholly ineffective to prevent partial confiscation. If so, the Fourteenth Amendment, so far as rate regulation cases are concerned, is little better than waste paper, for, as pointed out by the lower Court on the oral argument, it would in such event be easy for the Legislature to regulate rates almost to the vanishing point and thus for all practical purposes confiscate the earning power of a corporation.

If the Courts are constitutionally powerless to review a rate law, which yields one per cent., even though such one per cent. be most unjustly unremunerative, it is then logically true that a rate law would be beyond judicial attack, which would yield one-thousandth of one per cent.

Appellant's contention, however, needs no detailed argument, for it has been conclusively answered by the decisions of this Court, which uniformly have held that no Department of the Government, whether legislative, executive or judicial, can override the Constitution of the United States. Indeed the earlier cases, in which the right of judicial review was asserted, were in many cases legislative rates. The Appellants' contention is therefore best answered without further argument by a few quotations from the opinions of this Court.

In Reagan v. Farmers L. & Tr. Co., 154 U. S., 362, 397, this Court said of this duty of the Judiciary :

> " Still there can be no doubt of their (the Courts') power and *duty* to inquire whether a body of rates *prescribed by a Legislature or a commission* is unjust and unreasonable and such as to work a practical destruction to rights of property and if found so to be, to restrain its operation ".

In Smyth v. Ames, 169 U. S., 466, where a schedule of legislative rates was sought to be enforced, the Court said that the power to regulate was

> "not without limit and that under pretense of regulating fares and rates the *State* cannot require a railroad corporation to carry persons or property without reward".

The Court summarized the authorities as follows (p. 526):

> "2. A State enactment, *or* regulations made under the authority of a State enactment, establishing rates for the transportation of persons or property by railroad that will not admit of the carrier earning such compensation as under all the circumstances is just to it and to the public, would deprive such carrier of its property without due process of law and deny to it the equal protection of the laws, and would therefore be repugnant to the Fourteenth Amendment of the Constitution of the United States".

Again the Court said, anticipating the present contention (p. 527):

> "No one, we take it, will contend that a *State enactment* is in harmony with that law simply because the *legislature* of the State has declared such to be the case; for that would make the State legislature the final judge of the validity of its enactment, although the Constitution of the United States and the laws made in pursuance thereof are the supreme law of the land, anything in the Constitution or laws of any State to the contrary notwithstanding."

In Covington Turnpike Co. v. Sandford, 164 U. S., 578, 598, this Court said:

> "The utmost that any corporation, operating a public highway, can rightfully demand at the hands of the *Legislature, when exerting its general powers*, is that it receive what, under all the circumstances, is such compensation for the use of its property as will be just both to it and to the public".

Again in San Diego Land Co. v. National City, 174 U. S., 739, 753, the Court said:

> "It is equally clear that this power could not be exercised arbitrarily and without reference to what was just and reasonable as between the public and those who appropriated water and supplied it for the general use; for the State cannot **by any of its agencies, legislative, executive or judicial,** withhold from the owners of private property just compensation for its use."

Again in C. B. R. R. v. Chicago, 166 U. S., 226, 234, the Court said:

> "But a State may not **by any of its agencies** disregard the prohibitions of the Fourteenth Amendment."

And again in Chicago Ry. Co. v. Tompkins, 176 U. S., 167, 173, the Court said:

> "It is often said that the Legislature is presumed to act with full knowledge of the facts upon which its legislation is based. This is undoubtedly true, but when it is assumed from that, that its judgment upon those facts is not subject to investigation, the inference is carried too far."

And again, in Cotting v. Stock Yards Co., 183 U. S., 79, 91, the Court said:

> "As to parties engaged in performing a public service, while the power to regulate has been sustained, negatively the Court has held that *the Legislature* may not prescribe rates which, if enforced, would amount to a confiscation of property. But it has not held affirmatively that the Legislature may enforce rates which stop only this side of confiscation and leave the property in the hands under the care of the owners without any remuneration for its use."

We concede that in the Granger cases (94 U. S., 113 *et seq.*), where the abstract power of a Legislature to regulate rates at all was alone in question, the Court did say, in 1876, that the rates prescribed by the State were beyond judicial review and conclusive, but this pure *dictum* was unanimously overruled by the Court in Railroad Commission Cases, 116 U. S., 307, decided in 1886, and this was reaffirmed in Chicago R. R. Co. v. Minnesota, 134 U. S., 418 (1889), in which last case the three dissenting Judges clearly indicated that the majority opinion overruled the Granger Cases. Since then the right of judicial review to prevent confiscatory rates has been uniformly recognized and appellant's present contention, that an Act of the Legislature has some peculiar sanctity to nullify the Fourteenth Amendment, comes a quarter of a century too late.

VIII.

The Fourteenth Amendment invalidates a rate, if it yield less than "just remuneration," even though it yield some return.

Both the Circuit Court and the learned Master found upon the evidence that a just and remunerative return to the complainant could not be less than six per cent. That was found to be an "irreducible minimum." Appellants now contend in effect that even if this be so, the Fourteenth Amendment is inapplicable because there is no confiscation in the constitutional sense, if the return yield *any* compensation to the complainant, however inadequate it may be. As the denial of anything less than a full and adequate return is manifest injustice, the Appellants' contention logically seeks to establish "a twilight zone" of injustice, within which the State can freely confiscate the greater portion of a public service corporation's earning power. In its last analysis, the contention is that while the Fourteenth Amendment is effective to prevent *total* confiscation, it is ineffective to prevent *partial* confiscation.

As applied to the present case, the contention, therefore, is that even if less than six per cent. is a denial of just and adequate remuneration, the Federal Constitution is powerless to prevent partial confiscation and that the State is therefore, as to legislative rates, in the position of Warren Hastings in his administration of India, in that it can take a substantial part of private property, but is free from interference if it "stop only this side of confiscation" and thereby "marvel at its own moderation". If this be so, as previously stated, the Fourteenth Amendment is of little value, for the Legislature can always exempt itself from the inhibition of the Bill of Rights by allowing the unfortunate public service corporation to retain a small, although grossly inadequate, part of its just earning power.

Mr. Whitney, in his brief for the Public Service Commission (p. 260) is more merciful than his associate counsel and can therefore with greater justice "marvel at his own moderation". While he agrees with them (pp. 258, 267) that there is a "twilight zone of injustice" (the phrase is ours), within which the State can confiscate the just earning power of a public service corporation, without any interference under the Fourteenth Amendment, he yet narrows the zone somewhat by a suggestion (for which there is no warrant or justification in the decisions of this Court) that the limit of Federal power is to give to the much harassed public service corporation the current net rate of interest on a safe non-taxable security of a gilt edge variety. This percentage he fixes at from 3 to 4 per cent., and while he admits that the Company is justly and reasonably entitled to an additional profit, which would represent the "insurance against risk", he thinks such additional profit is beyond the protective power of the Fourteenth Amendment. He admits (p. 260) that this profit, which represents the profit of the risk, is one that the State should not "reasonably" take away under the guise of regulation, but he denies that the Federal Government has any jurisdiction in the matter. He says (p. 259):

> "The State police power may intervene to cut down the NORMAL income of property IN THE MOST SERIOUS DEGREE so long as the property is not 'taken.'"

He admits (p. 261), that this lack of protection under the Fourteenth Amendment puts the stockholders of such a corporation "to a serious risk—a risk of pecuniary loss by the action of the local authorities--without any real efficient relief". He, however, gives them the soothing balm that "dividends occasionally stop, just as a house sometimes stands empty", and that (p. 262)

> "a State which does not treat its corporations fairly will soon suffer and soon repent, and will not the *education* that it will have received compensate in the long run for the temporary loss that investors will have suffered?"

Of course the drawback to this argument is that the State gets its education at the expense of individual investors and that it is of little satisfaction to the latter, when their just income is destroyed and they are reduced to possible penury, to learn that the people as a whole are somewhat wiser by reason of their (the individual investors') misfortunes.

This ingenious theory also ignores the practical consideration that the public service corporation may have built its works by borrowed money, upon which it is paying far more than the net interest rate on non-taxable securities, and it further asserts the indefensible proposition that there is a substantial element in the "just return," namely, the insurance against risk or profit for the hazard, WHICH THE STATE IS AT LIBERTY TO CONFISCATE. All rates, therefore, according to Mr. Whitney, are like ancient Gaul of our school days, divided into three parts: (1) The confiscatory. (2) The unreasonable. (3) The reasonable.

To support this argument, he makes a distinction between a "taking" of property and a regulation of rates, but as we will hereafter show, the "taking" of property, which is meant in this class of cases is not the taking of the capital itself but the taking of the *earning power* for the supposed benefit of the public.

Indeed this whole question has been somewhat confused by the use of the misleading word "confiscation". There is no such word as "confiscation" in the Fourteenth Amendment. It simply provides not only for the equal protection of the laws in the pursuit of gainful occupation (which equal protection is wanting when the

State can arbitrarily deprive any corporation of its just earning power), but also prohibits the taking of property "without due process of law," which means, unless the uniform decisions of this Court are wholly wrong, that no corporation can be compelled to serve the public without "just compensation" for its service.

This contention of a "twilight zone of injustice", which is as unsound in ethics as it is in law, and as wanting in reason as in authority, finds no warrant whatever in the decisions of this Court.

In Cotting vs. Stock Yards, 183 U. S., 91, this Court said in 1901, of this very contention, that this Court

> "has not held affirmatively that the Legislature may enforce rates *which stop only this side of confiscation* and leave the property in the hands and under the care of the owners without any remuneration for its use."

The rule, as uniformly laid down by this Court, has been one of "just compensation."

The meaning of that phrase, as familiar in legal phraseology as in common speech, is so clear that a volume of words would not amplify its meaning. Compensation means **full** compensation and can mean nothing else, and a man is never compensated when he receives less than that which is due him, any more than the laborer has the payment of his hire when he receives a fractional part thereof. The laborer is worthy of his full hire, and the public service corporation is entitled to full remuneration for the service which it renders. *Nothing more and nothing less.*

The appellant's contention is an inversion and also a perversion of the common law rule as to reasonable rates.

The Granger Cases were simply declaratory of the common law and were based on the *dictum* of Lord Hale, that he whose business is affected by a public interest shall "take a reasonable toll". The Court further quoted Lord Ellenborough in Aldnutt v. Inglis, 12 East, 527, that those who enjoyed a public monopoly are "obliged to limit themselves to a *reasonable compensation* for such ware-housing". Compensation, therefore, was the rule at common law, and it is inherent in the very word "compensation" that the hire must be *equivalent* to the service.

In the Railroad Commission Cases, 116 U. S., 307 (1886) decided ten years after the Granger Cases, the Court said that the authority of a railroad carrier to carry persons and property, and to "fix, regulate and receive tolls," **"itself implies authority to charge a reasonable sum for the carriage"**, and added that "this would have been implied if there had been no such provision." In the same case, the Court repudiated the doctrine of Chief Justice WAITE, in the Granger Cases, that a legislative rate was beyond judicial review, and said (p. 331):

> "From what has thus been said, it is not to be inferred that this power of limitation or regulation is itself without limit. This power to regulate is not a power to destroy, and limitation is not the equivalent of confiscation. Under pretense of regulating fares and freights, the State cannot require a railroad corporation to carry passengers or property **without reward.** Neither can it do that which in law amounts to a taking of private property for public use without **just compensation** or without due process of law".

"Just compensation" therefore became the rule, to which this Court has adhered without shadow of turning. In so doing it used a well recognized legal term of constitutional law, for with only three exceptions, the constitution of every State in the Union provided in substance that private property should not be taken for public use without "just compensation."

The Fifth Amendment uses the same term and the Supreme Court in Monongahela Navigation Co. v. U. S., 148 U. S., 312, 326, thus defines its significance:

> "The noun 'compensation', standing by itself, carries the idea of an equivalent. Thus we speak of damages by way of compensation, or compensatory damages, as distinguished from punitive or exemplary damages, the former being the equivalent for the injury done, and the latter imposed by way

> of punishment. So that if the adjective 'just' had been omitted, and the provision was simply that property should not be taken without compensation, the natural import of the language would be that the compensation should be the equivalent of the property. And this is made emphatic by the adjective 'just.' **There can, in view of the combination of those two words, be no doubt that the compensation must be a full and perfect equivalent of the property taken.**"

Nor as to just compensation is there any sound distinction between the value of capital and the value of its earning power.

In Monongahela Navigation Co. v. U. S. (p. 328), *supra*, the Court further said:

> " How shall just compensation for this lock and dam be determined? What does the full equivalent therefor demand? The value of property, generally speaking, is determined by its productiveness—the profits which its use brings to the owner."

To the same effect is Mr. Justice FIELD's vigorous statement in Munn v. Illinois, 94 U. S., which, though contained in the dissenting opinion, became subsequently the accepted doctrine of this Court. He said (p. 141):

> " All that is beneficial in property arises from its use and the fruits of that use, and whatever deprives a person of them deprives him of all that is desirable or valuable in the title and possession. If the constitutional guaranty extends no further than to prevent a deprivation of title and possession and allows a deprivation of use and the fruits of that use, it does not merit the encomiums it has received."

From the ruling of " just compensation " as thus stated, this Court has never departed. Moreover, it wisely declined to amplify it by further definition.

In Chicago R. R. Co. v. Minnesota, 134 U. S., 418, 458, it said :

> " If the Company is deprived of the power of charging **reasonable rates** for the use of its property and such

> deprivation takes place in the absence of an investigation by judicial machinery, it is deprived of the lawful use of its property and thus in substance and effect of the property itself without due process of law ".

In his concurring opinion, Mr. Justice MILLER said (p. 461):

> " But when the question becomes a judicial one and the **validity and justice** of these rates are to be established or rejected by the judgment of a Court, it is necessary that the railroad corporations interested in the fare to be considered should have notice and have a right to be heard on the question relating to such fare, which I have pointed out as judicial questions ".

Can it be doubted that the "justice" of rates requires full, and not partial, compensation?

Again, in Reagan v. Farmers Loan & Trust Co., 154 U. S., 362, 397, it was said that it was the Court's

> "power and duty to inquire whether a body of rates prescribed by a Legislature or a commission is **unjust and unreasonable**, and such as to work a practical destruction to rights of property, and if found so to be, to restrain its operation ".

Can it be questioned that an inadequate rate is " unjust and unreasonable," even though it give *some* compensation?

Again the Court said, in the same case (p. 399):

> " The equal protection of the laws which, by the Fourteenth Amendment, no State can deny to the individual, forbids legislation in whatever form it may be enacted, by which the property of one individual is, **without compensation,** wrested from him for the benefit of another, or of the public ".

In the same case it was held that it was competent for the Courts,

> " to enter upon an inquiry as to the **reasonableness and justice** of the rates prescribed by the Railroad Commission ".

Can less than full compensation be in any legal sense in accord with "reasonableness and justice"?

In the same case, this Court pointedly indicated by analogy its recognition that compensation necessarily implied full compensation. The Court said (p. 410):

> "The equal protection of the laws, the spirit of common justice, forbids that one class should by law be compelled **to suffer loss that others may make gain.** If the State were to seek to acquire the title to these roads under its power of eminent domain, is there any doubt that constitutional provisions would require the payment to the corporation of **just compensation,** that compensation being the value of the property as it stood in the markets of the world and not as prescribed by an Act of the Legislature? Is it any less a departure from the obligations of justice to seek to take, not the title but **the use for the public benefit at less than its market value?**

Applying the analogy, would the requirement of the Fourteenth Amendment be satisfied if the State Court of New York had taken possession of complainant's property under the right of eminent domain and by legislative act given it a grossly inadequate sum therefor? Could it in such case be said with reason that as long as the Legislature allowed it *anything* for its property it had received some compensation and the question as to *quantum* was so far a legislative question as to be beyond judicial review? This Court has itself answered in the negative by this pointed declaration *that* **"just compensation" in rate regulation cases is "just compensation" in condemnation cases.**

In Smyth v. Ames, 169 U. S., 466, the Court, reaffirming the Railroad Commission Cases, again held that no public service corporation can be obliged to discharge its public functions "without reward" or without "just compensation", and thus again used the language of the Constitution, as already interpreted in the Monongahela Bridge Case, *supra*, as meaning **full compensation.**

In Covington Turnpike Co. v. Sandford, 164 U. S., 578, 598, the Court held that a public service corporation had the right to require rates that were "just both to it and the public", and this it later defined in the opinion as "**the fair value of the services rendered**".

Again, in Smyth v. Ames, 169 U. S., 466, 547, it summed up the rule as follows:

> "What the Company is entitled to ask is **a fair return upon the value** of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that no more be exacted from it for the use of a public highway than the services rendered by it are reasonably worth."

Could the rule of full compensation be more clearly stated? To conform it to appellant's contention, it would be necessary to paraphrase it thus:

> "What the Company is entitled to ask is some return, however inadequate, upon the value of that which it employs for the public convenience. On the other hand, what the public is entitled to demand is that as little be exacted from it as will be required to pay expenses and make some return, however small and inadequate, to the Company for the use of its capital and the employment of its skill".

In San Diego Land Company v. National City, 174 U. S., 739, 757, the Court thus stated the rule:

> "What the Company is entitled to demand in order that it may have just compensation, is **a fair return upon the reasonable value of the property** at the time it is being used for the public".

In Chicago R. R. Co. v. Tompkins, 176 U. S., 167, 173, this Court again referred to the analogy of condemnation proceedings and said:

> "It is within the competency of the legislature to determine when and what property shall be taken for public uses. That question is one of policy over which the courts have no supervision; but if after determining that certain property

> shall be taken for public uses the legislature proceeds further, and declares that only a certain price shall be paid for it, then the owner may challenge the validity of that part of the Act, may contend that his property is taken without due compensation; and the legislative determination of value does not preclude an investigation in the proper judicial tribunals."

In Minneapolis R. R. Co. v. Minnesota, 186 U. S., 257, the Court again affirmed the doctrine of Smyth v. Ames, that just compensation was "**a fair return upon the value** of that which it employs for the public convenience."

The most recent statement of the rule is found in Atlantic Coast Line R. R. Co. v. No. Carolina Corp. Com., 206 U. S., 1, where Mr. Justice WHITE said (p. 24):

> "In a case involving the validity of an order enforcing a scheme of maximum rates of course the finding that the enforcement of such scheme will not produce an **adequate return** for the operation of the railroad, in and of itself demonstrates the unreasonableness of the order."

In the same case, he speaks of rates "*as a whole adequately remunerative,*" and again, of an order "*for a wholly inadequate compensation.*"

The threefold iteration of the word "*adequate*" is significant.

A composite statement of this Court, therefore, is that legislative rates, to be constitutional, must yield a "compensation" that is "full," "fair," "just," "reasonable" and "adequate" and one that is not less than the "market value" of such use.

Of course, as pointed out in the Covington Turnpike Case, *supra*, there is no rule of law that there must be a return *upon the capital stock*, for the capital stock may be fictitious; nor is there any fixed rule that there must be a return upon *original cost*, for this may be largely in excess of present value. The only rule of the Court is that the fair present value shall yield a fair and full return, and whether it does so is a judicial question, even though the primary declaration of the Legislature creates a presumption of reasonableness.

In view of recent developments, we need not emphasize to this Court that any other rule would not only work injustice in individual cases, **but would be a public calamity.** It would largely nullify the Fourteenth Amendment in rate regulation cases. Rate regulations, often passed under the pressure of public clamor and with little opportunity of defense by the public service corporation, would simply be so adjusted as to yield a slight return in order to be immune from judicial review. To the unfortunate investor, it would matter little whether his property was totally confiscated or whether his company received but one per cent. upon the fair value of his property, *for so small a return could yield no dividends whatever*, and thus the investors in public service corporations, whose holdings aggregate many billions of dollars, would, for all practical purposes, be beyond the great protective power of the Fourteenth Amendment. That this Court, after the developments of the last two years and under present conditions, should declare this to be the law, is to us inconceivable.

In the very recent and important rate case of Central R. R. Co. vs. Georgia Railroad Commission (161 Fed. Rep., 995), the Circuit Court well said of a railroad carrier:

> "He must have 'just' compensation. Any schedule of rates is forbidden which produces injustice. **The quantum of injustice is immaterial. There must be 'no injustice.'"**

It is true that the rule for which we contend does impose upon the Judiciary in rate cases the same burden as in condemnation cases, of determining what is full compensation for property taken, and undoubtedly this important duty is "difficult and perplexing." But, as was stated by this Court in Chicago Ry. Co. vs. Tompkins, 176 U. S., 167, 172:

> **"This difficulty affords no excuse for a failure to examine and solve the questions involved.**

* * * **Difficult as are the questions involved in these cases, burdensome as the labor is which they cast upon the Courts, no tribunal can hesitate to respond to the duty of inquiry and protection cast upon it by the Constitution."**

In Southern Pacific R. R. Co. v. Commissioners, 78 Fed. Rep., 261, Mr. Justice McKenna thus forcibly stated the question:

> " When the power of judicial review was asserted and entertained, the Fourteenth Amendment of the Constitution was bound to be firmly and accurately applied. There could be no middle ground. Middle ground would satisfy neither legislative prerogative nor judicial prerogative. Certainly not the judicial prerogative. That must apply justice as it is understood of men, and, in its clear light, it was inevitable that it would come to be seen that the Fourteenth Amendment of the Constitution would be a composition of delusive words if it forbade only the taking of the physical property, while it permitted the taking of its value,—if its guaranties of the law's equal protection to all persons would be satisfied as to railroads by leaving them a microscopical profit. If so, the pool of Tantalus would lose its force to illustrate excited and disappointed expectation when compared with the organic law of this great land. We should keep in mind that the regulation of a railroad affects, in reality, the natural persons who own it, not the insensible, legal artificiality and abstraction called a ' corporation '. For the natural persons the protection of the Constitution is intended, and would any one say that justice is done them if their investment be allowed only an infinitesimal fraction of 1 per cent., while all other investments are expected to return, at least, legal interest, with freedom, besides, of unlimited advantage."

The lower Federal Courts and the highest Courts of some of the States have so far developed a legal rule as to hold that the maximum return must not be less than the legal rate of interest.

For this rule there is ample justification. Usury laws are simply maximum charges for the loan of money. The authority of the State as to them is precisely the authority of the State as to the maximum charges of public service corporations. In each case the justification is the prevention of extortion. Beyond that the State is powerless to interfere in that which is essentially a matter of private contract. The liberty of contract gives the borrower and the lender full freedom to contract between themselves for the loan of capital, subject only to the power of the State to prevent extortion. The maximum legal interest, therefore, is the legislative declaration of a rate that is not unreasonable and within which the borrower and the lender have full freedom of contract. In Lake Shore v. Smith (*supra*, p. 52), this Court has ruled that the legislative rate is *prima facie* a reasonable rate and that while the Company cannot go beyond it, yet within it

> " it is at liberty to conduct its work in such a manner as may seem to it best suited for its prosperity and success ".

We have, then, a legislative declaration that for the ordinary loan of money upon collateral, six per cent. is legislatively reasonable and that the borrower and the lender are at liberty to contract for at least that sum. If this be true of the ordinary loan of money, it is doubly true of an investment in a public service corporation, which in a sense is a loan of capital to a public enterprise. There are, however, at least two important differences between the two, which strengthen the legal rule that the investor should not receive less for the use of his money than the ordinary creditor.

(1) The creditor has no further labor than the exercise of judgment in the selection of his collateral. With him, to use the phrase of Aristotle, " money breeds itself."

Those, however, who unite in a public service corporation to serve the public, add to the mere use of money all the resources of science, industry and business sagacity to serve the public interest.

In Brunswick Water District v. Maine Water Co., Mr. Justice SAVAGE well said :

> " Those who engage in a public service cannot be put upon the same level as those who make mere investments. They are not like the depositors in a savings bank, whose right to draw out is limited to precisely what they have put it, with its earnings. They are, on the contrary, engaged in a business, with the ordinary incidents of a business, with some of the hazards and the hopes of a business. To be successful, they must be wise and prudent, thrifty and energetic. These virtues, if they have them, they impress upon the property, making it more valuable than it otherwise would have been. Is it to be said that they can have no return for skill and good management ? We do not think so. They are entitled to charge reasonable rates. (Beale and Wyman on R. R. Rate Regulation, Sec. 401.) "

(2) A better reason, however, is that the ordinary creditor, in the case of a call loan, can withdraw his money at will and, in the case of a time loan, can, upon the maturity of his obligation, withdraw his money for any more profitable use which may present itself. The money which is contributed to the capital of a public service corporation, on the contrary, remains permanently dedicated to that use. Practically it cannot be withdrawn, and if in the progress of society the use is superseded by a better use, the investor may not recover more than a fraction of his investment. The property of a gas plant is at the hazard of any inventor who may be able to supply a better means of illumination. As gas succeeded oil and as the electric has materially lessened the demand for gas, similarly a superior illuminant may at any time be discovered, which will supersede the use of both. It is well known that upon this problem distinguished scientists are working in all

the laboratories of the world, and many believe that the wonderful discoveries in radio-active substances will yet result in an illuminant produced at little cost and without heat.

It therefore follows that the maximum rate for the hazardous use of money cannot reasonably be less than the maximum rate for an ordinary loan on good collateral.

The legal interest rule has been recognized in a number of cases.

In Brymer v. Water Co., 179 Pa., 251 :

> " They are entitled to a rate of return, if their property will earn it, *not less than the legal rate of interest ;* and a system of charges that yields no more income than is fairly required to maintain the plant, pay fixed charges and operating expenses, *provide a suitable sinking fund for the payment of debts* and pay a fair profit to the owners of the property, cannot be said to be unreasonable ".

The same Court reaffirmed this ruling in the very recent and important case of Pennsylvania R. R. Co. v. Philadelphia County, 220 Pa., 100, 115, where the Court passed upon the validity of the two-cent rate law of that State. The Court said :

> " What was said in Brymer v. Water Co., 179 Pa., 231, was that the company was entitled to a fair return, not less than the legal rate of interest. *In naming the legal rate the court was naming a minimum not maximum rate. Six per cent. is the legal estimate of the legitimate profit from the ordinary safe use of money.* No business man in 1846, even if now, went into a new and extensive venture of uncertain outcome without the hope of more than common interest. Because his judgment or foresight was good is no reason that he should be shorn of his profits in the result."

In Chicago Union Traction Co. v. State, 114 Fed. Rep., 557, 561, where the valuation of corporate franchises for the purposes of taxation was under consideration, the Court said :

> " Several other elements in a fair calculation, based on net earnings, have raised questions to which we have given

> careful consideration. The first of these is upon what rate of the true net earnings the aggregate value of the property should be capitalized. We have fixed the rate at *six per cent.* That is the rate adopted in States where assessments are made upon the basis of net earnings. It is less than the rate that some advanced advocates of municipal ownership are willing to guarantee to investors in securities of this character".

In Louisville Ry. Co. v. Brown, 123 Fed. Rep. 946, the Court said as to maximum railroad rates (p. 951):

> " I think it will be conceded that as long as the rates are reasonable and do not unjustly discriminate, the Company is entitled to earn some amount, and it seems reasonably clear to me that if entitled to earn something, under the above conditions, it is entitled to earn, under the same conditions, *a compensatory amount equal at least to the usual and legal rate of interest in the locality where the railroad is situated*".

In the very recent case of Central R. R. of Georgia v. Alabama, 161 Fed. Rep., 925, the Circuit Court, in its exhaustive opinion upon the Railroad Rate Law of that State, adopted the "legal rate of interest rule". Judge JONES said:

> "The best standard which the courts and business men have been able to find for testing such questions is to ascertain whether, when the service is done at just and reasonable rates, the carrier obtains for the service as a whole a fair return upon the value of all the property employed in the business. The courts have, therefore, generally taken as the standard of proper return the legal rate of interest, contrasted with the current rate of profit from the use of other property in like kinds of business. While the percentum of profit allowed upon loans of money between private individuals is not, in many respects, a fair standard for determining just profits from the use of other kinds of property under conditions of greater hazard, yet the rate is the result of long experience, and is tantamount to a legislative declaration that such measure of profit is in general a just return upon investments in property. The evidence shows that the cur-

> rent rate of profit upon property used in business enterprises similar to railroads gives a net income, upon the value of such property, not lower than 8 per cent. per annum Whether we take the legal rate of profit by way of interest on loans of money, or the rate of profit which common experience shows to be the average, and, therefore, approximately a just return from the use of other forms of property, both modes lead to the same result."

In Milwaukee Ry. & Lt. Co. v. Milwaukee, 87 Fed. Rep., 577, 585, four and five-tenths per cent. was held confiscation.

In Columbus Lt. Co. v. Columbus (Referred to by the Master, Record, p. 207), the Master allowed, and the District Court confirmed, a finding that "*at least six per cent. should be allowed*".

In Southern Pac. R. R. Co. vs. Com., 78 Fed. Rep., 236, 261 (*ante*, p. 86), Mr. Justice McKenna said:

> " All other investments are expected to return *at least* legal interest with freedom besides of unlimited advantage."

In People *ex rel.* Water Supply Co. v. State Board of Tax Commissioners, the Appellate Division of the Supreme Court of New York for the Third Department, in a case involving the true assessment of a special franchise tax, repudiated the reasonableness of a five per cent. return for a public service corporation, and said:

> " Six per cent. should then be deducted as a fair return upon the value of the real estate and other valuable property. The surplus earnings should then be capitalized at six per cent. and the result represents the fair value of the intangible rights in the streets, to which rate should be added the value of the tangible property in the streets, and the result represents the value of the special franchise."

In Spring Valley Water Works v. San Francisco, 124 Fed. Rep., 598, the Court held that

> " The weight of evidence is clearly in favor of a rate *not less than six per cent. per annum*",

and therefore held 4.40 per cent. to be confiscatory.

In International Bridge Co. v. Canada Southern Ry. Co., 7 Ont. App., 226, the Court of Appeal of Canada passed upon the reasonableness of the tolls charged by a Bridge Company. The Court, after agreeing that the creation of a sinking fund to safeguard against possible casualties to the bridge was reasonable, added :

> "To speak of six per cent. upon capital laid out in such an enterprise, is *most unreasonable.*"

This decision was affirmed by the highest judicial authority of England (8 Appeal Cases, 723).

In that case the hazard of the capital, due to the possibility of an accident to the bridge was recognized, and the Court by way of illustration referred to the great disaster which befell the bridge across the Tay.

A gas company operating in a large city *and especially in a congested city like New York,* is subject to as great a hazard as any bridge company. Gas conduits and electric wires are necessarily laid in close proximity and the consequent danger is recognized by the most competent gas engineers. That such danger is not imaginary can be illustrated by the immense damage done to the Boston Gas Companies by an explosion, which destroyed a large number of lives and much property. The gas business, therefore, is more hazardous than a water company or turnpike company or even a bridge company. It bears a close analogy to a railroad or steamship company, where the accident of a day, against which the highest engineering talent cannot wholly guard, may consume the profits of many days or even years.

The State of New York has uniformly recognized that a public service corporation should receive more than six per cent.

A return not exceeding 10%, with a reserve fund of 10% of the capital in addition, was recommended for *this Company* by the Senate Committee of 1886 (Complainant's Exhibit 227, Record, pp. 5325, 5388).

The New York Mutual Gas Light Co., by its Charter from the Legislature, is permitted to earn 10% dividends, and to share with its customers any earnings beyond that point (Chap. 651 L. 1866, Comp. Ex. 239, Record, pp. 1854, 5292).

The lowest rate assumed, by the Stevens' Committee of 1905, was 8%.

And likewise the Gas and Electric Commission in 1906, found that 8% was a reasonable return upon the actual value of the property owned by the Company and used in the manufacture and distribution of gas (Bill of Complaint, Record, p. 33; Opinion admitted in Answer).

Most significant is the provision of the "Railroad Law" of the State of New York. It provides (§ 38) that the Legislature may, from time to time, alter or reduce the "rate of freight, fare or other profits upon such roads;" but that the same shall not, without the consent of the Corporation, be so reduced as to produce with such profits "*less than* 10% *per annum on the capital actually expended.*

Aside from the evidence of this Section as to the Legislative view of the "fair and reasonable" rate of return allowable to a public service corporation, could it be said that the Complainant was receiving the "equal protection of the laws," if it should be limited to a lower return than other public service corporations, with no ground whatever evident for such a discrimination?

In Massachusetts, the Legislative Committee of 1900, in discussing the situation of the New England Gas and Coke Association and the dividend, which might be permitted to be paid by it if brought under the jurisdiction of the Gas Commission, referred to such return as "*the* 10% *heretofore recognized by custom*" (Bemis, Record, p. 2541; Mass. House Document, No. 1405 of 1900).

Even municipal plants in Massachusetts, owned and operated by public capital, which customarily receive and expect a lower return than private capital, are permitted to return as high as 8 per cent. upon such capital, in addition to setting aside a sinking fund for existing obligations and three per cent. for a final renewal fund (Revised Laws Mass., Vol. 1, Ch. 4, § 22).

Even in England, where the return expected upon capital is substantially lower than in America, Gas Companies pay dividends from eight to ten per cent.; and, among others, Mr. Marks, the chief witness and expert for the appellants, admits that the three Metropolitan Companies of London pay an average of $8\frac{24}{100}\%$ on their capital (Record, p. 2097).

It is stated in the report to the Committee of 1886, that the South Metropolitan of London was at that time paying 12%.

It would unduly expand this brief to attempt any adequate summary of the expert testimony given in behalf of the appellee to sustain its claim of a return of 8% to 10%.

Dr. Humphreys, probably the most experienced gas engineer in this country, and a witness for the appellee, testified from a large practical experience in the appraisal and purchase of gas properties as well as from a special study of the subject, that 10% is a fair return upon the investment of a gas company (Record, p. 1689).

Messrs. McMillin, Halsey and Bertron, gentlemen not only well acquainted with matters financial, in general, but with exceptional experience in dealing in public lighting securities, testified that investors will not advance capital to purchase gas properties, unless they can see a present or reasonably immediate *earning* power of at least 10% on the *purchase price;* and such price includes of course not only *tangible* property but any franchise and good will, which go to make up the entire value of the going concern (Record, pp. 1697, 1765–1771).

Mr. Bertron, on the general subject pointed out that even the Pennsylvania Railway, which is generally regarded as the standard transportation company in the United States, was earning about 10% on the market price of its shares, then around 140; and that the stock of the Atchison Railway, selling at par, was earning about 12.

Appellants presented no witness to rebut the testimony of Messrs. Humphreys, McMillin, Halsey and Bertron, as to the rate of earning, which must be visible on the investment to induce the investor to embark his capital in the enterprise.

They presented a schedule, showing that on the market value of certain selected gas stocks the net return *paid* to the investor was less than 5% in many instances. Mr. Whitney, in his brief (p. 112) for the Public Service Commission, admits that such market quotations are so affected by special considerations as to be of little, if any use.

The fallacy of such market quotations is obvious. The market price of a stock is dependent upon the earning possibilities of a Company far more than its present distribution of dividends. The stock market, usually optimistic, always discounts the future by paying more than the dividend value in the hope of larger dividends or other advantages. Moreover, the market price is necessarily affected by the surplus of a corporation, and often by the strategic importance of the Company in a given locality. The Appellee's experts analyzed this schedule and showed some of the special circumstances which caused the securities of different localities to sell temporarily at a price which, in dividends, yielded a small return of five per cent. It is, however, unnecessary to repeat this analysis in this brief, for this Court will not decide the question on what Judge HOUGH happily called "the vagaries of speculation."

As the Master has stated (Record, p. 255), Dr. Marks, the chief expert for the Appellants below, "expressed the view that a *dividend rate* of 8% was fair" (Record, p. 2037).

It was also shown that the Boston Consolidated Gas Company by a recent Act was authorized to pay 7% dividends with gas at 90 cents; but it may increase its dividends to *8% or anything higher*, if and when it is able to reduce the price of gas 5 cents per thousand feet for each additional 1% of dividend.

In very rare instances has the Massachusetts Commission reduced the price of gas, where a Company was then paying less than 10%, and in each such instance the Commission has felt it necessary to explain in a written opinion the special and peculiar reasons, upon which is based its action (Dr. Humphreys, Record, p. 4723; copy of Opinions). The action, in no case, was based on the general proposition that a well managed and reasonably capitalized Company, was entitled to earn less than 10%.

Complainant has never paid excessive dividends; the most that it has ever paid in any calendar year under the old rate is 8½%. It has paid as low as 3%; it is now paying at the rate of 4%; and for the entire period of its existence it has under the old rates paid only a fraction over 6% (Complainant's Exhibit 83, Record, p. 5034). To pay an average dividend of even 8%, it must be permitted a maximum earning power of at least 10% in good years. From 1884 down to the hearing before the Master, the stockholders of Complainant have received in dividends an aggregate sum *less by over $11,000,000* than would have been required to pay average dividends of even 8% during that period (Complainant's Ex. 84, Record, p. 5036), and an even greater deficit below 8% (exact figures $10,401,671.50) appears if we consider only the period up to 1900, when *the capital of the Company was first increased* from the original $39,078,000, at which it was fixed at the time of consolidation in 1884.

A small surplus, much less than the deficit below 8% dividends above shown, was accumulated by the Company; but within every one of the last six years it has been drawn upon to pay dividends, the earnings of the Company being insufficient to pay even the moderate ones declared. Stockholders thus merely took "their own," which they might have distributed to themselves earlier. Thus for the year ending October 31st, 1905, *the Company under the old rates failed to earn its dividends by $2,005,552.62*, and drew that sum from surplus to make up the deficit (Complainant's Ex. 95, Record, p. 5052); so that Complainant's total surplus appeared on October 31, 1905 at $1,546,697.38 (Complainant's Exhibit 80, Record, p. 5033) or less than $74,000 per annum in the 21 years of the Company's operations, being only 1.03 cents per thousand on the total sales of the Company for that period.

If these results have followed under the old rates, what would have resulted if the earnings had been reduced 20% by the reduction of $1.00 to .80 per cubic thousand?

X.

The basis of calculation is the present value of the property and not its original cost.

An argument was addressed in the Court below, which in its last analysis is pure socialism. It contended that the appreciation in the value of complainant's property was an "*unearned increment*", upon which the complainant should be denied any return. It was therefore claimed that the true basis was the original cost of the property.

The complainant Company was formed by the consolidation of six existing gas companies. Among the present real estate holdings of the Consolidated Company are some which were originally acquired by some of the constituent companies as early as 1823, when New York City was little more than a village. During all these years the Company has held this property, having at all times the legal right and the opportunity to convert it into cash at the steadily enhancing prices of real estate due in part to the extraordinary growth of the City of New York. It is now seriously claimed that the rate should be fixed upon the cost value of this property in 1823, and not upon its fair present value.

Mr. Whitney's brief for the Public Service Commission illustrates this socialistic idea of State regulation, by an illustration set forth in full on page 200 of his brief. He imagines two gas companies starting with separate locations of equal value. One plant, with the changes incident to the growth of a community, increases in value, while the other remains stationary. Other things being equal, he then asks whether the fortunate company is entitled to a higher price for gas by reason of such appreciation in value than the less fortunate company.

We confess that if this argument for the legislative equalization of fortunes had been addressed to a Single Tax Society, we would feel no surprise, but addressed to the Supreme Court of the United States, in a judicial proceeding under the Fourteenth Amendment, we can only rub our eyes and say:

"Can such things be
And overcome us as a summer cloud,
Without our special wonder?"

Why should the Legislature, in preventing extortion in the sale of gas, attempt to equalize improvidence with providence and to deny to the prudent investor and wise business management the profit of their sagacity, or even good fortune, simply because another competitor has been less fortunate? This doctrine in its last analysis is simply an attempt to penalize thrift and to take away one man's property (or what is equivalent, its earning power) because another has not been equally fortunate.

Fully appreciating that this Court has ruled to the contrary by holding that the basis of the calculation is "the fair value of the property being used by it for the convenience of the public." Mr. Whitney proceeds to point out the "fallacy" of this "basis" by asserting that (p. 202):

> "Only so much of the value of the property as was covered by the original investment is really used as capital in gas making. For that purpose the value has never increased."

This certainly is novel doctrine. If the Consolidated Gas Company, through one of its predecessor companies, bought in 1823 a piece of ground for $10,000 and has in the course of years built a plant upon it and the ground is to-day worth $1,000,000, then Mr. Whitney asserts that all that the Gas Company actually uses in the business is $10,000, and not $1,000,000, although as matter of fact, the million dollar property is actually used for the purpose of making gas and is appropriate for such use. This reasoning is worthy of the scholasticism of the Middle Ages.

Mr. Whitney adds, however (p. 202), that we are not wholly denied the appreciation of value, because we can realize on such value *when we sell it.* In the meantime, however, if we are denied a just return on such increased value, it is idle capital in our hands.

Moreover, Mr. Whitney's theory results in a strange paradox. If we devote our property to the public use, we are denied any return except upon the original cost, but if we withdraw it from the public use, we are then graciously permitted to obtain some return upon it in other ways. This theory would effectually put a penalty and not a premium upon public service and radically reverses the theory of public service corporations, under which they are entitled to gain a profit upon what they use and not upon what they cease to use.

Mr. Whitney further says (p. 203) that because we make no claim for a return on the stocks of the Edison Electric Company, the enhanced market value of the real estate stands in no better position. The fallacy of this is obvious, for the stocks of the Edison Company are not employed in the manufacture and distribution of gas, while the real estate in question is.

Still more socialistic in its reasoning is Mr. Whitney's remark (p. 244), that if a company has, under authority of law, made profits and has not distributed them to stockholders in the way of dividends but has re-employed them in the business for the public good, and these facts have not been disclosed to the consumer, such investment of surplus earnings

> " should be regarded as having been contributed by the consumer and not by the company and hence should not be treated as capital for the purpose of fixing maximum rates."

If this be true, then not only can our present property be taken without a reasonable return but profits heretofore paid us, under maximum rates fixed by the Legislature are to be taken from us and treated as contributions of the consumers to the capital of the business. Whether we are obliged to capitalize these invested profits and distribute them in the form of new stock among the consumers, whose contribution it is claimed they are, Mr. Whitney does not say. If this be so, not only is the present and future uncertain for public service corporations, but even the past is not secure.

However convincing this argument might be in a Single Tax Society, it surely can find no place in this last and great citadel of property rights, the Supreme Court of the United States.

Passing by these fanciful and untenable suggestions, we will briefly discuss Mr. Whitney's main proposition, from which they are deduced, that the basis of calculation for rate regulation purposes is not the present value but the original cost.

Such a contention is absolutely without any sanction by this Court. On the contrary, this Court, in the case of San Diego Land Co. v. National City, 174 U. S., 739, 757, thus stated the rule:

> "What the Company is entitled to demand, in order that it may have just compensation, is a fair return upon the reasonable value of the property **at the time it is being used for the public.** The property may have cost more than it ought to have cost and its outstanding bonds for money borrowed and which went into the plant may be in excess of the real value of the property. So that it cannot be said that the amount of such bonds should in every case control the question of rates, although it may be an element in the inquiry as to what is, all the circumstances considered, just both to the Company and to the public."

Again, in Cotting v. Stock Yards Co., 183 U. S., 79, 91, the Court said:

> "It has declared that the **present value** of the property is the basis by which the test of reasonableness is to be determined, although the actual cost is to be considered, and that the value of the services rendered to each individual is also to be considered."

Again in Smyth v. Ames, 169 U. S., 547, the Court said:

> "What the Company is entitled to ask is a fair return upon the value of that which it **employs** for the public convenience."

Again in San Diego Land Co. vs. Jasper, 189 U. S., 439, 442, the Court said:

> "It no longer is open to dispute that under the Constitution 'what the Company is entitled to demand, in order that it may have just compensation, is a fair return upon the reasonable value of the property **at the time it is being used for the public.'** San Diego Land Co. vs. National City, 174 U. S., 739, 757. That is decided, and is decided as against the contention that you are to take the actual cost of the plant, annual depreciation, etc., and to allow a fair profit on that footing over and above expenses."

Again in Stanislaus County vs. Irrigation Co., 192 U. S., 201, 215, the Court said:

> "After taking such facts into consideration, the Company might still be directed to receive rates that would be nothing more than a fair and just compensation or return upon the reasonable value of the property **at the time it was being used** for the supplying of the water to the public."

The lower Federal Courts have uniformly so understood the doctrine of this Court.

> The owner of property devoted to a public use " is entitled to the benefit of any appreciation in value above the original cost and the cost of improvements, which is due to what may be termed natural causes," such as "improvements made in the vicinity of the property, the growth of the City or town where it is located, the building of railroads, the development of the surrounding country and like causes." The owner would be deprived of the increased value so produced, " by legislative action which prevents him from realizing an income commensurate with the enhanced value of his property."
>
> Thayer, J., in Cotting v. Kansas City Stockyards Co., 82 Fed. Rep., 850, 854.

If the property " has since enhanced in value, those who invested their money in it, like others who invest their money in other kinds of property, are justly entitled to the benefit of the increased value," in determining a reasonable rate of return upon the investment.

San Diego Land & Town Co. v. National City, 74 Fed. Rep., 79, 83 ; Affd. 174 U. S., 939.
San Diego Land Co. v. Jasper, 89 Fed. Rep., 274, 281.
San Diego Land Co. v. Jasper, 110 Fed. Rep., 702, 714.

That the Company loses a return upon any depreciation in value is reasonably settled. "It is a poor rule that does not work both ways," and therefore a return on the appreciation of value necessarily follows.

We invite the earnest consideration of this Court to the irreparable damage which would be done to railroad investments in this country, if the doctrine for which the Appellants contend were sanctioned by this Court. Billions of dollars are invested in railroad properties and there is insistent public demand for a revaluation of railroad properties as the basis of determining the reasonableness of their charges. Most of these railroads have been built for many years and some, like the Baltimore & Ohio, for nearly three-quarters of a century. Many of them occupy in part their original roadbeds and still use in part their original terminal facilities. If these are to be valued on the basis of their original cost, there will be a destruction of values which may justly be compared to the San Francisco earthquake. If capital is freely loaned to these corporations on the basis of the present value of their property, why should this Court hold that while, in determining the reasonableness of railroad rates their fixed charges must be recognized, nevertheless the rates may only yield a return upon the original cost of the property?

Certainly the economic phrase "unearned increment" can be applied with poor grace to the railroads, for manifestly they have not only in great part created the enhanced values which they themselves enjoy but have immeasurably appreciated the property holdings of the community. This is also true of gas companies, for if their real estate holdings have grown in value with the growth of the community, it is equally true that the real estate holdings of every citizen have been immeasurably enhanced by the ability of the owner to have such indispensable conveniences of civilization as light, water and power.

XI.

The costs were properly imposed upon the respondents, including one-half thereof upon William S. Jackson, as Attorney General of the State of New York.

It is not seriously questioned that the costs in this expensive litigation should have been imposed upon the respondents. The State, to the prejudice of the complainant's property rights, has enacted certain unconstitutional legislation, which, even with the collection of these costs, will impose a very heavy burden of expense upon the complainant company. The complainant has sustained its contention in all respects and has established to the satisfaction of the Court that its property rights have been invaded by a violation of the Fourteenth Amendment. Under the circumstances, it would have been most inequitable had the costs not been imposed upon the defendants.

It is claimed, however, that so much of this decree as imposed costs upon William S. Jackson, as Attorney General of the State of New York, is erroneous. It is obvious that either William S. Jackson, as an individual or in his official capacity, must bear his proportionate share of the burden of a losing litigation. As he was conducting the litigation for the supposed benefit of the State, it would be[more equitable if the State should assume the burden imposed upon him. Under ordinary circumstances, this would give rise to a debatable question whether if the suit be not a suit against the State, the State can in turn be made to pay its proportionate share of the expense.

But in the case at bar it is not necessary for this Court to determine this question, for we have already shown *(supra,* pp. 33 and 34) that when the Attorney General entered a general appearance as "Attorney General of the State of New York" and filed an answer which took issue with the complainant on the merits, he, under the authority of Gunther v. Atlantic Coast Line, 200 U. S., 273, waived any immunity which the State might have otherwise enjoyed and thereby made the State responsible for its share of the costs in attempting to enforce an unconstitutional Statute.

XII.

The Circuit Court was without power to make relief from an unconstitutional statute conditional upon the acceptance by complainant of a new rate to be fixed by the Court.

Counsel for the Public Service Commission by their XV. Point (p. 286) ask that relief be granted us on condition that we accept a rate, not fixed by either Legislature or Commission but to be fixed by the Court. They therefore asked the Court to fix a rate, by threatening to deprive the Company of part of its property unless it consented to the rate as so fixed. This the Court had no power to do. The power of the court, in a case of this kind, is limited to ascertaining whether an established rate is reasonable. If it finds that it is not reasonable, the legislative Act establishing it must be declared void. The court has no power to fix the rate which, in its judgment, would be reasonable, as such power is exclusively legislative. The court cannot, therefore, refuse relief except on condition that it shall be allowed to do that which the law says it has no power to do.

> Cotting v. Kansas City Stockyards Co., 82 Fed. Rep., 839, 845;
> Western Union Tel. Co. v. Myatt, 98 Fed. Rep., 335, 342-3;
> Chicago etc. R. Co. v. Wellman, 143 U. S., 339, 344;
> Reagan v. Farmers L. & Tr. Co., 154 U. S., 362, 397, 399;
> Steenerson v. Great Northern R. Co., 69 Minn., 353, 375;
> State v. Sioux City &c. R. Co., 46 Neb., 682, 702;
> State v. Johnson, 61 Kan., 803, 817;
> San Diego Water Co. v. San Diego, 118 Cal., 556, 581.

The maxim, "He who seeks equity must do equity," invoked by the appellant, has no application to a case of this kind but only to those cases where the granting of equitable relief is *within the discretion of the court.* The maxim, "Equity follows the law," is superior, in the present case, to that invoked by the appellant. Equity must follow the law; and courts of equity have no greater right to disregard contract relations or statutory or constitutional provisions than have courts of law. The constitution of the United States is the supreme law of the land and is binding on all judges alike, whether sitting in equity or at law. No discretion whatever is vested in courts of equity, in a case involving the constitutionality of a statute. If, on the facts found, a law is unconstitutional, the court must declare it void; and it has no discretion in the matter.

> Magniac v. Thomson, 15 How., 281.

In that case, the Court stated it as a postulate or legal truism, "admitting of no dispute", that (p. 299):

> "Wherever the rights or the situation of parties are clearly defined and established by law, equity has no power

> to change or unsettle those rights or that situation, but, in all such instances, the maxim, *equitas sequitur legem*, is strictly applicable."

If an Act of the legislature, by its extreme terms, deprived a citizen of his liberty or inflicted cruel and unusual punishments, it would not for a moment be contended that any court under our system of jurisprudence would have power to require him to agree, as a condition of having the law declared void, to submit to such punishment or conditions as the court might consider reasonable. The point has been passed upon by this Court.

Hedges v. Dixon County, 150 U. S., 182.

In that case, suit was brought by the holders of a large number of bonds issued by Dixon County, where the constitutional limit had been exceeded and where the bonds were, therefore, not enforceable at law. The complainants asked the court to determine how many bonds were issued in excess of the constitutional limit, to declare bonds to that amount held by the complainant void and to enforce the liability of the County on the remaining bonds. Held, that as the power of the Court was limited by the constitution, the issue of a greater number of bonds than was authorized rendered all of the bonds void and that a court of equity had no jurisdiction, as the transaction, being void at law, was equally void in equity; and in discussing the principle involved, the Court said (p. 192):

> "Where a contract is void at law for want of power to make it, a court of equity has no jurisdiction to enforce such contract, or, in the absence of fraud, accident or mistake, to so modify it as to make it legal and then enforce it. Courts of equity can no more disregard statutory and constitutional requirements and provisions than can courts of law. They are bound by positive provisions of a statute equally with courts of law; and where the transaction, or the contract is declared void because not in compliance with express statutory or constitutional provision, a court of equity cannot interpose to give validity to such transaction or contract, or any part thereof."

The business of the Appellee is not interstate commerce and it is, therefore, beyond the sphere of federal legislation. The rate can be prescribed only by the state legislature. But neither the federal government nor any of its departments is permitted in any manner to exercise a state function. In other words, even if a judge of the state court had the undoubted power which the defendants asked the trial Court to exercise, yet the fact that the Court is here only applying the Constitution and is without general jurisdiction shows its want of power. To require the complainant, as a condition of declaring these statutes void, to assent to a rate fixed by the Court, would be

> " an invasion by the judiciary of the federal government of the legislative functions of the state government. It is a most extraordinary request; and a compliance with it would involve consequences no less out of the way of judicial procedure, the end of which no wisdom can foresee."
>
> Heine v. The Levee Commrs., 19 Wall., 655, 661 (MILLER, J.).

XIII.

The Circuit Court properly assumed jurisdiction of this controversy.

This brief was necessarily prepared without the advantage of seeing the full and very able brief of the learned counsel for the Public Service Commission (herein referred to as Mr. Whitney's brief), which, in substantial interest, is the chief Appellant. Its brief was not served upon us until October 23rd, at which time it was impossible to reconstruct this brief so as to follow the points in Mr. Whitney's brief in the order in which they are made. We believe, however, that this brief on the law, together with Mr. Garver's brief on the franchises and goodwill and also Mr. Mathewson's brief on the facts, have anticipated and fully answered every pertinent question—whether of law or fact—advanced by Mr. Whitney. One feature of his brief seems to justify a further answer, and that is the repeated and continuous attack upon the propriety of the Federal Court's assumption of jurisdiction in this controversy.

Mr. Whitney does not and can not suggest that this court is without jurisdiction, for he concedes that as the ultimate question involved is the application of the Fourteenth Amendment, that the controversy presents essentially a federal question. Nevertheless, he vehemently expresses his opinion that the enforcement of the Fourteenth Amendment in this case should have been left to an administrative tribunal whose decision should have been a finality. In his Third Point, (page 175), Mr. Whitney also asserts that the Federal Court should have declined jurisdiction and remitted it to the state courts. He claims that this should have been done upon the ground that the controversy is not (page 177)

> " one of so grave a nature as warrants the interposition of the federal power in purely local affairs,"

as if the application of the Fourteenth Amendment was a purely local affair and as if the confiscation of the earning power of a business, whose assets according to the findings of the Circuit Court amounted to nearly sixty millions of dollars, was not " grave " in its character. He asserts that the state courts have some superior power to (page 177) " confine the record within the limits of reason and intelligibility," and therefore that the federal courts are incapable of trying the case within such limits. His attack, however, is not only upon the federal judiciary, but upon the assumption of jurisdiction by any court, state or federal. He states, page 177, that this is

> " a question between one man in a gown and three or four men without gowns,"

and he believes that

> " the majority of thinking people, taking the general average rather than any particular case, would consider a commis-

> sion as the best qualified, a Judge as the next best and a legislature as the least."

As the rates now under consideration are purely *legislative* rates, this concession does not advance the Appellant's argument.

Mr. Whitney then proceeds to demonstrate the inferiority of the Federal court in determining the application of the Fourteenth Amendment to that of a state commission by asserting (page 178) that the man in the gown

> "can give but a limited time to the hearing of the case,"

and that therefore counsel have not adequate time to argue the case.

The record in the present case is a striking exhibit of the relative fairness of legislative and administrative bodies and the judiciary. The Stevens Legislative Committee of 1905 refused to recognize the *right* of counsel for this Company to be heard in the investigation, and limited counsel in showing the Company's side

> "to such brief additional questioning or data as the courtesy of the Committee permitted."

At its conclusion, any opportunity to argue the questions involved orally was denied. Its investigation of all the companies, gas and electric, lasted only three weeks.

Still more striking is the comparison between the care taken by the Gas and Electric Commission of 1906 on the one hand and the Circuit Court upon the other. The former investigated all of the gas companies of Manhattan *in less than three months*, while the Master appointed by the Circuit Court took testimony for over seven months, and considered the matter for four months more before filing his report. Mr. Whitney complains that a Court does not give counsel sufficient time in this class of cases. The fact is that Judge HOUGH gave nearly a week to the oral argument of this case.

Mr. Whitney, on page 262, does not regard it as

> "seemly that a single man, whatever be his title and by whomsoever elected or appointed, shall have general appel-

> late jurisdiction over a tribunal of specialists established by a state—a judgment practically final upon questions of fact, for is this Court able to read the record or its work?"

He is of opinion that injustice by state tribunals will be fully corrected by the consequential damage done to its general prosperity, for he says,

> "a State which does not treat its corporations fairly will soon suffer and soon repent, and will not the education which it will have received compensate in the long run for the temporary loss that investors will have suffered?"

We admit that the developments of the last few years have been an "education" in the matter of arbitrary action by the states in confiscating the earning power of corporations, but we fail to see how such "education" can afford any compensation or even consolation to the unhappy investor for his loss, which is permanent and not, as Mr. Whitney intimates, merely "temporary."

Whatever may be said as to the comparative ability of the federal judiciary and a state tribunal to intelligently determine when the Fourteenth Amendment is violated—and, as Mrs. Malaprop says, "comparisons are odorous"—there is one manifest advantage of the judiciary over an administrative tribunal, and that is in the impartiality of their judgment. The judiciary is trained by habit and tradition to hold the scales of justice even, but an administrative tribunal is not only Court but prosecutor as well, and it would be unnatural if the same man or body of men could be both litigant and Judge without affecting their judicial poise. Moreover, it cannot be ignored that an administrative bureau necessarily desires to satisfy public opinion—often ill advised—and to please the electorate. This is admirably illustrated by the Gas Commission of 1905, which prescribed this 80 cent rate. They conducted their all too brief deliberations under the pressure of newspaper clamor, which vehemently insisted upon 80 cent gas. While they were considering the rate and before the gas company had presented any evidence, the then

Governor of the State of New York (who appointed the members of said Commission) recommended in his message the passage of an 80 cent gas bill. As the Commission was a part of the Governor's administration, the effect of this executive policy could not have been negligible, but this recommendation was promptly followed, when a bill was introduced in the State Legislature to carry the Governor's recommendation into effect. This was followed, before the Commission reached its conclusion, by the introduction of another bill by Senator Stevens, Chairman of the Legislative Committee of 1905, to abolish the Commission altogether. All these facts will be found in the record. (See Carter's testimony.)

We do not question the motives of the officials to whom reference has been made; we have no question that they sincerely and honestly believed that 80 cent gas was due to the consumer, but when we see an administrative tribunal, reaching a finding under pressure of this character, we must emphatically dissent from the claim that such a tribunal has superior qualifications to the federal judiciary in enforcing the Fourteenth Amendment.

Our preference in litigating our rights under the Federal Constitution in the Federal courts is further strengthened by the rules of evidence which Mr. Whitney, as the legal representative of the Public Service Commission, lays down as the true method of determining the compensatory or confiscatory character of a rate. If we are remitted to the tender mercies of Mr. Whitney's favorite tribunal, it is reasonable to assume that we will be confronted with the rules of testimony which its distinguished counsel has laid down. These rules are (page 187):

> 1. The burden of proof to establish the non-compensatory character of a rate is upon the public service corporation, which must prove every fact in its own relief.
>
> 2. The corporation must therefore prove the value of its property, (which can only be done in part by expert testimony,) BUT
>
> 3. No expert testimony can be given by the gas company because a rate "cannot be declared unconstitutional

because persons employed and paid by complainant swear * * * that in their opinion certain valuations ought to be given to certain pieces of property from which valuations the unconstitutionality of the statute would be inferable" (page 210).

4. As between two unimpeached and qualified expert witnesses, the valuations most favorable to the consumers must be adopted (page 191).

5. Where the experts for the consumers testify to one value of the property and those for the public service corporation to another, the former must be accepted, "unless the state concedes figures from which the contrary deduction must be made."

6. A statutory rate "cannot be declared unconstitutional" upon the testimony of experts or employees "unless the state admits its correctness."

7. Items of value "incapable of exact valuation, must be put down at the minimum amount that a fair minded state board could fix."

Short will be the shrift of a public service corporation if Mr. Whitney's administrative board conducts its proceeding according to these novel and remarkable laws of evidence. In rate regulation cases, the primary question is value, and value necessarily depends to a large extent upon expert testimony, and yet we are told that the courts should refuse the public service corporation the right to call in expert testimony, and that even if it is given the privilege, a conclusive presumption follows that such experts are wrong and that those called by the consumers are necessarily right. If this be so, there is assuredly no "equity stirring."

We cannot believe that it is necessary for us to defend the right of the Federal courts to intervene in this class of cases. Upon this point this Court has spoken in no uncertain tone. In Reagan vs. Farmers Loan & Trust Co., 154 U. S., 362, 397, this Court (page 369) asserts that it is not only the "power" but also the "**duty**" of the courts

> "to inquire whether a body of rates prescribed by a legislature or a commission is unjust and unreasonable."

Recognizing the difficulty of this most important duty, it said, in Chicago Railway Co. vs. Tompkins, 176 U. S., 167, 172,

> " this difficulty affords no excuse for a failure to examine and solve the questions involved * * * Difficult as are the questions involved in these cases, burdensome as the labor is which they cast upon the courts, *no tribunal can hesitate to respond to the duty of inquiry and protection cast upon it by the Constitution.*"

The governmental power to regulate rates, even though demanded by the public interests, is nevertheless in its last analysis experimental state socialism. Its exercise would be intolerable unless the judiciary, as in the past, shall continue to restrain the oppressive use of such power. This truth found felicitous and significant expression in the words of an honored justice of the Court below,* who, on retiring from the bench about a year ago, after thirty years of continuous service, gave to his brethren of the bench and bar this message, as the ripened fruit of his judicial experience :

> " At no time in the history of this nation has the adherence of the national judiciary, to its best traditions of independence and courage, been put to the test so severely as it is likely to be in the days of this generation. The times are near when the courts of this country are to be, more than ever before, the sanctuary of that justice, which consists in administering the law of the land according to the ordained principles of our present form of government. The will of the majority is not law when it transcends the constitutional limitations upon its exercise of power. In many of the States, that will is now threatening the rights of the minority, and has already compelled or instigated legislatures, under the guise of protecting the public interests, to arbitrarily interfere with private business, and to impose unusual and unnecessary restrictions upon lawful occupations. Not a few of the measures proposed invade the freedom of

---

* Judge WALLACE.

> the individual to manage his own legitimate concerns without unwarranted governmental domination, and to enjoy the fruits of his enterprise or of his good fortune without the risk of governmental confiscation. Assuming to act under the authority to make reasonable regulations respecting the use of property which has been clothed with a public interest, many legislatures, by establishing tariffs of rates, or imposing new duties or responsibilities upon the owners of such property, have already subjected them to such onerous exactions as practically to destroy the value of their investments."

To defeat this wise exercise of judicial power, counsel for Appellants insist that the judiciary should not declare any law invalid if there be any possible doubt as to its validity. Where the question of constitutionality is purely one of law and not dependent upon the ascertainment of facts, this doctrine has some justification, although as the occasion for the exercise of federal power to defeat socialistic attacks upon property grows greater, the reluctance of the federal courts, in applying the great limitations of the Constitution, has become markedly less.

The doctrine of the exclusion of all doubt must not be taken too literally. This Court has repeatedly adjudged legislation invalid even though the constitutional question (as in the Income Tax Cases) was so difficult and doubtful that the conclusion could only be reached by a divided Court and after repeated arguments. It therefore cannot be literally true that no Statute can be declared invalid if there be any doubt, however unreasonable. If such were the real attitude of this Court, the wise limitations of the Federal Constitution—without which popular government in our heterogeneous democracy would inevitably break down—would be sacrificed again and again to the supposed exigencies of State legislation, especially where the validity of the latter depends, as in rate cases, upon the ascertainment of facts as to which the exclusion of all doubt is in many cases an impossibility.

This Court is as much concerned in the vigor and efficiency of the Federal Constitution as in that of a State enactment. Its great purpose—so nobly pursued for more than a century—is to uphold in all its vigor and power each part of our dual system of government, and in doing so, it must decide every question as, upon full consideration, seems just. To hold that it can render no adverse judgment in a constitutional cause, unless it can exclude all possibility of error, would be a virtual abdication of its high office: "With firmness in the right," as it is given to see the right, it must enforce in all its vigor and efficacy the wise limitations of the Constitution on state and federal legislative action, and it cannot, if our institutions are to endure, avoid this duty on the ground that the ascertainment of either laws or fact cannot be wholly free from possible error.

The spirit, with which it approaches these great cases, was well expressed by the great Chief Justice in Marbury v. Madison. It was there contended that the sanctity of a statute was such that the judiciary should sustain it at all hazards, as the deliberate act of the people, but Marshall said that these advocates of a peculiar sanctity of a Statute are

> "reduced to the necessity of maintaining that Courts must close their eyes on the Constitution and see only the law. This doctrine would subvert the very foundation of all written Constitutions. It would declare that the act which, according to the principles and theory of our Goverment, is entirely void, is yet in practice completely obligatory."

He added impressively:

> "Why does a judge swear to discharge his duties agreeable to the Constitution of the United States, if that Constitution forms no rule for his government; if it is closed upon him and cannot be inspected by him; if such be the real state of things, this is worse than solemn mockery".

Supreme Court of the United States.

OCTOBER TERM, 1908.

No. 396.

WILLIAM R. WILLCOX, *et al.*, constituting the Public Service Commission of the State of New York for the First District,
Appellants,
vs.
CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 397.

THE CITY OF NEW YORK,
Appellant,
vs.
CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 398.

WILLIAM S. JACKSON, as Attorney General of the State of New York,
Appellant,
vs.
CONSOLIDATED GAS COMPANY OF NEW YORK.

Brief for Appellee, upon special franchises and good will.

APPEALS FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK.

Preliminary Statement.

The Special Master, who tried the issues of fact in this case, found that the reasonable value of all the property of the Gas Company devoted to the business of manufacturing and supplying gas was $83,357,000 (Record, p. 247). In this valuation, he included the sum of $20,000,000 as the reasonable value of the special franchises and good will of the Company, without attempting to apportion the value between those two items (Record, p. 247).

Upon the entire valuation of $83,357,000, the Special Master found that, at the rate of eighty cents per thousand cubic feet, the Gas Company would receive a return of only 2.8% (Record, p. 248). Even if the $20,000,000 allowed for the special franchises and good will were thrown out altogether, the return upon the remaining $63,357,000 would be only 3.6%. This would be equivalent to 6% on $38,788,805, thus leaving $24,569,000, upon which the Company would receive no return (Record, p. 248).

Upon the final hearing, the Court refused to allow anything for the good will of the business; but it held that two of the special franchises owned by the Company were worth *at least* $12,000,000 (Record, p. 431), deeming it unnecessary to pass expressly upon the findings of the Special Master as to the other franchises (Record, p. 432), though indirectly confirming such findings (Record, p. 430); and this sum was included in the total value of the property of the Company, upon which it was adjudged to be entitled to a return (Record, p. 432).

The special franchises of the Company (which included the mains and services in the streets) were assessed for the year 1906, for the purposes of taxation, at $31,900,000 (Record, p. 5291). The mains and services were valued at about $7,900,000 (Record, pp. 202, 1849, 5061), thus leaving for the intangible franchises, the sum of $24,000,000. The Chairman of the State Board of Assessors testified, without contradiction, that, in his opinion, the reasonable value of those franchises was $31,900,000 (Record, p. 1848), in which was included about $7,900,000 for the value of the tangible property, consisting of the mains and house connections (Record, p. 1849).

The appellants assail the allowance of any sum for special franchises or good will, not only on the ground that the amount is excessive, but that the Company does not possess any special franchises and that, even if it did, such franchises cannot be included among the assets upon which the Company is entitled to a return.

The Company has its mains in every paved street in the Borough of Manhattan (Record, p. 566). Its total mileage, in 1905, exclusive of abandoned mains, was 822 miles (Record, p. 668), through which it furnished to its 390,000 consumers (Record, p. 1675) 13,283,163,767 cubic feet of gas (Compl. Ex. 94, Record, p. 5051).

POINTS.

PART I.

SPECIAL FRANCHISES MUST BE INCLUDED AMONG THE ASSETS UPON WHICH THE COMPANY IS ENTITLED TO A RETURN.

FIRST.

Unanimity of opinion in the lower Court as to special franchises.

That the special franchises of the Company should be included among its assets, upon which it is entitled to a return, was the opinion of the Circuit Judge (Lacombe, J.), who granted the motion for a preliminary injunction (Record, p. 143); it was the opinion of the Special Master, who was appointed (Record, p. 199) on account of his peculiar qualifications, pursuant to the suggestion of this Court in Chicago, etc., Ry. Co. v. Tompkins (176 U. S., 167, 180), that "the most competent and reliable master" should be selected in a case of this kind; and it was also the conclusion of the District Judge before whom the case was tried. While the personal views of the learned District Judge were at variance with the conclusion which he reached, he nevertheless felt constrained to yield his own convictions to the weight of authority on the subject (Record, p. 414).

In regard to these special franchises, Judge Lacombe said (p. 142):

> "The Commission reached the conclusion that the franchises, under which it has laid mains and is delivering gas and which are a part of its property, should be considered as of no value whatever, although the State, through the action of its taxing officers, has declared that they are worth several millions of dollars. It is suggested that some of these franchises have expired or lapsed in some way. That proposition need not be considered because it is not asserted that all of them have lapsed. The complainant has taken over the franchises of many different corporations

granted at different times. So long as a substantial part of these still remain, the argument is not affected, except as to details of result. The reason assigned by the Commission for not including the value of the franchises is that 'they were granted by the people without compensation.' That is so: these franchises were granted very many years ago at a time when there seems to have been no intelligent appreciation of the fact that they might become enormously valuable; when reckless improvidence was the rule and all sorts of franchises were given away without any provision for securing to the State its fair share of unearned increment thereon. Nevertheless, when the State offers a franchise to whomever will take it, without requiring any money return thereon, and for the sole consideration that the taker shall promptly, continuously and fully develop it by the expenditure of his own money, and such offer is accepted and the terms of the agreement carried out by the taker, there results a contract, which—with due consideration of all proper conditions and limitations inherent in the nature of the particular contract—is as much within the protection of the Constitution as are all other contracts. If the State, twenty-five or fifty years thereafter, should say to the taker: 'We were very improvident in not providing that you should pay us something each year for this franchise; therefore, hereafter you shall pay us eight per cent. annually on $10,000,000 or $20,000,000 or we will evict you from the franchise'—it might find itself embarrassed by the provisions of the Constitution in thus undertaking to avoid the results of its own improvidence.

"*A franchise*, whatever its value may be, which has not expired, nor lapsed, nor been in some way forfeited, *is property in the hands of its holder*. There is force in the argument that when the State says: 'We will value this property at several millions of dollars when we tax you on it, but at nothing at all when we fix the rate you may charge for your product in order to receive an eight per cent. return on your property'—it is seeking to accomplish by indirect methods what it might not be able to accomplish directly."

SECOND.

Meaning of the term, "special franchises."

At the outset, it should be clearly noted that the franchises which are in controversy in this case are not *corporate* franchises.

They are special rights or easements, which may be granted to individuals as well as to corporations. An instance of such a grant to individuals is contained in the present record. The Legislature of New York, in 1871, granted to Isaac P. Martin and others the right to make and sell gas and to lay pipes in the streets of New York, north of 79th Street (L. 1871, Ch. 944; Record, p. 5119).

As applied to a gas company and as used in this brief, the term "special franchises" signifies the right to occupy with its mains the streets of the municipality where it carries on its business, as distinguished from the corporate franchise and the general franchise to engage in the business of manufacturing and supplying gas.

People v. Tax Commissioners, 174 N. Y., 417, 435.

This distinction is frequently overlooked in the briefs filed by counsel for the appellants.

The special franchises which are involved in the case at bar are *the identical franchises* which were under consideration by this Court in the Special Franchise Tax Cases.

Metropolitan Street Ry. Co. v. New York, 199 U. S., 1; affirming 174 N. Y., 417;
Consolidated Gas Company v. New York, 199 U. S., 53.

THIRD.

Law of New York controls as to nature of special franchises.

This Court will accept as controlling the law of New York upon the question of the property rights that exist in special franchises. Whether the right to use the streets constitutes property in the full sense of the term, how that right may be acquired, its extent, duration, assignability, etc., are all questions which depend upon the law as it exists in the State of New York.

Ohio Oil Co. v. Indiana, 177 U. S., 190, 205, 207;
Muhlker v. Harlem Railroad Co., 197 U. S., 544;
Vicksburg v. Vicksburg Waterworks Co., 206 U.S, 496, 509.

In New York, it is the law, as declared by the Court of Appeals in the Elevated Railroad Cases, that the owner of property fronting on the streets of a city possesses easements of light, air and access, which are impaired by an elevated railroad structure in such streets. New York is almost alone in the recognition of this principle. Yet, in Muhlker v. Harlem Railroad Company (*supra*), this Court not only applied that doctrine to the Harlem viaduct in Fourth Avenue, but it went to the extent of reversing the New York Court of Appeals, which had held to the contrary, on the ground that the decision of the Court of Appeals was at variance with the previous decisions of that Court, under which it had been held that the principle of the Elevated Railroad Cases was applicable to the Harlem viaduct; and this Court decided that the New York Court of Appeals was not at liberty to ignore its previous decisions on the subject and thus impair the obligation of contracts entered into on the faith of those decisions. The Court of Appeals has since then recognized the binding force of the decision of this Court in the Muhlker case.

Sander v. New York, 182 N. Y., 400, 403.

FOURTH.

In New York, special franchises are property in the fullest sense.

I. That, in New York, special franchises are property, in every respect, is well settled.

Sixth Ave R. Co. v. Kerr, 72 N. Y., 330;
People v. O'Brien, 111 N. Y., 1, 40;
Suburban Rapid Transit Co. v. New York, 128 N. Y., 510, 520;
People *ex rel.* Woodhaven Gas Co. v. Deehan, 153 N. Y., 528, 532;

Parker v. Elmira, C. & N. R. Co., 165 N. Y., 274;
People v. Tax Commissioners, 174 N. Y., 417, 437;
Matter of White Plains Commissioners, 176 N. Y., 239;
Matter of Long Acre El. L. & P. Co., 188 N. Y., 361;
Hatfield v. Straus, 189 N. Y., 208, 219;
Coney Island etc. R. Co. v. Kennedy, 15 App. Div., 588, 592;
Rochester etc. Turnpike Road Co. v. Joel, 41 App. Div., 43, 45;
Wakefield v. Village of Theresa, 125 App. Div., 38.

1. In People v. O'Brien (*supra*), Chief Justice RUGER, who delivered the opinion of the Court, said, in referring to the Broadway Railroad franchise to construct a street railroad on Broadway (p. 40), that such franchises "have been uniformly regarded as indestructible by legislative authority and as *constituting property in the highest sense of the term.*"

In that case, a right to lay the tracks of a railroad in Broadway had been conferred upon the Broadway Surface Railroad Company. Before any tracks were laid, the Company mortgaged its property and franchises to secure an issue of bonds, which were duly purchased by investors. Subsequently, the charter was revoked by the Legislature. Held, that the right to amend or repeal did not give the Legislature the right to deprive the Company of its franchise to occupy the streets. On the part of the State, it was contended that a franchise of that kind was a mere license or privilege, enjoyable during the life of the grantee only and renewable at the will of the State. To that suggestion, the Court said (p. 41):

> "We believe this proposition to be not only repugnant to justice and reason, but contrary to the uniform course of authority in this country."

2. In Suburban Rapid Transit Co. v. New York (*supra*), where the right to construct its railroad over a certain highway had been conferred upon the Railroad Com-

pany, which, however, had not instituted any proceedings to acquire ownership of the right of way, it was held that this right could not be impaired by a subsequent statute appropriating the land for a public park. In the course of its opinion, the Court said (p. 520):

> "How can a franchise thus conferred by the legislature be deemed inchoate and defeasible? Is not its possession an element of the security upon which capital has been subscribed and loans have been made to the Company?"

And, referring to the special franchise in People v. O'Brien, the Court added:

> "The corporate franchise * * * was held by us to be a right indestructible by the legislature *and to ocnstitute property in the highest sense of that term.*"

3. In the Woodhaven case (*supra*), the Court said, referring to the franchise of a gas company to occupy the streets of a municipality with its mains (p. 532):

> "Such a franchise is property that cannot be destroyed or taken from it or rendered useless by the arbitrary act of the village authorities in refusing the permit to place the conductors under the streets."

4. In Parker v. Elmira, C. & N. R. Co. (*supra*), the Court said (p. 280) that a franchise was "*entitled to the same protection from invasion as any other species of property.*"

5. In the Long Acre case (*supra*), the Court of Appeals has recently said (p. 366):

> "It cannot be disputed that a franchise to operate electrical conductors in the streets is property, taxable, alienable, subject to levy and sale under execution and to condemnation under the exercise of the power of eminent domain."

6. Still more recently (October, 1907), in Hatfield v. Straus (*supra*), the Court said, referring to a franchise giving the right to use the streets (p. 219):

> " A franchise is property, assignable, taxable and transmissible ";

and the Court made it very clear that a franchise was something much more substantial than a mere license, thus following the conclusion previously reached by the Court of Appeals.

Milhau v. Sharp, 27 N. Y., 611, 622;
People v. O'Brien, 111 N. Y., 1, 41;
Trustees of Southampton v. Jessup, 162 N. Y., 122, 126;

and also by this Court.

Monongahela Nav. Co. v. United States, 148 U. S., 312, 343–4.

7. In Wakefield v. Village of Theresa (125 App. Div., 38), the Court (all five Justices concurring) said (p. 42):

> " In reliance upon the contract, the plaintiffs and their predecessors in interest expended money in erecting, extending and operating the plant, and the privilege granted to use the streets became *a valuable property right*, of which the owners cannot be deprived, unless there has been a forfeiture on their part, or unless the plant has become a nuisance."

II. That a special franchise, such as those under consideration in this case, is property, with all the attributes of property, is the law of nearly every State in the Union and has repeatedly been recognized in this Court.

West River Bridge Co. v. Dix, 6 How., 507, 534, 543;
Wilmington Railroad v. Reid, 13 Wall., 264;
Morgan v. Louisiana, 93 U. S., 217, 223;
New Orleans, etc., R. Co. v. Delamore, 114 U. S., 501;
Monongahela Nav. Co. v. U. S., 148 U. S., 312;
Detroit v. Detroit Citizens St. Ry. Co., 184 U. S., 368, 394;
Metropolitan St. Ry. Co. v. New York, 199 U. S., 1, 39.

" A large portion of the wealth of the community consists of intangible property."

Adams Express Co. v. Ohio, 166 U. S., 185, 218–19;
Metropolitan St. Ry. Co. v. New York, 199 U. S., 1, 39.

Even the value of the tangible property of public service corporations depends largely upon the special franchises owned by such corporations. Without such franchises, the right of way or tracks of a railway company would possess only a nominal value, and the pipes and mains of a gas company would be mere junk for the scrap heap.

People v. New York, 174 N. Y., 417, 437, 441;
State Railroad Tax Cases, 92 U. S., 575, 606.

In the Court below, the learned counsel for the Attorney General (Hon. David B. Hill), in referring in his brief (p. 27) to the statement contained in the opinion of Judge LACOMBE (*ante*, p. 5), that "a franchise * * * is property in the hands of its holder," made this unqualified concession:

"*No one doubts the latter proposition.*"

Not so laconic was the utterance on this point of the Attorney General of New York, in the Franchise Tax Cases (the very last cases coming to this Court from New York, in which the nature of special franchises was under consideration), in which the State of New York was contending that they were property of the most valuable kind. In the report of that case (199 U. S., 1, 25-26, 53), the following admirable summary of the nature and attributes of such franchises was made in the brief submitted by the Attorney General and his able associate:

> "These special franchises have all of the attributes of property. They are vendible and transferable. They cannot be taken away, even under the power of eminent domain, without due compensation. They may be leased or mortgaged. *They survive the existence of the corporation upon which they are bestowed.* They are the life and soul of the tangible property to which they appertain. They bestow an earning capacity upon physical properties, which, without them, would corrode and decay, and be utterly useless. While the tangible property employed for the utilization of the intangible franchise is destructible, the latter is indestructible. While the former requires renewal and reparation, the latter does not; and, yet, the two are inseparable, and together constitute a species of property, the aggregate of

> which, in the United States, is valued in the exchanges of the country at figures which almost paralyze the imagination."

In his Brief now filed in this Court, the Attorney General makes substantially the same admission (*post*, p. 56); and this is also conceded in the Briefs filed by counsel for the other appellants (*post*, pp. 62, 68).

As long ago as the Dartmouth College case, Mr. Justice STORY said (4 Wheat., 518, 684) that "a grant of a franchise is not, in point of principle, distinguishable from a grant of *any other property*."

FIFTH.

In New York, special franchises cannot be repealed or impaired, under the reserved power.

While, under the reserved power, the legislature may revoke the corporate and general franchises of a corporation, it cannot, in New York, by repealing the charter, annul or impair its special franchises.

People v. O'Brien, 111 N. Y., 1, 36, 37.

SIXTH.

Special franchises are easements or interests in real property.

When authority is given by the State to a corporation to use the streets of a municipality and the franchise has been accepted and acted upon by the corporation, a contract has been made which, during its continuance, cannot subsequently be impaired by the legislature.

People v. Sturtevant, 9 N. Y., 263, 273;
Milhau v. Sharp, 27 N. Y., 611, 620, 622;

New Orleans Gas Co. v. Louisiana Light Co., 115 U. S., 650, 660 ;
New Orleans Water Works v. Rivers, 115 U. S., 674, 681.

But the contract thus entered into for the use of the streets is something more than a mere personal right. It is a grant of an incorporeal hereditament; it is an easement or right of way in the streets, and hence is real property.

Milhau v. Sharp, 27 N. Y., 611, 620-1 ;
People v. O'Brien, 111 N. Y., 1, 40, 55 ;
Ghee v. Northern Union Gas Co., 158 N. Y., 510, 513 ;
People v. Tax Commissioners, 174 N. Y., 417, 435-6 ;
Matter of White Plains Commissioners, 176 N. Y., 239, 249 ;
Kronsbein v. Rochester, 76 App. Div., 494 ;
Matter of East River Gas Co., 122 App. Div., 890 ;
Bowman v. Watham, 2 McLean, 376 ;
Detroit Citizens' Street Ry. Co. v. Detroit, 64 Fed. Rep., 628, 643, 644, 646 (C. C. A.) ;
West River Bridge Co. v. Dix, 6 How., 507, 534 ;
Gue v. Tide Water Canal Co., 24 How., 257 ;
East Alabama Ry. Co. v. Taggart, 114 U. S., 340, 353.

1. In Milhau v. Sharp, the Court, in referring to a franchise to use the streets for a surface railroad, said, by SELDEN, J. (p. 620) :

> " It amounted also to an immediate grant of an interest, and, it would seem, of a freehold interest in the soil of the streets to the defendants. The rails, when laid, would become a part of the real estate, and the exclusive right to maintain them perpetually is vested in the defendants, their successors and assigns."

2. In People v. O'Brien, in referring to the Broadway Railroad franchise, the Court said (p. 40) :

> " We are, therefore, of the opinion that the Broadway Surface Railroad Company took an estate in perpetuity in Broadway, through its grant from the City under the authority of the Constitution and the Act of the Legislature ; "

and it also added (p. 55):

> "We are, therefore, of the opinion that the Broadway Surface Company took an indefeasible title to the land necessary to enable it to construct and maintain a street railroad in Broadway and to run cars thereon for the transportation of freight and passengers, which survived its dissolution."

3. In Ghee v. Northern Union Gas Co., the Court, in the course of its opinion, which was written by PARKER, C. J., in referring to the street franchise of a gas company, said (p. 513):

> "It operates to create a franchise, by which is vested in the corporation receiving it *a perpetual and indefeasible interest in the land constituting the streets of a municipality.*"

4. In the Franchise Tax Cases (174 N. Y., 419, 435), the Court referred to a special franchise as a "*right of way over a public street.*"

5. In the Matter of White Plains Commissioners, the Court referred to the franchise of a water company to use the streets of a municipality as "a perfect *grant*" (p. 249).

6. In Kronsbein v. Rochester, the New York Appellate Division (five Justices) unanimously decided that the special franchises of corporations appearing upon the assessment rolls, pursuant to Chapter 712 of the Laws of 1899 (the Special Franchise Tax Law), are to be considered as part of the assessable real estate of the city, in ascertaining the amount of the real property upon which the debt limit is computed, *within the meaning of the State Constitution*, which limits the power of a municipality in contracting debts, to ten per cent. of the assessed value of the real estate. In the course of its opinion, the Court said (p. 501):

> "It is to be observed that the Legislature did no violence to the settled principles of the law in designating these franchises as real property. They are inseparably connected with real estate and appurtenant to it, like a fixture or an incorporeal hereditament, and the

exercise of the privilege requires a disturbance of the soil of the physical body of the land. The statutory definition runs in harmony with that of the common law."

6. The Matter of the East River Gas Company is not reported in full. That was the unanimous decision of the Appellate Division of the First Department (five Justices), in a proceeding instituted to perpetuate the testimony of a witness, pursuant to Sections 1688*a* and 1688*i* of the New York Code of Civil Procedure, which provide a system for perpetuating testimony upon a matter "involving a question as to title to *real property* in the State of New York." The testimony which it was desired to perpetuate was with reference to the assignment of a street franchise from one gas company to another. The application was opposed by the City of New York, on various grounds, including the ground that the special franchise was not real property. The Supreme Court, in granting the application, and the Appellate Division in affirming the order, thus necessarily passed directly upon the point that the special franchise of a gas company is real property.

II. The same conclusion has been reached in other States, where the question has arisen.

Chicago v. Baer, 41 Ill., 406;
Stockton Gas Co. v. San Joaquin County, 148 Cal., 313.

III. That a franchise of this kind is real property was decided in England, in the early days of gas lighting.

Rex v. Brighton Gas Light Co., 5 B. & C., 466.

IV. Counsel for the Public Service Commission concede, in their Brief, that these franchises are "incorporeal real property" (*post*, p. 62).

SEVENTH.

A corporation cannot be deprived of its special franchises, except under the power of eminent domain and upon payment of their full value.

That a corporation cannot be deprived of its special franchises, in condemnation proceedings, without just compensation, is now the firmly established law.

Sixth Ave. R. Co. v. Kerr, 72 N. Y., 330;
Matter of White Plains Commissioners, 176 N. Y., 239;
Coney Island etc. R. Co. v. Kennedy, 15 App. Div., 588, 592;
Spring Valley Water Works v. San Francisco, 124 Fed., 574;
Monongahela Nav. Co. v. U. S., 148 U. S., 312.

I. In the Matter of White Plains Commissioners, the Village of White Plains instituted proceedings to condemn the property of a water works company. The Commissioners did not allow anything for the special franchise and good will of the company, on the ground that, in the contract between the village and the company, the village had expressly consented to the franchise only on condition that it should have the right to purchase the property at the expiration of any period of five years, and that the special franchise and good will therefore had only a nominal value. The Court of Appeals reversed the order confirming the award and held that the village authorities had no power to impose such a condition, that the condition was consequently void, although expressly assented to by the company, and that the village should pay the company the full value of all its property, "*including its good will and franchise*"(p. 252).

II. In the Monongahela Navigation Company case, this Court, after a very careful consideration of the nature of a special franchise, reached the conclusion that even under its unlimited power to regulate commerce, Congress could not appropriate property in a navigable stream, without paying to the owner not only the value of the tangible property but also that of the special franchise under which the tangible property was operated. Congress had passed an Act, authorizing the United States to acquire by condemnation proceedings a lock and dam, constructed by the Navigation Company pursuant to authority derived from the State of Pennsylvania, which had authorized the Company to collect tolls for the use of the lock. A provision was inserted in the Act of Congress, that, in estimating the sum to be paid, nothing should be allowed for the franchise to collect tolls. The Attorney General attempted to sustain this provision under the commerce clause of the Constitution; and he urged that, as Congress had the absolute power to regulate commerce, the right to take tolls must necessarily have been granted by the State and accepted by the Company subject to this superior power of regulation. This argument was pressed with great confidence, in reliance upon the undisputed power of Congress to direct the removal of any obstruction to commerce, without compensating the owner. But this Court held that even the unlimited power to regulate commerce would not authorize the Federal Government to destroy a franchise of this kind without making just compensation for it; and it has since then reiterated the conclusion thus reached.

> United States v. Bellingham Bay Boom Co., 176 U. S., 211, 216.

Counsel for the Public Service Commission contend that the Monongahela case is not in point, because the franchise in that case had a conceded value, by reason of its including a right to take tolls up to an amount securing an 8% dividend upon the capital stock of the corporation, and also because the franchise could not be ignored by the United States, although it might possibly have been ignored by the State, under its reserved power. It is not, however, a question of how much value a franchise may have, but whether it has any value. This will necessarily vary with each case; and that there are various elements of value was expressly recognized in the Monongahela case (p. 328). In New York the reserved power does not include the right to disregard a special franchise (*ante*, p. 12).

III. Half a century ago, this Court was urged to make a distinction, in condemnation proceedings, between tangible and intangible property, just as it is urged to do so in the present case.

West River Bridge Co. v. Dix, 6 How., 507.

In that case, a bridge company had erected a bridge, under a franchise granting it that right and the right to take tolls. Subsequently, the town authorities laid out a highway, which included this bridge; and proceedings were instituted to acquire the property and franchises of the bridge company for that purpose. An award was made, which included the franchises. The bridge company contended that its franchise to take tolls was a special kind of property, more sacred than mere corporeal property, and that it could not be appropriated under the exercise of the power of eminent domain, as it was a contract which could not be impaired, owing to the prohibition of Section 10 of the first Article of the Constitution. To this, the Court answered (p. 534):

> "We are aware of nothing peculiar to a franchise which can class it higher or render it more sacred than other property. A franchise is property, and nothing more; it is incorporeal property, and is so defined by Justice BLACKSTONE, when treating in his second volume, c. 3, p. 20, of the Rights of Things. It is its character of property only which imparts to it value and alone authorizes in individuals a right of action for invasions or disturbances of its enjoyment."

As to the distinction between corporeal and incorporeal property, the Court said (p. 534):

> "A distinction has been attempted, in argument, between the power of a government to appropriate for public uses property which is corporeal, or may be said to be in being, and the like power in the government to resume or extinguish

a franchise. *The distinction, thus attempted, we regard as a refinement, which has no foundation in reason.*"

This language was quoted with approval in Long Island Water Supply Co. v. Brooklyn (166 U. S., 685, 693).

EIGHTH.

Special franchises cannot be taken or disregarded under the power to regulate rates.

I. If special franchises are "entitled to the same protection from invasion as any other species of property" (165 N. Y., 274, 280), and if a corporation cannot be deprived of its special franchises except under the exercise of the power of eminent domain and upon payment of their full value, it necessarily follows that a corporation cannot be deprived of its special franchises indirectly, through the exercise of the legislative power of regulating rates; for, as this Court observed, in the Railroad Commission Cases (116 U. S. 303, 331), the power to regulate rates "*amounts to a taking of private property for public use.*"

If, in the exercise of the sovereign power of eminent domain, a power which is essential to the very existence of government, a special franchise cannot be taken without making just compensation for it, and if, in the exercise of the great constitutional power to regulate commerce, a special franchise cannot be ignored, it is not possible that such franchises may be disregarded in the exercise of the power to regulate rates, a power the extent of which has not yet been satisfactorily determined. The power of a state legislature to regulate the rates of a public service corporation is inferior to the power to direct changes in the tangible structures of a public service corporation (Atlantic Coast Line v. N. Car. Corp. Com'n, 206 U. S., 1) and is insignificant compared with the vast power expressly conferred upon Congress to regulate commerce between the

States, before the exercise of which, State legislatures stand powerless. On what possible ground can it be contended that this comparatively subordinate power of a State legislature to regulate rates, can rise superior to property rights, which must be respected even in the exercise of the unlimited power of Congress to regulate commerce ?

The contention is advanced in the present case that the special franchises of a public service corporation are granted upon the implied condition that they are subject to the right of the legislature to regulate rates and, therefore, that the effect upon the value of such franchises may be ignored in such regulation. That was also the contention in the Monongahela case ; but this Court held that no legislature could ignore the mandatory prohibition of the Federal Constitution and that even the power to regulate commerce was subject to the prohibition against taking private property for public use without just compensation. The power of a State to regulate rates is necessarily limited to the extent that such regulation shall not impair the obligation of contracts, nor deprive a person of his property without due process of law, nor deprive him of the equal protection of the laws.

If the City of New York should decide to go into the lighting business upon its own account and to supply light to its inhabitants, and if power to acquire the properties of the existing lighting companies were conferred upon it, and if it exercised that power, it would have to pay for the special franchises, in condemnation proceedings, as well as for the tangible property taken. In other words, it would start out with a capitalization which would include the value of the special franchises of the existing companies ; and it would have to charge a sufficient price for its gas to obtain a return upon the amount paid for the franchises ; otherwise, it would lose money in the undertaking and would be forced to collect by general taxes what it had not received in the price of gas.

II. If, in the regulation of rates, the value of the special franchises could be disregarded, an easy method would be afforded of accomplishing indirectly what could not possibly be done directly. Because, if it were desired to give the City power to acquire the properties of the existing gas companies, without paying for the special franchises, all that would be necessary to do would be, first, for the legislature, or the City (if it had the express power), to regulate the rates, so as to permit a return only upon the value of the tangible property and thus eliminate largely the value of the special franchises, and, having done that, to acquire the property of the gas companies in condemnation proceedings, including the special franchises, which could thus be obtained at a nominal valuation. The Attorney General, in his Brief filed in this Court (p. 6), seems to approve of such a course; but its iniquity was pointed out in the opinion of Judge HOUGH, in the Court below (Record, p. 414); and it was also alluded to by this Court, in the Monongahela case (148 U. S., 312, 337):

> " It would seem strange that if, by asserting its right to take the property, the government could strip it largely of its value, destroying all that value which comes from the receipt of tolls, and having taken the property at this reduced valuation, immediately possess and enjoy all the profits from the collection of the same tolls."

In Knoxville Water Works Co. v. Knoxville (189 U. S., 434), the Court said (p. 438) that " an attempt to affect the price of the company's plant in that way (by the regulation of rates), if the City should elect to purchase, would not be allowed to succeed."

III. The right of the legislature to regulate rates is based upon the principle that the patrons of a business affected with a public interest are entitled to all the benefits derived from the business, over and above a reasonable return upon the value of the property employed. In other words, such patrons virtually become partners in the enterprise. They stand in the position of holders of deferred shares, who are entitled to all the profits of the business in excess of a fixed return upon the value of the common property. Accordingly, to ignore the special franchises as to those who had actually invested their capital in the enterprise and made it profitable, would be to bestow those franchises exclusively upon the holders of these deferred shares, who had not contributed any capital to the common venture.

It is sought to conceal the injustice of such a result, by asserting, in general and vague language, the right of the " public " to the franchises, on the ground that those franchises belong to the public and should never have been parted with without compensation. As a matter of fact, if the actual shareholders were deprived of all return upon the value of the special franchises, the general public would not get the benefit of the return on such franchises, but such benefit would be enjoyed only by that very small and limited portion of the public which happened to patronize the particular company owning the franchises.

IV. While the point has not been directly passed upon by this Court, yet, wherever it has been referred to in the general discussion of the subject of rate regulation, it has been stated or assumed that, in fixing a rate, the value of the special franchises must be included in valuing the property of a public service corporation.

Smyth v. Ames, 169 U. S., 466 ;
Reagan v. Farmers L. & T. Co., 154 U. S., 362 ;
Chicago etc. Ry. Co. v. Tompkins, 176 U. S., 167 ;
Detroit v. Detroit Citizens St. Ry. Co., 184 U. S., 368.

1. In Reagan v. Farmers L. & T. Co., the Court said (p. 410) :

> " If the State were to seek to acquire the title to these roads, under its power of eminent domain, is there any doubt that constitutional provisions would require the payment to the corporation of just compensation ; that compensation being the value of the property as it stood in the markets of the world and not as prescribed by an act of the legislature ? Is it any less a departure from the obligations of justice to seek to take not the title but the use for the public benefit, at less than its market value ? "

2. In Smyth v. Ames, the Court, in considering the method of ascertaining the value of the property, employed language which necessarily included special franchises, stating (p. 547) that there should be included "the amount and market value of its bonds and stock, . . . the probable earning capacity of the property"; and the meaning of this language is made clear by reference to the language previously used (p. 544):

> "The apparent value of the property *and franchises* used by the corporation, as represented by its stocks, bonds and obligations, is not alone to be considered when determining the rates that may be reasonably charged".

3. In Chicago etc. Ry. Co. v. Tompkins, the Court said (p. 173):

> "It is within the competency of the legislature to determine when and what property should be taken for public uses. The question is one of policy over which the Courts have no supervision; but if after determining that certain property shall be taken for public uses, the legislature proceeds further and declares that only a certain price should be paid for it, then the owner may challenge the validity of that part of the act, may contend that his property is taken without due compensation; and the legislative determination of value does not preclude an investigation in the proper judicial tribunals. *The same principle applies, when vested rights of property are disturbed by legislative enactment in respect to rates.*"

4. Detroit v. Detroit Citizens Street Railway Company holds that the legislature is precluded from exercising its power to regulate the rates of a corporation, which will interfere with a maximum rate previously agreed upon. If that is so, as to a contract price, it must be so with respect to the general principle that no rate can be fixed which precludes a reasonable return upon the value of *all* the property.

There is a marked difference between the exercise of the police power in the regulation of rates and its exercise where the public health, safety or morals are concerned.

The regulation of rates is an exercise of the police power.

People v. Budd, 117 N. Y., 1;
Budd v. New York, 143 U. S., 517, 544-5.

In all cases involving the public health, safety or morals, the exercise of the police power is paramount to property or contract rights. All property is held subject to the exercise of that power; and the owner has no remedy, if, as a result, his contract rights are changed or the value of his property is impaired.

Butchers Union Co. v. Crescent City Co., 111 U. S., 746, 750-1;
New Orleans Gas Co. v. Louisiana Light Co., 115 U. S., 650, 668-673;
New Orleans Gas Light Co. v. Drainage Commission, 197 U. S., 453;
Chicago etc. Ry. Co. v. Illinois, 200 U. S., 561;
Northern Pacific Ry. Co. v. Duluth, 208 U. S., 583, 596.

But that principle is not recognized in the regulation of rates; and contract and property rights cannot be ignored in such cases. A contract for a specific rate will be protected.

Detroit v. Detroit Citizens St. Ry. Co., 184 U. S., 368;
Cleveland v. Cleveland City Ry. Co., 194 U. S., 517, 536;
Vicksburg v. Vicksburg Water Works Co., 206 U. S. 496, 508, 515-6.

All the decisions of this Court, in the rate regulation cases, are based upon the proposition that the legislature cannot ignore property or contract rights in establishing a rate. A rate must be allowed which will permit a reasonable return upon the fair value of the property devoted to the public use.

San Diego Land Co. v. National City, 174 U. S., 739, 753-6.

V. In the lower Federal courts and in the State courts, wherever the point has been suggested, the conclusion has also been reached or intimated, that special franchises cannot be ignored, in fixing rates.

Ames v. Union Pacific Ry. Co., 64 Fed. Rep., 165, 176;
Spring Valley Water Works v. San Francisco, 124 Fed. Rep., 574;
San Diego Water Co. v. San Diego, 118 Cal., 556.

1. In Ames v. Union Pacific Ry. Co., Mr. Justice BREWER expressly referred to the stronger reason which exists for allowing for the value of franchises in the case of rate regulation than in condemnation proceedings, saying (p. 178):

> "Is there not an element of equity which puts the reduction of rates in a different attitude from the absolute taking of the property by virtue of eminent domain? In the latter case, while only the value is paid, yet that value is actually paid, and the owners may reinvest and take the chances of gain elsewhere, whereas, if the property is not taken, the owners have no other recourse than to receive the sum which the property they must continue to own will earn under the reduced rates."

2. In Spring Valley Water Works v. San Francisco, Judge MORROW expressly included the franchises in the property of the company, which he valued for the purpose of ascertaining the return permitted by the rate. In referring to the Monongahela case, he said (p. 594):

> "It is true this was a condemnation proceeding, and the question was to determine what was just compensation for the appropriation of corporate property to a public use, while the case before this Court relates to the fixing of water rates which shall be a just compensation for the appropriation of complainant's property to a public use. It is not perceived that there is any difference in the principles applicable to the two cases; and this appears to have been the view of the Supreme Court in San Diego Water Co. v. San Diego, *supra*."

3. In the San Diego case, the Court said, with reference to fixing a maximum rate (p. 567):

> "The question what is just compensation in such a case is, *in all respects*, analogous to the question which arises *in every case* of appropriation under the power of eminent domain."

NINTH.

Gross injustice of disregarding value of special franchises in rate regulation cases.

Throughout the country, these special franchises have been capitalized with the sanction of the state authorities; and millions of dollars have, accordingly, been invested in the stocks and bonds of public service corporations, both here and abroad, the principal security of which are the special franchises of those corporations. To hold that such franchises can now be absolutely ignored in the regulation of rates and that rates may be reduced to a point which will permit a return only upon the value of the tangible property would be to set the seal of sovereign approval upon wholesale repudiation and to favor particular classes of the community (in the case of a gas company, its consumers) at the expense of the investing classes, to whose contributions all public utilities owe their existence and their value.

TENTH.

Special considerations affecting the question in New York.

In addition to the fact that these franchises are regarded as "property in the highest sense", in New York (People v. O'Brien, 111 N. Y., 1, 40), there are some special considerations which would make it peculiarly flagrant for the Legislature of that State to disregard them, in establishing a maximum rate for a public service corporation, and particularly for the appellee.

I. *Assessment for taxation.*

In New York, special franchises are assessed for the purposes of taxation, under a special statute passed for that purpose.

L. 1899, Ch. 412.

As the Court of Appeals observed, in construing that statute, its effect was to subject to taxation "property scattered all over the State, worth nearly two hundred millions of dollars".

People v. Tax Commissioners, 174 N. Y., 417, 437.

Under the authority thus conferred, the State of New York assessed the special franchises of the Consolidated Gas Company for the year 1906, at $31,900,000, which included about $7,900,000 for the tangible property (the mains and connections) and $24,000,000 for the franchises to occupy the streets (Record, pp. 202, 1849, 5061). That valuation was placed upon these franchises by the State Board, a body whose exceptional skill, in the opinion of the Court of Appeals, justified the disregard of the home rule principle in the State Constitution, in the appointment of a state board to value local franchises.

People v. Tax Commissioners, 174 N. Y., 417, 437-8.

Can the Legislature of the State of New York say to this Gas Company: "We will value your special franchises at the sum of $24,000,000 for the purposes of taxation, as measuring your obligation to contribute to the support of the government; but we will place only a nominal valuation upon them in determining the price which you may charge to your consumers"? And would it be any justification for such Janus-like action by the State, if it made the magnanimous concession suggested by appellants' counsel, that the tax paid should be allowed as an operating expense in ascertaining the net receipts of the business? On "concessions" of that kind, it would be entirely proper to deprive the Company of all return upon the value of its real estate, by permitting it to treat the tax levied upon such real estate as an operating expense. That kind of logic would lead to the conclusion that a public service corporation should be content to serve the public gratuitously, if the legislature should benevolently concede to it the right to pay its taxes out of the operations of the business.

The appellants contend that the taxation of special franchises does not prove that they constitute property, because, under the

Tax Law, not only is a franchise taxable, but also the "authority or permission" to maintain mains. But the "authority or permission" to maintain mains is a franchise. The existence of a franchise does not depend upon the extent of its duration; and permission to occupy the streets for one year is just as much a franchise and property right (irrespective of its value) as permission to do so for thirty years, or perpetually. A lease, for a year, of a city lot, no matter how small, is property just as much as ownership of the fee of an entire block.

II. *Express recognition of right in New York to capitalize special franchises.*

The Public Service Commissions Law of New York (L. 1907, Ch. 429, Secs. 55, 69), by which the power to regulate rates has been conferred upon a Commission, provides that "the commission shall have no power to authorize the capitalization of any franchise to be a corporation, or to authorize the capitalization of any franchise or the right to own, operate or enjoy any franchise whatsoever in excess of the amount (exclusive of any tax or annual charge) actually paid to the State or to a political subdivision thereof, as the consideration for the grant of such franchise or right."

This provision is significant, for two reasons: first, because, in prohibiting the capitalization of franchises for the future, except where they are actually paid for, the validity of the previous capitalization of franchises is impliedly conceded; and, second, because a corporation may even now capitalize its franchises to the extent of the amount paid for them. In other words, it is to-day the declared policy of the State to permit the capitalization of such franchises; and, consequently, they must be taken into consideration in the regulation of rates. But, in the absence of legislative prohibition or limitation, it cannot make the slightest difference what consideration was given for the franchises, whether it was in the form of a cash payment or the expenditure of capital in reliance upon a contract with the State. This question of the consideration will be referred to again (*post*, p. 37), in considering the unfounded contention of the appellants, that no return should be permitted upon the special franchises, because nothing was paid for them.

III. *Capitalization of special franchises expressly sanctioned in 1884.*

While it is clear on principle that, in New York, special franchises must be included in any valuation of the property of a public service corporation in the regulation of rates and while that is a principle which can be invoked by the other New York gas companies mentioned in the record, which are affected by the legislation assailed in this case, there is a special fact in the history of the appellee which is decisive on this appeal.

The Consolidated Gas Company was organized in November, 1884, by the consolidation of six gas companies, which, at that time, were in active operation in New York City: the New York, the Manhattan, the Metropolitan, the Harlem, the Municipal and the Knickerbocker (Record, p. 4819). The new Company was capitalized at $39,078,000, in which was included $7,781,000 for the intangible property, including the special franchises (Record, pp. 5325, 5340). This consolidation was made in accordance with a statute which permitted the consolidation of the property *and franchises* of manufacturing corporations (L. 1884, Ch. 367).

Section 5 of that Act was as follows:

> "Upon the consolidation of the said corporations, and the organization of such new company, as hereinbefore prescribed, all and singular the rights, privileges, *franchises*, and interests of every kind belonging to or enjoyed by the said several corporations so consolidated, and every species of property, real, personal and mixed, and things in action thereunto belonging, mentioned in said agreement of consolidation, shall be deemed to be transferred to and vested in and may be enjoyed by such new corporation, without any other deed or transfer; and such new corporation shall hold and enjoy the same, and all rights of property, privileges, *franchises* and interests in the same manner and to the same extent, as if the said several companies so consolidated had continued to retain the title and transact the business of

> such corporations, and the title to real and personal estate, and rights and privileges acquired and enjoyed by either of the said corporations shall not be deemed to revert or be impaired by such act of consolidation, or anything relating thereto."

Section 1 of the Act provided that the agreement of consolidation should specify the amount of the capital, "*which capital shall not be larger in amount than the fair aggregate value of the property, franchises and rights of the several companies thus to be consolidated.*"

In 1885, a Committee was appointed by the Senate to investigate this consolidation, as the result of charges made that there was an over-capitalization (Record, p. 5325). A large amount of evidence was taken; and, as a result of the investigation, a report was made, sustaining the capitalization (Record, pp. 5382–8). With respect to the valuation of $7,781,000 placed upon the franchises, the report expressly called attention to the injustice of permitting the franchises to be capitalized, as the legislature would thus, in effect, make it inevitable that "the consumers of gas should be required to pay such a price for it as would pay a dividend upon the value of these franchises" (Record, p. 5385). After referring to the fact that about *one-sixth* of the entire capital stock had even then passed into the hands of innocent purchasers (Record, p. 5387) and that the franchises of only four of the Companies were worth *much more* than the sum of $7,781,000, at which the franchises of all six Companies had been capitalized (Record, p. 5386), the majority of the Committee said (Record, p. 5387):

> "Nothing but the clearest proof of fraud and violation of the law, by virtue of which it was issued, would justify any attempt to render such stock worthless. We are compelled to say that we have not been able to find such proof. If injustice has been done to the gas consumers of New York City, it has been done by the legislature passing a law allowing consolidations to be effected in this manner. These companies did simply what the law expressly said they might do."

Few issues of stock have been subjected to a more rigid scrutiny than that made by the Legislative Committee in the case of this Company, when the facts were still fresh and when complete and accurate proof was readily obtainable. The validity of that issue was thus investigated under the most exacting conditions and in the most public manner; and the right of this stock to a return can no more be questioned than the right of any other share of stock of the Company.

If one sixth of the capital stock of the Company had passed into the hands of innocent purchasers within a little more than a year after the consolidation, there can be little doubt that substantially all the stock now held by nearly five thousand investors (Record, p. 760) has, during the quarter of a century that has since elapsed, been purchased on the faith of this legislative recognition, that the stockholders of the Company were properly entitled to a return upon the value of the franchises. It is, of course, impossible, at this late date, to set apart specific stock, of the par value of $7,781,000, and say that it alone of the entire capital stock is entitled to a return. The capitalization of the franchises enters into the value of every share; and it does not now make the slightest difference at what sum the franchises were then valued. Having been capitalized with the sanction and approval of the legislature, the Company is entitled to a return upon their present value, whatever that may be. The capitalization of the franchises is a fact just as substantial and firmly based as the contract in the Detroit Street Railroad case (Detroit v. Detroit Citizens St. Ry. Co., 184 U. S., 368), where this Court held that, in the regulation of rates, the City of Detroit could not disregard a thirty year contract, which had been made with the Company, permitting it to charge five cent fares. The only difference between the two cases is that, in the Detroit case, the exact return had been definitely fixed by agreement of the parties, while, in the case at bar, it is determined or fixed by law.

In the Broadway Railroad Case (People v. O'Brien, 111 N. Y., 1), the special franchises of the Company had been mortgaged before the road was constructed. The Legislature subsequently repealed the charter of the Company and terminated its existence;

but it was held that the Legislature had no right to do an act which would work an injustice upon the persons who had purchased the mortgage bonds of the Company. What the Court said in that case would apply with much greater force to the facts of the present case, in view of the express legislative recognition of the act of the Company, a quarter of a century ago, and the vast number of purchases and sales of the stock of the Company that have necessarily taken place since then (p. 53):

> "Creditors, contractors and stockholders had a right to rely upon the promise of the state, that the annulment of the corporate charter should not affect the remedies existing in their favor against the corporation, and this promise is a contract protected by the provisions of the Federal Constition."

In the Court below, counsel for the Attorney General attempted to avoid this awkward fact, by claiming that the appellee was not a corporation at all, because, under the Consolidation Act of 1884 (L. 1884, Ch. 367), only manufacturing corporations could consolidate, and gas companies were not manufacturing corporations, and, therefore, the consolidation of 1884 was a nullity. Such a fanciful contention would never have been advanced, had it not been considered absolutely necessary to escape from the effect of the consolidation in the capitalization of the franchises. But it is a singular argument for the Attorney General to advance. For if there was any merit in the contention, the many illustrious predecessors of the present incumbent of that office were strangely remiss in their official duty, in allowing the years to slip by without trying to have the existence of this great corporation declared a nullity. And after all these years of acquiescence and especially after the legislative investigation, when the Act was still fresh on the statute book and the Legislature must be assumed to have known what corporations were intended to be included in the statute, and thousands of innocent investors have been led to purchase the stock, it is little short of flippancy to advance an argument so trivial and so inequitable. This is especially true, in view of the fact that gas companies are undoubtedly manufacturing companies and have been held to be such, even under tax statutes, which must, of course, be strictly construed.

Nassau Gas Light Co. v. Brooklyn, 89 N. Y., 409.

That the organization of the appellee by the consolidation of 1884 was legal and valid was the affirmative contention of the present Attorney General, in a recent application made by him to the Supreme Court of New York, for leave to bring an action to have the corporate existence of the appellee annulled, on the ground that it was exercising franchises which it did not possess. That application was denied, and the Company was recognized as having a valid existence by the Appellate Division of the Supreme Court (five Justices concurring).

Matter of Consolidated Gas Co., 124 App. Div., 401.

The contention that the consolidation was not duly made, in 1884, has been abandoned by the Attorney General in his brief submitted to this Court.

ELEVENTH.

The principle involved in the regulation of rates.

I. Much of the apparent difficulty in the discussion of this subject is due to the failure to recognize the essential principle which is involved in the regulation of rates and which has been lost sight of to some extent in the complexity of the facts to which such cases give rise.

The right to regulate rates has recently become a subject of such conspicuous importance, that it is naturally inferred that the regulation of rates is a matter of recent origin. But rate regulation is merely the enforcement of a principle which has long been recognized at common law and which has been the subject of legislation from the earliest days of parliamentary history. This principle is, that a business which, as Lord HALE long ago expressed it, is "affected with a public interest," by reason of the fact that the public are compelled to patronize it, must make a reasonable charge for its services or product. Legislation became necessary when the persons engaged in the business exceeded their legitimate rights and made *unreasonable* charges. The legislature did not interfere, so long as the charges were reasonable. It merely prohibited unreasonable charges, by fixing a limit of reasonableness. It did not in any way attempt to interfere with property rights, but merely sought to prevent imposition and extortion.

Lake Shore, etc., Ry. Co. v. Smith, 173 U. S., 684, 698.

At common law, however, the reasonableness of a rate had very little to do with the amount of return received by the owner of property upon the capital invested in the business. Whether or not a rate was reasonable depended principally upon the nature of the service rendered and the charges that were usual in that class of business. The value of the property employed or the return realized upon the property was so slight a factor that it was virtually ignored.

Canada Southern R. Co. v. International Bridge Co., 8 App. Cas., 723, 731;
Transportation Co. v. Parkersburg, 107 U. S., 691 699;
Interstate Commerce Commission v. Railroad Co., 145 U. S., 263;
Cotting v. Kansas Stock Yards, 183 U. S., 79, 95-7.

1. In Canada Southern R. Co. v. International Bridge Co., Lord Chancellor SELBORNE thus expressed the opinion of the House of Lords (p. 731):

> "It certainly appears to their Lordships that the principle must be, when reasonableness comes in question, not what profit it may be reasonable for a company to make, but what it is reasonable to charge to the person who is charged. That is the only thing he is concerned with. They do not say that the case may not be imagined of the results to a company being so enormously disproportionate to the money laid out upon the undertaking as to make that of itself possibly some evidence that the charge is unreasonable, with reference to

> the person against whom it is charged. But that is merely imaginary. * * * It seems to their Lordships that it would be a very extraordinary thing indeed, unless the Legislature had expressly said so, to hold that the persons using the bridge could claim a right to take the whole accounts of the company, to dissect their capital account, and to dissect their income account, to allow this item and disallow that, and, after manipulating the accounts in their own way, to ask a court to say that the persons who have projected such an undertaking as this * * * are to be regarded as making unreasonable charges * * * because the Bridge Company gets a dividend which is alleged to amount at the utmost to 15%. Their Lordships can hardly characterize that argument as anything less than preposterous."

2. In Transportation Co. v. Parkersburg, this Court said (p. 699):

> "It is also obvious that since a wharf is property and wharfage is a charge or rent for its temporary use, the question whether the owner derives more or less revenue from it, or whether more or less than the cost of building and maintaining it, or what disposition he makes of such revenue, can in no way concern those who make use of the wharf and are required to pay the regular charges therefor; provided, always, that the charges are reasonable and not exorbitant."

3. The language employed in the International Bridge case *(supra)* was quoted with approval in the Cotting case (183 U. S., 96), where Mr. Justice BREWER, in commenting upon it said (p. 97):

> "The question is always, not what does he make as the aggregate of his profits, but what is the value of the services which he renders to the one seeking and receiving such services. Of course, it may sometimes be, as suggested in the opinion of Lord Chancellor SELBORNE, that the amount of the aggregate profits may be a factor in considering the question of the reasonableness of the charges; but it is only one factor, and is not that which finally determines the question of reasonableness."

II. Had this common law principle of reasonableness been kept clearly in view, many of the perplexities of the subject in regard to the valuation of the property and the amount of the return would have been avoided. Chief Justice WAITE, for instance, would never have suggested, as he did in the Granger Cases (94 U. S., 178), that the power of the legislature in the regulation of rates was supreme and was not subject to review by the court.

But when, in the later cases, the point was clearly presented, that such a power as that which was claimed by the legislature might destroy a business or deprive a property of its productive capacity, the courts were brought face to face with the constitutional limitations imposed upon state legislatures, instead of approaching the question from the common law point of view of what was reasonable in view of the services rendered and the charges which prevailed in that kind of business. From the constitutional point of view, it was so obvious that the fixing of a rate which would not permit *any* return upon the property would be a deprivation of property rights and of the equal protection of the laws, that the courts were driven to the conclusion that a regulation which would produce such a result was void. If, in considering the constitutional question of the effect of the state legislation upon property rights, the proper criterion is that such legislation must permit a return upon the value of the property invested in the business, it must follow that the legislature cannot discriminate between different classes of property or determine for itself that, on some kinds of property, the owner shall be entitled to a return but that upon other kinds of property, he shall have no return. That being so and it being conceded that special franchises are property " in the highest sense of the term " (111 N. Y., 1, 40), the Federal Constitution protects it from invasion, no matter what form that invasion may assume (165 N. Y., 274, 280).

TWELFTH.

Difficulties suggested by the trial Court.

In the course of his opinion, Judge Hough gave full expression to the difficulties which he encountered in reaching the conclusion that special franchises must be included in the assets upon which the Company is entitled to a return. He felt compelled, however, to disregard his own doubts on the subject, "because to refuse would disregard views expressed by higher courts regarding the general nature of franchises and regulation proceedings"; and he, therefore, followed "the method of reasoning there *clearly indicated*" (Record, p. 414).

The "views expressed by higher courts" and the "method of reasoning" to which he referred were those which have heretofore been set forth, namely, that special franchises are property and, therefore, cannot be disregarded by the legislature in the regulation of rates or in any other manner. Economic doubts and metaphysical speculation on the subject are, therefore, idle, as was conceded by the learned trial Judge, after he had given expression to them (Record, p. 414). To enter upon a discussion of them under the circumstances is scarcely necessary; but inasmuch as the doubts expressed in the opinion reflect some of the reasons relied upon by counsel for the appellants, a brief reference to them may not be out of place.

I. The reason upon which the greatest stress was placed in the Court below and that which apparently made the deepest impression upon the trial Judge was that the Company did not give a valuable consideration for its special franchises. How far the Court was carried by this suggestion is best shown in its own language (Record, p. 411):

> "It is not asserted that any right such as above described (special franchise right) was ever *bought* by complainant from either State or City, or that for such right any valuable consideration was ever paid *in the usual legal sense of those words.*"

And again (Record, p. 412):

> "Return can be expected only from investment, and he that invests must part with something in the act of investing. He that hath not sown shall not reap."

Such utterances sound strangely at this hour of the day. Views of that kind may have been entertained a hundred years ago with respect to corporate franchises; but since the Dartmouth College case, they have rarely been indulged in by the Courts. To assert that no valuable consideration was ever paid, "*in the usual legal sense of those words*", for the special franchises of the appellee, is to ignore one of the most common elements of a legal consideration, recognized from the earliest days of the common law and forming a well settled principle of the Roman Law.

2 Blackstone Com., 444.

1. There is no affirmative evidence of any kind in the record to show that the constituent companies of the appellee did not make substantial cash payments for their franchises. Assuming, however, that they did not make such payments, the consideration they actually gave for their franchises was no less valuable and substantial. The important contribution made to civilization by the introduction of gaslight has been frequently dwelt upon by historians and courts. Thus, in New Orleans Gas Co. v. Louisiana Light Co. (115 U. S., *650), Mr. Justice HARLAN, in writing for a unanimous court, characterized the business of manufacturing gas as (p. 669) "one of the most important agencies of civilization, for the promotion of the public convenience and the public safety"; and he quoted with approval (p. 658) the statement made in Knight's History of England, that "the adventurers in gas lights did more for the prevention of crime than the government had done since the days of Alfred".

And the New York Court of Appeals employed equally impressive language in Harlem Gas Co. v. Mayor (33 N. Y., 309, 327):

> "In our northern latitudes, when darkness prevails over half the twenty four hours for a large part of the year, light diffused through the public streets and avenues is a predominant and urgent necessity, which no well governed city can do without. This beneficient application of artificial light is one of the distinguishing characteristics between the city of modern times and those of the middle ages, when darkness reigned supreme for no inconsiderable portion of the time, broken only to become more visible by the occasional torch of the linkboy or the lantern of the solitary watchman. The modern gaslight, diffusing its rays over every part of the public thoroughfare, is a source of pleasure and comfort and convenience, as well as a security against crime and disorder, which no other agency can supply. It is indispensable at all times; and no municipality can be said to be well governed which is not able to command its presence under all circumstances."

Some of the constituent companies of the appellee date back to the early part of the last century, when the business of attempting to supply gas for illuminating purposes was an untried and extremely precarious one. Many enterprises in which the public are interested owe their origin to the generous disposition of public spirited citizens, who contribute their capital, not for the sake of investing it advantageously but to advance the general welfare. Many enterprises require to be encouraged in order to induce capital to embark in them. In the case of the New York Subway railroad, for instance, capital could not be induced to invest in the enterprise, at the outset.

Sun Publishing Co. v. Mayor, 152 N. Y., 257, 273;

and the same timidity existed when the construction of an elevated railroad was originally contemplated.

Mayor v. Manhattan Ry. Co., 143 N. Y., 1, 30-32 (PECKHAM, J.).

Railroad companies have not only, in numerous instances, been given free rights of way through the streets of villages and cities, but large tracts of valuable land and other property have frequently been made exempt from taxation for a period of years; and, in the early days of railroad construction, it was a matter of common occurrence for municipalities to bond themselves for large amounts, in order to raise the capital required for the construction of the roads; and similar inducements were given to gas companies.

New Orleans v. Clark, 95 U. S., 644;
New Orleans Gas Co. v. Louisiana Light Co., 115 U. S., 650, 670.

And the general gas Act of New York, passed in 1848, conferred power upon the municipal authorities to exempt gas companies from taxation on their personal property for three years.

L. 1848, Ch. 37, Sec. 18.

This principle of fostering infant industres is relied upon as the complete justification of the protective tariff, a policy to which the nation has long been committed.

When, therefore, these gas companies originally furnished the capital for a new and uncertain enterprise, they were giving a consideration for the right to occupy the streets, which, at the time and until recent popular agitation on the subject, was considered by every one to be ample.

The adequacy of such consideration has been expressly recognized by the New York Court of Appeals and by this Court.

Mayor v. Manhattan Ry. Co., 143 N. Y, 1, 30, 31;
Bridge Proprietors v. Hoboken Co., 1 Wall., 116, 146;
Re Binghampton Bridge, 3 Wall., 51.

In the latter case, the Court said (p. 74):

> "The legislature, therefore, says to public spirited citizens: 'If you embark with your time, money and skill in the enterprise which will accommodate the public necessities, we will grant to you for a limited period or in perpetuity privileges that will justify the expenditure of your money and the employment of your

> time and skill.' Such a grant is a contract, *with mutual considerations*; and justice and good policy alike require that the protection of the law should be assured to it."

2. Even if the constituent companies gave no consideration for their franchises and those franchises should be considered as a gift, that fact would not deprive them of their character as property. On the theory that it would, any property presented by one person to another would have no value to the donee; and our laws of descent and distribution would cease to have any significance, if they did not confer full property rights upon the beneficiaries.

As Mr. Justice STORY said, in the Dartmouth College case (4 Wheat., 518, 683):

> "When a contract has once passed, *bona fide*, into grant, neither the King nor any private person who may be the grantor can recall the grant of the property, although the conveyance may have been purely voluntary. A gift completely executed is irrevocable."

Much of the right of way and frequently the terminals of our railroad companies were donated to them, the national government making extensive donations of federal lands to the transcontinental railroad companies. It not only granted a right of way to the Union Pacific Railroad Company but also made enormous land grants to it, and timber rights; and it lent to the Company the credit of the nation, to the extent of $16,000 a mile for the entire line. In referring to the contention subsequently made, that the conditions on which these grants were made could be disregarded or changed by Congress, this Court said, in the Sinking Fund Cases (99 U. S., 700, 719):

> "They cannot legislate back to themselves, without making compensation, the lands they have given this corporation to aid in the construction of its railroad."

On the appellants' contention, it would be improper, in fixing the maximum rates for railroad companies to include such of these lands as were devoted to railroad purposes among the assets on which the companies are entitled to a return. But there is not a rate case where such a suggestion has been made. That it makes no difference how or on what terms the property was acquired was expressly recognized in Ames v. Union Pac. Ry. Co. (64 Fed. Rep., 165), where it was contended by counsel for the State Board of Transportation that no return should be permitted on the right of way, because it had been donated by the Government. In that case, Mr. Justice **Brewer** applied the rule which prevails in condemnation proceedings to the case of rate regulation, and said (p. 176):

> "No inquiry is open as to whether the owner has received gifts from the state or individuals. * * * It is enough that he owns the property—has the legal title; and so owning, he must be paid the actual value of that property. If he has done any wrong in acquiring or using the property, that wrong must be redressed in a direct action therefor, and cannot be made a factor in condemnation proceedings. These propositions in respect to condemnation proceedings are so well settled that no one ever questions them. *The same general ideas must enter into and control legislation of the kind before us.*"

The notorious scandal connected with the acquisition of the Broadway Railroad franchise resulted in the repeal by the Legislature of the charter of the Company; and yet the Court of Appeals, in discussing the question of the franchise, said (111 N. Y., 1, 31):

> "We know not only from contemporary history but from cases which have already reached this Court, that serious questions have arisen with reference to the propriety of the means by which the corporators of the company obtained this consent from the municipal authorities; but they are not involved in this case and have no bearing upon the questions presented for discussion by the record."

In the same case, the Court of Appeals quoted with approval (p. 52) the following remarks of Judge **Cooley**

(City of Detroit v. Detroit etc. Plankroad Co., 43 Mich., 140):

> "It cannot be necessary at this date to enter upon a discussion in denial of the right of the government to take from either individuals or corporations any property which they may rightfully have acquired. In the most arbitrary times, such an act was recognized as pure tyranny, and it has been forbidden in England ever since Magna Charta, and in this country always. It is immaterial in what way the property was lawfully acquired, whether by labor in the ordinary avocations of life, by gift, or descent, or by making a profitable use of a franchise granted by the State; it is enough that it has become private property and it is thus protected by the 'law of the land'."

Even if it should be assumed that the special franchises of all the public service corporations in New York were the free gift of the State, the people of the State are reaping the benefit not only in the multiplication of conveniences, which have become necessities, but in the fact that these franchises, estimated by the Court of Appeals to be worth $200,000,000 (174 N. Y., 437), are now returning to the State a large revenue in the shape of taxes.

3. The suggestion of Judge Hough (Record, p. 412), that the appellee did not invest any property *in* the special franchises, but *under* them, is an obvious misconception, resulting from his confusing a special franchise with a general franchise and from assuming that nothing has value for which a cash payment has not been made. If even a small cash payment had been made, he would have been forced to say that there had been an investment *in* the franchise. Manifestly, if services or risks equivalent to cash payments were performed or assumed, the investment is equally *in* the franchise. In either case, a correct balance sheet of the Company would include among its assets the value of its special franchises.

4. *Analogies relied upon.*

The illustrations employed by the learned trial Judge, to emphasize the difficulty of treating special franchises as property, show a misconception of both economic and legal principles. He conceived that there was a difference between such property and "land or money," because, in the case of a franchise, he could not perceive that there was any property right in the franchise "before a main is laid or a foot of gas manufactured" (Record, p. 412). But special franchises do not differ in this respect from any other kind of property, even such tangible property as "land or money." Definite and precise value is confounded with value in general. The wild lands granted by the national government to the Union Pacific Railroad Company, remote from any settlement, had no market value before the railroad was projected; and many experienced business men regarded the project as visionary and believed that it would not succeed. But such lands were property, in the legal sense, just as completely as the most highly improved land in the heart of a city. Money in the pocket of a wrecked mariner on a desert island has no present value; but it would be property even if it were certain that the unfortunate possessor of it would spend the remainder of his days alone on the island. Value varies necessarily with the use, but is not solely dependent upon the use. The historical illustration of a town crier or herald (Record, p. 412) illustrates very well the confusion in which the Court became involved, as will appear by following the illustration to its logical conclusion. The Court asks whether any value is attached to such franchise, "beyond the right of working under its protection for a fair wage", and whether the herald would be justified in charging two prices for his proclamation, one for the service and the other as return for income on his franchise. The essence of all property rights is to permit their exercise for a profitable return; and there is no difference in principle between the right of a public herald to exercise his calling and the right accorded to every citizen to pursue his chosen vocation. If the right granted to the herald was recognized by the law to be assignable (as is the case with special franchises), then it is something which could be sold or exchanged for "money or land."

The essence of a property right is not its actual exercise, but the authority to exercise it. There is, therefore, no greater difficulty in the case of a special franchise than there is in the case of wild land. The fact that no capital has been invested in its development makes no difference either in the economic or legal sense.

All doubt on this point has been set at rest in New York.

People v. O'Brien, 111 N. Y., 1;
Suburban Rapid Transit Co. v. New York, 128 N. Y., 510;
People v. Neff, 19 App. Div., 590, 592-3.

The Broadway Railroad franchise had been mortgaged for millions of dollars before a rail had been laid; and yet the Court of Appeals, with unusual warmth, repudiated the suggestion that it was not property, in every sense of the term; and in the case of the Suburban Rapid Transit Railroad Company, the Railroad Company had not even acquired its right of way; yet its property rights in the franchise were held to be inviolable, even as against the exercise of the power of eminent domain by a municipality.

In People v. Neff, Mr. Justice CULLEN (now Chief Judge of the Court of Appeals), in delivering the opinion of the Court, made a statement which affords a complete answer to Judge HOUGH's suggestion, that there is no property right in a special franchise "before a main is laid or a foot of gas manufactured":

> "In the case of Coney Island, Fort Hamilton and Brooklyn R. R. Co. v. Kennedy, *et al.* (15 App. Div., 588), we held that *though the plaintiff had not laid a rail nor entered upon the street*, its franchise was as absolutely property as the land abutting on the street, and that the former could no more be taken for public purposes without compensation than the latter. This was the law laid down in the case of Suburban Rapid Transit Co. v. Mayor (128 N. Y., 510)."

The learned District Judge was of the opinion that "the concepts of the nature and value of franchises are seen dimly and confusedly because of the failure to distinguish between productive and non-productive property" (Record, p. 412).

The confusion is not due to the failure to distinguish between productive and non-productive property, because property rights do not depend upon the productivity of the property; it is due to the failure to note the essential nature of property. The Court thought that the great distinction between "land, money and chattels," on the one hand, and franchises on the other, was that the former could be made productive without a franchise. But there are many chattels, such as works of art, which have a large property value and which are not productive at all. Money itself is not productive, its value depending upon its service as a convenient medium of exchange; and land is, in its ultimate analysis, nothing but a right or franchise recognized by the state.

The conclusion of the Court (Record, p. 413), that a franchise "possesses no more economic value for the investor than does an actual shield possess fighting value, apart from the soldier who bears it," is no more true as applied to franchises than it is as applied to land or chattels or any other kind of property. In every case, the law which protects the individual in his claim to a particular portion of the earth's surface is a shield, without which there would be no value. All property rights are dependent upon the shield of the law. Remove that protection and the conception of property and property rights, which is the basis of our system of jurisprudence, would cease to exist.

Throughout this discussion by the Court, it is noticeable that the word franchise (as applied to the public herald, for instance) is frequently employed in the sense of general franchise or right to engage in a particular business. No contention is made, in the present case, that the appellee is entitled to a return upon the value of its general franchise to manufacture and supply gas.

To assert that, " on every private sale of franchise property, the price paid is so much *money* lost to the public by official incompetence or worse " (Record, p. 413) is to make a statement which has no more point economically speaking, as applied to franchises, than it has as applied to any other species of property. In the sphere of government, it may be that the incident of taxation should properly fall heavier on that class of property, the use of which brings the greatest benefit to the owner and imposes the heaviest burden on the public; but such considerations are wide of the mark in a discussion of the legal principles involved in the recognition of fundamental property rights.

How far this sentiment, as expressed by the Court, may carry its adherents, is illustrated by the radical utterance of a highly respected member of the Public Service Commission of New York for the Second District (Mr. Thomas M. Osborne), who, in an article in the Atlantic Monthly for April, 1908 said (p. 553) :

> " A franchise granted by the legislature of fifty years ago belonged then to us of today quite as much, if not more, than to our grandfathers who handed it over to some railroad in perpetuity; it belongs to us now, as it will belong to our grandchildren in their turn. The action of the legislature of two generations ago in giving away our birthright is not morally a binding contract upon us today, when it comes in conflict with the present or future public interest, and the vested rights of the private inheritors of that franchise will not finally stand when they come in conflict with the vested rights of the State."

That is the view which Mr. Henry George entertained with respect to real estate; but even Mr. George was not bold enough to declare that such a policy should be forthwith put into effect. He was of the opinion that the

The learned District Judge was of the opinion that "the concepts of the nature and value of franchises are seen dimly and confusedly because of the failure to distinguish between productive and non-productive property" (Record, p. 412).

The confusion is not due to the failure to distinguish between productive and non-productive property, because property rights do not depend upon the productivity of the property; it is due to the failure to note the essential nature of property. The Court thought that the great distinction between "land, money and chattels," on the one hand, and franchises on the other, was that the former could be made productive without a franchise. But there are many chattels, such as works of art, which have a large property value and which are not productive at all. Money itself is not productive, its value depending upon its service as a convenient medium of exchange; and land is, in its ultimate analysis, nothing but a right or franchise recognized by the state.

The conclusion of the Court (Record, p. 413), that a franchise "possesses no more economic value for the investor than does an actual shield possess fighting value, apart from the soldier who bears it," is no more true as applied to franchises than it is as applied to land or chattels or any other kind of property. In every case, the law which protects the individual in his claim to a particular portion of the earth's surface is a shield, without which there would be no value. All property rights are dependent upon the shield of the law. Remove that protection and the conception of property and property rights, which is the basis of our system of jurisprudence, would cease to exist.

Throughout this discussion by the Court, it is noticeable that the word franchise (as applied to the public herald, for instance) is frequently employed in the sense of general franchise or right to engage in a particular business. No contention is made, in the present case, that the appellee is entitled to a return upon the value of its general franchise to manufacture and supply gas.

To assert that, " on every private sale of franchise property, the price paid is so much *money* lost to the public by official incompetence or worse " (Record, p. 413) is to make a statement which has no more point economically speaking, as applied to franchises, than it has as applied to any other species of property. In the sphere of government, it may be that the incident of taxation should properly fall heavier on that class of property, the use of which brings the greatest benefit to the owner and imposes the heaviest burden on the public; but such considerations are wide of the mark in a discussion of the legal principles involved in the recognition of fundamental property rights.

How far this sentiment, as expressed by the Court, may carry its adherents, is illustrated by the radical utterance of a highly respected member of the Public Service Commission of New York for the Second District (Mr. Thomas M. Osborne), who, in an article in the Atlantic Monthly for April, 1908 said (p. 553) :

> " A franchise granted by the legislature of fifty years ago belonged then to us of today quite as much, if not more, than to our grandfathers who handed it over to some railroad in perpetuity; it belongs to us now, as it will belong to our grandchildren in their turn. The action of the legislature of two generations ago in giving away our birthright is not morally a binding contract upon us today, when it comes in conflict with the present or future public interest, and the vested rights of the private inheritors of that franchise will not finally stand when they come in conflict with the vested rights of the State."

That is the view which Mr. Henry George entertained with respect to real estate; but even Mr. George was not bold enough to declare that such a policy should be forthwith put into effect. He was of the opinion that the desired result should be attained by concentrating taxation upon that form of property.

Mr. Osborne's advanced views produce the effect upon the reader which the New York Evening Post, of February 24, 1906 (an habitually severe critic of the public service corporations of New York City) expressed, in referring to the conclusion of the former Gas Commission, that, in estimating the value of the properties of gas companies, their special franchises should *not* be included:

> " Whatever may be said of the other reasoning of the Gas Commission, its deliverances about the value of a franchise *leave the reader gasping.* * * *
>
> " The value of the franchise is an indestructible part of the property to be acquired. The fact that it was given for nothing is an excellent reason for giving no more in that way, but once granted, the franchise is property, which not even the legislature can confiscate."

THIRTEENTH.

Other imaginary difficulties.

Other reasons for disregarding the special franchises were suggested in the Court below, which were apparently not deemed worthy of comment by the Court, in its opinion.

I. One of these has already been alluded to (*ante*, p. 27), namely, that the franchises should not be included in the assets of the Company, because the tax upon the franchises had been allowed as an operating expense. But, as has already been observed, that kind of reasoning would be equally applicable to the real estate and all other property of the Company, none of which is exempt from taxation. Such reasoning would lead to the conclusion that the Company is not entitled to any return upon any of its property, so long as it is permitted to earn enough to pay taxes.

II. It was also suggested that the special franchises were acquired subject to the right to regulate rates. That is equally true of all the other property acquired by the Company. The right to regulate, however, is limited to allowing a fair return upon the reasonable value of *all* the property of the Company.

III. An additional reason advanced for not including the franchises among the assets is that, to do so, would prevent any regulation of the rate.

This reason seems to have been suggested by Messrs. Beale and Wyman, in their recent publication of "Railroad Rate Regulation" (Sec. 372). But the only authority cited in the work in support of the statement is Brunswick, etc., Water District v. Water Co. (99 Me., 371). The case is not at all in point, as it was a condemnation proceeding, where the Legislature had expressly directed that the value of the special franchises should be taken into consideration. Messrs. Beale and Wyman state that there is "one" case (Spring Valley Water Works v. San Francisco, 124 Fed. Rep., 574), which contains a *dictum* to the contrary of their assertion. It was not a *dictum*, as the point was carefully considered and passed upon in that case, and the value of the franchises was included in estimating the value of the assets of the company upon which it was entitled to a return (124 Fed. Rep., 574, 596).

The *dicta* to the contrary, to which the learned authors might have referred are those of this Court, which have heretofore been given (*ante*, p. 22). The treatment accorded the subject by these authors is, as the Court below observed, "summary and insufficient" (Record, p. 413); and this is illustrated by their statement (Section 364), that it "is not entirely clear on the authorities" whether compensation must be made for the franchises of a public service corporation taken in the exercise of eminent domain. There is certainly no doubt on that point in the courts of New York or in the Federal courts.

Matter of White Plains Commissioners, 176 N. Y., 239;
Monongahela Nav. Co. v. U. S., 148 U. S., 312.

The reason advanced by these authors for not including the franchises is evidently unsound as applied to special franchises in New York. It assumes in the first place, that a special franchise has no value except as shown by the net earnings of the company. While it is the productive use of property which produces a return upon the investment, the failure to put it to such use does not render the property worthless. A vacant piece of land may be worth just as much per square foot as adjacent land upon which there is the most adequate and costly improvement. A gas or railroad company, which had an undoubted franchise to use the streets of New York in perpetuity, could dispose of that right for a very large amount, even though it had never attempted to exercise it; or it could be mortgaged for the purpose of raising money to construct the plant of the company, as was done in the case of the Broadway railroad.

People v. O'Brien, 111 N. Y., 1, 31.

The fallacy of the argument is in assuming that the value of a special franchise cannot be considered without giving it a value based upon the unregulated rate or the highest possible rate. That is not necessary in the case of franchises any more than in the case of any other property of the corporation. Inasmuch as the legislature has the power to regulate rates, manifestly, the value of the franchises of a public service corporation is governed and limited by the existence of that legislative authority. No public service corporation has an absolute right to any continued fixed rate, in the absence of an express contract to that effect; and the value of its franchises must be estimated in view of the possibility of a regulation of the rate. That the value of these special franchises is not to be determined from the net earnings alone but from all the circumstances and conditions under which they are exercised was expressly declared in the Franchise Tax Cases.

People v. Tax Commissioners, 174 N. Y., 417, 440.

The argument has no greater force as applied to franchises than it has as applied to tangible property. The value of the plant of a going concern, which is in successful and profitable operation, under favorable conditions, is very much greater than the value of the same plant, if the business is conducted at a loss or is discontinued. In the latter case, the plant may cease to have any value, except to the dealer in second-hand materials. If a company is permitted to earn 20% a year on the value of its plant, that value is much greater than if the company should be permitted to earn only 6% upon the same plant. The record shows (pp. 511, 1703) that the Eighteenth Street plant of the Company has recently been taken by the City, in condemnation proceedings, for the North River water front improvement. It was of great value to the Company; but it probably did not add anything to the market value of the land, when it ceased to be used in connection with the gas business. The manufacturing plant of every gas company is more valuable with gas at a high rate than at a low rate; but that fact does not prevent a reduction of the rate. It is not the value of the property at any given rate that the court ascertains in these cases, but the reasonable value of the property under all the existing conditions, including the fact that the legislature has the power to reduce the rate if the price charged is unreasonable. There is no greater difficulty in allowing for this element of reduction in the rate in the case of special franchises than there is in the case of the manufacturing plant. Even if there were, it would not affect the legal principle involved. Where there is a breach of contract, it may be extremely difficult to ascertain the damages sustained by the injured party; but that does not affect his right to recover damages, even though they may be largely conjectural.

Wakeman v. Wheeler & Wilson Co., 101 N. Y., 205.

And this is true in substantially all cases where actions are brought to recover unliquidated damages, whether arising in tort or growing out of contract.

IV. Another fanciful argument was advanced in the Court below, partly as a reason for not including the special franchises among the assets of the Company and partly as an apology for the manifest injustice of imposing a tax of $24,000,000 upon a right which the Legislature defined as "real property" and ignored when it attempted to regulate the rates to be charged by the Company.

This "argument" was, in effect, that if the legislature should ignore the special franchises in fixing a rate, such franchises would cease to have any value and, therefore, would not be subject to taxation, and consequently no injustice would be done. In other words, as one of the counsel for the Attorney General forcibly expressed it, the franchises would be "annihilated". In the Brief filed by him in this Court, the milder term, "destroy", is employed (Brief, p. 58).

The learned counsel failed to point out that this "argument" would be just as effective if applied to the manufacturing plant of the Company. Ignore the plant in fixing your rate, and all will be well, because then you will not have to pay any tax upon it.

But even if that were a sound conclusion as applied to real estate, it would not be so as applied to the special franchises, for the very simple reason that, in spite of the fact that no return was permitted upon them, they would continue to have a substantial value, so long as any return whatever was received from the tangible property; because, it is the exercise of the franchises that gives value to the tangible property, and the franchises would, therefore, have value, so long as it was profitable to operate the plant of the Company.

> People v. Tax Commissioners, 174 N. Y., 417, 440; 199 U. S., 1;
> Gue v. Tidewater Canal Co., 24 How. U. S., 261, 263;
> State Railroad Tax Cases, 92 U. S., 575, 606.

Even if the business of the Company were, for a year or more, conducted at a loss, it is perfectly certain that the special franchises would continue to be assessed under the statute.

The only manner, therefore, of completely "annihilating" the special franchises would be by "annihilating" the value of the tangible property also. In other words, confiscate all the property, and the luckless property owner will have nothing to complain of, because he will no longer have to pay any taxes.

A curious consequence of this "argument", which the counsel did not call attention to, would be that if it were applied to the appellee, so that it would be relieved of paying the taxes upon $24,000,000 worth of property, the citizens of New York would have to tax themselves to make good the difference and would thus be compelled to pay out for the support of the government what they had saved in their gas bills.

FOURTEENTH.

Proposed impairment of contract rights.

The appellants contend that no return should be permitted upon special franchises, because, in granting those franchises, the legislature reserved the right to ignore them in the regulation of the rates to be charged by the Company.

I. The burden rested upon the appellants to show such reservation. No attempt of that kind was made, and no such attempt could possibly have succeeded, because the special franchises of the Company were granted long before the days of universal rate regulation and long before the full possibilities of that potent and at present popular power had dawned upon the legislative mind.

In the Dartmouth College Case (4 Wheat., 518, 712), Mr. Justice Story said:

> "In my judgment, it is perfectly clear that *any* act of a legislature which takes away *any* powers or franchises vested by its charter in a private corporation, *or which restrains or controls the legitimate exercise of them* * * * is a violation of the obligations of that charter. *If the legislature mean to claim such an authority, it must be reserved in the grant.*"

II. An unconditional grant by a State constitutes a contract, which is entitled to protection under the Constitution just as fully as a grant made by an individual.

Fletcher v. Peck, 6 Cranch, 87 ;
Sinking Fund Cases, 99 U. S., 700, 719;
New Orleans Water Works Co. v. Rivers, 115 U. S., 674, 681 ;
People v. O'Brien, 111 N. Y., 1.

Fletcher v. Peck was decided several years before the Dartmouth College case; and the reason for the conclusion reached by the Court was set forth with characteristic lucidity and point by Chief Justice MARSHALL, who, in the course of his opinion, said (pp. 137-8) :

> " The contract between Georgia and the purchasers was executed by the grant. A contract executed, as well as one which is executory, contains obligations binding on the parties. A grant, in its own nature, amounts to an extinguishment of the right of the grantor, and implies a contract not to reassert that right. A party is, therefore, always estopped by his own grant. * * *
>
> " If, under a fair construction of the constitution, grants are comprehended under the term 'contracts', is a grant from the State excluded from the operation of the provision ? Is the clause to be considered as inhibiting the State from impairing the obligation of contracts between two individuals, but as excluding from that inhibition contracts made with itself? * * *
>
> " What motive, then, for implying, in words which import a general prohibition to impair the obligation of contracts, an exception in favor of the right to impair the obligation of those contracts into which the State may enter ? * * *
>
> " The legislature is then prohibited from passing a law by which a man's estate, or any part of it, shall be seized for a crime which was not declared, by some previous law, to render him liable to that punishment. Why, then, should violence be done to the natural meaning of words for the purpose of leaving to the legislature the power of seizing, for public use, the estate of an individual in the form of a law annuling the title by which he holds that estate ?"

III. The grant in the present case was the right to occupy the streets of the city with the mains and pipes of the Company. Suppose these had been laid through private property, under grants or easements obtained from individual owners, could it reasonably be contended that it would be no impairment of the contract rights of the Company, if, in the regulation of rates, the State should ignore these easements in private property? Is it conceivable that, under such circumstances, all that the Company would be entitled to receive would be a return only upon the reproductive value of the mains and pipes and not upon the much greater value of the easement in the streets, by which it acquired the right to lay and use the mains and pipes and the continuous right of access to them for the purpose of keeping them in repair? If not, then, under the decision in Fletcher v. Peck, there is not a particle of difference, in legal effect, between an easement obtained from an individual and one obtained from the State; in the one case, it is carved out of private property belonging to the individual and, in the other, out of public property owned or controlled by the State. In both cases, the very fact that the right is possessed necessarily permits it to be exercised in the same manner as any other property right, that is, for the purpose of obtaining a profit from its use. Such use is an attribute of ownership.

Case of the State Freight Tax, 15 Wall., 232, 277-8.

To deprive the appellee of all return upon its special franchises would, in the language of this Court, in Pearsall v. Great Northern Ry. Co. (161 U. S., 646, 673), be "so far destructive of the original grant as to render it valueless, although there might, in neither case, be an express repeal of any of its provisions."

That the special franchises of the appellee would be rendered valueless if no return were allowed upon them is the insistent contention of the appellants.

IV. The regard which a State should have for its fair name ought to make it even more reluctant to ignore a grant made by it than one made by an individual, to which it was not a party. If an individual had granted the right to the Company through his private lands, the State might contend, without the taint of personal dishonor which attaches to the repudiation of a contract by a party to the contract, that the only property actually employed in the business was the tangible property and that the right to maintain the mains was merely the right to put the tangible property to profitable use and, therefore, had itself no intrinsic value. But for the State to make that contention, when it had not reserved the right in its grant, would be to repudiate its own contract obligations. In the absence of an express reservation, the State has no greater power to deprive its grantee of all return upon the value of an easement, than it would have, in the case of a grant of land for the exclusive use of a gas manufacturing plant, to insist that the land was granted merely to enable the gas to be manufactured and distributed and that, as the land was thus a mere instrument to carry out the main object of the Company's business, no return should be permitted on its value, although the State placed a large valuation upon it for purposes of taxation.

FIFTEENTH.

The Brief of the Attorney General.

I. In the brief filed by the Attorney General in this Court, it is conceded (Brief, p. 68) that, in the Special Franchise Tax Cases, the Court of Appeals held special franchises to be property; and the further concession is made (Brief, p. 20, Sub. 9) that special franchises "*are property which the public cannot condemn and take over without paying a reasonable compensation therefor.*"

No attempt is made to explain why the State must treat these franchises as property for one purpose and why it may ignore them for another purpose. It is true that the suggestion is made, that the franchises were granted subject to the right of the State to regulate the rates to be charged by the Company. But no reservation is referred to; and regulation means reasonable limitation, not confiscation or total disregard of existing property. Special franchises are, of course, granted subject to the legislative power of regulation; but they do not differ in that respect from any other property. The real estate of a public service corporation is also subject to the power of rate regulation, and its value will depend, to some extent, upon the maximum rate allowed; but that does not mean that such real estate may be ignored when the legislature establishes the rate.

II. In discussing the question of franchises in his Brief, the Attorney General repeatedly employs the term in the sense of general franchises, that is, the right to engage in the business of manufacturing and supplying gas to the public, as distinguished from special franchises, or the right to maintain mains in the city streets. This general sense is that in which the term is used in the Fourth, Fifth and Thirteenth Points (pp. 27, 54). It is this confusion which causes him to assert, in his Third Point (p. 27), that the only property which the Company uses in manufacturing and supplying gas is its tangible property. Would he say that, if the Company had acquired a right of way through private property instead of through the city streets?

The East River Gas Company of New York condemned a right of way for a tunnel under the East River, so as to enable it to bring its gas from the Brooklyn side of the River to the Manhattan side (Matter of East River Gas Co., 119 App. Div., 350). Can an expensive conduit of that kind be disregarded in fixing the price of gas for that Company? Or, suppose a gas company had its manufacturing property in the centre of a block and could obtain connection with its mains in the streets only through land owned by private individuals; could its right of way through such lands be disregarded in fixing a rate of return upon its property? The tunnels under the East River and the smaller tunnels under the streets constitute the right of way of the East River Gas Company; and such right can no more be disregarded than the right of way of a railroad corporation. On the contention of the Attorney General, he would be forced to assert that a railroad company should not be permitted to include its right of way among its assets, upon which it is entitled to a return, but only the cost of reproducing the ties and rails. It is no answer to this conclusion to say that the railroad company owns the fee of the land constituting its right of way. That is presumably not the law in New York, where only such interest is taken as is required (Sixth Ave. Ry. Co v. Kerr, 72 N. Y., 330, 332–3); but even if it were, the exact nature of the title or interest owned is of no consequence, in considering whether that which is actually owned is property. In the case of a street railroad in Broadway, for instance, what is the value of the rails as compared with the right to lay and use them?

III. The attempt is made to show that Smyth v. Ames (169 U. S., 466) holds that a return is permitted only on tangible property. What the Court was considering in that case was the return on tangible property; and its remarks were, of course, primarily applicable to that kind of property. That it did have in mind also the value of the property of the company as an organic whole, including the intangible property, is evident from a consideration of the entire opinion and also from the expressions of the Court heretofore quoted (*ante*, p. 23).

IV. In the discussion by the Attorney General of "the method of valuing special franchises", contained in the Eighth, Ninth and Tenth Points of his Brief (pp. 32–37), the same confusion is observable, of treating special franchises as synonymous with general franchises. The assertion that "there is absolutely no measure of the value of a franchise", except the profits derived from its use, is contrary to the conclusion reached by the Court of Appeals in the Special Franchise Tax Cases (174 N. Y., 417, 438-9). As heretofore stated (*ante*, p. 45), a franchise may have great value before the Company has acquired any tangible property. Indeed, no prudent investor would contribute capital for the construction of a costly plant for a gas or street railroad company until it had obtained the right to use the streets.

To assert that if a return should be permitted on the value of the special franchise of a company, an *excessive* rate once established could never be reduced, because the value of the franchise depends on the rate charged, is to ignore the fundamental principle of rate regulation, that all property is held subject to the right to limit a return, upon the basis of a reasonable rate; and there is no difference in this respect between special franchises and any other kind of property (*ante*, p. 50). The suggestion of the Attorney General is effectively answered by himself, when he refers to the method of valuing the special franchises of a corporation in condemnation proceedings (Brief, p. 60):

> "If the franchises of a gas company were appropriated in condemnation proceedings, it would be entitled to compensation thereof at a valuation determined by the capitalization (at a reasonable rate) of the net earnings of the Company (under the prevailing *lawful* rate charged), over and above the sum which would represent a fair return on its tangible property."

On that basis, there would be no difficulty whatever in valuing the special franchises of the appellee; for the maximum rate which it could charge has been fixed by the Legislature ever since 1886.

L. 1886, Ch. 322;
L. 1890, Ch. 566, Sec. 70;
L. 1897, Ch. 385, Sec. 1.

Such maximum rate is a reasonable rate.

Brooklyn Union Gas Co. v. New York, 188 N. Y., 334;
Lake Shore, &c., Ry. Co. v. Smith, 173 U. S., 684, 695.

It was, therefore, scarcely worth while to indulge in such declamation as that which is found in the Attorney General's Brief (p. 72), where the actual facts are ignored and the appellee is charged with an attempt to capitalize "a prescriptive right of extortion."

V. The discussion in the Sixteenth Point of the Attorney General's brief (pp. 61-65), of the effect of the consolidation of 1884, shows a misapprehension both of the position of the appellee and of the nature of the Act under which the consolidation was made.

1. It has never for a moment been conceded nor suggested on the part of the appellee, that its constituent Companies

would not have been entitled to include among their assets, upon which they were entitled to a return, the value of the special franchises respectively owned by them.

2. Whether the Act under which the constituent Companies were consolidated contemplated a technical sale of the property and franchises to the new Company created by the consolidation is of no consequence, because the effect was precisely the same, inasmuch as a value was placed on the property and franchises of each Company, which was to be paid for by stock of the new Company. This transaction, however, did constitute a sale, as distinguished from mere barter, where no value is placed upon the articles exchanged. The consolidation agreement was not a purely formal agreement between these Companies for the operation of the business and the division of earnings. It was an actual sale and transfer of the title of the assets of each Company to the new Company, for a sum to be paid by the latter Company in its capital stock. Not only was each Company vitally interested in the valuation of its own property, but, as the Attorney General concedes (Brief, p. 63), if any stockholder objected to such valuation, he was entitled, under the Act (L. 1884, Ch. 367, Sec. 2), to have the value of his stock determined and paid for *in cash* by the new Company. The Act (Sec. 1) expressly provided that the capital of the new Company should not exceed "the fair aggregate value of the property, franchises and rights of the several companies thus to be consolidated."

The special franchises of the consolidating Companies were thus permitted to be sold to the new Company in precisely the same manner as any of the other property; and it was because of the complaint of the valuation which had been placed upon the property and franchises by the constituent Companies, that the legislative investigation took place, resulting in the report that such valuation could not be disturbed.

SIXTEENTH.

The Brief of the Public Service Commission.

I. The voluminous Brief (317 pages) filed on behalf of the Public Service Commission carries rate regulation into the clouds and leaves us in the region of dreamland and moonshine (166 U. S., 171, 222), where practical business considerations cease to have any influence. Is it possible, for instance, that the Consolidated Gas Company is actually receiving more than 22% upon the full value of all its property which is devoted to the public use (Brief, p. 239), and that the investing public has failed to grasp that fact? Is it a part of the scheme of present day government, that the legislature shall be regarded as a school of education in economics, to be supported by its unfortunate victims (Brief, p. 262)? Can it be that, in these times, a company is not properly managed, unless it borrows its capital instead of obtaining it in the old-fashioned way of issuing stock (Brief, p. 268)? Is it true that earnings devoted to the development and extension of a business belong to the patrons of the business and not to the stockholders, whose dividends were curtailed in order that the business might thus be developed and its facilities increased (Brief, pp. 244-5)?* How would this doctrine impress investors abroad, especially in England, where the application of earnings to betterments is universally capitalized? Is it reasonably conceivable that when individuals invest their money in a new public service business they are calculating for part of their return on the speculative profit to be realized from the real estate acquired for the business (Brief, p. 243)? And does a public service corporation fail to show that a given rate is confiscatory unless it also shows that the rate will be confiscatory upon all other corporations affected by it (Brief, p. 273)? Is it true that all of the gas companies in the city of New York are operating under the same conditions (Brief, p. 279), and that the conditions in the sparsely settled districts of the upper Borough of the Bronx are the same as those in the densely populated business and residential districts in the Borough of Manhattan? Is it possible to say that a board which values some of the property of a public service corporation at zero is fair-minded and does not make a flagrant attack upon the rights of property (Brief, p. 230)?

---

* *Contra*, Brymer v. Butler Water Co., 179 Pa. St., 231.

II. That the special franchises of the appellee are property and "*incorporeal real property*" is expressly conceded in this Brief (p. 293).

III. That the appellee possesses special franchises is also expressly conceded (Brief, pp. 79, 150*e*, 236). While it is asserted that these franchises have ceased to exist, that contention is obviously inconsistent with the admission that they do exist. If it is urged that they exist but can be terminated on notice, then it is no longer a question of their existence but of their value; and in another part of their argument (p. 81), counsel assert that a revocable franchise is valued in New York at as great an amount as if it were perpetual.

Attention is called by counsel to their sixth assignment of error (Brief, p. 154), on the ground that the Court failed to make an express finding as to the present existence of the New York, the Manhattan, the Municipal and the Metropolitan franchises. Counsel overlook the fact that the findings of the Special Master, that three of these franchises were perpetual, was confirmed by the Court (*post*, pp. 97, 110, 112).

Counsel seem to think that some ingenuity was shown by the appellee in discussing the validity of the Manhattan franchise before considering that of the New York franchise, which was earlier in point of time (Brief, p. 293). The reason this was done was because the Manhattan franchise contained an express grant of the right to lay mains (*post*, p. ~~99~~ 77); and this provision was absent from the New York grant. It has been our contention that the intention of the legislature was the same in each case and that this could be more clearly shown by taking up first the grant where the intention was actually expressed. In spite of their criticism, the learned counsel reach the same conclusion, as they concede (Brief, p. 300) that "there is much indication that the legislature intended to grant to the Manhattan Company the same nature and extent of power which it had granted to the New York Company."

The provision permitting the city to purchase the property of the Harlem Company at 10% more than the cost, upon which reliance is placed (Brief, p. 303), was, as we shall show later (*post*, pp. 91, 92), a nullity.

IV. It being conceded that the special franchises are real property and that the appellee possesses such franchises, recourse is had to the old argument that these franchises were granted subject to the condition that the grantee should receive a return only upon the actual investment. This suggestion has already been dealt with (*ante*, p. 53). No attempt is made to point out such a condition; but if, in making a grant, it was intended that the grantee should have a return on some of his real property but not on all of it, the exception should be clearly expressed. That no thought of such an exception was in the mind of the legislature when these grants were made is conceded by counsel for the Public Service Commission, when they state that the regulation of rates was "a thing almost unheard of until the public realized that competition was a thing of the past" (Brief, p. 262). Suppose it were shown that, in the case of each one of these grants, a large sum of money had been paid to the State or City for them; would it then be contended that there was an implied condition that no return should be received on the capital actually invested? But if not, where a money payment has been made, no more can it be implied where the grant was a gift or where the consideration was the acceptance of the grant and the investment of capital in the public enterprise.

The contention is again advanced that if the eighty cent rate should permit a return only upon the value of the tangible property, there would be no value left for the special franchises. The fallacy of this has already been exposed (*ante*, p. 52).

It is also contended (Brief, p. 220), that the grant of a special franchise which does not fix the rate to be charged cannot be valued. It might as well be claimed that if land is granted to a railroad company for its right of way, and a schedule of the rates to be charged by the company is not appended, no return can be permitted on the value of the land. If a five cent fare is permitted, as in the Detroit case, or an 8% return, as in the Monongahela case, counsel would concede that the special franchise had a value which could not be ignored. But the mere statement of a specific amount can make no difference, if there is an amount which can be ascertained. In the present case, that amount is one which will permit a reasonable return upon all the property employed (6% or 8%, or 10%, or whatever the special facts may warrant); and while it may be more difficult to estimate the value of the franchise in such case, the difficulty does not affect the principle (*ante*, p. 51); and this is also shown by the fact that these franchises are universally valued for purposes of taxation.

The right to fix a maximum rate does not, as counsel contend (Brief, p. 224), preclude the special franchises from being valued on the basis of a reasonable rate, any more than it does in the case of the real estate or plant of the Company. The franchise is no more held subject to this servitude of regulation than any of the other property. All of the property is so held.

V. *The capitalization of 1884.*

Counsel treat this subject as if the details of the capitalization of 1884 were one of the issues in the case; and extracts from the testimony of the witnesses who appeared before the legislative Investigating Committee are quoted and the testimony is discussed with an amplitude of detail that would scarcely have been permitted even before that Committee. The most refined calculations are entered into to show that the value placed upon the special franchises did not represent the exact difference between the market value of the capital stocks of the Company and the appraised value of their tangible property; and there is a perfect riot of figures on these minute points. But why all this burrowing into the past, when the only point involved is the fact that the franchises were capitalized with the sanction of the legislature? The complaint that they were over-capitalized was the occasion of the legislative investigation; but the Committee reported that the franchises of only four of the six companies were worth *much more* than the amount at which all of them had been capitalized (*ante*, p. 30).

VI. *The special franchise tax.*

Counsel set up a bogey in connection with the State Franchise Tax and proceed to annihilate it. They insist that we contend that the taxation of the special franchises constitutes an actual estoppel against the State, both as to their existence and duration and as to their value (Brief, p. 235). Our contention is that the taxation recognizes the existence of the franchise and that it is a property right (*ante*, p. 27; *post*, p. 85) and that the valuation by the State Tax Board, which is the only expert body capable, in the opinion of the Court of Appeals, of assessing such property (*post*, p. 118), is entitled to great weight in considering the value of these franchises. In New York, the State shares in the local taxation of real estate (Tax Law, Sec. 173).

VII. *Value of the special franchises and good will.*

There are no questions of fact which are more frequently referred for hearing and determination by courts of chancery to masters and referees than those involving the title of property and its value. In foreclosure and partition proceedings, this practice is universal. No court would have the time to consider the details involved in such questions. Much more is that applicable to the case at bar, brought before the highest appellate tribunal in the land, where the conclusions of the Special Master and Court rest upon an examination and consideration of many different instruments and acts and where local conditions and considerations have become a part of the learning and experience of those tribunals.

An elaborate attack is made upon the findings of the Court as to the value of the special franchises. How elaborate that attack is may be inferred from the contention (Brief, p. 230), that the State may "at any time authorize or direct the city to build its own lighting plant" and that consequently the value of the special franchises are only nominal, because the Company could not compete with the City. In other words, because something may possibly happen in the indefinite future, which has never yet happened, to reduce the value of the franchises, one must act as if it had already happened, with the resultant loss. It is apparent that the State Tax Board does not take that contingency into consideration in assessing the franchises. Counsel do not stop to consider that the argument, if it is valid at all, inevitably leads to the conclusion that the value to be placed upon the real estate and plant must also be nominal; because, it is elsewhere urged that the plant can have no value except for the scrap heap (Brief, p. 219), if the special franchises cease to have value. On this basis of valuation, the Company is undoubtedly receiving a return of several thousand per cent on the actual value of its investment.

The main attack made upon the findings of value by the Court below is because the Court assumed an increase in value since 1884. Inasmuch as the population of the City and the consumption of gas have increased enormously since 1884, it is very obvious that the special franchises of the appellee, which the Court below found to be perpetual, have also greatly increased in value; and this is conceded in the Brief, where it is admitted (p. 221) that "the franchise has indeed an enormous value, so long as it is not terminable or terminated by expiration or revocation."

Even if, for the sake of the argument, the contention of counsel should be conceded, that the special franchises of the appellee are revocable, yet if, notwithstanding that fact, the State values them at $24,000,000 (and the method of valuation is not claimed by counsel to be erroneous), the finding by the Court that they are worth $12,000,000 cannot be regarded as excessive.

This question of value is treated more fully in a subsequent point (*post*, p. 116).

SEVENTEENTH.

The Brief of the City of New York

No proposition has been advanced in the Brief filed on behalf of the City of New York, which has not already been considered. So far as the question of good will is concerned, the Brief is silent. On the question of special franchises, it furnishes numerous examples of the common fallacies pointed out in elementary treatises on logic. Thus, on p. 18, there is an example of *petitio principii* :

> "The very claim of a return upon franchise value involves an admission that the appellee has been receiving more than a fair return upon its investment for the public."

Here is another example of the same fallacy, in which the italics are those of the authors (p. 21) :

> "*Nothing* is taken away *to which the Company had a right.* It never had a *right* to earn any more than a reasonable return on its investment."

An illustration of the *ad hominem* argument is found on p. 19 where it is surmised that the "cleverness of officials in concealing the truth" may have had something to do with the fact that the rates of the appellee were not sooner regulated ; and this conjecture is re-enforced by allusions to the "excessive" charges heretofore made ; thus entirely ignoring the fact that a maximum, and hence reasonable, rate fixed by the legislature of New York, has prevailed since 1886 (*ante*, p. 59).

The definition of "regulation" affords an interesting example of the luminous manner in which the subject is treated in this Brief (p. 21) :

> "It (regulation) is only, simply, and cannot otherwise be described than *regulation* of rates for services rendered."

In other words, regulation is regulation.

The statement is several times repeated, that if a rate should be fixed which would permit only a reasonable return upon the capital actually invested, the special franchises would have no value (pp. 18, 28, 32) ; and this statement is forthwith demolished by a quotation from Messrs. Beale and Wyman, which is made "because of the conciseness and intrinsic force of the statement" (p. 28).

"The vice" of the decision of the lower Court is attributed to the fact that a franchise was held to be synonymous with property (p. 21). "We are so accustomed to the collocation of property and franchise, in speaking of corporations, that we unconsciously come to treat the words as synonymous." In the very next sentence, the learned counsel give a striking illustration of this "collocation", by including in the phrase, "all property", the term, "franchise"; and, later (p. 31), it is asserted that "a franchise, whether general or special, is taxable *the same as other property*."

Having stated that a special franchise is no part of the investment of a gas company, counsel chance to remember that such a franchise must be paid for in condemnation proceedings; and they dispose of this awkward fact, by concluding that that does not add anything to the investment (p. 32). The Court of Appeals, however, differed from that conclusion, when it reversed the report of the Commissioners in the White Plains Water case (176 N. Y., 239). If the amount subsequently allowed for the special franchise and good will in that case was not part of the capital investment, to which the stockholders were entitled, to whom did it belong?

Many of the other erroneous contentions advanced in the lower Court, which have heretofore been commented upon, are brought forward in the present Brief; such as the confusion of terms in failing to distinguish between special and general franchises (p. 20), the gratuitous assumption that no consideration was given for the special franchises of the appellee (pp. 19, 24), the alleged insuperable difficulty in valuing special franchises (p. 22) etc.; and the counsel "take occasion to observe", impressively (p. 24), that "there are no rights of stockholders, as such, involved in this litigation or any aspect of it". The corporate entity is the real and only culprit and victim. The thousands of stockholders and bondholders, who are anxiously waiting to see whether their incomes from investments in public service corporations are to be cut down to a bare return upon the reproductive value of the tangible property alone, may possibly demur to this solemn observation of counsel.

PART II.

GOOD WILL, OR THE VALUATION OF THE PROPERTY AS AN ORGANIC WHOLE.

The Special Master included good will among the assets upon the value of which the Company was entitled to a return (Record, p. 205). The Court rejected this item; and its primary reason for so doing was because the ordinary legal definition of good will was not applicable to the Company's business (Record, p. 410). It is a case where a general principle has been summarily disposed of by a narrow and precise definition. But, as Mr. Chief Justice Fuller observed, in Metropolitan Bank v. St. Louis Dispatch Co. (149 U. S., 436, 446):

> "Undoubtedly good will is in many cases a valuable thing, although there is difficulty in deciding accurately what is included under the term."
>
> See, San Francisco Nat. Bank v. Dodge, 197 U. S., 93, 95.

I. It may be true that good will, in the strict mercantile sense, is somewhat of a misnomer as applied to public service corporations. But, in a broader sense, good will is a valuable property right, growing out of the successful establishment of a business, over and above the actual capital invested and employed in the business. In this sense, good will may be regarded as the momentum of a well established business in successful operation; and the value, in the case of a public service corporation, is more substantial and more permanent than that of the good will of a mercantile business. The good will of a manufacturing or mercantile establishment may be of great present value, but with no certainty of its continuance for any extended period. The article manufactured may cease to have any commercial value, through a caprice of fashion or because it has been superseded by another article more novel or serviceable, while the continuing prosperity of a mercantile establishment or business of any kind depends so largely upon the personal element that, in estimating such good will, the courts have refused to consider that it has a value greater than the net profits of the business for two or three years.

> 1 Lindley on Partnership (5th Eng. Ed.), 447;
> Mellersh v. Keen, 28 Beav., 453.

But, in the case of a gas business, the conditions inevitably make for greater permanence. Nothing is more certain than that large quantities of illuminating gas will continue to be used for many years to come; and this was expressly found by the trial Court, in limiting so strictly the allowance to be made for depreciation (Record, p. 407); and the merely *personal* element in the management of the business has very little to do with the use of gas.

Thus, the successful continuance of the appellee's business does not depend upon influences which are subject to sudden change. It depends primarily upon the existence of a long established business in a public necessity, and upon existing connections made with its vast army of consumers; and the longer this connection has existed and the greater the number of consumers, the greater will be their reluctance to have new connections made with an untried company, and the more substantial will be the value of the good will of the old company.

II. Judge Hough was of the opinion that "tangible property has a certain value entirely apart from franchise or right to continue business, or method of transacting business; but good will, in the sense of organization for the business of furnishing gas, can have no existence whatever apart or detached from the franchise conferring the necessary privilege" (Record, p. 111).

That view, so far as the tangible property is concerned, is at variance with the one expressed by the Court of Appeals in the Franchise Tax Cases (174 N. Y., 417, 424), as well as with those of this Court.

> Gue v. Tidewater Canal Co., 24 How., U. S., 261.
> State Railroad Tax Cases, 92 U. S., 575, 606.

That good will may not have any value apart from the franchises does not detract from its substantial character as property any more than it detracts from the substantial character of the manufacturing plant to say that its value is dependent upon the franchises.

Neither can it make any difference that the business may be a monopoly, though the record in this case shows the contrary. That is true, to some extent, of all public service corporations, and is the fundamental reason why they are subject to regulation by the legislature.

III. Judge Hough also expressed the opinion that the "most ingenious financier" would not think of capitalizing the good will of the gas business. But even if it were absolutely certain that the appellee had no franchises whatever or that all of its franchises would shortly expire, there is no doubt that the mere fact of having an established business, in active operation, would be of very great value. The municipal authorities would be extremely reluctant to compel the Company to remove its hundreds of miles of mains from the streets; and, by the very fact of the existence of those mains in the streets and their connection with the buildings along their line, the Company could afford to pay more for an additional franchise than any new company, which would require several years to construct its works and make its connections; and it cannot reasonably be doubted that if the Company were forced to retire from business and dispose of its manufacturing plants and mains, it could obtain for its property much more than the actual estimated profit of the business during the period required for the construction of new mains and connections. A new company, which purchased the business of the appellee with all its existing connections and the improvements and special facilities resulting from long experience, would have to pay for them and would, therefore, be forced to capitalize them.

There is no greater difficulty in capitalizing this value than there is in capitalizing the good will of an ordinary mercantile business. That is done every day; and it is an entirely proper thing to do. The only objection to it is that it is frequently abused by excessive capitalization. But that objection applies to patents and mining properties and indeed to property of every kind, in varying degrees.

IV. In New York (the law of which is controlling in this case), good will, or the added value derived from an established business, is property, which, in the case of a partnership, constitutes a partnership asset and does not pass to the surviving partner.

Slater v. Slater, 175 N. Y., 143.

But the New York courts have gone further and held, even in the case of a water works company (a public service corporation) that its good will must be paid for in condemnation proceedings.

Matter of White Plains Commissioners, 176 N. Y., 239.

V. In New York, under the system of taxation which exists, corporations are required to pay a state franchise tax, under which good will is taxable.

Tax Law, Sec. 182;
People v. Roberts, 154 N. Y., 101;

and, in the case of gas companies, they are required to pay one-half of one per cent. of their gross earnings, in addition to a sum dependent upon the rate of the dividend (Tax Law, Sec. 186); and, as the earning power is necessarily dependent upon the good will of the company and the extent to which its business has been established, this tax necessarily includes a tax upon the good will and other intangible property of the Company.

If good will is property for the purposes of taxation, it is necessarily property for every other purpose.

VI. In the opinion of the Court below, a conclusive reason for not allowing anything for the so-called good will of the Company was that the price of gas has for many years been regulated by law (Record, p. 411). For many years, the maximum rates charged by railroad companies in New York has been regulated by law (L. 1848, Ch. 140, Sec. 30). Is there any doubt that the property of the New York Central and Hudson River Railroad Company has a value far beyond anything which could reasonably be attributed to its tangible property and special franchises? The same is true of all public service corporations and of all business affected with a public interest. It is just as applicable, for instance, to warehouses or grain elevators owned by *individuals* (Munn v. Illinois, 94 U. S., 113, Brass v. Stoeser, 153 U. S., 391, People v. Budd, 117 N. Y., 1), where there is no special franchise, as it is to the business of a public service *corporation*. But it would scarcely be claimed that an individual who had built up a valuable elevator business, as in the Budd case, could have his charges limited, without taking into consideration the value of the business as a whole, that is, the value of the good will, which, in such a case, where there was no special franchise derived from the state, would be the main element of value in the business.

A suggestion of that kind was thus answered by Mr. Justice BREWER, in Cotting v. Kansas City Stock Yards Co. (183 U. S., 79, 104):

> " Is it true, in this country, that one who by his attention to business, by his efforts to satisfy customers, by his sagacity in discerning the probable courses of trade, and by contributing of his means to bring trade into those lines, succeeds in building up a large and profitable business, becomes thereby a legitimate object of the *legislative scalping knife ?*"

VII. It would be the application of the legislative knife to a more vital part than the scalp, if the legislature were permitted to regulate a business, either as it should be under ideal conditions, or as it would be if it were a mere lifeless aggregation of different pieces of property. What the legislature regulates, and all that it has the power to regulate, is a going business, one actually devoted to the public use, *an organic whole*; and it is the value of that whole, in active operation, which must be taken into account. This vital principle has been repeatedly recognized by this Court, in its reference to " present " value, that is, value under the conditions which actually exist when the regulation is attempted and not under conditions which might possibly exist in Utopia. The regulation of rates in New York City must depend upon values as they exist at that place, not as they exist in some other part of the country. The value of any manufacturing plant depends largely upon whether it is in successful operation. An artificial gas plant might be rendered worthless, if natural gas were found in the vicinity in sufficient quantity to make it impossible to supply artificial gas in competition.

The present record shows that the valuation placed upon the real estate and plant of the Company was merely the market or reproductive value. Nothing was allowed for the fact that all of this property has a largely enhanced value by reason of the fact that it is operated as a single entity, although the parts are physically separated. It is the great value of this business as an organic whole, and not the nominal value of its dismembered and lifeless parts, upon which its owners are entitled to a return; and that principle is universally recognized in assessing property for taxation.

Cleveland, &c., Ry. Co. v. Backus, 154 U. S., 439;
Express Company Cases, 166 U. S., 171, 185;
Western Union Tel. Co. v. Gottlieb, 190 U. S., 412;
Fargo v. Hart, 193 U. S., 490;
San Francisco Bank v. Dodge, 197 U. S., 70.

1. In Cleveland etc. Ry. Co. v. Backus, the Court said (p. 444):

> "The true value of a line of railroad is something more than an aggregation of the values of separate parts of it operated separately."

2. In the Express Company cases, Mr. Justice Brewer said (p. 219):

> "Now whenever separate articles of tangible property are joined together, not simply by a unity of ownership, but in a unity of use, there is not infrequently developed a property, intangible though it may be, which in value

exceeds the aggregate of the value of the separate pieces of tangible property."

And he further said (p. 221):

> "But if the State comprehends all property in its scheme of taxation, then *the good-will* of an organized and established industry must be recognized as a thing of value. The capital stock of a corporation and the shares in a joint stock company represent not only the tangible property but also the intangible, including therein all corporate franchises and all contracts, privileges *and good-will* of the concern."

And he further said (p. 222):

> "The value which property bears in the market, the amount for which its stock can be bought and sold is the real value. Business men do not pay cash for property in moonshine or dreamland."

3. In Fargo v. Hart, the Court, in an opinion written by Mr. Justice HOLMES, said (p. 499):

> "The sleepers and rails of a railroad, or the posts and wires of a telegraph company are worth more than the prepared wood and the bars of steel or coils of wire, from their organic connection with other rails or wires and the rest of the apparatus of a working whole. This being clear, it is held reasonable and constitutional to get at the worth of such a line, in the absence of anything more special, by a mileage proportion. The tax is a tax on property, not on the privilege of doing the business; but it is intended to reach the intangible value due to what we called the organic relation of the property in the State to the whole system."

4. In San Francisco National Bank v. Dodge, in the dissenting opinion in which four of the Justices participated, it was expressly recognized (pp. 93, 95) that good will is a property right, protected by the Constitution; and there was apparently no difference of opinion on this point in the case of the other Justices.

VIII. A similar conclusion has been reached by the Federal Courts in rate regulation and other cases.

National Water Works Co. v. Kansas City, 62 Fed. Rep., 853, 865;

Metropolitan Trust Co. v. Houston etc. R. Co., 90 Fed. Rep., 683, 687;

Spring Valley Water Works v. San Francisco, 124 Fed. Rep., 574, 595.

1. In National Water Works Co. v. Kansas City (62 Fed. Rep., 853, 864), Mr. Justice **Brewer** said:

> "On the other hand, the city insists that the franchise has ceased and that basing the value upon earnings is in effect valuing a franchise which no longer exists, and which the city is not to pay for; that the true way is to take the value of the pipe, the machinery, and real estate, put together into a water works system, as a complete structure, *irrespective of any franchise*—irrespective of anything which the property earns or may earn in the future. * * * The original cost of the construction cannot control, for 'original cost' and 'present value' are not equivalent terms. *Nor would the mere cost of reproducing the water works plant be a fair test, because that does not take into account the value which flows from the established connections between the pipes and the buildings of the city.* It is obvious that the mere cost of purchasing the land, constructing the buildings, putting in the machinery, and laying the pipes in the streets—in other words, the cost of reproduction—does not give the value of the property as it is to-day. A completed system of waterworks, such as the Company has, without a single connection between the pipes in the streets and the buildings of the city, would be a property of much less value than that system connected, as it is, with so many buildings and earning, in consequence thereof, the money which it does earn. The fact that it is a system in operation, not only with a capacity to supply the city, but actually supplying many buildings in the city,—not only with a capacity to earn, but actually earning,—makes it true that 'the fair and equitable value, is something in excess of the cost of reproduction.' The fact that the company does not own the connection between the pipes in the streets and the buildings—such connections being the property of the individual property owners—does not militate against the proposition last stated; for who would care to buy, or at least give a large

price for, a waterworks system, without a single connection between the pipes in the streets and the buildings adjacent. Such a system would be a dead structure, rather than a living and going business. The additional value created by the fact of many connections with buildings, with actual supply and actual earnings, is not represented by the mere cost of making such connections. Such connections are not compulsory, but depend upon the will of the property owners and are secured only by efforts on the part of the owners of the waterworks, and inducements held out therefor. The city, by this purchase, steps into possession of a waterworks plant—not merely a completed system for bringing water to the city and distributing it to pipes placed in the street, but a system already earning a large income, by virtue of having secured connections between the pipes in the streets and a multitude of private buildings. It steps into possession of a property which not only has the ability to earn but is in fact earning. It should pay, therefore, not merely the value of a system which might be made to earn, but that of a system which does earn."

2. In Metropolitan Trust Co. v. Houston etc. R. Co. (90 Fed. Rep., 683), Judge McCormick gave expression to the same idea, in holding that, in estimating the value of a railroad, its favorable location should have been considered, in view of the advance in prosperity of the country through which it ran, as well as " the increment of its value due to the settling, seasoning and permanent establishment of the railways and to the established business and the good will connected with its business, which has been established through a long series of years and all of which should reasonably be considered in fixing the value of the property and the capitalization upon which at least it is entitled to earn and to pay some return."

It is an elementary economic truth, which has been recognized by this Court (San Diego Land Co. v. National City, 174 U. S., 739, 757) that, in any form of business enterprise, a return must be allowed for the services of those who engage in it, as well as upon the capital actually employed. What return shall be permitted for such services is dependent upon their value, and a test of the value is the result accomplished. If the value of the services is great, the capital employed and the property used has an added value, which, for lack of a better term, may be called good will, and which is universally recognized as one of the most valuable assets of a successful business. An enterprising man may build up an elevator business so successfully, that, in course of time, it is patronized to such an extent by the public as to become " affected with a public interest." To " regulate " his business, by allowing him a return only upon the actual value of his land and plant, without considering its value as an organic whole, would be to rob him possibly of the rewards of a lifetime of intelligent effort and successful achievement.

What is the value of the tangible property of an express company, compared with the value of its business as a going concern? Would anyone seriously contend that an express company would receive a reasonable return from its business, if the legislature merely permitted a return upon the value of its horses, wagons and office furniture?

Upon the theory which the appellants seek to establish in this case, all business must first be brought to a standstill, in estimating the value of the investment. If that theory should be accepted, it would require no prophetic vision to foresee the time when legislative zeal would cause the abandonment by individuals of all forms of enterprise affected with a public interest, leading inevitably to the assumption of such business by the state.

PART III.

THE APPELLEE POSSESSES SPECIAL FRANCHISES.

FIRST.

Every presumption in favor of the appellee's rights.

I. The Appellee owns 822 miles of mains in the streets of New York, through which it supplies about 13,000,000,000 cubic feet of gas every year to nearly 400,000 consumers; and it has been engaged in this business continuously since 1884. Prior to that date, its constituent companies, the earliest of which reached back to 1823, had been engaged in the same business. To carry on this business properly and to maintain its mains in good condition, make needed repairs, supply new connections and provide further extensions as the service was extended into a wider territory, required the continual opening of the streets. But before any opening can be made in a street, special permission to make it must first be obtained, as required by the City Charter (Sec. 528):

> "It shall be unlawful, after the passage of this Act, for any person or corporation to take up the pavement of any of the streets, avenues, highways or other public places of said city * * * unless permission in writing therefor shall have been first obtained from the said Commissioner of Water Supply, Gas and Electricity, with the written approval of the President of the Borough within which it is desired to lay such conduits."

The City is thus continually giving to the Company its consent to open the streets in connection with its business; and this course of dealing has been going on from time immemorial. The Court will certainly not assume that all of those who now represent and for so long a period have represented the City in these matters, have been derelict in the performance of their duty, especially since the new Charter took effect in 1898, establishing the definite policy that no new franchise shall be consented to without some consideration, and then only for a limited period.

City Charter, Secs. 73, 74.

II. Moreover, if, as the appellants contend, the appellee has a monopoly in the City of New York, the Legislature has, in the Acts complained of, regulated the business of the appellee and thus recognized the existence of its right to occupy the streets.

Owensboro v. Owensboro Waterworks Co., 191 U. S., 358; Southern Pacific Co. v. Board of Railroad Commissioners, 78 Fed. Rep., 236, 251 (McKenna, J.).

In Owensboro v. Owensboro Waterworks Co., Mr. Justice McKenna, in delivering the opinion of the Court, said (p. 372):

> "*The appellee is in possession of the waterworks, and is supplying the inhabitants of the city with water.* It is that service which the city desires to regulate, and it is to "every person, firm, company and corporation" engaged in that service the ordinance of March 21, 1900, is addressed. No other person, firm or corporation than the appellee is so engaged in Owensboro, or has been so engaged for some years. *We do not think the legality of the ordinance can be questioned or measured by either the company or the city by the defects or perfections of the title of the company to its franchises or property.*"

In their Brief filed in this Court, counsel for the Public Service Commission, which has special jurisdiction in those matters, concede that the appellee possesses special franchises (*ante*, p. 62).

SECOND.

Question of actual existence and duration of special franchises unimportant.

The New York City Charter (Secs. 73, 74), providing for the purchase of special franchises, gives every public service corporation the right to acquire such franchises upon the payment of a sum to be fixed by the proper authorities. If, therefore, the Consolidated Gas Company does not now possess any franchises, as is contended by the appellants, it can readily acquire them by paying for them. Section 69 of the Public Service Commissions Law (L. 1907, Ch. 429) permits the capitalization of the amount thus paid:

> "The Commission shall have no power to authorize the capitalization of any franchise to be a corporation or to authorize the capitalization of any franchise or the right to own, operate or enjoy any franchise whatsoever in excess of the amount (exclusive of any tax or annual charge) actually paid to the state or to any political subdivision thereof as the consideration for the grant of such franchise or right."

If the Company should now acquire special franchises by paying for them, the sum fixed by the municipal authorities would probably not be less than the valuation which has been placed upon the franchises by the State Board for the purposes of taxation. The consumers would thus be obliged to pay a price for the gas supplied by the Company which would permit a return upon this capitalization. The insistence of counsel for the appellants, that the Company does not possess any special franchises is, therefore, difficult to understand; because, if such were the case, the consumers would be no better off and possibly not so well off; for if the Company were now required to purchase its special franchises from the City, the amount paid might be larger than the valuation which has been placed upon them in this case, inasmuch as the assessed valuation by the State Board is greater than that found by the Court.

THIRD.

Special franchises from acquiescence.

I. The franchise to lay mains is derived from the state and not from the municipality, though its exercise is, of course, subject to reasonable control, supervision and regulation by the local authorities, as part of their general police power.

Barhite v. Home Telephone Co., 50 App. Div., 25, 32;
Rochester v. Bell Telephone Co., 52 App. Div., 6, 9;
People *ex rel.* Nassau Electric Lines v. Squire, 107 N. Y., 593.

II. The legislature has absolute and exclusive control of the streets of the cities and villages of the state. All franchises or rights in the streets have their source in the sovereign power. The municipalities have only such control (aside from the ordinary police regulations for the use of the streets) as is *expressly* conferred upon them by the legislature.

Dillon on Municipal Corporations (4th Ed.), Sec. 89, 680;
Milhau v. Sharp, 27 N. Y., 611;
Rhinehart v. Redfield, 93 App. Div., 410, 413; affd. 179 N. Y., 569;
Potter v. Collis, 156 N. Y., 16, 30;
Matter of White Plains Commissioners, 176 N. Y., 239;
Carthage v. Central N. Y. Tel. Co., 185 N. Y., 448;
Paige v. Schenectady Ry. Co., 178 N. Y., 102, 115;
Detroit v. Detroit Citizens Street Ry. Co., 184 U. S., 368, 382;
Blair v. Chicago, 201 U. S., 400, 457, 492.

III. In New York, the only statutory power conferred upon municipalities, in the case of gas companies, is to give their consent to the exercise of the legislative authority to lay mains for the purpose of carrying on the business of manufacturing and supplying gas. That is, of course, a very important power, the exercise of which is essential before the legislative authority can take effect.

Ghee v. Northern Union Gas Co., 158 N. Y., 510, 512.

But no particular method of giving the consent is prescribed by the legislature. It need not even be in writing. Any such conduct on the part of the municipality as is equivalent to acquiescence in the use of the streets by a corporation having the legislative authority will be held to constitute the statutory consent.

People *ex rel.* N. Y. & Richmond Gas Co. v. Cromwell, 89 App. Div., 291;
People *ex rel.* Brooklyn Union Gas Co. v. Littleton, 110 App. Div., 728, 729;
Wakefield v. Village of Theresa, 125 App. Div., 38 (1908).

1. In the case of the New York and Richmond Gas Company, a gas company had been organized under the general Act of 1848, which conferred full power upon such corporations to manufacture and sell gas and "to lay conductors for conducting gas through the streets, lanes, alleys and squares in such city, village or town, *with the consent of the municipal authorities of said city, village or town* and under such reasonable regulations as they may prescribe." A corporation had been organized, in 1856, under that Act, and the Company had been engaged for nearly half a century in supplying gas to the inhabitants of the town specified in the certificate of incorporation. In 1903, the municipal authorities refused to grant permission to the successor of this company to lay mains in certain streets not previously occupied. Upon application to the court, a peremptory writ of mandamus was issued, requiring such permission to be given, although it was not shown that there had ever been any formal consent on the part of the municipal authorities to lay the mains. The court held that such authority would be implied from the acquiescence of the local authorities in the conduct of the business of the company; and it reached this conclusion, on the ground that authority to lay conductors was conferred by the general gas Act, above quoted, which did not prescribe the form of the local consent or even require it to be in writing, and that the consent could, therefore, properly be inferred

from the failure to object. In reaching this conclusion, the court followed the principle recognized by the Court of Appeals, in Jennings v. Van Schaick (108 N. Y., 530, 532), where it was held proper to infer municipal permission to construct an opening in the sidewalk from an acquiescence of eighteen years, without objection.

2. The principle recognized in the New York and Richmond Gas Company was followed in the case of the Brooklyn Union Gas Company, *supra.*

3. In Wakefield v. Village of Theresa, a contract had been entered into between the Village and certain individuals, whereby the privilege of occupying the streets with wires and poles for electrical lighting was granted, for a period of five years, with privilege of renewal. After the expiration, in 1900, of the five years, there was no formal renewal but the business was continued and extended. Subsequently, in 1906, the Village determined to construct a lighting plant of its own, and notified the owners of the private lighting plant to remove their poles and wires from the streets. Held, that this could not be done, owing to the acquiescence on the part of the Village. In regard to this, the Court said (p. 42):

> " It is claimed that the privilege expired in 1900 by the terms of the contract. The plaintiffs did not become vested with the title to the plant until 1903, and it was then in operation with the acquiescence of the defendant. They equipped the plant, adding to it materially, and the claim was not then made that a renewal of the contract was essential to give validity to the privilege of keeping the poles and wires in the streets. The contract contemplated the extension of the franchise beyond the five year period, unless the municipality elected to purchase the appliances. In a rather loose way, and yet with the approval of all parties, the plaintiffs have continued to avail themselves of their franchise, from year to year, without any formal renewal. Consequently, it is too late now for the defendant to make the omission to renew the agreement a ground for impeaching its validity, or to claim that the plaintiffs are in the streets unlawfully."

The same principle is recognized in other States.

Altanta v. Gate City Gas Light Co., 71 Ga., 106;
Spokane City R. Co. v. Spokane Falls, 6 Wash., 521, 33 Pac., 1071;
Commercial Elec. L. & P. Co. v. Tacoma, 17 Wash., 661, 50 Pac., 592;
Chicago v. Union Stockyards Co., 164 Ill., 224.

FOURTH.

The possession of the special franchises will be inferred from their assessment for taxation.

The mere fact that the special franchises of the appellee have been assessed by the State Board necessitates the conclusion that it possesses such franchises; because, if it were occupying the streets without due authority, it would have no franchise which could be made the subject of assessment.

People *ex rel.* Retsof Mining Co. v. Priest, 75 App. Div., 131; affd. 175 N. Y., 511.

FIFTH.

Special franchises perpetual.

In New York, a special franchise is perpetual, unless its duration is expressly limited by the consent or grant conferring it.

Davis v. Mayor, 14 N. Y., 506, 532;
Milhau v. Sharp, 27 N. Y., 611, 620;
People v. O'Brien, 111 N. Y., 1, 38, 40;
Miner v. N. Y. Centl. etc. R. Co., 123 N. Y., 242, 249;
Roby v. N. Y. C. H. R. R. R. C., 142 N. Y., 176, 180;
Trustee of Southampton v. Jessup, 162 N. Y., 122, 127;
Rhinehart v. Redfield, 93 App. Div., 410, 414; affd. on opinion below, 179 N. Y., 569.

I. In Davis v. Mayor, where there was no limitation upon the duration of the special franchise granted by the municipality, which had no power to grant a franchise in perpetuity, the Court said, per COMSTOCK, J. (p. 532) :

> "These rights are in effect granted in perpetuity, because the only provision for their termination is in case the associates, after ten years, shall decline to pay such license fees 'as the corporation, with the permission of the legislature, shall prescribe.'"

II. In Milhau v. Sharp, the Court, per SELDEN, J., said, with reference to a similar franchise, in holding that it was perpetual (p. 620) :

> "I say *perpetually*, because there is no limitation in point of time to the continuance of the franchise, and no direct power is reserved to the corporation to terminate it. * * * The title to the rails, when permanently attached to the land, and such right in the land as may be requisite for their *perpetual* maintenance, are, therefore, granted to the defendants by the resolution."

III. In People v. O'Brien, the Court said (RUGER, Ch. J.), with respect to a similar franchise (p. 38) :

> "Grants similar in all material respects to the one in question have heretofore been before the courts of this state for construction, and it has been quite uniformly held that they vest the grantee with an interest in the street, *in perpetuity*, for the purposes of a street railroad."

And again (p. 40) :

> "We are, therefore, of the opinion that the Broadway Surface Railroad Company took an estate *in perpetuity* in Broadway, through its grant from the city under the authority of the constitution and the act of the legislature."

Counsel for the Public Service Commission attempt to break the force of the decision in People v. O'Brien, by asserting that the remarks of Chief Judge RUGER in that case were purely *obiter*, because it was not necessary for the court to hold that the franchise granted was perpetual. The statement quoted, however, expresses the view of the law on the subject which had been entertained by the most eminent jurists of the State. But the point was directly involved in the Broadway case. The whole question at issue was whether the special franchise of the Company, the duration of which was not specified in the grant (p. 39), expired with the life of the corporation. If it was the legislative intention, in granting the franchise without any limitation as to the time, to confine it to the life of the corporation, manifestly, with the cessation of that life, the special franchise would also cease to exist. But the Court unanimously concluded that the special franchise was not limited by the life of the corporation. There was no possible ground for contending that it was limited for a definite term of years, and the Court (p. 41) scouted the idea that it was a mere license or tenancy at will, terminable on notice. Therefore, in asserting that the special franchise was perpetual, the Court directly passed upon the vital point in the case.

Counsel for the Public Service Commission assert that the conclusion of the Court on the question of the perpetual character of the franchise was not concurred in by the majority of the Court, because two Judges (ANDREWS and EARL, JJ.) "concurred upon grounds separately stated." All of the Judges who took part in the case (including DANFORTH and FINCH, JJ.) did concur with the Chief Judge; and the grounds "separately stated" by ANDREWS and EARL, JJ., assume (p. 65), as their fundamental premise, the correctness of the statement of the Court (p. 40), that the Railroad Company "took an estate in perpetuity in Broadway."

SIXTH.

Duration of special franchises not affected by life of the corporation.

The mere fact that the life of a corporation to which a special franchise is granted is limited, does not limit the franchise itself.

People v. O'Brien, 111 N. Y., 1, 41;
Miner v. N. Y Cent. etc. R. Co., 123 N. Y., 242, 249;
Detroit Citizens Street Ry. Co. v. Detroit, 64 Fed. Rep., 628, 635 (C. C. A.);
Detroit v. Detroit Citizens Street R. Co., 184 U. S., 368, 394.

Blair v. Chicago (201 U. S., 400) is relied upon as an authority holding that where the duration of a corporate franchise is not specified, it is presumed to be limited to the life of the corporation. But this Court distinctly held in that case (p. 481), in referring to a number of similar ordinances, all of which were expressly limited to twenty-five years, with a single exception, that it would presume that the intention had been to limit all in the same manner. It was the case of the recognition of the principle, *noscitur a sociis.* And as to the ordinances of another municipality, the Court (p. 488) merely followed the law of Illinois on the subject. In New York, a different view is entertained.

Even though the life of a corporation may be limited by the original charter or certificate of incorporation, the term of the corporate existence may be extended.

Gen. Corp. Law, Sec. 32;
L. 1867, Ch. 937;

and in the case of a public service corporation, whose business grows more valuable with the passage of time, it will be presumed that such extension will be made.

Miner v. N. Y. C. etc. R. Co., 123 N. Y., 242.

In that case, the Court said (p. 249):

> "While the life of the corporation was limited to fifty years, it could not have been expected that it should really cease to exist at the end of that period. While the legislature reserved the right to cut its life short, it also had the power to extend it. It is the experience of mankind that such quasi public corporations never come to an end by mere effluxion of time. A railroad corporation which had, during fifty years, rendered public service and properly discharged its corporate functions, would, with the passage of years, become more and more useful and more and more a necessity."

A similar view was taken by this Court, in

Union Pacific R. Co. v. Chicago etc. Ry. Co., 163 U. S., 564, 592.

Counsel for the appellants attempt to distinguish the Miner case, on the ground that railroad companies must acquire the fee to their right of way, and their tracks are more securely attached to the land than gas mains. But it is not true that railroad companies must acquire the fee, in condemnation proceedings. They should properly take only such interest as is necessary for their purposes.

Sixth Ave. R. Co. v. Kerr, 72 N. Y., 330, 332-3.

And to assert that the tracks of a railroad company are of a more permanent character, because more securely attached to the realty, than the mains of a gas company, which are buried under paved streets, is to make light of the facts.

SEVENTH.

Special franchises assignable.

It is the settled law of New York that franchises are assignable.

People v. O'Brien, 111 N. Y., 1, 40;
Parker v. Elmira, C. & N. R. Co., 165 N. Y., 274;

and the title may be transferred, even by a voluntary assignment, to an individual, and by him to a corporation.

Matter of Long Acre El. L. & P. Co., 188 N. Y., 361.

This Court has held that, in the absence of a statutory prohibition, such franchises are assignable.

New Orleans etc. R. Co. v. Delamore, 114 U. S., 501.
See also, Gue v. Tidewater Canal Co., 24 How., 257.

EIGHTH.

The special franchises of the Company.

Under the Act of 1884, all the franchises of the six constituent Companies passed to the appellee (L. 1884, Ch. 378, Sec. 5), whose corporate existence will not expire until 1934 (Record, p. 4820).

The Companies, in the order of their incorporation, were as follows:

The New York Gas Light Company (1823);
The Manhattan Gas Light Company (1830);
The Metropolitan Gas Light Company (1855);
The Harlem Gas Light Company (1855);
The Municipal Gas Light Company (1874);
The Knickerbocker Gas Light Company (1876).

Inasmuch as the franchises of all the Companies were merged into one company, it is not important to consider the validity of each, if the right to occupy the streets with its mains is possessed by the Company under one or more special franchises. A single company needs but one franchise. The duplication of franchises is, therefore, immaterial, in considering the right of the appellee to occupy the streets; and the court below deemed it unnecessary to pass expressly upon the findings of the Special Master with respect to any of the franchises except those of the Harlem and Knickerbocker Companies, which it found were "sufficient to meet all its requirements" (Record, p. 432). Inasmuch, however, as the Master's Report was confirmed, except where otherwise expressly indicated (Record, p. 430), the finding of the Master, that the New York, Manhattan and Metropolitan franchises were existent and perpetual (Record, pp. 195, 197), was not disturbed.

NINTH.

The Harlem Franchise.

The franchise of the Harlem Gas Light Company was unlimited in time and embraces all that portion of the City north of 79th Street.

I. The appellants contend that because the corporation was organized for only fifty years, therefore, the franchise was limited to the corporate existence. As we have already seen (*ante*, p. 88), that is not the law.

II. The consent granted by the City authorities contained the following provision (Record, p. 5093):

> "THIRD: The Mayor, Aldermen and Commonalty of said City hereby reserve the right to purchase, at any time, from the said Company, all the materials, pipes, fixtures, buildings and all and singular all the personal and real property owned by said Company, by paying to the said Company the cost of the same, and ten per cent. over and above said cost."

The appellants contend that, as the City can exercise this right at any time, the franchise of the Company is terminable at will, and has, therefore, no value for the future. This conclusion would not be correct even if the premise were sound, as there is no proof that the City is now committed to the doctrine of municipal ownership and operation of gas plants, or is ever likely to be; and, as no special legislative authority has been conferred upon the City to engage in the gas business, it has no power to purchase a gas manufacturing plant.

Matter of White Plains Commissioners, 176 N. Y., 239, 251.

The entire provision above quoted is, however, an absolute nullity; because no power to make it was conferred by the Legislature; and it makes no difference that the Company may have expressly entered into a contract which imposed such condition.

Beekman v. Third Ave. R. Co., 153 N. Y., 144;
Potter v. Collis, 156 N. Y., 16;
Matter of White Plains Commissioners, 176 N. Y., 239.

This principle will be considered further, in discussing the Manhattan franchise (*post*, p. 103 *et seq.*).

The Harlem franchise thus clearly is perpetual and unlimited as to all that part of the City north of 79th Street. It would, therefore, certainly extend as far north as the Harlem River, that is, to Spuyten-Duyvil (220th Street); and there is no reasonable doubt that, with the enlargement of the City limits in 1873 (L. 1873, Chap. 613), and in 1895 (L. 1895, Ch. 934), the franchise extended to the Twenty-third and Twenty-fourth Wards, now forming the Borough of the Bronx.

People *ex rel.* Woodhaven Gas Light Co. v. Deehan, 153 N. Y., 528;
St. Louis Gas Light Co. v. St. Louis, 46 Mo., 121;
Grand Rapids v. Hydraulic Co., 66 Mich., 606;
Illinois Centl. R. Co. v. Chicago, 176 U. S., 646, 666.

The question involved is somewhat analogous to that once raised as to whether the Federal Constitution applied only to States in existence at the time of its adoption.

Town of Pawlet v. Clark, 9 Cranch, 292.

The Grand Rapids case (*supra*) is precisely in point. A water company was given a franchise to lay its pipes in the village of Grand Rapids. Subsequently, the village became a city, and its territory was enlarged. The city attempted to enjoin the Water Company from using the streets of the additional territory. The application was denied. The Court said (p. 612):

> "It is claimed that the village has ceased to exist and the defendant's privileges fell with it. It is also claimed that if this is not so, defendants are confined to the land covered by the village. * * * It has never been supposed that a city or any other public corporation changed its rights or its identity by gaining or losing territory. The same principle has been applied to the relations of special corporations which are connected with city arrangements, whether educational or for business purposes, and no new legislation is generally needed to adjust their new relations. This is illustrated in Trustees of Erie Academy v. Erie, 31 Pa. State 515, and in St. Louis Gas Lt. Co. v. St. Louis, 46 Mo., 121; the latter case being one relating to a supply of gas. * * * Had the village remained a village and been enlarged, the question would hardly have been raised. * * * If the charter had been granted a year after, instead of a year before the village became a city, it would not be reasonable to construe it as referring to then existing boundaries. There is no more reason for doing so now."

The mere extent of the territory annexed is immaterial. If only a few lots were annexed and an existing street were extended through them, no one would think of questioning the duty of a gas company occupying the original street to furnish gas to the occupants of the additional lots. But if there is a duty, there is a reciprocal right; and the principle would necessarily be the same if the additional territory comprised several blocks or an entire ward instead of a few lots.

In order to guard against the application of this well recognized legal principle, it was expressly provided in the Greater New York Charter (which took effect January 1, 1898), that no franchise previously granted should be extended by the enlargement of the City but should be confined to the existing territory.

City Charter, Sec. 1538.

The Harlem franchise is thus perpetual and unlimited in that part of the City where the greatest increase of population will necessarily take place.

TENTH.

The Knickerbocker Franchise.

At the time of the consolidation, the Knickerbocker Company owned two franchises, one known as the "State Grant" and the other as the "Anthracite" franchise.

I. The State Grant.

This was a direct and perpetual grant by the State to various individuals, giving them an unlimited right to manufacture and sell gas and to lay mains in that part of the city north of 79th Street (Complt's. Ex. 119, p. 5119).

L. 1871, Ch. 944.

The rights thus granted were, by various mesne assignments, vested in The Knickerbocker Company in 1876 (Complt's. Exs. 112-114, 116, 119-215; Record, pp. 5105-5110, 5113-5115, 5119-5254).

The appellants objected to many of these assignments, on the ground that there were technical defects in their execution. But such assignments are not required to be recorded, nor are they required to be in any particular form; and it is not necessary that they should even be in writing. There is no evidence in the case that the individual grantees claim any interest in the grant as against the appellee.

The conclusion of the Special Master was, therefore, properly confirmed by the Court, that, under the State Grant, the Company acquired a perpetual right to lay and maintain its mains north of

79th Street (Record, p. 432); and, in view of the lapse of time during which the Company has been in undisputed enjoyment of this franchise, this Court will be reluctant to disturb a finding of fact made after full consideration of all the evidence on the subject.

Thus, under both the Harlem franchise and the State Grant, the Company has a perpetual right to lay mains anywhere above 79th Street.

II. The Anthracite grant.

The Anthracite Gas Lighting and Heating Company was organized in 1863, under the General Manufacturing Act of 1848, for a period of fifty years (Complts. Ex. 107, Record, p. 5097). In June, 1863, the City duly gave its consent to the Company to lay mains *in all the streets*, for the period of fifty years, that is, until 1913 (Complts. Ex. 106, Record, p. 5095).

The validity of this franchise is attacked, on the ground that, as the Anthracite Company was organized under the General Manufacturing Act, and not under the General Gas Act of 1848, the City had no power to allow the Company to use the streets.

But the Company was empowered by the Legislature, under the General Manufacturing Act, to manufacture and sell gas in the City of New York and to purchase, hold and dispose of real and personal property (Chap. 40, L. 1848; Record, p. 5097). If the City, which owned the fee of the streets, chose to permit the Company to lay conduits in the streets for the purpose of delivering the gas, no one but the State could object, and such objection could be taken only in a direct proceeding instituted for the purpose.

Starin v. Edson, 112 N. Y., 206, 215;

Matter of Long Acre El. L. & P. Co., 188 N. Y., 361, 367.

Whatever force the objection may ever have had has been entirely removed by the recent decision of the Court of Appeals in the Long Acre case (*supra*), where the point now urged by the appellants was definitely passed upon. In that case, the American Electric Manufacturing Company was organized under the General Manufacturing Act of 1848 (188 N. Y., 368). The City conferred upon that Company the right to use the streets ; and this right was voluntarily assigned to an individual, and, by various mesne assignments, became vested in the relator, the Long Acre Company. It was contended on behalf of the respondent that the relator had not shown any legislative authority to use the streets. The Court of Appeals, however, held that, as, under the Manufacturing Act of 1848, corporations had power to purchase, hold and convey real and personal property, and as the right granted by the City was property, it could dispose of that property even to an individual. In the present case, therefore, the Anthracite Company had the undoubted right to assign the franchise granted to it ; and, by various mesne assignments, the franchise passed, in 1876, to the Knickerbocker Company (a corporation formed under the general gas Act), and, through the consolidation, to the appellee.

Under the Anthracite franchise, the appellee, therefore, has the right to lay and maintain its mains, *throughout the entire City*, until 1913.

III. Between 1876 and 1884, the Knickerbocker Company, which, as above stated, was organized under the general gas Act, occupied the streets and carried on its business ; and the Legislature recognized its right to enter into the consolidation of 1884 and to capitalize its franchises. Thus, both the City and the State recognized that it possessed franchises.

ELEVENTH.

The Manhattan Franchise.

While it is unnecessary to consider the validity of the Manhattan franchise, inasmuch as it merely duplicates the Harlem and Knickerbocker franchises, yet the right under that franchise is so clear that a brief reference to it will not be out of place.

The finding of the Special Master, that this franchise was owned by the appellee and was perpetual (Record, pp. 195, 197), was confirmed by the Court (Record, p. 430).

The Manhattan Gas Light Company was organized in 1830, and received a direct charter from the Legislature (Complt.'s Ex. 5, Record, p. 4830).

L. 1830, Ch. 59.

No limitation was placed upon the duration of its corporate existence. Its charter contained this language (Sec. 9):

> "This Act shall be deemed a public act and shall be benignly and favorably construed for the purposes therein expressed and declared in all courts and places whatsoever."

This express provision thus negatives the principle that, in construing a grant by the State, every intendment is to be taken in favor of the public and against the grantee, though that principle is never applicable unless there is ambiguity in the grant.

Trustees of Southampton v. Jessup, 162 N. Y., 122, 127.

There was granted to the Company "full power and authority" to manufacture and sell gas in the City of New York, "and to lay pipes for the purpose of conducting the gas in any of the streets or avenues of the said City" (Record, p. 4830). It was, however, provided, "that no public street, lane or highway in the City of New York shall be dug into or in any way injured or defaced without the permission of the corporation of said city first had and obtained."

The City gave its consent to the use of the territory between Grand and 42d Streets; and it attempted to limit the duration to the year 1868 (Record, p. 5085).

This attempted time limitation by the municipality was a nullity.

The authorities on the subject have already been considered, to some extent (*ante*, p. 92).

I. The legislative authority was a direct and present grant, complete in itself, unqualified and unlimited.

The grant to lay mains took effect at once, without requiring any consent on the part of the municipality. The only proviso was that no streets should actually be dug into, that is, opened for the purpose of laying mains, without the permission of the City. In other words, the legislature intended to reserve to the City the right to determine whether any gas mains should be laid in a particular street or locality, and to prevent the duplication of mains in a street already occupied by the mains of another gas company; and it was doubtless because the City had previously given its consent to the occupation by the New York Gas Light Company of the streets south of Grand Street (Record, p. 5081), that it limited its consent, in the case of the Manhattan Company, to the territory north of Grand Street.

What was said by this Court, in New Orleans Waterworks Co. v. Louisiana Sugar Refining Co. (125 U. S., 18, 32) is in point:

> "The legislature itself thus defined the class of persons to whom, and the object for which, the permission might be granted. All that was left to the city council was the duty of determining what persons came within the definition, and how and where they might be permitted to lay pipes, for the purpose of securing their several rights to draw water from the river, without unreasonably interfering with the convenient use by the public of the lands and highways of the city. The rule was established by the legislature, and its execution only committed to the municipal authorities. The power conferred upon the city council was not legislative, but administrative, and might equally well have been vested by law in the mayor alone, or in any other officer of the city."

While the authority to lay mains in the streets of the city was directly conferred by the legislature, it was intended to permit the City to designate the streets in which it might be exercised, to control the physical opening of the various streets and avenues, from time to time, and to regulate the manner in which they should be opened.

II. That it was not intended to confer power upon the local authorities to impose conditions or to change the nature of the legislative grant appears more clearly by a reference to some of the contemporaneous legislative grants, in which the language employed varies slightly but where the legislature evidently had precisely the same object in view, in each instance.

1. Thus, in the charter of the Albany Gas Light Company (L. 1833, Ch. 135), it was provided (Sec. 9) that the corporation should " conform to all reasonable regulations which may be made by the Mayor, Aldermen and Commonalty of the City of Albany as to the time and manner of laying their pipes and to prevent the works from becoming a nuisance."

2. The charter of the Buffalo Gas Light Company (L. 1856, Ch. 734) contained this provision :

> " But before digging up or removing *any* of the streets or avenues of the said city, the said corporation shall first give notice to and obtain the consent of the common council of said city for that purpose."

This assumes that the authority to lay the mains was granted by the State and that the company could proceed to lay its mains but before actually opening any particular street or avenue, it should first give notice to the municipal authorities and obtain their consent as to that street. In other words, the municipal consent did not apply to a general authority to occupy the streets, which might be given once for all ; but the notice was to be given and the consent obtained every time that a new street or avenue was opened.

3. By L. 1841, Ch. 74, a charter was granted to a gas company to supply gas in Albany. Section 10 of the Act provided that it should not take effect until the municipal authorities had filed their consent to it with the Secretary of State. Obviously, the municipality could not vary the terms of the grant. It was merely given the power to say whether the Act, as passed, should take effect. It was a veto power, similar to that usually conferred upon the Governor of the

State as to bills passed by the legislature. While the Governor may approve a particular bill, he cannot, as a condition of his approval, vary the terms of the Act.

4. The same thing is illustrated in the charter of a Buffalo company (L. 1845, Ch. 254, Sec. 10), which provided that before commencing to lay conductors, the *assent* of the local authorities should be filed with the Secretary of State. It was also provided, by the same section, that the laying of the mains should be exercised in conformity with the regulations made by the common council; from which it is obvious that the control of the actual physical opening of the streets, from time to time, was vested in the local authorities.

5. The so-called State Grant, or franchise acquired by the Knickerbocker Company, contains a striking illustration of the same fact; as it was provided in its charter that it was not to be construed to authorize the laying of gas pipes within any territory under the control of the Department of Public Works, without the consent of that Department. That this refers merely to the physical act of laying the pipes is obvious, because the Board of Aldermen or Common Council, and not the Department of Public Works, exercise the legislative power of the municipality.

Ghee v. Northern Union Gas Co., 158 N. Y., 510.

6. In the very recent case of Carthage v. Central New York Telephone Co. (185 N. Y., 448), it was contended that the general Village Law, which conferred power upon villages " to regulate the erection of telegraph, telephone or electric light poles or the stringing of wires in, over or upon the streets or public grounds, or upon, over or in front of any building or buildings ", was broad enough to make it competent for the village to compel the Telephone Company to place the extension of its existing lines in underground conduits. But the Court of Appeals said that there was no such implied power; and it clearly pointed out the distinc-

tion between the power to regulate and the power to impose conditions (p. 452):

> "It is clear that the intention of the legislature was to permit villages to regulate the erection of telegraph, telephone or electric light poles and the stringing of wires on these poles. The right to erect these poles and string the wires is not derived from the village authorities, but they are permitted to regulate the erection of the same, that is to say, the location of the poles and the streets to be occupied are doubtless within the reasonable power of the village to regulate".

This distinction was also pointed out in the Ghee case.

Ghee v. Northern Un. Gas Co., 158 N. Y., 510, 525.

The language of the Manhattan Charter makes it clear that what the Legislature intended was that every time the Company desired to lay its mains in a street not previously occupied, it should first obtain the permission of the local authorities. That has always been required, even in the case of companies which had expressly obtained the general consent of the City to the occupation of the streets.

City Charter, Secs. 469, 528;

and, prior to the present City Charter, the matter was regulated by municipal ordinance.

L. 1870, Ch. 137, Art. Third, Sec. 2, Subd. 5;
L. 1873, Ch. 335, Art. Two, Sec. 17, Subd. 5;
L. 1882, Ch. 410, Sec. 86, Subd. 5, Sec. 322.

III. The right to lay mains necessarily includes the right to use them for conducting gas, when laid. In other words, the phrase, "to lay," is a compendious one, which carries full authority to occupy the streets in the operation of the business. The law requires the mains to be maintained, after they have been laid; and any one injured by the failure to perform that duty has a good cause of action against the corporation.

14 Am. & Eng. Encyc. of Law, 936;
Siebrecht v. East River Gas Co., 21 App. Div., 110;
Washington Gas Co. v. District of Columbia, 161 U. S., 316, 325.

A gas company, being a public service corporation, is obliged to furnish gas to all consumers along its lines.

11 Am. & Eng. Encyc. of Law, 928;
Thornton on Oil and Gas, Sec. 525;

and this duty has been statutory in New York since 1859.

L. 1859, Ch. 319, Sec. 6;
Transportation Corporations Law, Sec. 65.

Having once laid its mains, under legislative authority, a gas company not only has the right to use and maintain them, but it is obliged to do so.

IV. It is noticeable that the same words, "to lay," are employed in the consent of the City, in the case of the Manhattan Company (Record, p. 5085), the words "use" or "maintain" not being employed; and that was so in the case of every consent granted by the City to any of the constituent Companies (Record, pp. 5092, 5094, 5095, 5116, 5119); and it is the language which has usually been employed in the case of all gas companies throughout the State, as appears in the charters of the Albany and Buffalo Companies, to which reference has heretofore been made (*ante*, pp. 99, 100).

Similar language was employed in the State Grant (Exhibit 119, Record, p. 5120), and is used in the Transportation Corporations Law with reference to gas companies (Sec. 61, Subd. 1) and waterworks companies (Sec. 82, Subd. 2). In the numerous charters granted to turnpike and bridge companies, the power granted is to "build" or "construct," the subsequent operation being implied.

L. 1830, Ch. 200;
L. 1830, Ch. 227;
L. 1830, Ch. 229;
L. 1830, Ch. 271;
L. 1831, Ch. 108;
L. 1831, Ch. 235;
L. 1831, Ch. 259;
L. 1831, Ch. 263.

And, in the Railroad Law, the authority conferred is to lay out and construct a railroad (Sec. 4, Subd. 3), nothing being said about operating it subsequently; and similar language is employed in the Constitution of the State (Art. III, Sec. 18).

In the case of every grant of a franchise, whatever is required by necessary implication for its enjoyment passes with the grant.

Langdon v. The Mayor, 93 N. Y., 129, 151–2.

V. Where full and unlimited authority is conferred directly by the legislature upon a public service corporation, and there is no limitation in the grant, and no power is expressly given to the local authorities to impose conditions, the local authorities cannot limit the authority or prescribe terms or conditions upon which it may be exercised. In this respect, municipalities have no greater power than any other administrative body of the State.

New Orleans Waterworks Co. v. Refining Co., 125 U. S., 18, 32;
Walla Walla v. Walla Walla Water Co., 172 U. S., 9.

1. In Pittsburgh's Appeal (*supra*), a case most carefully considered by the Court, after it had been argued by eminent counsel, the Court said (p. 21):

> "So far as the limited authority to legislate on these peculiar subjects" (opening streets) "has been delegated to Councils, *and to that extent only*, can the corporate powers, rights and privileges of natural gas companies be qualified or limited. Councils are authorized to give or withhold their assent without more. They have no right to couple their assent with any condition or restriction not imposed by the Act, unless the company agrees to accept the same and be bound thereby; and even then the conditions or restrictions so accepted by the company must harmonize and in no wise conflict with the provisions of the Act. The assent of councils being given, the regulations they are authorized to adopt are such only as relate to the manner of laying pipes, altering, inspecting and repairing the same, and the character thereof with respect to safety and public convenience. These regulations must also be reasonable and not in conflict with any of the provisions of the Act. In all other respects, the powers of such companies are clearly defined and their duties and liabilities prescribed by the Act under which they are incorporated."

That case was tried before Judge WHITE, whose decision was unanimously affirmed and whose opinion is given in full in the report of the case in the Supreme Court. Referring to the legal effect of the word "assent", Judge WHITE said (p. 12):

> "The word 'assent', in the 13th section, must be understood in its ordinary sense, as consenting or agreeing to. Something is stated or proposed to another; he assents to it, that is, accepts it, agrees to it. If he asserts or proposes something else, it is not assenting to what was asserted or proposed, but offering something else. A corporation with its charter under the Act of May 29th, 1885, comes to the city and asks consent to enter with its chartered rights and privileges. The statute says to the city: You may consent or not, as you please. It does not say you may refuse and then make the best bargain you can with the company. You may assent or dissent, that is all. If you assent, it must be with the rights the company has under the

> statute, and you can do nothing more than ordain such reasonable regulations as are secured to you in the 11th section."

2. In Beekman v. Third Ave. R. R. (*supra*), a franchise was granted to a railroad company by the municipality, which, in addition to requiring the payment of a certain percentage of the gross receipts, as required by statute, also required the payment of a cash sum into the city treasury. This was not expressly authorized, *but the Company assented to it and agreed to make the payment.* Held, a nullity, as it was against public policy to permit a municipality to impose conditions which had not been expressly authorized by the legislature.

3. That an agreement to a condition which the municipality had no power to impose is a nullity was also expressly held in Potter v. Collis and Matter of White Plains Commissioners (*supra*).

The reason why such an agreement is a nullity was clearly stated in Town of Golconda (108 Ill., 419), where the Court said (p. 427):

> "The complainants owned a ferry franchise, which they had a right to enjoy and use until they should commit some act which might authorize the State to interfere and forfeit the franchise. While in the enjoyment of this right, the act of 1859 was enacted by the legislature, which conferred a franchise for twenty years, but this act conferred no additional rights upon complainants. At the time the act was passed, they had, under the law of the land, all that the act of 1859 professed to confer, and much more, and we are unable to perceive how it is that complainants lost all rights held by them under the grant to Daniel Field in 1823, and confirmed by the act of 1827, by merely accepting the provision of the act of 1859. Suppose a certain person is in the possession of a tract of land under a regular chain of title from the government. Another person holds a tax title on the land, which the owner in possession buys, and obtains a a deed. Is the owner, when his title may be called in question, estopped from asserting title to the land from the government from the fact that he purchased an outstanding tax title and after the purchase occupied under

> such title in connection with the original title? Surely not; and yet there is no substantial difference between the supposed case and the position of complainants. The complainants, when the act of 1859 was passed, were in the possession of the ferry franchise which had been conferred originally on Daniel Field, and descended to them. They had an undoubted right to hold and operate the ferry under the original grant. They did no act indicating an intention to abandon title to the ferry, but when the act of 1859 was passed, they accepted its provisions and held under it in connection with the original title. We do not think they waived any rights held under the original grant by accepting the provisions of the act of 1859, nor were they estopped from claiming under the original grant. If they thought the act of 1859 might strengthen their title to the ferry, we perceive no reason which would preclude them from accepting its provisions and at the same time retaining the original title held by them when the act of 1859 was passed."

4. In Dusenberry v. N. Y. etc. Traction Company (*supra*), the Court said (p. 270):

> " Where the legislature, in the exercise of its sovereign power, has regulated the subject matter, it is not competent for persons charged with the duty of giving their consent to the performance of a particular act to impose other or different conditions."

VI. While there are many decisions holding that a municipality may prescribe conditions and limit the period during which the authority conferred by the legislature may be exercised, it will be found that in every one of such cases, the authority granted by the legislature to the corporation was not immediate and absolute but that power was *expressly* conferred upon the municipality to prescribe the conditions under which the authority should be exercised. For instance, in People v. O'Brien (111 N. Y., 1), the Court recognized the right of the City to fix the duration of the grant (p. 38); but the Act in that case expressly imposed the duty on the City to prescribe conditions and give notice of the conditions prescribed before granting the consent.

L. 1884, Ch. 252, Sec. 7.

The same was true in the case of Blair v. Chicago (201 U. S., 400, 457-8) and in Louisville Trust Co. v. Cincinnati (76 Fed. Rep., 296).

The appellants contend that the mere fact that the consent of the municipality is required to the occupation of the streets, before a gas company can exercise the special franchise granted by the legislature, confers upon the municipality the power to impose terms and conditions and to limit the duration of the legislative grant and that otherwise the requirement of the municipal consent would be meaningless. But the evident purpose of the legislature was merely to confer a veto power upon the municipality and to permit it to determine for itself whether the streets should be occupied by any corporations other than those already in existence ; in other words, whether the needs of the public had not already been fully supplied.

In the absence of express legislative authority, a municipality which does not own the fee of the streets has no greater power to grant the right to occupy the streets than the individuals whose property abuts on the streets. In the case of street railroad companies, the right to lay tracks in the city streets is derived from the legislature ; but that right cannot be exercised without the consent of one-half in value of the adjacent property owners and of the municipality.

New York Constitution, Art. III., § 18.

In other words, it requires the consent of a certain proportion of the property owners before the company can exercise its franchises. The property owners are given a veto power and are permitted to determine (subject to review by the court) whether the streets shall be occupied for such purpose. But no one would contend that this veto power would permit the property owners to prescribe the terms and conditions upon which the streets shall be occupied or to limit the duration of the legislative grant.

VII. This Court has recently noted the distinction between the words " power " and " authority." The grant of power has often been construed to mean nothing more than capacity to acquire a property right, not the acquisition of the right itself. "Authority," however, is the appropriate word by which an immediate right is conferred. In Blair v. Chicago (201 U. S., 400, 457), where full power to prescribe the terms and conditions of franchises had been expressly conferred on the municipality, the Court said:

> "The company must be 'authorized' by the city council before it can lay tracks or operate railways in the streets. This is more than to designate that for which authority has already been given. To authorize is to 'clothe with authority,' Webster's Dict.; 'to give legal power to,' Century Dict. It is an additional grant of right and power which the legislature requires the corporation to obtain as a condition precedent to its use and occupation of the streets."

In the case of the Manhattan Company, both power and authority are expressly conferred.

VIII. The practical construction which has been placed on the Manhattan franchise is conclusive as to its meaning and intent.

On the theory of the appellants, that the City had the right to limit the franchise which had been granted by the Legislature and that the Manhattan franchise, therefore, expired in 1868, manifestly that Company would have had no right to use the streets subsequently. As a matter of fact, however, its business was continued down to 1884, when it entered into the consolidation agreement with the other operating Companies. There was, therefore, a period of sixteen years when it was permitted to do business without objection. In other words, the municipal authorities conceded that the Company did have the right to occupy the streets ; that is, they recognized the Company's right to continue its business, in spite of the attempted limitation to 1868 ; and they, therefore, properly treated that limitation as a nullity. This was a practical construction placed upon the Act by the parties affected by it, which would resolve any doubt the Court might have, if the question was one of first impression.

Power v. Village of Athens, 99 N. Y., 592, 601–2 ;
Des Moines Ry. Co. v. Des Moines, 151 Fed. Rep., 854, 861.

It is well settled, that the construction placed upon a statute by those upon whom rests a duty concerning it is entitled to great weight.

Cohens v. Virginia, 6 Wheat., 264 ;
Easton v. Pickersgill, 55 N. Y., 310, 315 ;
People v. Dayton, 55 N. Y., 367, 377 ;
Matter of Washington St. R. R. Co., 115 N. Y., 442, 447 ;

and where this has been long continued, the courts will recognize it as conclusive.

U. S. v. Hill, 120 U. S., 169, 180 ;
Robertson v. Downing, 127 U. S., 607, 613 ;
U. S. v. Alabama R. R. Co., 142 U. S., 615, 621.

IX. The existence of the Manhattan franchise subsequent to 1868 was expressly recognized by the Legislature.

The Act of 1884, under which the consolidation was effected, provided that the amount of capital of the consolidated company should not exceed " the fair aggregate value of the property, franchises and rights " of the consolidating companies (L. 1884, Ch. 347, Sec. 1) ; and the Senate Committee of 1886 found that, in assigning $7,781,000 for the franchises of the constituent companies, this restriction of the statute was not disregarded (Record, p. 5386). There was included in this item the sum of $2,329,000, allotted as the value of the Manhattan franchise, representing the proportion of the said $7,781,000 which the sales of the Manhattan Company bore to the total sales of all the consolidating companies (Record, pp. 186, 6418). Obviously, there would not have been any franchise of the Manhattan Company, if, as the appellants contend, that franchise had previously expired ; and the Legislature itself thus adopted the construction which had been placed upon the franchises by the Company and by the municipality.

TWELFTH.

The New York Franchise.

The finding of the Special Master, that the New York franchise was owned by the appellee and was perpetual (Record, pp. 195, 197), was confirmed by the Court (Record, p. 430).

The New York Gas Light Company was incorporated by a special Act of the Legislature in 1823 (Complts. Ex. 2, Record, p. 4826), with the right of "perpetual succession."

L. 1823, Ch. 85.

That Act also was required (Sec. X.), as in the case of the Manhattan franchise (*ante*, p. 97), to be "benignly and favorably" construed.

What has been said about the Manhattan franchise is applicable to the New York franchise, with the exception that the latter does not contain a specific grant of authority to lay mains. But the Company is authorized (Sec. I.) to manufacture and sell gas, "for the purpose of lighting the said city or the houses thereof and any buildings, manufactories or houses therein contained and situate."

The charter contains a proviso similar to that contained in the Manhattan Charter, that no streets should be dug into without the permission of the local authorities.

I. While the authority "to lay mains" is not expressly conferred by this New York charter, there can be no doubt that that is what the Legislature intended to grant.

In 1823, the use of gas for illuminating purposes was a novelty; and in granting a special charter to a company organized for that purpose, the Legislature evidently intended to give it full power to engage in the business of manufacturing and supplying gas, including the right to lay mains, under such reasonable regulations as to opening the streets as might be prescribed by the local authorities.

The Company was organized to manufacture and sell gas for lighting the buildings of the city, and, as it could not light the buildings without conducting the gas through the streets to the buildings, the authority to lay mains was necessarily conferred. At that time, the City had no power to grant a franchise. It merely had the ordinary police power of regulation; and the provision was added, that the Company should not actually dig into the streets without first obtaining the permission of the City, so as to prevent the Company from claiming that the City had been deprived of its usual right to regulate the manner in which the streets should be dug into or opened, from time to time.

II. The authority conferred is expressly made perpetual, in providing that the Company should have the right to perpetual succession (Record, p. 4826).

III. For the reasons stated in discussing the terms of the Manhattan Charter, the local authorities had no power to limit the exercise of the franchise to thirty years. *But they did not attempt to do so.* They affirmatively consented to the occupation of all streets south of Grand and Canal Streets (Record, p. 5081); and as to this particular territory, they expressly conferred upon the Company the "*sole and exclusive* privilege and right" to lay mains for a period of thirty years. In other words, there was no attempt to limit the *general* right, but merely a limitation on the *monopoly* right to thirty years. While the Legislature had not conferred power to grant an *exclusive* right, it undoubtedly intended to ratify the exercise of the power by the City, when it subsequently granted the Manhattan Charter in 1830, the first section of which contained this provision (L. 1830, Ch. 59, Record, p. 4830):

> "But the rights and privileges hereby granted, shall not be construed to impair or affect any *exclusive* rights or privileges heretofore granted to any incorporated company in said city."

That could have had reference only to the New York Company, which was the sole incorporated gas company then engaged in business in the City.

Similar language, recognizing this exclusive right, was used in the Act incorporating the Metropolitan Gas Light Company (Record, p. 4853).

L. 1855, Ch. 545, Sec. 1.

IV. The City authorities openly conceded the right of the New York Company to occupy the streets of the city for thirty-one years after the expiration of this thirty year *exclusive* limitation ; and, as in the case of the Manhattan Company, the special franchise of the New York Company was valued at the time of the consolidation, in 1884, with the approval of the Legislature; the substantial sum of $1,417,000 being allowed for it (Record, pp. 186, 6418).

Moreover, in 1858, five years after the New York franchise had expired, as claimed by the appellants, the municipal authorities, in giving their consent to the Metropolitan Gas Light Company to occupy the streets, did so "subject to the same restrictions as to the mode of laying down said conductors as apply to and govern the New York and Manhattan Gas Light Companies in that respect" (Record, p. 5094); thus formally recognizing that the New York and Manhattan Companies did then have the right to use the streets.

THIRTEENTH.

The Metropolitan Franchise.

The finding of the Special Master, that the Metropolitan franchise was owned by the appellee and was perpetual (Record, pp. 195, 197), was confirmed by the Court (Record, p. 430).

The Metropolitan Gas Light Company was organized under a special charter granted in 1855 (Complts. Ex. 10, Record, p. 4852).

L. 1855, Ch. 545.

Its corporate existence was unlimited ; and the Company was expressly authorized (Sec. 1) to exercise, "at any time hereafter", that is, in perpetuity, the powers conferred upon it. The language of the first section, by which the authority was granted, is obviously modeled after the similar section in the Manhattan charter of 1830, although there are various provisions more favorable to the Company, evidently inserted for the purpose of preventing any possible doubt as to the construction of the Act.

"Full power and authority" are conferred to engage in the business of manufacturing and supplying gas and to lay mains. After the provision that no street should be dug into without the permission of the local authorities, this further provision is added, which is not contained in the charters of the older Companies :

> "And the said Boards are hereby authorized to grant and vest *exclusive* permission and authority to and in said Company for said purposes, to such extent and under such regulations as to them shall seem expedient, and such permission and authority shall be conclusive and shall continue as thus fixed during the period designated by said boards at the time of granting the same. But the rights and privileges hereby granted shall not be construed to affect or impair any exclusive rights or privileges vested in any incorporated company in said City."

Section 11 of the Act (Record, p. 4855) contains a provision similar to those in the New York and the Manhattan Charters, that the Act shall "be favorably construed for the purposes herein expressed, and declared in all courts and places whatsoever."

I. There having been a direct legislative grant to the Metropolitan Company, which was expressly made perpetual, and no power having been given to the local authorities to limit the duration of the grant or to impose conditions upon its exercise, any attempted limitation of it would have been a nullity, under the decisions heretofore cited (*ante*, pp. 92, 103 *et seq.*).

II. The only power granted to the municipality, aside from giving it the right to prescribe the usual regulations in connection with the opening of the streets, was to confer "*exclusive*" authority upon the Company, for such period and upon such conditions as might be prescribed. The Legislature thus gave the municipality power to *enlarge* the rights of the Company, by granting an *exclusive* franchise to territory not previously occupied; but it gave no power to limit the franchise. Doubtless, the incorporators of this Company hoped to induce the local authorities to grant them an *exclusive* franchise for some portion of the City, for some definite period of time, and had been advised that the City had no power to do this unless the Legislature expressly granted the power. The City did not attempt to exercise the power to confer "exclusive" authority upon the Metropolitan Company; and its attempt to limit the *general* rights of the Company was a nullity.

Des Moines Street Ry. Co. v. Des Moines, 154 Fed. Rep., 854, 862.

In that case, the Railroad Company had been given an *exclusive* right to occupy the streets of the defendant for thirty years. At the expiration of that period, the City undertook to compel the Company to remove its tracks. Held, that the franchise was not limited to thirty years, but was perpetual, and that the thirty year limitation applied only to the exclusive or monopolistic feature of the franchise.

III. The power conferred by the legislature upon the City to grant an *exclusive* right to the Metropolitan Company did not in any way detract from the general authority directly conferred on the Company by the legislature.

Abbott v. Duluth, 104 Fed. Rep., 833.

In that case, Judge LOCHREN said (p. 837):

> "These rights and powers, being unlimited in respect to duration, were valuable property rights, not merged nor excluded by the special acts referred to, which granted in addition the *exclusive* monopoly of occupying the streets, etc. of Duluth, and later of West Duluth, with telephone poles and wires for a limited time. This monopoly, which was the only real grant made by the special acts, ceased with the lapse of the prescribed time; but the unlimited right to oc-

> cupy the highways of the city remains and continues. The acceptance by the company of the special *exclusive* rights granted by the special acts for a fixed time, and presumably of value, cannot be construed as a refusal, disclaimer, or surrender of the rights and powers granted to and vested in the company by the general law. There was no inconsistency. The company could receive and enjoy all the rights and powers given by the general law and the special acts. No election or disclaimer was required or expected. Both the general law and the special acts were beneficial, and will, therefore, be presumed to have been equally acted on and relied upon".

IV. It is thus evident that the appellee has a perpetual right to use the streets under the Metropolitan charter.

FOURTEENTH.

Summary as to the special franchises now owned by the appellee.

The Consolidated Gas Company now has the following rights, under the franchises of its constituent Companies :

I. A perpetual right, under the New York franchise, for the Boroughs of Manhattan and the Bronx.

II. A perpetual right, under the Manhattan franchise, for the Boroughs of Manhattan and the Bronx.

III. A perpetual right, under the Metropolitan franchise, for the Boroughs of Manhattan and the Bronx.

IV. A right under the Anthracite franchise (acquired by the Knickerbocker Company), for the Boroughs of Manhattan and the Bronx, until 1913.

V. A perpetual right, under the State Grant (acquired by the Knickerbocker Company), for that portion of the City north of 79th Street.

VI. A perpetual right, under the Harlem franchise, for that portion of the City north of 79th Street.

PART IV.

VALUE OF FRANCHISES AND GOOD WILL.

The Special Master allowed $20,000,000 for the combined value of the franchises and good will, not attempting to apportion the value between the two (Record, p. 210). The trial Court rejected the item of good will, and found that the value of the special franchises of two of the constituent companies was *at least* $12,000,000 (Record, p. 431). The finding of the Master was an ultimate fact, resulting from the consideration of many complicated and difficult questions of fact; and it should not have been disturbed by the Court, unless it was improper to include in the assets anything for the so-called good will. That it was not improper to include this item has heretofore been shown (*ante*, p. 69).

It is immaterial that the Master did not separately find the values of the special franchises and good will, if the evidence shows that the value of the one added to that of the other is equal to or exceeds the sum of $20,000,000. He valued the intangible property as an entirety. In valuing the intangible property of the Company, it is manifestly very difficult to draw the precise line between the value of the special franchises and the value of the good will.

FIRST.

The value of the special franchises.

On the evidence in this case, the special franchises alone are reasonably worth much more than was found either by the Special Master or by the Court.

I. The universal practice to assess property for purposes of taxation at less than its actual value is a matter of general knowledge, which has been recognized and rebuked by the courts.

People *ex rel.* Equitable Gas Co. v. Barker, 144 N. Y., 94, 99-100;

People *ex rel.* Manhattan Ry. Co. v. Barker, 146 N. Y., 304, 313;

Railroad Companies v. Board of Equalizers, 85 Fed. Rep., 302, 308;

Cummings v. Bank, 101 U. S., 153;

New York State v. Barker, 179 U. S., 279, 286.

II. For the year 1906, the special franchises of the Company were assessed at about $24,000,000, exclusive of the mains and connections (Record, pp. 202, 1849, 5061). The Tax Law requires the State Board to fix the value of these franchises (Sec. 42) and to hear all complaints in regard to values so fixed (Sec. 43), before making them final. In the absence of any evidence to the contrary, that valuation should be accepted by this Court as conclusive.

Railroad Companies v. Board of Equalizers, 85 Fed. Rep., 302;

Adams Express Co. v. Ohio, 166 U. S., 185.

1. In Railroad Companies v. Board of Equalizers, the Court said (p. 315):

> "Where true value is a constitutional requirement, as in Tennessee, it would seem to follow logically that such value, for the purposes of taxation, must be substantially the same thing as when value is inquired about for the purposes of regulation."

While true or full value is not a constitutional requirement in New York, it is a statutory requirement, which has been enforced by the courts.

Tax Law, Sec. 21, subd. 3, Sec. 37;

People *ex rel.* Manhattan Ry. Co. v. Barker, 146 N. Y., 304, 312-313.

2. In Adams Express Co. v. Ohio, Mr. Justice BREWER, in delivering the unanimous opinion of the Court, said (p. 220):

> "Now it is a cardinal rule, which should never be forgotten, that whatever property is worth for the purposes of income and sale, it is also worth for purposes of taxation."

That equation must necessarily remain true, if it is stated conversely.

III. Owing to the peculiar character of the property right in such franchises, the difficulty of valuing them is very great. So great did it seem to the Court of Appeals, when it passed upon the validity of the Act providing for the assessment of such franchises for purposes of taxation, that it gave this as the sole reason for holding that the home rule provision of the Constitution had not been violated, in conferring the power to assess local franchises upon a State Board; and it expressly held that only such a Board of highly trained and experienced men was competent to fix a value upon this class of property.

People *ex rel.* Met. St. R. Co. v. Tax Commrs., 174 N. Y., 417, 438.

On this point, the Court said (p. 439):

> "This property was *sui generis*, and from its nature could not be valued by local officers. Unless it escaped taxation in the future as it had in the past, it was necessary to commit the power to other officers, with new functions, wider experience and greater opportunities for observation * * *. They (the franchises) were specialties and had no market value. * * * The value depends upon so many conditions, existing frequently in localities widely separated, and upon such a complication of facts and figures, that the valuation cannot be safely entrusted to men of common knowledge and experience."

IV. In the present case, the appellee did not rely upon the assessed value of its franchises, but called the very best possible expert on the subject, the Chairman of the State Board of Tax

Commissioners, who had taken part in the assessment of 1906; and it proved affirmatively by him that $24,000,000 was the reasonable value of the intangible part of the franchises of the Company (Record, pp. 202, 1849, 5061).

The appellants *did not call a single witness to testify on the point;* and the only manner in which they attempted to break the force of this positive and uncontradicted testimony was by asserting that it did not appear that the witness knew what the franchises of the Company were, when he made his estimate. But that was for them to expose, on cross-examination, if they believed that the witness had no information concerning the Company's franchises at the time when he acted in an official capacity in assessing their value. A single question would have elicited the information.

The Court will certainly not assume that a State officer, of such exceptional experience, occupying a position of such great importance and responsibility, would attempt to make an assessment of millions of dollars upon property about which he knew nothing. It will presume that the officer performed his full duty and completely acquainted himself with all the facts.

Seaboard Air Line v. Florida, 203 U. S., 261, 270.

That the State Board was fully possessed of all the facts concerning the franchises is clearly evident from the provisions of the Tax Law (Sec. 43), which require every corporation, under very severe penalties, to report under oath to the Board every special franchise possessed or enjoyed by it; and the Board has power to require supplemental reports, from time to time.

The very best evidence which, in the opinion of the Court of Appeals, could possibly be adduced was thus given affirmatively by the complainant; and no attempt was made to contradict it or to discredit the witness, who was entirely disinterested, except in so far as his official position would naturally lead him to sympathize with the defendants. Neither the Special Master nor the trial Court was at liberty to disregard that evidence; and the finding should have been in accordance with it, for the sum of $24,000,000.

V. The value of at least $12,000,000, found by the Court for two of the franchises, was arrived at by a process of reasoning based upon the valuation of the franchises at the time of the consolidation in 1884, at $7,781,000, and the natural increase in the value since that time.

If the franchises were worth $7,781,000, in 1884, it is evident that they are worth vastly more than that to-day. Under these franchises, the Company has a perpetual right to use the streets of the City. During the past twenty-three years, the City has more than doubled in population, while the relative increase in the amount of gas consumed has been even greater than the increase in population, the consumption in 1905 being more than 13,000,000,000 cubic feet, as against less than 4,000,000,000 cubic feet in 1885 (Record, p. 5039).

Furthermore, the physical space available for gas mains has practically all been disposed of on Manhattan Island; and that condition has largely come about since 1884, first, by the introduction of lighting by electricity, involving the use of underground conductors, second, by the statute of 1884 (L. 1884, Ch. 534), which required all telegraph and telephone companies to remove their wires from the surface of the streets before November, 1885, and, third, by the construction of subway railroads.

Even had these exceptional and peculiar conditions not existed in New York, the continuous growth of the city and the occupation of all the available space in the streets would have rendered an existing occupation of the streets of constantly increasing value. This was recognized by the Court of Appeals, in the recent case of Western Union Telegraph Co. v. Syracuse Electric Light Co. (178 N. Y., 325), where the Court said (p. 330):

> "Space beneath the surface of the streets in our large cities is becoming more valuable every year for the purpose of conducting water, heat and light to the dwellings of the inhabitants as well as for the construction of sewers, underground railroads, subway lines, pneumatic tubes and other agencies of great public utility";

and in Ghee v. Northern Union Gas Company (158 N. Y., 510), the Court said, with respect to the streets of New York City (p. 514):

> "The use of the space in the streets of New York, whether on the surface or beneath it, has been steadily growing in importance and value and will probably so continue for many years to come."

The fact was also referred to by this Court in New Orleans Gas Co. v. Drainage Commission (197 U. S., 453), where the Court said (p. 461):

> "The need of occupation of the soil beneath the streets in cities is constantly increasing, for the supply of water and light and the construction of systems of sewerage and drainage."

In 1884, the population of New York City, north of 79th Street was confined almost entirely to a few straggling villages. To-day, that population is probably nearly as great as was that of the entire City south of 79th Street, in 1884; and the values south of 79th Street have also increased enormously.

VI. The method pursued by the Court is criticised by the appellants, on the ground that the valuation of 1884 included patents, contracts and good will, in addition to the special franchises. That fact, however, was taken into consideration by the Court (Record, p. 419). The valuation of $7,781,000 was reached, in a general way, at the time of the consolidation of the Companies, by taking the approximate difference between the market value of their stock and the appraised value of the tangible property, after setting aside $1,303,000 for working capital (Record, p. 5384). The Court will take judicial notice of the fact that the year 1884 was a period of financial panic and widespread depression throughout the country, when all quotations were affected by the disturbed conditions. No stocks were quoted at as high figures as they would have been quoted had not such conditions then existed.

In discussing this subject, the appellants also entirely ignore the fact that the constituent companies paid off a considerable portion of their floating indebtedness prior to the consolidation and that a permanent indebtedness of $2,232,000 was transferred to the new Company (Record, pp. 573, 4496, 5731). This, of course, represented value or capital assets in addition to the market value of the stock.

The appellants assert that there was included in the valuation at that time a sum of from $2,000,000 to $3,000,000 for the patents of the Companies. The only foundation for such an assertion was the statement of the Vice-President of the Company as to what the patents of the Consolidated Company were worth *in December, 1885* (Record, p. 6465), more than a year after the consolidation had taken place; and there is no evidence that the Company had not acquired those patents subsequent to the consolidation. Neither is there any evidence tending to show that any patents owned by the constituent companies in 1884 were taken at more than a nominal valuation in the consolidation.

As the Court below observed (Record, p. 417), there was no attempt to place an accurate and precise valuation upon the franchises, in 1884.

The franchises of all corporations have been treated, until recently, very much in the manner that a healthy person regards the vital functions of his body; he is scarcely conscious of their existence and virtually ignores them until something goes wrong and he is aroused to a sense of their importance. It is only recently that attention has been directed to the special franchises exercised by public service corporations; and, in 1884, there was no attempt to appraise the value of the franchises of the constituent companies with mathematical exactness nor to apportion that valuation among the Companies, except, approximately, on the basis of their earnings. Undoubtedly, as the Senate Committee reported, the franchises alone (excluding all other intangible property) *of only four of the Companies* were worth *much more* than $7,781,000 (Complainant's Ex. 227, Record, p. 5386).

As to the contracts referred to by the Vice-President of the Company, in December, 1885, the evidence shows that these were contracts between the constituent Companies (Record, p. 6269), which obviously could not have been considered in the consolidation.

VII. Independently of all testimony in the case, the Court cannot but conclude that the right to lay and maintain gas mains in the streets of New York (that is, in the present case, in the Boroughs of Manhattan and the Bronx) is one of enormous value; and that is expressly conceded by counsel for the Public Service Commission (Brief, p. 221). As to what value shall be ascribed to it, probably no two persons would be found to agree exactly.

In the Court below, the appellants contended that the difficulty of accurately estimating the value of the franchises was so great that no attempt to value them should be made, because any valuation would be a mere " guess ". A guess is a conjecture, indulged in without sufficient facts upon which to base a rational judgment. When there are facts and considerations upon which a judgment can be based, the conclusion reached is no longer a mere guess; and the fact that there may be difficulties in the way of reaching an exact conclusion and that two persons of equal intelligence may differ in their conclusions, does not, in the eye of the law, impair the value of the result. That is so, in varying degrees, in all matters affecting human conduct; and, it is peculiarly so where a tribunal is required to estimate the uncertain damages resulting from a tort, or from a breach of an executory contract, where the damages are largely conjectural.

If the difficulty of valuing special franchises were insuperable, they could never be taxed; and the Special Franchise Tax Law, which was held by this Court and the Court of Appeals to be valid (199 U. S., 1), would have been a nullity. The fact that special franchises are now universally taxed shows that there is no serious difficulty in valuing them. In New York City, under its present Charter, (Section 74), before a special franchise can be granted, the Board of Estimate and Apportionment must pass upon the adequacy of the price to be paid for it. These franchises are, therefore, now disposed of in such manner as to give them a recognized market value. There is thus a substantial basis for estimating their value, which does not exist in the innumerable cases which are constantly being disposed of, where it is necessary for a court or jury to determine the very uncertain and problematical damages resulting from the loss of life or limb.

VIII. The fact that the Company, in *certiorari* proceedings instituted by it, has contested the right of the State to tax its special franchises and, in some of its returns to the State Board, has given the value only of its tangible property, is of no consequence in a case of this kind. Acting under the advice of counsel (Record, p. 1246), the Company made such statements for the purpose of taxation as would raise the issues of fact and law and protect its legal rights in having the assessment reviewed.

The petition and return, in *certiorari* proceedings, are the formal pleadings, corresponding to the complaint and answer in an action.

People v. Stilwell, 190 N. Y., 284.

In other words, the petition merely sets forth the legal position asserted by the petitioner; and it was a statement of this kind, made by Mr. Carter (Record, pp. 1239–1247), which the appellants criticise, but which the Special Master found was not improper (Record, p. 216).

The record shows that in spite of the protests made by the Company against an increase in the assessed value of its franchises, the assessments have been increased from $13,950,000, in 1900, to $31,900,000 in 1906.

If the figures given by the Company in its returns had been adopted by the State Board, there might be some ground for claiming that the Company was bound by them. But they were not adopted. On the contrary, they were entirely disregarded; and the value of the special franchises of the Company has been increased from year to year, by the State Board, ever since the

Special Franchise Act took effect (Record, pp. 1667, 3101, 6702, 6710).

Even, however, if the State Board had specifically adopted the Company's figures, that would not have created an estoppel against it. It would merely be evidence, to be taken into consideration with all the other facts, in ascertaining the "actual value of cost or reproduction".

> Southern Pacific R. Co. v. Board of Railroad Commissioners, 87 Fed. Rep., 21, 22;
> Louisville R. Co. v. Brown, 123 Fed. Rep., 946, 949;
> San Diego Land Co. v. Jasper, 189 U. S., 439, 443.

IX. The Court below did not specifically pass upon the value of the New York, Manhattan and Metropolitan franchises, because it did not consider it necessary to do so (Record, p. 432), as it found that the value of the other franchises owned by the Company was "*not less than*" the sum of $12,000,000 (Record, p. 418). But each one of those franchises is perpetual and coextensive with the entire City, as has been heretofore shown; and each one is undoubtedly worth a very large sum, in addition to the amount expressly found by the Court.

SECOND.

The value of the good will.

While it may be difficult to estimate the value of the good will with mathematical precision, the substantial basis of value is much more solid in the case of the business of the appellee than it is in the case of an ordinary mercantile business.

I. There is no doubt that the combined property of the Company has a value which is largely in excess of the separate values of the properties of its constituent companies.

In Cleveland Ry. Co. v. Backus (154 U. S., 439, 444), the Court referred to the New York Central Railroad as an illustration of the additional value given to a combined property over that of the properties of the separate companies. A railroad constitutes just as complete a monopoly as a gas business.

II. The estimate of Dr. Humphreys (a most eminent authority upon the subject) of $7,500,000 for the good will (Record, p. 1689) was extremely conservative. Mr. Addicks, on a more definite mathematical basis, estimated the value, on a 7% return, at $18,975,000 (Record, pp. 209, 1766).

Even without these estimates, there cannot be the slightest doubt that a very substantial sum should have been allowed for the value resulting from a long established and extensive business of this kind, in successful operation in the metropolis of the country; and the finding of the Special Master was abundantly supported by the evidence.

PART V.

THE SPECIAL FRANCHISES AND GOOD WILL SHOULD BE INCLUDED AMONG THE ASSETS UPON WHICH THE APPELLEE IS ENTITLED TO A RETURN, AND A VALUATION AT LEAST EQUAL TO THAT PLACED UPON THEM BY THE SPECIAL MASTER SHOULD BE ADOPTED BY THIS COURT.

Supreme Court of the United States.

OCTOBER TERM, 1908.

WILLIAM S. JACKSON, as Attorney-General of the State of New York, *et al.*, Appellants, AGAINST THE CONSOLIDATED GAS COMPANY OF NEW YORK, Appellee.	Number 398.

The undersigned, representing an ownership of Twelve hundred and ninety shares of the capital stock of the Brooklyn Union Gas Company, and Twenty-six thousand dollars of its bonds, convertible on March 1st, into stock at par, making a total interest of Fifteen hundred and fifty shares, respecfully asks leave to file this brief *amicus curiæ.*

The Brooklyn Union Gas Company is situated in the City of New York, and is subject to the same legislation of which the appellee complains. It has instituted a suit identical in character with this action which has not been pressed to trial, but of which the result here will undoubtedly be decisive.

It is apprehended that if the decision of the Circuit Court in this action should be affirmed, any regulation of corporations exercising public franchises in the City of New York would be made so difficult as to be practically impossible, and the community or municipality in the face of such a condition will very probably feel impelled to take the manufacture and distribution of gas into its own hands,—building its own plant and furnishing the commodity by its own agents,—a course which must work great injury to stockholders of the different companies by imperilling, if not wholly destroying the value of their investment. Leave of this Court is craved, therefore, to submit certain reasons which appear to have been overlooked below for holding Chapter 125 of the Laws of 1906 to be well within the constitutional authority of the New York Legislature.

Most of the elements entering into this cause —nearly all of them—the value of the plant and real estate, the cost of producing gas, the earnings gross and net, the right to consider its franchises as property used in its business and on which, therefore, the company is entitled to some return—have been argued elaborately by counsel on both sides and considered exhaustively by the Court at Circuit. No attempt will be made here to amplify the discussion in these respects.

Three features of this question, however, it is ventured to suggest, should be made clearer than the Court below has left them:

First: The exact meaning, significance and extent of the security guaranteed by the Constitution to property of corporations employed in operating public franchises.

Second: The right of the Legislature to ascertain for itself facts necessary to the exercise of powers undoubtedly belonging to it, and the extent to which a Court may substitute its own judgment on questions of fact for the judgment of the Legislature reached not capriciously or recklessly or corruptly, but after exhaustive inquiry, full hearing and elaborate discussion on matters admittedly affecting legislation and

Third: The authority of the Courts to set aside completely a law reducing rates to be charged by a public service corporation, and to restore the original rates exacted from the community where three-fourths of the reduction are conceded to be within the competence of the Legislature,—if not incumbent on it as public duty,—and its authority was exceeded—if at all—only as to one-fourth.

FIRST POINT.

It was error in the Court at Circuit to hold that no rate can be constitutionally enforced on this public service corporation which does not allow the company to earn six per cent. upon the property employed in its operation.

Ever since attempts were first made to regulate by legislation rates charged by public service corporations, this Court has always held unvaryingly to two principles: (1) Power to regulate the charges and operations of such corporations is an incident to sovereignty which the State has power to exercise through its political department, Munn *v.* Illinois, 94 U. S., 113, but (2) *"this power to regulate is not a power to destroy, and limitation is not the equivalent of confiscation. Under pretence of regulating fares and freights, the State cannot require a railroad corporation to carry persons or property without reward; neither can it do that which in law amounts to a taking of private property for public use without just compensation, or without due process of law."*

Stone v. *Farmers Loan & Trust Co.,*
116 U. S., 307-331.

Thus while admitting the power of the Legislature to regulate charges of a railroad company, the right of the corporation to a judicial hearing as to whether the rates so fixed were so low as to be confiscatory was held to be a constitutional privilege of which it could not be deprived.

Chic., M. & St. P. R. Co. v. *State of*
Minn., 134 U. S., 418.

The duty of the Courts to interfere in certain cases to prevent confiscation of property employed in operating public franchises under pretence of regulation having been established, it has become necessary to determine with some degree of preciseness the circumstances and conditions under which that power should be exercised. While it is thoroughly well settled that a rate which is confiscatory cannot be enforced, it is by no means settled which department of government is authorized in every case to decide whether a rate is fair and reasonable, or by what standard its fairness and reasonableness is to be measured.

On this head Mr. Justice Harlan, writing the opinion of a unanimous Court, says:

> "It should also be remembered that the judiciary ought not to interfere with the collection of rates established under legislative sanction unless they are so plainly and palpably unreasonable as to make their enforcement equivalent to the taking of property for public use without such compensation, as under all the circumstances is just both to the owner and to the public; that is, judicial interference should never occur unless the case presents, clearly and beyond all doubt, such a flagrant attack upon the rights of property under the guise of regulations as to compel the Court to say that the rates prescribed will necessarily have the effect to deny just compensation for private property taken for the public use."
>
> San Diego L. & T. Co. *v.* National City, 174 U. S., 739, at p. 754, and cases there cited.

And at page 756, the Court further said:

> "This Court had previously held in Covington & Lexington T. R. Co. *v.* Sandford, 164, U. S. 578, 597, 598 (41: 560, 566, 567), —which case involved the reasonableness of

> rates established by legislative enactment for a Turnpike Company,—that a corporation performing public services was *not entitled, as of right* and without reference to the interests of the public, *to realize a given per cent. upon its capital stock;* that stockholders were not the only persons whose rights or interests were to be considered; and *that the rights of the public were not to be ignored.* * * * The utmost that any corporation operating a public highway can rightfully demand at the hands of the Legislature, when exerting its general powers, is that it receives what under all the circumstances is such compensation for the use of its property as will be just both to it and to the public."

It is respectfully submitted that the logical deduction from these decisions and all others rendered by this tribunal is that the courts are concerned *solely in maintaining the security of property, not with guaranteeing a profitable use of it.*

This distinction between the *security of property and the profitable employment* of property seems to have been overlooked by the Court at Circuit, which appears to have considered itself bound not simply to protect the property of the stockholders of the appellee from positive loss or injury, but to secure some degree of "attractiveness" for their investment (see the Original Opinion, fols. 134-135, and Supplemental Opinion, fol. 41).

An expression of Mr. Justice Harlan in Covington & Lexington Turnpike Co. *et al. v.* Sandford *et al.* 164 U. S., 588, to the effect that in considering the fairness and reasonableness of a rate "*each case must depend upon its special facts,*" seems to have been construed by the Court at Circuit as authority for declaring that cases of this character are not to be governed by any fixed rules.

The exact language of the Circuit Judge on this head is: *"I believe the decisions end to-day about "where they began,—declaring only that 'each case "must depend upon its special facts,' Covington "&c. Turnpike Co. vs. Sandford, supra,* (Opinion of judge at Circuit, fol. 128)."

It is submitted that nothing could be more erroneous than such an interpretation of Mr. Justice Harlan's language. This court has not labored to so little purpose in the long line of decisions rendered by it on this and kindred subjects.

The proposition, as Mr. Justice Harlan states it, is perfectly clear and absolutely unanswerable. Indeed it is self evident. Every case involving rates turns upon some distinct and peculiar state of facts. To say that these facts must form the basis on which its disposition depends is far from affirming or intimating that in dealing with them no fixed rule is to be observed, and that where a rate fixed by the Legislature is challenged, its reasonableness must in every instance be determined by the Court as an entirely independent original proposition, without regard to precedents established by other cases or in other proceedings.

Throughout opinions rendered by this Court in many different cases, especially those contributed by Mr. Justice Harlan and Mr. Justice Brewer, the assertion frequently recurs that *"this is a government of laws not of men,"* a principle vital to the constitutional system of which this great tribunal has always been the faithful depositary and its members vigilant guardians. But surely if the mere discretion of a man, even though he be a judge, not governed or controlled by any fixed rule, but free to dispose of each case "upon its special facts," as they appear to him, is the final authority to decide a question so momentous, fraught with such consequences to the community and the corporations chartered to serve it, then in this respect at least our government emphatically *is* a government of men, *not* of laws.

The opinion expressed by the learned judge at Circuit that it is impossible to fix by a definite rule the respective limits of legislative and judicial authority on this subject, it is respectfully submitted, is an erroneous conception of our constitutional system. The proper field of the Legislature on one hand, and of the Judiciary on the other, will not be impossible or even difficult to ascertain if we take the whole tide of decisions by this court and in the light of them examine carefully the relations which public service corporations bear to the community they are chartered to serve and the stockholders by whose capital they are operated. In the light of such an examination, opinions that appear to be contradictory will be reconciled, and doubts that appear most perplexing will be solved.

In Chic., M. & St. P. R. Co. *v.* State of Minn., 134 U. S., 418, quoted above—a leading case—Mr. Justice Blatchford, writing the opinion of the majority, says:

> "The question of the reasonableness of a rate of charge for transportation by a railroad company, involving as it does the element of reasonableness both as regards the company and as regards the public, *is eminently a question of judicial investigation, requiring due process of law for its determination.*"

Mr. Justice Bradley, writing the minority opinion (Mr. Justice Gray and Mr. Justice Lamar concurred with him) begins by saying:

> "I cannot agree to the decision of the Court in this case. It practically overrules Munn *v.* Illinois, 94 U. S., 113 [24:77], and the several railroad cases that were decided at the same time. *The governing principle of those cases was that the regulation and*

> *settlement of the fares of railroads and other public accommodations is a legislative prerogative and not a judicial one. This is a principle which I regard as of great importance."*

And farther on he says:

> "But it is said that all charges should be reasonable, and that none but reasonable charges can be exacted; *and it is urged that what is a reasonable charge is a judicial question. On the contrary, it is pre-eminently a legislative one,* involving considerations of policy as well as of remuneration; and is usually determined by the legislature by fixing a maximum of charges in the charter of the company, or afterwards, if its hands are not tied by contract."

Here appear to be two radically irreconcilable positions,—one it would seem wholly erroneous if the other be correct. And yet it is submitted both these eminent jurists were entirely correct, except that instead of the same question, as they supposed, they were really discussing two different questions or rather, they were discussing two different aspects of one question.

It is respectfully submitted that in one aspect what constitutes a fair and reasonable rate is a judicial question, to decide which the Courts alone are competent, while in another aspect it is a political question over which the Legislative Department has exclusive control—a control which it cannot abdicate or share with any body or other department of government.

The sense in which the question what constitutes a fair and reasonable rate is judicial, and the sense in which it is legislative will be made perfectly clear by recurring to a few elemental propositions which in these days are not questioned anywhere.

Under our industrial and political system there are two elements entering into a public service corporation: One the right to operate it—what is known as the franchise, the other the capital by which the franchise is placed in operation. The franchise—which includes the right to exercise the power of eminent domain—being an attribute to sovereignty, the right to control it must, always, remain with the sovereign, that is to say, with the state—the government. On the other hand, the capital by which the franchise is operated is the property of individuals who contribute it. It is private property dedicated to a public purpose.

The corporation in return for the special opportunities of profit which it enjoys, owes to the sovereign efficient service; and the sovereign—that is to say, the state or government—is bound to protect, from all manner of assault, or injury—under color of law or in open violation of it—the capital—the private property—dedicated to this public service. Stated in the narrowest compass, the corporation owes the people the most efficient service within the reach of human endeavor, consistent with security of the capital—not the fictitious amount at which it may be capitalized, but the real capital, the genuine property—actually embarked in it.

The right of all property—property engaged in operating public franchises no less than property otherwise employed—to security being absolute, it is the province of the courts to see that the security is complete, whether threatened by violence that is unauthorized, or by legislation that is unconstitutional.

But what is actually meant by this security of property? What does it involve? What are its essential features? What rights does it embrace?

While it is now settled beyond question that a rate which compels a public service company to do business at a loss would impair the value of the capital embarked in it, and therefore, would be a taking of property without due process of law, which the Courts must condemn as confiscatory, it has not yet been held affirmatively by this Court that a rate which though it did not entail actual loss in operation, nevertheless was so low as to prevent the possibility of earning any profits would be beyond the *constitutional* power of the legislature to impose, and therefore the Courts would be bound to set it aside. Discussing the authority of the United States Courts to review the action of a Legislature in the regulation of rates, as established by the decisions of the United States Supreme Court, Mr. Justice Brewer distinguishes between corporations engaged in business of *"a public character,"* and those engaged in business *"not strictly of a public character,"* but in which *"the public have an interest,"* and says:

> "As to parties engaged in performing a public service, while the power to regulate has been sustained, negatively the Court has held that the Legislature may not prescribe rates, which, if enforced, would amount to a confiscation of property. *But it has not held affirmatively that the Legislature may enforce rates which stop only this side of confiscation, and leave the property in the hands and under the care of the owners without any remuneration for its use."*
>
> *Cotting* v. *Kansas City Stock Yards Co. et al., 183 U. S., 79, at p. 91.*

The time has arrived, it is respectfully submitted, when the necessities of commerce and of orderly government make it important if not vital that the courts should go a step further in defining constitutional security of property by holding it to include not merely safety of the principal—the right to hold its *corpus* intact—but in addition the right of the owner to employ it so as to secure some return.

Unless property can be employed at a profit it won't be employed at all, and unless it can be employed it is not worth holding. A right of property, which did not embrace the right to employ it for the benefit of the owner, would be a mere right of custody, utterly valueless, a burden rather than a benefit, a penalty rather than a privilege, a hollow mockery, a trap for the unwary baited by delusive and misleading words.

Security of property, even in the narrowest and most literal sense, must include the right to earn some return. Property, whatever its form, cannot be preserved except at some expense. This expense, if not earned by employment of it at a profit, must be defrayed from principal, and the cost of maintenance being continuous would involve steady diminution of the property itself and finally its entire extinction.

Clearly then a rate, which even though it did not entail actual loss in operation—that is to say, an immediate, direct impairment of the property invested in corporations of this character,—yet was so low as to prohibit the possibility of earning any return on it—would be confiscatory, and the courts must intervene to forbid its enforcement.

If property embarked in public service corporations is entitled to any return, it must be an actual return—a return that is at least tangible.

What now is the return the courts are bound to see that no legislation will prevent a public service corporation from earning?

The Court below seems to have considered the legal rate of interest allowed in New York State to be, if not the measure, at least an indication of the profit which capital engaged in operating public franchises should always be permitted to earn in order to maintain its constitutional security. But the legal rate of interest is the maximum profit that can be collected for the use of money in that State. The great majority of transactions on credit are at a much lower rate. The maximum rate of interest is profit, the minimum rate is security. And with security alone are the courts concerned.

The profit which the courts should fix as essential to the constitutional safety of property employed in operating public franchises, it is respectfully submitted, is simply that which will equal the minimum rate of interest paid for the use of money in the open market.

This rule is entirely consistent with all the decisions on this subject rendered by this august tribunal.

Mr. Justice Harlan has pointed out in Covington & Lexington Turnpike Road Co. *et al., v.* Sandford *et al., supra*, that a corporation performing public services is not entitled *"as of right and without reference to the interests of the public* to realize a given per cent. upon its capital stock."

And this observation is weighty, timely, unanswerable. Should, for instance, a public service corporation be shown to have been extravagant, corrupt or reckless, in disposing of its resources or employing its capital, the community should not be subjected to exactions in order that such profligate expenditures may be made to yield substantial returns. But for every dollar expended in good faith and with reasonable discretion in making its service effective, the courts will see that a company be allowed to impose such rates as will enable it to earn returns sufficient at least to maintain the security of its property.

Whether a rate is fair and reasonable in this sense—that is to say, *whether it violates or respects the security of property* embarked in the operation of public service corporations—is clearly a question which the courts must determine, in the proper exercise of a most important function imposed upon them by the Constitution.

But there is another aspect of the question what is a fair and reasonable rate which is not judicial but legislative, which concerns not the constitutional security of property, but a great question of public policy, with which the political side of the government alone is competent to deal.

In this country it always has been a policy of government to enlist private enterprise in the operation of public franchises. Now, the only way by which private individuals can be induced to invest capital in this form of public service is by offering them opportunity to earn adequate profits.

How much that profit should be—what constitutes the fair and reasonable rate that will allow such a profit to be earned—and thus encourage the investment of capital in making public franchises effective—is a question of policy to be decided by the political or legislative department, with which the Courts could not deal effectively, even if the legislative sought to bestow the power upon them.

Not only is this the boundary between judicial and legislative functions fixed by our Constitution, but it is the natural boundary between them, as will be apparent if we conceive for a moment the essential functions of a Court.

The function of a Court is to declare and establish the law, constitutional or statute. The law to be law must be fixed, certain, and definite. The Courts, therefore, can have no power to relax, change or modify it.

The Legislature, on the other hand, is created expressly to prescribe new enactments or relax existing statutory provisions, as it may think will serve the public weal.

The function of the Courts is to ascertain what the law is and then declare it; the function of the Legislature is to ascertain what the law ought to be and then enact it.

A Court can never consider policy in the sense of squaring its decision by it. But policy is a thing the Legislature is bound always to consider. The Court must declare the law, whatever consequences the judges may apprehend from their decision. In this respect no discretion is open to them. The discretion sometimes given to judges in dealing with individuals—especially in imposing penalties on offenders against the State—they can never exercise when interpreting the law under which they act. They must always and everywhere declare the law, not perhaps as they would have framed it or as they might like to make it, but as they find it—as it is—as the framers made it.

The Legislature, on the other hand, being required to deal with all matters of policy is preeminently a field for the exercise of discretion. Instead of ignoring considerations of policy, it should be governed by them.

While, therefore, it remains a policy of the country to invite the employment of private property in the operation of public franchises, the Legislature must fix the condition by which owners of capital may be induced to engage in this form of service. The profits which should be allowed investors with this object might be six per cent. at one time, at another ten per cent., or twelve per cent., according to the varying rates of interest for money and the requirements of public convenience. Fixing these rates is distinctly a matter of public policy, and therefore it is a function essentially and exclusively legislative. The Courts could not discharge it effectively even if they tried, and if all other departments of government were willing they should assume it.

The duty of this Court, it is respectfully submitted, is to recognize these separate spheres, and by clearly defining them, establish in the judiciary complete power to decide what is the reasonable rate necessary to maintain the *constitutional security of property,* while acknowledging in the Legislature equally unquestioned power to fix the fair and reasonable rate necessary to encourage the investment of capital in such enterprises.

The rate at which the law of 1906 requires the appellee in the case at bar to sell its product ensures it a net return of over five per cent. on its property, including as property the franchises it holds from the State, and this being ample to maintain its property in security every constitutional requirement necessary to the validity of such legislation has been met and the decision of the Court at Circuit adjudging the statute unconstitutional and void should be reversed.

SECOND POINT.

The Legislature, having inquired into the cost of gas and having concluded after full investigation where every interest was heard, that a rate of eighty cents per thousand feet is adequate to allow the companies, engaged in furnishing this commodity, a fair and reasonable profit on the capital actually employed in the business, its conclusions in that respect should be controlling. At least, they should be held controlling in the absence of any assertion, pretense or shadow of proof that the course of the Legislature had been governed by recklessness or any unworthy or improper motive.

It is respectfully submitted that, unless a conclusion of the Legislature on a question of fact reached after full inquiry properly authorized and honestly conducted, concerning a matter admittedly within the scope of its authority, be binding on all other departments of government, including the judiciary, the legislative department is not an independent or co-ordinate branch of the Government, but a subordinate and inferior body.

All proceedings of a public body clearly within its competence are entitled to credit by every other public body. This is the very essence of a separate or independent jurisdiction.

In the case at bar, the Legislature having investigated the manufacture and supply of gas in

New York City for the avowed purpose of ascertaining the rate which would allow companies engaged in this business a fair return on their property, while prohibiting them from imposing extortionate rates on the community, passed a law fixing eighty cents per thousand feet as the maximum price that might be charged for this commodity, whereupon a judge of the United States, sitting at Circuit, undertook an entirely independent inquiry into the same subject, and having reached a conclusion on this question of fact slightly different from that of the legislative body, he proceeded to adjudge the law invalid and set it wholly aside.

If the position assumed in this respect by the Court at Circuit be sustained by this Court, it is difficult to see how the legislature can be considered a co-ordinate branch of government, or how it can be held to retain even a measure of independence.

Nothing in the prior judicial decisions of this country would justify such an emasculation of legislative independence and importance. On the contrary, the courts hitherto have always been careful to recognize that wherever the Legislature is given authority to deal with any subject it is the fullest authority, including authority to decide for itself all matters of fact incident to the exercise of its functions.

> "The Courts must, of necessity, presume (whatever may be averred to the contrary) that no general statute is ever passed either for want of information upon the part of the legislature or because it was misled by the false representation of lobbyists or interested parties."
>
> Farmers' Loan & Trust Co. *v.* Chic. P. & S. Ry. Co., 39 Fed., 143.
> Angle *v.* Chicago, *Id.*, 912.

Where an act of the Legislature appropriating money to an individual for services rendered the State under appointment by the Governor is valid on its face, the Court will not look into evidence aliunde to determine whether it violates the Constitution, Art. 4, Sec. 25, Sub. 29, and Secs. 31 and 32, which provide respectively that the Legislature shall not pass any law affecting the fees or salary of any officer, make any gift of the public money, or award extra compensation to an officer after the service has been rendered.

Rankin *v.* Colgan, 92 Cal., 605.

Story, in his work on the Constitution, Vol. 2, Sec. 1342, says:

> "It would seem, as the power is given to Congress to suspend the writ of *habeas corpus* in cases of rebellion or invasion, that the right to judge whether exigency had arisen must exclusively belong to that body."

Surely, if the Legislative Department has *exclusive* power to decide for itself facts which authorize it to take action, affecting individual liberty so profoundly as a suspension of the *habeas corpus* act, it should not be denied practically ail power to decide for itself facts which justify it in taking action affecting property to the moderate extent of fixing rates that a corporation exercising a public utility may exact from the community it serves.

This Court in all its decisions affecting legislative regulation of public service corporations has always recognized the right of a Legislature to ascertain for itself facts necessary to the effective discharge of this function.

> "But the Courts cannot, after the Board has fully and fairly investigated and acted, by fixing what it believes to be reasonable rates, step in and say its action shall be set

> aside and nullified because the Courts, upon a similar investigation have come to a different conclusion as to the reasonableness of the rates fixed. There must be actual fraud in fixing the rates, or they must be so palpably and grossly unreasonable and unjust as to amount to the same thing."
>
> Spring Valley Water Works *v.* S. F., 82 Cal., 286, cited with approval in San D. L. & T. Co. *v.* National City, 174 U. S., 739, at page 750.
>
> "It should also be remembered that the Judiciary ought not to interfere with the collection of rates established under legislative sanction unless they are so plainly and palpably unreasonable as to make their enforcement equivalent to the taking of property for public use without such compensation as under all the circumstances is just both to the owner and to the public; that is, judicial interference should never occur unless the case presents, clearly and beyond all doubt, such a flagrant attack upon the rights of property under the guise of regulations as to compel the Court to say that the rates prescribed will necessarily have the effect to deny just compensation for private property taken for public use."
>
> San Diego L. & T. Co. *v.* National City, 174 U. S., 739 at page 754, and cases there cited.

If the Legislature have any power to investigate conditions with a view to legislation clearly within its power, its conclusions of fact must be entitled to some weight. If they have any weight, they are entitled to full weight, at least in the absence of any proof that the Legislature has acted in bad faith. They are either entitled to full weight and authority or they have no force or significance whatever.

The right to inquire and ascertain facts is an indispensable prerequisite to wholesome legislation. If the Legislature be not competent to ascertain for itself a fact essential to its own procedure and if its conclusions on such a matter be not entitled to any consideration by other departments of government, it is idle to speak of it as a legislative body. It is not even a commission to propose legislation, much less a body competent to enact laws. This Court, it is confidently believed, will hesitate long before rendering a decision which must reduce the legislative branch to such insignificant proportions.

It is not open to question that the power to regulate public service corporations, if it exist anywhere, is in the Legislature. Before that power can be exercised effectively certain questions of fact must be decided. Before a reasonable rate can be fixed it is necessary to ascertain what is reasonable. This information can best be obtained by thorough and complete investigation of the whole subject. Such an inquiry concerning the cost of gas in New York City the New York Legislature undertook and prosecuted exhaustively (Record, p. 66, *et seq.*). It found that a rate of eighty cents would be sufficient to afford a reasonable return on the property employed in the manufacture and distribution of gas. That rate was fixed by a statute passed after all the testimony offered had been received and weighed; after prolonged and exhaustive arguments had been heard. (Record.) In the absence of any suggestion that hate, violence, fraud or other unworthy motive governed the Legislature its action, like the action of every official body, should be presumed to have been taken in strict obedience to the constitutional oaths of its members. Yet the Court at Circuit seems to have completely ignored this inquiry, and the proceedings based on it.

If the conclusion of a legislature based on careful inquiry be of no value—entirely negligible—then legislative investigations and examinations preliminary to legislation are a waste of time and funds, senseless and indefensible.

Failure to inquire before acting is the complaint most generally brought by thoughtful men against legislative bodies. Is this Court prepared now to declare such preliminary investigations wholly useless and indeed improper—by holding a conclusion reached after exhaustive inquiry, entirely negligible—so utterly useless that the expense of conducting it must have been an unjustifiable waste of public revenue.

If the valuation of real estate, plant and mains of the Company made by the Legislature be correct, a rate of eighty cents for its product would assure a return of more than six per cent. on its property. It would, therefore, have been, according to the opinion of the Court a fair and reasonable rate within the meaning of the Constitution. It was by fixing a different valuation of its own that the Court has reached the conclusion that an eighty-cent rate would yield a return of less than six per cent, though exceeding five per cent on the property of the corporation. By what principle of construction is the judgment of a Court on the value of real estate to be held so superior to the judgment of the Legislature on the same subject as to justify the complete nullification of a law solemenly enacted after deliberate consideration and careful investigation?

Conclusions as to the value of real estate are essentially speculative. In no sense can they be considered capable of demonstration. If a slight difference in estimating the value of real property between the Legislature and the Court be sufficient to render unconstitutional a law reducing rates which admittedly were too high, then legislative power to regulate corporations can hardly be said to exist. It can be undertaken only under conditions that make it practically inoperative.

But if the community cannot regulate public franchises entrusted to private corporations—if its attempts at regulation be surrounded by such difficulties as to make them almost inevitably foredoomed to failure—there is still one remedy open to it—and that is to exercise these franchises itself by its own agents. It would be intolerable if corporations furnishing a commodity absolutely essential to the convenience and even the necessities of life be suffered to exist—to occupy public highways—to exercise the power of eminent domain—without being subject to governmental regulation of any kind.

Regulation of public service corporations being essential to the public welfare, it will be established, somehow or other. If it cannot be enforced against corporations to whom public franchises have been granted, then these franchises must be exercised by the community itself.

If this attempt at regulation fail, it is difficult to conceive how any can succeed. In that event, nothing can be clearer than that the community will very likely be driven to establish its own gas plant. On such a proposition, if submitted to him as a citizen, even a stockholder in a gas company whose sense of civic duty outweighs regard for his personal interests, would probably feel bound to vote in the affirmative.

The courts, it is believed, will be slow to sanction a doctrine which must result in placing citizens well-disposed and law-abiding in a position where the condition of performing loyally their full civic duty must be a sacrifice of their property interests.

THIRD POINT.

Even if the action of the Legislature in fixing a rate of eighty cents per thousand feet be unconstitutional, the Court erred in enjoining enforcement of the law to any extent whatever. The decree should have been limited to enjoining the State officers from enforcing any reduction below eighty-five cents per thousand feet, which rate the opinion of the Judge shows would have been ample to ensure full protection of the company's property according to the standard of constitutional security fixed by the Judge himself.

The opinion of the Court clearly shows that had the Legislature reduced the price of gas from a dollar to eighty-five cents, instead of eighty cents, a profit of over six per cent. would have been left to the company on all the capital actually employed in its operation—including its franchises as property—and this according to the standard fixed by the judge himself would have been sufficient to maintain the constitutional security of the property. Yet the judgment sets aside the law absolutely and wholly.

It is a familiar principle of construction that where certain features of a law transcend the constitution, yet others are within the power of the Legislature to enact, those features that are constitutional will be upheld. (Cooley on Constitutional Limitations, 7th Ed., p. 247.)

In the case at bar, even according to the valuation of real estate and other conclusions of fact reached by the Court at Circuit, the Legislature had unquestioned power to order a reduction in the rate from one dollar to eighty-five cents. Its action, therefore, should have been held invalid only to the extent that it ordered a reduction below that rate.

The attention of the Judge evidently having been called to this before final settlement of the order, and a request apparently having been made that before any injunction be issued, and as a condition of its becoming effective, the company should be required to reduce the price of its product to eighty-five cents per thousand feet, as of the date on which the law was passed, that request was refused on three grounds.

FIRST.—Because such an order might lead all the parties herein to accept the decision of the Circuit Court, and thus prevent an appeal to this Court, it being considered important in the highest degree that the questions raised in this litigation be finally determined.

SECOND.—Because that question had not been raised in the pleadings.

THIRD.—Because such modification would in effect be fixing a rate by the Court and it would operate as coercion of the Company into conceding a rate of eighty-five cents to consumers, through fear that otherwise a rate of eighty cents might be imposed on it (Supplemental opinion, Fol. 47, Record, p. — *et seq.*).

Clearly, the first reason is no longer operative. The case is here in this court, which will undoubtedly pass upon it, and every feature of it.

The second ground, it is respectfully submitted, seems to be inconsistent with every principle of equity jurisprudence.

The testimony on which the Court was able to conclude that a rate of eighty-five cents would have been well within the constitutional power of the Legislature was admitted without question or objection. It is part of the record now. It is hardly conceivable that a motion to amend the pleadings so as to make them conform to the proof in this respect could have been denied. Indeed, it is passing strange that the Court, of its own motion, did not order such an amendment.

Moreover, this cause is not an issue affecting two private individuals, one of whom might fairly be made to bear any adverse consequence that flowed from his own neglect. The appellants have no personal interest in these proceedings. They are here purely as representatives of the community. That four millions and a half of people must continue to pay for a commodity essential to their comfort, at a rate more than fifteen per cent. higher than the Court itself holds reasonable, and that they should be left subject to these unreasonable exactions merely because of a defect in pleadings so purely technical and unimportant that it did not operate to prevent the admission of any testimony, is a proposition scarcely to be reconciled with any theory of equity announced, sanctioned, or accepted by this Tribunal.

It is the very essence of equity that its operations are always for justice.

It embodies in our system that ultimate prerogative of justice which in some form or other has been found necessary in every state of society to prevent the law itself from becoming perverted or distorted at times to the perpetration of injustice by rigid, unbending and unvarying enforcement of fixed rules.

This high prerogative in its nature is essentially discretionary, but discretion, as it is exercised by a court of equity, *"must not be arbitrary, fanciful or "capricious; it must be legal and regular; governed "by rules, not by humor."*

The distinctive characteristic of equity is that never under any circumstances can it be made to aid in the perpetration of injustice or to connive at it, whatever the consequences. If there be a wrong which cannot be redressed except at the cost of perpetrating another wrong, equity prefers to let the one it finds and for which it is not responsible continue rather than soil its own hands by stooping to an injustice, however slight, in an attempt to correct it. Yet here a law seeking to reduce rates which admittedly were too high, because the reduction slightly exceeds the limit considered reasonable by the Court, is nullified, not merely to the extent of the excess, but wholly and completely. The Court is not content to save the company from a rate which it considers too low by five cents, but it goes further and imposes on the community, for the benefit of the company, a rate too high admittedly by fifteen cents.

If it were absolutely necessary to inflict so severe an injury on the community in order to save the corporation from a much slighter injury, it might well be questioned whether a Court of Equity would under such circumstances feel itself justified in granting a permanent injunction. But this question does not arise here. To restore the dollar rate admittedly excessive, is not the necessary alternative to sustaining the eighty-cent rate which the Court holds inadequate. The Court, in its discretion, can forbid the enforcement of any rate below eighty-five cents—the rate found by itself to be just and reasonable—and thus do full justice to both the corporation and the community.

It is an elemental principle of equity that it will not take cognizance of a controversy, unless it can do complete justice to every one concerned in it or affected by it. Surely the community, the consumers of gas, are deeply affected by this controversy. And the Court of Equity which proclaims itself powerful enough to relieve a gas company from a rate that it considers slightly too low, should not be suffered by this great tribunal to confess itself powerless to grant such a measure of relief except at the cost of imposing on the community rates that are admittedly very much too high.

The suggestion of the learned judge at Circuit that to attach a condition to the issuance of this injunction order which would effect substantial justice between the community and the gas company by compelling the corporation to concede the rate which he himself held reasonable would in effect be fixing a rate by the Court—seems to be based on a misapprehension of his own decision. As matter of fact what the Court actually does by this very decree is to fix a rate. Whatever words, terms or formula may be employed to describe the result, nobody can question that a rate of one dollar per thousand feet for gas in the City of New York will be fixed in fact if this decision be upheld. And how will it be fixed? Not by legislative enactment—the Legislature has done everything in its power to lower the rate—but in spite of the Legislature, by order of the Court. The Court seems able to fix a rate that is unreasonable if not unconscionable, and to fix it so firmly that every consumer of gas in New York City must feel the burden of it, but a rate that by its own conclusion is reasonable and fair it professes itself unable to fix even as a condition of granting relief against a rate attacked as unfair. A conclusion so incomplete is not consistent with equity, as it has been developed and amplified by the American Judiciary.

If eighty-five cents would have been a reasonable rate, according to the opinion of the Court itself, surely the community should not be sentenced to an exaction of fifteen cents beyond this reasonable rate, simply because of a mistake on the part of the legislative body in estimating the value of many different elements—constituting the property of the corporation.

LAST.

It is respectfully submitted that the judgment of the Court below should be reversed or at least modified, so that an injunction against the enforcement of Chap. 125 of the Laws of 1906, of the State of New York, will be issued only on condition that the plaintiff furnish its product at a rate not exceeding eighty-five cents per thousand feet.

W. Bourke Cockran,
Amicus Curiae,
31 Nassau Street,
New York City.

SUPREME COURT OF THE UNITED STATES.

October Term, 1908.

No. 396.

WM. R. WILLCOX ET AL., Constituting the Public Service Commission of the State of New York for the First District, Appellants,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 397.

THE STATE OF NEW YORK, Appellant,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

No. 398.

WILLIAM S. JACKSON, as Attorney General of the State of New York, Appellant,

vs.

CONSOLIDATED GAS COMPANY OF NEW YORK.

Brief Submitted by Nathan Matthews, as Amicus Curiæ, Tremont Building, Boston, Mass.

The undersigned, representing the complainant in the case of *Haverhill Gaslight Company vs. Barker*, depending since February, 1900, in the Circuit Court of the United

States for the District of Massachusetts (see —, Federal Reporter, page —), in which case are involved some of the issues before this court in the case at bar, respectfully asks leave of court to file as *amicus curiæ* the following brief or memorandum:

I.

The Franchise Question.

If the court is of the opinion that, under some circumstances, the value of a public service company's franchises should be disallowed as an item upon which the company is entitled, under the Fourteenth Amendment, to just compensation by way of income, the undersigned submits that a contrary result should be reached in cases where:

(*a*) the franchise has been paid for by the company in cash; or where

(*b*) the franchise has been granted for a definite period; or where

(*c*) the franchise specifically authorizes the company to charge a particular rate; or

(*d*) the franchise has been indirectly paid for under the compulsion of State laws, such for instance as those which obtain in some States prohibiting the issue of capital stock except at its market value. In such cases the subscribers to the new stock of a prosperous company are obliged to pay a premium representing the capitalized value of the earning capacity of the company, which is based, of course, in part on the company's franchises; and it would be grossly inequitable to permit the State to compel a purchaser of stock to pay a franchise value for it, and then to eliminate this value through a reduction of rates.

II.

On the Relation Between Share Capital and Investment in a Rate Case.

There can be no relation, useful for consideration in a rate case arising under the Fourteenth Amendment, between the complainant's investment and the par value of its share capital; for

(*a*) the share capital of the company may have been watered, and may thus be far in excess of the fair value of the company's assets; or

(*b*) the stock may have been issued at a premium, and may thus represent at par much less than the value of the company's assets; or

(*c*) the company may have obtained the money to build extensions and improvements from its surplus earnings rather than from the issue of stock, in which case the total outstanding amount of stock would be less than the value of the company's plant; or

(*d*) the stock may have no par value at all, for, as was frequently the case in the early part of the nineteenth century, the company may have been incorporated with so many shares of stock, but without a par value for the same (see as instances many aqueduct, canal, and other franchise companies incorporated in Massachusetts between 1783 and 1830); or

(*e*) there may be no company in the case at all. Public service franchises, such as are necessary to the exploitation of a water works, gas plant, electric light plant, etc., are frequently operated under legislative authority by individuals and firms, in which case there is no company and of course no stock.

III.

The Relation Between the Company's Assets and the Amount of Money Paid into the Plant from the Proceeds of Stock and Bonds.

There is no relation, useful for consideration in a rate case arising under the Fourteenth Amendment, between the physical assets of a public service company and the amount of money which has been raised by the sale of stock and bonds; for.

> (*a*) the franchise may, as noted above, be operated by a private individual or firm without any corporation, stock, bonds, or dividends; or
>
> (*b*) the company may have been financed largely from surplus earnings which might have been paid out in dividends, but which in fact have been turned into the plant, with the result that the outstanding stock and bonds have been kept down to a nominal amount.

In amplification of the point last noted, it is submitted that the surplus earnings of a public service company above the amount needed for operating expenses, depreciation, etc., belong to the stockholders, and may, at their election, either be paid out as dividends, or used for extensions, additions and other purposes for which fresh stock may be issued if the stockholders so desire.

There are two ways of managing a corporation. According to one method all surplus earnings as above defined are paid out as interest or dividends, and the cost of extensions, additions and improvements is met by the issue of fresh stock or bonds; the result being that the nominal or share capital of the company is increased from year to year and is generally approximately equal to the fair cash value of the company's physical plant. The other method, more common in the past than now, and more common in the case of strictly private corporations than in the case of public franchise companies, is to keep the capital as small as possible by devoting the surplus earnings so far as they go to defraying the cost of extensions, additions, and improvements; the result being that while the physical assets of the company increase from year to year exactly as under the other method, the capitalization of the company is kept at a nominal or fairly constant figure.

Both these methods are entirely legitimate. and it can make no difference to the State or the consumers which of them a particular company sees fit to adopt.

When a rate case arises it may be competent in the case of a company managed under the first system to base the rate upon the amount of capital stock and bonds outstanding; but this is because this amount will generally be found to be approximately equal to the company's assets. In the case of a company managed under the second plan it is necessary, to prevent confiscation of a whole or a part of the earning value of the company's physical assets, to ignore the amount of the stock and bonds outstanding and to look solely to the physical assets.

If it be contended that the basis of a valid rate under the Fourteenth Amendment is only that part of the company's assets which has been paid for out of the proceeds of stock and bonds, this contention is equivalent to an admission that it is entirely legitimate for a public service company, as against the public, to pay for all its extensions, additions, and improvements out of earnings, and then the rate must be high enough to pay for the estimated annual amount of such extensions, additions, and improvements. The consumers cannot be heard to say in one breath that the company cannot treat as part of its capital or investment the value of the physical assets which have been paid for out of surplus earnings, and in the next breath that in striking the account of earnings the company is not to be allowed a rate sufficient to cover operating expenses, depreciation, and the annual cost of extensions, additions, and improvements. The practical result is probably much the same either way—that is to say, if a company spends $50,000 a year on extensions, it makes little or no difference whether it is permitted to charge a price high enough to cover this item, or whether this item is disallowed, but the rate is based upon the value of the extensions which have previously been defrayed from revenue. Whichever rule be adopted, it seems clear that the consumers cannot have the benefit of it without taking the burden also. If a company has lost the right, as against the public, to capitalize its extensions because they have been paid for out of earnings, it must be permitted to continue the process and be given a rate sufficient to meet the extensions of the future.

Although the actual difference in dollars and cents in any particular case would probably be small, or perhaps nothing at all, it seems clear that by far the simpler and more consistent method is to allow the company a reasonable return upon the present value of its physical assets, but nothing for annual extensions in excess of the amount needed to cover current operation, repairs, and depreciation.

It is submitted that the only rule applicable with strict justice to all cases, as well as the only rule consistent with the language of this court in the decisions from Smyth *vs.* Ames to the present time, is that the complainant is at least entitled to such a rate as will leave it a reasonable return, above the cost of operation, repairs, and depreciation, on the fair present cash value of the physical assets owned and employed by it in the business.

IV.

The Rate of Return.

It is suggested by the appellants, or some of them, that a price which allows the complainant the minimum rate of interest current in the community in question is not obnoxious to the Fourteenth Amendment.

The undersigned submits that the smallest return which can be allowed without violating the provisions of the Amendment is a rate which represents the value of money for investment in property of the kind in question in the part of the country in question.

A rate less than this deprives the company of a part of the income or annual value of its property, and to that extent is without due process of law.

This rate will vary for different sections of the country, for communities of different size, and perhaps for other reasons; but in any particular case, it ought not to be difficult to ascertain. It is what a purchaser would expect to earn if he bought the company's assets. It is the prospective profit which he would expect the company would be able to earn before he would be willing to pay a definite price for its physical assets. This sum cannot possibly be the minimum rate of interest in the community in question; for everybody knows that a gas, electric light, or other similar plant, with all the business hazards attached to it, cannot be sold on the same terms on which a mortgage upon real estate can be placed, or a market found for municipal bonds. It is possible that some part of the purchase money might be financed by loan at perhaps 5 per cent., or more or less, dependent upon the circumstances of the case; but it is idle to suppose that the whole purchase money could be procured on any such terms. The purchaser would expect to earn on that part of the money which he did not borrow certainly more than the rate at which he could borrow the other part.

In estimating the value of money for investment in the business in question, it is, we take it, the average value or cost of the total amount required. If, for instance, half of the purchase money could be borrowed at 5 per cent., and a purchaser could not be found unless he could be shown an earning capacity of 7 per cent. for the remaining half, the average rate for the whole investment would be 6 per cent.

Applied to gas companies, large or small, the figure which represents the annual value of money for that part of the investment which cannot be placed in the shape of a loan would, it is submitted, be considerably more than 6 per cent. The undersigned does not know to what extent the record in this case shows the current dividends which are paid by gas companies in the State of New York; but in other parts of the country there can be little doubt that dividends ranging all the way from 8 to 15 per cent. of a capitalization approximating the cash value of the company's physical assets is earned and paid without protest on the part of the public.

The court at circuit in this case has found that 6 per cent. should be allowed upon the whole investment of the company. As the question is one of the rate at which money can be found for investment in the business in question in the community in question at the time in question, and as the decision of this question depends upon the evidence in each particular case, it is submitted that the decision of the lower court in this particular case should not be set aside. It is submitted that this court cannot fairly say upon the record that 6 per cent. is more than the value of money for investment in the gas business in the city of New York at the present time.

Respectfully submitted by

NATHAN MATTHEWS.

OPINION

WILLCOX *et al.*, CONSTITUTING THE PUBLIC SERVICE COMMISSION OF NEW YORK, *v.* CONSOLIDATED GAS COMPANY.

CITY OF NEW YORK *v.* CONSOLIDATED GAS COMPANY OF NEW YORK.

JACKSON, ATTORNEY GENERAL OF THE STATE OF NEW YORK, *v.* CONSOLIDATED GAS COMPANY.

APPEALS FROM THE CIRCUIT COURT OF THE UNITED STATES FOR THE SOUTHERN DISTRICT OF NEW YORK.

It is not a question of discretion or comity for the Federal court to take jurisdiction of a case; it is the duty of that court to take jurisdiction when properly appealed to; and it should not be criticized for so doing even though the case be one of local interest. *Cohens* v. *Virginia*, 6 Wheat. 264, 404. The right of a party plaintiff to choose the

---

[1] On January 4, 1909, MR. JUSTICE PECKHAM made the following announcement:

First. At the time of the consolidation, the value of the franchises of the constituent companies was fixed by them at $7,781,000 and that amount formed part of the capital of the complainant for which it

Federal court cannot be properly denied. *Re Metropolitan Receivership*, 208 U. S. 90, 110.

Rates, when fixed by legislative authority, for public service corporations, should allow a fair return upon the reasonable value of the property at the time it is being used, but the legislative act will not be

---

issued stock. The consolidation was effected pursuant to the state statute and the State has never questioned the validity or fairness of the valuation. Since the consolidation the stock so issued has been dealt in up to the present time as valid stock of the consolidated company, capitalized pursuant to the statute at not more than the fair aggregate value of the property, franchises and rights of its constituent companies. The State should not now be heard to question the value of the franchises at the time of the consolidation. The method of arriving at the value of these kinds of franchises, and how they should generally be tested in the fixing of rates, are questions not now before the court and are left undecided. The case before the court is decided upon its own peculiar facts.

Second. The estimated increase in the value of these franchises as made by the trial court at the time of the commencement of this suit is only an estimate and is not based upon evidence sufficient to warrant the finding of any increase whatever over the amount agreed upon at the consolidation.

Third. The evidence leaves it in doubt whether the value of the property used by the company in its business is as great as found by the trial court after reducing the value of the franchises to the sum agreed upon at consolidation.

Fourth. But taking the value as found by the court, after reducing the value of the franchises the result gives a return of almost 5½ per cent. A reduction in the value of the real estate, plants, etc., of a small amount only would bring the return to, if not more than 6 per cent. A possible increased consumption of gas would probably increase the earning of the company without a corresponding increase of cost. Under all the circumstances the complainant has failed to make out its case with that degree of clearness necessary to warrant the interference of a court of equity before an actual and *bona fide* test has been made under the practical operation of supplying gas at the rates mentioned in the statutes.

Fifth. There is no rule as to any particular rate which any corporation subject to legislative control in the matter has a right to obtain without legislative interference. It depends upon circumstances and locality. In this particular case with reference to the risk attending the business and the locality where it is carried on, the complainant declared invalid by the courts unless the rates are so unreasonably low that their enforcement would amount to taking the property for public use without compensation. *San Diego Land and Town Co. Cases*, 174 U. S. 739; 189 U. S. 439.

Except in very clear cases, courts should not interfere with state rate

---

is entitled to a return, if it is possible, of 6 per cent upon the fair value of its property actually used in its business of supplying gas.

Sixth. There is no discrimination between the individual consumer and the city, by fixing the price of gas for the city at five cents per thousand cubic feet less than is permitted in the case of individual consumers, so far at least as the complainant is concerned. If the amount obtained from the total gas sold to the city and the individual is enough to secure the requisite return upon the property, it is all the complainant can require and the question of discrimination between city and individual is one in which the complainant can have no interest.

Seventh. The rate proposed must be with reference to the value of the property at the time when the rate takes effect. The company is entitled to the benefit of any increase in value at that time. This at least is the general rule, and if there be any exception to the rule, this case does not come within it.

Eighth. Any increased expense arising from the increased candle power of the light demanded by the statutes, was included substantially in the expenses of the year (1905) with reference to which the inquiry was made.

Ninth. The provision in the acts requiring a certain pressure is unconstitutional. The proof unquestionably shows great possible if not probable danger of explosion in the mains or other pipes, if the pressure demanded were applied to them as they now are. To eliminate such danger would require strengthening all the mains and other pipes, which would involve an expenditure of many millions of dollars upon which no return could be obtained at the rates prescribed by the acts. The provision can be separated, however, from the rest of the statute and the balance thereof made valid. The pressure must be sufficient to produce a light of the candle power mentioned in the acts.

Tenth. If the court below is right in its construction of the penalties, as to their amount, etc., such penalties are void, but are separable from the rest of the acts and the balance can be effectually carried out.

Eleventh. This is not a case for the valuation of good will. The complainant has in fact a substantial monopoly of the gas business in the city of New York and those who wish to use gas must take it from complainant. In this case, as there is no possibility of competition there should be no allowance for good will.

legislation before the legislation goes into effect. *Knoxville* v. *Water Co., ante*, p. 1.

Value of the property employed being an essential element in determining whether a rate is or is not confiscatory, and being also largely a matter of opinion, where the determination of the question depends upon such value, a court of equity should hesitate to interfere by injunction to suspend the rate before it goes into operation and a fair trial has been made.

Franchises of public service corporations are property and cannot be taken or used by others without compensation, and, where a State has by legislative enactment permitted such corporations to capitalize such franchises, their value at the time of such capitalization should be included in the value of the property as an element for fixing rates; but no increased value of such franchises should be allowed.

Public service corporations, such as gas companies, are subject to the legislative right to fix rates which permit not more than a fair return on the property used.

Whether a rate yields such a fair return as not to be confiscatory depends upon circumstances, locality and risk, and no particular rate can be established for all cases.

Under all the circumstances of this case this court concurs with the court below that six per cent is a fair return on the value of property employed in supplying gas in the city of New York, and a rate yielding that return is not confiscatory.

In estimating value of franchises for the purpose of fixing rates, it is immaterial that the corporation is taxed on a greater value than that allowed if it charges its taxes as operating expenses in determining net income.

Where a public service corporation has a monopoly, such as of supplying gas in a large city, "good will" cannot be considered as an element of value of the property employed.

For purpose of fixing rates the value of property employed should be determined as of the time when the inquiry is made, and, as a general rule, the corporation is entitled to the benefit of increased value since acquisition.

Twelfth. As it may possibly be that a practical experience of the effect of the acts by actual operation under them might prevent the complainant from obtaining a fair and just return upon its property used in its business of supplying gas, the complainant, in that event, ought to have the opportunity of again presenting its case to the court. Therefore the decree is reversed with directions to dismiss the bill without prejudice.

A provision in a state statute, requiring a public service corporation to perform its service in such a manner that its entire plant would have to be rebuilt at a cost on which no return could be obtained at the rate fixed, deprives the company of its ability to secure such return and is unconstitutional and void.

Ex parte Young, 209 U. S. 123, followed as to the unconstitutionality of provisions in a state statute for penalties for violations so enormous as to be overwhelming.

Provisions in a gas rate bill for rate, pressure and penalties for violation, may be, as held in this case, separable and the unconstitutionality of the provisions as to pressure and penalties will not affect the provisions as to rate.

Provision in a gas rate act establishing one rate for the municipality and another for individual consumers is not an unreasonable classification and does not render the act unconstitutional under the equal protection clause of the Fourteenth Amendment.

Where none of the different classes of consumers complain of different rates the corporation cannot complain of such differences provided the total receipts are sufficient to yield an adequate return.

Where, as in this case, in an action brought before the rate takes effect, complainant fails to sustain the burden of clearly showing that a rate act is confiscatory, the bill should be dismissed without prejudice to right of the complainant to bring another action after the rate goes into effect if it then proves to be confiscatory.

So held in regard to the New York Eighty-Cent Gas Law.

157 Fed. Rep. 849, reversed.

THE appellee, complainant below, filed its bill May 1, 1906, in the United States Circuit Court for the Southern District of New York against the city of New York, the Attorney General of the State, the District Attorney of New York County and the Gas Commission of the State, to enjoin the enforcement of certain acts of the legislature of the State, as well as of an order made by the Gas Commission, February 23, 1906, to take effect May 1, 1906, relative to rates for gas in New York City.

Since the commencement of the suit the Gas Commission has been abolished and the Public Service Commission has been created by the legislature in its stead. The official term of Attorney General Mayer has also expired, and Attorney General Jackson, his successor, has been substituted in his place.

The ground for the relief asked for in the bill was the alleged unconstitutionality of the acts and the order, because the rates fixed were so low as to be confiscatory. Upon filing the bill a preliminary injunction was granted (146 Fed. Rep. 150), and after issue was joined the case was referred to one of the standing masters of the court to take testimony, in conformity to the practice indicated in *Railroad* v. *Tompkins*, 176 U. S. 167, 179.

A hearing was had before the master, who reported in favor of the complainant. The case then came before the Circuit Court, and, after argument, a final decree was entered, restraining defendants from enforcing the provisions of the acts and the order relating to rates or penalties. 157 Fed. Rep. 849. These various defendants, except the District Attorney, have taken separate appeals directly to this court from the decree so entered. The acts which are declared void as unconstitutional are chapter 736 of the Laws of 1905, which limits the price of gas sold to the city of New York to a sum not to exceed 75 cents per thousand cubic feet. The act also requires that the gas sold shall have a specified illuminating power, and a certain pressure at all distances from the place of manufacture. Penalties are attached to a violation of the act. The other act is chapter 125 of the Laws of 1906, limiting the prices of gas in the boroughs of Manhattan and the Bronx, to other consumers than the city of New York, to 80 cents per thousand cubic feet, with like penalties as in the act of 1905, and with the same provisions as to illuminating power and the pressure in the service mains. The order which was declared invalid was one made by the Gas Commission created under and by virtue of chapter 737 of the Laws of 1905, the order providing that the price of gas in the city should be not more than 80 cents to consumers other than the city of New York. The order had the same provisions as to illuminating power and pressure as the acts above mentioned. The master and the court below found that the 80-cent rate was so low as to amount to confiscation, and hence the acts and the order were invalid as in violation of the Federal Constitution.

Mr. Edward B. Whitney, with whom *Mr. George S. Coleman* was on the brief, for appellants Willcox *et al:*

A simple allegation that a statute is unconstitutional is no exception to the rule that equity can only be resorted to when there is no adequate remedy at law. *Cruickshank* v. *Bidwell*, 176 U. S. 73; *Indiana Manufacturing Co.* v. *Koehne*, 188 U. S. 681, 684. The suit cannot be maintained on the ground that it prevents multiplicity of actions, since no representative consumers were made parties, as in *Ex parte Young*, 209 U. S. 123, 129. See *Richman* v. *Consolidated Gas Co.*, 114 N. Y. App. Div. 216, 224; *S. C.*, 186 N. Y. 409. A statute should never if possible be construed so as to be unconstitutional or absurd. *Oates* v. *National Bank*, 100 U. S. 244; *Grenada County* v. *Brogden*, 112 U. S. 268. Penalty laws are strictly construed. *France* v. *United States*, 164 U. S. 676, 682; *Bolles* v. *Outing Co.*, 175 U. S. 262, 265; *United States* v. *One Bay Horse*, 128 Fed. Rep. 207. The penalty clause in this act was not properly construed by the court below, but as properly construed is reasonable. *Cox* v. *Paul*, 175 N. Y. 328; *Griffin* v. *Interurban Street Railway Co.*, 179 N. Y. 438, 448–449; *S. C.*, 180 N. Y. 538; see cases cited in *In re Snow*, 120 U. S. 286; *United States* v. *Patty*, 2 Fed. Rep. 664; *Armour Packing Co.* v. *United States*, 209 U. S. 56, 77; *United States* v. *Eagan*, 30 Fed. Rep. 498; *Taft* v. *Stephens Lithographic Co.*, 38 Fed. Rep. 28; *Creeps* v. *Durden*, Cowp. 640; *Central R. R. Co.* v. *Green*, 86 Pa. St. 427. Assuming equity to have had jurisdiction, it should have been declined and the controversy remitted to the state courts.

The 75-cent rate as to the city is not an unconstitutional discrimination. On the contrary, since the 75-cent statute was passed in 1905, and under it the complainant could still earn nearly ten per cent according to the Circuit Court figures, it was valid when enacted, and therefore could not be made invalid by the passage of a subsequent law, even if the latter were unconstitutional.

Under the rule laid down in *Sweet* v. *Rechel*, 159 U. S. 380, 392 (derived from *Wellington, Petitioners,* 16 Pick. 87, 96–97, and *Talbot* v. *Hudson,* 16 Gray, 417, 422), and the test laid down in *San Diego Land Co.* v. *Jasper,* 189 U. S. 439, 441–442, as between two unimpeached and qualified expert witnesses, the valuations most favorable to defendant must be adopted; a statute cannot be declared unconstitutional upon testimony of experts or employés (see *Chicago & Grand Trunk Railway Co.* v. *Wellman,* 143 U. S. 339), unless the State admits its correctness; complainant is entitled to no higher valuations than those which it has itself fixed under oath; and items incapable of exact valuation must be put down at the minimum amount that a fair minded state court could fix. At least as to all items of capitalization over and above the actual cost of the property, the test must be this: Is it logical or equitable that the consumer should pay more cents per thousand cubic feet of the gas he burns because of the inclusion of this item?

The period to which attention must be directed is the month of May, 1906, when the suit was begun. If conditions thereafter change, the remedy is under *Smyth* v. *Ames,* 169 U. S. 466, 549–550.

The basis of valuation of the land occupied by complainant's plants should not exceed its cost to the company. Of two gas companies, long established in the same community, neither should be permitted to charge a higher rate than the other to its consumers for the sole reason that, on account of movements of population uninfluenced by either company, the site of its plant would be the more valuable if vacated and sold. The fortunate company is entitled to obtain full value of the land when sold, but meanwhile the unrealized profit does not represent profit used in the manufacture and distribution of gas; it represents wealth which the manufacture and distribution of gas keeps out of use. But if the basis of valuation is to exceed the cost of the land it should still not exceed the estimated cost of replacing it with other land capable of accomplishing the same result.

The manufacturing plants should be valued not at what it would cost to reproduce them as they stand, but at what it would cost to produce a modern construction which could do the same amount of work. The complainant is estopped from disputing in such a case as this the valuation which it has itself given to the state tax officers and investigating committee.

The complainant is not entitled to any allowance of increased value over original cost of the pipes in the streets, due to the fact that the streets have been repaved with money raised by assessments upon the consumers, complainant being excused under the state law from paying assessments.

A franchise with, is to be distinguished from a franchise without, the right to charge a minimum toll or earn a minimum dividend. *Monongahela Navigation Co.* v. *United States*, 148 U. S. 312, belongs to the latter class (see original record in that case, pp. 33, 39, 50, 53, and brief for appellee therein). A revocable franchise is not entitled to be valued at a substantial sum. *Kingsland* v. *The Mayor*, 110 N. Y. 569, 583. The franchises claimed by complainant are either unconstitutional, or not complainant's property, or revocable immediately or upon short notice. Moreover, a franchise to build and operate, without any special contract guaranteeing a minimum rate, has no value cognizable in rate-making or condemnation proceedings except that it gives the company the valuable right to have its tangible assets valued as portions of a profitable going concern, instead of merely as a job lot of secondhand material. See *People ex rel. Metropolitan Street Railway Co.* v. *Tax Commissioners*, 174 N. Y. 417; *Brunswick Water District* v. *Maine Water Co.*, 99 Maine, 371, 375–381. Such a franchise must be construed as having been granted subject to the fixing of a reasonable maximum rate. There is an implied understanding that the tolls shall be high enough to give the company a fair return. A fair return on what? What would counsel advise a proposed purchaser about it, the day after the company opened for business? According to our contention it would be calculated upon the capital invested. Moreover, the State can at any time authorize or direct the city to build its own lighting plant. If this be done, the company must drop its claim for a profit on its alleged franchise or lose all its customers. *Skaneateles Water Case*, 161 N. Y. 154; *S. C.*, 184 U. S. 354, and the *Newburyport Cases*, 168 Massachusetts, 541, 555; 103 Fed. Rep. 584; 193 U. S. 561.

The basis of the maximum rate regulation should not be a figure exceeding the capital actually invested. At the time of the granting of the franchise the implied understanding is that a reasonable return will be allowed upon the capital invested, in view of the special risk of the enterprise. If assured that the public will protect him to the extent of allowing him to make, if successful, a profit upon that investment proportionate to that risk, the investor will take it.

As to the rate of return, it has been already decided that six per cent, including an allowance for depreciation, is sufficient. *San Diego Co.* v. *Jasper*, 189 U. S. 439, 446. But it is submitted that property is not taken under the Fourteenth Amendment if the owner is allowed, over and above a proper contingent fund, a sum sufficient to cover the elements known in political economy as interest on capital and wages of superintendence; the element of insurance against the special risks of the business not being protected by the Fourteenth Amendment, but one as to which the responsibility is upon the State. Mill's Political Economy, Book I, Ch. 15, § 1; J. L. Laughlin's Elements of Political Economy, ed. 1902, pp. 202, 206; Marshall's Principles of Economy, Book VI, Ch. 6, §§ 4, 5. If complainant is entitled to six per cent upon any part of its investment, it is not so entitled as to the whole of the investment; for companies so situated could borrow in ordinary times at considerably lower rate to the extent of half the tangible property, nor is there evidence justifying the return at any particular rate upon the franchise item.

The bill should be dismissed because the experience of the other companies doing business in the same territory, as well as of this complainant, should have been shown. If one of two companies doing business in the same territory can make a reasonable profit at the statutory rate, then that rate is constitutional as to both companies, since to apply it to that company alone would violate its rights under the Fourteenth Amendment. See *Gill Case*, 156 U. S. 657; *Cotting Case*, 183 U. S. 114. Applying the same rate to the company less well equipped would not violate its rights, although it might force reconstruction, temporarily cutting off any return. *Moeschen* v. *Tenement House Department*, 89 N. Y. App. Div. 526, 538; 179 N. Y. 325, 330; 203 U. S. 583.

Assuming that an injunction were proper in this case, it should have been conditioned upon complainant's reducing its charge for gas to whatever sum would be deemed constitutional. 1 Pomeroy's Eq. Jurispr., §§ 385–386, 389, 393; *De Walsh* v. *Braman*, 160 Illinois, 415, 420; see also *Veazie* v. *Williams*, 8 How. 134, 161; *Willard* v. *Tayloe*, 8 Wall. 557, 567; *People's Bank* v. *Marye*, 191 U. S. 272, 281, 285, and cases cited; *S. C.*, 3 Dill. 19, 34; *Farmers' Loan & Trust Co.* v. *Denver Co.*, 126 Fed. Rep. 46, 51; *Thomas* v. *Evans*, 105 N. Y. 601, 615; *Fanning* v. *Dunham*, 5 Johns. Ch. 122, 142, and cases cited; *Stanly* v. *Gadsby*, 10 Pet. 521; *Tiffany* v. *Boatman's Inst.*, 18 Wall. 375, 385; *Knoth* v. *Manhattan Railway Co.*, 109 App. Div. 802, 807, affirmed 187 N. Y. 243.

Mr. Alton B. Parker, with whom *Mr. Francis K. Pendleton* and *Mr. William P. Burr* were on the brief, for the city of New York, appellant in No. 397:

The court below erred in assigning to the franchises acquired by the appellee under the consolidation agreement a money value as part of the investment on which it is entitled to a return. It was solely on the finding by the court of a value of $12,000,000 for these franchises that the court decreed the enactments to be unconstitutional in respect of the rates fixed. Whatever monetary value might, for any purpose, be assigned to these franchises, it disappears when the rate of charge for service is so reduced as to yield no more than a fair and reasonable return on the investment in the means employed in rendering the service; the court having found $47,831,435 as the value of the tangible assets employed by the appellee, and six per cent to be a reasonable return, and that the return the appellee would probably realize at the reduced rate would be $3,024,592.45, which is more than six per cent on the valuation so found—the court erred in adding to that valuation $12,000,000 for franchises, thus increasing the investment to $59,831,435, on which the probable return would be less than six per cent, though the return would even then be reasonable.

The court below erred in assigning to the tangible assets any value in excess of their original cost to the constituent corporations of the appellee and the cost of any additions thereto since 1884, the time of consolidation. The entire cost of the real estate employed in its business by the appellee was only $4,118,267.38 as against $11,985,435 allowed by the decree, being a difference of $7,867,167.62, which, being deducted from the total valuation of $47,831,435, would reduce that total to $39,964,268.38, on which the return of $3,024,592.45 would be more than seven per cent. Further, if the valuation for franchises be excluded, whether we take original cost to constituent corporations, or appraised valuation by the constituent corporations in 1884 for the purposes of consolidation and additions thereto since then, or even present values as found by the master and approved by the court, the result is the same; the net return of $3,024,592.45 exceeds six per centum; when the item franchises, valued by the corporations in 1884 at $7,781,000, and not separately valued by the master, but increased by the court, through a process of reasoning, to $12,000,000 is added that even then the return is over five per centum. And further, $5,555,761.63 has been unwarrantably added for reproductive cost of mains and services and deducting this sum and the excessive allowance for real estate from the total found by the court, the return to the appellee on its investment would be more than eight per cent.

The return of six per cent adopted by the court, is more than a fair return to the appellee, that is more than is usually obtained or expected from equally safe investments.

The finding of the court as to the impossibility of the appellee fulfilling the requirement as to pressure in its mains is predicated of the erroneous valuations of the property of the appellee, and these being corrected the appellee would be able to make the requisite changes and still have a fair return; and the requirement is separable from the other provisions.

The legislation complained of is not unjustly discriminatory; the discrimination is just and reasonable, the city standing in the relation of a wholesale consumer or buyer; the cost of supplying the city is greatly less than the cost of supplying other consumers; and the difference of five cents per thousand feet in favor of the city when spread over the entire sales of the appellee results in a difference of only fifteen one-hundredths of a cent per thousand feet in favor of the city.

The appellee has an adequate defense at law against proceedings to enforce performance of any of the provisions of the statute, if they are not enforcible, and, by injunction, against the separable provisions for penalties.

Mr. William S. Jackson, Attorney General of the State of New York, for appellant in No. 398:

The evidence fails to show that it was impossible for the legislature fair-mindedly to come to the results reached.

The legislative acts were based upon evidence presented by complainant.

The legislative acts were invalidated by improper methods of valuation, involving property not entitled to a return, gross over-valuations and duplications. For purposes of rate regulation, neither franchise nor good-will can be valued separately from tangible property. The valuation of franchises and good-will would nullify the State's power to reduce rates once established. But that power has been upheld by this court in *Stanislaus County* v. *San Joaquin C. & I. Co.*, 192 U. S. 213, 214.

The owner is entitled to a return only upon the fair value of the property necessary for the particular use. *Covington & Lexington Co.* v. *Sandford*, 164 U. S. 578. For there may "have been extravagant and needless expenditure of money" in construction; it may have been invested in a plant "unwisely built." *Reagan* v. *Farmers' Loan & Trust Co.*, 154 U. S. 362; "it may have been invested in property that cost more than it should have cost." *San Diego L. & T. Co.* v. *National City*, 174 U. S. 739. "Great mistakes of construction, even though honest, may have been made, which unnecessarily enhance the cost; more property may have been acquired than necessary and needful for the purpose intended." *Stanislaus County* v. *San Joaquin C. & I. Co.*, 192 U. S. 201; and "reckless and unnecessary expenditures, not legitimately incurred in the acquisition, construction or preservation of so much of the plant as is necessary for the purpose, may have been made." *San Diego City Co.* v. *City of San Diego*, 62 Am. St. Rep. 273. The question of reasonableness of a rate involves the element of reasonableness both as regards the company and as regards the public. *Chicago &c. R. R.* v. *Minnesota*, 134 U. S. 450; *Turnpike Co.* v. *Sandford*, 164 U. S. 578.

The rate fixed must be just to the public as well as to the public service corporation. *San Diego Land Co.* v. *National City*, 174 U. S. 757; *San Diego Land & Town Co.* v. *Jasper*, 189 U. S. 442; *Turnpike Co.* v. *Sandford*, 164 U. S. 578; *Smyth* v. *Ames*, 169 U. S. 546.

The State has the right to secure to the public the benefits of the advancement in the particular science affected by the law, and its power so to do is not to be restricted by the employment of obsolete apparatus or the use of methods which that particular science has long since discarded. *Gill Case*, 156 U. S. 657.

The 80-cent rate will be held to yield complainant a fair return unless it is plainly and palpably confiscatory. *Chicago &c.* v. *Wellman,* 143 U. S. 339, 444; *Reagan* v. *Farmers' Loan & Trust Co.,* 154 U. S. 362, 391; *Smyth* v. *Ames,* 169 U. S. 466, 529; *Henderson Bridge Co.* v. *Henderson City,* 173 U. S. 592, 614, 615; *San Diego Land Co.* v. *National City,* 174 U. S. 739, 754; *San Diego Land Co.* v. *Jasper,* 189 U. S. 439; *Ball* v. *Rutland R. R. Co.,* 93 Fed. Rep. 19; *Palatka Waterworks* v. *Palatka,* 127 Fed. Rep. 161.

The maximum rate fixed by chapter 125 of the Laws of 1906, will permit complainant to earn a fair return upon the property employed by it in its gas business.

A statute which permits a public service corporation to earn a return of five and five-tenths (5.5) per cent per annum upon investment in constantly appreciating realty, in plant and property in the streets protected against depreciation, and upon intangible property, which is constantly appreciating in value, does not constitute confiscation of that property.

The provisions as to candle power, pressure and penalties do not invalidate the acts and they are separable. *Reagan* v. *Farmers' Loan & Trust Co.,* 154 U. S. 362, 394–396; *Consolidated Gas Co.* v. *Mayer,* 146 Fed. Rep. 155.

The eleven-cent allowance by the court was excessive.

We submit that all this allowance in excess of 7.70 cents for current repairs and replacements is excessive. The 7.70-cent charge keeps the plant at all times presently efficient. The average for twenty years has been 10.89 cents, and the development of the capacity under that average shows that it was much more than necessary for the purpose now pretended. *Cedar Rapids Water Co.* v. *Cedar Rapids,* 199 U. S. 600.

Mr. James M. Beck, Mr. John A. Garver and *Mr. Charles F. Matthewson* for appellee:

Mr. Beck: In the statutes here in question the provisions as to pressure are unconstitutional, and invalidate both statutes. The undisputed and indisputable conclusions from the testimony upon this point are:

Assuming that compliance with the pressure provisions was at all practicable, it would involve the expenditure of at least $4,000,000, a substantial increase in operating charges and a reconstruction of the company's distributing system throughout the city; such compliance was physically impossible before the act became operative and the penalties for non-compliance accrued; nor could such increased fixed charges and operating expenses be incurred under the eighty-cent gas rate, and leave a fair return.

The penalties for failure to comply would aggregate at $5,000 per day, $1,800,000 per year under complainant's distributing system as now existing and in operation.

The subjects of price, quality and pressure are so interwoven in these statutes that the requirements as to pressure cannot be severed from the other provisions so that the court can reasonably believe that the legislature would have enacted the provisions as to price and candle power with the provision as to pressure eliminated, and this being so, the whole scheme of legislation is invalidated. The legislative history of the statutes plainly shows the interdependence of the provisions.

This court is under no obligation to determine for the legislature which of two impossible alternatives is to be eliminated. *Non constat* that the legislature may not prefer to retain the old maximum price of $1 to enable the complainant to reconstruct its plant; *non constat* that it may not prefer to repeal the provisions as to pressure in order that the price of gas may be reduced.

The cases cited by counsel for appellants upon the question of severability do not sustain their contentions. *Pollock* v. *Loan Co.*, 158 U. S. 601; *Employer's Liability Cases*, 207 U. S. 463, 501; *Field* v. *Clark*, 143 U. S. 649; *McPherson* v. *Blacker*, 146 U. S. 1; *Baldwin* v. *Franks*, 120 U. S. 685; *Huntington* v. *Worthing*, 120 U. S. 97; *Allen* v. *Louisiana*, 103 U. S. 80, discussed and distinguished.

The severability of different portions of a statute is a question of construction, and in this case a New York statute should be construed by New York decisions under which the pressure provision is not severable from the body of the statute. See *People* v. *Porter*, 90 N. Y. 68; *Trustees Saratoga Springs* v. *Gas Co.*, 191 N. Y. 123.

The provisions of said acts as to penalties are unconstitutional on their face and invalidate both statutes. Such penalties operate as a denial of the equal protection of the laws. *Cotting* v. *Stockyards Co.*, 183 U. S. 79; *Ex parte Young*, 209 U. S. 123; *Chicago Ry. Co.* v. *Minnesota*, 134 U. S. 418.

Both statutes are unduly discriminatory, and therefore unconstitutional upon their face.

This corporation has, as every one has, the liberty of contract guaranteed by the Fourteenth Amendment. *Lochner* v. *New York*, 198 U. S. 53; *Allgeyer* v. *Louisiana*, 165 U. S. 589. The State, therefore, has no general and unlimited right to interfere between the producer and the consumer as to the price upon which they would otherwise mutually agree, and while, as to public utility corporations the supervisory power of the State, subject to the guarantees of the Constitution, has been recognized since *Munn* v. *Illinois*, yet the State, when it seeks to interfere with the rights of property and the liberty of the citizen to contract for the sale of the products of his labor, only has power to prevent extortion by maximum charges of general and uniform application.

Under the police power to regulate rates, the State is without power to direct a public utility corporation to sell to one customer at a less price than to another. Its power to step between the public service corporation and its customers is exhausted when it fixes a general and uniform maximum price for the public service. *Lake Shore R. R. Co.* v. *Smith*, 173 U. S. 684. See also *Wilson* v. *United Traction Co.*, 72 App. Div. 233; *Beardsley* v. *Railroad Co.*, 162 N. Y. 230.

The rate fixing power is one of prohibition. In strictness, it does not fix rates, but simply provides that any sum beyond a given maximum is unreasonable. In so doing, it in effect declares that the maximum is a reasonable price. *Brooklyn*

Union Gas Co. v. *New York*, 188 N. Y. 334; *Lake Shore Ry. Co.* v. *Smith*, 173 U. S. 684, 695.

When, therefore, the State provides that as to all other consumers, 80 cents per thousand feet is a reasonable charge, and provides that, as to one consumer, no greater charge than 75 cents shall be made, it in effect declares that to the favored consumer gas must be sold at less than a reasonable rate. This the State cannot do.

The finding of the Circuit Court that the rates prescribed would yield the complainant less than a just and reasonable rate of return is a finding of fact and not a conclusion of law, and this court should therefore give to such finding the controlling weight of a special verdict of a jury and not reverse such finding except for clear and indubitable error. *Turnpike Co.* v. *Kentucky*, 164 U. S. 578; *C., M. & St. P. R. R. Co.* v. *Tompkins*, 176 U. S. 167; *Davis* v. *Schwartz*, 155 U. S. 631, 636; 1 Foster's Fed. Prac., § 315, p. 690; *Green* v. *Bishop*, 1 Cliff. 186, 194; *Mason* v. *Crosby*, 3 Woodb. & Minn. 258, 269; *Donnell* v. *Columbia Ins. Co.*, 2 Sumn. 366, 371; *Welling* v. *La Bau*, 34 Fed. Rep. 40; *Moline Plow Co.* v. *Carson*, 72 Fed. Rep. 387, 388; *Fidelity &c. Co.* v. *St. Matthew's Savings Bank*, 104 Fed. Rep. 858, 860; *Paddock* v. *Commercial Ins. Co.*, 104 Massachusetts, 521, 531; *Richards* v. *Todd*, 127 Massachusetts, 167, 172; *Penna. R. R. Co.* v. *Philadelphia County*, 220 Pa. St. 100.

The Fourteenth Amendment invalidates a rate if it yield less than just remuneration, even though it yield some return. *Cotting* v. *Stockyards Co.*, 183 U. S. 91; *Railroad Commission Cases*, 116 U. S. 307; *Monongahela Navigation Co.* v. *United States*, 148 U. S. 312, 326; *Munn* v. *Illinois* (dissenting opinion of Field, J.), 94 U. S. 141; *Chicago R. R. Co.* v. *Minnesota*, 134 U. S. 418, 458; *Reagan* v. *Farmers' Loan & Trust Co.*, 154 U. S. 362, 397; *Smyth* v. *Ames*, 169 U. S. 466; *San Diego Land Co.* v. *National City*, 174 U. S. 739; *Minneapolis R. R. Co.* v. *Minnesota*, 186 U. S. 257; *Atlantic Coast Line R. R. Co.* v. *N. C. Corp. Com.*, 206 U. S. 1.

A composite statement of this court, therefore, is that legislative rates, to be constitutional, must yield a "compensation" that is "full," "fair," "just," "reasonable" and "adequate" and one that is not less than the "market value" of such use.

The rule that the fair return must not be less than the legal rate of interest is justified on reason and authority. *Brunswick Water District* v. *Maine Water Co.*, Beale and Wyman on R. R. Rate Regulation, § 401; *Brymer* v. *Water Co.*, 179 Pa. St. 251; *Pennsylvania R. R. Co.* v. *Philadelphia County*, 220 Pa. St. 100, 115; *Chicago Union Traction Co.* v. *State*, 114 Fed. Rep. 557, 561; *Louisville Ry. Co.* v. *Brown*, 123 Fed. Rep. 946; *Central R. R. of Ga.* v. *Alabama*, 161 Fed. Rep. 925; *Milwaukee Ry. & Light Co.* v. *Milwaukee*, 87 Fed. Rep. 577; *Southern Pacific R. R. Co.* v. *Commonwealth*, 78 Fed. Rep. 236; *Spring Valley Water Works* v. *San Francisco*, 124 Fed. Rep. 598; *Bridge Co.* v. *Canada Southern Ry.*, 7 Ont. App. 226.

The basis of calculation should be the present value of the property and not its original cost. *San Diego Land Co.* v. *National City*, 174 U. S. 739, 757; *Cotting* v. *Stockyards Co.*, 183 U. S. 79, 91; *Smyth* v. *Ames*, 169 U. S. 547; *San Diego Land Co.* v. *Jasper*, 189 U. S. 439, 442; *Stanislaus County* v. *Irrigation Co.*, 192 U. S. 201, 215; *Cotting* v. *Kansas City Stockyards Co.*, 82 Fed. Rep. 850, 854.

Mr. Garver: Special franchises must be included among the assets upon which the company is entitled to a return. The special franchises which are involved in the case at bar are the identical franchises which were under consideration by this court in the Special Franchise Tax Cases. *Metropolitan Street Ry. Co.* v. *New York*, 199 U. S. 1, affirming 174 N. Y. 417; *Consolidated Gas Co.* v. *New York*, 199 U. S. 53.

The law of New York controls as to nature of special franchises. *Ohio Oil Co.* v. *Indiana*, 177 U. S. 190, 205, 207; *Muhlker* v. *Harlem R. R. Co.*, 197 U. S. 544; *Vicksburg* v. *Vicksburg Water Works Co.*, 206 U. S. 496, 509.

In New York, special franchises are property in the fullest sense. *Sixth Ave. R. Co.* v. *Kerr*, 72 N. Y. 330; *People* v. *O'Brien*, 111 N. Y. 1, 40; *Suburban Rapid Transit Co.* v. *New York,* 128 N. Y. 510, 520; *People ex rel. Woodhaven Gas Co.* v. *Deehan,* 153 N. Y. 528, 532; *Parker* v. *Elmira, C. & N. R. Co.,* 165 N. Y. 274; *People* v. *Tax Commissioners,* 174 N. Y. 417, 437; *Matter of White Plains Commissioners,* 176 N. Y. 239; *Matter of Long Acre El. L. & P. Co.,* 188 N. Y. 361; *Hatfield* v. *Straus,* 189 N. Y. 208, 219; *Coney Island &c. R. Co.* v. *Kennedy,* 15 App. Div. 588, 592; *Rochester &c. Turnpike Road Co.* v. *Joel,* 41 App. Div. 43, 45; *Wakefield* v. *Village of Theresa,* 125 App. Div. 38.

A corporation cannot be deprived of its special franchises, except under the power of eminent domain and upon payment of their full value. *Sixth Ave. R. Co.* v. *Kerr,* 72 N. Y. 330; *Matter of White Plains Commissioners,* 176 N. Y. 239; *Coney Island &c. R. Co.* v. *Kennedy,* 15 App. Div. 588, 592; *Spring Valley Water Works* v. *San Francisco,* 124 Fed. Rep. 574; *Monongahela Nav. Co.* v. *United States,* 148 U. S. 312.

While the point has not been directly passed upon by this court, yet, wherever it has been referred to in the general discussion of the subject of rate regulation, it has been stated or assumed that, in fixing a rate, the value of the special franchises must be included in valuing the property of a public service corporation. *Smyth* v. *Ames,* 169 U. S. 466; *Reagan* v. *Farmers' L. & T. Co.,* 154 U. S. 362; *Chicago &c. Ry. Co.* v. *Tompkins,* 176 U. S. 167; *Detroit* v. *Detroit Citizens' St. Ry. Co.,* 184 U. S. 368.

In addition to the fact that these franchises are regarded as "property in the highest sense," in New York there are some special considerations which would make it peculiarly flagrant for the legislature of that State to disregard them, in establishing a maximum rate for a public service corporation, and particularly for the appellee. *People* v. *O'Brien,* 111 N. Y. 1, 40.

In New York, special franchises are assessed for the purposes of taxation, under a special statute passed for that purpose. Laws 1899, Ch. 412; *People* v. *Tax Commissioners,* 174 N. Y.

417, 437. The right to capitalize special franchises has been recognized by the law of New York. Laws 1907, Ch. 429, §§ 55, 69. The capitalization of special franchises was expressly sanctioned in 1884. Laws 1884, Ch. 367.

An unconditional grant by a State constitutes a contract, which is entitled to protection under the Constitution just as fully as a grant made by an individual. *Fletcher* v. *Peck*, 6 Cranch, 87; *Sinking Fund Cases*, 99 U. S. 700, 719; *New Orleans Water Works Co.* v. *Rivers*, 115 U. S. 674, 681; *People* v. *O'Brien*, 111 N. Y. 1.

Good will should have been included among the assets upon the value of which the company was entitled to a return. Good will is a valuable property right, growing out of the successful establishment of a business, over and above the actual capital invested and employed in the business. *Franchises Tax Cases*, 174 N. Y. 417, 424; *Gue* v. *Tidewater Canal Co.*, 24 How. 261; *State R. R. Tax Cases*, 92 U. S. 575, 606; *Slater* v. *Slater*, 175 N. Y. 143; *Matter of White Plains Commissioners*, 176 N. Y. 239; *People* v. *Roberts*, 154 N. Y. 101; *Cleveland &c. Ry. Co.* v. *Backus*, 154 U. S. 439; *Express Company Cases*, 166 U. S. 171, 185; *Western Union Tel. Co.* v. *Gottlieb*, 190 U. S. 412; *Fargo* v. *Hart*, 193 U. S. 490; *San Francisco Bank* v. *Dodge*, 197 U. S. 70.

Mr. Matthewson dealt exclusively with the facts in the cases.

By leave of court, *Mr. W. Bourke Cockran*, representing certain interested parties, and *Mr. Nathan Matthews*, representing the complainant in the case of *Haverhill Gas Light Company* v. *Barker*, pending in U. S. Circuit Court for the District of Massachusetts, filed briefs herein, as *amici curiæ*.

MR. JUSTICE PECKHAM, after making the foregoing statement, delivered the opinion of the court.

At the outset it seems to us proper to notice the views regarding the action of the court below, which have been stated by counsel for the appellants, the Public Service Commission, in their brief in this court. They assume to criticise that court for taking jurisdiction of this case, as precipitate, as if it were a question of discretion or comity, whether or not that court should have heard the case. On the contrary, there was no discretion or comity about it. When a Federal court is properly appealed to in a case over which it has by law jurisdiction, it is its duty to take such jurisdiction (*Cohens* v. *Virginia*, 6 Wheat. 264, 404), and in taking it that court cannot be truthfully spoken of as precipitate in its conduct. That the case may be one of local interest only is entirely immaterial, so long as the parties are citizens of different States or a question is involved which by law brings the case within the jurisdiction of a Federal court. The right of a party plaintiff to choose a Federal court where there is a choice cannot be properly denied. *In re Metropolitan Railway Receivership*, 208 U. S. 90–110; *Prentis* v. *Atlantic Coast Line et al.*, 211 U. S. 210. In the latter case it was said that a plaintiff could not be forbidden to try the facts upon which his right to relief is based before a court of his own choice, if otherwise competent. It is true an application for an injunction was denied in that case because the plaintiff should in our opinion have taken the appeal allowed him by the law of Virginia while the rate of fare in litigation was still at the legislative stage, so as to make it absolutely certain that the officials of the State would try to establish and enforce an unconstitutional rule.

The case before us is not like that. It involves the constitutionality, with reference to the Federal Constitution, of two acts of the legislature of New York, and it is one over which the Circuit Court undoubtedly had jurisdiction under the act of Congress, and its action in taking and hearing the case cannot be the subject of proper criticism.

An examination of the record herein, with reference to the questions involved in the merits, shows that the act under which the Gas Commission was appointed was subsequently to the commencement and trial of this suit, declared, on grounds not here material, to be unconstitutional by the Court of Appeals of New York. 191 N. Y. 123, February 18, 1908. The order made by the commission must therefore be regarded as invalid. It is not important in this case, because the act of the legislature of 1906, makes the same provision as to the price of gas to consumers other than the city that the order does. We have as remaining to be considered the above-mentioned two acts of the legislature.

The question arising is as to the validity of the acts limiting the rates for gas to the prices therein stated. The rule by which to determine the question is pretty well established in this court. The rates must be plainly unreasonable to the extent that their enforcement would be equivalent to the taking of property for public use without such compensation as under the circumstances is just both to the owner and the public. There must be a fair return upon the reasonable value of the property at the time it is being used for the public. *San Diego Land & Town Company* v. *National City*, 174 U. S. 739, 757; *Same* v. *Jasper*, 189 U. S. 439, 442.

Many of the cases are cited in *Knoxville* v. *Water Co.*, just decided, *ante*, p. 1. The case must be a clear one before the courts ought to be asked to interfere with state legislation upon the subject of rates, especially before there has been any actual experience of the practical result of such rates. In this case the rates have not been enforced as yet, because the bill herein was filed and an injunction obtained restraining their enforcement before they came into actual operation.

In order to determine the rate of return upon the reasonable value of the property at the time it is being used for the public, it, of course, becomes necessary to ascertain what that value is. A very great amount of evidence was taken before the master upon that subject, which is included in five large volumes of the record. Valuations by expert witnesses were given as to the value of the real estate owned by the complainant, and as to the value of the mains, service pipes, plants, meters and miscellaneous personal property.

The value of real estate and plant is to a considerable extent matter of opinion, and the same may be said of personal estate when not based upon the actual cost of material and construction. Deterioration of the value of the plant, mains, and pipes is also to some extent based upon opinion. All these matters make questions of value somewhat uncertain; while added to this is an alleged prospective loss of income from a reduced rate, a matter also of much uncertainty, depending upon the extent of the reduction and the probable increased consumption, and we have a problem as to the character of a rate which is difficult to answer without a practical test from actual operation of the rate. Of course, there may be cases where the rate is so low, upon any reasonable basis of valuation, that there can be no just doubt as to its confiscatory nature, and in that event there should be no hesitation in so deciding and in enjoining its enforcement without waiting for the damage which must inevitably accompany the operation of the business under the objectionable rate. But where the rate complained of shows in any event a very narrow line of division between possible confiscation and proper regulation, as based upon the value of the property found by the court below, and the division depends upon opinions as to value, which differ considerably among the witnesses, and also upon the results in the future of operating under the rate objected to, so that the material fact of value is left in much doubt, a court of equity ought not to interfere by injunction before a fair trial has been made of continuing the business under that rate, and thus eliminating, as far as is possible, the doubt arising from opinions as opposed to facts.

A short history of the complainant, as to its incorporation and its capital, and the method by which the value of its franchises was arrived at, will render the further examination of the case more intelligible.

Prior to 1884 there were seven gaslight companies in New York City, each operated under separate charters, granted at different times between the years 1823 and 1865 or 1871. They each had the right to use the streets of certain portions of the city for the purpose of laying their mains and service pipes in order to furnish gas to the city and the citizens. Not one of the companies had ever been called upon to pay a penny for such right, but the grant to each was in that aspect a gratuity. It was not, at the time of granting franchises such as these, the custom to pay for them.

In 1884, by chapter 367 of the laws of that year, authority to consolidate manufacturing corporations was granted upon conditions mentioned in the act. The directors of the corporations proposing to consolidate were to make an agreement for consolidation, embracing, among other things, the amount of capital and the number of shares of stock into which it should be divided, the capital not to be in amount more "than the fair aggregate value of the property, franchises and rights of the several companies to be consolidated." The agreement was not to be valid until submitted to the stockholders of each of the companies and approved by two-thirds of each. The constituent companies, which were afterwards consolidated under their agreement, and pursuant to the act mentioned, were six in number, the seventh, the Mutual Company, withdrawing. The companies agreed upon the valuation of their property, which was to be paid for in the stock of the consolidated company, and the original stock held by the stockholders of each company was surrendered to the consolidated company. The value of the franchises of all the companies was set at the figure of $7,781,000. The court below said that the master reported there was little direct evidence before him as to the value of the franchises, to which the court added that if the master, by direct evidence, meant testimony of the same kind regarding their value as had been offered regarding every item of tangible property, there was none at all.

The court further stated "that it does not appear in the evidence how the valuation of the franchises was measured, or why the figures selected were chosen, but that it was true that when complainant was organized, in 1884, under the consolidation statute, which in terms permitted it to acquire the property and franchises of the other companies, it issued stock of the par value of $7,781,000, representing the franchises it then acquired and nothing else, and that the stock was held by purchasers, who, I am compelled to think, had a right to rely upon legal protection for legally issued stock." It is not, of course, contended there was special stock issued for this particular item, but it was included in the total sum for which the consolidated company issued its stock and upon its receipt the stockholders in the various companies surrendered their stock in those companies. The result was that the amount of the stock issued by the consolidated company was increased by $7,781,000, representing a value of franchises which was agreed upon by the stockholders in the companies, and which had never cost any of them a single penny.

It cannot be disputed that franchises of this nature are property and cannot be taken or used by others without compensation. *Monongahela Co.* v. *United States*, 148 U. S. 312; *People* v. *O'Brien*, 111 N. Y. 1, and cases cited. The important question is always one of value. Taking their value in this case as arrived at by agreement of their owners, at the time of the consolidation, that value has been increased by the finding of the court below to the sum of $12,000,000 at the time of the commencement of this suit. The trial court said: "If, however, complainant's franchises were worth $7,781,000 in 1884, and its tangible property, at the same time, was appraised (as appears in evidence), at $30,000,000 (in round figures), then since complainant's business (in sales volume) has, in twenty-three years, almost quadrupled, and its tangible assets grown to $47,000,000, it appears to me that a fair method of fixing value of the franchises in 1905 is to assume the same growth in value for the franchises as is demonstrated by the evidence in the case of tangible property. If, therefore, the franchise valuation of 1884 was proportioned to personalty and realty of $30,000,000, a franchise valuation proportioned to $47,000,000 in 1905 would be over $12,000,000. This, I think, a logical result from the assumption I am compelled to start with, *i. e.*, that franchises have a separate and independent value. But there is, however, no method of valuing franchises, except by a consideration of earnings; earnings must be proportioned to assets; and both kinds of assets, tangible and intangible, must stand upon the same plane of valuation; having, therefore, a measure of growth of tangible assets from 1884 to 1905, the franchise assets must be assumed to have grown in the same proportion. I find that the value of complainant's franchises at the date of inquiry was not less than $12,000,000, making a total valuation of $59,000,000, upon which the probable return is $3,030,000, or very considerably less than 6 per cent." The judge stated his own views as opposed to including these franchises in the property upon the value of which a return is to be calculated in fixing the amount of rates, but held that he was bound by decided cases to hold against his personal views.

We are not prepared to hold with the court below as to the increased value which it attributes to the franchises. It is not only too much a matter of pure speculation, but we think it is also opposed to the principle upon which such valuation should be made. This corporation is one of that class which is subject to regulation by the legislature in the matter of rates, provided they are not made so low as to be confiscatory. The franchises granted the various companies and held by complainant consisted in the right to open the streets of the city and lay down mains and use them to supply gas, subject to the legislative right to so regulate the price for the gas as to permit not more than a fair return (regard being had to the risk of the business) upon the reasonable value of the property at the time it is being used for the public.

The evidence shows that from their creation, down to the consolidation in 1884, these companies had been free from legislative regulation upon the amount of the rates to be charged for gas. They had been most prosperous and had divided very large earnings in the shape of dividends to their stockholders, dividends which are characterized by the Senate committee, appointed in 1885 to investigate the facts surrounding the consolidation, as enormous. The report of that committee shows that several of the companies had averaged, from their creation, dividends over sixteen per cent, and the six companies in the year 1884 paid a dividend upon capital which had been increased by earnings, as in the case of the Manhattan and the New York, of eighteen per cent, and, had it been upon the money actually paid in, it would have been nearly twenty-five per cent.

The committee also said in the same report that these "franchises were in force November 10, 1884, the time of the consolidation, and the money invested in them was earning the same enormous dividends. So far as the evidence shows, there was nothing in the condition of affairs on the 10th of November to indicate that these franchises would not be as valuable for the next twenty years as they had been in the past. There were gas companies enough in the city with a capacity capable of supplying the demands for the next twenty years. A law was on our statute books that virtually prohibited the laying of any more gas pipes in the streets. The gas companies had an agreement among themselves, fixing the price of gas at a figure that paid these dividends. The people were paying this price, as they had in the past, without objection or protest. This price may have been too high, and the dividends were excessive, but they were not illegal, and the valuation of the franchises computed upon these dividends, and that state of facts cannot be called a violation of a law that expressly authorized it to be done, unless such valuation was too high."

The committee, upon these facts, were of opinion that the valuation of $7,781,000 for the franchises was not more than their fair aggregate value.

Assuming, as the committee did, that the company would be permitted to charge the same prices in the future which in the past had resulted in these "enormous" or "excessive" dividends, it need not be matter of surprise that a franchise by means of which such dividends had been possible was not regarded as overvalued at the sum stated in 1884.

We think that under the above facts the courts ought to accept the valuation of the franchises fixed and agreed upon under the act of 1884 as conclusive at that time. The valuation was provided for in the act, which was followed by the companies, and the agreement regarding it has been always recognized as valid, and the stock has been largely dealt in for more than twenty years past on the basis of the validity of the valuation and of the stock issued by the company.

But although the State ought, for these reasons, to be bound to recognize the value agreed upon in 1884 as part of the property upon which a reasonable return can be demanded, we do not think an increase in that valuation ought to be allowed upon the theory suggested by the court below. Because the amount of gas supplied has increased to the extent stated, and the other and tangible property of the corporations has increased so largely in value, is not, as it seems to us, any reason for attributing a like proportional increase in the value of the franchises. Real estate may have increased in value very largely, as also the personal property, without any necessary increase in the value of the franchises. Its past value was founded upon the opportunity of obtaining these enormous and excessive returns upon the property of the company, without legislative interference with the price for the supply of gas, but that immunity for the future was, of course, uncertain, and the moment it ceased and the legislature reduced the earnings to a reasonable sum the great value of the franchises would be at once and unfavorably affected, but how much so it is not possible for us now to see. The value would most certainly not increase. The question of the regulation of rates did from time to time thereafter arise in the legislature, and finally culminated in these acts which were in existence when the court below found this increased value of the franchises. We cannot, in any view of the case, concur in that finding.

This increase in value did, however, form part of the sum upon which the court below held the complainant was entitled to a return. That court found the value of the tangible assets actually employed at the time of the commencement of this suit in the business of supplying gas by the complainant to be $47,831,435, to which it added the $12,000,000 as the value of the franchises as found by it, making the total of $59,831,435, upon which it held that the company was entitled to a return of 6 per cent, being $3,589,886.10. It also found its total net income for the year 1905 amounted to $5,881,192.45, almost 10 per cent upon the sum above named. Altering the finding of the court so far only as to place the value of the franchises at the time agreed upon in 1884, $7,781,000, the total value upon that basis of the property employed by the company would be $55,612,435, upon which 6 per cent would be $3,336,746.10, while the sum, estimated as the return on 80 cent gas would have been $3,024,592.14, which is nearly 5½ per cent on the above total of $55,612,435.

What has been said herein regarding the value of the franchises in this case has been necessarily founded upon its own peculiar facts, and the decision thereon can form no precedent in regard to the valuation of franchises generally, where the facts are not similar to those in the case before us. We simply accept the sum named as the value under the circumstances stated.

There is no particular rate of compensation which must in all cases and in all parts of the country be regarded as sufficient for capital invested in business enterprises. Such compensation must depend greatly upon circumstances and locality; among other things, the amount of risk in the business is a most important factor, as well as the locality where the business is conducted and the rate expected and usually realized there upon investments of a somewhat similar nature with regard to the risk attending them. There may be other matters which in some cases might also be properly taken into account in determining the rate which an investor might properly expect or hope to receive and which he would be entitled to without legislative interference. The less risk, the less right to any unusual returns upon the investments. One who invests his money in a business of a somewhat hazardous character is very properly held to have the right to a larger return without legislative interference, than can be obtained from an investment in Government bonds or other perfectly safe security. The man that invested in gas stock in 1823 had a right to look for and obtain, if possible, a much greater rate upon his investment than he who invested in such property in the city of New York years after the risk and danger involved had been almost entirely eliminated.

In an investment in a gas company, such as complainant's, the risk is reduced almost to a minimum. It is a corporation, which in fact, as the court below remarks, monopolizes the gas service of the largest city in America, and is secure against competition under the circumstances in which it is placed, because it is a proposition almost unthinkable that the city of New York would, for purposes of making competition, permit the streets of the city to be again torn up in order to allow the mains of another company to be laid all through them to supply gas which the present company can adequately supply. And, so far as it is given us to look into the future, it seems as certain as anything of such a nature can be, that the demand for gas will increase, and, at the reduced price, increase to a considerable extent. An interest in such a business is as near a safe and secure investment as can be imagined with regard to any private manufacturing business, although it is recognized at the same time that there is a possible element of risk, even in such a business. The court below regarded it as the most favorably situated gas business in America, and added that all gas business is inherently subject to many of the vicissitudes of manufacturing. Under the circumstances, the court held that a rate which would permit a return of six per cent would be enough to avoid the charge of confiscation, and for the reason that a return of such an amount was the return ordinarily sought and obtained on investments of that degree of safety in the city of New York.

Taking all facts into consideration, we concur with the court below on this question, and think complainant is entitled to six per cent on the fair value of its property devoted to the public use. But assuming that the company is entitled to six per cent upon the value of its property actually used for the public, the total value fixed by the court below is, as we have seen, much too large. We must first strike out the increased value of the franchises asserted by the court over the amount agreed upon in 1884, when the companies were consolidated. We also find that the total value of the tangible property is made up of several items, two of which are—

Real estate.	$11,985,435
Plants.	15,000,000

Both depend largely upon the opinions of expert witnesses as to the value of that kind of property. Where a large amount of the total value of a mass of different properties consists in the value of real estate, which is only ascertained by the varying opinions of expert witnesses, and where the opinions of the plaintiffs' witnesses differ quite radically from those of the defendants', it is apparent that the total value must necessarily be more or less in doubt. It, in other words, becomes matter of speculation or conjecture to a great extent. It may be, as already suggested, that in many cases the rates objected to might be so low that there could be no reasonable doubt of their inadequacy upon any fair estimate of the value of the property. In such event the enforcement of the rates should be enjoined even in a case where the value of the property depends upon the value to be assigned to real estate by the evidence of experts. But there may be other cases where the evidence as to the probable result of the rates in controversy would show they were so nearly adequate that nothing but a practical test could satisfy the doubt as to their sufficiency.

In this case a slight reduction in the estimated value of the real estate, plants and mains, as given by the witnesses for complainant, would give a six per cent return upon the total value of the property as above stated. And again, increased consumption at the lower rate might result in increased earnings, as the cost of furnishing the gas would not increase in proportion to the increased amount of gas furnished.

The elevated railroads in New York when first built charged ten cents for each passenger, but when the rate was reduced to five cents it is common knowledge that their receipts were not cut in two, but that from increased patronage the earnings increased from year to year, and soon surpassed the highest sum ever received upon the ten cent rate.

Of course, there is always a point below which a rate could not be reduced and at the same time permit the proper return on the value of the property, but it is equally true that a reduction in rates will not always reduce the net earnings, but on the contrary may increase them. The question of how much an increased consumption under a less rate will increase the earnings of complainant, if at all, at a cost not proportioned to the former cost, can be answered only by a practical test. In such a case as this, where the other data upon which the computation of the rate of return must be based, are from the evidence so uncertain, and where the margin between possible confiscation and valid regulation is so narrow we cannot say there is no fair or just doubt about the truth of the allegation that the rates are insufficient.

The complainant also contends that the State having taxed it upon its franchises cannot be heard to deny their existence or their value as taxed.

The fact that the State has taxed the company upon its franchises at a greater value than is awarded them here, is not material. Those taxes, even if founded upon an erroneous valuation, were properly treated by the company as part of its operating expenses, to be paid out of its earnings before the net amount could be arrived at applicable to dividends, and if such latter sums were not sufficient to permit the proper return on the property used by the company for the public, then the rate would be inadequate. The future assessment of the value of the franchises, it is presumed, will be much lessened if it is seen that the great profits upon which that value was based are largely reduced by legislative action. In that way the consumer will be benefited by paying a reduced sum (although indirectly) for taxes.

We are also of opinion that it is not a case for a valuation of "good will." The master combined the franchise value with that of good will, and estimated the total value at $20,000,000. The complainant has a monoply in fact, and a consumer must take gas from it or go without. He will resort to the "old stand," because he cannot get gas anywhere else. The court below excluded that item, and we concur in that action.

And we concur with the court below in holding that the value of the property is to be determined as of the time when the inquiry is made regarding the rates. If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the company is entitled to the benefit of such increase. This is, at any rate, the general rule. We do not say there may not possibly be an exception to it, where the property may have increased so enormously in value as to render a rate permitting a reasonable return upon such increased value unjust to the public. How such facts should be treated is not a question now before us, as this case does not present it. We refer to the matter only for the purpose of stating that the decision herein does not prevent an inquiry into the question when, if ever, it should be necessarily presented.

The matter of the increased cost of the gas, resulting from the provisions of the acts, as to making the gas equal to 22 candle-power, is also alleged as a reason for inadequacy of rate.

It appears that the average candle-power actually produced in the first six months of the year 1905 was 22, while but 20 candle-power was exacted by law, and for the last six months of that year, while 22 candle-power was exacted, the average amount was 24.19. This expense was included in the operating expense of that year, which resulted in the net earnings above mentioned, while the company was complying with the requirements of the act in this particular.

It is unnecessary, therefore, to further inquire as to the additional expense caused by this requirement.

Again, it has been asserted that the laws are unconstitutional, because of the provision as to pressure, and also by reason of the penalties which a violation of the acts may render a corporation liable to.

The acts provide that the pressure of the gas in the service mains at any distance from the place of manufacture shall not be less than one inch nor more than two and a half inches.

The evidence shows that to put a pressure such as is demanded by the acts upon the mains and other service pipes in their present condition would be to run a great risk of explosion, and consequent disaster. Before compliance with this provision would be safe the mains and other pipes would have to be strengthened throughout their whole extent, and at an expenditure of many millions of dollars, from which no return could be obtained at the rates provided in the acts. This would take from the complainant the ability to secure the return to which it is entitled upon its property, used for supplying gas, and the provision as to the amount of pressure is therefore void. This particular duty imposed by the acts is, however, clearly separable from the enactments as to rates, and we have no doubt that the remainder of the statute would have been enacted, even with that provision omitted.

The obligation would remain upon the company to have a pressure sufficient to insure a light of 22 candle-power, as provided in the acts.

We are of the same opinion as to the penalties provided for a violation of the acts. They are not a necessary or inseparable part of the acts, without which they would not have been passed. If these provisions as to penalties have been properly construed by the court below, they are undoubtedly void, within the principle decided in *Ex parte Young*, 209 U. S. 123, and the cases there cited, because so enormous and overwhelming in their amount.

When the objectionable part of a statute is eliminated, if the balance is valid and capable of being carried out, and if the court can conclude it would have been enacted if that portion which is illegal had been omitted, the remainder of the statute thus treated is good. *Reagan* v. *Trust Co.*, 154 U. S. 362, 395; *Berea College* v. *Commonwealth of Kentucky*, 211 U. S. 45, 54. This is a familiar principle.

Lastly, it is objected that there is an illegal discrimination as between the city and the consumers individually. We see no discrimination which is illegal or for which good reasons could not be given. But neither the city nor the consumers are finding any fault with it, and the only interest of the complainant in the question is to find out whether, by the reduced price to the city, the complainant is upon the whole unable to realize a return sufficient to comply with what it has the right to demand. What we have already said applies to the facts now in question.

We cannot see from the whole evidence that the price fixed for gas supplied to the city by the wholesale, so to speak, would so reduce the profits from the total of the gas supplied as to thereby render such total profits insufficient as a return upon the property used by the complainant. So long as the total is enough to furnish such return it is not important that with relation to some customers the price is not enough. *Minneapolis &c.* v. *Minnesota*, 186 U. S. 257; *Atlantic Coast Line* v. *North Carolina Commission*, 206 U. S. 1.

Upon a careful consideration of the case before us we are of opinion that the complainant has failed to sustain the burden cast upon it of showing beyond any just or fair doubt that the acts of the legislature of the State of New York are in fact confiscatory.

It may possibly be, however, that a practical experience of the effect of the acts by actual operation under them might
